Meanwhile the operations in Weſt Flanders were carried on with equal ſpirit and effect. General Labourdonnaye, having forced the Auſtrians from ſeveral important poſts, and opened the navigation of the river Lys, marched to take poſſeſſion of Tournay, which had been recently evacuated; Menin and Ypres were ſoon added to his conqueſts; and on the 12th of November he took poſſeſſion of Ghent. The Auſtrians under La Tour retired to Antwerp; but part of their baggage, which had been embarked on the Scheldt, fell into the hands of the French. During theſe tranſactions, Dumouriez appeared before Bruſſels, and his advanced guard made a ſucceſsful attack on the prince of Wirtemburg, who, with an army of eight thouſand men, occupied the heights of Anderlicht. On the following day, the gates of Bruſſels were opened to the French commander. Charleroi, Antwerp, Mechlin, Louvain, Oſtend, Namur, and all the Auſtrian Netherlands except Luxembourg, ſucceſſively followed the example of the capital; while the moſt numerous and beſt appointed armies of Europe were retreating in every direction from the enthuſiaſtic forces of the victorious republic.

Early in the enſuing ſpring of 1793, general Miranda inveſted Maeſtricht with an army of twenty thouſand men, and ſummoned the town to ſurrender, in a proclamation replete with ſanguinary menace. But the prince of Saxe-Cobourg, having defeated the republicans at Aix la-Chapelle, obliged him to raiſe the ſiege. About the ſame time, prince Frederic of Brunſwic took ſome batteries at Zwaone, killed thirteen hundred of the French at Bruges, and took ſeven hundred priſoners. Alarmed at theſe defeats, Dumouriez returned into the Netherlands on the 15th of March, and compelled the Auſtrian advanced poſts to retire from Tirlemont. On the 18th, a general engagement took place at Neerwinden, the French army being covered on the right by Landen, and on the left by Dermael. This action continued with equal obſtinacy on both ſides from ſeven o'clock in the morning till five in the afternoon, when the French were defeated with the loſs of four thouſand men and ſeveral pieces of cannon. The latter end of June was only diſtinguiſhed by ſome petty ſkirmiſhes between the two grand armies; but in the enſuing month, the Auſtrians gained ſome advantages of greater importance. The garriſon of Condé, after ſuſtaining a blockade of three months, was obliged to capitulate to the prince of Wirtemberg; and Valenciennes ſurrendered to his royal highneſs the duke of York, who took poſſeſſion of it in the name of the emperor. About the ſame time Mentz was reduced, after a moſt tedious ſiege, by the king of Pruſſia.

The campaign of 1794, proved extremely unfortunate to the confederates. In Flanders, general Jourdan gained the battle of Fleurus; Charleroi, Bruges, Ypres, and Courtray, ſurrendered to the French; Oſtend was evacuated; the defeat of general Clairfait near Mons obliged that town to capitulate; and the prince of Cobourg was compelled to abandon the whole of the Netherlands; while Bruſſels, Antwerp, Landrecy, Queſnoi, Valenciennes, and Condé, were ſucceſſively retaken; and the victorious republicans, purſuing their ſucceſs, took Aix-la-Chapelle, defeated Clairfait in the vicinity of Juliers, and made themſelves maſters of Bonn, Cologne, Maeſtricht, and Nimeguen. It muſt, however, be acknowledged, that ſome of theſe victories were dearly purchaſed; and it is but juſtice to aſſert, that the allies gave many brilliant proofs, even in this unlucky campaign, of their extraordinary valour, ſkill, and reſolution. The duke of York, lord Moira, the hereditary prince of Orange, and many other illuſtrious commanders of the allies, diſtinguiſhed themſelves in a very particular manner; but the prodigious numbers and unparalleled enthuſiaſm of the French troops were altogether irreſiſtible; the coaleſced armies were likewiſe unfortunately reduced by hardſhips and diſeaſe; and, in moſt caſes, the eaſy reduction of towns and fortreſſes reſulted from the treachery of the inhabitants.

Elated, in 1795, by the ſeceſſion of Pruſſia and Spain from the grand alliance, and the inactivity of the German princes, the republicans avowed their intention of completing the humiliation of their enemies. They opened the campaign with the ſiege of Luxemburg, and the reduction of that important place ſerved to enflame their enthuſiaſm; but after obtaining ſome ſmall advantages over the Auſtrian armies, they were doomed to experience an unexpected reverſe of fortune. Their projects on the right bank of the Rhine were totally fruſtrated; Jourdan was compelled to raiſe the ſiege of Mentz, and to retire with precipitation to Düſſeldorf; Manheim was retaken after an obſtinate reſiſtance; and the victorious Clairfait, having effected a junction with Wurmſer, recovered the palatinate, and moſt of the countries between the Rhine and the Moſelle. Theſe ſucceſſes induced the Auſtrians to penetrate as far as Luxemburg, and a large diviſion of their troops was immediately provided with all the requiſites for ſuch an attempt: but the deſperate reſiſtance of the French retarded the execution of this project, and, after a prodigious effuſion of blood, the ſeverity of the winter compelled both parties to ſuſpend hoſtilities.

The ill ſucceſs of the laſt campaign was wholly attributed, by the French directory, to the unſkilful management of their generals. But as the Auſtrians were prepared to paſs the Rhine in great force, and the attachment of the Belgians began to waver, it was reſolved to divert the emperor's attention from the Netherlands, to his Italian dominions, whence he drew ſtill greater ſupplies. This undertaking was certainly arduous, and many obſtacles preſented themſelves which appeared almoſt inſuperable; but theſe were counterbalanced by the enthuſiaſtic ardour of thoſe French troops who were impatient to indemnify themſelves for the hardſhips they had ſuſtained upon a rocky and ſteril coaſt, to which they had long been confined by want of reinforcements.

Upon theſe conſiderations the French republic determined, in 1796, to attempt the reduction of Italy; and the rapid victories of their troops under general Bonaparte in that campaign, exceeded their moſt ſanguine expectations. The battles of Milleſimo, Dego, and Mondovi, compelled his Sardinian majeſty to accept of

peace, on the hard conditions of ceding Savoy and Nice to the invaders; general Beaulieu, after an obſtinate conflict at Lodi, was forced to retire, with the ſhattered remains of his army, to Mantua; and the conquerors, ſoon afterward, took poſſeſſion of the whole of Lombardy. The armiſtice which had been concluded on the Rhine, was declared to be at an end on the 31ſt of May; when the army of the Sambre and Meuſe, under Jourdan, gained ſome great advantages over the Auſtrians, and penetrated into the interior of the empire. Meanwhile another army, under general Moreau, having croſſed the Rhine at Straſburg, marched through Bavaria, in order to join the conquerors. This attempt, however, was rendered abortive, and both armies experienced a reverſe of fortune which obliged them to recroſs the Rhine. The archduke Charles, commander of the Auſtrian forces, followed Moreau with great expedition, and retook the fort of Kehl, after a moſt obſtinate reſiſtance on the part of the French.

Meanwhile the emperor aſſembled a new army, with a view to reſtore the affairs of Italy, and gave the command of it to general Wurmſer, one of the ableſt officers in the Auſtrian ſervice. This force, on its firſt arrival was ſo extremely ſucceſsful, that the French were repulſed, defeated, and compelled to raiſe the ſiege of Mantua. But Bonaparte ſoon returned to the charge; and, after a ſeries of obſtinate engagements, Wurmſer was obliged to take refuge behind the walls of Mantua, while a detachment of the republicans made an irruption into the Tyrol, and gained poſſeſſion of the paſſes leading into Vienna. The Auſtrians, at the ſame time, made a gallant effort, under general Alvinzy, to reſcue Wurmſer and his beſieged army; but the battles of Arcola and Rivoli unfortunately fruſtrated their deſign, and Mantua was obliged to ſurrender on capitulation.

While the victorious Bonaparte was compelling the pope, the king of Naples, and other princes, to conclude ſuch treaties as he thought proper to dictate, the imperial court was buſily occupied in the means of diſputing once more the empire of Italy. At length it was determined to collect a moſt formidable army from the numerous diviſions and garriſons in the Auſtrian ſervice; and to give the command to the archduke Charles, whoſe conduct and ſucceſſes during the laſt campaign had rendered him extremely popular. The Auſtrians had been ſo effectually diſcouraged by their defeat at Rivoli, that they had ever ſince avoided an engagement, and remained cautiouſly poſted on the northern ſide of the Piava; while the enemy lay on the oppoſite bank, to obſerve their motions, and prevent them from croſſing the river.

Upon the firſt appearance of the archduke Charles at the head of the Auſtrian army, in the campaign of 1797, the French reſolved to give him battle; and accordingly advanced to the Piava in three diviſions. The firſt, commanded by Maſſena, croſſed over near Feltri, and obliged the imperialiſts to retire to Belluno; the ſecond, under Serrurier, paſſed the river at Aſola, after repulſing a detachment who had attempted to check his progreſs; and the third, commanded by general Guiaux, advanced to Sacali, where he overtook the rear-guard of a diviſion of the Auſtrians, and took a conſiderable number of priſoners. The French diviſions now directed their march toward Tagliamento; but the Auſtrians entrenched themſelves on the oppoſite ſide, and prepared to make a vigorous reſiſtance; being perfectly aware that the enemy, by paſſing this river, would be able to over-run a large extent of country. Bonaparte and the archduke Charles were the commanders in chief on this occaſion, and both generals drew up their troops with extraordinary ſkill; but after a long and ſanguinary conflict, the Auſtrians were overpowered, and compelled to retreat with prodigious loſs. The archduke, however, retained his accuſtomed intrepidity, and reſolved to hazard another combat the next morning; but the diſcouragement of his troops, and an unexpected aſſault on the part of the French, compelled him to abandon his deſign, and conſult his ſafety by a precipitate flight.

By the paſſages of the Piava and Tagliamento, the whole country to the north of theſe rivers lay open to the French, while the imperialiſts retired in every direction. Palma Nova was haſtily evacuated; Gradiſca and Goritz were obliged to ſurrender, notwithſtanding the utmoſt exertions of their garriſons; and Trieſte, the only ſea-port belonging to his imperial majeſty on the Adriatic, ſoon fell into the hands of the conquerors. Meanwhile an Auſtrian army was utterly defeated by Maſſena, at Tarvis, with the loſs of a prodigious number of men, thirty pieces of cannon, and four hundred baggage-waggons. Towards the end of March, the central diviſion of the republicans, having entered Carinthia, chaſed the archduke from his head-quarters at Clagenfurth, and advanced acroſs the Drave to Friſach. An obſtinate conflict took place at the defiles leading to Neumark; but the imperialiſts were again forced to retire, with the loſs of a great number of ſlain, and about ſix hundred priſoners. The archduke, having collected his flying troops, attempted to make a vigorous ſtand at Hundſmark, but he was again defeated with great ſlaughter. In the mean time, the arms of Joubert were attended with equal ſucceſs in the Tyrol. The imperialiſts had poſted themſelves in the defiles leading to Inſpruck, and, as they conſiſted entirely of veteran troops detached from the Rhine, it was hoped they would have been able to guard the acceſſes of this province; but the diſcharge of the French artillery was ſo tremendous, that they were ſoon routed, with the loſs of ſix hundred priſoners and the whole of their baggage. About the ſame time Bernadotte completed the reduction of the province of Carniola, and opened an entrance on that ſide into Stiria. The court of Vienna now began ſeriouſly to regard their ſucceſs againſt the revolutionary French, as doubtful and precarious: the fifth army which Auſtria had raiſed againſt them was nearly deſtroyed; the recruits that were raiſing could not ſupply the place of veterans who had not themſelves been able to reſiſt the enemy; and the archduke, on whom implicit confidence was repoſed, had proved as unfortunate in command as his predeceſſors. The only apparent reſource was to acquieſce in the terms of pacification offered by France. But the Auſtrian nobility declared to the contrary, and expreſſed a zealous determination to ſhare the fortune of their ſovereign, and to defend his capital to the laſt extremity. Accordingly, a body of young gentlemen who had ſerved as volunteers under Alvinzi, were again to be completed; the Hungarian nobles were earneſtly exhorted to repair with their vaſſals to Vienna; a formidable maſs of reſolute ſoldiers was to be raiſed in the hereditary ſtates; and the regular troops were ordered to aſſemble from all quarters.

During theſe tranſactions, Bonaparte was collecting and concentrating his forces in order to proceed to Vienna, where he reſolved to plant the ſtandard of France, if the emperor ſtill refuſed to terminate the war. Previouſly to his renewing hoſtilities, however, he wrote a letter to the archduke Charles, which excited the univerſal attention of Europe, and was admirably calculated to conciliate the eſteem of a people to whom he preſented the olive-branch of peace: but on the archduke's expreſſing his inability to conclude a treaty without ſpecial orders, the French troops were immediately put in motion, and their general declared that he would ſoon carry all his deſigns into execution. The news of this determination, and the rapid approach of a victorious enemy, induced his imperial majeſty to liſten to terms of accommodation. Accordingly, generals Murveldt and Bellegarde were deputed to confer with Bonaparte on the ſubject of an armiſtice; and, after a few days, preliminaries of peace were ſigned by both parties.

Meanwhile the French armies on the Rhine had ob-

tained ſome conſiderable advantages. On the 19th of April, general Moreau effected a paſſage acroſs the river, and took poſſeſſion of fort Kehl, notwithſtanding the obſtinate reſiſtance of the Auſtrians who occupied that important place: the loſs on both ſides was very great; five French generals were wounded, and numbers of their ſoldiers killed; but the Auſtrians loſt many more men in the engagement, beſides three thouſand who were taken priſoners. About the ſame time, a furious battle was fought on the Lower Rhine, between generals Hoche and Kray, which terminated in the utter defeat of the imperialiſts, and the loſs of all their artillery. The enemy, elated with this ſucceſs, purſued the retiring Auſtrians to the defiles of the Dilla, and were advancing by rapid marches to Frankfort, when intelligence arrived of the preliminaries being ſigned by Bonaparte and the emperor.

By this treaty of peace, ſigned at Campo-Formio on the 17th of October, 1797, the emperor ceded to the French republic the whole of the Auſtrian Netherlands, and conſented to their retaining the Venetian iſlands of Corfu, Zante, Cephalonia, and all the other iſles in the Adriatic, together with their ſettlements in Albania. He alſo acknowledged the Ciſalpine republic as an independent ſtate; ceding to it the ſovereignty of the countries in Lombardy, which had formerly belonged to Auſtria, and conſenting that it ſhould poſſeſs Bergamo, Breſcia, and other territories late in the dependence of Venice, together with the duchies of Mantua and Modena, the principalities of Caveara and Maſſa, and the cities of Romagna, Ferrara, and Bologna, lately belonging to the pope. The ceſſions on the part of France were Iſtria, Dalmatia, the city of Venice with a large portion of the dominions of that republic, and all the Venetian iſlands in the Adriatic lying to the north-weſt of the Gulf of Lodrino.

Theſe were the leading articles of the treaty of Campo-Formio; but there were ſome other articles, deemed of an unoſtenſible nature, by which the emperor conſented that the Rhine ſhould be the boundary between France and Germany; and promiſed to uſe his mediation for procuring a ſimilar conſent on the part of the ſtates and princes of the empire. He alſo gave his formal aſſent to the diſpoſitions which had been made of various imperial fiefs in Italy, in favour of the Ciſalpine and Ligurian republics; and promiſed to concur with France in ſoliciting the diet of the empire to reſign its feudal ſovereignty over thoſe diſtricts.

This treaty, however, proved no more than an armed truce, during which the oppoſite parties were leſs animated by the deſire of a permanent peace, than by the wiſh of being in a condition to renew the war. The preliminaries of Leoben had been ſigned at a moment pregnant with dangers to the French commander, as well as with deſtruction to the houſe of Auſtria. In proportion, therefore, as that perilous criſis was removed, the French and Auſtrian governments reſumed their habitual paſſions and views. The French directory, by many overt acts of injuſtice and oppreſſion, manifeſted a ſtrong diſpoſition to extend their conqueſts; the negociations at Raſtadt gradually aſſumed the appearance of a diplomatic war, in which the reſpective plenipotentiaries acted as ſpies upon each other; and the admiſſion of general Suwarrow with a Ruſſian army into Germany, was conſidered as a declaration of war againſt the French republic.

The armies of both parties were at this time truly formidable. General Maſſena, with forty-five thouſand men, occupied Swiſſerland, and the left bank of the Rhine almoſt from its ſource to the weſtern extremity of the Lake of Conſtance; Jourdan was ſtationed, with ſixty-five thouſand, between Baſle and Duſſeldorf; and the corps on the right bank of the Rhine, amounting to twenty thouſand men, was called "the army of obſervation." The imperialiſts, on the other hand, had more than ſixty thouſand men, under command of the archduke Charles, on the Lech; twenty thouſand were aſſembled in the palatinate under general Stzarray; an equal number, commanded by general Hotze, occupied the Voralberg and the country of the Griſons; nearly twenty-five thouſand, under general Bellegarde, were on the frontiers of the laſt-mentioned country and the Tyrol; and the army of Italy was computed to conſiſt of ſixty thouſand effective men.

If numbers could have enſured ſucceſs, his imperial majeſty might now have triumphed in the anticipation of a moſt brilliant victory; for he had, at this juncture, one hundred and eighty thouſand men, ninety thouſand of whom were in a ſituation for acting againſt Jourdan and Maſſena. But, as the Auſtrians were reſolved to let the odium of recommencing hoſtilities fall upon the republicans, their firſt operations could only be defenſive and dependent on thoſe of the enemy. It was the buſineſs of the archduke to confine himſelf, in the firſt inſtance, to the defence of the paſſage of the Lech; and generals Hotze and Bellegarde were fully employed in providing for the ſecurity of their poſts in Swabia, Tyrol, and the country of the Griſons, together with thoſe in the Valteline and in Italy.

On the 2d of March, 1799, general Bernadotte preſented himſelf before the fortreſs of Philipſburg; and, in an inſolent letter to the commandant, ſummoned the place to ſurrender, aſſerting that the garriſon was ready to revolt, and denouncing vengeance in caſe of reſiſtance. But his menaces were treated with merited contempt; and, after making ſome vigorous exertions, he was compelled to raiſe the ſiege. Meanwhile the French army, having penetrated into the Palatinate and Swabia, levied heavy contributions, and continued their march without any impediment; as the Auſtrians were at a diſtance, and the duke of Wirtemberg, the only prince who could have thrown any obſtacles in their way, obſerved a ſtrict neutrality.

Maſſena having made himſelf maſter of the narrow paſs the Lucien-ſteig, by throwing a bridge acroſs the Rhine at Atmooz, general Auffenburg had no other reſource than to concentrate his forces for the defence of Chur. Accordingly, after an obſtinate conteſt, he took poſſeſſion of the heights near Chur, and prepared to make a gallant reſiſtance againſt the further encroachments of the enemy; but, being overpowered by numbers, he was compelled to ſurrender. General Hotze, in the mean time, made a vigorous effort to penetrate into the valley of the Rhine; but he was repulſed, and obliged to return to Field-kirk with the loſs of a conſiderable number of men and ſeveral pieces of cannon. A few days after theſe ſucceſſes, Lecourbe, with a ſtrong detachment of French troops, took poſſeſſion of almoſt all the valley of the upper and lower Engadine; but on his attacking an Auſtrian poſt at St. Martinſbruck, he was defeated by general Alciani, with conſiderable loſs. This check counterbalanced the ſucceſs of Deſolles in the Valteline; and delayed, for ſome time, the invaſion of the Tyrol.

Meanwhile the archduke, being appriſed of the enemy's motions, ordered the whole of his army to prepare to croſs the Lech, and to proceed with all poſſible expedition to Ulm, which he wiſhed to ſecure, as a ſtrong point of ſupport on the Danube. His orders were immediately reduced to execution, and in leſs than a week he fixed his head-quarters at Memmingen; while his vanguard, commanded by general Nawendorf, puſhed on towards Ravenſburg, and the corps which had occupied Ulm was ſending detachments along both ſides of the Danube. The line poſſeſſed by the Auſtrians between Ulm and Bregentz had already fruſtrated Jourdan's plan of gaining the flank of the Tyrol by mere marches; the main body of the imperial army was ready to ſupport general Hotze; and both parties prepared for a battle, which now became unavoidable.

Hitherto no reſiſtance had been made in Swabia; and the

the French continued to aver, notwithſtanding their numerous acts of injuſtice, that they had no other view than to take poſitions of ſafety. But, at length, the directory threw off the maſk, and cauſed war to be formally declared, by the legiſlative body, againſt his imperial majeſty and the grand-duke of Tuſcany. Hereupon Jourdan determined to come to action on the 21ſt of March: but the archduke reſolved to be beforehand with him, and immediately divided his army into three columns; one of which, commanded by the prince of Furſtemberg, was to march towards Mengen, in order to diſlodge the enemy from that place; while a ſecond diviſion, under general Wallis, directed their march to the river Oſtrach; and the archduke, with the centre, advanced on the ſame point along the cauſeway of Sulgau. The advanced poſts of the enemy made a moſt deſperate reſiſtance, but were at laſt overthrown by the imperialiſts: the bridge of Oſtrach was alſo forced after an obſtinate conflict, and the republicans were compelled to retire with the loſs of five thouſand men. A ſecond engagement took place near Aach, and was ſupported on both ſides with aſtoniſhing firmneſs and intrepidity: but victory again declared in favour of the Auſtrians; and Jourdan, after haſtily repaſſing the Rhine, proceeded to Paris, *for the re-eſtabliſhment of his health*. Here, however, he met with the reception that is uſually given by popular governments to unſucceſsful generals; and was ſtripped of his command of the army. About the ſame time the inhabitants of the Tyrol took up arms againſt their French invaders; and, after a moſt obſtinate conflict, compelled them to evacuate that country.

Maſſena was now appointed to ſucceed Jourdan in the chief command of all the French forces from the frontiers of the Tyrol and Italy to the palatinate. Accordingly, on the 12th of April, he fixed his head-quarters at Baſle, as the central point of his army; which conſiſted of about one hundred thouſand men, and extended from Manheim to the ſource of the Adige. The war might now be ſaid to aſſume a more decided character; and all the hopes which the French directory and ſome of the German princes had founded on the congreſs of Raſtadt, were totally overthrown. The brilliant ſucceſſes of the archduke re-animated the court of Vienna; and the imperial commiſſioner announced officially to the congreſs, that he had orders to revoke all the conceſſions he had made, and to declare that matters ſhould thenceforth be conſidered in the ſame ſtate as they were previouſly to the opening of the congreſs. This declaration, and the ſubſequent departure of the deputies of the empire, terminated the conferences at Raſtadt.

It will here be proper to take a retroſpective view of ſome particular events, which took place previous to the renewal of the war in Germany. On the 13th of April, 1796, the populace of Vienna had voluntarily taken up arms to defend their city, and the palace of their ſovereign, againſt the republican forces, who were ſuppoſed to be approaching by rapid marches toward the capital. This mark of loyalty was immediately recorded among the public acts of government, and the emperor commanded that its anniverſaries ſhould be celebrated with civil and religious ceremonies. On the evening of that day, 1798, the republican flag was diſplayed, for the firſt time, on the balcony of the French ambaſſador's hotel. This groſs inſult excited general indignation, and the populace demanded with loud and repeated cries that the flag ſhould be taken down. To murmurings ſucceeded violence; and the exaſperated multitude, after tearing the obnoxious colours to atoms, burſt open the gates of the hotel, threatening to ſacrifice the ambaſſador and all his ſuite to their vengeance. The furniture on the ground-floor was inſtantly demoliſhed, and two of Bernadotte's carriages were dragged to the court of the palace, and broken to pieces. But whilſt they were thus employed, a detachment of military occupied the ſtreet in which the ambaſſador's houſe was ſituated, and prevented their return. A polite apology was offered on the part of the court, for this unfortunate diſturbance; but the haughty demands of the ambaſſador could not be complied with, and he therefore took the earlieſt opportunity of quitting Vienna.

This occurrence was ſoon followed by another more tragical and calamitous. At the termination of the conferences at Raſtadt, the French plenipotentiaries expreſſed an intention of ſetting out in three days for Paris. But, on applying for a ſafe conduct, they were ordered to quit the territory of Gernbach and the imperial army in the ſpace of twenty-four hours. At the ſame moment, four hundred huſſars entered Raſtadt, and took poſſeſſion of the gates, with an order to ſuffer no perſon to enter in, or go out. About nine o'clock in the evening the French miniſters were in their carriages; and, after ſome altercation, they obtained permiſſion to leave the town; but they had ſcarcely proceeded five hundred paces from the gate, when a troop of huſſars ruſhed out from a wood, and ſurrounded the firſt carriage, in which was Jean Debrie with his wife and children. Miſtaking theſe ruffians for a patrole, Debrie held his paſſport out at the window, mentioning his name and quality; but he was immediately dragged out, and wounded in ſo terrible a manner by the ſabres of his aſſailants, that he was left for dead, though he afterwards contrived to crawl into an adjacent ditch. The ſecond carriage was then ſtopped, and Debrie's ſecretary and valet-de-chambre were forced to alight; but on their exclaiming that they were domeſtics, they eſcaped without any other injury than a few blows. Bonnier was dragged from the third carriage by one of the moſt violent huſſars, who cut off his hand, head, and arms. Roſenſteil, the ſecretary of legation, perceiving what was paſſing, jumped out of his carriage and made his eſcape; but Roberjot was inhumanly murdered, while his diſtracted wife held him ſtrongly locked in her arms. The aſſaſſins then retired, and the carriages with the ladies and ſervants returned to Raſtadt, whither Roſenſteil alſo came about eleven o'clock the ſame night, and Jean Debrie the next morning.

The Ruſſian miniſters immediately wrote to colonel Barbaczy, commander of the Auſtrian advanced poſts, demanding a proper eſcort for what remained of the French legation; and the injured parties quitted Raſtadt on the following day, in company with the Ligurian miniſter, who had followed them on the former occaſion, but had fortunately eſcaped before the huſſars came up to his carriage. Various conjectures were formed reſpecting this myſterious tranſaction, and two imperial officers were arreſted, in order to undergo a trial by a court-martial; but as it was afterward declared that the aſſaſſins were French emigrants, under the aſſumed appearance of huſſars, this trial did not take place.

The French directory peremptorily charged the court of Vienna with the murder, and the councils adopted a reſolution, "that this act ſhould be denounced, in the name of the republic, to the governments of every country, as commanded by the imperial cabinet, and executed by its troops; that funeral ſolemnities ſhould be performed throughout France, in honour of the murdered deputies; that in all places of municipal adminiſtration, in ſchools, tribunals, and public eſtabliſhments, an inſcription ſhould be ſet up, ſtating that the Auſtrian government had cauſed this inhuman murder to be committed by its ſoldiers; that a banner ſhould be ſent to every army by ſea and land, with an inſcription provocative of vengeance againſt the Auſtrians; and that indemnities ſhould be given to the widows and children of the deceaſed miniſters." His imperial majeſty, however, expreſſed ſuch abhorrence of the atrocious deed, and made ſuch vigorous exertions for diſcovering its authors or accomplices, that the French nation gradually cooled in their reſentment, and began to doubt the reality of what had been ſo poſitively charged upon the cabinet of Vienna.

But

But to return to the progrefs of the war:—After victory had enabled the Auftrians to act offenfively in Germany and Italy, they found themfelves obliged to regulate every operation in fuch a manner as to direct the whole to the attainment of one common object. A plan was concerted between generals Hotze and Bellegarde, for an attack on the territories of the Grifons; and, after fome vigorous repulfes, they effected their defign of expelling the French troops from that country. Maffena, foon afterward, evacuated the eaftern part of Italy; and the imperialifts, having gained poffeffion of St. Gothard, were enabled to complete the communication between their two grand armies. Their operations now became better combined, and their activity acquired a more decided fuperiority than at any other period of the campaign. They kept the French in awe on the Mayne, the Necker, and the Kintzing; feized all the paffages between Swifferland and Italy; befieged the citadel of Turin; and blockaded, at the fame time, the fortreffes of Tortona, Mantua, and Alexandria.

The month of July, 1799, and the beginning of Auguft, paffed over without any important enterprife; but during that time great preparations were made and meafures taken for future operations. The French, having preffed the levy of their conferipts, formed two new armies; one of which was deftined to act on the Rhine, and invade Franconia; while the other was to cover France on the fide of Dauphiny, to act offenfively in Piedmont, and to co-operate with the army which occupied the Genoefe. After thefe fupplies to the army of the French, the Auftrian forces were now no longer adequate to retain their firft acquifitions, or to purfue the career of dawning conqueft. Recourfe was therefore had to the courts of London and Peterfburgh; and the emperor, in an aulic decree, called on the ftates of the empire to pay the Roman months, and to furnifh the quintuple contingents, agreeably to the laft conclufions of the diet of Ratifbon. At the fame time, the elector of Bavaria and the duke of Wirtemberg were perfuaded to enter into the coalition, and to raife a confiderable body of troops, on condition of their being fubfidized by Great Britain.

On the 14th of Auguft, general Maffena refolved to make an attack on the whole Auftrian line; and his project was attended with fuch fuccefs, that the imperialifts were foon driven from the cantons of Schwitz and Uri; and the archduke Charles was obliged to quit Swifferland, in order to provide for the fafety of that part of his army which was ftationed on the right bank of the Rhine. Upon the departure of prince Charles, the allies propofed to recover the fmall cantons, and to turn the pofition fo long held by Maffena on the Albis, and on the lakes of Zug and Lucerne. But Maffena gaining intelligence of this project, refolved to commence hoftilities before it could be reduced to execution. Accordingly he ordered fome bridges to be thrown acrofs the Limmat, and gained fuch advantages as enabled him to inveft the town of Zurich. A terrible engagement enfued between the French and the Ruffian regiments, the latter of whom had replaced the Auftrians in front of Zurich; but victory declared on behalf of the republicans, and the Ruffian general Korfakow was compelled to retire to Eglifau, in order to pafs the Rhine. Marfhal Suwarrow was no fooner apprifed of this misfortune, than he put his divifion in motion, and, through a feries of fanguinary combats, proceeded to Glarus, where he expected to have been joined by fome Auftrian regiments; but finding himfelf difappointed, he was obliged to retreat to the country of the Grifons, after lofing about three thoufand men. He afterwards effected a junction with the troops of general Korfakow: but previoufly to his undertaking any freth enterprife, he received the unexpected and unaccountable orders from his fovereign to reconduct his army into Ruffia.

Towards the end of October, the French and imperial armies were oppofed to each other on the banks of the Maine, the Enz, the Necker, and the Rhine. The grand object of the republicans was to cover the fiege of Philipfburg, which they hoped to carry by the weight of their fire: that of the Auftrians was to raife it, and at all events to protect the duchy of Wirtemberg. Great exertions were made, and great abilities exhibited, on both fides; but the difputed fortrefs was ultimately relieved, and the French, after evacuating Manheim and Nickerrau, were compelled to repafs the Rhine.

The court of Vienna, recently fupplied with pecuniary affiftance from England, and the acceffion of Bavarians, Wirtemburgers, and other German troops in Britifh pay, was not to be diverted from its refolutions by Bonaparte's offering to conclude a pacification on the general ground of the treaty of Campo-Formio. The imperial miniflers replied to the overtures of the firft conful, that the emperor would not enter into any negociation but in conjunction with his Britannic majefty; and notwithftanding the lethargic indifference of many of the Germanic ftates, and the recent defection of the Ruffians, the Auftrians prepared to profecute the war with equal vigour and alacrity.

Maffena, being appointed to take the command of the difcomfited army of Championet, repaired with all poffible expedition to Italy, where he iffued proclamations for re-eftablifhing confidence among the troops and the inhabitants of the territory of Genoa, all of whom were in a ftate of infurrection. He effected his defign in this refpect, by the united force of feverity and conciliation; but the ftate of the army was truly deplorable. The troops, which had been ftated by the French minifter at fixty thoufand, were reduced to twenty-five thoufand, and of thefe one half were incapable of active duty; the horror excited by the hofpitals was fo great, that many of the wretched invalids chofe rather to die in their own quarters, than to be carried to fuch an infectious manfion; whole bodies of the foldiery went off without their commanders; and feveral general officers withdrew themfelves without permiffion. Whilft Maffena was endeavouring, by extraordinary exertions, to remedy or to palliate thefe misfortunes, the Englifh fleet under lord Keith appeared in the Gulf off Genoa, for the blockade of which city it was drawn up in the regular forms; while the Auftrian army, under general Melas, approached by land, and extended its front along the whole line of the republican forces.

Melas, being well acquainted with the pitiable condition of his enemy, had contented himfelf during the winter with obferving his motions, by means of a fimple cordon; while he difpofed his own army throughout Piedmont, Lombardy, the Venetian ftate, the Bolognefe, Ancona, and Tufcany. By thefe maflerly precautions, the French were fo completely deceived, that they exulted in the idea of their own fuperiority, at the very moment when the numerous corps that were to compofe the imperial army were on their march to the general rendezvous. Cities, towns, and villages, as by a fpontaneous movement, fent forth companies, regiments, and battalions; till in the courfe of a few days general Melas was enabled to aflemble ten thoufand men before Bobbio, ten thoufand in front of Tortona, and thirty thoufand at Acqui and Alexandria; leaving at the fame time in the plains of Piedmont the whole of his cavalry, with twenty thoufand infantry, and a fine park of artillery. On the 5th of April, the Auftrians made a general attack on the French troops; many of whom were driven back to Ruha, but thofe at Bergodi-Sornoni and on the heights of Cordibona firmly maintained their ground. The fecond day of the fiege was more terrible. An attack on the right of the French line was made by general Otto, who, with a body of ten

thouſand men, fell on the firſt diviſion near Bobbio, in order to open a paſſage to Genoa. The firſt diviſion, under general Miolis, was ſoon repulſed, and compelled to fall back to Quinto, where they rallied and made a ſucceſsful ſtand for the defence of the city; the ſecond, commanded by general Gazau, thought proper to retire behind the Scrivia; and although the third diviſion ſucceeded in throwing a reinforcement into Savona, they could neither ſave Vado, nor prevent the entire ſeparation of a detachment under Suchet, from the army of Genoa.

The 7th of April proved more auſpicious to the French. The imperialiſts having gained poſſeſſion of Monte Jaccio, lighted up ſeveral fires in the night, and ſounded the tocſins in all the adjacent country, in order to alarm the inhabitants of Genoa. Maſſena perceived the danger that might reſult from ſuch an artifice, and reſolved to perform ſome exploit in ſight of the Genoeſe, in order to do away the impreſſions which had been made upon their minds by the firſt advantages of the Auſtrians. Accordingly he gave orders for an immediate attack on that part of the imperial army; and his meaſures were ſo well concerted with generals Miolis, Darnaud, Hector, Pelitot, and others, that the Auſtrians were defeated with the loſs of fifteen hundred priſoners, beſides a conſiderable number in killed and wounded. On the ſame day, the ſecond diviſion of the French army retook Cazella, Rongo-di-Fornari, and Savigone; and the third diviſion reſtored the line from Voraggio to Campani. The following day was taken up, on both ſides, in general and particular diſpoſitions of the forces. The diſpoſitions that reſpected the firſt diviſion, under general Miolis, were expreſsly deſigned for defending the approaches to the city of Genoa; and the commandant of marine was inſtructed to follow, as far as poſſible, the movement projected by the commander-in-chief, in order to defend the tranſports from the ſmall craft of the Engliſh.

It has been juſtly obſerved, that this was not the blockade of a ſingle place abandoned to itſelf, but it was the right wing of the French army of Italy completely cut off, which, while it maintained its own ground, gave time to the left wing and the centre to ſet themſelves in motion, and to undertake ſome deciſive enterprize. The imperialiſts, ſtrong as they were, had not the means of carrying on a ſiege in form, unleſs they ſhould borrow artillery from the Engliſh; and it muſt certainly have been a difficult matter, had that expedient been adopted, to convert the Britiſh guns, mounted for marine ſervice, into battering cannon. The nature of the ground divided the whole of the attack into two ſeparate parts, by the courſe of the Biſagno. The forts Diamant and l'Eperon covered the line of defence on the left; and on the right it was ſupported by the fort of Richelieu, and five counter-forts, which are attached to it on the prolongation of the eminence. Maſſena having made all the diſpoſitions which ſeemed to promiſe a temporary ſecurity to Genoa, projected a grand movement, by which he deſigned to blockade Savona, retake Vado, and re-eſtabliſh his communication with general Suchet.

Early on the morning of the 9th of April, the French received intelligence that the Auſtrians were pouring down from all quarters on Genoa. Maſſena, however, made no alteration in his diviſion, but continued to make the moſt vigorous exertions for the execution of his plan; in purſuance of which he haſtened to eſtabliſh his head-quarters at Cogoletto: general Soult was to have been at Saſello in the evening, but an unexpected movement of the imperialiſts retarded his march, and laid him under the neceſſity of ſecuring his communication with Genoa. Next morning general Melas advanced againſt Maſſena with three bodies of his army: the diviſion on the right conſiſted of the brigades of Latterman, Buffy, and Sticker, commanded by count de Palfy; the centre was compoſed of the brigades of Bellegarde and Beautano, under the orders of general Bellegarde; and the left diviſion conſiſted of four Auſtrian regiments, under the count St. Julian. Meanwhile the French general Gazau took a poſition on the road leading to Pouzonne; and general Poinſot prepared to attack, on the heights of Saſello, the Auſtrian rear-guard, which was bearing on Verneria.

Poinſot executed his project with ſuch impetuoſity, that he cut off part of the regiment of Deutchmeiſter, and took three pieces of cannon, with two hundred thouſand cartridges and ſix hundred priſoners. But a diviſion of twelve hundred men under general Gardanne were attacked by the imperialiſts, and compelled to retire after a ſanguinary conflict. Meanwhile general Soult had gained ſeveral advantages, and effected a junction with Freſſinet, commander of the ſmall body who followed Maſſena on the coaſt. In an engagement which preceded this junction, the Auſtrians loſt ſeveral officers of rank, and upwards of a thouſand priſoners. The French, however, had no cauſe of exultation; for their loſs was equal to that of their enemies, and their money and proviſions had ſuffered ſuch a ſenſible diminution, that they were at length obliged to retire towards Genoa, and the forts with which it was environed.

During the fifteen days that the defence of Genoa was maintained by offenſive operations, Maſſena loſt ſuch a prodigious number of men, that he clearly perceived nothing more was to be expected from the force of his arms. He therefore reſolved to fortify himſelf in his poſitions, to diſcover ſome means of ſubſiſtence, and to exerciſe the ſtricteſt economy in the uſe of ſuch as yet remained. By means of ſome veſſels which had eſcaped the vigilance of the Engliſh fleet, he ſent letters to Corſica and Marſeilles, and about the ſame time he gained intelligence of the march of the army of reſerve under Bonaparte. This news rekindled the enthuſiaſtic ardour of his troops, and encouraged him ſtill to hold out, even under his accumulated misfortunes.

On the 30th of April, Maſſena reſolved to make a vigorous effort, with his corps of reſerve, to force the Auſtrians from their advanced poſitions. In this attempt he ſucceeded; but it was at the expence of a ſeries of deſperate actions, in which the combatants, being too near each other to make uſe of muſketry, had recourſe to their bayonets, and even to ſtones. After a moſt prodigious effuſion of blood on both ſides, the French took ſeveral thouſand priſoners, and burnt all the ſcaling-ladders which had been deſtined for the eſcalade of Genoa and the adjacent forts. At the ſame time general Soult made himſelf maſter of the poſt of Deux-Freres, and completed the defeat of the imperialiſts on that line.

Theſe deſtructive combats, however, procured no ſolid advantages to the republicans; but on the contrary augmented their misfortunes, by increaſing the number of priſoners, while they were driven to extremities for want of proviſion. The army of Bonaparte was at too great a diſtance to afford any relief to Maſſena; the city of Savona had ſurrendered to the Auſtrians; and the bombardment of Genoa, by the Engliſh fleet, overwhelmed the inhabitants with ſuch terror, that a general inſurrection was hourly apprehended. At length, on the 4th of June, about ſeven o'clock in the evening, Maſſena ſigned the treaty for the evacuation of Genoa, on the moſt honourable terms, and the Auſtrians took poſſeſſion of the city.

The French army under Bonaparte now advanced to the plain of Marengo, where the preparations on the ſide of the Auſtrians ſeemed to be deciſive for battle. At this place both the French and imperialiſts exhibited extraordinary ſkill and reſolution; and the engagement was ſupported on both ſides with ſuch aſtoniſhing firmneſs, that the balance of victory long continued to waver, and the commanders of both parties

were expoſed to the moſt imminent danger, Bonaparte having his clothes pierced with balls in ſeveral places, and Melas being twice diſmounted by his horſe falling under him. At length, however, the French conſul, availing himſelf of an error which Melas had committed, ruſhed with ſuch irreſiſtible fury upon his enemies, that they were inſtantly thrown into diſorder, and compelled to retreat with the utmoſt precipitation. This dreadful defeat induced general Melas to ſolicit an armiſtice, and the anſwer of Bonaparte was dictated by a ſpirit of moderation. Hoſtilities were therefore ſuſpended until Melas ſhould receive further orders from Vienna; and the victorious conſul returned to Milan, where he ſolemnly recognized the Ciſalpine republic as a free and independent nation.

By the armiſtice of Marengo, the French army was to occupy all the country lying between the Chieſa, the Oglio, and the Po, and the Mincio was not to be occupied by either of the armies; the caſtles of Tortona, Alexandria, Turin, Arona, and Placentia, were to be put into the hands of the French by a certain time; the Auſtrian general was to releaſe all perſons, in the fortreſſes under his command, who might have been impriſoned for political opinions; and it was particularly ſtipulated that during the armiſtice no detachments ſhould be ſent from either party into Germany.

During theſe tranſactions the other diviſions of the French army croſſed the Rhine, under the command of generals St. Suſanne, St. Cyr, Moreau, and Lecourbe. The diviſion under St. Suſanne marched to Offenburgh, and that under St. Cyr advanced toward Fribourg, while Moreau proceeded, without any conſiderable oppoſition, to the point where the various diviſions had been appointed to meet, and Lecourbe made himſelf maſter of the caſtle of Hohenweil.

General Kray, who had ſucceeded the archduke Charles as commander of the Auſtrians, was now compelled to evacuate Donaweeſchingen in order to check the progreſs of the enemy. The left wing of the French, under St. Suſanne, immediately took poſſeſſion of that place, and, extending their flanks to the main body of Moreau's army, endeavoured to eſtabliſh themſelves in the lines of Stockach, with a deſign to oppoſe the lines of the imperialiſts. After ſome petty ſkirmiſhes on both ſides, an engagement took place at Moſskirk, in which Moreau, aſſiſted by Lecourbe, made ſome impreſſion on the Auſtrian battalions, and notwithſtanding their gallant exertions, compelled them to retreat with conſiderable loſs. The ſubſequent actions of Biberach and Memmingen proved equally unfortunate; and general Kray deemed it expedient to retire to Ulm, where he was joined by ſix thouſand Bavarian and Wirtemburg auxiliaries, under the command of baron Deux Ponts.

The French now advanced to Rhieneck, little more than a league from Ulm, and ſeemed inclined to give battle to the imperialiſts; but general Kray prudently avoided that meaſure until the promiſed reinforcements ſhould arrive from Auſtria. Six battalions of infantry, drawn from the garriſon of Vienna, were on their march, and to be followed by ſix more, and five ſquadrons of cuiraſſiers; and the garriſons of ſeveral Auſtrian, Bohemian, and Moravian, cities, were appointed to form a body of reſerve on the banks of the Adige and the Danube. Under theſe circumſtances, both generals contented themſelves with mutual obſervation; but the French contrived to turn this ſtate of inaction to their advantage, by laying the whole of Franconia and Swabia under contribution. For nearly two months Moreau had ſought nothing further than to amuſe the imperialiſts by marches and counter-marches, by threatened ſieges and ſham irruptions, to alarm them for the ſafety of the hereditary ſtates, and prevent them from paying any attention to the affairs of Italy; but when the victory of Marengo had put the fate of Italy into the hands of Bonaparte, Moreau determined to act with more enterprize and vigour. Accordingly he prepared to croſs the Danube, in order to bring general Kray to a deciſive action; and ordered Lecourbe to paſs over with the right wing of his army between Dillingen and Blenheim, while the main army croſſed at a point nearer Ulm. The execution of this deſign was followed by a ſeries of actions on the famous plains of Blenheim, in which the Auſtrians loſt, in killed, wounded, and priſoners, about five thouſand men; and the French more than half that number. The diviſions under generals Sztarray and Nauendorf being cut off from the main army of the imperialiſts, general Kray was obliged to leave Ulm under the protection of a garriſon, while he retreated with the remains of his forces to Ingolſtadt. Bavaria was now laid under heavy contributions; the duke and duchefs of Wirtemberg were compelled to retire, with their family and ſuite, to Anſpach; and the whole electorate of Treves fell into the hands of the enemy; while an army of thirty thouſand French and Batavians was marching toward the Upper Rhine, with a deſign to penetrate into Franconia.

In theſe embarraſſing circumſtances the Auſtrians ſolicited an armiſtice, which was granted on the 15th of July, 1800. This truce led to a negociation; and in leſs than a fortnight count St. Julian on the part of the emperor, and the ex-biſhop Talleyrand on the part of France, ſigned preliminaries of peace, on the baſis of the treaty of Campo-Formio. The ſame diſtreſſes which induced the Auſtrian government to requeſt a ſuſpenſion of hoſtilities, urged the neceſſity of concluding a definitive treaty of peace. But there were ſtill ſome circumſtances which tended to ſupport the emperor's ſinking ſpirits, and to revive the ambition inherent in his family. Hungary, and many of the hereditary ſtates, began to exhibit an abhorrence of the intolerable oppreſſion of the republicans; and his imperial majeſty had concluded a treaty by which he became indebted to Great Britain in the ſum of two millions ſterling, not chargeable with intereſt before the expiration of ſix months from the concluſion of a peace between him and the French republic. It had alſo been ſtipulated that the war ſhould be carried on with all poſſible vigour, and that neither party ſhould conclude any treaty which did not comprehend the other. The emperor, faithful to theſe engagements, exerted himſelf to include the Britiſh nation in a treaty of general peace; and when the enſuing correſpondence between France and England proved abortive, he poſitively refuſed to ratify the preliminaries which had been ſigned at Paris, alleging that the count St. Julian had exceeded his orders.

Towards the end of Auguſt, therefore, the French government informed its generals, that the emperor had refuſed to ſubſcribe to the conditions which had been ſigned by his plenipotentiary, and that the armiſtice would be at an end on the 7th of September. The general officers and chiefs of corps were alſo exhorted to improve this interval in ſuch a manner that they might be able to encounter the enemy as ſoon as they ſhould receive orders. About the ſame time his imperial majeſty iſſued a proclamation, aſcribing the rupture of the armiſtice to the French, and expreſſing his intention of putting himſelf at the head of his army in Germany. The firſt motions of the French ſeemed to indicate an intention of carrying the chief weight of the war into Bohemia: but the grand plan of Moreau's operations was not clearly developed; this campaign being cut ſhort, by deciſive advantages gained over the imperialiſts. On the 29th of November, Moreau commenced hoſtilities near the Inn, and carried the Auſtrian works at Weſſemberg: but he was leſs fortunate in a ſubſequent engagement with the archduke John (younger brother of the emperor) in the vicinity of Haag. The Auſtrian troops were at firſt driven back by the irreſiſtible fury of their aſſailants; but victory at length

decided

decided in their favour, and the French were repulſed with great ſlaughter. On the ſame day an attack was made on an Auſtrian poſt near Roſenheim; but the French were driven back with conſiderable loſs, and the prince of Condé's corps acquired great reputation by their cool firmneſs and intrepid conduct.

Encouraged by theſe ſucceſſes, the archduke John reſolved to aſſault the French poſt at Hohenlinden, and on the 3d of December put his troops in motion for that purpoſe; but his march was ſo much retarded by a heavy fall of ſnow, that only the central column arrived at the place of deſtination at the time when all the diviſions ought to have been ready for action. The French perceived this misfortune, and reſolved to convert it to their advantage. Accordingly a diviſion of their army, under Richenpanſe, pierced between the left wing of the Auſtrians and the centre, and aſſaulted their left flank and rear at the moment when they had formed in front, and commenced an attack. The Auſtrians ſuſtained the conflict, for ſeveral hours, with their accuſtomed bravery; but their centre being repelled by the impetuoſity of the French, they were thrown into confuſion, and driven to the heights of Ramſam. In order to improve this advantage, general Moreau puſhed on to Saltzburgh, which he took after an obſtinate conflict: the ſubſequent reduction of Newmark cut off all communication between the archduke John and general Mollitor; and the Tyrol was threatened, on three ſides, with invaſion.

During theſe tranſactions, the Gallo-Batavian army under Augereau gained ſome conſiderable advantages over the imperialiſts in Franconia. On the rupture of the armiſtice, the baron d'Albini, who commanded the troops of Mayence, attacked the Batavian infantry near the bridge of Aſchaffenburg; but, after three vigorous aſſaults, he was repulſed. The Gallo-Batavian army then quitted its cantonments; and general Dumonceau undertook the ſiege of Wurtzburg, while Augereau repaired to Bamberg in order to give battle to the Auſtrians and drive them beyond the Rednitz. They occupied two advantageous heights that command Burg-Eberach, and diſputed every inch of ground with ſurpriſing gallantry; but they were ultimately forced to retreat before the enthuſiaſtic fury of their enemies. After this occurrence, the Auſtrians made ſeveral attempts to cut off the communication between Augereau and Moreau, and, if poſſible, to turn the left of Moreau's army: but they found it impoſſible to acquire any advantage. For about fourteen days, ſeveral ſkirmiſhes took place between the out-poſts; and on the 18th of December a moſt ſanguinary battle was fought between Lauff and Nuremberg. This action was ſuſtained with equal firmneſs and bravery from nine o'clock in the morning till the cloſe of the day, and the loſs on both ſides was ſaid to be nearly equal.

Meanwhile the Auſtrian army of the Danube removed its head-quarters from Straſwalden to Skwanſtadt, where the archduke Charles re-aſſumed the chief command. That prince immediately ordered his troops to remain on the defenſive; but before he could make the requiſite diſpoſitions, the French army of the Rhine advanced in five diviſions, and a general engagement enſued, in which the imperialiſts were defeated with prodigious loſs. Next morning they endeavoured to make a ſtand on the heights of Lambach; but, after an obſtinate conflict, they were again overpowered, and compelled to retire to Lintz, within ninety-two miles of Vienna.

General Moreau now formed his army into three columns; of which the right, under Lecourbe, advanced toward the mountains ſouth of Steyer on the Ens; the centre, commanded by Moreau himſelf, marched to Steyer; and the left, under Grenier, proceeded on the high road from Lintz towards Vienna. That great city was now overwhelmed with conſternation, and the diſtreſs of the loyaliſts was greatly augmented by the behaviour and expreſſions of many diſaffected perſons, who ſeemed to exult at the approach of the enemy: ſuch was the general deteſtation of the war, and ſuch the progreſs of French intrigues and principles. A party of life-guards was ordered to eſcort the imperial family to Oſen; the gallery of paintings, the imperial treaſury, and other valuable articles, were placed in waggons ready for removal; and the Auſtrian capital was preparing to ſuſtain a ſiege; when the archduke Charles brought intelligence that he had concluded an armiſtice of thirty days with general Moreau.

This armiſtice aſſigned to the French army of the Rhine a triangular portion of territory, whoſe baſe reſted on Wurtzburg and Chiavenna, and whoſe point reſted between Leoben and Packlarn on the Danube. It was not to be for a leſs duration than thirty days, at the expiration of which time hoſtilities were not to be reſumed until a farther notice of fifteen days, to be dated from the hour when the notification of the rupture ſhould be made public; and the armiſtice was to be indefinitely prolonged till the notice of a rupture. No corps or detachment, either of the French army of the Rhine or of the imperialiſts in Germany, were to be ſent to the reſpective armies in Italy, ſo long as no armiſtice ſhould take place in that country. The general in chief of the army of the Rhine engaged to tranſmit the preſent convention to the generals of the Gallo-Batavian army, that of the Griſons, and that of Italy, with a preſſing exhortation to conclude a ſuſpenſion of hoſtilities.

As ſoon as general Augereau was informed of the new armiſtice, he ſent to the Auſtrian generals Simbſchen and Klenau, to confer on the ſettlement of a line of demarkation between the Gallo-Batavian army and the imperial troops in the Upper Palatinate and Franconia. Accordingly it was agreed that the Maine and the Rednitz ſhould ſeparate the two armies as far as Lichtenfells, on the line of neutrality. This line was to comprehend Forkheim, Bamberg, Bannach, Haffalſtein, and Lichtenfells; the Gallo-Batavians were to occupy the city and diſtrict of Nuremberg; and the general in chief was to eſtabliſh his head-quarters and his park of artillery at Wurtzburg. While theſe negociations were carrying on in Germany, Italy ſtill groaned beneath the ſcourge of war. But in order to give a clear idea of its preſent ſituation, we muſt take a retroſpective view of ſome events, which have been hitherto omitted, in order to avoid an interruption of the more connected parts of our hiſtory.

By the armiſtice concluded after the battle of Marengo, the French army was to occupy all the country between the Chieſa, the Oglio, and Po; and the Auſtrians were to retain Tuſcany, with the city and citadel of Ferrara. But the Auſtrians inſiſted on keeping poſſeſſion of an extenſive territory, called the Poleſino of Ferrara; and during the diſpute which reſulted from their pretenſions, a general inſurrection of the people was concerted and encouraged in Tuſcany. Hoſtilities were on the point of being renewed, when general Brune, hearing that preliminaries had been ſigned by count St. Julian, expreſſed his intention of ſuſpending the motions of his troops until he ſhould receive farther orders from his government. A new convention was ſoon afterward agreed to at Caſtiglioni, by which general Brune conſented to wait for an anſwer from Vienna reſpecting the evacuation of the Ferrareſe by the imperialiſts. No mention was made in this treaty of diſarming the levy-en-maſſe: but this was not in a ſtate of great forwardneſs; nor, if it had been completely raiſed, could ſuch a rabble of enervated Italians have been formidable to the veteran troops of France.

The French, however, evidently ſought a pretext for an irruption into Tuſcany, that they might be enabled, in caſe of a renewal of the war, to prevent the landing of Britiſh forces in that quarter. A general officer was ſent

ſent in the name of the commander-in-chief to general Sommariva, who commanded in Tuſcany, requeſting that the armed peaſants might be immediately diſbanded, and threatening an hoſtile incurſion in caſe of refuſal. As theſe demands were not attended to, lieutenant-general Dupont entered Florence with a numerous army, while general Clement advanced to Leghorn. The inſurgents were immediately diſperſed, and the Auſtrians, to the number of two thouſand five hundred, were permitted to retire to Ancona; but the merchandiſe of the Engliſh (though permitted by the armiſtice of Marengo to retain its neutrality) was, in open violation of public faith, confiſcated for the benefit of France. The invaſion of Tuſcany, however, ſeems to have had but little effect on the imperial cabinet; for it did not occaſion any movements on the part of their armies till the expiration of the truce of Hohenlinden. Some light ſkirmiſhes had, indeed, taken place between the advanced poſts, but the campaign was not reſumed till the 24th of December.

It appears that the French were, at firſt, inclined to fall upon the Auſtrians near the lake of Garda, and there to turn the lines of the Mincio: but general Lebrune, animated by the ſucceſſes of Moreau, reſolved to attack them in front. Accordingly a bridge was thrown over the Mincio, the paſſage effected, and the left bank maintained by a detachment of French forces againſt the vigorous and repeated exertions of the imperialiſts. In the courſe of that day the French took upwards of two thouſand priſoners, and ſeveral ſtandards; and next morning the paſſage of the river was carried by the main body at Monzanbano. An order given by the lieutenant-general Delmes for a general charge by the French infantry and cavalry, was executed without firing a ſingle cannon; and, after a moſt obſtinate conflict, the Auſtrians were routed with prodigious ſlaughter. Meanwhile two French brigades were attacked by a reſerve of twelve thouſand Hungarian grenadiers; but, having received a timely reinforcement, they defeated the aſſailants, and made themſelves maſters of four pieces of cannon, a cheſt of ammunition, and about two thouſand priſoners. At Vallegio they encountered freſh difficulties, from the intrepid firmneſs of the imperialiſts; but, after the village had been three times taken and retaken, and prodigies of valour performed on both ſides, the Auſtrian commander thought proper to retreat; and the French took poſſeſſion of five pieces of cannon, two howitzers, nine hundred muſkets, and eighty horſes, beſides a prodigious number of priſoners. This defeat, and the arrival of freſh reinforcements to the enemy, induced the Auſtrians to evacuate the caſtle of Vallegio, which they had hitherto retained.

Next morning, lieutenant-general Delmas ſurrounded the redoubts of Salionga, and began to make preparations for an aſſault: but the Auſtrians, fully ſenſible of the impracticability of a ſucceſsful defence, ſurrendered at diſcretion; and fourteen pieces of cannon, two pair of colours, and a thouſand priſoners, fell into the hands of the victorious republicans. Elated by theſe ſucceſſes, the French proceeded to occupy on their left the heights of Caſtel-Nuovo, and on their right took poſt between Legnano and Verona; while ſome detachments were ordered to lay ſiege to Peſchiera, and blockade Mantua.

Meanwhile the main body of the Auſtrians had paſſed the Adige; and they had ſtrengthened with ſome troops and a numerous artillery an intrenched camp which they had formed near Verona, covering the great road between that town and Mantua. From the reports of a reconnoitring party, it appeared that great numbers of Auſtrians were drawn up along the whole line of the Adige; the pontoons were, therefore, ſent to Bouſſolingo, and preparations were made for paſſing the river at that place on the enſuing morning. An attack was to be made in two points: the firſt at the place where it was really intended that the advanced guard ſhould paſs, and the ſecond to operate as a feint. The diviſion, under Boudet, received orders to ſtorm the Auſtrian poſt at Chiuſa, and to advance to the heights of Romada; while another diviſion of infantry and cavalry ſhould paſs the Adige, and the right wing, commanded by general Dupont, ſhould take poſt at Bouſſolingo. Theſe orders were all executed on the morning of the 1ſt of January, 1801; and in the courſe of that day the whole army, excluſive of the diviſions under Boudet and Rochambeau, gained the left bank of the Adige, and marched forward with ſuch rapidity, that the Auſtrians, after throwing reinforcements into the two forts, deemed it adviſable to evacuate the town of Verona. Meanwhile Boudet made himſelf maſter of Chiuſa, Alla, and Roveredo, and formed a junction with Rochambeau, who had reduced Riva and Torboli, and concentrated his forces at Mori.

Whilſt one diviſion of the French army, under general Morencey, was charged with the blockade of the forts of Verona, the advanced guard, with the reſerves of infantry and cavalry, advanced towards Vicenza in purſuit of the Auſtrians; who defended ſeveral poſitions with extraordinary gallantry, and retreated in good order behind Montebello. The French, now purſuing an eaſy courſe of ſucceſs, croſſed the Brenta, made themſelves maſters of Trent, and chaſed the imperialiſts from Baſſano and Caſtel-Franco to Salvaroza. In this career the republicans are ſaid to have marched one hundred and thirty miles in eight days, and to have taken upwards of three thouſand priſoners. Prodigious numbers of the Auſtrians were ſlain in their retreat; and the roads near Salvaroza were ſtrewed with the bodies of dead and dying men.

On the 12th of January, the left wing of general Lebrune's army had its foremoſt columns at Azalo, and by its poſt was connected with the centre, under the command of general Souchet; the advanced guard was ſtationed at Salvaroza; and the corps of reſerve, with the dragoons and the cavalry, were drawn up in the neighbourhood of Caſtel-Franco: while the Auſtrian army lay encamped on the plain of Salvaroza; and, notwithſtanding their recent misfortunes, were preparing for another engagement.

In this poſture of affairs an Auſtrian colonel arrived at the French head-quarters, and propoſed conditions of an armiſtice, which was accordingly concluded on the 16th of January at Treviſo, within twenty miles of Venice. The line of demarkation between the two armies was to be the Tagliamento, from its efflux in the mountains of Tyrol, to the place where it diſembogues into the Adriatic. The fortreſſes of Peſchiera, Porto-Legnago, Ancona, and Ferrara, were to be ceded to the French, and the blockade of Mantua was to be continued: but by a new armiſtice, concluded at Luneville on the 6th of February, his imperial majeſty conſented to give up Mantua, as an indiſputable proof of his ſincerity.

At this juncture, the meaſures of the Auſtrian miniſtry were generally deteſted and ridiculed; the nerves of the army were unſtrung; the ſentiments and wiſhes of the officers were diſcordant; and almoſt the only point in which all ranks agreed, was a deſire that the war, which had occaſioned ſuch a prodigious waſte of blood and treaſure, ſhould be brought to a ſpeedy concluſion. Such being the ſtate of the people, and even of the military, his imperial majeſty at laſt reſolved to give peace to the empire; and a definitive treaty was accordingly concluded at Luneville, on the 9th of February, 1801, between the French republic, and the emperor and the Germanic body.

This treaty was, without doubt, extremely unpalatable to the houſe of Auſtria; as its principal articles deprived them of the rich inheritance of their Burgundian anceſtors, and almoſt excluded them from Italy. Compelled to relinquiſh the ſovereignty of the Belgic pro-

vinces, the grand-duchy of Tuſcany, and all the fine domains on the left bank of the Rhine, they were, in a great meaſure, iſolated from thoſe points of contact where they had ſo often exerted their ſtrength againſt other powers, and on which they had long aſſerted a right to interfere in the principal affairs of Europe. Many able politicians, however, were of opinion that, in the compactneſs of empire acquired by the acceſſion of Venice, Iſtria, Dalmatia, and the Venetian iſles in the Adriatic, the Auſtrian family had gained in real ſtrength an ample compenſation for the loſs of their more extenſive, but disjointed, territories.

The elector-palatine of Bavaria now likewiſe renounced the duchies of Juliers, Deux-Ponts, and their dependencies; together with the bailiwic of the palatine of the Rhine.

Such was the humbled ſtate of the emperor Francis II. at the ſigning of the peace of Luneville; and however derogatory or ſubverſive it might be thought of the eſtabliſhed rights and hereditary claims of the houſe of Auſtria, yet would it have been fortunate for the affairs of the emperor, had he ſuffered things to reſt upon the baſis of that treaty. But inſtead of which, the moment that the king of Great-Britain broke with the French republic concerning the deſtination of Malta, Francis availed himſelf of that opportunity of preparing for a freſh war, under the deluſive hopes of recovering the ceded territories, and of reſtoring the loſt laurels of his fading crown and dignity.

While the French emperor Napoleon was taking poſſeſſion of the electorate of Hanover, under pretence of repriſals againſt the king of Great-Britain for the iſland of Malta, Francis entered into a quadruple alliance with England, Ruſſia, and Sweden, to proſecute the war with vigour and effect, by croſſing the Rhine, and commencing hoſtilities in the territory of France. The allied army was to conſiſt of 500,000 effective men; and their operations, on paper, were moſt ably projected. But it unfortunately happened with theſe, as with moſt allied armies, that they were not mutually prepared, nor ready to act in concert with each other. Of this the crafty Napoleon took an early advantage. Inſtead of allowing the Auſtrians time to croſs the Rhine, and carry the war, as they had projected, *into the very heart of France*; the republican army was the firſt to croſs that river, and unite its forces with thoſe of the elector of Bavaria, who had ſecretly entered into an alliance with the French emperor.

The grand diviſion of the imperial army, under the chief command of the archduke Ferdinand, and field-mareſchal baron Mack, finding itſelf anticipated by the French in croſſing the Rhine, was compelled to fall back into the interior of Swabia, with a view to concentrate and ſtrengthen its lines. The diviſion under prince Ferdinand made choice of a ſtrong poſition for its encampment on the banks of the Danube; while that of lieutenant-general Mack ſecured itſelf under the ſtrong fortifications of the city of Ulm. The French army, under the command of the emperor Napoleon in perſon, with mareſchal Berthier, and the generals of diviſion Ney and Laſnes, came up with the archduke Ferdinand's diviſion, near Gramberg, on the 7th of October, 1805; and on the 8th, a partial action took place at Wertingen, which was followed on the 9th by the ſkirmiſh near Gunſberg, wherein the Auſtrians loſt 2500 men; and prince Ferdinand was obliged to retire to the banks of the Inn.

After this ſucceſs, the French emperor loſt no time in marching for Ulm. At day-break, on the morning of the 14th of October, the corps under mareſchal Ney attacked and took poſſeſſion of the bridge at Elchingen; and, equally early, on the morning of the 15th, the emperor Napoleon drew up his whole army in line of battle before the city of Ulm. Here he harangued each regiment, each battalion, ſeparately and cordially, addreſſing himſelf to the feelings and paſſions of his ſoldiers, and inſpiring them with courage and reſolution to die, rather than loſe the firſt great battle, which was, he ſaid, on that day to be fought; and on the ſucceſs of which, he very juſtly remarked, would in a great meaſure depend the ultimate fate of the war. He was anſwered from the ranks by ſhouts of "Victory or death!"—and the whole line were anxiouſly waiting for the dreaded onſet from the veteran corps under field-mareſchal baron Mack, when, to the utter aſtoniſhment of the whole French army, as well as of all Europe, lieutenant-general Mack, with the flower of the Auſtrian army, conſiſting of thirty-three thouſand fine troops, all picked men and real ſoldiers, who had faced death in a thouſand forms without fear or diſmay, entered into a haſty capitulation, and never even attempted to ſave the garriſon, or ſtrike a ſingle blow! How much he was deſpiſed for this puſillanimous conduct, even by his own ſoldiers and his adverſaries who wiſhed to fight, let their exclamations and ſtinging reflexions evince to all the world. On the 17th of October the articles of capitulation were ſigned; and on the 20th Napoleon Bonaparte had the pride of ſeeing this fine Auſtrian army defile before him, which laſted from two o'clock in the afternoon till ſeven in the evening; during all which time he kept field-mareſchal count Mack, with eight of the Auſtrian generals, and ſeven of the lieutenant-generals, at his ſide, to witneſs their own diſgrace; which indeed muſt have been truly heart-breaking to every man of ſentiment and courage, to ſee ſo numerous and fine an army march before the conqueror with all the honours of war, though without a ſcratch or a wound,—then ignobly to lay down their arms, and be driven, like beaſts of burden, into the interior of France, as priſoners of war! What ſoldier amongſt them would not have vigorouſly fought, and nobly died in the defence of his country, rather than have ſubmitted to ſuch indelible diſgrace and infamy? Let field-mareſchal count Mack anſwer the queſtion.

Whether the divided and disjointed organization of the Auſtrian troops under different deſtinations, was politic and judicious, or not, may be a queſtion in military ſcience; but it is nevertheleſs certain that it proved fatal to nearly the whole of that noble army, which fell like a vaſt foreſt before the keen edge of the woodman's axe. Beſides the flower of the army under the archduke Ferdinand and count Mack, fifty thouſand choice troops, called "the army of Italy," were detached under the command of the archduke Charles; to whom was oppoſed the French diviſion under general Maſſena. Here the whole campaign was ſpent in fatal ſkirmiſhes, by which the army was reduced to half its number, and no one point gained: prince Charles ſlowly and unwillingly moving from poſt to poſt through the whole Italian territory, until he was finally obliged to retreat for ſafety into the hereditary dominions of Auſtria. Another grand diviſion of the army under the command of the archduke John, and generals Jellachich and Wolfskehl, were deſtined to the defence of the eaſtern and weſtern Tyrol, and the Voralberg; yet, notwithſtanding the utmoſt bravery of theſe troops, prince John was overpowered by ſuperior numbers of the French, commanded by mareſchal Ney; and he was defeated, after an obſtinate action, at the foot of mount Brenner, in the Tyrol. The other generals, at the head of the diviſion in the Voralberg, were defeated in a ſimilar way by a ſuperior corps of the enemy under the command of mareſchal Augereau, who took Jellachich priſoner, with the greateſt part of his troops. Thus the Auſtrian army, conſiſting of nearly two hundred and fifty thouſand men, was prematurely defeated, and upwards of one hundred thouſand of them taken priſoners, by being engaged piecemeal, and under different deſtinations; but which, had they been kept together, and concentrated ſo as to have encountered

the enemy in one mighty body, it is more than probable that the event of the war would have taken a very different turn.

It now became the object of Napoleon to follow up this great blow with redoubled vigilance; and his determination was to take poſſeſſion of Vienna, the capital of Auſtria, by forced marches; and to this point, as to a centre, he commanded the four diviſions of his army to direct their courſe, in ſpite of every obſtacle that might preſent itſelf in their way. On the oppoſite ſide of the Inn, a numerous body of Auſtrian and Ruſſian troops were poſted, as if to diſpute the paſſage; but after a ſlight ſkirmiſh they fell back to Lintz, and left the French army to croſs the river without interruption, which it accompliſhed on the 28th of October. It now advanced through the Auſtrian territory, almoſt without reſiſtance, till it reached St. Polten, only twenty-ſix miles from Vienna. Here Napoleon was waited upon by a deputation from the emperor Francis, tendering him the keys of the city, and truſting to his magnanimity and juſtice, in not ſuffering private perſons, nor their property, to be violated, nor that magnificent metropolis to be defaced and pillaged by the ſoldiery. On the 13th of November, 1805, Napoleon, at the head of his whole army, took poſſeſſion of Vienna; and to his honour it muſt be recorded, that he held the preſervation of the city, and the rights of its inhabitants, moſt ſacred; though the diſaffected and inſidious among the natives came forward to plunder with haſty ſtrides; and every viper that had for ages been foſtered in the boſom of the ſtate, now erected their deleterious fangs, to glut on the vitals of the parent which gave them birth, or the government which ſecured their exiſtence, and afforded them nouriſhment and protection! But there muſt be ſome ſuch reptiles in every ſtate, and in every country, or the meaſure of guilt and iniquity could never be full.

Previous to this direful and ever to be lamented day, (for Vienna had never before been taken or entered by an hoſtile army,) the emperor Francis II. had retired to Preſburg, in Upper Hungary, in his way to Olmutz, the capital of Moravia, where he was to meet the Ruſſian emperor Alexander; and to which place his empreſs, family, and houſehold, with all his valuables that could be ſecured in time, had been before removed. And here alſo, amid the poignant diſtreſs of the empreſs and royal family, and after having loſt his whole Auſtrian dominions, Francis magnanimouſly publiſhed a declaration to his ſubjects, couched in the moſt animated terms, "that it was ſtill his determination to purſue his fortune to the laſt ſtake, and neither ſubmit to an inexorable foe, nor enter into a ſeparate peace, while he could rely on the *pledged aſſiſtance of the king of Pruſſia*, and on his invincible allies the emperor of Ruſſia, and the king of Great-Britain,—*but under circumſtances of the very laſt extremity.*" He alſo called upon his loyal and beloved ſubjects "to riſe in maſs, further to ſtrengthen and aid the undiminiſhed armies of his great allies and friends, until the emperor of the French ſhould be brought to ſuch terms and conditions of a peace, as would not tarniſh or abridge the honour and independence of the firſt and higheſt monarchy in Europe."

But the memorable event which was to decide the fate of the empire, and blaſt the laurels of the houſe of Auſtria, was now at hand: this was the battle of Auſterlitz; the only important ſtand made by the allies during the war. The emperor Francis had collected a conſiderable part of his diſcomfited army, conſiſting of about twenty-five thouſand men, under his own immediate command, aſſiſted by prince John of Lichtenſtein; and which he now united to the grand Ruſſian army, conſiſting of about eighty thouſand men, commanded by the emperor Alexander in perſon, aſſiſted by the grand duke Conſtantine, prince Pangrazion, and the generals Kutuſow and Buxhovden. The French army was commanded by the emperor Napoleon in perſon, aſſiſted by the mareſchals Soult, Laſnes, Bernadotte, Davouſt, and prince Murat, and conſiſted of one hundred and twenty thouſand men, elated with conqueſt, and enthuſiaſtic in the purſuit of victory. Early on the 2d of December, 1805, the arduous and bloody conflict began. The whole French line was inſtantly put in motion; and having a moſt decided advantage in its numerous cavalry and artillery, it galled and mowed down the ranks of the allies even before they could come into action. The horſes of the Ruſſian artillery and cavalry, worn down by ſo long a march, and deſtitute of food for three days previous to the battle, were wholly incapable of acting. The only alternative left for the allies, was to march up to within point-blank ſhot of the enemy, and after diſcharging a few rounds as they approached, to engage them on the point of the bayonet. This manœuvre was enforced with all poſſible expedition throughout the line, and a dreadful effuſion of human blood was the conſequence. The French front were compelled to give way; but being ſupplied with a ſtrong reinforcement of freſh troops, they in turn gained ground, and a dreadful havock was again made; both ſides fighting more like enraged tigers, than like men. At length the French ſucceeded in forcing the centre of the allies; and the right and left wings being too much disjointed, and deſtitute of cavalry, the enemy eaſily turned their flanks, and fell upon their rear. Every chance of recovering this misfortune was loſt; a dreadful ſlaughter enſued, and victory declared for the French. Here ended the laſt ſtruggle of Francis II. with the implacable Napoleon Bonaparte; and the emperor Alexander marched back his diſcomfited troops to the Ruſſian territory

Had, indeed, the allied powers been punctual to their engagements, and taken their ground with the ſame promptitude and alacrity as the French:—had the Engliſh, and Swedes, and Ruſſians, united with the Hanoverian and Heſſian troops, formed a vaſt army in the rear of the French, as had been ſtipulated:—and had the heſitating indeciſive Pruſſian monarch joined his unimpaired legions to them, *as pledged to the emperor Francis:*—is it reaſonable to imagine that the republican army, after all, and more than all, its unparalleled ſucceſſes, hemmed in on all ſides, and ſhut up in the moſt diſtant province of the German empire, where its enemies would have multiplied every hour, and all the neutral ſtates have joined their contingents to the imperial army,—could ever have cut its way through ranks of ſuch combined magnitude, or made good a retreat through a country, where all reſources and ſupplies might have been completely cut off?—The elector of Wirtemburg publicly declared that he only waited for the king of Pruſſia, to join, with him, his forces under the imperial ſtandard; and but for want of which, he was compelled to take an active part in favour of the enemy. But it was unfortunately the lot of Frederic William not to participate in ſo much glory:—the criſis of his fate was not yet arrived:—coveting too much, he luſted for more than was his due:—while courted and importuned on every ſide to throw the weight of his mighty army into the ſcale, he had the vanity to ſuppoſe his nod could at pleaſure ſtrike the balance. By this deluſion he eventually loſt his empire, even before he knew the extent of his own imbecility. Thus we partly trace the unfathomable ways of divine Providence, in making man the inſtrument of his own chaſtiſement,—in dealing out to all his creatures a juſt and equal retribution.—See the article PRUSSIA.

Immediately after the fatal battle of Auſterlitz, the emperor Francis, foiled in every hope, and reduced to the laſt extremity, was compelled to ſue for an armiſtice, as a prelude to a peace on ſuch terms as the conqueror might think fit to grant. Theſe, though hard, and extremely humiliating, were nevertheleſs not ſo ſevere as might have been expected from the triumphant leader of a revolutionary army. It was ſtipulated that the emperor

emperor of Auſtria ſhould for ever relinquiſh the ſtates of the republic of Venice, as ceded to him by the treaties of Campo Formio and Luneville, with the Venetian iſles, Iſtria, and Dalmatia, now to be united to the kingdom of Italy; and of which the emperor Napoleon ſhould be acknowledged king. That the electors of Bavaria and Wirtemburgh, the allies of France, ſhould reſpectively take upon them the title of king, and be thus acknowledged by the houſe of Auſtria and the German States; and who ſhould never in future exerciſe any kind of authority over them, or over the elector of Baden, or the territories claimed, or to be claimed, by all or either of them. Signed at Preſburgh the 26th of December, 1805.—For more extenſive particulars of this war, and the conſequences reſulting from it, as well as for the complete hiſtory of the French Revolution, ſee the article FRANCE, vol. vii. p. 760–905.

CONSTITUTION AND GOVERNMENT.

The German conſtitution and government appear to have been founded upon the baſis of its numerous independent ſtates, of which it is ſaid there are nearly three hundred; and, upon the authority of the *electors*, who, as we have ſeen, p. 484, aſſumed the right of electing their emperors ever ſince the demiſe of Louis IV. the laſt reigning prince of the houſe of Charlemagne in Germany. The emperor Maximilian firſt divided the empire into *ten circles*, in the year 1552; but the circle of Burgundy or the Netherlands being afterwards detached from the empire, there of courſe remain only *nine*. It is the claim of theſe electors, which originally, as well as at preſent, renders the German empire elective; and on this account, every king of the Romans, when choſen, is required ſolemnly to renounce all attempts to render the dignity hereditary in his family. The conſtitution of the empire, ſince the peace of Weſtphalia, which terminated the thirty years war againſt the proteſtants, makes no expreſs limitation with reſpect to religion, nation, ſtate, or age; but the engagement at the coronation, "to protect the pope and the holy ſee," ſeems to exclude a proteſtant from this dignity. On the intricate ſubject of the Germanic Conſtitution, as ſettled at the peace of Weſtphalia, the ingenious Pütter remarks as follows:

"Conſidering the various revolutions which were occaſioned partly by the number of important articles of that peace, and partly by the calamities of ſo long and ſo general a war, it cannot be wondered that the whole conſtitution of the Germanic empire, almoſt all at once, underwent a conſiderable change, or rather firſt acquired its proper firmneſs, which ſoon diſcovered itſelf by effects of the firſt importance. As ſuch great revolutions in general do not ariſe ſuddenly, without many preparatory circumſtances, which gradually unfold themſelves, ſo Germany had been for ſeveral centuries in ſuch a ſituation, that it might eaſily be foreſeen, that it would not, like France and other European nations, continue an undivided empire, which could not upon the whole be conſidered in any other light than as a ſingle ſtate. From the hereditary rights of the dukes and counts in their original ſtate, as ſervants of the crown, and of the rights of ſovereignty of which the ſpiritual and temporal ſtates gradually acquired the poſſeſſion, it could not be ſaid, that the emperor was the only regent in Germany, or that the whole of Germany could be conſidered as a ſingle ſtate. Every ſpiritual and temporal elector, or prince, count, or prelate, had in fact been long the actual ſovereign of his own country. Every imperial city formed a diſtinct, though ſmall, republic. Even cities which were not imperial, were almoſt in a ſimilar ſituation. Every imperial knight, or immediate nobleman, had dominion over the diſtrict of his eſtate, as his territory. Germany, therefore, had been long divided into as many ſeparate ſtates as there were electorates, principalities, counties, imperial prelacies, imperial cities, immediate nobility, and imperial villages; and it could only ſo far be ſaid, that Germany continued upon the whole one ſtate, and one empire, as all theſe particular ſtates did not diſſolve the bond which originally united them as members of the ſame empire, but continued in a mutual and perpetual connection, ſubject to the ſame fundamental laws, and to one common ſupreme head.

"The remains of a ſimilar conſtitution were evident even in France, as long as there were dukes of Burgundy and Britanny; and formerly the conſtitution of that country was almoſt the ſame as that of Germany; but the great difference which now appears between the internal conſtitution of the two nations of France and Germany, diſcovered itſelf in two principal things: firſt, that the kings of France, notwithſtanding the increaſe of the number of dukes, counts, and prelates, always preſerved their own domains, whilſt the emperor, on the contrary, loſt them all; and then, that in France, all the ſtates, as at laſt Burgundy and Britanny, were united to the crown; whilſt in Germany, on the contrary, even the hopes of redeeming thoſe domains which had been only mortgaged, were at laſt totally abandoned.

"Every thing was already, and had been for many years, in ſuch a ſituation in Germany, that it was eaſy to perceive that it would be difficult to make any further alteration; eſpecially as the attempt made by the powerful emperor Charles V. which had the faireſt proſpects of ſucceſs, was totally fruſtrated by the valiant conduct of a ſingle German prince, [Maurice,] ſupported by France. The queſtions, however, likely to ariſe concerning the ſingular conſtitution formed in Germany, which was almoſt the only one of its kind, were not ſo thoroughly determined that obſtacles could not be raiſed, and that a Ferdinand III. after the victories of Prague, Lutter on the mountain of Barenberg, and Nordlingen, might not ſtill feel a ſtrong inclination to imitate the example of Charles V. and make another attempt to reduce Germany to the dominion of a ſingle ſovereign. So far, the whole of the war of thirty years may be conſidered as a ſtruggle againſt this attempt; but it is likewiſe evident, that the peace of Weſtphalia has finally decided the queſtion, in oppoſition to the deſigns of Ferdinand, in favour of the conſtitution, as it had actually exiſted for ſo many years, and for the advantage of the ſtates of the empire. Not that the peace was the firſt foundation of their territorial ſovereignty, and the prerogatives connected with it—No—this had been continually increaſing for ſeveral centuries, and in its nature was equally as valid before the commencement of the war of thirty years, as afterwards; but the treaty of Weſtphalia firſt confirmed it, and affixed the ſeal. All doubts which had before ariſen were finally removed, and the whole conſtitution became ſolidly and permanently eſtabliſhed.

"Germany therefore, conſidered as one empire, is a political, but not, like the other European nations, a ſimple body, but a compound one, the component parts of which are diſtinct ſtates, which preſerve their connection under the emperor, as one common ſupreme head. With this idea, every difficulty which had hitherto ariſen in the diſputes concerning the Germanic empire, whether its government was monarchical, ariſtocratical, democratical, or mixed, totally vaniſhes. People were not aware that among different forms of governments there might be another higher diviſion of ſimple and compound ſtates, which had no conformity with any other than the firſt of the different ſtandards. The examples of the Seven United Provinces, the Thirteen Cantons of Swiſſerland, and the United States of North America, prove the poſſibility of ſeveral ſtates being united in one compound political body, the component parts of which do not on that account ceaſe to be ſeparate ſtates. The Germanic empire has only this peculiarity,

peculiarity, that, notwithſtanding its diſmemberment into ſo many ſeparate ſtates, it has preſerved its ancient monarchical head; and all this may be perfectly reconciled upon the ſame principle as we conſider all compound bodies, when we view them in the whole, in a different light from that in which we view them in their ſeparate parts.

"Germany, as a compound political body, conſiſts of as many different ſtates as there are ſtates of the empire, and territories, each of which has its own peculiar government, which are again diſtinguiſhed into almoſt every poſſible ſpecies, and are, more or leſs, monarchical, ariſtocratical, or democratical. In the whole, however, Germany, conſidered as an empire, has its monarchical form of government, ſo long as the perſon of the emperor is independent of all ſuperior human power: for the eſſential difference between a monarchy and republic conſiſts in this, that in the latter no ſingle individual can be independent, as crowned heads only in the former. Germany, therefore, conſidered in the whole, in reckoning the ſtates of Europe, can no more be left out of the number of empires and monarchies, than Great Britain, or Sweden; but this is no reaſon why the emperor ſhould have an abſolute monarchical power, like the king of Denmark, and others; but he remains a monarch, though he cannot act without the conſent of the diet, any more than a king of Great Britain without the concurrence of the parliament; and though his throne is not hereditary, like that of other kings, but depends upon a free election, like that formerly of Poland.

"If we conſider this compound political body again in another point of view, which is inſeparable from it, viz. its component parts, it has evidently much more reſemblance to the ſtates of the United Provinces, Swiſſerland, and North America, than to countries which are ſimple monarchies. This diſtinguiſhing characteriſtic certainly always remains, that Germany is united, not merely under a congreſs or ſtates-general, but under a common ſupreme head, endowed with monarchical though not abſolute power, and in moſt reſpects under the neceſſity of acting with the concurrence of the ſtates of the empire. This, however, does not by any means prevent the other third point, as often as the component parts come into conſideration, in which the late conſtitution of the United Provinces, may be compared with that of the Germanic empire, as far as this empire is divided into ſeparate ſtates totally diſtinct from each other.

"Every electorate, every principality, every imperial city, every territory, however inconſiderable, which is included in the number of the ſtates of Germany, has its own peculiar government, its own fundamental laws, its own taxation, adminiſtration of juſtice, police, coinage, and what is ſtill more, its own military eſtabliſhment, and the right of entering into alliances, making war, concluding peace, and ſending ambaſſadors: in ſhort, whatever ideas a perſon travelling through the various independent ſtates of Europe may form of the difference of their conſtitutions, laws, and other regulations, will equally occur to a traveller in Germany; and often teach him, in a ſtill more ſtriking manner, that there are ſtates which are totally diſtinct from each other; ſince he need not travel half a day in Germany without finding forms of government, ſometimes republican, ſometimes monarchical, ſometimes limited, ſometimes deſpotic, ſometimes hereditary, and ſometimes dependent on the freedom of election; yet without finding totally different laws in every new territory; but other coins, other poſts, and other ſoldiers; and a perſon who reſides but for a ſhort time in the country, would much more frequently experience that Germany conſiſts of ſeveral ſtates totally diſtinct from each other, than that the empire is ſtill united under one common ſupreme head. This perpetual change of ſtates is very inconvenient to ſtrangers: the difference is not only obſervable by the uniform of the troops, colour of the livery of the poſtilions; but by a change of money, which frequently differs in its value, and generally by the payment of freſh tolls.

"One circumſtance ariſing from this, and peculiar to the Germanic empire, is the diſtinction between its *mediate* and *immediate* members. In the ſame manner as two objects which we may ſuppoſe to have relation to each other, are immediately related, when there is no third object intervening; but otherwiſe only mediate. This may be illuſtrated by the example of the connection between a grandfather and his children, who may be ſaid to be mediately related; while the relation between parents and children, on the contrary, is immediate; and in this relation all perſons and affairs in Germany ſtand, under the ſovereignty of the empire, and its common head. But as a nobleman's eſtate, for inſtance, which lies in a German principality, and ſubject to a prince's ſovereignty, is only ſo far a part of the Germanic empire, as it conſtitutes a part of that principality; ſo, with reſpect to the whole empire, it can only be conſidered as a mediate member. Such eſtates, or territories, on the contrary, are immediate, which do not form any part of another ſtate, but only conſtitute a part of the empire in general. According to this idea, the whole of Germany is divided into mediate and immediate members; the latter of which are regularly at the ſame time ſtates of the empire, who have the government of their reſpective countries in their own hands; and the former are, as parts of theſe ſtates, ſubject to their territorial ſovereignty; yet there are immediate members of the empire likewiſe, which have no ſeat or voice at the diet, and are therefore not ſtates, the very nature of which eſſentially conſiſts in ſuch a ſeat and voice. Theſe are the free imperial nobility, or knighthood of the empire, and the imperial villages. Many noblemen's eſtates, convents, and cities likewiſe, have loſt their immediacy, and are become ſubject to the ſovereignty of other ſtates, and are therefore mediate; and the queſtion is ſtill in diſpute with ſome, whether they are immediate or not.

"The whole conſtitution of the Germanic empire, therefore, centers in this, that the queſtion ſtill remains reſpecting the ſovereign rights of the emperor over mediate members, either in the caſe of complaints made againſt their ordinary government, or by virtue of certain reſerved rights which exiſted before the riſe of territorial ſovereignty, and have remained throughout Germany in the emperor's power. Theſe are, in particular, his right of raiſing to a higher rank, conferring academical honours, and nominating counts palatine of his court, and notaries. Yet even theſe rights cannot be exerciſed with any legal effect, or acknowledged in moſt countries, without their being firſt ſubmitted to the examination and approbation of the territorial lord. No ſovereignty whatever can be exerciſed over immediate members of the empire, except in the name of the emperor; but with this diſtinction again, whether it is left to the emperor alone, as in the caſe of moſt imperial grants, inveſtitures, and the juriſdiction as exerciſed in the imperial courts of judicature, with reſervation of the reſort to the Auſtregues; or whether it depends upon the conſent of the diet, the two ſuperior colleges of the empire, or of the electoral college alone. This matter has been determined at different times, partly in the peace of Weſtphalia, and partly in the emperor's capitulations; though with reſpect to the latter, all the diſputes which have ariſen concerning the caſes where the electoral conſent alone is neceſſary, have not yet been wholly decided.

"Even in the peace of Weſtphalia, ſome doubts are ſtill left concerning what caſes, beſides thoſe which are expreſsly mentioned as belonging to the diet, are included in the clauſe annexed, which mentions 'other ſimilar caſes.' Even in thoſe matters which belong to the

the diet, particularly when any thing is in queſtion which is to have the force of law throughout the empire, and the weight of which is likely to fall upon the ſtates themſelves, the balance ſeems more in favour of the ſtates than of the emperor. On this account it almoſt as frequently happens, that a motion is made on the ſide of the ſtates, which they endeavour to bring to a concluſion of the empire under the emperor's authority, as that the emperor himſelf propoſes any thing which requires the conſent of the empire. In this reſpect we find that the relation between the emperor and the diet is totally different from that in which the king of Great Britain ſtands to the parliament, or the king of Sweden to the diet. There thoſe who have a ſeat and voice at the diet are only private perſons; whilſt here the ſtates are actual ſovereigns of a country, in their own right. Even the congreſs of North America conſiſts only of deputies from the united ſtates, each of whom is dependent on the ſtate which ſends him, and bound to comply with its inſtructions: the ſtates of Germany, on the contrary, are actual rulers of thoſe countries, from the poſſeſſion of which they derive their ſeat and voice at the diet. The votes themſelves are given as they pleaſe; or when they depute others for that purpoſe, as their plenipotentiaries, it remains always in their power to direct how they ſhall be given.

"Beſides the opinions or reſolutions which the ſtates may form among themſelves, it is certainly neceſſary for the emperor to give his approbation before a decree of the empire can have its legal force, or the rights of majeſty be exerciſed throughout Germany. Yet there are caſes where a joint reſolution of all the ſtates of the empire together, or of a certain number of them, may have its due efficacy without the emperor's conſent: as in this manner ſeveral of the ſtates have united, and entered into a ſort of treaty with each other, more than once, reſpecting the ſtandard of coinage, which they have ſettled themſelves.

"If we conſider the peculiarities of the Germanic conſtitution, as it was firmly eſtabliſhed by the peace of Weſtphalia, we ſhall find that one of its greateſt advantages is, that when every thing is in its proper order, each individual territorial lord has ſufficient opportunities of doing good; but that if, on the contrary, he is inclined to injure his country, either the provincial ſtates may interfere to prevent him, or elſe his ſubjects in general, or any individual among them, may ſeek redreſs from one of the ſupreme tribunals of the empire. Upon the whole, therefore, it is certainly a happy conſtitution, by which ſuch proviſion is made to prevent the apprehenſion of ill conſequences attending the territorial ſovereignty, divided as it is in ſo many hands, which of courſe cannot be ſuppoſed to be guided always with the ſame degree of wiſdom and goodneſs of heart, as might otherwiſe be expected, conſidering that the little tyrants of a confined diſtrict are often more dangerous than great tyrants in extenſive territories.

"There are two rocks however ſtill remaining, peculiar to the Germanic conſtitution, which our reigning princes, and thoſe who are in expectation of power, cannot be ſufficiently careful to avoid. The German word *landeſherr* (territorial lord) ſeems once to have conveyed an idea that they were actual lords of their country, in the ſame manner as the proprietor of an eſtate conſiders it as his own property, to be diſpoſed of and managed as he pleaſes. The anceſtors of the preſent ſtates of the empire might certainly be originally conſidered only as the poſſeſſors of large eſtates, though they have ſince gradually acquired the character of actual ſovereigns. As they are therefore now in that capacity, they muſt not any longer imagine that their territories are merely for their own uſe, that a number of ſlaves wait for their commands, and that only rights, and no obligations, are connected with their elevated rank; but they ought to recollect, that, as rulers, they have real duties to diſcharge, which ought only to tend to render their country happy, and to promote the ſecurity and welfare of their ſubjects."—See Dornford's Tranſlation of Pütter's Germanic Empire.

Such is the liberal and ſatisfactory explanation of that ſingular conſtitution of the Germanic ſtates, which has puzzled numerous writers and legiſlators; and in which the liberties and franchiſes of both lords and commons, appear to be amply provided for and legally ſecured. Innovations, however, will from time to time creep into every ſtate, and are found ſtruggling againſt eſtabliſhed forms and maxims even in the beſt regulated ſocieties; and therefore ought always to be guarded againſt with patriotic firmneſs.

The origin of electors is not well known; ſome refer it to an edict of Otho III. confirmed by Gregory V. about the year 996. But this opinion is contradicted by the whole tenor of hiſtory. From the earlieſt period in the hiſtory of Germany, the perſon who was to reign over all, was elected by the ſuffrage of all. Thus, Conrad I. was elected either by all the princes and chief men, or by the whole nation; in 1204, Conrad II. was elected by all the chief men, and his election was approved and confirmed by the people; and at the election of Lotharius II. in 1125, ſixty thouſand perſons of all ranks were preſent, and he was named by the chief men, whoſe nomination was approved by the people. Others refer it to Frederic II. who died in 1250. The firſt author who mentions the *ſeven electors* is Martinus Polonus, in this reign; and this reſtrictive privilege was probably obtained by degrees. The princes of greater authority were firſt allowed to name the perſon whom they wiſhed to be choſen emperor, and the people retained the right of approving or diſapproving the nomination; and when they had ſecured the right of voting firſt, or of *prætaxation* as it was called, it became needleſs for the inferior eccleſiaſtics or barons to attend, merely to confirm their choice; more eſpecially as their attendance would become troubleſome and expenſive. Beſides, the aſſumed privilege of the ſeven electors, who poſſeſſed the moſt extenſive territories, was ſtrongly ſupported by their numerous dependents and allies; and they were conſidered as the repreſentatives of all the orders which compoſed the higheſt claſs of German nobility. See Robertſon's Hiſt. ch. v. —Others have aſcribed the origin of electors to Ralph of Hapſburgh, founder of the houſe of Auſtria, in the year 1280. It appears from the above account that their number was unſettled, at leaſt till the time of Frederic II. in the thirteenth century. The golden bull, publiſhed by Charles IV. in 1356, fixed the number of electors to ſeven; three of them eccleſiaſtics, viz. the archbiſhops of Mentz, Treves, and Cologne; and four ſeculars, viz. the king of Bohemia, the count palatine of the Rhine, the duke of Saxony, and the marquis of Brandenburg. By the treaty of Munſter, in 1648, this order was changed; the duke of Bavaria being put in the place of the count palatine, and an eighth electorate erected for the count palatine. In the year 1692, a ninth electorate was created by the emperor Leopold, in favour of Erneſt duke of Hanover, under the title of elector of Brunſwic. Some oppoſition was made to this election; and the princes of Germany ſtood out for ſome time, and refuſed to acknowledge it. But they afterwards acquieſced in it, and it has been ſince recogniſed by all the foreign princes. The king of France did it at laſt by the treaty of Raſtadt, in 1713. The changes that have taken place in Germany within theſe laſt ten years, but chiefly after the treaty of Luneville, have diſpoſſeſſed ſome electors, and added others; ſo that the number is now ten, as ſtated in p. 395.—The electors had not only the power of chooſing the emperor, but they have actually exerciſed that of depoſing him. Thus they depoſed Adolphus of Naſſau in 1298, and Wenceſlaus in 1401. See p. 483, 485.

The

The names and offices of the electors, then, as they were confirmed and acknowledged by the treaty of Raſtadt, were as follow:

1. The archbiſhop of Mentz, chancellor of the empire when in Germany.
2. Archbiſhop of Treves, chancellor when in France.
3. Archbiſhop of Cologne, chancellor when in Italy.
4. King of Bohemia, cup bearer.
5. Elector of Bavaria, grand ſerver of feaſts.
6. Elector of Saxony, great marſhal.
7. Elector of Brandenburg, (king of Pruſſia,) great chamberlain.
8. Elector palatine, great ſteward.
9. Elector of Hanover, (king of Great Britain,) arch treaſurer.

The reſpective offices of theſe electors were eſtabliſhed by the *golden bull*, as mentioned at p. 485, whereby the electors became as it were great officers of ſtate, and their offices were made hereditary in their families.

The form of election is by the ſaid bull directed to be as follows. The elector of Mentz, in quality of great chancellor of the empire, is to ſummon the electors, upon the demiſe of an emperor, within the ſpace of one month after he receives notice of that event; and the day fixed for the election is to be within the compaſs of three months from iſſuing the ſummonſes. The electors are not required to attend perſonally, but may ſend their ambaſſadors, and on ſuch an occaſion they generally name three; but if an elector neither attends in perſon, nor appoints an ambaſſador, he forfeits his right of voting for that time only. The elector of Mentz collects the ſuffrages, which are given *viva voce*, according to the rank of the electors; and laſt of all he gives his own vote, which is required of him by the elector of Saxony. It is neceſſary that the perſon choſen ſhould have a majority of the whole body, and not merely a majority of votes; for if there are three candidates, and one has four, another three, and the third two voices, the election remains undecided. The ceremony of the election is performed at Frankfort on the Maine; but though cuſtom has fixed it at that city, it is not eſſentially neceſſary that it ſhould be held there.

As ſoon as the choice is made, the newly-elected emperor, or his proxy, muſt immediately ſwear and ſubſcribe to the capitulation of election; and before his coronation, muſt ſwear to it in perſon; and, till this is done, he cannot aſſume the government, but muſt leave it to the vicars of the empire. The *capitulation* is the contract between the emperor and the ſtates, which he ſwears faithfully to obſerve and keep: viz. 1. To defend the empire in church and ſtate. 2. To obſerve and maintain the fundamental laws of the empire. 3. To defend and uphold the rights, privileges, franchiſes, and immunities, of the princes and people, in every part of the empire. The coronation, according to the golden bull, ought to be performed at Aix-la-Chapelle, but it has been performed for many years in the place where the election is made. Until the reign of Maximilian, the emperors were crowned at Rome by the pope, and then ſtyled themſelves "Roman emperors;" but that emperor not chooſing to go to Rome, obtained from the pope a bull, which empowered him to take the title of emperor, on his being crowned in Germany. The title of king of Italy and Lombardy, if we except twenty-one fiefs of the empire which lie in the eccleſiaſtical ſtate, is merely titular.

The prerogatives of the emperor conſiſt partly in his being conſidered, by all other crowned heads and ſtates in Europe, as the *firſt* European potentate, and conſequently precedence is given him and his ambaſſadors in all foreign courts. With reſpect to the German empire, he is its ſupreme head, and as ſuch enjoys many privileges. Yet his power in the adminiſtration of the German empire, is limited both by the capitulation of the election, the other laws of the empire, and by the cuſtoms of the empire. Thoſe privileges which he has the right of exerciſing without the advice of the ſtates, are called his *reſervata*; but his greateſt power does not conſiſt in theſe, which are far from being repugnant to the liberties of the ſtates of the empire. His rights, with reſpect to eccleſiaſtical affairs, conſiſt in little more than confirming eccleſiaſtical elections, and ſending commiſſaries to the elections of archbiſhops, biſhops, and abbots, that they may be performed in due order; but the commiſſary is never perſonally preſent at theſe elections.

In temporal affairs, the emperor has the right of beſtowing perſonal dignities; ſuch as creating lords, barons, and counts, who enjoy the dignity of princes, and of knights and gentry; as alſo that of raiſing countries and territories to a higher rank; of beſtowing coats of arms, as alſo the enlarging, improving, and altering, them. He has the power of eſtabliſhing univerſities, and enabling them to confer academical degrees; of granting a right of holding fairs and markets, and of erecting any place into a ſanctuary. He can place children who are born out of wedlock upon the footing of ſuch as are legitimate; can confirm the contracts and ſtipulations of the members of the empire; and ſo far remit the oaths extorted from them, that they may commence an action at law againſt another, on account of the very thing for which the oath was adminiſtered. The emperor, however, has no right, without the conſent of the collective ſtate of the empire, to put one of thoſe ſtates under the ban; to exclude a ſtate of the empire from a ſeat and voice in its colleges; to interfere in the laws of the empire; to conclude treaties in affairs relating to the empire; to involve it in a war; to raiſe levies; or to conclude a peace in which the empire is concerned; to appoint taxes in it; to regulate the coinage; to build forts in the empire; or to determine religious diſputes.

The ſucceſſor in the adminiſtration is frequently choſen by the electors during the life of the emperor, and the perſon ſo choſen is ſtyled "king of the Romans." He is elected and crowned in the very ſame manner as the emperor; and though he has properly no kingdom, he is actually a crowned head; is ſaluted with the title of majeſty, and enjoys the title of "Perpetual Augmenter of the Empire," and "King of Germany;" and takes precedence before all the other kings of Chriſtendom: on the death of the emperor he ſucceeds, as heir apparent, without any freſh election.

Since the emperors are no longer crowned at Rome, the only meaning that is affixed to the title of king of the Romans, is, therefore, that of the preſumptive heir to the imperial dignity: the golden bull indeed, makes no ſuch proviſion for a ſucceſſor during the life of the reigning prince; but this mode of election was eſtabliſhed by an agreement entered into between the emperor and the electors, for the benefit and convenience of the empire. When the throne becomes vacant by the death of the reigning emperor, and no king of the Romans has been previouſly choſen, the elector palatine, and elector of Saxony, have the title of *vicars* of the empire, in right of their reſpective offices; the one of count palatine, the other of arch-marſhal of the empire. The emperor in his capitulation conſtantly engages to ratify and confirm, in the fulleſt manner poſſible, all acts performed by the vicars general, during the time of the interregnum.

The emperor may delegate his power to any prince of the empire, when he himſelf is not in a condition to exerciſe it, and an officer thus appointed is called "vicar of the emperor;" but the authority annexed to ſuch a poſt, is much more circumſcribed than that of the vicars of the empire, it being held during the pleaſure of the emperor, to whom this officer is accountable for the exerciſe of his delegated power.

What is implied in the term "ban of the empire," is, a cenſure pronounced in the diet, againſt a German prince, who is conſidered as having violated the obligations he lies under, as a member of the Germanic body. The conſequences ariſing to any prince, who is put under the ban of the empire, are, his being excluded, ſo long as ſuch interdiction continues, from all the privileges which he poſſeſſes by the conſtitution of the empire; and the imperial troops may be marched into his territories, quartered there, and exact contributions for their ſupport. In the reign of the emperor Charles V. Frederic elector of Saxony, having been put under the ban of the empire, was taken priſoner; and, in order to obtain the ſurrender of Wittenbergh, then the capital of Saxony, the elector was tried by a court-martial, convicted of treaſon and rebellion, and condemned to loſe his head. This proceeding was in ſuch open defiance of every principle of juſtice, that the accuſed was not brought before the court, and was ignorant of its ſitting until its ſentence was announced to him: however, the ſentence ſo pronounced by a court to which he was not amenable, was never executed, becauſe it was a flagrant violation of the conſtitution.

At preſent, however, (March 1807,) this conſtitution and form of government appears wholly or in part annihilated, inaſmuch as Francis II. formally reſigned the empire of Germany, with its title, crown, and regalia, on the 6th of Auguſt, 1806; and he now bears only the title of Francis I. emperor of Auſtria, which he holds in his own right, it being hereditary in his family. This abdication was occaſioned by the *Confederation of the Rhine*, which drew many of the Germanic ſtates from their allegiance; and becauſe of the advancement of the electors of Bavaria and Wirtemberg to the dignity of kings, over whom, and the elector of Baden, Francis was reſtrained from exerciſing any ſpecies of authority, as well as over their reſpective dominions, or the circles of Bavaria, Franconia, and Swabia.—See particulars of the treaty of Preſburg, vol. vii. p. 884.—So that at preſent there is no ſupreme government over the empire of Germany; but every ſeparate ſtate appears at preſent to be governed by its own laws, without being amenable to any ſuperior, though the emperor Napoleon muſt be conſidered as lord paramount of theſe ſtates which compoſe the Confederation of the Rhine.

RELIGION, LAWS, LITERATURE, &c.

The Germans firſt became acquainted with ſome faint principles of the Chriſtian religion toward the cloſe of the ſeventh century, by means of the Iriſh biſhop Kilian, alſo by Suidbert and Ewald, who were Engliſhmen, and Rupretcht, of Worms, who ſettled at Saltzburgh; and in the eighth century, Winifred, of England, preaching among the Thuringians, Heſſians, and Saxons, was ordained biſhop of the Germans beyond the Rhine, by the name of Bonifacius; he was afterward made archbiſhop of Germany, when, under the ſpecious pretence of propagating the doctrines of Chriſtianity, he exerted himſelf with great zeal in promoting obedience to the church of Rome, and even employed the ſecular power againſt ſuch biſhops and prieſts as refuſed to ſubmit to the Romiſh yoke and ceremonies of worſhip. Charlemagne propagated Chriſtianity among the Saxons; and ſome time after, the Bohemians and Moravians were alſo brought to embrace the Chriſtian religion, by Henry I.

The Reformation began firſt in Germany, about the year 1517; through the means of Martin Luther, an Auguſtine monk, and then a profeſſor in the newly-founded univerſity of Wittemberg in Saxony. What greatly tended to ſpread the reformation in Germany was, the long contention which had ſubſiſted between the popes of Rome, and the emperors. Charles V. although he could not brook the ſuperiority aſſumed by the pope, and made uſe of every means which ſecret intrigue and open force could ſupply to humble the Roman pontiff, yet conſidered the ſpread of the reformation in his dominions, as no leſs injurious to that overweening power which he ſo ardently coveted, and to obtain which he was ever plunged into a ſtate of reſtleſſneſs and diſquietude. He therefore appointed a diet of the empire to be held at Spire in 1529; but all the proteſtant electors and princes proteſting againſt its decrees, the year following another diet was convened at Augſburg, when the proteſtants delivered in their creed, as digeſted and drawn up by the learned Melancthon, which became known by the title of "the Augſburg confeſſion." As nothing conciliatory took place at this diet, the emperor determined upon making the ſword the dictator of opinions: a decree was iſſued condemning the tenets of the proteſtants, and forbidding them to be taught; which cauſed the proteſtant princes to aſſemble at Smalkald in Thuringia, and enter into their defenſive league. The perſecutions which at that time threatened the German proteſtants was, however, prevented by the dangers to which Charles found himſelf expoſed from Solyman II. emperor of the Turks; therefore, to gain over his proteſtant ſubjects, he conſented to their exerciſing liberty of conſcience until a general council ſhould be aſſembled to diſcuſs the points of religion. This conceſſion of the emperor cauſed the proteſtant princes to engage to render him their utmoſt aſſiſtance againſt the Turks. But at length Charles concluded a truce with Solyman II. and entered into an alliance with pope Paul III. by which he engaged to ſuppreſs hereſy, and to maintain the authority of the holy ſee. The pope then convened a general council to aſſemble in 1546, at Trent, in the Tyrolean Alps; but as the proteſtants ſaw no probability that juſtice would be done to their cauſe, in an aſſembly evidently convened for the purpoſe of condemning them by a partial inveſtigation, and the whole weight of eccleſiaſtical authority; to avert, if poſſible, the deſtruction which was preparing for them, the princes who had entered into the league at Smalkald, took up arms, and appeared in the field with a force exceeding ſeventy thouſand men; but this confederacy was ſoon broken, by the artful management of the emperor, which cauſed the treacherous defection of a principal ſupporter in their cauſe; this man was Maurice marquis of Miſnia and Thuringia, who, as a principal leader among the confederating powers, had gained the entire confidence of all. The price paid for this breach of honour was the electorate of Saxony, of which the elector Frederic was deprived. On the ſuppreſſion of this confederacy, heavy penalties and ſevere puniſhments were inflicted on all the proteſtants who had entered into the league of Smalkald; and Charles flattered himſelf that he had effectually ſuppreſſed all oppoſition to his will. The emperor, in 1547, ſummoned a diet to meet at Augſburg, at which he preſided, and opened the buſineſs with a ſpeech; but the pope, not liking ſuch a proceeding, convoked an aſſembly at Bologna. Charles not chooſing to ſuffer the diſgrace of having the Augſburgh aſſembly rendered nugatory, cauſed the buſineſs of religion to be proceeded upon there; and even granted to the proteſtants ſome kind of indulgence with reſpect to the marriage of eccleſiaſtics, and to the laity receiving the cup at the euchariſt. Theſe *conceſſions*, as they were then deemed, were to continue in force until a council ſhould be called, and the aſſembly was therefore ſtyled "the interim." On the death of Paul III. Julius III. who ſucceeded him in 1550, that ſame year re-aſſembled the council of Trent.

But the jarring intereſts of the pope and emperor prevented their acting with unanimity in the general cauſe; and the council of Trent continued to ſubſiſt until

until the year 1563, although the members were ſeldom called together, and the deciſions which it from time to time promulgated, neither obtained the unanimous approbation of the Roman catholics, nor the ſmalleſt compliance on the part of the proteſtants; being in the higheſt degree hoſtile to their principles. In 1552, the proteſtant intereſts began to revive under the conduct of the ſame Maurice, elector of Saxony, who was a man of very ſuperior abilities both as a politician and a general, and whoſe conſummate art of diſſimulation, as it had formerly deceived the proteſtants, now with equal effect deceived the emperor, whoſe conduct had given him extreme diſguſt. By the aſſiſtance of France, Maurice was enabled to raiſe a conſiderable force, with which he marched againſt the emperor, at Inſpruck in Tyrol, the common reſidence of the archdukes of Auſtria. His march was ſo rapid, that the emperor, then ſeverely attacked by the gout, was put into a litter, and conveyed over the Alps, in a dark and rainy night, and retired to Villach in Carinthia, to avoid falling into his hands; and the council of Trent, which had then been convened, was haſtily broken up; Maurice having entered his proteſt againſt its authority. At length a meeting was held at Paſſau, A. D. 1552, conſiſting of the whole body of German electors, both papiſts and proteſtants. Ferdinand king of the Romans, and brother to the emperor, attended as his repreſentative; and the emperor's tyrannic ſway had rendered him ſo odious even to the catholics, that they came with minds well diſpoſed toward their religious opponents; in conſequence of ſuch a diſpoſition, mutual conceſſions were made, and terms of compromiſe ſettled, which the emperor very reluctantly complied with.

At the beginning of the reign of Ferdinand I. a diet at Ratiſbon confirmed the proteſtants in their religious rites, and during more than half a century the empire was very little diſturbed by religious contentions, except what aroſe between the Lutherans and Calviniſts. In 1609, the proteſtants entered into a new confederacy, which was ſtyled "the evangelical union," to which another aſſociation was oppoſed which bore the name of "the catholic league," ſoon after which, John William duke of Cleves and Juliers dying without iſſue, the ſucceſſion to thoſe duchies rouſed to arms the heads of the two parties. Several competitors aroſe, and the emperor cited them all before him. The princes of the evangelical league oppoſed the emperor, and thoſe of the catholic league ſupported him: the elector of Saxony only, among the proteſtants, and who was a claimant, joined the emperor. He was grandſon of Auguſtus, who ſucceeded his brother Maurice in 1553, he being ſlain in a battle with Albert elector of Brandenburg. The proteſtant league, conſidering their force as inſufficient to oppoſe againſt their antagoniſts, applied to Henry IV. of France, who continued to ſupport their cauſe until his death. The flames of war were thus kindling toward the end of the reign of the emperor Matthias, and when his couſin Ferdinand II. was choſen emperor, they burſt forth with great fury, A. D. 1618.

The proteſtants of Bohemia then diſclaimed all allegiance to the emperor, and choſe the elector palatine, who had married the princeſs Mary of England, daughter of James I. for their king, who was diſtinguiſhed as Frederic V. but he ſuſtained his regal character a very ſhort time; for the battle of Prague, which was fought in 1620, gave ſuch a total overthrow to his party, that Frederic not only loſt his kingdom, but was deprived of his palatinate, whilſt his queen ſought an aſylum in England: the elector died in 1632. The armies of Ferdinand were now commanded by Buguoy count Tilly and the duke of Walſtein, who for a time carried victory wherever they went, and brought all Germany under the abſolute will of the emperor; which ſucceſs only ſerved to extend his ambitious views, which were now directed to obtain influence and territory in Italy. In Germany, confiding in his reſiſtleſs ſtrength, he iſſued an edict requiring the reſtitution of all benefices and church lands which had been held by proteſtants ſince the treaty of Paſſau. Cardinal Richelieu, who then governed France under the reign of Louis XIII. although he perſecuted the Hugonots in that country, yet gave every poſſible aſſiſtance to the evangelical union in Germany: a ſtateſman's religion is merely a convenient pretext to cover his political ſchemes. This miniſter was no leſs active in oppoſing the emperor's deſigns in Italy; to which, on the other hand, the conduct of the king of Spain was favourable. The proteſtants thus deprived of poſſeſſions which they held by a right derived from the treaty of Paſſau, entered into a league with Guſtavus Adolphus king of Sweden; a former alliance with Chriſtian IV. of Denmark, had proved of little avail; but to this league with Sweden, Richelieu became a very important party, for he ſtipulated to tranſmit to Guſtavus an annual ſubſidy of one million two hundred thouſand livres (150,000l.), and the king agreed to maintain an army of thirty-ſix thouſand men.

At this time the imperialiſts, commanded by Tilly, carried terror and deſtruction wherever they came. The inhuman manner in which that general waged war againſt the proteſtants, ſtamps indelible infamy on his name. In 1631 he took the city of Magdeburg by ſtorm, to which he ſet fire, and maſſacred the inhabitants without diſtinction of age, ſex, or rank. Its population at that time was computed at forty thouſand, and only eight hundred are ſaid to have eſcaped the fury of the ſoldiery, let looſe upon them by their ſavage leader. To ſtop the ſpread of theſe barbarities, Guſtavus, with his hardy and well-trained Swedes, entered Pomerania, took Frankfort on the Oder, Colburg, with other places, and defeated Tilly near Leipſic, on September 7th that ſame year: about ſeven months after, that general was killed in diſputing the paſſage of the Lech. Guſtavus, after his victory at Leipſic, was joined by all the members of the evangelical union, and marching into Bavaria, entered Munich, its capital, in triumph. He was then ſolicited by ſome, to revenge on that city the mercileſs extermination of the Magdeburghers, by giving it up to pillage, and deſtroying the emperor's fine palace; but he rejected the idea with all the magnanimity of a Chriſtian hero.

Walſtein ſucceeded to the command of the imperial army on the death of Tilly, and in November 1632, the important battle of Lutzen was fought, in which the renowned Guſtavus loſt his life, and the proteſtants their firmeſt dependence; yet a ſucceſſion of able Swediſh generals, who had fought under Guſtavus, led on the Swedes to many very glorious victories; whilſt the able adminiſtration of Oxenſtiern, the chancellor of Sweden, with the ſtrong ſupport of France, whoſe armies were commanded by marſhal Turenne and the duke d'Enguien, ſon of the prince of Condé, and who on the death of his father and his ſucceſſion to the title, was called "the great Condé," at length obliged the emperor to join in a treaty concluded at Prague, in 1635, by which he revoked the requiſitions which he had made by the edict of Ratiſbon. This treaty put an end to hoſtilities between the imperialiſts and the German princes of the evangelical union, and left the Swedes and French to contend with the emperor, who dying in 1637, his ſon Frederic III. ſucceeded him, and maintained the war for eleven years; but, having ſuffered many ſevere defeats, and his beſt generals having periſhed in the ſervice, a mean regard to his own perſonal ſafety, and the preſervation of his contracted power, induced him to aſk for peace, which not all the miſeries and deſolations produced by a war ſo long continued, ſo widely ſpread, and ſo rancorouſly waged, could have extorted from his obdurate heart. On the

24th of October 1648, the peace of Weſtphalia was ſigned at Munſter, which brought back to Germany its loſt tranquillity, ſecured the rights of conſcience, and eſtabliſhed the proteſtant religion in Germany.

By virtue of the religious ſtipulations eſtabliſhed by the treaty of Weſtphalia, no other religion but that of Roman, Lutheran, and Calviniſtic or Reformed, was to be tolerated in the empire; yet there are ſects that adhere to neither of theſe three religions, and yet enjoy the free exerciſe of their own. The determination whether a perſon be a member of this or that church, belongs only to that very church; and each ſovereign, or lord, is bound to allow his own vaſſals and ſubjects, who are of another religion, not only the public and private exerciſe of theirs, but every thing belonging to it, churches, ſchools, ſpiritualities, incomes, conſiſtories, &c. in the ſame manner as they ſtood on the firſt of January 1624: but in a country where there are ſubjects who adhere to one religion which in that year was neither publicly nor privately obſerved, it lies in the ſovereign's breaſt whether he ſhall ſuffer them to remain in the country. If he enters into a ſtipulation with them, and promiſes them a toleration, it muſt be maintained, not only by him, but by his ſucceſſors; for the rights of ſuch ſubjects muſt not be infringed. But if he will grant no toleration, he muſt allow thoſe who, at the time of the treaty of Weſtphalia, were already ſettled in his country, five years at leaſt; and thoſe who afterward came to ſettle therein, or have made any change in their religion, at leaſt three years. However, theſe regulations have in later times been wholly neglected.

Each proteſtant ſtate may make what regulations and changes it pleaſes within its own juriſdiction, in matters relating to the churches and ſchools. Hence the external forms differ greatly in the proteſtant countries of the empire. The ſovereign commonly decides all important affairs, ſettles and eſtabliſhes, removes, promotes, caſhiers, or otherwiſe puniſhes, ſuch as ſerve either in the church or ſchools: he forms eccleſiaſtical regulations, appoints feaſts and faſts, and erects colleges, which in his name ſuperintend the other affairs of the church. Conſiſtories are alſo generally appointed by the proteſtant ſtates, which for the moſt part conſiſt of lay and eccleſiaſtical counſellors; but in ſome places more, and in others fewer, things fall under their notice. In many places alſo peculiar ſynods and a church council are held. Thoſe that ſerve the church and ſchools are either appointed by the ſovereign of the country, or the conſiſtory, the elders of the church, or its members.

The power poſſeſſed by the proteſtant ſtates over their catholic ſubjects, is the ſame with that which the catholic ſtates have over their proteſtant ſubjects. In favour of thoſe, who in the year 1624 enjoyed the public exerciſe of their religion, it is provided, that the catholic biſhops, in whoſe diſtrict they belong, ſhall retain the ſame ſpiritual juriſdiction over them as they held in that period: conſequently, ſuch as were merely tolerated out of grace or favour, are alſo wholly left, in this particular, to the ſupreme juriſdiction of the lord of the country; but with this limitation, that he can require nothing of them which is contrary to the principles of their church. On the other hand, no cloiſter ſituated in the territory of any proteſtant ſuperior, or lord, can be converted to the uſe of any other order, unleſs the former order be wholly extinct; and even in that caſe, the cloiſter is to be ſupplied only with ſuch regulars as had a being, or were an order, prior to the religious diſſenſions.

In ſhort, the proteſtants compoſing one united body have mutually agreed, that whenever a Lutheran lord of a country ſhall change his religious perſuaſion to that of the reformed or Calviniſtical church, or obtain a country whoſe inhabitants are of that communion, and *vice verſa*, he ſhall preſerve to his ſubjects the free exerciſe of their religion, their whole form of church and ſchool diſcipline, and all their other privileges. But if a church ſhall of itſelf change its principles to that of the lord of the country, the public exerciſe of religion ſhall be permitted the people; but at their own expence, and without prejudicing the adherents to other tenets. The conſiſtorial counſellor, the ſuperintendents of divinity and of philoſophy, are to profeſs the religion that prevailed in the country at the concluſion of the treaty of Weſtphalia. Thus an enlarged principle of mutual toleration was inculcated throughout the ſtates of Germany, which has greatly promoted the happineſs of the people, by extirpating the ſeeds of religious perſecution.

The adminiſtration of juſtice is conducted with the ſame principles of equity as are obſerved with reſpect to religious liberty, or liberty of conſcience. The diet is that aſſembly of the ſtates in which the legiſlative power of the empire reſides; and is compoſed of the electors, princes, prelates, counts, and free or imperial cities. The emperor, when preſent, preſides in perſon; when abſent, by his commiſſary, whoſe communication of propoſals from the emperor to the aſſembly is called the *commiſſorial decree*. The elector of Mentz, as chancellor of the empire, is director of the diet; and to his chancery are all things addreſſed that are to be ſubmitted to the empire; the reading of which by his ſecretary to the ſecretaries of the other miniſters at the diet is denominated *per dictaturam*, and conſtitutes the form of tranſmitting papers or memorials to the dictature of the empire. The diet is compoſed of three diſtinct colleges, each of which has its particular director. The firſt college is that of electors; of which the archbiſhop of Mentz is director as firſt elector. The ſecond college is that of princes. It conſiſts of princes, archbiſhops, and biſhops; and of prelates, abbots, and counts, who are not conſidered as princes. Each prince, ſpiritual and temporal, has a vote, but prelates and counts vote by benches. The prelates are divided into two benches, the counts into four; and each bench has only one vote. The archduke of Auſtria and the archbiſhop of Saltzburg are alternately directors of the college of princes. The third college is that of the free cities of the empire; the director of which is the miniſter of the city in which the diet happens to ſit. In all theſe colleges, the ſentiments of the majority are concluſive, except in reſpect of fundamental laws, which affect the whole empire, or ſuch matters as relate to religion. In theſe they muſt be unanimous.

Where religion is intereſted, the proceedings are alſo different. The colleges are then conſidered as conſiſting of two bodies, the evangelic and the catholic; and if any religious point be propoſed, it muſt meet not only the unanimous concurrence of the propoſing body, but muſt have the majority of the other to eſtabliſh it. This diſtinction aroſe from the *evangelic body*, which was formed by the proteſtant ſtates and princes to guard the proteſtant intereſt in Germany, by watching over the laws for the ſecurity of their religion, and, in caſe of violation, by obtaining redreſs from the imperial throne. For in any part of the empire, as in the palatinate, where the count is a papiſt and the ſubjects are proteſtants, ſhould oppreſſions ariſe, application would be made to the evangelic body through the director. The elector of Saxony is director of the evangelic body, though he is a papiſt: but therefore his repreſentations in favour of the proteſtants have more force; and beſides, ſhould he abuſe an office which inveſts him with conſiderable weight and influence, he could be inſtantly deprived of it.

The firſt two colleges are ſtyled *ſuperior*, and in effect conſtitute the diet: for all points that come before the diet, are generally firſt deliberated in the college of electors, and paſs from that to the college of princes; in which, if any objection ariſe, a free conference takes place between the directors of each college. And ſhould

they,

they, in conſequence of this free conference, concur, they invite the third college to accede to their joint opinion; which invitation is generally complied with: but ſhould this college return a refuſal, the opinion of the other two colleges is in ſome few caſes engroſſed in the chancery, and delivered to the emperor's commiſſary as the opinion of the empire. The opinion of the third college is merely mentioned at the cloſe. However, though the ſuperior colleges do in effect conſtitute the diet, yet the received maxim is, that no two colleges conſtitute a majority, that is, the majority of voices at the diet; nor can the emperor confirm the opinion of two colleges as an opinion of the diet. By the peace of Weſtphalia, a deciſive vote was recognized as a right of the imperial cities, which the two ſuperior colleges ſhould not infringe upon; their vote being, by the fundamental law, of equal weight with that of the electors and princes. After a meaſure is approved of by the colleges, it is ſubmitted to his imperial majeſty to receive his negative or confirmation. Should he approve the point, it is publiſhed in his name as the reſolution of the empire, which ſtates are exhorted to obey, and tribunals directed to conſider as ſuch.

The diet not only makes and explains all laws, but decides ambiguous caſes. The common adminiſtration of juſtice, however, is referred to the *imperial chamber*; the members of which are a judge of the chamber, and twenty-five aſſeſſors, partly proteſtants, partly papiſts. The preſident is appointed by the emperor, the aſſeſſors by the ſtates. The court receives appeals from inferior juriſdictions, and decides dubious titles; and all cauſes before it between prince and prince, or princes and private perſons, are adjudged according to the laws of the reſpective parties, or according to the imperial law. This tribunal is under the inſpection of viſitors appointed by the ſtates; and, during their viſitation, the ſentences of the court are ſubject to reviſion. Appeals lie afterward alſo from the judgment of the viſitors to that of the diet.

The *aulic council* receives appeals from inferior juriſdictions; and to it belong the reſerved rights of the emperor; and to the imperial chamber alſo are annexed peculiar powers. The imperial chamber ſubſiſts during a vacancy of the throne under the authority of the vicars of the empire; whereas the aulic council does not exiſt until appointed by the ſucceeding emperor. It conſiſts of a preſident, vice-preſident, and ſeventeen aſſeſſors, of whom ſix are proteſtants. The vice-chancellor of the empire is alſo intitled to a ſeat; and all decrees iſſuing from the council paſs through his hands to thoſe who are to execute them. This tribunal obtains for the emperor, through the appeals from the courts of other princes, a new authority beſides that which he poſſeſſes from his reſerved rights; but electors and ſome princes, as thoſe of Hanover, Auſtria, Brunſwick, Swediſh Pomerania, Heſſe, are free from this dependence on the emperor, to whoſe aulic council their ſubjects cannot appeal; nor can it take cognizance of eccleſiaſtical or criminal cauſes, both of which appertain only to territorial juſtice.

Over each of the nine circles preſide directors, to whom the tribunals of juſtice commit the execution of their decrees. The office of *director* is permanent and hereditary, as it belongs always to the firſt prince in the circle, upon whom it confers high authority; for all the decrees of the imperial chamber and aulic council are of no avail unleſs the director will execute them. The directors of the circles are not only inſtruments of war but of peace: for in caſe of an imperial war, they are to collect the troops of the circle; and if any ſtate or prince of their reſpective circles ſuffer violation from others, they are to yield protection and enforce the peace; or, ſhould there be any tumultuous upriſings of the people, the ſuppreſſion of ſuch belongs to them.

The emperor is the executive inſtrument of the whole empire; but as it is impoſſible for the head of the empire to preſide in different tribunals at the ſame time, or to tranſport himſelf to the extremities of Germany, with the promptitude which the deciſion of proceſſes ſo frequently require, the office of *count palatine* was inſtituted. The buſineſs of this magiſtrate is to ſuperintend the adminiſtration of juſtice in the various provinces. To him an appeal lies from the ordinary tribunals, in cauſes which were not of ſufficient importance to be carried before the emperor. By him too the imperial ban is publiſhed, and by him the finances are adminiſtered. Theſe officers were firſt eſtabliſhed in Bavaria, Saxony, Swabia, and upon the Rhine.

Every prince of a ſeparate ſtate is arbitrary in laws of policy, but not of revenue; for no new tax or impoſt can be laid on his country, without the conſent of the nobles and ſubjects. For this purpoſe, on the *land tag*, or day on which his ſubjects are to be convened, which is once in the period of four or five years, and at no other time can he aſſemble them, he calls together the nobles and commiſſaries or deputies of the towns of his dominions. The nobles uſually attend in perſon, but may ſend repreſentatives. To this aſſembly the prince propoſes the taxes, &c. and a majority of voices diſpoſes of the meaſures. On the land tag, the reſpective quotas of each place are fixed, in order to diſcharge the princes contingent in caſe of a war. There is indeed no fixed ſtanding army; but the various ſtates are obliged to furniſh their quotas, when called upon by the diet in caſe of war. The whole number of forces thus to be raiſed is ſaid to be as follows: by the eccleſiaſtical princes, 74,500; by the temporal princes, 379,000; and by the emperor, 90,000, as head of the houſe of Auſtria. Total, 543,500 effective men. The whole revenue has been calculated at 20,000,000l. ſterling.—Extraordinary aids are occaſionally granted by the ſtates for the ſupport of the empire; or the forts thereof, ſuch as Philipſburg, Kehl, and Mentz; or for a war againſt the Turks, the expences of an embaſſy of the empire, the maintaining of the forts, &c. The granting of theſe aids in Germany is regulated according to what is called *Roman months*, which denomination deduces its origin from thoſe times in which the emperors, in order to receive the papal coronation, took a journey to Rome, and the German ſtates of the empire were bound to conduct them with a certain number of men, conſiſting of horſe and foot, for ſix months, at their own expence; or to pay twelve florins monthly for a horſeman, and for a footman four, which money obtained the name of Roman months. This ſtandard was afterwards retained, and the rate of each ſtate, either in men or money, is ſettled in what is called the matricula of the empire. But though certain Roman months were frequently granted the emperor, yet they were not always duly paid. A Roman month from the whole empire brings in 58,280 florins.

From the great extent of the German empire, every variety of ſoil is to be found within its circuit; and from which reſults abundant ſources of the grand ſupport of national wealth,—commerce. The middle parts of the empire are productive in corn and cattle; the ſouthern abound with excellent wines and fruits. The northern parts, from their chilneſs, are rather unfavourable to vegetation; but even there agriculture improves daily. Their mines are great ſources of wealth; they produce, excepting tin, almoſt every metal. Of quickſilver, one mine alone is computed to yield fifty thouſand pounds weight a-year. They furniſh a very fine clay for porcelain; and the ſhores abound with excellent and extenſive ſalt works. Its mineral productions are decidedly the firſt native articles for trade; after which its medicinal waters, ſalt, hemp, flax, linen, ſilk, wines, fruits, corn, cattle, ſtuffs, cloths, timber, porcelain, wrought iron and ſteel, drugs, oil, and colours, are their leading articles of commerce.

Literature

Literature and the liberal ſciences have of late years made a rapid progreſs in Germany; a happy conſequence of the meliorating reign of Joſeph II. the friend of letters, and of ſcientific men; manifeſted by opening a literary correſpondence with the learned ſocieties in England and France. The Germans excel moſtly in proſe; though that ſtyle of writing is far from having reached the perfection of which it is capable; particularly ſublime or religious ſubjects. Luther confeſſedly introduced into his proſe greater exactneſs, eaſe, and ſtrength, than any writer either before him, or for a long time after him. At his deceaſe, it again began to decline, and continued gradually to grow worſe and worſe, till, in the earlier part of the eighteenth century, it was almoſt reduced to a mere jargon of words out of foreign languages. Whoever was then deſirous of writing what might be worth reading, was compelled to have recourſe either to the Latin or to the French. Thomaſius was the firſt of the later modern Germans who endeavoured to reform his native tongue: Wolf followed his ſteps, and gave to its expreſſions the preciſion of philoſophical exactneſs; Moſheim added clearneſs, grace, and harmony; Bodmer, Breitinger, Gellert, Rabener, and others, contributed farther to its improvement, more eſpecially by ſtripping it of its borrowed tinſel, and by reſtoring its proper native powers and richneſs. This may be ſtyled the firſt period in the progreſs of German proſe. The ſecond period may be dated from about the year 1760, when firſt the German writers, Leſſing, Mendelſſohn, &c. began to be generally acquainted with the beauties of Britiſh literature. Since that time, the number of German authors who have diſtinguiſhed themſelves in every ſpecies of proſaic compoſition, is altogether aſtoniſhing, and highly worthy of praiſe.

In works of fancy, poetry, wit, and humour, the German writers have as yet had but little ſucceſs; a brilliancy of imagination, though doubtleſs to be found in ſome individuals, is by no means prevalent among them. In dramatic writings they ſeem chiefly to have failed. Comedy appears not to be much their object, and tragedy, which oftener employs the pens of their writers, is commonly compoſed in a bad taſte, the characters often unnatural, or extravagant, and the plots frequently bearing a tincture of native barbariſm. The cauſe of this failure is probably the want of encouragement; the French language prevailing in all the courts, and French plays are exhibited in preference to German. In hiſtory, the Germans diſplay far leſs of animation than of accuracy and method, and contribute little to the pleaſure, but much to the information, of their readers; their compoſitions on this ſubject conſiſting moſtly of dry matter of fact, without thoſe pleaſing reflections, and elegant deſcriptions, which ſo much enliven the works of ſome hiſtorians, particularly the Engliſh. In general we may allow that where laborious inveſtigation, ſteady perſeverance, and cool judgment, are neceſſary, the Germans are hardly ſurpaſſed by any people; as in juriſprudence, and experimental philoſophy, particularly chemiſtry; for the diſcoveries and improvements in which the world is highly indebted to German induſtry.

The ſeminaries of learning in Germany have long been in high repute. There are no leſs than thirty-eight univerſities; nineteen of which are proteſtant, ſeventeen are catholic, and two of them receive ſtudents indiſcriminately of both perſuaſions. There are alſo a number of literary ſocieties and academical inſtitutions; and education is particularly attended to even in the very loweſt ranks.

The Germans are in general tall and well-made; the women are modeſt and well-looking; and many of them will rival the greateſt beauties in other countries. Both ſexes affect to dreſs in rich clothes, according to the faſhion of England or France. Many of the principal people wear a great deal of gold and ſilver lace; the ladies of the Auſtrian court do not differ much in their dreſs from thoſe of the ſame rank in England and France. In ſome of the courts of the inferior ſtates they appear in furs, decorated with as many diamonds as they can procure. The burghers and inhabitants of ſeveral cities in Germany dreſs in a manner extremely ſtiff and antique; though their appearance of late years has much improved. The artiſans and labourers, as in the other parts of Europe, wear thoſe ſort of clothes that are beſt adapted to their various occupations.

The peculiar turn of mind of the Germans ſeems to be for philoſophy; they are diſtinguiſhed from all the nations of Europe for a cool, and generally a juſt, judgment, united with extreme induſtry. We have before obſerved, that the character and diſpoſitions of men depend much on the government under which they live. That of the Germans is in general inert and phlegmatic; they have therefore little of the fire and national pride by which the Spaniards are diſtinguiſhed. Their pride and patriotic ſentiments only extend to the part of Germany in which they are born; to the reſt of their countrymen they are as ſtrange as to any foreigners. This is owing to their organization under ſeparate and diſtinct ſtates, where perhaps different cuſtoms and faſhions prevail.

Though the character of the Germans be not ſo brilliant as that of ſome few other nations, ſtill it is not deſtitute of peculiar excellencies. The German is the man of the world; he lives under every ſky, and conquers every natural obſtacle to his happineſs. His induſtry is inexhauſtible. Poland, Hungary, and Ruſſia, are indebted for moſt of their improvements to German emigrants. Rectitude is an almoſt univerſal characteriſtic of the people of this country; nor are the manners of the peaſants, and thoſe of the inhabitants of the ſmall towns, by any means ſo corrupt as thoſe of ſeveral of the neighbouring countries: it is perhaps owing to this, that, notwithſtanding the great emigrations, the country is ſtill ſo well peopled. Upon the whole, Chriſtian forbearance on the ſide of the proteſtants, and frankneſs and good-heartedneſs on the ſide of the catholics, are the characteriſtics with reſpect to religion, which are productive of much national happineſs.—For the particular hiſtory of each ſeparate ſtate, ſee under their reſpective titles in this Encyclopædia.

GER'MANY, a townſhip of the American ſtates, in York county, Pennſylvania.

GER'MEN, *ſ.* [Latin.] A bud; a ſhoot.

GER'MERSHEIM, a town of Germany, in the circle of the Lower Rhine, and palatinate of the Rhine, ſituated at the conflux of the Queich and the Rhine: erected into a town by the emperor Rodolphus I. who died here in 1290. In January 1794, this town was taken by the French republicans; and on the 29th of May, near this place, the French were defeated by the Auſtrians, having four hundred men killed, and ſix hundred taken priſoners. It is five miles ſouth of Spire, and ſixteen ſouth-weſt of Heidelberg. Lat. 49. 10. N. lon. 25. 5. E. Ferro.

GER'MIGNY, a town of France, in the department of the Yonne: one league ſouth-eaſt of St. Florentin.

GER'MIGNY, a town of France, in the department of the Seine and Marne: one league eaſt of Meaux.

GER'MIN, *ſ.* [*germen*, Lat.] A ſhooting or ſprouting ſeed. *Out of uſe.*

> Thou all-ſhaking thunder,
> Strike flat the thick rotundity o' the world;
> Crack nature's mould, all *germins* ſpill at once
> That make ungrateful man. *Shakeſpeare.*

GER'MINANT, *adj.* Shooting; ſprouting.

To GER'MINATE, *v. n.* [*germino*, Lat.] To ſprout; to ſhoot; to bud; to put forth.—The ſeeds of all kinds of vegetables being planted near the ſurface of the

the earth, in a convenient ſoil, amongſt matter proper for the formation of vegetables, would *germinate*, grow up, and repleniſh the face of the earth. *Woodward.*

GERMINA'TION, *ſ.* [French.] The act of ſprouting or ſhooting; growth.—Suppoſe the earth ſhould be carried to the great diſtance of Saturn; there the whole globe would be one frigid zone; there would be no life, no *germination*. *Bentley.*

Botaniſts and agriculturiſts find, that different ſeeds employ certain given lengths of time in germinating, after being committed to the earth.

The *germination* of plants forms a very intereſting department of vegetable phyſiology; and the extenſive progreſs of chemical experiments, has of late thrown conſiderable light upon this curious ſubject. In 1793, M. Humboldt diſcovered, that ſimple metallic ſubſtances are very unfavourable to the germination of plants, while metallic oxyds favour it in proportion to their degree of oxydation. This fact induced him to ſearch for a ſubſtance with which oxygen might be ſo weakly combined as to be eaſily ſeparated, and he made choice of oxygenated muriatic acid gas mixed with water. The ſeeds of creſſes ſoaked in the oxygenated muriatic acid, ſhewed germs at the end of ſix hours, and in common water at the end of thirty-two hours. The action of the firſt fluid on the vegetable fibres is announced by a great number of air bubbles which cover the ſeeds, a phenomenon not exhibited by water till at the end of from thirty to forty-five minutes. Theſe experiments, announced in Humboldt's *Flora Subterranea Fribergenſis*, and in his Aphoriſms on the Chemical Phyſiology of Plants, have been repeated by others. They were made at a temperature of from 12 to 15 of Reaumur. In the ſummer of 1796, Humboldt began a new ſeries of experiments, and found that by joining the ſtimulus of caloric to that of oxygen, he was enabled ſtill more to accelerate the progreſs of vegetation. He took the ſeeds of garden creſſes, peaſe, French beans, garden lettuce, and mignonette, equal quantities of which were thrown into pure water and the oxygenated muriatic acid at a temperature of 88° Fahrenheit. Creſſes exhibited germs in three hours in the oxygenated muriatic acid, while none were ſeen in water till the end of twenty-ſix hours. In the muriatic, nitric, or ſulphuric, acid, pure or mixed with water, there was no germ at all: the oxygen ſeemed there to be too intimately united with baſes of azot or ſulphur, to be diſengaged by the affinities preſented by the fibres of the vegetable. The author announces, that theſe diſcoveries, if purſued, may one day prove of great benefit in the cultivation of plants. His experiments have therefore been repeated with great induſtry and zeal by ſeveral diſtinguiſhed philoſophers. Profeſſor Pohl at Dreſden cauſed to germinate in oxygenated muriatic acid the ſeed of a new kind of euphorbia, taken from Bocconi's collection of dried plants, one hundred and twenty years old. Jacquin and Vander Schott at Vienna threw into oxygenated muriatic acid all the old ſeeds which had been kept twenty or thirty years at the botanical garden, every attempt to produce vegetation in which had been fruitleſs, and their latent germinating powers were for the moſt part ſtimulated with ſucceſs. Even the hardeſt ſeeds yielded to this agent. Among thoſe which germinated were the yellow bonduc or nickar tree (*guilandina bonduc*), the pigeon cytiſus or pigeon pea (*cytiſus cajan*), the *dodonæa anguſtifolia*, the climbing mimoſa (*mimoſa ſcandens*), and ſome new kinds of the *homæa*. There are now ſhewn at Vienna very valuable plants, which are entirely owing to the oxygenated muriatic acid. Humboldt cauſed to germinate the *cluſia roſea*, the ſeeds of which had been brought from the Bahama iſlands by Booſe, and which before had reſiſted every effort to make them vegetate. For this purpoſe he employed a new proceſs, which ſeems likely to be much eaſier for gardeners who have not an opportunity of procuring oxygenated muriatic acid: He formed a paſte by mixing the ſeeds with the black oxyd of manganeſe, and then poured over it the muriatic acid diluted with water. Three cubic inches of water were mixed with half a cubic inch of the muriatic acid. The veſſel which contains this mixture muſt be covered, but not cloſely ſhut; elſe it might readily burſt. At the temperature of 95° the muriatic acid becomes ſtrongly oxydated; the oxygenated muriatic gas which is diſengaged paſſes through the ſeeds; and it is during this paſſage that irritation of the vegetable fibres takes place.

M. Sauſſure has alſo recently publiſhed ſome curious reſearches on the influence which oxygen gas has on the germination of plants. The greater part of naturaliſts, ſays he, who have examined the influence of atmoſpheric air on germination, have perceived, that when ſeeds are placed in contact with water and pure azotic gas they do not germinate; and that there is a production of carbonic acid, which, mixing itſelf with the azotic gas, increaſes the volume of the atmoſphere of the plant. They have ſeen that, when oxygen gas is ſubſtituted in the preceding experiment for azotic gas, there is alſo a production of carbonic acid gas; but that the atmoſphere of the plant decreaſes, and that the oxygen gas is abſorbed. He made ſeveral experiments to diſcover what takes place in theſe operations. The following are the reſults:

1. The atmoſpheric oxygen gas is not abſorbed by the ſeed in the act of germination, as ſeems hitherto to have been admitted, but is employed merely to form carbonic acid gas with the carbon of the ſeed. 2. The ſeed in germination does not, by the contact of the atmoſpheric air, form carbonic acid gas from its own ſubſtance, but only furniſhes one of the conſtituent parts of that gas, viz. carbon. 3. It furniſhes the oxygen and carbon from its own ſubſtance in the carbonic acid gas, which it produces when it is in contact only with water and pure azotic gas.

Spallanzani alſo examined this ſubject with conſiderable attention. He concludes from his experiments: 1. That the leaves and tops of vegetables, when the rays of the ſun dart upon them, increaſe the proportion of the oxygen gas of the atmoſpheric air. 2. That this augmentation is not ſo conſiderable as has been believed. 3. That the ſame parts of vegetables diminiſh the oxygen gas during the night, and cloudy days, by transforming it continually though ſlowly into carbonic acid. 4. That the flowers, whether in the ſun or ſhade, have more power to diminiſh the quantity of vital air or oxygen gas. 5. That fruits have the ſame effects in this reſpect as flowers.

Dr. G. Thilow has lately confirmed the diſcovery of Ingenhouz, that oxygen has a powerful influence on vegetation. The author's experiments were the two following:—1ſt. A weak ſickly dwarf-tree was beſprinkled with a mixture of oil of vitriol and water. The plant-lice, which rendered the plant ſickly, ſoon diſappeared, and the plant ſpeedily revived. 2d, A ſmall layer of an auricula by the ſame means, in the period of ſcarcely three weeks, was brought to a conſiderable ſize and full bloom; and this experiment would probably have ſucceeded in a ſhorter period, had not the expanſion of the plant been retarded by two nights froſt.

GER'MISCH, a town of Germany, in the circle of Bavaria, and biſhopric of Freyſing: twenty-one miles ſouth of Weilhaim.

GER'MON (Bartholomew), a celebrated French Jeſuit, born at Orleans, in 1663. He applied with great aſſiduity to his ſtudies, and acquired conſiderable reputation by his proficiency in the learned languages, his knowledge of antiquities, and of theology. He engaged in a long conteſt with fathers Mabillon and Conſtant, both belonging to the congregation of St. Maur, on the

ſubject of ancient diplomas; and publiſhed ſeveral treatiſes during the years 1703, 1706, and 1707, written in elegant Latin, and forming together three volumes, 12mo. He alſo engaged in the controverſy concerning grace; and was the author of a theological treatiſe On the Hundred-and-one Propoſitions of Queſnel condemned by the Bull Unigenitus, in 2 vols. 4to. This work was adopted by the cardinal de Biſſy, who publiſhed it in his own name.

GERMO'NIO (Anaſtaſio), an eminent canoniſt, born at Sala in Piedmont, in 1551. He engaged in the ſtudy of law, firſt at Turin, and then at Padua. At the former of theſe univerſities he received his degree from the hand of his tutor, the celebrated Pancirolus, who expreſſed great aſtoniſhment at his proficiency. He obtained a chair of canon-law at Turin, which he continued to occupy after he had been raiſed to the poſts of apoſtolical-protonotary and metropolitan archdeacon. When his archbiſhop was created a cardinal, he accompanied him to Rome, and acquired the eſteem of Sixtus V. and the ſucceeding pontiffs. Clement VIII. joined him to the congregation formed for compiling the ſeventh book of decretals, in which were to be inſerted the decrees of the council of Trent, with proper explanations; but after the work was finiſhed and ſent to the preſs, political reaſons cauſed the court of Rome to ſuſpend the publication. He refuſed two biſhoprics, but was at length induced to accept the archbiſhopric of Tarantaſia in Savoy. The duke Charles-Emanuel ſent him as his ambaſſador at the court of Madrid, where he died in 1627. Of his works, beſides his Notes on the Decretals, and Paratitles on the Digeſt and Code, are: *De Sacrorum immunitatibus Lib. tres*; *nec-non de indultis Apoſtolicis Tractatus*, printed at the Vatican, 1591, folio: *Pomeridianæ Seſſiones in quibus Latinæ Linguæ dignitas defenditur, &c.* 1580, 4to. All his works, reviſed by himſelf, were printed at Rome, 1623, folio.

GERMS, a town of Germany, in the archduchy of Auſtria: four miles weſt of Zwetl, and ſixty-two weſt-north-weſt of Vienna. Lat. 48. 32. N. lon. 32. 43. E. Ferro.

GERN, a town of Ruſſia, in the government of Tula: twenty-eight miles weſt-ſouth-weſt of Tula.

GERN, a town of Germany, in Lower Bavaria: thirteen miles ſouth-ſouth-eaſt of Dingelfingen, and fifteen weſt-north-weſt of Braunau.

To GERN, *v. n.* [from ȝeonnan, Sax. *oſcitare.*] To yawn.—And gaped like a gulf, when he did *gerne. Spenſer.*

GER'NOI, a fortreſs of Ruſſian Siberia, in the government of Kolivan, on the Irtiſch: two hundred and four miles ſouth-weſt of Kolivan. Lat. 51. 44. N. lon. 96. E. Ferro.

GERNOIAR'SKOI, a fortreſs of Ruſſian Siberia, in the government of Kolivan, on the Irtiſch: one hundred and ninety-ſix miles weſt-ſouth-weſt of Kolivan. Lat. 52. 45. N. lon. 95. E. Ferro.

GER'NON, [ȝeonne, Sax. ſtudious.] A proper name.

GERNORIETZ'KOI, a fortreſs of Ruſſian Siberia, in the government of Kolivan, on the Irtiſch: one hundred and eighty miles weſt-ſouth-weſt of Kolivan. Lat. 52. 45. N. lon. 95. E. Ferro.

GERN'RODE, an abbey of Germany, in the circle of Upper Saxony, founded in 960, and richly endowed for ladies, by Gero margraviate of Luſatia; but ſecularized in the ſeventeenth century, in favour of the houſe of Anhalt, by the treaty of Weſtphalia: and gives to that houſe a ſeat and voice among the prelates of the Rhine. The aſſeſſment is thirty-ſix florins for a Roman month: twenty-two miles weſt of Bernburg, and thirty weſt of Deſſau.

GERN'SHEIM, or GER'RENSHEIM, a town of Germany, in the circle of the Lower Rhine, and electorate of Mentz, ſituated on the Rhine: twenty-ſeven miles north-north-weſt of Heidelberg, and eighteen ſouth-ſouth-eaſt of Mentz.

GERNYOSZEG', a town of Tranſilvania, ſituated on the river of Maros: ten miles ſouth-weſt of Kereſztur.

GERO'DA, a town of Germany, in the circle of the Lower Rhine, and territory of Eichsfeld, with a rich Benedictine abbey, whoſe juriſdiction extends over five villages: eight miles north-eaſt of Duderſtadt.

GERODO'I, a town of France, in the department of the Aube, and chief place of a canton, in the diſtrict of Troyes: three leagues eaſt of Troyes.

GEROLD'SECK HO'HEN, a caſtle of Germany, in the circle of Swabia, which gives name to a ſmall county ſituated on the left ſide of the Kinzig; the aſſeſſment for the Roman month is ſixteen florins, and to the chamber of Wetzlar eight rixdollars nine kruitzers: three miles ſouth-ſouth-eaſt of Gengenbach.

GER'OLDSGRUN, a town of Germany, in the circle of Franconia, and principality of Bayreuth, with a mineral ſpring: four miles ſouth-weſt of Lichtenberg.

GER'OLDSTEIN, a town of Germany, in the circle of the Upper Rhine, and county of Katzenelnbogen: ſeven miles ſouth of Naſtede.

GER'OLSTEIN, or GEROLDSTEIN, a town of Germany, in the circle of Weſtphalia, belonging to the county of Blankenheim, ſituated on the Kill: twenty-four miles north of Treves. Lat. 50. 19. N. lon. 24. 5. E. Ferro.

GER'OLTZHOFEN, a town of Germany, in the circle of Franconia, and biſhopric of Wurzburg: nine miles ſouth-eaſt of Schweinfurt, and twenty north-eaſt of Wurſburg.

GE'RON POINT, a cape of Ireland, in the county of Antrim: fifteen miles north-north-eaſt from Antrim, and thirty-two north from Belfaſt. Lat. 55. 3. N. lon. 5. 50. W. Greenwich.

GERO'NA, or GIRONA, a town of Spain, and capital of a viguery, in the province of Catalonia, the ſee of a biſhop, ſuffragan of Tarragona. In 1694, it was taken by the French, and reſtored at the peace of Ryſwick. In 1705, it was taken by the troops of the archduke Charles; and in 1711 it was taken by the French under the command of the duke of Noailles: forty-four miles ſouth of Perpignan, and forty-ſeven north-eaſt of Barcelona. Lat. 42. 10. N. lon. 19. 21. E. Peak of Teneriffe.

GERON'TES, *ſ.* in Grecian antiquity, a ſenate of judges, inſtituted by Lycurgus: their number, according to ſome, was twenty-eight; and, according to others, thirty-two. They governed in conjunction with the king, whoſe authority they were intended to balance, and to watch over the rights of the people. Polybius defines their office in few words, when he ſays, *per ipſos, & cum ipſis, omnia adminiſtrari.* None were to be admitted under ſixty years of age, and they held their office for life.

GERON'THRÆ, in ancient geography, a town of Laconia, where a yearly feſtival, called *geronthræa*, was obſerved in honour of Mars. The god had there a temple, with a grove, into which no woman was permitted to enter during the time of the ſolemnity. *Lucan.*

GERONTOCO'MIUM, *ſ.* [γερων, an old man, and κομεω, Gr. to take care of.] An hoſpital or alms-houſe for old people.

GERONTOC'OMY, *ſ.* A part of phyſic, which ſhews the way of living for old men, in order to preſerve their health.

GEROPO'GON, *ſ.* [Greek; from γερων, an old man, and πωγων, a beard; from the whiteneſs of the ſeed-crown.] In botany, a genus of the claſs ſyngeneſia, order polygamia æqualis, natural order compoſitæ ſemiflosculoſæ, or compound flowers, with ſemiflorets or ligulate florets only, (cichoraceæ, *Juſſ.*) The generic characters are—Calyx: common ſimple, many-leaved; leaflets lanceolate-ſubulate, keeled, upright, longer than the corolla. Corolla: compound ſubimbricate, uniform; corollules hermaphrodite; outer as many as

there are leaflets in the calyx; inner fewer, ſhorter; proper one-petalled, ligulate, truncate, five-toothed. Stamina: filaments five, very ſhort; anther cylindric, tubular. Piſtillum: germ oblong; ſtyle filiform, the ſame length with the ſtamens; ſtigmas two, bowed back, filiform. Pericarpium: none; calyx oblong, upright, gaping. Seeds: of the ray ſubulate, the ſame length with the calyx; down with five patulous awns—of the diſk ſubulate, ſhorter; down feathered. Receptaculum: with briſtle-ſhaped chaffs; (naked, *Gærtner.*)—*Eſſential Character.* Calyx, ſimple; receptacle, with briſtle-ſhaped chaffs; ſeeds, of the diſk, with a feathered down—of the ray, with five awns.

Species. 1. Geropogon glabrum, or ſmooth geropogon, or old man's beard: leaves ſmooth. 2. Geropogon hirſutum, or rough geropogon: leaves hairy. 3. Geropogon calyculatum, or perennial geropogon; calyxes calycled.—Theſe plants have the ſame habit with tragopogon and ſcorzonera. The flowers in the two firſt ſpecies not yellow, but red: theſe are annual. The third ſpecies is perennial. All of them are natives of Italy; and flower in June, July, and Auguſt. For the propagation and culture, ſee TRAGOPOGON.

GER'RHÆ, in ancient geography, a people of Scythia, in whoſe country the Boryſthenes riſes. The kings of Scythia were generally buried in their territories.

GER'RI, a town of Spain, in the province of Catalonia: thirty-ſeven miles north of Balaguer.

GER'RI, a town of Africa, in Nubia, ſituated on the Nile, containing about 140 houſes: 130 miles north-north-eaſt of Sennaar. Lat. 16. 15. N. lon. 30. 34. E. Greenwich.

GER'RISH ISLAND, a ſmall iſle near Cape Neddock, cloſe to the main land of the diſtrict of Maine, in the American States.

GER'RISHEIM, a town of Germany, in the circle of Weſtphalia, and duchy of Berg: four miles eaſt of Duſſeldorp.

GER'RY, a townſhip of the American States, in Worceſter county, Maſſachuſſets. It was incorporated in 1786, and contains 14,000 acres of land, and 740 inhabitants: thirty miles north-weſt of Worceſter, and ſixty-five north-weſt by weſt of Boſton.

GERS, a river of France, which riſes near La Barthe de Neſtes in the department of the Upper Pyrenees, croſſes the department of the Gers, paſſing by Maſſeure, Seiſſan, Auch, Fleurance, Lectoure, &c. and runs into the Garonne, about a league ſouth-eaſt of Agen.

GERS, a department of France, bounded on the north by the department of the Landes, and the Lot and Garonne; on the eaſt by the department of the Upper Garonne; on the ſouth by thoſe of the Upper and Lower Pyrenees; and on the weſt by the department of the Landes. About fifty-five miles long, and from twenty-two to forty-five broad. It takes its name from the river Gers, which croſſes it from ſouth to north. Auch is the capital. This is one of the four departments formed out of Guienne.

GER'SAU, a town of Swiſſerland, and many years capital of a ſmall republic, in the canton of Schweitz. The whole territory is only about two leagues long, and one wide, and the population about one thouſand ſouls. It formerly belonged to the houſe of Auſtria, but entered into an alliance with the cantons of Uri, Schweitz, and Underwalden, in 1315, which was confirmed in 1359. The town is ſituated on the north ſide of the lake of Four Cantons: ſix miles ſouth-weſt of Schweitz.

GER'SCHITZ, a town of Bohemia, in the circle of Konigingratz: nine miles north-weſt of Konigingratz.

GERS'DORF, a town of Germany, in the circle of Upper Saxony, and principality of Querfurt: four miles north-eaſt of Juterbock.

GER'SHAM, [Heb. a ſtranger.] A man's name.

GER'SHON, a man's name.

GER'SHONITE, *ſ.* A deſcendant of Gerſhon.

GERSPACH', a town of Germany, in the circle of Swabia, and county of Eberſtein, on the Murg: two miles ſouth-eaſt of Baden, and twenty-two north-eaſt of Straſburg. On the 5th of July, 1794, the Auſtrians were defeated near this place, and the town taken poſſeſſion of by the French.

GERSS'PRENTZ, a river of Germany, in the circle of the Lower Rhine, which runs into the Main, near Stockſtad, in the electorate of Mentz.

GER'STEN (Chriſtian-Louis), profeſſor of mathematics at Gieſſen, born in that city in 1701, and died at Frankfort in 1762. His works are, 1. *Tentamina Syſtématis novi ad Mutationes Barometri, ex Natura elateris Aerei demonſtrandas.* Frankfort, 1733, 8vo. 2. *Methodus nova ad Eclipſes Terræ & Appulſus Lunæ ad Stellas ſupputandas.* Gieſſen, 1740, 4to. 3. *Exercitationes recentiores circa Roris Meteora.* Offenbach, 1748, 8vo. 4. *Methodus nova Calculi Eclipſium Terræ ſpecialis*, in the Philoſophical Tranſactions, vol. xliii. N°. 482. 5. *Mercurius ſub Sole viſus, & Obſervatus in Specula Aſtronomica.* Gieſſen, Phil. Tranſact. vol. xliv. N°. 482, and in Nov. Act. Lipſ. 1745. 6. *Quadrantis Aſtronomici muralis Idea nova & peculiaris.* Phil. Tranſact. vol. xliv. N°. 483.

GERSTRUN'GEN, a town of Germany, in the circle of Upper Saxony, and principality of Eiſenach: eight miles weſt of Eiſenach.

GERSUM'A, *ſ.* [Saxon.] A fine or income.

GERSUMARI'US, *ſ.* In law: finable; liable to be amerced or fined at the diſcretion of the lord of the manor.

GERS'WALDE, a town of Germany, in the circle of Upper Saxony, and Ucker Mark of Brandenburg: nine miles ſouth of Prenzlow.

GER'TRUDE, [of ȝæn, all, and ꝥruth, Teut. q.d. true to her truth.] A Chriſtian name of woman.

GERTRU'DENBERG, a town of Germany, in the circle of Weſtphalia, and biſhopric of Oſnabruck: one mile eaſt of Oſnabruck.

GERTRU'DENBURG, or ST. GERTRUYDENBURG, a town of Brabant, but of late years ſubjected to Holland. Such was the diſpoſition of both countries towards this place, that the Brabanters were accuſtomed to compel their dukes to promiſe their endeavours to reunite it to their duchy; and the Hollanders, on the contrary, compelled their comte to ſwear not to neglect any means in his power to preſerve it. It has a good harbour formed by the Merwe, which is here extended to a very conſiderable lake, called Bies Boſch, of about two hours paſſage croſs to Dort. It is built in the form of a creſcent, with regular fortifications, good baſtions, and ſome forts, with ſluices, by means of which they can lay the country about it under water. In ancient charters it is called *Mons Littoris*, the Mountain of the Shore. Pepin de Landen, duke of Brabant, gave it to his daughter Gertrude, in 647, who built a church dedicated to St. Amand, biſhop of Tongres; but afterwards the place becoming celebrated by the death and miracles of Ste. Gertrude, it has ſince been called *Mont de Ste. Gertrude*, or *Gertrudenburg*. It has a caſtle, built in 1321. In 1420, the inhabitants of Dort took the town and ſet fire to it, which demoliſhed the church. On the 28th of Auguſt, 1573, the confederates, under the conduct of captain Poyet, a French Calviniſt, came ſo ſuddenly upon it, that they almoſt cut the garriſon in pieces before they could act on the defenſive. In 1589, the Engliſh garriſon ſurrendered, or, as ſome aſſert, ſold it to the prince of Parma. Prince Maurice came to beſiege it on the 28th of March, 1593, and after having taken the fort of Stekelhof, which was about two muſket ſhots from the town, he approached near, made bridges over the waters and marſhes for a regular communication between his quarters, and fortified his camp with ſuch art and caution that it could not be forced, and the place was compelled to ſurrender on the 25th of June, in the ſight of comte de Mansfelt, who had advanced

advanced to its relief, and was then beſieging the prince's army. Gertrudenburg was ſummoned by the French republicans the latter end of February, 1793, and ſurrendered after three days bombardment; it was evacuated ſoon after. The officers who ſurrendered the fort were afterwards tried on a ſuſpicion of miſconduct, but were acquitted with honour. It was again taken by the French in 1795: ten miles ſouth-eaſt of Dort, and ſeven north-eaſt of Breda. Lat. 51. 42. N. lon. 22. 19. E. Ferro.

GER'VAIS (Armand-Francis), abbot of the monaſtery of La Trappe, born at Paris about the year 1660. He received his claſſical education at the college of the Jeſuits, and when he was fifteen years of age entered among the bare-footed Carmelites. Having, in 1745, publiſhed the firſt volume of a curious and intereſting General Hiſtory of the Ciſtercian Order in France, in which a ſevere attack was made upon the Bernardins, they applied to the court, by which a letter of arreſt was iſſued out againſt him, and he was immured within the abbey of Notre Dame des Reclus, in the dioceſe of Troyes, where he died in 1751, at the advanced age of ninety-one; greatly admired for his learning, and reſpected for many virtues. He was the author of, 1. The Life of St. Cyprian, 1717, 4to. 2. The Lives of Peter Abelard and his wife Heloiſe, &c. 1720, 2 vols. 12mo. 3. A Tranſlation of the genuine Letters of Abelard and Heloiſe, taken from an ancient Latin Manuſcript, with curious hiſtorical and critical Notes, 1723, 12mo. 4. The Hiſtory of Suger, Abbot of St. Denys, &c. 1721, 3 vols. 12mo. 5. A Defence of the Abbé Rancé againſt the Invectives of Father Vincent Thuiller, inſerted in the firſt Volume of the poſthumous Works of Father Mabillon, 1725, 12mo. 6. The Life of St. Irenæus, 1723, 2 vols. 12mo. 7. The Life of Ruffinus, Prieſt of the Church of Aquileia, 1724, 2 vols. 12mo. 8. The Life of St. Paul the Apoſtle of the Gentiles, &c. 1735, 3 vols. 12mo. 9. The Life of St. Epiphanius, with an Analyſis of his Works, &c. 1738, 4to. 10. The Life of St. Paulinus, Biſhop of Nola, 1743, 4to. 11. The Hiſtory of the Abbé Joachim, ſurnamed the Prophet, 1745, 2 vols. 12mo. 12. A critical Examination of the Lives of the Abbé Rancé, Reformer of the Abbey of La Trappe, written by MM. Maupou and Marſollier, 1744, 12mo. Some treatiſes againſt Father Courayer, on the ſubject of the Validity of Engliſh Ordinations, &c.

GER'VAISE (Nicholas), a French eccleſiaſtic and miſſionary, the ſon of a phyſician in Paris. Before the age of twenty he accompanied ſome miſſionaries to Siam, in which country he remained four years, making himſelf acquainted with the Siameſe language and hiſtory. Upon his return he publiſhed *Hiſtoire Naturelle & Politique du Royaume de Siam*, 4to. 1688; and in the ſame year he added, by way of ſupplement, *Deſcription Hiſtorique du Royaume de Macaçar*, 4to. 1688; 12mo. Theſe works bear the marks of a juvenile writer, but are not deſtitute of curious and valuable information. He then entered the church, and became a rector at Vannes in Brittany. The provoſtſhip of Suévre in the church of St. Martin at Tours was afterwards conferred upon him, on which account he drew up A Life of St. Martin, Biſhop of Tours, with a Hiſtory of the Foundation of his Church, 4to. 1699. In 1715 he publiſhed A Hiſtory of the Roman Senator Boëthius, with an Analyſis of his Works, and Notes and Diſſertations hiſtorical and theological, 12mo. About 1724, he went to Rome, where he was conſecrated biſhop of Horren. He afterwards embarked for the place of his miſſion in Guiana, where, with all his eccleſiaſtics, he was maſſacred by the Caribbee Indians, in November, 1729.

GER'VAS, [Teut. i. e. all faſt.] A proper name of men.

GER'VASE of TILBURY, called *Tilburenſis*, an hiſtorian of the thirteenth century, who took his name from his native place, Tilbury in Eſſex, and was nephew to king Henry II. He was greatly in favour with the emperor Otho IV. who made him marſhal of the kingdom of Arles. He wrote a large commentary on Geoffrey of Monmouth's Britiſh Hiſtory, entitled *Illuſtrationes Galfredi*, and alſo a tripartite Hiſtory of England. To him is likewiſe aſcribed the compilation of the exchequer book, entitled, *Liber Niger Scaccarii*, though, by Mr. Madox, who gave a correct edition of it, Richard Nelſon biſhop of London is ſuppoſed to have been its true author. Other works of Gervaſe are: A Hiſtory of the Holy Land; *Origenes Burgundionum*; *Mirabilia Orbis*; and a chronicle entitled *Imperialium Otiorum, Lib. III.*

GER'UND, *ſ.* [*gerundium*, Lat.] In the Latin grammar, a kind of verbal noun, which governs caſes like a verb. See GRAMMAR.—There be belonging to the infinitive mood of verbs certain voices called *gerunds*, which have both the active and paſſive ſignification. *Lilly.*—The participle with the prepoſition before it, and ſtill retaining its government, anſwers to what is called in Latin the *gerund. Lowth.*

GERUN'DA, in ancient geography, a town of the Auſetani, in the Hither Spain, on the ſouth or right ſide of the river Sambroca. *Gerundenſes*, the people. Now *Gironne* in Catalonia, on the Ter.

GER'YON, in fabulous hiſtory, a famous monſter, born from the union of Chryſaor with Callirhoe, and repreſented by the poets as having three bodies and three heads. He lived in the iſland of Gades, where he kept numerous flocks, which were guarded by a two-headed dog, called Orthos, and by Eurythion. Hercules, by order of Euryſtheus, went to Gades, and deſtroyed Geryon, Orthos, and Eurythion, and carried away all his flocks and herds to Tirynthus. *Heſiod.*

GER'ZAT, a town of France, in the department of the Puy-de-Dôme, and chief place of a canton, in the diſtrict of Clermont: four miles north-eaſt of Clermont.

GER'ZEN, a town of Germany, in the circle of Lower Bavaria: ſeven miles ſouth of Dingelfingen, and eleven eaſt of Landſhut.

GES'AMUND, a man's name.

GES'AS, a town of Sileſia, in the principality of Neiſſe: two miles and a half ſouth-eaſt from Patſchkau.

GES'CHE EL AUBE, or GIR GIR, *ſ.* A new ſpecies of graſs found by Mr. Bruce near Ras el Feel, on the borders of Abyſſinia. It begins to ſhoot in the end of April, and advances ſpeedily to its full height, which is about three feet and a half. It is ripe in the beginning of May, and decays very ſoon afterwards. The leaf is long, pointed, narrow, and of a delicate texture. The ſtock from which it ſhoots produces leaves in great abundance, which ſoon turn yellow and fall to the ground. Goats, the only cattle ſeen in that country, are very fond of it, and ſeem to prefer it to all other food. This ſpecies of graſs was thought a great acquiſition by Mr. Bruce; but we do not find that it has ever been cultivated for cattle in England.

GESE'KE, a town of Germany, in the circle of the Lower Rhine, and duchy of Weſtphalia: nine miles eaſt-ſouth-eaſt of Lipſtadt, and fourteen north of Ruden.

GE'SEM (Land of), probably the Land of Goſhen in Egypt, ſummoned by Nabuchodonoſor king of Aſſyria, to aſſiſt him againſt the Medes. *Judith*, i. 9.

GE'SHUR, or GESHURI, a part of Syria bordering upon the north of Paleſtine, and compriſed in the original boundaries of the Iſraelitiſh territory; being aſſigned to the half-tribe of Manaſſeh in Baſhan, and was part of the inheritance of the family of Jair. Its natives, the Geſhurites, were not then expelled from thence, but continued to dwell with the Iſraelites; and very probably, at ſome ſubſequent period, regained their independence. For, in the reign of king David we read of a king of Geſhur named Talmai, whoſe daughter David had married, and who proved the mother of Abſalom. It was with this ſame Talmai that Abſalom took refuge when he had aſſaſſinated his brother Amnon;

mon; here he remained in exile three years, when through the intereſt of Joab, (by whoſe hand he afterwards fell,) he was recalled by his father. Some have ſuppoſed there was a city of the name of Geſhur ſituated in this country; but it does not appear ſo from Scripture, which we have cloſely followed in this ſtatement: neither were the Geſhurites whom David invaded ſituated as ſome have imagined; they were ſituated ſouth of Judah, towards Shur and Egypt, though very probably of the ſame race with the above, and their ſeparation might be occaſioned by the terror of the Iſraelitiſh arms, when they firſt entered Paleſtine. *Deut.* iii. 14. *Joſh.* xiii. 2, 11–13. 2*Sam.* iii. 3. xiii. 37–38. xv. 8. 1 *Chron.* ii. 23. iii. 2.

GESH'URITES, *ſ.* The inhabitants of Geſhur.

GE'SIS, a town of Germany, in the county of Feldkirck: four miles eaſt of Feldkirck.

GES'MOLD, a town of Germany, in the circle of Weſtphalia, and biſhopric of Oſnabruck: twelve miles ſouth-eaſt of Vorden.

GES'NER (Conrad), a phyſician and naturaliſt, born at Zurich, in 1516. During his youth he had to ſtruggle with that indigence to which ſcholars without fortune are often liable. With difficulty he obtained ſchool-learning in his native place; and viſiting Straſburg for his improvement, he was obliged to become the domeſtic ſervant of one of the profeſſors, who taught him Hebrew. He was afterwards ſent with ſome public aſſiſtance into France, where he enlarged his ſphere of ſtudy, and engaged in the inſtruction of others. On his return, he ventured to indulge an amorous attachment, and married in his twentieth year. He taught boys their grammar for a maintenance, and at his leiſure ſtudied books of medicine. He had already imbibed from an uncle that ardour for botanical purſuits which was the ruling paſſion of his life. A ſtipend was given him to ſtudy at Baſil, and at that univerſity he improved himſelf in medical knowledge and in Greek. Being invited to Lauſanne, he there obtained the Greek profeſſorſhip, and began to publiſh in botany and materia-medica. He then viſited Montpellier, and, after a ſhort ſtay, went again to Baſil, where he took the degree of doctor of phyſic, with which he returned to his native city. Thenceforth Zurich was the place of his fixed abode; and, beſides the practice of phyſic, he was employed in giving public lectures on philoſophy, ethics, and phyſics. Theſe, however, were a ſmall part of his labours. He took ſeveral journeys for the purpoſe of examining and collecting plants and other objects of natural hiſtory, of which he was the firſt perſon upon record who formed a muſeum. He cultivated a botanical garden, which he enlarged and improved, till he was unfortunately cut off by the plague in 1565, aged forty-nine.

Geſner, as a botaniſt, was the firſt who had a clear notion of method, and who diſcerned the exiſtence of genera comprehending many ſpecies, and claſſes containing many genera. He alſo diſtinguiſhed various natural claſſes in his book On the Collection of Plants. By his diſcoveries of new plants, or inveſtigation of doubtful ones, he at leaſt doubled the old catalogues, and at his death had prepared drawings of fifteen hundred ſpecies: of theſe, ſome are as elegant and accurate as any later ones, expreſſing the botanic character, and all the parts. He very diligently ſtudied the medicinal virtues of plants, frequently making experiments upon himſelf, as well as collecting practical obſervations from common uſe. Some of the moſt powerful remedies were introduced by him into practice; and he, firſt of the moderns, reſcued opium from the rank of poiſons, and ſhewed it to be a ſudorific, and a medicine of great efficacy. His principal writings under this head were: 1. *Apparatus & Delectus ſimplicium Medicamentorum; & de Compoſitione Medicamentorum.* 2. *Catalogus Plantarum, Nomina Latine, Græce, Germaniæ, & Gallice, proponens.* 3. *Enumeratio Medicamentorum purgantium, &c.* 4. *Tabulæ Collectionum in Genere, in Uſum Pharmacopolorum.* 5. *De ſecretis Remediis Theſaurus.* 6. *De Stirpium aliquot Nominibus veteribus & novis.* 7. *Hortorum Germaniæ Deſcriptio.* He alſo edited the *Hiſt. Stirpium & Adnotationes in Dioſcoridem* of Valerius Cordus, adding many new and fine plates of his own; and publiſhed an Epitome of Matthiolus, with ſuch additions of deſcriptions and plates as to make it a moſt valuable work. His medical writings are chiefly compriſed in thoſe on botany and materia-medica; but there are beſides, his *Libelli tres Medicinales; de Sanitate tuenda; contra Luxum Conviviorum; & contra Notas Aſtrologicas in Venis ſecandis*; and *Libellum de Lacte & Operibus lactariis.* After his death appeared his *Epiſtolarum Medicinal. Lib.* III. edited by Caſpar Wolfius, to which a fourth book was afterwards added. They are replete with valuable obſervations, medical and botanical. He alſo edited ſeveral pieces of the ancient medical writers, and publiſhed a collection of chirurgical writers in one folio volume. In the other branches of natural hiſtory, his great work, *Hiſtoria Animalium*, takes the lead. This he had intended to compriſe in ſix books, of which he publiſhed four: on viviparous quadrupeds; on oviparous quadrupeds; on birds; and on fiſhes and aquatics. The two remaining were to have been on ſerpents, and on inſects. His collections in this performance are a rich treaſure of all the knowledge then poſſeſſed on theſe ſubjects. He wrote alſo *De Foſſilibus, Gemmis, Lapidibus, Metallis*, &c. *De Thermis & Fontibus medicatis Helvetiæ & Germaniæ*; and *Deſcriptio Montis fracti ſive Piloti.* In philology his labours were not leſs conſiderable. The principal were: a *Lexicon Græco-latinum*; and a *Bibliotheca univerſalis, ſeu Catalogus Librorum locupletiſſimus omnium Scriptorum, Lingua Latina, Græca, & Hebraica, exſtantium & non-exſtantium*, folio.

GES'NER (John James), profeſſor in the Caroline college at Zurich, born in that city in 1707, and died there in 1787. He diſtinguiſhed himſelf by ſeveral valuable works on numiſmatics, and left an extenſive collection of coins and medals to his brother, profeſſor John Geſner. He was author of the following works: 1. *Theſaurus Univerſalis omnium Numiſmatum veterum Græcorum & Romanorum*, Turic. 1733, 4 vols. folio. 2. *Specimen Rei Numariæ*, ibid. 1735. 3. *Numiſmata Regum Macedoniæ omnia quæ Laboribus celeberrimorum Vivorum Crophii, Lazii, Golzii, Patini, Spanhemii, Harduini, Begeri, Wildii, Haymii, Liebii, &c. ex regiis aliiſque numiſmatophylaciis hactenus edita ſunt, additis ineditis & nondum deſcriptis, quotquot comparare licuit, integra Serie hiſtorica Tabulis Æneis repræſentata digeſſit, deſcripſit & Notis variorum doctiſſimorum Vivorum illuſtrata edidit J. J. Geſner*, Turic, 1738, folio. 4. *Numiſmata Græca Populorum & Urbium*, ibid. 1739–1754, folio. 5. *Numiſmata Regum Syriæ, Ægypti, Arſacidarum, Populorum & Urbium Græciæ, Imperatorum Romanorum, Latina & Græca*, ibid. *ſine anno*, folio. 6. *Numiſmata antiqua Imperatorum Romanorum Latina & Græca*, ibid. 1748.

GES'NER (John Matthias), Britannic profeſſor of rhetoric at Gottingen, born in 1691, at Roth, in Anſpach, where his father John Samuel was a clergyman. He received the firſt part of his education at the gymnaſium of Anſpach, and ſoon diſtinguiſhed himſelf by a ſtrong attachment to ancient literature, as well as to the oriental languages. He ſtudied theology at Jena; and in 1710 began to give ſpecimens of his talents and learning by various publications. On the eſtabliſhment of the univerſity of Gottingen in 1734, he was invited thither to be profeſſor of rhetoric; and when the royal ſociety was eſtabliſhed there in 1751, he was the firſt member of the hiſtorical claſs; in 1753 he was appointed a counſellor of ſtate, and in 1761 perpetual director. This office, however, he did not long enjoy; as he died on the 3d of Auguſt the ſame year. His principal works are: 1. *Philopatris Dialogus Lucianeus, cum Diſputa-*

tione de illius Ætate & Auctore, Jena, 1714, 8vo. 2. *Inſtitutiones Rei Scholaſticæ*, ibid. 1715, 8vo. 3. *Commentatio de Annis Ludiſque ſæcularibus veterum Romanorum*, ibid. 1717, 4to. 4. *Chreſtomathia Ciceroniana*, or, Select Paſſages from the Works of Cicero, ibid. 1717, 8vo. 5. *Baſilii Fabri Theſaurus Eruditionis ſcholaſticæ recenſitus, emendatus & locupletatus*, Lipſ. 1726, folio. 6. *Chreſtomathia Pliniana*, or Select Paſſages from Pliny's Natural Hiſtory, 1728, 8vo. 7. *Primæ Lineæ Artis oratoriæ*, Anſpach, 1730, 8vo. 8. *Diſputatio de Philopatride, Dialogo Lucianeo*, Lipſ. 1730, 4to. 9. *Chreſtomathia Græca, ſive Loci illuſtres ex optimis Scriptoribus delecti*, ibid. 1731. 10. *Scriptores Rei ruſticæ veteres Latini, Cato, Varro, Columella, Palladius, Vegetius, & Gargilius Martialis, cum Editionibus prope omnibus & MSS. pluribus collati, adjectæ Notæ Virorum clariſſimorum integræ, tum editæ & Lexicon Rei ruſticæ*, Lipſ. 1735, 2 vols. large 4to. with plates. 11. *Plinii Secundi Panegyricus*, Goetting. 1735, 8vo. 12. *Quintiliani de Inſtitutione oratoria, Lib.* XII. ibid. 1738, 4to. 13. *Plinii Cæcilii Secundi Epiſtolarum Libri* X. *Ejuſdem Panegyricus, cum Annotationibus perpetuis*, Lipſ. 1739, 8vo. 14. *Carminum Libri* III. Vratiſl. 1743, 8vo. 15. *J. G. Heinceii Fundamenta Stili cultioris, adjectis Annotationibus, Geſneri*, Lipſ. 1743, 8vo. 16. *Opuſcula varii Argumenti*, Vratiſl. 1743, four parts, 8vo. 17. *Encheiridion, ſive Prudentia privata & civilis T. Pomponii Attici, &c. in Uſum Prælectionum*, Goett. 1745, 12mo. 18. *Theſaurus Latinæ Linguæ et Eruditionis Romanæ*, Lipſ. 1747–8, 4 vols. folio. 19. *Index etymologicus Latinitatis, &c.* Lipſ. 1749, 8vo. 20. *Primæ Lineæ Iſagoges in Eruditionem univerſalem*, Lipſ. 1757, 8vo. tom. ii. ibid. 1774–5, 8vo. 21. *Claudiani Opera, Varietate Lectionis et perpetua Annotatione illuſtrata*, Lipſ. 1759, 8vo. 22. *Angeli Mariæ Card. Quirini et Geſneri Epiſtolæ mutuæ*, Norimb. 1760, 8vo. 23. *Chreſtomathia Tragica, tres integras Tragœdias continens; Æſchyli Prometheum, Sophoclis Ajacem, Euripedis Phœniſſas*, Goetting. 1762, 8vo. 24. *Orphei Argonautica, Hymni, Libellus de Lapidibus et Fragmenta, &c. curante G. C. Hambergero*, Lipſ. 1764, 8vo. The celebrity which Geſner had acquired, in conſequence of the many valuable works which he publiſhed, was ſtill farther increaſed by this poſthumous edition of Orpheus, as he has rendered intelligible, by ſhort and comprehenſive notes, a work otherwiſe difficult and obſcure. 25. *Theſaurus Epiſtolicus Geſnerianus, edidit C. A. Klotz*, Halae, 1768, 8vo.

GES'NER (Solomon), a German Lutheran divine in the ſixteenth century, born at Boleſlaw in Sileſia, in 1559. After having made ſome progreſs in the ſtudy of rhetoric and the mathematics, he removed to Straſburgh, where he obtained an academic exhibition, which he diligently employed in the ſtudy of philoſophy, the mathematics, rhetoric, theology, and the Hebrew, Chaldee, and Syriac, languages. In 1592 he received an invitation to fill the theological chair in the univerſity of Wittemberg. By the cloſeneſs of his application to his various engagements, he brought on a complication of diſorders, to which he fell a ſacrifice in 1605, in the forty-ſixth year of his age. He publiſhed, 1. The Prophecy of Hoſea, with the Latin Verſion of St. Jerome, from the Hebrew, and that of B. A. Montanus from the Chaldee Paraphraſe of Jonathan, illuſtrated by the Commentary of St. Jerome, and additional Notes. 2. A General Diſquiſition on the Pſalter, treating of the dignity, the uſe, the argument, and the connection, of the Pſalms. 3. Polemical Diſſertations on the Book of Geneſis. 4. The Orthodox Doctrine concerning the Perſon and Office of Jeſus Chriſt. 5. A Collection of Sermons on the Sufferings of Chriſt. 6. *De Conciliis, Lib.* IV. of which the two firſt contain general remarks, and an hiſtorical view of all the councils, and the two laſt a refutation of the two books of Bellarmine on the ſame ſubject; academic diſputations, controverſial treatiſes, &c.

GESS'NER (Solomon), an eminent paſtoral poet, and landſcape painter, born in 1730, at Zurich in Swiſſerland. His father, who was a bookſeller and printer, brought him up to his own buſineſs, but did not neglect giving him a liberal education. At the age of twenty-two he made a tour through Germany, for the purpoſe both of his own improvement, and of extending the connections of his father's buſineſs, in which he was now admitted as a partner. The acquaintance of many of the German literati, to whom he obtained an introduction during the courſe of this journey, ſtimulated the paſſion he had already imbibed for letters; and ſoon after his return, in 1753, he publiſhed a ſhort poem, entitled Night. This was followed by his paſtoral romance of Daphnis, in three cantos. They were both favourably received, and were judged to diſplay great talents for rich deſcription and tender ſentiment, though marked with the exuberances and irregularities of juvenile fancy. Some of the fictions in theſe pieces ſhewed him to be an imitator of the manner of Ovid; but his maturer taſte led him to a ſtrain of ſimplicity, and a natural ſtyle of painting, which are his chief characteriſtics. This character is peculiarly exemplified in his next and favourite work, his Idyls, formed, as he affirms, upon the model of Theocritus, but infinitely ſurpaſſing that poet in delicacy and true tenderneſs, and in the pure morality they inculcate. The Idyls were greatly admired in all the countries where their language was native, and brought a large addition to the author's reputation. This was carried to its height by his next performance, The Death of Abel, which appeared in 1758. In this piece the dignity of a religious epic, like the Paradiſe Loſt, is attempted to be united with the ſimplicity and ſuavity of paſtoral. Its ſucceſs was highly flattering: beſides the repeated editions it underwent at Zurich in the original, it was tranſlated into moſt European languages.

Geſſner afterwards publiſhed ſome minor poems, of which The Firſt Navigator is one of the moſt admired. He alſo eſſayed his powers in the paſtoral drama, but with no extraordinary ſucceſs. Almoſt all his poetical effuſions were the product of his youth, and written before he had completed his thirtieth year. About that period he married the daughter of Mr. Heidegger, a gentleman who poſſeſſed a valuable collection of paintings of the Flemiſh ſchool; and this circumſtance gave a new turn to his purſuits. He had at an early age learned to draw, and had acquired ſome attachment to the arts of deſign. This was now revived, and he began ſuddenly to attempt imitating what he admired. In a Letter on Landſcape Painting, he has given an inſtructive account of the ſteps by which he was led to a proficiency in that art. For ſome time he only ventured upon decorations of books printed at his office; but at length he attained more confidence, and in 1765 publiſhed ten landſcapes, etched and engraved, as well as deſigned, by himſelf. Twelve others appeared in 1769, and he continued to execute ornaments for the works which iſſued from his preſs. Theſe efforts raiſed his fame as an artiſt almoſt to a parity with that he had gained as a writer; and he has deſervedly obtained a diſtinguiſhed place among the votaries of the fine arts in Swiſſerland. Hence his paintings in water-colours, and his ſeveral drawings, are eagerly ſought by connoiſſeurs. He died by a ſtroke of apoplexy, in 1783, in the fifty-eighth year of his age.

The private character of Geſſner was in a high degree amiable and exemplary. As a huſband, a father, and a friend, his virtues were equally conſpicuous. His caſt of mind was penſive, and even melancholy; his manners gentle. In converſation he was mild and affable, and, where the ſubject admitted of it, often highly animated, riſing into great elevation of ſentiment, and beauty of expreſſion. But in every part of his deportment, there was that unaffected ſincerity, that ſimpli-

city

city and modeſty, by which true genius is ſo generally diſtinguiſhed. With qualities ſuch as theſe, Geſſner could not fail to be loved and reſpected; and uniting to taſte and literature the talents requiſite for active life, he was raiſed by the ſuffrages of the citizens of Zurich to the firſt offices in the republic; the duties of which he diſcharged with ſcrupulous fidelity. The fame of the accompliſhed and virtuous magiſtrate of Zurich, ſpread to the remoteſt parts of Europe. The empreſs of Ruſſia, Catharine II. ſent him a gold medal as a mark of her eſteem: and ſtrangers from all countries viſiting Swiſſerland courted his ſociety, and gave him the moſt flattering proofs of their reſpect and admiration. His Death of Abel is his grand production; but his Idyls are alſo generally known and admired; we tranſcribe the character given of them by Dr. Blair: "Of all the moderns, Geſſner, a poet of Swiſſerland, has been the moſt ſucceſsful in his paſtoral compoſitions. He has introduced into his Idyls, (as he entitles them) many new ideas. His rural ſcenery is often ſtriking, and his deſcriptions lively. He preſents paſtoral life to us with all the embelliſhments of which it is ſuſceptible, but without any exceſs of refinement. What forms the chief merit of this poet, is, that he wrote to the heart, and has enriched the ſubjects of his Idyls with incidents that gave riſe to much tender ſentiment. Scenes of domeſtic felicity are beautifully painted. The mutual affection of huſbands and wives, of parents and children, of brothers and ſiſters, as well as of lovers, are diſplayed in a pleaſing and touching manner. Not underſtanding his language, I can be no judge of his ſtyle, but in the ſubject and conduct of his paſtorals, he appears to me to have out-done all the moderns."—"The ſtyle of Geſſner, (obſerves his tranſlator,) on which Dr. Blair declines giving an opinion, appears to me to be pure, eaſy, and perſpicuous, altogether free from thoſe inverſions and contortions which are found in the Death of Abel, as tranſlated by Mrs. Collyer, and which give it ſo forced and unnatural an air. The ſtyle of the Idyls particularly is poliſhed with the utmoſt care, and diſcovers an elegance, yet ſimplicity of expreſſion, perfectly ſuited to the characters and manners which are deſcribed."

GESNE'RA, or GESNERIA, *ſ.* [ſo named by Plumier in honour of Conrad Geſner of Zurich, the famous botaniſt and natural hiſtorian.] In botany, a genus of the claſs didynamia, order angioſpermia, natural order perſonatæ, (campanulaceæ, *Juſſ.*) The generic characters are—Calyx: perianthium one-leafed, ſuperior, five-cleft, ſharp, permanent. Corolla: one-petalled, incurved and recurved; tube thickiſh, with a contracted neck and funnel-form throat; border five-cleft, blunt; upper diviſions concave; three lower flat, ſpreading. Stamina: filaments four, ſhorter than the corolla; antheræ ſimple. Piſtillum: germ inferior, flatted; ſtyle filiform, the ſame in ſituation and length with the ſtamens; ſtigma capitate. Pericarpium: capſule roundiſh, and crowned with the patulous calyx, ſub-bilocular; partition in the middle longitudinally interrupted. Seeds: extremely numerous, and very ſmall; receptacles on each ſide faſtened to the partition. If the capſule be cut tranſverſely near the top, it appears to be one-celled; if through the middle, two-celled. *Swartz.*—*Eſſential Character.* Calyx, five-cleft, ſitting on the germ; corolla, incurved and recurved; capſule, inferior, two-celled.

Species. 1. Geſneria humilis, or low geſneria: leaves lanceolate, ſerrate, ſeſſile; peduncles branched, many-flowered. All the ſpecies are natives of South America and the Weſt Indies. The firſt is of much humbler growth than the third ſpecies; the leaves much ſmaller; and the flowers deeper cut at their brims. It was found growing naturally by Dr. Houſtoun at Carthagena in New Spain; and by ſir Hans Sloane in Jamaica.

2. Geſneria acaulis, or ſtemleſs geſneria: leaves lanceolate-ovate, ſerrate, ſubpetioled, crowded at the end; peduncles three-flowered, ſhorter than the leaf. Stem round, woody, having a clay-coloured bark, with ſome furrows in it, riſing three or four inches high, having at the top very many oblong leaves, ſtanding very thick, without any order, on foot-ſtalks a quarter of an inch in length, covered with a reddiſh wool-like moſs. They are ſeven inches long, and an inch and half broad near the farther end, whence they narrow to a point, and they alſo grow gradually narrower to the foot-ſtalk. From the axils come out ſmall peduncles, branched, ſuſtaining ſcarlet flowers an inch long, which are followed by a ſhort, fungous, cornered, ſeed-veſſel, having no diſtinct cells, containing many ſmall, oblong, yelloviſh, ſeeds. Browne calls it "ſmall tufted geſneria, with ſcarlet flowers;" and obſerves that the ſtem is always ſimple, creeping along the rocks, and bearing a pretty large tuft of leaves at the extremity, with ſingle flowers ſpringing from each axil. Swartz deſcribes the ſtem as very ſhort at firſt, but as it advances becoming frequently a foot in length, and in this ſtate covered with withered leaves and calyxes. Native of Jamaica.

3. Geſneria tomentoſa, or woolly geſneria: leaves ovate-lanceolate, crenate, hirſute; peduncles lateral, very long, corymbiferous. This riſes with a ſhrubby ſtalk to the height of ſix or ſeven feet, dividing into two or three irregular branches, covered with a ruſſet wool; leaves ſeven or eight inches long, and two and a half broad in the middle, having a ruſſet woolly midrib; they are placed on every ſide the branches without order, and on ſhort footſtalks. This plant bears ſome affinity to the ſaxifrages in the ſituation of theſe receptacles, and in the opening of the capſule. It is called by Browne, "hairy erect geſneria, with open flowers." It is a native of Jamaica, and was cultivated by Mr. Miller in 1759.

4. Geſneria craniolaria, or craniolaria geſneria: leaves wedge-ſhaped, oblong, tooth-laciniate; peduncles terminating; corollas bell-ſhaped. This ſort grows naturally at the Havannah, and in ſome of the other iſlands in America. It riſes with a ſhrubby ſtalk to the height of ten or twelve feet, dividing upwards into a few branches, which are garniſhed with ſpear-ſhaped leaves, cut on their edges as in the genus Craniolaria, (ſee vol. v. 323,) whence the trivial name is derived. The flowers are produced from the ſide of the branches, growing ſeveral together on the ſame foot-ſtalk; they are ſhaped like thoſe of the foxglove, of a greeniſh yellow-colour, with brown ſpots on the inſide; the flowers have a ſwelling tube, which is recurved, and the brim is ſlightly divided into five unequal ſegments: theſe appear in July, but are not ſucceeded by ſeeds in England.

5. Geſneria grandis, or large geſneria: leaves broad-lanceolate, very long, toothletted, rough-haired above, rugged beneath; peduncles terminating; ſtem arboreſcent. 6. Geſneria ſcabra, or rough geſneria: leaves ovate-lanceolate, ſerrate, rugged; peduncles axillary; corollas cylindric, recurved. 7. Geſneria corymboſa, or corymbed geſneria: leaves ovate, acute, ſerrate, ſcarioſe, ſharp; peduncles many-parted; flowers in corymbs. 8. Geſneria exſerta, or lengthened geſneria: leaves ovate-lanceolate, crenate, ſmooth; peduncles three-flowered; genitals twice the length of the corolla; capſules ovate. 9. Geſneria calycina, or calycine geſneria: leaves lanceolate-ovate, acuminate, ſerrate, ſmooth; peduncles three-flowered; genitals longer than the corolla; calyxes bell-ſhaped; capſules cylindric. 10. Geſneria ventricoſa, or ventricoſe geſneria: leaves elliptic, acuminate, crenate, ſmooth; peduncles four-flowered or thereabouts; ſegments of the calyx awl-ſhaped, elongated; corollas ventricoſe. 11. Geſneria pulchella, or fair geſneria: herbaceous; leaves ternate, ovate, acute, ſerrate, villoſe; peduncles axil-

lary, one-flowered. 12. Geſneria pumilla, or dwarf geſneria: ſtemleſs; leaves ovate-wedge-ſhaped, crenate, ſubſeſſile; peduncles ſub-biflorous, ſhorter than the leaves.—All theſe are natives of Jamaica, and the tenth of ſome other iſlands in the Weſt Indies; they were all obſerved by Swartz. They are ſhrubby, except the eleventh, which is annual according to Swartz, but perennial as marked by others. Browne deſcribes this as having a ſlender even ſtem, ſeldom riſing above ten or fourteen inches in height; and throwing out a beautiful ſingle reddiſh flower from the axil of each of the upper leaves; filaments longer than the corolla, and ſomewhat twiſted, as they riſe. Monſ. Lamarck ſaw it in flower in the garden belonging to Monſ. l'Heritier, who named it Cyrilla pulchella; which ſee. He firſt received it in flower by means of Brouſſonet from England, where it was introduced in 1778 by Mr. William Forſyth.

Propagation and Culture. Theſe plants are propagated by ſeeds, which muſt be procured from the countries where they grow naturally. They ſhould be brought over in their capſules, for as they are very ſmall and light, when they are ſeparated from the partition to which they adhere, they ſoon loſe their vegetative quality. The ſeeds ſhould be ſown in pots filled with light earth, and plunged into a hot-bed of tanner's bark as ſoon as they arrive, for they ſometimes lie long in the ground; thoſe ſown in autumn come up the following ſpring; therefore when they happen to arrive here at that ſeaſon, the pots in which the ſeeds are ſown ſhould be plunged into the tan-bed in the ſtove, and during the winter the earth ſhould be now and then gently watered to prevent its drying too much, but it muſt not be too moiſt. In the ſpring the pots ſhould be removed out of the ſtove, and plunged into a freſh hot-bed, which will bring up the plants ſoon after. When theſe are fit to remove, they ſhould be each planted into a ſeparate pot, and plunged into a good hot-bed of tan, obſerving to ſhade them till they have taken new root; then they muſt be treated in the ſame way as other tender plants from the ſame countries. In autumn they muſt be plunged into the tan-bed in the ſtove, where, during the winter, they ſhould have but little water given to them; for if they receive much wet, it will deſtroy them. In this ſtove the plants muſt conſtantly remain, for they will not thrive if they are kept out of the tan. In the ſummer they ſhould have free air admitted to them at all times when the weather is warm; and they muſt be frequently refreſhed with water during that ſeaſon, but it muſt not be given to them in too great plenty. As the plants advance in growth they will require larger pots, but there muſt be care taken not to over-pot them, for they will not thrive in large pots. With this management the plants will flower the ſecond year, and may be continued three or four years, but they are not of long duration in their native country. The fourth ſort ſeldom flowers till the third year; and, as it does not produce ſeeds here, it is with difficulty preſerved in the European ſtoves. The eleventh ſort deſerves to be cultivated in the flower-gardens of America: it thrives beſt in a cool gravelly ſoil, well furniſhed with moiſture, and intermixed with rich mould. See DIGITALIS and CRANIOLARIA.

GES'SANT, *adj.* In heraldry, a term uſed when a lion's head is borne over a chief.

GES'SENE, a town of Bohemia, in the circle of Boleſlau: nine miles north-eaſt of Tumau.

GES'SES, *ſ.* The furniture belonging to a hawk.

GES'SIGO POINT, a cape of Ireland, in the county of Sligo: eleven miles north-weſt of Sligo. Lat. 54. 22. N. lon. 8. 33. W. Greenwich.

GES'SO, a town of Italy, in the kingdom of Naples, and province of Abruzzo Citra: fifteen miles north-eaſt of Civita Borella.

GES'SOPS, a town of United America, in the ſtate of Maryland: eight miles eaſt-ſouth-eaſt of Fort William.

GEST, a town of France, in the department of the Mayne and Loire: three leagues and a half of St. Florent-le-Viel.

GEST, *ſ.* [*geſtum*, Lat.] A deed; an action; an atchievement:

Who fair them quites, as him beſeemed beſt,
And goodly can diſcourſe with many a noble *geſt*. *Spenſer.*

Show; repreſentation.—*Geſts* ſhould be interlarded after the Perſian manner, by ages, young and old.—The roll or journal of the ſeveral days, and ſtages prefixed, in the progreſſes of our kings, many of them being ſtill extant in the herald's office; [from *giſte*, or *giſe*, Fr.] *Hanmer.*

I'll give you my commiſſion
To let him there a month, behind the *geſt*,
Prefix'd for's parting. *Shakeſpeare.*

A ſtage; ſo much of a journey as paſſes without interruption. *It is now in all ſenſes obſolete.*—He diſtinctly ſets down the *geſts* and progreſs thereof. *Brown.*—A bed or couch.

GES'TA, a town of Sweden, in the province of Weſt Gothland: twenty-three miles north-eaſt of Uddevalla.

GESTA'TION, *ſ.* [*geſtatio*, Lat.] The act of bearing young in the womb; or the progreſs of the fœtus from the time of conception to that of parturition. When the ovum firſt deſcends into the womb, it is ſaid to be about the ſize of a poppy-ſeed; that in ten days it weighs half a grain; in thirty days, twenty-one grains; in three months, about three ounces; and, at the end of nine months, the perfect child is found of different ſizes, and from four to nine pounds in weight; ten or eleven pounds are very rare. See the article CONCEPTION, vol. v. p. 12.

The true time of *geſtation* in a woman, is nine ſolar months, each of which is reckoned to be about thirty days ten hours and a half; but it often happens that the child is born at ſeven months, and ſometimes at ten, or even at eleven. C. Teſſier, of the National Inſtitute at Paris, has recently made diligent reſearches into the obſcure ſubject of geſtation; and he read a paper before the council and grand ſitting, to ſhew that pregnancy in women might be prolonged a quarter beyond the uſual time. A child, therefore, ſays M. Teſſier, born beyond the eleventh month of the widowhood of the mother, ought not to be *always* an impeachment of her chaſtity. And ſuch was the ſentence paſſed by a celebrated decree of the parliament of Paris, which declared as legitimate a prince of Condé born eleven months after the death of his father. An inſtance of the ſame kind, which occurred at Rome, is related by Aulus Gellius. A woman of a moſt reſpectable character, brought forth a child in the eleventh month after the death of her huſband. The woman was accuſed of having violated her chaſtity; but the emperor Adrian, under whoſe reign the affair happened, decreed that it was poſſible for pregnancy to be extended to that period. The following are the author's words:—"Præterea ego de partu humano, præterquam quæ ſcripta in libris legi, hoc quoque veniſſe uſu Romæ comperi. Fœminam bonis atque honeſtis moribus non ambigua pudicitia, in undecimo menſe, poſt mariti mortem, peperiſſe; factumque eſſe negotium propter rationem temporis, quaſi marito mortuo poſtea concepiſſet, quoniam decem viri in decem menſibus gigni hominem, non in undecimo ſcripſiſſent: ſed divum Hadrianum, cauſa cognita, decreviſſe in undecimo quoque menſe partum edi poſſe: idque ipſum ejus rei decretum nos legimus. In eo decreto Hadrianus id ſtatuere ſe dicit requiſitis veterum philoſophorum et medicorum ſententiis." *A. Gell. Noct. Att. lib.* iii. *cap.* 16.

Table

Table of the Period of Geſtation, and of the Duration of Life, of ſeveral Quadrupeds.

Animals.	Months of Geſtation.	Years of Life.	Authors.
Elephant	24	150 to 200	Ariſtotle.
Camel	12	40 to 50	The ſame.
Buffalo	12	20 to 25	Cajetano.
Aſs	12	25 to 30	Buffon.
Mare	11½	25 to 30	Ariſtotle.
Cow	9	14 to 15	The ſame.
Stag	8½	35 to 40	Treatiſe on Hunting.
Roebuck	5½	12 to 15	Buffon.
Sheep	5	12 to 15	The ſame.
Goat	5	11 to 13	The ſame.
Dog	2	11 to 15	The ſame.

Table of the Period of Incubation, and of the Duration of Life, of ſeveral Birds.

Birds.	Days of Incubation.	Years of Life.	Authors.
Swan	42	200 nearly	Aldrovandi.
Parrot	40	100 nearly	Wolmaer.
Gooſe	30	80 and more	Willughby.
Eagle	30		
Buſtard	30	Not aſcertained by any naturaliſt.	
Duck	30		
Turkey	30		
Peacock	26 to 27	25 to 28	Ariſtotle. Pliny.
Pheaſant	20 to 25	18 to 20	Treatiſe on Pheaſants.
Crow	20	100 and more	Heſiod.
Nightingale	19 to 20	17 to 18	Buffon.
Pullet	18 to 19	16 to 18	Buffon.
Pigeon	17 to 18	16 to 17	Several obſ.
Linnet	14	13 to 14	Willughby.
Canary bird	13 to 14	13 to 14	Treatiſe on Birds.
Goldfinch	13 to 14	18 to 20	Buffon.

It appears by this table, that the ſwan and parrot, which employ the longeſt time in incubation, are alſo thoſe which live longeſt: the longevity of the former of theſe birds has been carried to two hundred years, and that of the latter to one hundred. In regard to the oſtrich, the life of which the ancients carried beyond one hundred years, we can find no relation between this period and that of the incubation, as the female ſeldom ſits on the eggs, which are hatched by the heat of the ſun. The caſe is the ſame with the crane and the heron, to which the ancients aſſigned a life equally long; but we have no obſervations in regard to their incubation. The gooſe, which employs thirty days in incubation, lives beyond the age of eighty. The eagle, buſtard, duck, and turkey, are the next in the table in regard to the period of incubation; but it has never yet been compared by any ornithologiſt with the duration of their life. All the other birds noticed in the table live nearly in proportion to the time of their incubation; but, as theſe obſervations were made chiefly on domeſtic or captive birds, it is probable that there may be ſome difference between them in a wild ſtate. In regard to birds in a wild ſtate, it is almoſt impoſſible to obtain any correct information. Very few authors have ſpoken of the duration of their life; and whenever they have been caught, they endeavour to judge of their age by marks which are very ambiguous.

By comparing theſe two tables, a very great analogy will be found between the time of the geſtation of quadrupeds, and that of the incubation of birds, in regard to the duration of life. Thus we obſerve that, among quadrupeds, the elephant, which lives from 150 to 200 years, goes with young twenty-four months; and that the camel, which goes with young twelve months, lives forty or fifty years. Among birds, the ſwan which ſits forty-two days, and the parrot which ſits forty days, are thoſe which live longeſt, their life exceeding one hundred years. In looking over this table, the ſame relation appears to be preſerved. The horſe and aſs, which have the ſame period of geſtation, live nearly the ſame time; that is to ſay, twenty-ſix or thirty years. The domeſtic fowl and pigeon, which have nearly the ſame period of incubation, attain to the ſame age; and the caſe is the ſame with the goat and the ſheep, as well as with the canary-bird and the linnet. There are, however, two very ſtriking exceptions. The ſtag, among quadrupeds, goes with young a month leſs than the mare, and yet lives about ten years longer: and, among the birds, the crow, which ſits only twenty days, lives far beyond one hundred years, according to Heſiod, and ſeveral other obſervers.

Theſe exceptions ſtill further prove that our knowledge reſpecting this part of natural hiſtory is very limited, and prove the neceſſity of making further obſervations. Beſides, the difficulty of aſcertaining the exact duration of the life of quadrupeds is equally great as that experienced in aſcertaining the duration of the life of birds, ſince theſe obſervations can be made only on a ſmall number of individuals, taken, for the moſt part, in a ſtate of domeſticity. If, notwithſtanding theſe exceptions, ſome relation has been ſuppoſed to be found between the time employed for perfect growth, and the duration of life, it appears, from a view of this table, that there is a more direct connection between it and the time of geſtation: nature alſo ſeems to have preſerved a kind of connection between the time employed in geſtation and that of incubation, in regard to the duration of the life of birds and quadrupeds.

GES'TE, or GEISTE, a river of Germany, in the duchy of Bremen, which runs into the Weſer, near its mouth.

To GESTI'CULATE, *v. n.* [*geſticulor*, Lat. *geſticuler*, Fr.] To play antic tricks; to ſhew poſtures.

GESTICULA'TION, *ſ.* [French; *geſticulatio*, Lat.] Antic tricks; various poſtures.—One who pretended to expreſs the ſame ſentence as many ways by *geſticulation*, as even Cicero himſelf could by his eloquence. *Wollaſton.*

GESTICULO'SE, *adj.* Full of geſtures. *Scott. Not much uſed.*

GES'TINEN, a town of Swiſſerland, in the canton of Uri: fifteen miles ſouth of Altorff.

GES'TION, *ſ.* The act of doing; the management of any buſineſs. *Cole. Not uſed.*

GESTRI'CIA, a province of Sweden, about ſeventeen leagues long, and ten wide, bounded on the north by Helſingland, on the eaſt by the Gulf of Bothnia, on the ſouth by Upland, Weſtmanland, and Dalecarlia, and on the weſt by Dalecarlia. The mines, forges, foreſts, lakes, and rivers, furniſh the principal riches and ſupport of the inhabitants, who do not much concern themſelves with agriculture. Geſle is the capital.

GES'TUNGSHAUSEN, or GESHAUSEN, a town of Germany, in the circle of Upper Saxony, and principality of Coburg: ſeven miles eaſt of Coburg.

GESTU'OSE, *adj.* Full of geſtures; full of antics. *Scott. Not much uſed.*

GEST'URE, *ſ.* [*gero*, *geſtum*, Lat. *geſte*, Fr.] Action or poſture expreſſive of ſentiment.—Humble and reverend *geſtures* in our approaches to God, expreſs the inward reverence of our ſouls. *Duty of Man.*—Movement of the body.—Every one will agree in this, that we ought either to lay aſide all kinds of *geſture*, or at leaſt to make uſe of ſuch only as are graceful and expreſſive. *Addiſon.*

Grace was in all her ſteps, heav'n in her eye,
In ev'ry *geſture* dignity and love! *Milton.*

To GEST'URE, *v. a.* To accompany with action or poſture.—He undertook ſo to *geſture* and muffle up himſelf in his hood, that none ſhould diſcern him. *Wotton.*

GESVAL'DO, a town of Italy, in the kingdom of Naples,

Naples, and province of Principato Ultra: twelve miles north-weſt of Conza.

GE-TCHAO, a town of China, of the third rank, in the province of Chang-tong: twenty-ſeven miles eaſt-ſouth-eaſt of Lu.

To GET, *v. a.* pret. *I got*, anciently *gat*; part. paſſ. *got*, or *gotten*: [ȝeꝑan, ȝeꝑꝑan, Sax.] To procure; to obtain.—Of that which was our father's he hath *gotten* all this glory. *Gen.* xxxi. 1.—We *gat* our bread with the peril of our lives. *Sam.* v. 9.—David *gat* him a name when he returned from ſmiting of the Syrians. 2 *Sam.* viii. 13.—The word *get* is variouſly uſed: we ſay to *get* money, to *get* in, to *get* off, to *get* ready, to *get* a ſtomach, and to *get* a cold. *Watts.*—To force; to ſeize:

The king ſeeing this, ſtarted from where he ſat,
Out from his trembling hand his weapon *gat*. *Daniel.*

All things, but one, you can reſtore;
The heart you *get* returns no more. *Waller.*

To win by conteſt.—He *gat* his people great honour, and he made battles, protecting the hoſt with his ſword. 1 *Macc.* iii. 3.—To *get* the day of them of his own nation, would be a moſt unhappy day for him. 2 *Mac.* v. 6.

Henry the ſixth hath loſt
All that which Henry the fifth had *gotten*. *Shakeſpeare.*

To have poſſeſſion of; to have. This ſenſe is commonly in the compound preterite.

Then forcing thee, by fire he made thee bright;
Nay, thou haſt *got* the face of man. *Herbert.*

To beget upon a female.—Children they *got* on their female captives. *Locke*—If you'll take 'em as their fathers *got* 'em, ſo and well; if not, you muſt ſtay 'till they *get* a better generation. *Dryden.*

The god of day, deſcending from above,
Mixt with the day, and *got* the queen of love. *Granville.*

To gain as profit.—Though creditors will loſe one-fifth of their principal and uſe, and landlords one-fifth of their income, yet the debtors and tenants will not *get* it. *Locke.*—To gain a ſuperiority or advantage:

If they *get* ground and 'vantage of the king,
Then join you with them like a rib of ſteel. *Shakeſpeare.*

To earn; to gain by labour.—If it be ſo much pains to count the money I would ſpend, what labour did it coſt my anceſtors to *get* it? *Locke.*—To receive as a price or reward.—Any tax laid on foreign commodities in England raiſes their price, and makes the importer *get* more for them; but a tax laid on your home-made commodities leſſens their price. *Locke.*—To learn.—*Get* by heart the more common and uſeful words out of ſome judicious vocabulary. *Watts.*—To procure to be.—I ſhall ſhew how we may *get* it thus informed, and afterwards preſerve and keep it ſo. *South.*—To put into any ſtate.—Nature taught them to make certain veſſels of a tree, which they *got* down, not with cutting, but with fire. *Abbot.*

Take no repulſe, whatever ſhe doth ſay;
For, *get* you gone, ſhe doth not mean, away. *Shakeſpeare.*

To prevail on; to induce.—Though the king could not *get* him to engage in a life of buſineſs, he made him however his chief companion. *Spectator.*—To draw; to hook.—With much communication will he tempt thee, and ſmiling upon thee *get* out thy ſecrets. *Eccleſ.* xiii.—After having *got* out of you every thing you can ſpare, I ſcorn to treſpaſs. *Guardian.*—To betake; to remove; implying haſte or danger.—Ariſe, *get* thee out from this land. *Gen.* xxxi. 13.—Leſt they join alſo unto our enemies, and fight againſt us, and ſo *get* them up out of the land. *Exodus* i. 10.—He with all ſpeed *got* himſelf with his followers to the ſtrong town of Mega. *Knolles's Hiſtory.*—To remove by force or art.—They would be glad to *get* out thoſe weeds which their own hands have planted, and which now have taken too deep root to be eaſily extirpated. *Locke.*—To put.—*Get* on thy boots; we'll ride all night. *Shakeſpeare.*

To GET *off*. To ſell or diſpoſe of by ſome expedient.—Wood, to *get* his halfpence *off*, offered an hundred pounds in his coin for ſeventy in ſilver. *Swift.*

To GET *over*. To conquer; to ſuppreſs; to paſs without being ſtopped in thinking or acting.—'Tis very pleaſant to hear the lady propoſe her doubts, and to ſee the pains he is at to *get over* them. *Addiſon.*—To remove this difficulty, Peterborough was diſpatched to Vienna, and *got over* ſome part of thoſe diſputes. *Swift.*

To GET, *v. n.* To arrive at any ſtate or poſture by degrees with ſome kind of labour, effort, or difficulty: uſed either of perſons or things.—The ſtranger ſhall *get* up above thee very high, and thou ſhalt come down very low. *Deut.* xxviii. 43.—The fox bragged what a number of ſhifts and devices he had to *get* from the hounds; and the cat ſaid he had but one, which was to climb a tree. *Bacon.*—The removing of the pains we feel is the *getting* out of miſery, and conſequently the firſt thing to be done in order to happineſs. *Locke.*

So have I ſeen ſome fearful hare maintain
A courſe, 'till tir'd before the dog ſhe lay;
Who, ſtretch'd behind her, pants upon the plain,
Paſt pow'r to kill, as ſhe to *get* away. *Dryden.*

Impriſon'd fires, in the cloſe dungeons pent,
Roar to *get* looſe, and ſtruggle for a vent;
Eating their way, and undermining all,
'Till with a mighty burſt whole mountains fall. *Addiſon.*

To fall; to come by accident.—Two or three men of the town are *got* among them. *Tatler.*—To find the way; to inſinuate itſelf.—A child runs to overtake and *get* up to the top of his ſhadow, which ſtill advances at the ſame rate that he does. *Locke.*

So high he's mounted in his airy hopes,
That now the wind is *got* into his head,
And turns his brains to frenzy. *Dryden.*

To move; to remove:

Get home with thy ſewel make ready to ſet;
The ſooner, and eaſier carriage to get. *Tuſſer.*

To have recourſe to.—Lying is ſo cheap a cover for any miſcarriage, and ſo much in faſhion, that a child can ſcarce be kept from *getting* into it. *Locke.*—To go; to repair.—A knot of ladies, *got* together by themſelves, is a very ſchool of impertinence. *Swift.*—To put one's ſelf in any ſtate.—Without God's aſſiſtance we can no more *get* quit of our affliction, than but by his permiſſion we ſhould have fallen into it. *Wake.*—As the obtaining the love of valuable men is the happieſt end of this life, ſo the next felicity is to *get* rid of fools and ſcoundrels. *Pope.*—To become by any act what one was not before:

The laughing ſot, like all unthinking men,
Bathes and *gets* drunk; then bathes and drinks again.
Dryden.

To be gainer; to receive advantage:

Like jewels to advantage ſet,
Her beauty by the ſhade does *get*. *Waller.*

To GET *off*. To eſcape.—The gallies, by the benefit of the ſhores and ſhallows, *got off*. *Bacon.*

Whate'er thou doſt, deliver not thy ſword;
With that thou may'ſt *get off*, tho' odds oppoſe thee.
Dryden.

To GET *up*. To riſe from repoſe.—Sheep will *get up* betimes in the morning to feed againſt rain. *Bacon.*—To riſe from a ſeat. To remove from a place.—*Get* you *up* from about the tabernacle of Korah, Dathan, and Abiram. *Numb.* xvi.

To

To get, in all its ſignifications, both active and neutral, implies the acquiſition of ſomething, or the arrival at ſome ſtate or place by ſome means; except in the uſe of the preterite compound, which often implies mere poſſeſſion: as, *he* has got *a good eſtate*, does not always mean that he has acquired, but barely that he poſſeſſes it. So we ſay *the lady* has got *black eyes*, merely meaning that ſhe has them. *Johnſon.*

GE'TA (Septimius), ſecond ſon of the emperor Severus, and brother of Caracalla, born at Milan in 189, and ſucceeded to the title of Auguſtus in 208. Though he was not free from many vices, his milder diſpoſition made him a greater favourite with the people than his brother; and this circumſtance doubtleſs inflamed their mutual hatred. On the death of their father Severus, in 211, both princes ſucceeded to a joint ſovereignty; but it was impoſſible that ſuch a ſtate ſhould be laſting. It was terminated in the very next year by the deteſtable Caracalla, who murdered his brother in their mother's arms.—See the article ROME.

GE'TÆ, or GETU'LIANS, in ancient geography, a branch of the Scythians, who ſettled on the weſtern boundary of the Indus, thence called by ſome writers *Indo-Scythia*. They are repreſented as a brave and warlike people, who firſt expelled the ancient Greeks from this weſtern border of Hindooſtan, after they had been ſettled there by Alexander the Great. See GEOGRAPHY, p. 383, of this volume.

GETH'BRECK, *ſ.* A breach of the peace. *Phillips. Obſolete.*

GE'THER, [Heb. the vale of contemplation.] A man's name.

GETH'ILD, [Saxon.] The name of a woman.

GE'THIN (Lady Grace), an Engliſh lady of virtuous diſtinction, daughter of ſir George Norton, of Abbots-Leigh in Somerſetſhire, born in 1676. She had all the advantages of a liberal education; and became the wife of ſir Richard Gethin, of Gethin Court, in Ireland. She poſſeſſed great accompliſhments, but did not live to diſplay them; for ſhe died in the 21ſt year of her age. She was buried in Weſtminſter-abbey; and, for perpetuating her memory, proviſion is made for a ſermon to be preached in Weſtminſter-abbey, yearly, on Aſh-Wedneſday, for ever. She wrote a work which, ſoon after her death, was methodized, and publiſhed under the title of *Reliquiæ Gethinianæ*, Lond. 1700, 4to. with her portrait.

GETHIOI'DES, *ſ.* in botany. See ALLIUM PALLENS.

GETHSEM'ANE, the name of the garden where Jeſus Chriſt frequently reſorted with his diſciples; and where he was betrayed. It was ſituated without the walls of Jeruſalem, near the brook of Cedron, or Kideon. *Matth.* xxvi. 36. *John*, xviii. 1.

GETHYL'LIS, *ſ.* [Γηθυλλις, or γηθυον, is the name of a plant in Ariſtophanes, Athenæus, &c. ſo named, as ſpringing from γη, the earth.] In botany, a genus of the claſs hexandria, order monogynia, natural order ſpathaceæ, (narciſſi, *Juſſ.*) The generic characters are—Calyx: none, unleſs a ſheath obliquely truncate. Corolla: one-petalled, ſuperior; tube long, filiform, radical; border expanding flat, ſix-parted; diviſions oblong. Stamina: filaments ſix, inſerted into the mouth of the tube, ſhorter than the border, uſually divided; antheræ linear, ſpirally bent in. Piſtillum: germ inferior; ſtyle ſimple, longer than the ſtamens; ſtigma capitate. Pericarpium: berry club-ſhaped, blunt, radical, (ſeſſile in the bulb itſelf, and proceeding from it,) ſomewhat fleſhy, one-celled. Seeds: neſtling, one upon another in three rows, globular, ſmooth.—*Eſſential Character.* Calyx, none; corolla, ſix-parted; berry, club-ſhaped, radical, one-celled.

Species. 1. Gethyllis villoſa, or hairy gethyllis: leaves linear-filiform, ſpiral, villoſe; ſegments of the corolla ovate-oblong. 2. Gethyllis ciliaris, or fringed gethyllis: leaves linear, ſpiral, ciliate; ſegments of the corolla ovate-oblong. 3. Gethyllis ſpiralis, or ſpiral gethyllis: leaves linear, ſpiral, ſmooth; ſegments of the corolla oblong. 4. Gethyllis lanceolata, or lanceolate gethyllis: leaves lanceolate, flat; ſegments of the corolla lanceolate.

All theſe plants have the habit or air of Colchicum, but are ſufficiently diſtinguiſhed from it, by having a monopetalous corolla, and a berry for a fruit. There is but one flower on a naked ſtalk; and the fruit has a grateful odour, with a pleaſant taſte. They are natives of the Cape of Good Hope, where they were obſerved by Thunberg, who has figured and deſcribed them. The third ſpecies only has been long known in Europe; that was cultivated in 1780, by the late Dr. Fothergill. The two firſt were introduced here by Mr. Francis Maſſon, in 1777 and 1778.

GETPEN'NY, *ſ.* [an old term for] A theatrical piece, that ſucceeded.—The Gunpowder plot, there was a *getpenny!* I have preſented that to an eighteen or twenty-pence audience nine times in an afternoon. *Ben Jonſon's Bartholomew Fair.*

GET'STORFF, a town of Germany, in the archduchy of Auſtria: ſix miles ſouth-eaſt of Meiſſai.

GET'TENDORFF, a town of Germany, in the archduchy of Auſtria: five miles ſouth of Aigen.

GET'TER, *ſ.* One who procures or obtains. One who begets on a female.—Peace is a very lethargy, a *getter* of more baſtard children than war's a deſtroyer of men. *Shakeſpeare.*

GET'TING, *ſ.* Act of getting; acquiſition.—Wiſdom is the principal thing, therefore get wiſdom; and with all thy *getting* get underſtanding. *Prov.* iv. 7.—Gain; profit.—Who hath a ſtate to repair may not deſpiſe ſmall things; and it is leſs diſhonourable to abridge a petty charge than to ſtoop to petty *gettings*. *Bacon.*

GET'TYSBURGH, a town of the American States, in York county, Pennſylvania, ſituated at the head of Rock Creek, one of the head waters of the Monococy. It is nine miles north of the Maryland line, eight miles from Millerſtown, fifteen from Abbotſtown, thirty-ſix from Williamſport in Maryland, and one hundred and eighteen weſt by ſouth of Philadelphia.

GET'ZENDORFF, a town of Germany, in the archduchy of Auſtria: four miles ſouth of Ziſtertzdorff.

GET'ZENDORFF, a town of Germany, in the archduchy of Auſtria, ſituated on the river Reiſenpach: twelve miles ſouth-eaſt of Vienna, and ten weſt of Bruck.

GEVAU'DAN, before the revolution a mountainous country of France, in Languedoc, of which Mende was the capital.

GEV'ELSBERGH, or GRETTLESBERG, a town of Germany, in the circle of Weſtphalia, and county of Mark: ſix miles ſouth-eaſt of Blanckenſtein.

GEV'ES, a town of Africa, ſituated on a river of the ſame name, ſouth of the river St. Domingo.

GEVEZE', a town of France, in the department of the Ille and Vilaine, and chief place of a canton, in the diſtrict of Rennes: two leagues and a half north-north-weſt of Rennes, and one and a half ſouth of Hedée.

GEVIEZ', a town of Moravia, in the circle of Olmutz: twelve miles ſouth-weſt of Muglitz.

GE'UL, a river of Germany, which runs into the Meuſe, about five miles below Maeſtricht.

GE'UL, a town of Germany, in the duchy of Limburg, near the Meuſe: five miles north of Wyck.

GE'UM, *ſ.* [of Pliny. Derivation uncertain.] AVENS, or HERB-BENNET; in botany, a genus of the claſs icoſandria, order polygynia, natural order ſenticoſæ, (roſaceæ, *Juſſ.*) The generic characters are—Calyx: perianthium one-leafed, ten-cleft, uprightiſh; ſegments alternately very ſmall, ſharp. Corolla: petals five, rounded; claws the length of the calyx, narrow, inſerted into the calyx. Stamina: filaments numerous, ſubulate, length of the calyx, into which they

are inſerted; antheræ ſhort, broadiſh, blunt. Piſtillum: germs numerous, collected into a head; ſtyles inſerted into the ſide of the germ, (terminating, *Gært.*) hairy, long; ſtigmas ſimple. Pericarpium: none; common receptacle of the ſeeds oblong, (columnar, *Gærtner,*) hirſute, placed on the reflex calyx. Seeds: numerous, compreſſed, hiſpid, awned, with a long ſtyle. — *Eſſential Character.* Calyx, ten-cleft; petals, five; ſeeds, with a kneed awn.

Species. 1. Geum Virginianum, or American avens: flowers upright; awns hooked, naked; ſtem-leaves ternate, the upper ones lanceolate; petals ſhorter than the calyx. Stem a foot and half or two feet high, branching at the top into ſmall peduncles, each terminated by a ſmall white flower. This ſpecies differs from G. urbanum, which it otherwiſe much reſembles, in having white petals ſhorter than the calyx; the flowers nodding during flowering time; the peduncles being thicker towards the flower; the ſeeds hairy, and the root-leaves ſub-bipinnate.

Parkinſon mentions an avens from New England, brought by John Newton a chirurgion of Colliton; but he ſays it differs from G. rivale only in being taller and greater. It flowers in July and Auguſt; and is a native of North America.

2. Geum ſtrictum, or upright avens: flowers upright; awns hooked, naked; ſtem-leaves primate; leaflets and ſtipules gaſh-cleft; petals longer than the calyx. This alſo has the habit of G. urbanum; but the fruit is twice as large. Native of North America; it flowers in May and June.

3. Geum urbanum, common avens, or herb-bennet: flowers upright; awns hooked, naked; ſtem-leaves ternate; root-leaves lyrate-pinnate. Stalks from one to two feet high, nearly upright, ſomewhat flexuoſe, ſlightly angular, hairy, branched at the top; ſeeds about one hundred and ten, ovate, of a pale ferruginous colour, covered with two ſkins; the outer leathery, the inner membranaceous, very thin, pale ſtraw-colour. Common in moſt parts of Europe, in woods and hedges; flowering from May to September. The roots have a mildly aſtringent aromatic taſte, ſomewhat like that of cloves, whence this plant has the name of caryophyllata in Scopoli, Bauhin, &c. They ſhould be gathered in dry warm ſituations, for in ſhady moiſt places they have little virtue. Gathered in the ſpring, and put freſh into ale, they give it a pleaſant flavour, and prevent its turning ſour. Infuſed in wine it is eſteemed a good ſtomachic; but in water Haller affirms it to have been attended with bad effects, when given in malignant fevers, producing delirium. Chewed in the mouth, the roots take off from a diſagreeable breath.

The variety β, with larger flowers, was obſerved by Dr. Liſter in Tedford wood on the Lincolnſhire wolds: cultivated by Ray in his garden at Cambridge, from the neighbouring woods.

4. Geum Japonicum, or Japan avens: flowers upright; fruits hirſute; awns naked; leaves with three lobes or more. Stalk round, flexuoſe, upright, hirſute, a foot high or more, ſometimes, but ſeldom, a little branched at the top. Native of Japan.

5. Geum rivale, or water avens: flowers nodding; awns hooked, villoſe; petals retuſe, roundiſh-wedge-ſhaped; leaves pinnate. Root creeping, reddiſh, aſtringent, aromatic, ſmelling like cloves; ſtem a foot high, upright, round and branched, bending at the top, but becoming erect as the fruit ripens; leaves lyrate, much larger than in G. urbanum, jagged, gaſh-ſerrate and hirſute; receptacle of the ſeeds oblong and peduncled, whereas that of G. urbanum is ovate and ſubſeſſile; the tip alſo of the awns is hairy, not naked as in the other. Native of moſt countries of Europe, in moiſt paſtures and woods, indicating (according to Linnæus) a barren ſoil, not fit for corn; alſo in the Levant, and North America. With us it is more common in the north, as on the water of Leith, near Edinburgh, and other places in Scotland on mooriſh grounds; Settle, Ingleton, &c. in Yorkſhire, and Lancaſhire, and by ſides of rivers and on mountains in many places of the northern counties; about Chevely and Wood-Ditton in Cambridgeſhire, where it was firſt found by Dr. Chevallier, the late maſter of St. John's College; in Wolverton wood near Lynn; at Marham near Swaffham, and near Norwich, in Norfolk; near Sudbury, in a bog; near Aſton, in Warwickſhire; alſo in Wales, by Mr. Thomas Glynn, before 1633; about Snowdon, &c. It flowers from the end of May to autumn. The powdered root is beneficial in diarrhœas and hæmorrhages, and is much uſed by the Canadians in the cure of tertian agues: it will cure malt-liquor of its ropyneſs.

γ. This ſpecies varies with yellow flowers, and they frequently become double and proliferous. Near Strickland in Weſtmoreland, obſerved by Mr. Lawſon; alſo at Brearcliff.

6. Geum hybridum, or mule avens: flower nodding; calyx leafy, longer than the polypetalous corolla. This ſeems to be a mule plant produced between the foregoing and ſubſequent ſpecies. It grows much taller than G. rivale, and is in every reſpect a larger plant.

7. Geum montanum, or mountain avens: ſtem one-flowered; awns ſtraight, villoſe; leaves pinnate, hairy; outmoſt leaflet very large and roundiſh; the lower ones gradually ſmaller. Root-leaves in a tuft, on petioles of different lengths; theſe are hairy, and have ſeveral pairs of leaflets on them; the loweſt very ſmall, the ſucceeding ones gradually larger, and the pair immediately under the great terminating leaflet much bigger than any of the reſt; the extreme leaflet is two or three inches in length and breadth, obſcurely lobed, gaſh-ſerrate, and veined. Grows in the mountains of Swiſſerland, Auſtria, Sileſia, Dauphiné, and Arragon; where it flowers in June and July; with us, from May to September.

β. Small mountain avens is made a diſtinct ſpecies by Mr. Miller, who ſays that it is a very low plant, with flower-ſtalks about three inches long, bending on one ſide, each terminated by one bright yellow flower, about the ſame ſize with thoſe of the common ſort. Found on Monte Baldo, &c.

8. Geum potentilloides, or Siberian avens: ſtem one or two-flowered; awns ſtraight, naked; calyxes of the fruit upright; leaves pinnate, toothed. Native of Siberia; and flowers in June.

9. Geum reptans, or creeping avens: ſtems one-flowered; awns ſtraight, villoſe; leaves pinnate, gaſhed, hairy; runners creeping. Root large and woody; ſtems ſome almoſt upright, flowering, hirſute; others procumbent, creeping; all round, having palmate, ſeſſile, alternate leaves, otherwiſe naked; the flowering ſtems are but little longer than the leaves, and bear uſually one flower, ſeldom two, and very ſeldom three. Native of Swiſſerland, Auſtria, Sileſia, Savoy, and Piedmont; flowering in June and July.

Propagation and Culture. The third ſort, being common in a wild ſtate, is admitted only into botanic gardens. They are all hardy plants, which require a ſhady ſituation, but will thrive in any ſoil. They may eaſily be propagated by ſeeds, which ſhould be ſown in autumn; for when they are ſown in the ſpring, they do not grow the ſame year. See DRYAS and SAXIFRAGA.

GEV'REY, a town of France, in the department of the Côte-d'Or, and chief place of a canton, in the diſtrict of Dijon: ſeven miles ſouth of Dijon.

GE'USS (John Michael), profeſſor of mathematics in the univerſity of Copenhagen, born at Krummendyk in Holſtein, in 1745. He received his early education under the care of his father, a clergyman of that place, and he diſtinguiſhed himſelf by his writings on mathematical ſubjects, and particularly by his Theory of the Art of conſtructing Mines. In the compoſition of this work

work he was assisted by the manuscripts of Belidor, which he found means to obtain, though they had been suppressed in France, after the death of that celebrated engineer. This work, which appeared in 1776, excited great attention; and his Treatise on the Art of constructing Mines, the first part of which was published at Copenhagen the same year, was received with no less approbation. Geuss also translated from Danish into German Olafsen and Povelsen's Voyage to Iceland. It was published at Copenhagen 1774–5, in 2 vols. 4to. He sent several valuable communications to Brehm's *Ingenieur-und-Artillerie Magazin*; and gave an edition of *Logarithmi Buggiani Numerorum ab Unitate ad* 10000; *& Sinuum atque Tangentium ad singula minuta prima, cum eorundem Differentiis.* Havn. 1784, 8vo. This ingenious mathematician died on the 29th of November, 1786.

GEUSZ'NITZ, a town of Germany, in the circle of Upper Saxony, and bishopric of Naumburg: three miles east of Zeitz.

GEUTZ, a town of Germany, in the circle of Upper Saxony, and duchy of Anhalt Côthen, near Côthen.

GEW'GAW, *s.* [ȝeȝaꝛ, Sax. *joyau*, Fr.] A showy trifle; a toy; a bauble; a splendid plaything.—Prefer that which Providence has pronounced to be the staff of life, before a glittering *gewgaw* that has no other value than what vanity has set upon it. *L'Estrange.*

Some loose the bands
Of ancient friendship, cancel nature's laws
For pageantry and tawdry *gewgaws.* *Philips.*

GEW'GAW, *adj.* Splendidly trifling; showy without value.—Let him that would learn the happiness of religion, see the poor *gewgaw* happiness of Feliciana. *Law.*

GEWINE'DA, *s.* [Saxon.] The ancient convention of the people, to decide a cause: *et pax quam aldermanis Regis in quinque burgorum* gewineda *dabit emendatur* 12 *libris.* LL. Æthelred. cap. 1.

GEWITNES'SA, *s.* The giving of evidence in our ancient British law. *Brompton.*

GEWO'LD (Christopher), a lawyer and historian of the seventeenth century, born in Franconia. He was one of the aulic counsellors of Maximilian first elector of Bavaria, who confided to him the inspection of the archives of the duchy. Gewold profited of this advantage to give to the public several historical records before unknown. Of these were: 1. *Genealogia Serenissimorum Bojariæ Ducum*, 1605, folio. 2. *Chronicon Monasterii Reichersspergensis, &c.* 1611, 4to. This is inserted by Ludwig in his *Scriptores Rerum Germanicarum.* 3. *Henrici Monachi in Rebdorf Annales*, 1618, 4to. 4. *Wigulæi Hunds Metropolis Salisburgensis*, 1620. He also published, 5. *Delineatio Norici veteris, ejusque Confinium*, 1619, 4to. 6. *Commentarius de Septemviratu Romani Imperii*, 1621, 4to.

GEX, before the revolution a small country of France, situated between Mount Jura, the Rhône, the lake of Geneva, and Switzerland, ceded to France, from the dukes of Savoy, in 1601. It now forms part of the department of the Ain.

GEX, a town of France, and principal place of a district, in the department of the Ain, situated at the foot of the mountain of St. Claude: three leagues north-north-west of Geneva, and twelve north-east of Nantua. Lat. 46. 21. N. lon. 23. 44. E. Ferro.

GE'YER, a town of Germany, in the circle of Upper Saxony, and circle of Erzgeburg, situated in the midst of mines. Here are manufactures of vitriol, sulphur, alum, and arsenic; six miles west-south-west of Wolkenstein.

GE'YERSBERG, a town of Bohemia, in the circle of Konigingratz: twenty-eight miles east-south-east of Konigingratz, and twenty-eight east-north-east of Chrudim.

GEY'RACH, a town of Germany, in the duchy of Stiria: nine miles south-south-east of Cilley.

GEYSRUCK'EN JAF'FELAK, a mountain of Germany, which separates Upper Carniola from the county of Cilley: six miles north-east of Stein.

GEYSS, or GEY'SA, a town of Germany, in the circle of the Upper Rhine, and bishopric of Fulda, situated on the Ulster: fifteen miles north-east of Fulda, and twenty south-south-west of Eisenach.

GEYS'ZING, a town of Germany, in the circle of Upper Saxony, and circle of Erzgeburg: two miles east of Altenberg.

GEZA'EL, a town of Asiatic Turkey, in the Arabian Irak, on the Euphrates: one hundred and twenty miles west-north-west of Bassora.

GEZ'AN, or DSJESAN, a seaport of Arabia Felix, on the Red Sea, which carries on a considerable trade in sena and coffee: twenty-three miles west of Abu-Arisch.

GE'ZER, or GOB, a city of Palestine, situated in the tribe of Ephraim, and a city of the Levites of the family of Kohath. It was the seat of one of the kings of Canaan, previous to its conquest by the Israelites, the last of which was named Horam; and its inhabitants were permitted to dwell with their conquerors, though subject to tribute. In the reign of David, two battles were fought with the Philistines at this place; (compare 2 *Sam.* xxi. 18, 19. and 1 *Chron.* xx. 4, 5.) and in the reign of Solomon it was taken by the king of Egypt, who destroyed it with fire, and slew the Canaanites that dwelt there: this was for a present to his daughter, Solomon's wife; though Solomon rebuilt it at the expence of his own subjects. *Josh.* x. 33. xvi. 10. xxi. 21. *Judges*, i. 29. 1 *Kings*, ix. 15–17.

GEZIRAT', a town of Asiatic Turkey, in the province of Diarbekir: sixty miles south-east of Diarbek.

GEZIRET' IDDAHAB', or ISLAND OF GOLD, an island of Egypt, in the Nile; two miles south of Foua.

GEZ'ULA, or GAZULA, a country of Africa, the most southern province of the empire of Morocco. The inhabitants are considered as the most ancient people of Africa; the country produces a great deal of barley, and pasture for cattle; there are mines of iron and copper, of which they make various utensils, which they exchange for cloth, spices, horses, and other things of which they stand in need. Strangers are well received, and every year there is a well-regulated fair, which continues two months, for the sale and exchange of cattle and merchandise in general. These people are free, being allies rather than subjects of Morocco. Their arms consist of sabres, large sharp two-edged swords, and lances. They are numerous, but have no towns, generally living in camps or villages.

GFOLL, a town of Germany, in the archduchy of Austria: eight miles west-north-west of Crems.

GHALEF'KA, a decayed town of Arabia Felix, once a flourishing city, and the sea-port of Zebid, from which it is distant five miles. The harbour is now filled up, so that no ship, however small, can enter it. Not only has the sea receded, while the banks of coral are continually augmenting; but such a quantity of sand has been here accumulated by the drifting winds, that it actually rises into a hill of considerable height.

GHA'NA, or GHIN'NY, a strong town of Africa, in the kingdom of Wangara, of which it is the capital, situated on the Niger. Lat. 16. 10. N. lon. 13. 2. W. Greenwich; according to major Rennel's corrected statement in the Appendix to Park's Travels, p. lix.

GHAS'SAN, an ancient kingdom of Arabia, founded by the tribe of Azd, who settled in Syria-Damascus upon the banks of a river called Ghassan, whence the kingdom derived its name. Having expelled the Dajaamian Arabs, who were of the tribe of Salih, they made themselves masters of a very considerable territory, and established a monarchy, which subsisted, according to the most accurate computation, six hundred and sixteen years.

GHAST'FUL, *adj.* [ȝaꝛt and fulle, Sax.] Dreary; dismal; melancholy; fit for walking spirits. *Obsolete.*

Here will I dwell apart,
In *ghaſtful* grave, 'till my laſt ſleep
Do cloſe mine eyes. *Spenſer's Paſtorals.*

GHAST'LINESS, *ſ.* Horror of countenance: reſemblance of a ghoſt; paleneſs.

GHAST'LY, *adj.* [ȝarτ, Sax.] Like a ghoſt; having horror in the countenance; pale; dreadful; diſmal. —Thoſe departed friends, whom at our laſt ſeparation we ſaw diſfigured by all the *ghaſtly* horrors of death, we ſhall then ſee aſſiſting about the majeſtic throne of Chriſt, with their once vile bodies transfigured into the likeneſs of his glorious body, mingling their glad acclamations with the hallelujahs of thrones, principalities, and powers. *Boyle.*

Why looks your grace ſo heavily to-day?
—Oh! I have paſt a miſerable night;
So full of ugly ſights, of *ghaſtly* dreams,
So full of diſmal terror was the time. *Shakeſpeare.*

Horrible; ſhocking; dreadful:

I, who make the triumph of to-day,
May of to-morrow's pomp one part appear,
Ghaſtly with wounds, and lifeleſs on the bier! *Prior.*

GHAST'NESS, *ſ.* [ȝarτ, Sax.] Ghaſtlineſs; horror of look. *Not uſed.*

Look you pale, miſtreſs?—
Do you perceive the *ghaſtneſs* of the eye? *Shakeſpeare.*

GHAUTS, an extenſive chain of mountains in Hindooſtan, which riſe to a ſurpriſing height, and oppoſe to the weſtern country a mural front, interſected with *ghauts*, i. e. *paſſes*. They are the ſame which the Welſh call a *bwlch*. From the word *ghaut*, the whole chain derives its name. They give entrance from the coaſt into the lofty, fertile, and populous, plains of boundleſs view, which they ſeem to ſupport in the manner as buttreſſes do a terrace, formed on an immenſe ſcale. Theſe run along the ſea ſhore from Surat to Cape Comorin, at ſome places ſixty miles diſtant, but generally about forty, and in one place not more than ſix. They have leſſer hills at their baſes, clothed with beautiful foreſts, particularly of the valuable teek-tree. The plains are bleſt, from their ſalubrious ſituation, with a cool and healthy air. From the ſides of the mountains precipitate magnificent cataracts, forming torrents and ſtreams, the means of facilitating the conveyance of the timber, and of giving a thouſand picturesque ſcenes amidſt the foreſts. The Ghauts are diſtinguiſhed into the weſtern and the eaſtern. The firſt extend uninterruptedly from Surat to the paſs of Palicaudchery, when near Coimbetore they ſuddenly turn, deeply undulating, to the north. Then, at the paſs of Gujethetty, they wind north and north-eaſterly as high as Amboor and Mugglee, the laſt about eighty miles due weſt from Madras. From whence they ſeem to take a northerly courſe ſo as to comprehend Aurungabad, then croſs the Tapteè, and continue weſterly, at irregular diſtances from the river, till they arrive within a ſhort ſpace from Cape Comorin: thus they appear to form an inſurmountable barrier between the Myſore country and the coaſt of Malabar.

The whole chain, eſpecially in the Concan, has the effect of a connected wall, inacceſſible to the ſummit, unleſs by paths worked by the hand of man; and is not to be aſcended even by a ſingle traveller, without the fatiguing labour of many hours; ſteep precipices, roaring cataracts, and hoarſe reverberating echoes, terrify the paſſenger on each ſide; often violent tornados ariſe, and hurry men and cattle into the deep immeaſurable abyſs. But having attained the ſummit, the trouble is repaid by the magnificent proſpect to the weſt, of the far ſubjacent country, broken into hills, and clothed with beautiful vegetation; the coaſt, the iſlands, and an immenſity of ocean. Theſe Indian Apennines mark with preciſion the limits of the winter and ſummer, or rather the wet and dry ſeaſons, in India. They extend full thirteen degrees of latitude; and, from their prodigious altitude, being from three to four thouſand feet high, they arreſt the great body of clouds in their paſſage, and, according to the monſoons, or periodical winds from the north-eaſt or ſouth-weſt, give, alternately, a dry ſeaſon to one ſide, and a wet one to the other; ſome clouds indeed paſs over, which give a rainy ſeaſon at a very conſiderable diſtance to the leeward; they being too high and too light to condenſe and fall in rain within a ſmall diſtance of this great range.

GHE'BRES, a religious ſect in Hindooſtan, ſimilar to the Perſees or worſhippers of fire. They profeſs the doctrine of Zoroaſter, whom Bryant ſuppoſes to have worſhipped the ſun under the title of Zor-aſter; whence the name. See GABRES, p. 151, of this volume.

GHE'DI, a well-built little town between the Naviglio and Seriola, in Italy; with 3000 inhabitants.

GHEI'RA, a town of Aſiatic Turkey, in the province of Natolia: twenty miles ſouth-weſt of Degnizlu.

GHEI'VE, a town of Aſiatic Turkey, in the province of Natolia: twenty miles eaſt-north-eaſt of Iſnik.

GHE'LEN (Sigiſmond). See GELENIUS, p. 291, of this volume.

GHEME, a town of Italy, in the Novareſe: thirteen miles north-north-weſt of Novara.

GHENT, a large and celebrated city, the capital of Flanders, ſituated on the conflux of the rivers Scheldt, Lis, Moeze, and Lieve, which, with a great number of canals, cut through it every way, divide the town into twenty-ſix ſmall iſlands. The Nervii choſe it for their city, and after them the Vandals, who gave it the name of *Wanda*, from whence the name of *Gand*, or *Ghent*, is probably derived. Odoacer, grand foreſter of Flanders, ſurrounded it with walls; ſince which it has been frequently enlarged, particularly in 1397, under Philip the Bold, twenty-fifth comte of Flanders. The inhabitants were always warlike, and they have had frequent wars both againſt their neighbours and alſo againſt their princes.—See the article FLANDERS, vol. vii. p. 444.

It is related, in the annals of the province, that, in the year 1381, ſixty thouſand Flemings, under the conduct of Philip d'Arteville, revolted againſt Louis comte of Flanders, their ſovereign. This prince demanded ſuccour of Charles VI. king of France, then a boy, who, by the advice of the duke of Burgundy, came to Courtray, in perſon, at the head of his army, and attacked the rebels at Roſebeeck, near that city, and killed forty thouſand of the Flemings, with Arteville their leader. Arteville was the ſon of a brewer, and was at firſt compelled by force to join the malcontents, but being once engaged he acted with great ſpirit, though with too much cruelty, ordering no quarter to be given to the French, except to their little king Charles, whom he directed, if taken, to be brought to him, that, being bred up at Ghent, he might learn to ſpeak good Flemiſh. This action, on the part of the French, was followed by the moſt outrageous act of ſeverity.

The emperor, Charles V. was born in this town the 5th of February, 1500; but the inhabitants have little reaſon to reſpect his memory, for, loading them with frequent impoſitions, they revolted in 1539, and demanded ſuccour of Francis I. king of France, who paid no attention to their requeſts. The emperor departed from Spain, and, paſſing through France, chaſtiſed them with extreme rigour; he put to death ſix and twenty of the principal citizens, baniſhed a great number, confiſcated their eſtates, took away their artillery, their arms, and their privileges, and condemned them to pay a fine of more than twelve hundred thouſand crowns; ordered the magiſtrates to walk in public proceſſion, with cords about their necks; and built a citadel to prevent them from again revolting; ſo that from one of the fineſt cities in Europe it became a perfect ſolitude; ſince that time it has loſt much of its ancient ſplendour, but it is even

now

now conſiderable. In this city was concluded the famous treaty, on the 8th of November, 1676, called the *Treaty of Ghent*, conſiſting of five-and-twenty articles, the principal of which were, that the Spaniſh and foreign troops ſhould depart out of the country; that the provinces of Holland and Zealand ſhould remain united with the others; that the catholic religion ſhould be maintained, and the ancient privileges of the country be ſecure; which treaty was approved and ratified by Philip II. king of Spain. A ſhort time after, the duke of Arſchot was appointed governor of Flanders, and made a magnificent entry into the city; but the citizens, inſtigated by Imbiſe, Reyhove, and ſome others, aſſembled three days after, and inſiſted on a reſtoration of thoſe privileges which had been taken from them by Charles V. and being refuſed, they ſeized the duke, the biſhops of Bruges and Ypres, and ſome other noblemen, and held them priſoners for ſome time. They went ſo far as to take an oath to the prince of Orange, ſubſcribed to the union of Utrecht, and Imbiſe was made the principal echevin of Ghent; but, in 1584, they returned to their obedience under their legitimate ſovereign, and Imbiſe, the author of all the diſturbances, was depoſed, and publicly beheaded, on the 4th of Auguſt, 1585.

Louis XIV. king of France, took Ghent on the 9th of March, 1678, after a ſiege of ſix days; but reſtored it to Spain at the treaty of Nimeguen the ſame year, with whom it continued till the allies took it, with the citadel, in the year 1706, after the battle of Ramillies. The French ſeized it by ſtratagem the 5th of July, 1708, under the conduct of brigadier la Faille, but they remained in poſſeſſion only a ſmall time; for the allies, under prince Eugene and the duke of Marlborough, beſieged it again the 24th of December, and forced it to capitulate the 30th of the ſame month; the commander, comte de la Motte, lieutenant-general of France, with the garriſon, conſiſting of fourteen thouſand men, being made priſoners.

Ghent was erected into a biſhopric in 1559, by pope Paul IV. at the ſolicitation of Philip II. king of Spain, ſubject to the archbiſhop of Malines; beſides the cathedral, it has ſix pariſh churches, and a great many religious houſes; the ſtreets are large, and the market-places ſpacious, particularly the Friday's market, in the midſt of which is a ſtatue of Charles V. in his imperial habit, the effect of which is in a great meaſure deſtroyed by being erected on a column. The ancients have indeed left us ſome inſtances of this impropriety: but their errors ought not to be imitated; and moſt of theſe ſtatues were erected when purity of taſte began to decline. That attention which, in order to be excited, requires local elevation, does little honour to its object. The preſervation of this ſtatue may be conſidered as a proof that, if mankind be not always mindful of the benefits, they are at leaſt equally diſpoſed to forget the injuries, which they receive from princes; for ſurely few ſovereigns, after what has been related above, ever deſerved the hatred of a people more than Charles V. did that of the citizens of Ghent. This city was alſo unfortunately the object of imperial vengeance in the late conteſts between the Netherlands and the emperor; it ſuffered much in November, 1789, from an attempt made by the Auſtrian troops, under general Arberg, to burn and pillage it. Many houſes were deſtroyed, but the violent rain prevented the flames from ſpreading. The cruelties perpetrated by the ſoldiers were dreadful; ninety-ſeven perſons, many of whom were children, were maſſacred by them. They were however defeated by the citizens, who attacked the military in their barracks, to which they would have ſet fire, had not the officers laid down their arms, and ſurrendered at diſcretion. It redounds to the honour of the Flemings, that they ſpared theſe barbarous wretches, and treated them as priſoners of war.

Ghent has conſiderable trade in corn, with cloth, linen, and ſilk manufactures, much aſſiſted by two navigable canals, one to Sas de Ghent, the other to Bruges, Oſtend, &c. The magiſtracy is compoſed of burgomaſters, echevens, and common-council. John, the third ſon of Edward III. king of England, was born in this city, and thence called *John of Gaunt*. On the 14th of November, 1792, the French republicans took poſſeſſion of this city; the inhabitants of which expreſſed a deſire to be united to France. It is thirty miles ſouth-weſt of Antwerp, and thirty-five north of Lille. Lat. 51. 4. N. lon. 21. 17. E. Ferro.

GHERE'DE, a town of Aſiatic Turkey, in the province of Natolia: twenty-eight miles eaſt of Boli.

GHERGIS'TEN MOUNTAINS, a chain of mountains of Aſia, ſituated to the north of the country of Candahar, about fifteen leagues north of Candahar.

GHERGONG', the capital of the kingdom of Aſſam, in Aſia. It has four gates; and the city is encompaſſed with a bound-hedge of bamboos. The rajah's palace is ſurrounded by an elevated cauſey, planted on each ſide with a cloſe hedge of bamboo, which ſerves inſtead of a wall. On the outſide there is a ditch or foſs, which is always full of water. In the centre of the palace there is a ſaloon one hundred and fifty cubits long, and forty broad, ſupported by ſixty-ſix pillars. The rajah's ſeat is adorned with lattice-work and carving. Within and without have been placed plates of braſs, ſo highly poliſhed, that when the rays of the ſun ſtrike upon them, they ſhine like mirrors. It is an aſcertained fact, that 3000 carpenters and 12,000 labourers were conſtantly employed on this work for two years before it was finiſhed. Ghergong ſtands on the banks of the Burhampooter, 448 miles eaſt from Patna. Lat. 26. 26. N. lon. 95. 35. E. Greenwich.

GHERI'AH, a ſea-port of Hindooſtan, on the weſtern or Pirate Coaſt, in the country of Concan; ſtrongly fortified by the pirate Angria, from whom it was taken by admiral Watſon and colonel Clive, in 1756: eighty miles north-north-weſt of Goa. Lat. 16. 45. N. lon. 73. 7. E. Greenwich.

GHER'KIN, *ſ.* [from *gurcke*, Germ. a cucumber.] A ſmall pickled cucumber. *Skinner.*

GHER'MA, or GERMA, a town of Africa, in the deſert country of Berdoa. Lat. 24. 50. N. lon. 18. 20. E. Greenwich.

GHERMAN'SLI, a town of Aſiatic Turkey, in the province of Natolia: thirty-ſix miles weſt of Burſa.

GHER'ZE, a town of Africa, in the country of Tripoli: fifty miles ſouth of Meſurada.

To GHESS, *v. n.* [See *To* GUESS. *Gheſs* is by critics conſidered as the true orthography, but *gueſs* has univerſally prevailed.] To conjecture.—It ſeem'd a ſecond paradiſe, I *gheſſe*. *Spenſer.*

GHEUR'EL, a town of Aſiatic Turkey, in the province of Natolia: twenty-eight miles weſt-north-weſt of Angura.

GHEUT'SI, a town of Aſiatic Turkey, in the province of Caramania: ſixteen miles eaſt of Cogni.

GHEYS'SIQUAS, a nation of Hottentots, bordering on Caffraria, in the ſouth of Africa, and near the Cape of Good Hope. See the article HOTTENTOTS.

GHI'LAN, or KILAN, a province of Perſia, bounded on the north by the province of Adirbeitzan and Schirvan, on the north-eaſt by the Caſpian Sea, on the eaſt by the Caſpian Sea and the province of Mezanderan, on the ſouth by the Perſian Irak, and on the weſt by Curdiſtan and Adirbeitzan; about 200 miles from eaſt to weſt, and 150 from north to ſouth. It is one of the moſt beautiful and fertile provinces in all Perſia, producing ſilk, olives, rice, tobacco, and moſt excellent fruits of all kinds, and in ſo great quantity as not only to ſupply their own wants, but ſufficient to furniſh a great part of Perſia and Armenia. Whole foreſts are ſeen of mulberry, box, and walnut, trees. Every peaſant has a garden to his cottage, filled with orange-trees, citrons, figs, and vines. The inhabitants are Mahometans, of the

the ſect of Omar, brave, haughty, and induſtrious. This province was ceded to Ruſſia, with all its dependencies, by a treaty concluded at Peterſburg, in 1723, between the emperor and the ſchah; but no ſteps ſeem to have been taken on the part of Ruſſia till the year 1780, when the empreſs annexed it to the Ruſſian dominions. Reſhd is the capital.

GHILI'NI (Jerom), a man of letters, born in 1589, at Monza, in the Milaneſe. He ſtudied firſt in civil and canon law; but having married, and ſettled at Aleſſandria, (the native place of his father,) he for ſome years employed himſelf in the private purſuits of literature. Becoming a widower, he took the eccleſiaſtical habit, and reſumed the ſtudy of canon law, in which he became a doctor. He had an abbacy in the kingdom of Naples, and was made apoſtolical prothonotary. He was afterwards preſented to a theological canonry in the church of St. Ambroſe at Milan. In 1670, he was living at Aleſſandria in a very advanced age; but when he died is unknown. He was a member of the Academy of Incogniti at Venice. He publiſhed, 1. Poems. 2. Caſes of Conſcience. 3. Annals of Aleſſandria and its circumjacent Territory, folio, Milan, 1666; and a work entitled *Teatro di Uomini Letterati*, 2 vols. 4to. Venice, 1647.

GHINA'LA, or GUINALA, a town and kingdom of Africa, on the river Grande. Lat. 10. 20. N. lon. 12. 20. W. Greenwich.

GHINTA, *ſ.* [ſo named by Schreber, in honour of *Lucas Ghini*, a famous phyſician and botaniſt of Bologna, in the ſixteenth century.] In botany, a genus of the claſs diandria, order monogynia, (didynamia, *Sw.*) natural order of perſonatæ, (vitices, *Juſſ.*) The generic characters are—Calyx: perianthium one-leafed, tubular, permanent; mouth expanded, five-toothed, acuminate. Corolla: one petalled, irregular; tube long, narrow; border two-lipped, upper lip largeſt, roundiſh, concave, aſcending; lower three-parted, ſegments roundiſh, the middle one largeſt, bent down, emarginate. Stamina: filaments four, inſerted into the tube above the baſe, two longer than the others; antheræ with oblong cells, one at the end, fertile in the longer filaments, barren in the ſhorter; the other inſerted towards the middle of the filament, in ſhape of a ſcale. Piſtillum: germ roundiſh; ſtyle the length of the tube; ſtigma four-lobed. Pericarpium: drupe turbinate, angular, longer than the calyx, which is permanent. Seed: nut angular, four or five-celled, with one ſeed in each cell; (four-cornered, four-ſpined at the end, four-celled, with ſolitary kernels, *Swartz.*)—*Eſſential Character.* Calyx five-toothed, teeth acuminate; corolla two-lipped; ſtamina four, with two barren anthers at the end of the ſhorter filaments; pericarpium a drupe, containing a four or five-celled nut, with a ſeed in each cell; (a fleſhy four-celled nut, *Sw.*)

Species. 1. Ghinia ſpinoſa, or prickly ghinia: fruits four-ſpined. Stem ſlender, woody, branching, near three feet high; leaves oval, ſharply indented, light green, on ſhort foot-ſtalks; flowers diſtant, ſeſſile, in a looſe ſpike, on ſlender, naked, axillary, peduncles, ſix or ſeven inches in length; corollas ſmall, bright blue; ſeeds two, terminated by ſhort awns, and incloſed in the calyx. It is an annual plant, and native of the Weſt Indies, Antigua, Curaçoa, &c. The ſeeds were ſent to Mr. Miller from Vera Cruz, by Dr. Houſton.

2. Ghinia mutica, or ſmooth ghinia: fruits without ſpines. This alſo is an annual plant, about a foot and a half in height. Native of Guiana, and the iſland of Cayenne.

GHI'NUC, a town of Aſiatic Turkey, in the province of Natolia: twenty-four miles north-weſt of Sinob.

GHI'O, or SHEMLIK, a town of Aſiatic Turkey, in the province of Natolia: twenty miles north-eaſt of Burſa.

GHIR, a river of Africa, which riſes in mount Atlas, and empties itſelf into a lake in the Deſert of Hair.

GHIR'GIN, or GUANGUIN, a town of Africa, in the kingdom of Congo: thirty miles north-eaſt of Cape Roxo.

GHIR'NAH, a river of Hindooſtan, which runs into the Taptee: thirty-ſix miles ſouth-weſt of Burhampour.

GHIVI'RA, a town of Italy, in the duchy of Milan: thirty miles north-weſt of Milan.

GHIZ'NI, or GAZNA, a town of Aſia, in the country of Cabul, once the capital of a powerful empire of the ſame name; the city is called *the Second Medina*, from the great number of illuſtrious perſons who have been interred there: 150 miles eaſt of Candahar, and fifty-four ſouth of Cabul. Lat. 33. 40. N. lon. 61. 20. E. Greenwich.

GHO'BA, the place to which the Aſſyrian army were chaſed by the Iſraelites in the days of Judith. *Judith* xv. 5.

GHO'BAN, a town of Perſia, the reſidence of an Arabian ſchiech, near the mouth of the Euphrates.

GHO'ER, a town of the Dutch States, in Overiſſel, on the Regge: ten miles north-north-eaſt of Borkeloe.

GHOST, *ſ.* [from the Saxon GAST, which in the "Ælfrici Grammatica" is interpreted by *Spiritus*; *Anima.*] However the Saxon and Engliſh word may originally have been applied to expreſs what we term "Wind," the word "Ghoſt" has now a different ſenſe. And here we do not refer to the vulgar acceptation, when the ignorant and ſuperſtitious talk of "Ghoſts," by which they mean terrific phantoms. We will explain the word in the high and dignified ſenſe in which it is now underſtood.

St. Paul, 2 Cor. iv. 16. ſpeaks of our "Inward Body." ESTIUS and VORSTIUS thus interpret the paſſage:—*Hominem interiorem* appellat Spiritum, ſive Animam; vel Animam rationalem cum potentiis ei propriis: i. e. "The Apoſtle calls the Spirit, or Soul, or Rational Soul, with its appropriate faculties, *the Inward Man.*" This Spiritual Inhabitant of the Human Body is what we now underſtand when we uſe the word "Ghoſt" on ſolemn occaſions: ſo that the "Ghoſt of a Man," or "Spirit of a Man," are ſynonymous.

When, after his reſurrection, our Lord appeared to his diſciples, to convince them that they ſaw a real Body, he ſaid, "Behold, my hands and my feet, that it is I myſelf: handle me, and ſee: for a Spirit hath not fleſh and bones, as ye ſee me have." St. Luke xxiv. 39. Here our Lord preciſely diſtinguiſhes between that which conſtitutes the body, and that which is the nature of Man's "Ghoſt, or Spirit." Fleſh and Bones compoſe the one; but ſuch ſubſtance our "Inward Ghoſt or Spirit" does not in itſelf poſſeſs, though whilſt united with the body it feels the influence and weight of the carnal frame. At the diſſolution of the Body, the Inward Ghoſt or Spirit is freed from incumbrance. It departs for a ſeaſon to that region which is the abode of "Ghoſts or Spirits" ſeparated from Mortal Bodies. But at the final conſummation of all things, when the Reſurrection enſues, the "Ghoſt" of each perſon ſhall be re-united with his Body; which Body will not then be groſs, mortal, and corruptible, but pure, immortal, and incorruptible, ſo that the "Ghoſt" inhabiting it ſhall no more experience the preſſure from it, which we each of us perceive affecting us, when we attend to the Rational and Irrational Parts of our Frame, in all their workings, their conflicts, their different tendencies, their contrary gratifications, where the "Ghoſt or Spirit" has been trained to virtue and religion.

Taking the word "Ghoſt" in the ſignification of ſomewhat, which though "Subſtance," is yet not "Bodily Subſtance," or rather, not "Material Subſtance," but refined, and pure, as Light, or Fire, or Wind, all of which are "Subſtances," though not "Material Subſtances," we apply the term to the Third Perſon of the ONE GODHEAD, and denominate the HOLY SPIRIT by the appellation "HOLY GHOST."

We reject *Credulity* as a mark either of haſty judgment, or of weak underſtanding. To *popular* ſtories of Ghoſts and Goblins we give no credit. But we certainly do hear, on ſome occaſions, ſuch poſitive aſſertions made by

by moſt ſenſible and moſt reſpectable perſons, ſome of whom we know at this very time, that we can ſcarcely deny the fact, that the Spirits of departed friends do ſometimes appear.

GHOST'LINESS, *ſ.* Spiritual tendency; quality of having reference chiefly to the ſoul.

GHOST'LY, *adj.* Spiritual; relating to the ſoul; not carnal; not ſecular.—Save and defend us from our *ghoſtly* enemies. *Common Prayer.*—The graces of the ſpirit are much more precious than worldly benefits, and our *ghoſtly* evils of greater importance than any harm which the body feeleth. *Hooker.*—Having a character from religion; ſpiritual.—The *ghoſtly* father now hath done his ſhrift. *Shakeſpeare.*

Hence will I to my *ghoſtly* friar's cloſe cell,
His help to crave, and my dear hap to tell. *Shakeſpeare.*

GHOU'MEL, or GOMEL, a town of Africa, in the kingdom of Foulis, on the Joto, the reſidence of the king. Lat. 16. 12. N. lon. 11. 15. W. Greenwich.

GHOUR'BOND, a town of Aſia, in the country of Cabul: forty-two miles north-weſt of Cabul. Lat. 34. 55. N. lon. 67. 52. E. Greenwich.

GHOU'RI, a town of Aſia, in the kingdom of Balk. Lat. 35. 40. N. lon. 66. 56. E. Greenwich.

GHU'LA EL AIJAIB, a town of Arabia Felix: ten miles north-north-eaſt of Chamir.

GOULPAI'GAN, a town of Perſia, in the province of Irak: 100 miles north-north-weſt of Iſpahan.

GHUN'FUDE, a conſiderable city of Arabia, ſituated on the Red Sea, in the juriſdiction of the governor of Mecca, ſubject to the Turks. All the ſhips which are employed in carrying coffee to Jidda, are obliged to anchor here, in order to pay the duty, and obtain certificates thereof, before they are permitted to ſail: 145 miles ſouth of Mecca. Lat. 19. 7. N.

GHU'NI, one of the ſmaller Cape Verd iſlands, little more than a rock.

GIAB'BAR, a fortreſs of Aſiatic Turkey, in the province of Diarbekir: 120 miles ſouth-ſouth-weſt of Diarbek.

GIA'DEN, a town of Arabia: ſixty miles weſt-ſouth-weſt of Mecca.

GI'AFAR, ſurnamed *Sadek*, or *the Juſt*, a muſſulman doctor of great reſpectability, born at Medina in the 83d year of the Hegira, where he died, aged ſixty-five, in 148, correſponding with 764 of the Chriſtian era. He is the reputed author of the leſſer *Gefre*, a book compoſed of prophecies relating to the deſtiny of Muſſulmaniſm, and the great events that are to take place before the conſummation of all things, and of myſteries which will not be fully developed until the coming of Mehedi, towards the end of the world. He is alſo ſaid to be the author of the *Ketab Corradt*, or Book of Lots, which is one of the principal directories of the Muſſulmans in their divinations. But Giafar Sadek's Traditions are what are held in the higheſt repute, and chiefly conſecrate his memory as a doctor of Iſlamiſm. Theſe he is ſaid to have received from his father, and from Atha, one of the companions of Mahomet, and to have tranſmitted them to Thouri, to Ben Ainah, to Abou Hanifah, and to Malec, of whom the two laſt are the chiefs of the two ſects reputed orthodox among the Muſſulmans.

GI'AGAS, a tribe of predatory or wandering ſavages of Africa, ſomewhat ſimilar to the Bedouins, but of a more ferocious nature. They are alſo denominated *Iajas*, and ſeem from the brutality of their manners to be the ſame as the Imbi and the Gallas. We are indebted to a traveller, who reſided among them many years, for what we know reſpecting their cuſtoms and way of life. Their chief has the title of Great Giaga. He has an army of twenty thouſand men, under the command of twelve captains, each of whom has the charge of one of the gates of the camp; whilſt the chief has his pavilion, or place of reſidence, in the centre. He undertakes no enterpriſe without firſt conſulting their national god, which is called *mokiſſo*, and from whom he pretends to know the event of every action. This ceremony continues during a whole day: and he is aſſiſted by fifty women, and two ſorcerers, who form a circle round him, make a variety of geſtures, and repeat certain incantations. They dye his forehead, temples, breaſt, and belly, with a kind of powder, conſecrated by magical words; put into his hands his *caſingola*, or hatchet; and ſay to him, "Go, march againſt the enemy, and ſpare not, for the *mokiſſo* will attend thee." A male child is then brought, the head of which he ſplits. This boy is followed by four men, two of whom he ſlays with his own hand; the other two are put to death by his orders without the camp. A general entertainment then ſucceeds; ten cows are killed, five without and five within the camp; with an equal number of goats and dogs; and the fleſh of theſe animals is eaten with great feſtivity and triumph.

The dreſs of the Great Giaga conſiſts in having his hair very long, braided with many knots, and intermixed with ſhells; a girdle compoſed of the eggs of an oſtrich; and a plain *pagne* of ſtuff, manufactured from the fibres of the palm-tree. His body is marked with various figures, and every day anointed with human greaſe. He wears a piece of copper two inches in length acroſs his noſe; and another of the ſame ſize depends from each ear. He has about thirty wives, who follow him when he travels, one of whom carries his bows and arrows, and four of the others his cups and veſſels of liquor. When he drinks, they kneel, ſing, and clap their hands. He gives an exhortation to his troops every day; and if any one of them turns his back to the enemy, he ſuffers death, and is eaten by his comrades. However laborious and fatiguing their march may be, they no ſooner encamp, than they fortify the place with ſtrong paliſades. They employ a particular corps of their ſtouteſt men for this purpoſe. Their tents or huts are placed in a regular manner, and cloſe to each other; and they depoſit at the door their bows, arrows, and other weapons; ſo that, on the leaſt alarm, every man is completely armed and ready in a moment.

The Giagas have no idol nor other god than their *mokiſſo*. The manner in which they recruit their armies, is by the captives taken in war, and others whom they carry off in the courſe of their expeditions, like the mamalukes in Egypt. Theſe youths are no ſooner inrolled amongſt them, than they hang a collar round their necks in token of ſervitude, and which is to be worn till they have brought home the head of an enemy. It is then taken off, and they are declared free men. Nothing has ſo much influence on their minds, as the hope of being delivered from the collar, the badge of ſlavery; and to attain which, they will brave every danger, and ſurmount every obſtacle.

When a perſon of diſtinction dies, the body is waſhed, anointed with ointments, and decked in the moſt coſtly manner; and two of the women whom he chiefly loved, after having their arms broken, are placed by the ſide of the deceaſed, and in that manner buried with him in the ground. As ſoon as they are thus depoſited, the grave, which is commonly a deep vault, is filled with earth, and if theſe wretched women are not immediately ſuffocated, they expire amidſt lingering torments. Cuſtoms not unſimilar exiſt even at this day in Hindooſtan.

Theſe barbarians never make war but for the ſake of plunder; they only ſtop their march that they may have time to conſume their booty; and when that is exhauſted, they immediately recommence their predatory incurſions and military operations. But the worſt of all is, that not content with the property which they are able to carry off, they generally deſtroy, burn, or demoliſh, all immoveable poſſeſſions, and leave nothing behind them but a barren and deſolate wilderneſs. They never ſhew any deſire of ſettling in a country, unleſs they be extremely

extremely fatigued with their expeditions, or fatiated with plunder and ſlaughter. It may be readily conceived, that the inhabitants of a territory which this wandering tribe frequent, are in no very agreeable ſituation; and they are, therefore, ſeldom mentioned: all that we know of them is, that they have ſome rational form of government, and that their conſtitution is monarchical.

GI'AGH, *ſ.* in chronology, a cycle of twelve years; in uſe among the Turks and Cathayans. Each year of the giagh bears a name of ſome animal: the firſt that of a mouſe; the ſecond that of a bullock; the third of a lynx or leopard; the fourth of a hare; the fifth of a crocodile; the ſixth of a ſerpent; the ſeventh of a horſe; the eighth of a ſheep; the ninth of a monkey; the tenth of a hen; the eleventh of a dog; and the twelfth of a hog. They alſo divide the day into twelve parts, which they call *giaghs*, and diſtinguiſh them by the names of animals. Each giagh contains two of our hours, and is divided into eight kehs, as many as there are quarters in our hours.

GI'AH, a city of Paleſtine, belonging to the tribe of Benjamin; ſituated near the wilderneſs of Gibeon, and the hill of Ammah. 2 *Sam.* ii. 24.

GIAHED'H, a famous muſſulman doctor, called *Abou Othman Amoud*, or *Amrou Ben Mahboub*, a native of Baſſora, whence he removed to Bagdat. He was the diſciple of Abou Iſhak al Nadhám, and chief of the ſect of the Motazales, eminent for their ſubtilty in philoſophy and ſcholaſtic theology. He was the author of ſeveral treatiſes in metaphyſics, which the Arabs call *Elm al Kelam*, or the ſcience of words, or terms. The Schiites, or the followers of Ali, who are the friends of the Motazales, made him a preſent of a large ſum of money, in order to engage his pen in their defence; which led him to compoſe a work, in which he collected a vaſt maſs of traditions and anecdotes, all favourable to the cauſe of Ali. He died at Bagdat in the year 225 of the Hegira, or 840 of the Chriſtian era. His reputation was ſo high, that one ſect of the Motazales bears after him the name of *Giahediah*.

GIAID'HOFF, a town of Germany, in the duchy of Stiria: eight miles ſouth-ſouth-weſt of Graz.

GIALALI'NA, *ſ.* [Italian.] Earth of a bright gold colour, found in the kingdom of Naples, much valued by painters. *Woodward.*—This is the Italian name of the pigment otherwiſe called *Naples yellow*.

GIALU', a town of Tranſilvania: eight miles ſouth-ſouth-weſt of Clauſenburg.

GIAMA'NI, a town of Perſia, in the province of Chuſiſtan: twenty-eight miles ſouth-ſouth-weſt of Suſa.

GIAM'BEUX, *ſ.* [*jambes*, Fr.] Legs, or armour for legs; greaves:

The mortal ſteel diſpiteouſly entail'd,
Deep in their fleſh, quite through the iron walls,
That a large purple ſtream adown their *giambeux* fall.
Spenſer.

GIAM'OBASH, a town of Aſiatic Turkey, in the province of Natolia: twenty miles ſouth-ſouth-eaſt of Smyrna.

GI'ANAB, a town of Perſia, in the province of Kerman: fifty miles eaſt of Sirgian.

GIANNO'NE (Peter), an eſteemed modern hiſtorian, born in the kingdom of Naples, about 1680. He diſtinguiſhed himſelf by writing in Italian a Hiſtory of Naples, in 4 vols. 4to. 1723, divided into forty books. Its freedom with reſpect to the origin of the papal power gave ſuch offence to the court of Rome, that, with its uſual unforgiving ſpirit, it raiſed ſuch a perſecution againſt the author, that he long wandered as a fugitive, and at laſt obtained an aſylum with the king of Sardinia, who, however, found it neceſſary to diſguiſe his protection under the appearance of a confinement. He died in Piedmont, in 1748. An extract was made of all the matter relating to eccleſiaſtical affairs in his hiſtory, and printed in Holland, under the title of *Anecdotes Eccleſiaſtiques*. After his death a quarto volume of his Poſthumous Works was publiſhed, containing among other things his profeſſion of faith, and a defence of his hiſtory.

GI'ANT, *ſ.* [in Greek Γιγας, in Latin GIGAS, in Hebrew NOPHEL, or NEPHILIM, which may ſignify a MONSTER, or a TERRIBLE MAN, who beats and bears down other men.] The Scripture ſpeaks of Giants who lived before the flood; they are called NEPHILIM, mighty men, which were of old men of renown, *Gen.* vi. 4. AQUILA, inſtead of *Gigantes*, renders this word *Nephilim* Επιπιπτοντες, "men who attack, who fall with impetuoſity upon their enemies;" a tranſlation, ſays one, which renders very well the whole force of the Hebrew term. SYMMACHUS tranſlates it Βιαιοι, violent men, cruel, whoſe only rule of their actions is violence and force of arms.

The Scripture calls them ſometimes REPHAIMS. For example: Chedorlaomer and his allies beat the Rephaims, or Giants, at Aſhteroth Karnaim, *Gen.* xiv. 5. The Emims, ancient inhabitants of the land of Moab, were of gigantic ſtature, they were of the number of the Rephaims, or Giants, *Deut.* ii. 10, 11. The Rephaims and the Perizzites are joined together as old inhabitants of the land of Canaan, *Gen.* xv. 20. Job ſays, that "the ancient Rephaims mourn or groan under the waters," *Job* xxvi. 5. i. e. "Theſe Giants of the old world, who once carried themſelves inſolently towards God and men, but were quickly ſubdued by the divine power, and drowned with a deluge, do now mourn or groan from under the waters where they were buried, or in their ſubterranean and infernal habitations." But this paſſage is otherwiſe explained by ſome. Solomon, in Prov. ii. 18. ſays, that "the paths of a debauched woman lead to the Rephaims;" that is, "to hell, where the rebellious giants are; and that he who deviates from the ways of wiſdom, ſhall go and dwell in the aſſembly of the Giants in hell." *Prov.* xxi. 16.

The ANAKIMS, or the ſons of ANAK, were the moſt famous Giants of PALESTINE. They dwelt at Hebron, and thereabouts. Their ſtature was ſo much above what was common, that the Iſraelites, who were ſent to view the promiſed land, told the people at their return, that they had ſeen Giants of the race of Anak in this country, who were of ſo monſtrous a ſize, that the Iſraelites, in compariſon, were but graſshoppers to them. *Num.* xiii. 33.

The Septuagint ſometimes tranſlate the Hebrew word GIBBOR, "Giant," though literally it ſignifies no more than a ſtrong man, a man of valour and bravery, a warrior. For example: they ſay that Nimrod was "a Giant before the Lord," *Gen.* x. 8, 9. That the "Sun riſes like a Giant to run its courſe," *Pſal.* xix. 5. That the "Lord will deſtroy the Giant and the warlike man," *Iſa.* iii. 2. That he will "call his Giants in his wrath, to take vengeance of his enemies," *Iſa.* xiii. 3. That he will "deſtroy the power of Egypt by the ſword of his Giants;" that is, "of his warriors," *Ezek.* xxxii. 12. xxi. 27.

As to the exiſtence of Giants, ſeveral writers, both ancient and modern, have imagined, that the Giants ſpoken of in Scripture were indeed men of an extraordinary ſtature, but not ſo much above what was common as they have fancied, who deſcribe Giants as three or four times larger than men are at preſent. They were, ſay they, men famous for the violences which they committed, and for their crimes, rather than for their ſtrength, or the greatneſs of their ſtature.

It is very probable, that the firſt men were all of a ſtrength and ſtature much ſuperior to thoſe of mankind at preſent, ſince they lived a much longer time; long life being commonly the effect of a ſtrong and vigorous conſtitution. And that formerly there were men of a ſtature much above that of common men, cannot be denied,

nied, at leaſt not without contradicting the Holy Scriptures. The Iſraelites who traverſed the Holy Land, told their brethren, that they had ſeen Giants in this country of Anak's race, unmeaſurably large, as noticed above, *Num.* xiii. 33. Moſes ſpeaks of Og the king of Baſan's bed, which was nine cubits long, and four wide; that is, fifteen feet four inches and a half long, *Deut.* iii. 11. Goliah was ſix cubits and a ſpan in height; that is to ſay, ten feet ſeven inches, 1 *Sam.* xvii. 4. Theſe ſorts of Giants were ſtill common in Joſhua's and David's times, when the life of men was already ſo much ſhortened, and, as may be preſumed, the ſize and ſtrength of human bodies were very much diminiſhed. Beſides the Giants mentioned in Scripture, ſeveral hiſtorians make mention of Giants; as Herodotus, Diodorus Siculus, Pliny, Homer, Plutarch, &c. *Cruden.*

The excellent DERHAM, in his note on b. 5. c. 4. of his admirable work entitled "Phyſico-Theology," after having referred to examples of uncommon ſtature in more early times, adds, "In 1684, I myſelf meaſured an Iriſh youth, ſaid to be not nineteen years old, who was ſeven feet and near eight inches; and, in 1697, a woman who was ſeven feet three inches in height."

Captain WALLIS, one of thoſe perſevering navigators round the world, to whom we are indebted for enlargement of knowledge, gives us this account of the natives of Patagonia: "As I had two meaſuring rods with me, we went round and meaſured thoſe that appeared to be talleſt among them. One of theſe was ſix feet ſeven inches high; ſeveral more were ſix feet five, and ſix feet ſix inches." *Hawkeſworth's Voyages*, vol. i. 374.

Patrick Cotter, commonly called O'Brien, the Iriſh giant, who died in September laſt (1806), was eight feet and a half high; and there is now ſhown in London a youth about the age of that mentioned by Derham, and as tall.

In a memoir read before the Academy of Sciences at Rouen, M. Le Cat, the anatomical profeſſor, gave the following account of giants that are ſaid to have exiſted in different ages: "Profane hiſtorians have given ſeven feet of height to Hercules their firſt hero; and in our days we have ſeen men eight feet high. The giant who was ſhown in Rouen, in 1735, meaſured eight feet ſome inches. The emperor Maximin was of that ſize; Shenkius and Platerus, phyſicians of the laſt century, ſaw ſeveral of that ſtature; and Goropius ſaw a girl who was ten feet high. The body of Oreſtes, according to the Greeks, was eleven feet and a half; the giant Galbara, brought from Arabia to Rome under Claudius Cæſar, was near ten feet; and the bones of Secondilla and Puſio, keepers of the gardens of Salluſt, were but ſix inches ſhorter. Funnam, a Scotſman, who lived in the time of Eugene II. king of Scotland, meaſured eleven feet and a half; and Jacob le Maire, in his voyage to the ſtraits of Magellan, reports, that on the 17th of December, 1615, they found at Port Deſire ſeveral graves covered with ſtones; and having the curioſity to remove the ſtones, they diſcovered human ſkeletons of ten and eleven feet long. The chevalier Scory, in his voyage to the Peak of Teneriffe, ſays, that they found in one of the ſepulchral caverns of that mountain the head of a Guanche which had eighty teeth, and that the body was not leſs than fifteen feet long. The giant Ferragus, ſlain by Orlando nephew of Charlemagne, was eighteen feet high. Rioland, a celebrated anatomiſt, who wrote in 1614, ſays, that ſome years before there was to be ſeen in the ſuburbs of St. Germain, the tomb of the giant Iſores, who was twenty feet high. In Rouen, in 1509, in digging in the ditches near the Dominicans, they found a ſtone tomb containing a ſkeleton whoſe ſkull held a buſhel of corn, and whoſe ſhin-bone reached up to the girdle of the talleſt man there, being about four feet long, and conſequently the body muſt have been ſeventeen or eighteen feet high. Upon the tomb was a plate of copper, whereon was engraved, 'In this tomb lies the noble and puiſſant lord, the chevalier Ricon de Vallemont, and his bones.' Platerus, a famous phyſician, declares, that he ſaw at Lucerne the true human bones of a ſubject which muſt have been at leaſt nineteen feet high. Valence in Dauphiné boaſts of poſſeſſing the bones of the giant Bucart, tyrant of the Vivarais, who was ſlain by an arrow by the count de Cabillon his vaſſal. The Dominicans had a part of the ſhin-bone, with the articulation of the knee, and his figure painted in freſco, with an inſcription, ſhowing that this giant was twenty-two feet and a half high, and that his bones were found in 1705, near the banks of the Morderi, a little river at the foot of the mountain of Cruſſol, upon which, tradition ſays, the giant dwelt.

"January 11, 1613, ſome maſons digging near the ruins of a caſtle in Dauphiné, in a field which had long been called *the giant's field*, at the depth of eighteen feet diſcovered a brick tomb thirty feet long, twelve feet wide, and eight feet high; on which was a grey ſtone, with the words *Theutobochus Rex*, cut thereon. When the tomb was opened, they found a human ſkeleton entire, twenty-five feet and a half long, ten feet wide acroſs the ſhoulders, and five feet deep from the breaſt-bone to the back. His teeth were about the ſize each of an ox's foot, and his ſhin-bone meaſured four feet.—Near Mazarino, in Sicily, in 1516, was found a giant thirty feet high; his head was the ſize of an hogſhead, and each of his teeth weighed five ounces.—Near Palermo, in the valley of Mazara, in Sicily, a ſkeleton of a giant thirty feet long was found, in the year 1548; and another of thirty-three feet high, in 1550; and many curious perſons have preſerved ſeveral of theſe gigantic bones.—The Athenians found near their city two famous ſkeletons, one of thirty-four and the other of thirty-ſix feet high.—At Totu, in Bohemia, in 758, was found a ſkeleton, the head of which could ſcarcely be encompaſſed by the arms of two men together, and whoſe legs, which they keep in the caſtle of that city, were twenty-ſix feet long. The ſkull of the giant found in Macedonia, September 1691, held 210 pounds of corn.

"The celebrated ſir Hans Sloane, who treated this matter very learnedly, does not doubt theſe facts; but thinks the bones were thoſe of elephants, whales, or other enormous animals, now perhaps extinct."

REBEL GIANTS, or GIGANTES, in pagan mythology, were the ſons of Cœlus and Terra. According to Heſiod, they ſprang from the blood of the wound which Cœlus received from his ſon Saturn; and Hyginus calls them ſons of Tartarus and Terra. They are repreſented as men of uncommon ſtature, with ſtrength proportioned to their gigantic ſize. Some of them, as Cottus, Briareus, and Gyges, had each fifty heads and one hundred arms, and their lower extremities were ſerpents inſtead of legs. They were of a terrible aſpect, their hair hung diſhevelled about their ſhoulders, and their beard was ſuffered to grow uncropped. Pallene and its neighbourhood was the place of their reſidence. The defeat of the Titans, to whom they were nearly related, incenſed them againſt Jupiter, and they all conſpired to dethrone him. Accordingly they are fabled to have reared Mount Oſſa upon Pelion, and Olympus upon Oſſa; and from thence to have attacked the gods with huge rocks, ſome of which fell into the ſea and became iſlands, and others fell on the earth and formed mountains. Jupiter ſummoned a council of the gods; when being informed that it was neceſſary to obtain the aſſiſtance of ſome mortal, he by the advice of Pallas called up his ſon Hercules; and with the aid of this hero he exterminated the giants Enceladus, Polybotes, Alcyon, Porphyrion, the two ſons of Alœus, Ephialtus, Othus, Eurytus, Clytius, Tythyus, Pallas, Hippolitus, Agrius, Thoon, and Typhon, the laſt of whom it was more difficult to vanquiſh than all the others. Jupiter having thus gained a complete victory, he caſt the rebels down to Tartarus, where they were to receive the full puniſhment of their enormous crimes.

See the highly-prized cameo of Jupiter's victory over the Giants, in Plate III. of GEMS, p. 305, of this volume. But, according to ſome of the poets, he buried them alive under Mount Etna.

GI'ANTS-CAU'SEWAY, a lofty baſaltic promontory in the county of Antrim, on the north-eaſt coaſt of Ireland, which exhibits the moſt magnificent arrangement of baſaltic columns in the known world. The principal cauſeway conſiſts of an irregular arrangement of many hundred thouſands of columns, almoſt all of a pentagonal figure, but ſo cloſely and compactly ſituated on their ſides, though perfectly diſtinct from top to bottom, that ſcarcely any thing can be introduced between them. The columns are of an unequal height and breadth. How deep they deſcend below the ſtrand, has not been aſcertained. This grand arrangement extends nearly two hundred yards, entirely viſible at low water. The breadth of the principal or grand cauſeway, which runs out in one continued range of columns, is, in general, from twenty to thirty feet; at one place or two it may be nearly forty. The tops of theſe innumerable columns being nearly of an equal height, they form a grand and ſingular parade, rather inclining to the water's edge. But from high-water mark, as it is perpetually waſhed by the beating of the waves on every return of the tide, the platform lowers conſiderably, and becomes dangerous to be walked on without the greateſt care. At the diſtance of 150 yards from the cliff, it turns a little to the eaſt, and then ſinks into the ſea. The figure of theſe columns is almoſt unexceptionably pentagonal, or compoſed of five ſides; yet what is very extraordinary, and particularly curious, there are not two columns in ten thouſand to be found, that either have their ſides equal among themſelves, or whoſe figures are alike. Nor is the compoſition of theſe columns or pillars leſs deſerving the attention of the curious ſpectator. They are not of one ſolid ſtone in an upright poſition; but compoſed of ſeveral ſhort lengths, curiouſly joined, not with flat ſurfaces, but articulated into each other like ball and ſocket, or like the joints in the vertebræ of ſome of the larger kinds of fiſh, the one end at the joint having a cavity, into which the convex end of the oppoſite is exactly fitted. This is not viſible, but by diſjoining the two ſtones. The depth of the concavity or convexity is generally about three or four inches. And what is ſtill farther remarkable of the joint, the convexity, and the correſpondent concavity, is not conformed to the external angular figure of the column, but exactly round, and as large as the ſize or diameter of the column will admit; and conſequently as the angles of theſe columns are in general extremely unequal, the circular edges of the joint are ſeldom coincident with more than two or three ſides of the pentagonal, and from the edge of the circular part of the joint to the exterior ſides and angles they are quite plain. It is ſtill farther remarkable, that the articulations of theſe joints are frequently inverted; in ſome the concavity is upwards, in others the reverſe. The length alſo of theſe particular ſtones, from joint to joint, is various: in general, they are from eighteen to twenty-four inches long; and, for the moſt part, longer toward the bottom of the columns than nearer the top, and the articulation of the joints ſomething deeper. The ſize likewiſe of the columns is as different as their length and figure; in general, they are from fifteen to twenty inches in diameter. There are really no traces of uniformity or deſign diſcovered throughout the whole combination, except in the form of the joint, which is invariably by an articulation of the convex into the concave of the piece next above or below it; nor are there any traces of a finiſhing in any part, either in height, length, or breadth, of this curious cauſeway. If there is here and there a ſmooth top to any of the columns above water, there are others juſt by, of equal height, that are more or leſs convex or concave, which ſhow them to have been joined to pieces that have been waſhed away or broken off. Some of theſe columns are between thirty and forty feet high, from the top of the ſloping bank below them; and, being longeſt in the middle of the arrangement, ſhortening on either hand in view, they have obtained the appellation of *organs*, from a rude likeneſs in this particular to the exterior tubes of that inſtrument; and as there are few broken pieces on the ſtrand near it, it is probable that the outſide range of columns that now appears is really the original exterior line, to the ſeaward, of this collection. But how far they extend internally into the bowels of the incumbent cliff, is unknown. See the article BASALTES, vol. ii. p. 768–772, and the correſpondent engraving.

GI'ANT's HEAD, a cape on the eaſt coaſt of the iſland of St. Chriſtopher, a little to the eaſt of Ragged Point.

GI'ANTESS, *ſ.* A woman of unnatural bulk and height.—I had rather be a *giantefs*, and lie under mount Pelion. *Shakeſpeare.*

GI'ANTLIKE, or GIANTLY, *adj.* Gigantic; vaſt; bulky.—Single courage has often, without romance, overcome *giantly* difficulties. *Decay of Piety.*

GI'ANTSHIP, *ſ.* Quality or character of a giant:

His *giantſhip* is gone ſomewhat creſt fallen,
Stalking with leſs unconſcionable ſtrides,
And lower looks. *Milton's Agoniſtes.*

GI'AR, a town of Perſia, in the province of Farſiſtan: ſeventy miles eaſt of Schiras.

GIAR'GA, a town of the iſland of Corſica: nine miles eaſt of Calvi.

GIAR'ITCHAS, a cluſter of ſmall iſlands amongſt the Moluccas, in the Indian Sea, in lat. 0° 25′ north. They are of a moderate height, in ſome parts covered with trees of the ſpice or aromatic kind.

GIAR'MAL, a town of Hungary: twenty miles eaſt-ſouth-eaſt of Levens.

GIARU'RA, a town of Aſia, in the kingdom of Candahar: twenty-five miles ſouth-weſt of Candahar.

GIASAN', a town of Perſia, in the province of Segeſtan: twenty-five miles north-eaſt of Kin.

GI'AT, a town of France, in the department of the Puy-de-Dôme, and chief place of a canton, in the diſtrict of Riom: nine leagues weſt-ſouth-weſt of Riom, and nine weſt of Clermont.

GIAVEN'NA, a town of Italy, in the principality of Piedmont, and marquiſate of Suſa, ſituated at the foot of the Cottian Alps, near the Sangon. The air is ſalubrious, and the ſituation agreeable; it is ſurrounded with an ancient wall, with four gates; the abbot of St. Michael de l'Ecluſe is the ſpiritual and temporal lord of this and the neighbouring towns, in which they number about five thouſand inhabitants: ten miles ſouth-eaſt of Suſa, and fourteen and a half weſt of Turin.

GIA'VI, a town of the iſland of Sardinia: twenty-one miles eaſt-ſouth-eaſt of Algeri.

GIB'BAWAYS, an Indian tribe reſiding in Upper Canada, on the eaſt ſide of Detroit river, oppoſite to Fort Gibraltar.

GIB'BE, *ſ.* Any worn-out animal. *Hanmer.*

For who that's but a queen, fair, ſober, wiſe,
Would from a paddock, from a but, a *gibbe*,
Such dear concernings hide? *Shakeſpeare.*

GIB'BEN, a town of the duchy of Courland: thirty-two miles north-eaſt of Piltyn.

To GIB'BER, *v. n.* [from *jabber.*] To ſpeak inarticulately:

The ſheeted dead
Did ſqueak and *gibber* in the Roman ſtreets. *Shakeſpeare.*

GIB'BERISH, *ſ.* [derived by Skinner from *gaber*, Fr. to cheat; by others conjectured to be formed by corruption from *jabber*. But as it was anciently written *gebriſh*, it is probably derived from the chemical jargon of *Geber* and his tribe.] Cant; the private language of rogues and

Published as the Act directs Aug^t 1. 1807 by J. Wilkes.

and gipſeys.—Some, if they happen to hear an old word, albeit very natural and ſignificant, cry out ſtraightway, that we ſpeak no Engliſh, but *gibberiſh*. *Spenſer*.

GIB'BET, *ſ.* [*gibet*, Fr.] A gallows; the poſt on which malefactors are hanged, or on which their carcaſes are expoſed. A gibbet differs from a common gallows, in that it conſiſts of one perpendicular poſt, from the top of which proceeds one arm; except it be a double gibbet, which laſt is formed in the ſhape of a Roman capital T.—Haman ſuffered death himſelf upon the very *gibbet* that he had provided for another. *L'Eſtrange*.—Any traverſe beams. A great cudgel or ſtick, ſuch as they throw up in trees, to beat down the fruit.

To GIB'BET, *v. n.* To hang or expoſe on a gibbet.—I'll *gibbet* up his name. *Oldham*.—To hang on any thing going traverſe: as the beam of a gibbet.—He ſhall come off and on ſwifter than he that *gibbets* on the brewer's bucket. *Shakeſpeare*.

GIB'BET-MA'KER, *ſ.* One that makes gibbets.—Ho! the *gibbet-maker!* he ſays, that he hath taken them down again. *Titus Andronicus*.

GIB'BETHON, a city of Paleſtine, ſituated in the tribe of Dan; and one of the cities of the Levites of the family of Kohath. This city was afterwards poſſeſſed by the Philiſtines, and remained ſubject to them until the reign of Nadab king of Iſrael, who, whilſt in the act of beſieging it, fell by the treachery of Baaſha, who ſucceeded him in the kingdom. Here alſo Omri was proclaimed king of Iſrael. *Joſh.* xix. 44. xxi. 23. 1 *Kings* xv. 27. xvi. 15–17.

GIB'BIER, *ſ.* [French.] Game; wild-fowl.—Theſe impoſts are laid on all butcher's meat, while, at the ſame time, the fowl and *gibbier* are tax-free. *Addiſon on Italy*.

GIB'BON (Edward), a moſt diſtinguiſhed modern Engliſh hiſtorian, born at Putney, in 1737. His father, Edward Gibbon, eſq. was of an ancient family at Burton near Petersfield in Hampſhire, and had a ſeat in two parliaments. Edward was the only child reared by his parents; and his conſtitution was ſo infirm in childhood, that his life was often deſpaired of. In his ninth year he was ſent to the ſchool of Dr. Woodeſon, at Kingſton-upon-Thames. After a reſidence of two years with this maſter, in which he acquired the rudiments of Latin, he returned to his friends; and he has recorded his twelfth year, in which he read a variety of Engliſh books of poetry, romance, hiſtory, and travels, "as the moſt propitious to the growth of his intellectual ſtature." He then was entered at Weſtminſter-ſchool; but repeated attacks of ill health prevented him from making a regular progreſs in the claſſical ſtudies of the place; and he was more the nurſeling of an affectionate aunt, with whom he boarded, than the adventurous ſchool-boy. After ſeveral changes of ſituation, in which he was chiefly the object of medical care, his conſtitution began to acquire firmneſs; and his father, with the idea of puſhing him forwards to manly acquiſitions, placed him as a gentleman-commoner in Magdalen-college, Oxford, before he had completed his fifteenth year. He had already imbibed an extraordinary portion of hiſtorical knowledge by multifarious reading, which had ſtood in the place of the grammatical and philological ſtudies uſed in a literary progreſs at that period of life. "I arrived at Oxford," ſays he, "with a ſtock of erudition that might have puzzled a doctor, and a degree of ignorance of which a ſchool-boy would have been aſhamed." In this ſtate it is evident that he was ill prepared to receive the benefits, whatever they may be, of an univerſity education; and this circumſtance might perhaps operate as ſome counterpoiſe to the very bitter philippic he has pronounced againſt the conduct of public and private inſtruction at Oxford. The fourteen months he ſpent there, he ſtigmatiſes as the moſt idle and unprofitable of his whole life. To a total neglect of religious inſtruction he has attributed the moſt remarkable incident of his early days, which took place at this time. From childhood he had been addicted to diſputation on topics of divinity. His leiſure from other purſuits induced him to turn his attention to the controverſies between the papiſts and proteſtants; and as he entered into the field "without armour," he fell before the weapons of *authority* which the catholics ſo well know how to wield. His converſion to that faith was chiefly effected by reading the works of Boſſuet; and it was not till a perfect confidence in that author's tenets had taken place in his mind, that he had an interview in London with a popiſh prieſt, at whoſe feet, in June, 1753, he ſolemnly abjured the proteſtant religion. He immediately wrote a long letter to his father, in which he avowed and juſtified the ſtep he had taken. In reply to ſome reproaches that have been caſt upon him for this change of religion, he has ſaid, with proper confidence, "I am proud of an honeſt ſacrifice of intereſt to conſcience: I can never bluſh if my tender mind was entangled in the ſophiſtry that ſeduced the acute and manly underſtandings of Chillingworth and Bayle." In order to reclaim him, he was ſent by his offended father to reſide among the Calviniſts at Lauſanne in Swiſſerland, and was placed under Mr. Pavilliard, a calviniſt miniſter. There is ſomething very characteriſtic in the ſketch that gentleman has given of his pupil as he firſt appeared to him: "A little thin figure, with a large head, diſputing, and urging with the greateſt ability, all the beſt arguments that had ever been uſed in favour of popery." By the well-directed efforts of this tutor, aided by his own ſound reaſon and mature reflections, his faith in the Romiſh articles gradually gave way, and on Chriſtmas-day, 1754, he received the ſacrament in the proteſtant church. His reſidence at Lauſanne was alſo of high importance to his progreſs in knowledge, and the formation of regular habits of ſtudy. He made himſelf perfectly maſter of the French and Latin languages, and of the art of logic; and read with great attention many excellent authors, from which he made large ſelections. His ruling paſſion, that of reading, now fully developed itſelf, and he wanted no incitements to induſtry from a tutor. Belles-lettres, and the hiſtory of man and the human mind, were his favourite objects of ſtudy: mathematics he ſlightly touched upon, but ſoon relinquiſhed; and he congratulates himſelf that he eſcaped from them "before his mind was hardened by the habit of rigid demonſtration, ſo deſtructive of the finer feelings of moral evidence." This is an uncommon view of the effect of mathematical ſtudies, and which he never would have made, had the light of true mathematical demonſtration ſhed its effulgence over his mind. An extraordinary inſtance of his ardour for information is, that while an unknown youth at Lauſanne, he ventured to open a correſpondence on learned topics with ſome celebrated foreign profeſſors. In the midſt of theſe literary occupations, love unſuſpectedly found an entrance into his heart. The perſonal and mental accompliſhments of an amiable and celebrated woman, were not to be reſiſted. The circumſtances are ſo elegantly and undiſguiſedly related by Mr. Gibbon himſelf, as to give public intereſt to private connexion: we ſhall therefore ſtate the paſſage in the writer's own words: "I heſitate, from the apprehenſion of ridicule, when I approach the delicate ſubject of my early love. By this word I do not mean the polite attention, the gallantry without hope or deſign, which has originated in the ſpirit of chivalry, and is interwoven with the texture of French manners. I underſtand by this paſſion the union of deſire, friendſhip, and tenderneſs, which is inflamed by a ſingle female; which prefers her to the reſt of her ſex, and which ſeeks her poſſeſſion as the ſupreme or the ſole happineſs of our being. I need not bluſh at recollecting the object of my choice; and though my love was diſappointed of ſucceſs, I am rather proud that I was once capable of feeling ſuch a pure and exalted ſentiment. The perſonal attractions of mademoiſelle Suſan Curchod were

embellished by the virtues and talents of her mind. Her fortune was humble, but her family was respectable. Her mother, a native of France, had preferred her religion to her country. The profession of her father did not extinguish the moderation and philosophy of his temper, and he lived contented with a small salary and laborious duty, in the obscure lot of minister of Crassy, in the mountains that separate the Pays de Vaud from the county of Burgundy. In the solitude of a sequestered village, he bestowed a liberal and even learned education on his only daughter. She surpassed his hopes by her proficiency in the sciences and languages; and in her short visits to some relations at Lausanne, the wit, the beauty, and the erudition, of mademoiselle Curchod, were the theme of universal applause. The report of such a prodigy awakened my curiosity: I saw, and loved. I found her learned without pedantry, lively in conversation, pure in sentiment, and elegant in manners; and the first sudden emotion was fortified by the habits and knowledge of a more familiar acquaintance. She permitted me to make her two or three visits at her father's house. I passed some happy days there in the mountains of Burgundy, and her parents honourably encouraged the connection. In a calm retirement the gay vanity of youth no longer fluttered in her bosom: she listened to the voice of truth and passion, and I might presume to hope that I had made some impression on a virtuous heart. At Crassy and Lausanne I indulged my dream of felicity; but on my return to England I soon discovered that my father would not hear of this strange alliance, and that without his consent I was myself destitute and helpless. After a painful struggle I yielded to my fate; I sighed as a lover, I obeyed as a son; my wound was insensibly healed by time, absence, and the habits of a new life. My cure was accelerated by a faithful report of the tranquillity and cheerfulness of the lady herself; and my love subsided in friendship and esteem. The minister of Crassy soon afterwards died, his stipend died with him; his daughter retired to Geneva, where, by teaching young ladies, she earned a hard subsistence for herself and her mother: but in her lowest distress she maintained a spotless reputation and a dignified behaviour. A rich banker of Paris, a citizen of Geneva, had the good fortune and good sense to discover and possess this inestimable treasure; and in the capital of taste and luxury she resisted the temptations of wealth as she had sustained the hardships of indigence. The genius of her husband has exalted him to the most conspicuous station in Europe. In every change of prosperity and disgrace, he has reclined on the bosom of a faithful friend; for mademoiselle Curchod became the wife of M. Necker, the minister and legislator of the French monarchy."

It is impossible not to pause after the perusal of this passage, to contemplate the strange reverses of fortune which we meet with in the events of real life; and to be filled with melancholy reflexions on the subsequent fate and fortunes of Susan Curchod and her husband. See the article FRANCE, vol. vii. p. 747–777. In the midst of these serious emotions, however, it is impossible not to admire the writer who describes his own youthful love with the same stately and unbending dignity of style, in which he related the conversion of Constantine, the imposture of Mohammed, the conquests of Timur, the laws of Justinian, or the licentious amours of Theodora, in his highly distinguished work.

His banishment at Lausanne, which he has justly regarded as the incident to which he was chiefly indebted for all he afterwards gained as a thinker and writer, terminated in April, 1758. He was received by his father with affection and friendship; and he found in a mother-in-law a new relative, who in time conciliated his goodwill and confidence. Though the gaieties of London for a time gave an interruption to his literary course, yet he soon began to lay the foundation of a copious library, and prepared for his first appearance before the public as an author. He undertook the arduous task of writing a work which required great elegance of style, in a foreign language, which, indeed, had for some years been more familiar to him than his native tongue. His *Essai sur l'Etude de la Littérature*, was printed in 1761, in one volume 12mo. It was a very respectable juvenile performance, and was highly praised in foreign journals, and by his friends abroad. That it should bear no marks of being written by a foreigner, was not to be expected; but it displayed a very uncommon degree of facility and correctness in that language for one to whom it was only the acquisition of a few years. It however excited little attention at home, where French works were less read than they are at present.

Mr. Gibbon about this time took a captain's commission in the south battalion of the Hampshire militia; in which he afterwards became lieutenant-colonel commandant. Of the progress of his military acquirements he thus speaks: "The loss of so many busy and idle hours was not compensated by any elegant pleasure; and my temper was insensibly soured by the society of our rustic officers. In every state there exists, however, a balance of good and evil. The habits of a sedentary life were usefully broken by the duties of an active profession: in the healthful exercise of the field I hunted with a battalion, instead of a pack; and at that time I was ready, at any hour of the day or night, to fly from quarters to London, from London to quarters, on the slightest call of private or regimental business. But my principal obligation to the militia, was the making me an Englishman, and a soldier. After my foreign education, with my reserved temper, I should long have continued a stranger in my native country, had I not been shaken in this various scene of new faces and new friends: had not experience forced me to feel the characters of our leading men, the state of parties, the forms of office, and the operation of our civil and military system. In this peaceful service I imbibed the rudiments of the language and science of tactics, which opened a new field of study and observation. I diligently read, and meditated, the *Memoires Militaires* of Quintus Icilius, (Guichardt,) the only writer who has united the merits of a professor and a veteran. The discipline and evolutions of a modern battalion gave me a clearer notion of the phalanx and the legion; and the captain of the Hampshire grenadiers (the reader may smile) has not been useless to the historian of the Roman empire."

While thus engaged in military service, Mr. Gibbon's tent and quarters were often encumbered with the unusual furniture of Greek and Latin books; and though in a school so unfavourable to literature, his bent of mind was continually turned to study. On May 8, 1762, he thus delineates his own character: "This was my birthday, on which I entered into the twenty-sixth year of my age. This gave me occasion to look a little into myself, and consider impartially my good and bad qualities. It appeared to me, upon this inquiry, that my character was virtuous, incapable of a base action, and formed for generous ones; but that it was proud, violent, and disagreeable in society. These qualities I must endeavour to cultivate, extirpate, or restrain, according to their different tendency. Wit I have none. My imagination is rather strong than pleasing. My memory both capacious and retentive. The shining qualities of my understanding are extensiveness and penetration; but I want both quickness and exactness. As to my situation in life, though I may sometimes repine at it, it perhaps is the best adapted to my character. I can command all the conveniences of life, and I can command too that independence, (that first earthly blessing,) which is hardly to be met with in a higher or a lower fortune. When I talk of my situation, I must exclude

exclude that temporary one, of being in the militia. Though I go through it with ſpirit and application, it is both unfit for and unworthy of me."

From his military engagements Mr. Gibbon was ſet free by the general peace of 1762; and the firſt uſe he made of his liberty was to pay a viſit to Paris, in the beginning of 1763. After paſſing ſome months with the gay and the learned in that capital, he viſited Lauſanne, where almoſt a year was employed in cultivating ſociety, and in laying in materials for a profitable journey into Italy. This took place in 1765; and he thus in glowing language deſcribed his ſenſations on entering Rome: "After a ſleepleſs night, I trod, with a lofty ſtep, the ruins of the forum; each memorable ſpot where Romulus ſtood, or Tully ſpoke, or Cæſar fell, was at once preſent to my eye; and ſeveral days of intoxication were loſt or enjoyed before I could deſcend to a cool and minute inveſtigation." It was, he informs us, on the 15th of October, 1764, as he ſat muſing amidſt the ruins of the capitol, *while the bare-footed friars were ſinging veſpers in the temple of Jupiter*, that the idea of writing the decline and fall of this city firſt ſtarted into his mind. To treat ſome great hiſtorical ſubject had long been his favourite deſign, and he had fluctuated amid a variety which preſented themſelves. Of theſe, perhaps, the moſt promiſing was the hiſtory of the republic of Florence under the houſe of Medicis; but we cannot lament that he finally fixed upon a more extenſive theme. He firſt, however, actually proceeded ſome way in another intereſting deſign, and compoſed in the French language the firſt book of a Hiſtory of the Swiſs Liberty; but this, probably on account of its ſtyle, was condemned by a literary ſociety of foreigners in London, to whom it was read, and he committed it to the flames. In 1767, he aſſiſted his friend Deyverdun in compiling a critical work, entitled *Mémoires Littéraires de la Grande Bretagne*, of which a ſecond volume was publiſhed in the enſuing year; but its ſucceſs was not great. Hitherto he had ſhewn a ſingular, and in him injudicious, preference of the French language in writing; but in 1770 he tried his powers in his native tongue by a pamphlet of Critical Obſervations on the ſixth Book of the Æneid, intended as a refutation of Dr. Warburton's extraordinary hypotheſis concerning the meaning of the fabled deſcent of Æneas. This piece was printed anonymouſly, and did not captivate the public attention; yet it has been pronounced by able judges a very ingenious and elegant work of criticiſm, not unworthy of the author's ſubſequent fame. He himſelf has confeſſed that his perſonal attack upon the celebrated veteran whoſe opinion he oppoſed, was too ſevere, though provoked by the aſſuming arrogance which always characteriſed that writer.

In 1770 Mr. Gibbon's father died, and left him poſſeſſor of an eſtate much involved. He ſeems ſcarcely ever to have extricated himſelf from perplexities ariſing from this cauſe: yet he has obſerved, that upon the whole his circumſtances were well ſuited to the great taſk he undertook as an author; and that either poorer or richer he ſhould probably never have accompliſhed it. Leiſure and books were on the one hand neceſſary; on the other, the ſtimulus of a handſome increaſe of property. The circle of his acquaintance in London was large; but he compenſated the hours devoted to them by early riſing and cloſe application. His ſtudies were, however, more ſeriouſly interrupted by a ſeat in parliament, which he obtained for the borough of Liſkeard in 1774, through the favour of his kinſman Mr. (afterwards lord) Eliot. Of his proweſs in the houſe of commons he thus ſpeaks: "I took my ſeat at the beginning of the memorable conteſt between Great Britain and America, and ſupported, with many a ſincere and ſilent vote, the rights, though not perhaps the intereſt, of the mother country. After a fleeting illuſive hope, prudence condemned me to acquieſce in the humble ſtation of a *mute*. The great ſpeakers filled me with deſpair, the bad ones with terror. I was not armed by nature and education with the intrepid energy of mind and voice,

Vincentum ſtrepitus, et natum rebus agendis.

Timidity was fortified by pride, and even the ſucceſs of my pen diſcouraged the trial of my voice. But I aſſiſted at the debates of a free aſſembly; I liſtened to the attack and defence of eloquence and reaſon; I had a near proſpect of the characters, views, and paſſions, of the firſt men of the age. The cauſe of government was ably vindicated by lord North, a ſtateſman of ſpotleſs integrity, a conſummate maſter of debate, who could wield with equal dexterity the arms of reaſon and of ridicule. He was ſeated on the treaſury bench between his attorney and ſolicitor general, the two pillars of the law and ſtate, *magis pares quam ſimiles*; and the miniſter might indulge in a ſhort ſlumber, while he was upholden on either hand by the majeſtic ſenſe of Thurlow, and the ſkilful eloquence of Wedderburne. From the adverſe ſide of the houſe an ardent and powerful oppoſition was ſupported, by the lively declamation of Barré, the legal acuteneſs of Dunning, the profuſe and philoſophic fancy of Burke, and the argumentative vehemence of Fox. By ſuch men every operation of peace and war, every principle of juſtice or policy, every queſtion of authority and freedom, was attacked and defended; and the ſubject of the momentous conteſt was the union or ſeparation of Great Britain and America. The eight ſeſſions that I ſat in parliament were a ſchool of civil prudence, the firſt and moſt eſſential virtue of an hiſtorian."

In the beginning of 1776, the firſt volume, quarto, of his Decline and Fall of the Roman Empire, was given to the public. His expectations of its ſucceſs were very moderate, and it is not to be wondered at that he was much elated with the ſucceſs it really met with, which he thus deſcribes: "The firſt impreſſion was exhauſted in a few days; a ſecond and a third edition was ſcarcely adequate to the demand; and the bookſeller's property was twice invaded by the pirates of Dublin. My book was on every table, and almoſt on every toilette." Of all the applauſe he received, none ſeemed to flatter him ſo much as that of the two celebrated hiſtorians Hume and Robertſon, who, inſtead of viewing his riſing fame with jealouſy, promoted it with liberal commendation. But, in the midſt of this triumph, his two chapters concerning the growth and progreſs of Chriſtianity raiſed a ſtorm againſt him, which he ſeems not to have foreſeen, and, when it fell, to have regarded with ſome alarm. A number of antagoniſts aroſe, of different degrees of hoſtility and acrimony; ſome, enliſted in the defence of a church which was to reward their zeal; ſome, the voluntary champions of a revered faith. As he profeſſed to have touched upon this ſubject only as an hiſtorian, he declined entering upon it as a controverſialiſt; and the only reply he made was to Mr. Davis, who had in very unmeaſured terms attacked "not the *faith*, but the *fidelity*, of the hiſtorian." His Vindication againſt this opponent was greatly admired, as a model of keen and poliſhed retort; and it was generally admitted that he ſucceſsfully repelled the principal charges, and returned them upon his foe. With reſpect to the general ſpirit and deſign of the two chapters, we ſhall only obſerve, that the ſuggeſtion of ſecondary cauſes, by which the ſpread of Chriſtianity was peculiarly favoured, had been already adopted by ſome undoubted believers in its divine origin: and that, although there can be no doubt that Gibbon was a real enemy to revelation under the maſk of a believer, yet, while penal laws ſubſiſt againſt an open declaration of opinion, however requiſite this might appear, the practice of a prudential diſguiſe cannot ſo much be wondered at.

A ſecond viſit to Paris ſoon followed the publication of his firſt volume, and he appeared in no haſte to reſume his hiſtorical taſk. After it was begun again, a ſhort

interruption took place from his compoſing, at the requeſt of the miniſters a *Mémoire Juſtificatif*, intended as an anſwer to the manifeſto of the court of France on its declaration of hoſtilities. This piece, written in French, was admired both for its ſtyle and its reaſoning, and was delivered as a ſtate paper to the courts of Europe. For this ſervice, joined to his literary celebrity, he received the appointment of one of the lords of trade, by which a handſome addition was made to his income, and little to his engagements. At the beginning of 1781, the ſecond and third volumes of the Hiſtory appeared; and though many readers judged them to be inferior in point of compoſition to the firſt, yet, upon the whole, they ſupported his reputation. At a new election he had loſt his ſeat for Liſkeard, but he was brought in, upon a vacancy, for Lymington. It was not long, however, before lord North's miniſtry was diſſolved, and the abolition of the board of trade, by Mr. Burke's bill, followed. The prize being now loſt, Gibbon ſeemed to think his parliamentary career terminated; and the defalcation of his income no longer permitted him to ſupport the ſame ſtyle of living. He took a reſolution, therefore, of removing his reſidence to his favourite Lauſanne in Swiſſerland, as a place where he might purſue his ſtudies without interruption, and enjoy all the pleaſures of an elegant retreat at much leſs expence than in England. This plan he put in execution in the autumn of 1783. He was joint-poſſeſſor with his friend Deyverdun of a handſome and charmingly-ſituated houſe, and commenced a mode of living happily compounded of the man of letters and the gentleman of eaſy fortune. During the four following years he completed the three remaining quarto volumes of his Hiſtory, which were publiſhed together in April, 1788. He has deſcribed his ſatisfaction on finiſhing this great work, in the following words: "As I have preſumed to mark the moment of conception, I ſhall now commemorate the hour of my final deliverance. It was on the day, or rather night, of the 27th of June, 1787, between the hours of eleven and twelve, that I wrote the laſt lines of the laſt page, in a ſummer-houſe in my garden. After laying down my pen, I took ſeveral turns in a *berceau*, or covered walk of acacias, which commands a proſpect of the country, the lake, and the mountains. The air was temperate, the ſky was ſerene, the ſilver orb of the moon was reflected from the waters, and all nature was ſilent. I will not diſſemble the firſt emotions of joy on the recovery of my freedom, and, perhaps, the eſtabliſhment of my fame. But my pride was ſoon humbled, and a ſober melancholy was ſpread over my mind, by the idea that I had taken an everlaſting leave of an old and agreeable companion, and that whatſoever might be the future date of my Hiſtory, the life of the hiſtorian muſt be ſhort and precarious." He came to England to ſuperintend the printing, and then returned to that abode of Lauſanne, which had now become doubly endeared to him by the force of habit.

Of a work ſo well known as Gibbon's Hiſtory of the Decline and Fall, it would be ſuperfluous here to enter into any critical examination. It ſeems generally acknowledged, that it is a performance of vaſt and accurate reſearch, and of enlarged and philoſophical thinking; that it abounds in ſplendid paſſages and curious diſcuſſions; and that its ſtyle, though ſometimes affected and obſcure, through the deſire of avoiding common modes of expreſſion, is ſuch as diſplays a thorough maſtery of the whole compaſs of the Engliſh language. A familiarity with French models has occaſionally produced violations both of ſound ſenſe and of moral propriety; and his hiſtoric muſe, while ſhe retains her dignified garb, often loſes her ſober demeanour. The work has, however, taken a ſecure place among the Engliſh claſſics, and will ever form a diſtinguiſhed object in the literary hiſtory of the eighteenth century.

The remainder of Mr. Gibbon's life, being only that of a private gentleman, affords little matter for the biographer. The ſtorms of the French revolution, which began to menace the quiet regions of Swiſſerland, gradually looſened his attachment to Lauſanne, and made him look towards a refuge in England. He viewed that great event with all the alarm and deteſtation of one habituated to the higher orders of ſociety, and radically hoſtile to democratical ſway. He thus explicitly declares his ſentiments on the occaſion. "I beg leave to ſubſcribe my aſſent to Mr. Burke's creed on the revolution of France. I admire his eloquence, I approve his politics, I adore his chivalry, and I can almoſt excuſe his reverence for church eſtabliſhments." Many paſſages of his letters to his moſt confidential friend, lord Sheffield, ſhew that in his terror or indignation he had acquired a thorough averſion to even the moſt moderate and reaſonable reforms. In ſuch a ſtate of mind the authority of his opinion can ſtand for little; and his politics were always too perſonal to command much deference. His return to England, in 1793, was, however, the immediate reſult of a call of friendſhip which does honour to his heart: it was to conſole the friend above-mentioned under a heavy domeſtic loſs. He ſpent ſome months with that friend and in other viſits, when his attention was forcibly called to the progreſs of a diſeaſe which though it had long produced little inconvenience, was now become ſuddenly alarming. Mr. Gibbon had been three times tapped for an hydrocele; this diſorder, which was originally a ſlight rupture, had been coming on for more than thirty years; and he at laſt perhaps fell a victim to his own delicacy, ſince he declined ſurgical aid, and would not ſuffer his ſervant or any one to ſpeak of his diſorder till it got to an alarming height. He died on the 16th of January, 1794, three days after the third puncture. His body was opened on the fifth day after his death. It was then found, except that a degree of mortification, not very conſiderable, had taken place on a part of the colon; which, with the whole omentum, of a very enlarged ſize, had deſcended into the ſcrotum, forming a bag that hung down nearly as low as the knee. Since that part had been inflamed and ulcerated, Mr. Gibbon could not bear a truſs; and when the laſt ſix quarts of fluid were diſcharged, the colon and omentum deſcending lower, they, by their weight, drew the lower mouth of the ſtomach downwards to the os pubis; and this probably was the immediate cauſe of his death.

Mr. Gibbon has given a picture of his own character, which is probably near the truth. "I am endowed with a cheerful temper, a moderate ſenſibility, and a natural diſpoſition to repoſe rather than to activity: ſome miſchievous appetites and habits have perhaps been corrected by philoſophy or time. The love of ſtudy ſupplies each day, each hour, with a perpetual ſource of independent and rational pleaſure." He was eaſy in ſociety, and fond of it: he was beloved by his friends, and had in an eminent degree the manners and ſentiments of a gentleman. Early indulgence and habit had made the conveniences and elegances of cultured life eſſential to his comfort, and he was not one who could have been content with the conſciouſneſs of mental ſuperiority in an humble ſtate. After his death, two quarto volumes of his miſcellaneous works were publiſhed by lord Sheffield. Of theſe, the moſt valuable part is the Memoirs of his Life and Writings, compoſed by himſelf, whence the preceding narrative has been chiefly extracted. They are written in a very pleaſing manner, with much apparent frankneſs. Many of his private letters are ſubjoined, which are lively and entertaining, in the true epiſtolary ſtyle. The ſecond volume contains a journal of his ſtudies, with remarks upon books, chiefly in French; together with his ſmaller publications already mentioned.

The perſon and manners of Mr. Gibbon are thus deſcribed by M. Fred. Matthiſſon, a German writer of ſome celebrity: "I yeſterday waited on Mr. Gibbon. His

His figure is very ſtriking. He is tall, of athletic make, and rather aukward when he moves. His face forms one of the moſt ſingular phyſiognomical phenomena, owing to the irregular proportion of the parts to the whole. The eyes are ſo little as peculiarly to contraſt with his high and finely arched forehead; while the noſe, inclining to flatneſs, almoſt vaniſhes between the cheeks, which project exceedingly. The double chin hanging down very low renders the elliptical ſhape of his long face ſtill more remarkable: yet, in ſpite of theſe irregularities, Mr. Gibbon's countenance has an uncommon expreſſion of dignity, which, at firſt ſight, beſpeaks the profound and acute reaſoner. Nothing exceeds the glowing animation of his eyes. In his converſation and manner, he is quite the polite gentleman; civil, but cold. He ſpeaks French with elegance; and, which is truly ſurpriſing in an Engliſhman, pronounces it nearly like a Pariſian man of letters. He liſtens to his own accents with great complacency, and talks ſlowly, as if carefully examining each phraſe before he gives it utterance. With the ſame compoſed countenance he ſpeaks on agreeable and on diſagreeable ſubjects, on joyful and on melancholy events. During the whole of our converſation, the muſcles of his face remained unaltered; though a very ludicrous incident, which he had occaſion to relate, might naturally have drawn a ſmile from him. In his houſe, the ſtricteſt punctuality and order prevail; and his domeſtics muſt expect to be diſmiſſed if they perform not their buſineſs almoſt at the ſtated moment. Of this exactneſs, he ſets them the example himſelf. His day is divided like that of king Alfred. As the clock ſtrikes, he goes to buſineſs, to dinner, or ſees company; always taking the utmoſt care not to ſpend one minute beyond the time ſet apart for the occaſion." Upon the whole, with all his faults and failings, foibles and miſtakes, Mr. Gibbon might be conſidered as one of the firſt literary characters which illumined and adorned the eighteenth century.

The moſt ſerious objection to Gibbon's great work, is his attack upon Chriſtianity; the looſe and diſreſpectful manner in which he mentions many points of morality regarded as important on the principles of natural religion; and the indecent alluſions and expreſſions which too often occur in his remarks upon Scripture doctrine. His particular friend Mr. Hayley, in a fine poetical Eſſay on Hiſtory, after a ſplendid panegyric on the arduous labours of Mr. Gibbon, laments the irreligious ſpirit by which he was actuated, and his eminent work diſgraced:

Think not my verſe means blindly to engage
In raſh defence of thy profaner page!
Though keen her ſpirit, her attachment fond,
Baſe ſervice cannot ſuit with Friendſhip's bond;
Too firm from Duty's ſacred path to turn,
She breathes an honeſt ſigh of deep concern,
And pities Genius, when his wild career
Gives *Faith* a wound, or *Innocence* a tear.

GIB'BONS (Grinling), an ingenious ſculptor, born in Holland of Engliſh parents, or was the ſon of a Dutchman ſettled in England. Nothing is known of his education; but he brought himſelf into notice by his exquiſite ſkill in carving ornaments in wood. He was recommended to Charles II. who gave him a place in the board of works, and employed him in the decoration of his palaces. The foliage in the chapel at Windſor is by his hand, as alſo the carving of the ſtone pedeſtal of the equeſtrian ſtatue of the king in the principal court. Though he occaſionally undertook human figures, he did not excel in them. Carving was his peculiar art, and in it he arrived at the eminence of an original genius. After he became known by royal patronage, he was employed in a great variety of works. He carved the foliage in the choir of St. Paul's and the font of St. James's church. At the houſes of Burleigh and Chatſworth are a great number of his productions, of extraordinary beauty and delicacy of workmanſhip. The fineſt monument of his ſkill occurs in a chamber belonging to the earl of Egremont at Petworth, enriched from the ceiling between the pictures with feſtoons of flowers and dead game. This artiſt, who is one of the few of whom England in the laſt century could boaſt, died at London in 1721.

GIBBONS (Orlando), an excellent muſical compoſer, born at Cambridge in 1583. He was made organiſt of the Chapel-royal at the age of twenty-one, and in 1622 had a doctor's degree of muſic from Oxford, chiefly on the recommendation of his friend, the learned Camden. Being ordered, in 1625, to attend the ſolemnity of the marriage of Charles I. and Henrietta of France at Canterbury, he caught the ſmall-pox, which proved fatal to him. He was buried in the cathedral of that city. Gibbons was without queſtion the beſt church compoſer of his time, and many of his works, conſiſting of ſervices and anthems, are ſtill in uſe among the beſt of ſimilar compoſitions. They are characteriſed by pure harmony, ſimplicity, and grandeur. Beſides his ſacred muſic, he publiſhed, Madrigals of five Parts for Voices and Viols, 1612. The family of the Gibbons were muſical: his brothers Ellis and Edward were organiſts, one of Briſtol, the other of Saliſbury; and his ſon Chriſtopher was principal organiſt to Charles II.

GIB'BONS, GIBBS, or GIBSON, contractions and corruptions of *Gilbertſon*, q. d. the ſon of Gilbert.

GIBBOS'ITY, *ſ.* [*gibboſité*, Fr.] Convexity; prominence; protuberance.—When ſhips, ſailing contrary ways, loſe the ſight one of another, what ſhould take away the ſight of ſhips from each other, but the *gibboſity* of the interjacent water? *Ray.*

GIB'BOUS, *adj.* [*gibbus*, Lat. *gibbeux*, Fr.] Convex; protuberant; ſwelling into inequalities.—The bones will riſe, and make a *gibbous* member. *Wiſeman.*

A pointed flinty rock, all bare and black,
Grew *gibbous* from behind the mountain's back. *Dryden.*

Crookbacked.—I demand how the camels of Bactria came to have two bunches on their back, whereas the camels of Arabia have but one? How oxen, in ſome countries, began and continue *gibbous*, or haunch-backed? *Brown.*

[In aſtronomy.] This term is applied to repreſent that ſtate or ſhape of the enlightened part of the moon, being that in which ſhe appears more than half full or enlightened, which is the time between the firſt quarter and the full moon, and from the full moon to the laſt quarter; appearing then *gibbous*, that is, convex on both ſides of the enlightened part; thus contradiſtinguiſhed from the ſtate when ſhe is leſs than half full, then ſaid to be horned, or a creſcent.

GIB'BOUSNESS, *ſ.* Convexity; prominence.—To make the convexity of the earth diſcernible, ſuppoſe a man lifted in the air, that he may have a ſpacious horizon; but then, becauſe of the diſtance, the convexity and *gibbouſneſs* would vaniſh away, and he would only ſee a great circular flat. *Bentley.*

GIB'BY, one of the Papuan iſlands, ſituated under the equator, to the ſouth-eaſt of Patany Hook, and about ſix leagues diſtant from it. Its length is near five leagues; but its breadth is ſmall, and its appearance is like two hills divided by a low iſthmus. It is full of inhabitants, and abounds with nutmeg-trees and other ſpices.

GIB-CAT, *ſ.* An old worn-out cat.—I am as melancholy as a *gib-cat*, or a lugg'd bear. *Shakeſpeare.*

GIB'CLIFF, [or *Guy-Cliff*, from Guy of Warwick, the famous hero, who lived as an hermit there; or from Guy Beauchamp, earl of Warwick.] A place in Warwickſhire.

To GIBE, *v. n.* [*gaber*, old French, to ridicule.] To ſneer;

ſneer; to join cenſorioufneſs with contempt.—They laugh and *gibe* at our party. *Hooker.*

Why that's the way to choke a *gibing* ſpirit,
Whoſe influence is begot of that looſe grace
Which ſhallow laughing hearers give to fools. *Shakeſp.*

To GIBE, *v. a.* To reproach by contemptuous hints; to flout; to ſcoff; to ridicule; to treat with ſcorn; to ſneer; to taunt:

When rioting in Alexandria, you
Did pocket up my letters, and with taunts
Did *gibe* my miſſive out of audience. *Shakeſpeare.*

GIBE, *ſ.* Sneer; hint of contempt by word or look; ſcoff; act or expreſſion of ſcorn; taunt.—If they would hate from the bottom of their hearts, their averſion would be too ſtrong for little *gibes* every moment. *Spectator.*

But the dean, if this ſecret ſhould come to his ears,
Will never have done with his *gibes* and his jeers. *Swift.*

GIB'EAH, a city of Paleſtine, belonging to the tribe of Judah, ſituated in the mountains of that province. *Joſh.* xv. 57.

GIB'EAH, or GEBAH, a city of Paleſtine, belonging to the tribe of Benjamin, remarkable in Scripture as the place where began the conteſt between the tribe of Benjamin and the reſt of Iſrael, which terminated nearly in the total deſtruction of the former, together with the utter ruin of this city, which was burnt by Iſrael. It was rebuilt by the Benjamites that eſcaped, and proved the birth-place of Saul firſt king of Iſrael; whence it is frequently ſtyled "Gibeah of Saul." Here the ark of God remained from the time of its return from the Philiſtines, until it was removed from thence by order of David. Here the ſeven ſons of Saul were put to death, in conſequence of their father having violated the privileges of the Gibeonites. *Judges*, xix. 20. 1 *Sam.* x. 26. xiii. 15, 16. 2 *Sam.* vi. 3, 4. xxi. 1–9.

GIB'EATH, a city of Paleſtine, belonging to the tribe of Benjamin; probably the ſame with Gibeah above. *Joſh.* xviii. 28.

GIB'EHASC, a town of Arabia Felix, in the province of Hadramaut: one hundred and forty miles north-north-eaſt of Hadramaut.

GIB'ELIN, a town of Aſia, in Paleſtine: eight miles eaſt of Gaza.

GIB'ELINS, or GIBELLINS, a famous faction in Germany and Italy, oppoſed to another called the GUELPHS, who were partizans of the emperors and popes in their endleſs diſputes concerning eccleſiaſtical affairs. See the article GERMANY, in this volume.

GIBEL'LO, a town of Italy, in the Pallavicin: two miles and a half north-eaſt of Buſſeto.

GIB'EON, a city of Paleſtine belonging to the tribe of Benjamin, ſituated near the wilderneſs of that name; and was a city of the Levites of the houſe of Aaron or Kohath. It was the only city in Canaan that tamely ſubmitted to Iſrael when they invaded that country; for its inhabitants, the Hivites, by means of falſe pretences, prevailed upon Joſhua to treat with them, which he could not afterwards revoke any farther than ſubjecting them to perpetual ſervitude, which they willingly accepted; and ſo ſacred was this bond between them and Iſrael, that when Saul in his zeal ſlew the Gibeonites, the land of Iſrael ſuffered a famine for three years during the reign of David, who appeaſed the Divine vengeance by delivering ſeven of Saul's ſons to be put to death by the Gibeonites, who hanged them. Here Aſahel, brother of Joab, was ſlain by Abner; and here God appeared to Solomon at the commencement of his reign. *Joſh.* ix. xi. 19. xviii. 25. xxi. 17 2 *Sam.* ii. 24. iii. 30. xxi. 1–9. 1 *Kings*, iii. 5.

GIB'EONITE, *ſ.* An inhabitant of Gibeon.

GI'BER, *ſ.* A ſneerer; one who turns others to ridicule by contemptuous hints; a ſcoffer; a taunter.—You are well underſtood to be a more perfect *giber* of the table, than a neceſſary bencher of the capitol. *Shakeſpeare.*

GI'BERT (Balthaſar), an eminent profeſſor of belles-lettres, born at Aix in 1662. His father, who was an advocate in the parliament of Provence, ſent him to ſtudy firſt at Paris, and then at Soiſſons, under the fathers of the Oratory. Returning to Paris, he attended the college of Harcourt and the Sorbonne; and at the age of twenty-two was appointed to teach philoſophy at the college of Beauvais. In 1688 he was made profeſſor of rhetoric in the college of Mazarin at Paris, which office he filled during more than fifty years, with great reputation. He died in 1741, at the age of ſeventy-nine. Gibert made himſelf known as a writer by ſeveral eſteemed works. Theſe are, 1. *De la Veritable Eloquence.* 2. *Reflexions ſur la Rhetorique.* 3. *Jugemens des Savans ſur les Auteurs qui ont traité de la Rhetorique*, 3 vols. 12mo. 4. *Obſervations ſur le Traité des Etudes de Rollin.* 5. *Rhetorica juxta Ariſtotelis Doctrinam, Dialogis explanata*, for the uſe of his pupils; and the ſame in French, enlarged and corrected, under the title of, *La Rhetorique, ou les Règles de l'Eloquence.* He alſo pronounced Orations on ſeveral public occaſions, which were printed.

GI'BERT (John-Peter), a French eccleſiaſtic, born at Aix in Provence, in 1660. He early commenced his ſtudies at the Jeſuits' college in his native city, and was thence transferred to the univerſity, where in regular courſe he was admitted to the degrees of doctor in law, and in divinity. Having attracted the notice of M. du Chalucet, biſhop of Toulon, that prelate engaged him to teach theology in the ſeminary of that place, for ſome time; but afterwards the affairs of his family obliged him to return to Aix, where he purſued the ſame plan in the univerſity of that city. His predominant inclination for ſtudious retirement, however, ſoon led him to relinquiſh that employment; and in 1703 he left his native place, and removed to Paris, where he recommended himſelf to general eſteem by the unaffected ſimplicity of his manners, his candour, and readineſs to oblige. He died in 1736, turned of ſeventy-ſix years of age. His works conſiſt of, 1. The Duties of a Chriſtian, as laid down in the 118th Pſalm, 1705, 12mo. 2. Caſes of Practice, relating to the Sacraments, 1709, 12mo. 3. *Doctrina Canonum in Corpore Juris incluſorum, circa Conſenſum Parentum ad Matrimonium Filiorum minorum, Diſquiſitio hiſtorica, &c.* 1709, 12mo. 4. Memoirs relating to the Sacred Scriptures, Scholaſtic Theology, and the Hiſtory of the Church, 1710, 12mo. 5. Eccleſiaſtical Inſtitutions, according to the Cuſtoms of France, 1720, 4to. reprinted with important additions in 1736, 2 vols. 4to. 6. The Cuſtoms of the Gallican Church with reſpect to Cenſures and Irregularity, generally and particularly conſidered, &c. 1724, 4to. 7. Tradition, or the Hiſtory of the Church, with reference to the Sacrament of Marriage, 1725, 3 vols. 4to. 8. Canonical Conſultations relating to the Sacraments, 1725, 12 vols. 12mo. 9. *Corpus Juris Canonici per Regulas naturali Ordine diſpoſitas, Uſuque temperatas, et aliunde deſumptas, &c.* 1736, 3 vols. folio; together with Notes on Fevret's Treatiſe on Abuſes, and father Cabaſſut's *Juris Canonici Theoria et Praxis, &c.*

GIBER'TI (Giammateo), a learned prelate of the church of Rome, born at Palermo, the natural ſon of Franceſco Giberti, a Genoeſe, admiral of the pope's fleet. He viſited Rome at the age of twelve, where he ſoon diſtinguiſhed himſelf by the quickneſs of his parts, and his amiable diſpoſition and manners. Pope Clement VII. appointed him his datary, and employed him in legations to the king of France and other potentates. In 1523 he gave him the government of Tivoli, and in 1524 created him biſhop of Verona. Such, however, was the confidence he placed in Giberti, that he ſtill kept him at Rome, and made much uſe of his counſel.

This, it is ſuppoſed, was a principal motive with the pontiff for adhering to the French party, by which he was ſo great a ſufferer. This prelate was one of the hoſtages given by the pope in 1527 to the imperial army, on which occaſion he underwent much ill treatment, and was more than once threatened with a ſhameful death. The friendſhip of cardinal Pompeo Colonna procured his reſtitution. After this ſtorm he retired to his biſhopric; and his palace was open to all men of worth and learning. He eſtabliſhed in it a magnificent Greek preſs, in which were printed at his own expence ſeveral works of the fathers; and in order to render his editions correct, he employed ſeveral Greek copyiſts. He received the deſerved homage of the men of letters in his time, and is mentioned with great veneration in the poems of Fracaſtorio. This worthy prelate died in 1543. His works, which have been publiſhed collectively, chiefly conſiſt of the conſtitutions and regulations for the government of his church. Many of his Italian letters are found in different epiſtolary collections.

GIBIEUF' (William), a learned French prieſt, was a native of Bourges, admitted to the degree of doctor by the faculty of the Sorbonne, in 1612. Cardinal Berulle, the ſuperior of the order of the Carmelites in France, conſtituted him his vicar-general. He was the intimate friend of Des Cartes, and other diſtinguiſhed men of literature; and rendered himſelf reſpected for his piety and virtues, as well as for his learned attainments. He died at St. Magliore, in 1650. Among other works, he was the author of a treatiſe On the Liberty of God, and of the Creature, 1630, 4to. which was very favourably received among the learned men of his time.

GI'BINGLY, *adv.* Scornfully; contemptuouſly:

His preſent portance,
Gibingly and ungravely he did faſhion
After th' inveterate hate he bears to you. *Shakeſpeare.*

GIB'LETS, *ſ.* [According to Minſhew from *gobbet*, *gobblet*; according to Junius more properly from *gibier*, game, Fr.] The parts of a gooſe which are cut off before it is roaſted.

GIBOL'DEHAUSEN, a town of Germany, in the circle of the Lower Rhine, and territory of Eichsfeld: ſix miles north of Duderſtadt.

GI'BON, a town of the iſland of Cuba: twenty-two miles north-north-eaſt of Bayamo.

GIBRA'LEON, a town of Spain, in the country of Seville, on the river Odiel, with a harbour for ſmall fiſhing veſſels. It contains about one hundred and fifty houſes, divided into two pariſhes. Alphonſo king of Caſtile took it from the Moors in 1257, and peopled it with Chriſtians; it is ſituated about ten miles from the Atlantic: forty-four miles weſt of Seville. Lat. 37. 20. N. lon. 9. 45. E. Peak of Teneriffe.

GIBRAL'TAR, a town and fortreſs of Spain, in Andaluſia, but for a century paſt belonging to Great Britain, ſituated on a tongue of land, backed by an immenſe rock, at the ſouthern extremity of Europe. To the ancients it was known by the name of *Calpe*, one of the pillars of Hercules. Theſe pillars, or obeliſks, in the earlieſt ſtages of navigation, were made uſe of for beacons; and two of the moſt celebrated in ancient hiſtory ſtood upon each ſide of the entrance into the Mediterranean Sea, called *Fretum Gaditanum*; now the Strait of Gibraltar, which ſeparates Europe from Africa. The pillar on the African ſide was called *Abyla*; as that on the European ſide, in Iberia or Spain, was named *Calpe*, which Bryant derives from a cave in the rock beneath. He alſo ſhews that this pillar was called by the Arabians *Gibel-Tar*; "the tower of the rock or hill:" whence the name of Gibraltar. From the ſummit of this rock there is a moſt extenſive proſpect over part of Spain and Africa; and on it is maintained a watch-tower, to give notice of all ſhips and veſſels paſſing at ſea.

The ſtrait of Gibraltar, through which the Atlantic Ocean paſſes into the Mediterranean, extends from weſt to eaſt about thirteen leagues. In this ſtrait there are three remarkable promontories or capes on the Spaniſh ſide, and as many oppoſite to them on the African or Barbary ſide. The firſt of theſe, on the ſide of Spain, is cape Trafalgar, oppoſite to which is cape Spartel; and in the neighbourhood of this ſtood the fortreſs of Tangier, once in the poſſeſſion of the Engliſh. The next on the Spaniſh ſide is Tariſa; and over againſt it lies Malabata, near the town of Alcaſſar, where the ſtrait is about five leagues broad. Laſtly, Gibraltar, facing the mountain of Abyla, near the fortreſs and town of Ceuta, which form the eaſtern mouth of the ſtrait.

The value of this important fortreſs, in point of ſituation, appears to have been firſt noticed in the year 712. At that period of the Saracen war with Spain, the general of the caliph Al Walid, landed with an army of twelve thouſand men on the iſthmus between Calpe and the continent; and that he might ſecure an intercourſe with Africa, he ordered a caſtle to be built on the face of that hill, the ruins of which ſtill remain. It continued in the poſſeſſion of the Saracens till the beginning of the 14th century, when it was recovered by Ferdinand king of Caſtile. In 1333, however, it was obliged to ſurrender to the ſon of the emperor of Fez, who came to the aſſiſtance of the Mooriſh king of Granada. An attempt was made upon it in 1349 by Alonzo king of Caſtile; but when the fortreſs had been reduced to the laſt extremity, a peſtilential fever broke out in the Spaniſh camp, which carried off the king himſelf, and great part of his army; after which the enterpriſe was abandoned. The fortreſs continued in the poſſeſſion of the Saracen deſcendants of the prince of Fez till 1410, when it was taken by Joſeph III. king of Granada. A deſign of attacking it was formed by Henry de Guzman in 1435; but the enterpriſe having miſcarried through his imprudence, he was defeated and ſlain. It was, however, taken, after a gallant defence, by his ſon John de Guzman in 1462; ſince which time it has remained in the hands of the Chriſtians. In 1540, it was ſurpriſed and pillaged by Piali Hamet, one of Barbaroſſa's corſairs; but the pirates having fallen in with ſome Sicilian galleys, were by them defeated, and all either killed or taken.

In the reign of Charles V. emperor and king, the fortifications of Gibraltar were modernized, and ſuch additions made as to render them almoſt impregnable. It was firſt taken by the Engliſh, in the reign of queen Anne, and ſince that time has remained in their poſſeſſion; and probably will always do ſo, unleſs ceded by treaty, as it appears impoſſible to reduce it but by treachery.—It fell into the hands of the Engliſh on the following occaſion: In 1704, in conſequence of the reſolution adopted by the court of Britain to aſſiſt the archduke Charles in his pretenſions to the Spaniſh crown, admiral ſir George Rooke was ſent with a powerful fleet into the Mediterranean, when an attempt on Gibraltar was firſt reſolved upon. On the 21ſt of July, eighteen hundred troops were landed upon the iſthmus under the command of the prince of Heſſe Darmſtadt; and on the refuſal of the governor to ſurrender, preparations were made for attacking the place. Early in the morning of the 23d, a canonade was opened from the fleet, and kept up ſo briſkly, that in five or ſix hours the Spaniards were driven from their guns at the new mole-head. The admiral, perceiving that by gaining this part of the fortification, the reduction of the reſt would be facilitated, ordered out ſome armed boats to take poſſeſſion of it. On their approach the Spaniards ſprung a mine, which demoliſhed part of the works, killed two lieutenants and forty private ſoldiers, wounding about ſixty more. Notwithſtanding this diſaſter, the aſſailants kept poſſeſſion of the work, and took a ſmall baſtion, half-

way

way between the mole and the town. Upon this the governor thought proper to capitulate, and the prince of Heſſe took poſſeſſion of the gates on the 24th. The garriſon, conſiſting of one hundred and fifty men, marched out with the honours of war; and the Spaniards who choſe to remain, were honourably protected in their religion and property. The works were found very ſtrong, and the place well provided with ammunition and military ſtores. The prince of Heſſe was made governor; and eighteen men of war were left at Liſbon under the command of ſir John Leake, to ſuccour the garriſon if there ſhould be occaſion.

The loſs of ſuch an important fortreſs having alarmed both the courts of Madrid and Paris, orders were ſent to the marquis de Villadarias, a Spaniſh grandee, to retake it, in which he was to be aſſiſted by a naval force from Toulon. The prince of Heſſe, therefore, immediately applied to ſir John Leake for aſſiſtance; but before the latter had time to comply with his requeſt, a French fleet arrived, and debarked ſix battalions to the aſſiſtance of the Spaniards; after which they proceeded to the weſtward, leaving only ſix frigates in the bay. The trenches were opened on the 11th of October, about which time ſir John arrived with twenty ſail of Engliſh and Dutch ſhips; but hearing that the French were about to attack him with a ſuperior force, he judged it proper to return and refit. Having very prudently left orders at Liſbon to make preparations for this purpoſe in his abſence, he was enabled to accompliſh the work with ſuch expedition, that on the 29th of the ſame month he returned, and took by ſurpriſe in the bay three frigates, a fire-ſhip, two Engliſh prizes, a tartan, and a ſtore-ſhip. After this exploit he landed ſome reinforcements, ſupplied the garriſon with ſix months proviſion and ammunition; at the ſame time detaching on ſhore a body of five hundred ſailors to aſſiſt in repairing the breaches which had been made by the enemy's fire. In the mean while the Spaniards fitted out a ſtrong ſquadron from Cadiz, with a deſign to intercept the convoys of proviſions which might be ſent to the garriſon; flattering themſelves at the ſame time, that, on the arrival of their fleet, ſir John would be forced to retire, and the garriſon be obliged to ſurrender to their repeated attacks. The land army therefore continued their fire with additional fury, diſmounted many of the cannon, and did eſſential injury to the works in ſeveral different places. The prince of Heſſe, however, was by no means deficient in his endeavours to diſappoint their expectations; and at this critical juncture the fleet they had long expected arrived in the bay, December 7, 1704, with a proportionable quantity of ammunition and proviſions.

Sir John Leake having thus powerfully reinforced the garriſon, thought his preſence in the bay no longer neceſſary, and therefore ſet ſail for Liſbon, where he arrived about the end of the year. In the beginning of January 1705, the Spaniards were reinforced by a conſiderable body of infantry, and on the 11th of the month made an attack on the extremity of the King's Lines, but were repulſed. The garriſon was now farther reinforced by ſix companies of Dutch troops and two hundred Engliſh ſoldiers, together with ſome proviſions and ſtores. The aſſailants, however, perſiſted in the ſiege. The marquis de Villadarias was ſuperſeded by the mareſchal Teſſe, a Frenchman, with whom admiral Pointis was deſired to co-operate in blocking up the bay. The mareſchal therefore joined the army with four freſh battalions, beſides eight companies which had been ſent before. On the part of the Engliſh a reinforcement was ordered under the command of ſir Thomas Dilkes and ſir John Hardy, to join admiral Leake at Liſbon; which junction being effected, the whole fleet, conſiſting of twenty-eight Engliſh, four Dutch, and eight Portugueſe, men of war, having on-board two battalions of land forces, ſet ſail from Liſbon. Fortunately for the beſieged, the inceſſant rains and ſtorms had retarded the operations of the land forces, and greatly diſtreſſed the fleet of the enemy. Eight ſhips of the latter were forced from their anchors by the ſtrong weſterly wind, and obliged to drive to ſea. At this critical period ſir John Leake, with the allied fleet, entered the ſtraits; and perceiving five ſail making out of the bay, and a gun fired at them from the garriſon, he immediately gave chace. Three French men of war were taken, and the admiral's ſhip and another driven on-ſhore, where they were burnt. The reſt, on hearing the report of the guns, made the beſt of their way to Toulon.

The garriſon was now ſo well ſupplied, that mareſchal Teſſe withdrew his troops from the trenches, and and formed a blockade, drawing an intrenchment acroſs the iſthmus to prevent the garriſon from ravaging the country. The prince of Heſſe ſtill remained in the garriſon, where he repaired the batteries, and made ſome additions to the fortifications; after which he joined the archduke Charles at Liſbon. As the latter, however, was reſolved to try his fortune with the earl of Peterborough in Valencia and Catalonia, the prince was ſent back to Gibraltar to prepare part of the garriſon for embarkation, and ſoon after was followed by the whole fleet. Major-general Ramos was now appointed governor of Gibraltar, in which only two new battalions were left, as nothing was to be apprehended from the enemy. The new governor ſoon reſigned his command to colonel Roger Elliot, during whoſe time Gibraltar was made a free port by a ſpecial order from the queen.

In 1720, the Spaniards ſeem to have threatened another attack. Ceuta, the Spaniſh fortreſs in Barbary, had been for many years beſieged by the Moors; and a powerful armament, commanded by the marquis de Lada, was now aſſembled in Gibraltar-bay, under pretence of relieving that fortreſs, but with a ſecret deſign of ſurpriſing Gibraltar; for which purpoſe he had provided ſcaling ladders, &c. The armament, however, had not been fitted out with ſuch ſecrecy but that the Britiſh miniſtry had intelligence of it. On this they ſent orders to colonel Kane, governor of Minorca, to embark with part of his garriſon for Gibraltar under convoy of the fleet in the Mediterranean. On his arrival he compelled the Spaniſh commander to abandon his deſign, juſt as the fortreſs was to have ſuſtained a general aſſault. Notwithſtanding this diſappointment, the Spaniards continued to keep a watchful eye over Gibraltar; and, in 1726, they aſſembled an army in the neighbourhood of Algezira, or Old Gibraltar, encamping, on the 20th of January following, on the plain below St. Roch, and erecting a battery on the beach to protect their camp. Though admiral Hopſon was then at anchor in the bay of Gibraltar, yet, as he had received no intelligence of the actual commencement of hoſtilities between Great Britain and Spain, he was obliged to allow the boats of the latter to paſs with proviſions, arms, and ammunition, between Algezira and the camp. The operations of the Spaniards, however, ſeemed ſo evidently to tend towards an attack, that the governor thought proper to order ſuch of that nation as were in the town to leave it, and to forbid their galleys to anchor on that ſide of the bay.

The count de Las Torres commanded the Spaniſh forces, amounting to near twenty-thouſand men; and ſoon after forming his camp, he advanced along the neutral ground to within reach of the garriſon. On the 22d of February, the Spaniards opened their fire with ſeventeen pieces of cannon beſides mortars; and on the 3d of March they opened a new battery of twenty-two guns on the Old Mole; and on the 8th another of fifteen guns, bearing alſo upon the ſame Mole, the guns of which had annoyed the weſtern flank of their approaches. All this time the garriſon had kept up a conſtant and well-directed fire from the batteries, which

hore

bore upon the works of the enemy; but the ordnance in general being old, were frequently burſting, by which they ſuffered more than from the fire of the beſiegers. The Spaniards were greatly diſtreſſed by the fleet under admiral Hopſon and ſir Charles Wager, who, ſince the beginning of the ſiege, had intercepted their home-bound ſhips, and at the ſame time greatly benefited the garriſon by bringing the prizes into the bay. Finding the Spaniards, however, obſtinately bent on their enterpriſe, they formed a deſign, on the 2d of April, to bombard Algezira, from whence the Spaniards were ſupplied with various articles of ammunition; but the fleet happening to be becalmed, the deſign was afterwards unaccountably abandoned; and on the arrival of a reinforcement from Minorca, they ſailed to the weſtward. The enemy ſtill continued to augment their batteries, and erect new ones; and, on the 3d of May, the governor received intelligence that a general aſſault was intended; to repel which he took every proper precaution. Hoſtilities, however, ceaſed on the 12th, when news arrived that the preliminaries of a general pacification were ſigned; ſince which time to the year 1779, no farther attempts were made on Gibraltar.

In the courſe of the American war, the Spaniſh monarch having joined his forces to thoſe of France, a freſh attack upon this important fortreſs was concerted; and on the 16th of July 1779, the port was completely blocked up by a ſquadron of two ſeventy-four-gun ſhips, ſeveral frigates, galleys, &c. Ten days afterwards they began to form a camp on the plain below St. Roch, three miles from the fortreſs. The garriſon at this time conſiſted of 5382 men, including officers, with a company of engineers and artificers; but the greateſt expectations were formed from the abilities and valour of general Elliot the governor. From this time to the beginning of 1780, the enemy continued the blockade both by ſea and land, but without doing any damage to the works or garriſon. In the mean time, however, the uſual ſupplies of proviſions being cut off, the garriſon began to feel all the horrors of famine. Had matters remained long in this ſtate, it is plain that the fortreſs muſt have fallen into the hands of the enemy. They were, however, effectually relieved in conſequence of the victory gained by admiral Rodney over the Spaniſh fleet commanded by Don Juan de Langara. The former had been furniſhed with a ſtrong ſquadron, in order to relieve this important fortreſs; with which having ſet ſail, he in a few days fell in with a Spaniſh fleet of ſixteen tranſports bound from Bilboa to Cadiz, and laden with proviſions and naval ſtores, convoyed by a man-of-war of ſixty-four guns, four frigates, and two armed veſſels. Of theſe only a ſingle tranſport eſcaped, the reſt being all captured on the 8th of January, 1780; and the loſs of them, at the ſame time that it promiſed to be very ſerviceable to the garriſon, was equally detrimental to the enemy, who were in great want both of proviſions and ammunition for their ſhipping. This advantage, however, was only a prelude to the memorable yet awful deſtruction of the combined French and Spaniſh veſſels and gun-boats in the bay of Gibraltar, on the 13th of September 1782, for the particular deſcription of which ſee the article ENGLAND, vol. vi. p. 769. This was the laſt ſtruggle of the Spaniſh monarch for the recovery of Gibraltar; and which might ſerve to ſhew the futility of all further attempts to reduce ſo impregnable a fortreſs.

The town of Gibraltar is ſituated at the foot of the rock, and is defended on the ſide towards the bay by the batteries of the line-wall, the foot of which is waſhed by the ſea. Along this wall is the king's baſtion, by the fire from which the floating batteries were deſtroyed in the memorable action of the 13th of September 1782. In this baſtion lieutenant-general ſir Robert Boyd was interred, agreeably to his own requeſt, in a tomb erected by himſelf. At the back of the town is the *Calpe* or Rock of Gibraltar, which is one thouſand three hundred feet above the level of the ſea. On the ſummit of the rock, perhaps near the ſpot where the Herculean pillar ſtood, is the ſignal-houſe, commanding a very extenſive proſpect; and a new ſignal-houſe was erected by governor O'Hara in the year 1800, at the ſouthern extremity of the rock, which affords a more circumſpect view of the ſtrait. The rock towards the town and bay is of a gradual though rugged deſcent; but on the ſide towards the ſtrait it is exceſſively ſteep; notwithſtanding which, a long flight of ſteps has been cut in the rock, reaching quite down to the ſea, and called, from its ſituation, the Mediterranean Stairs.

The different galleries and fortifications called King's, Queen's, and Prince's, Lines, St. George's Hall, &c. are works of uncommon ingenuity and extreme labour, and have added conſiderably to the natural ſtrength of Gibraltar; other works alſo have been recently added, which appear to render the fortreſs truly impregnable. The town is well paved, and contains ſome very elegant houſes. There is one principal ſtreet leading from South Port to Water Port; all the others are ſide ſtreets, very ſmall and narrow. Charles the Fifth's wall commences at South Port, and extends to the top of the rock, near to the old Signal-houſe, ſhutting in what is called the town, from that extremity of the rock which advances into the ſea, and called Europa Point. A very good road, ſkirted with trees, parallel to which runs an aqueduct, reaches from South Port to this extreme part of Gibraltar, which is alſo called "the South," where there are good barracks, and an extenſive naval hoſpital. Theſe, with ſeveral other buildings, form what may be termed a ſecond town, where there is a ſtrong fort covering the New Mole, made to facilitate the anchorage of veſſels at the mouth of the bay. The bay itſelf forms a very beautiful and capacious baſon, in breadth about five miles, and in length about nine; with ſeveral ſmall rivers running into it from the Spaniſh coaſt. The water in the middle is more than a hundred fathoms in depth, ſo that a ſquadron may lie there in the utmoſt ſafety. On the eaſtern ſide of the bay the town and fortifications of Gibraltar are erected; and on the weſtern ſide the Spaniſh town of Algezira, or Old Gibraltar; with a fort and tower on ſome ſmall iſlands in front of it.

The garriſon of Gibraltar, in war time, conſiſts of from three to four thouſand men, with upwards of three hundred pieces of cannon. The town has three gates, with one Engliſh and one Spaniſh church, and a ſynagogue for the Jews, who find their way into every place where money circulates. The number of Engliſh, beſides the garriſon, is about two thouſand; and of Spaniards, Portugueſe, Genoeſe, and Jews, about as many. Moors are conſtantly coming in from the coaſt of Barbary with cattle, game, fiſh, and fruit. Theſe people call the town by the ancient name of *Dgebel-Thareh*. The rock and fortreſs of Gibraltar is joined to Spain by an iſthmus of low land, which widens progreſſively as it approaches the Spaniſh lines. Theſe extend entirely acroſs the iſthmus, and are flanked by two Spaniſh forts, the principal of which is called St. Philip. The Spaniſh lines are defended likewiſe by a number of guns, planted along them, and entruſted to the care of a garriſon, miſerably lodged and badly ſerved. The ſpace between the foot of the rock and theſe lines is known by the name of "Neutral Ground;" and is the only approach to Gibraltar by land.

The town and garriſon of Gibraltar, in war time, have been wholly ſupplied with freſh water from ciſterns, and an aqueduct, which are filled by the rain, until very lately ſome wells have been ſunk in the rock at immenſe labour, to procure a more certain ſupply of this invaluable neceſſary of life. But if water be ſcarce, wine, on the other hand, is in ſuch abundance, and ſo cheap, that in no part of the world exiſts a higher temp-

tation to intoxication. It is indeed diſguſting to ſee ſo many people lying in the ſtreets in the moſt degrading ſtate of inebriety. Drunkenneſs appears to be no crime, except in thoſe who are on duty; and every man coming off a working party is ordered to be paid eightpence on the ſpot, which he immediately proceeds to ſpend in a kind of bad wine, called *black-ſtrap*. Houſes for the ſale of this pernicious liquor are found at every ſtep, and furniſh no ſmall part of the revenue.

The ſituation of officers in Gibraltar during the time of war, is extremely confined, and almoſt a ſtate of impriſonment, from which it is impoſſible to ſtir, with no other amuſement or reſource than what they can create among themſelves. There has been, however, a garriſon library moſt judiciouſly ſet on-foot, which, to a mind ſuſceptible or deſirous of information, is an inſtitution of the moſt advantageous and laudable kind. A committee of officers is appointed, to whom the choice of the books is left; and in the ſelection none are admitted but the moſt approved productions. All intereſting new publications are purchaſed, and likewiſe a regular ſucceſſion of the beſt Engliſh newſpapers. Every officer, on his arrival at Gibraltar, contributes one week's pay to the fund, which conſtitutes him a ſubſcriber, paying only the additional ſum of four dollars annually. By means of this trifling ſubſcription, the library is well ſupplied; and a new building is now erected, calculated on purpoſe for literary purſuits.

In time of peace, the garriſon is more fertile in amuſement, an intercourſe being then permitted with the Spaniſh territories, whereby the troops are amply and cheaply furniſhed with every thing they can want. But when war, deſtroying all friendly communication, cuts off theſe ſupplies, the coaſt of Barbary becomes the only reſource; and it is a very precarious one; for, when the plague rages there, which is ſo often the caſe, the moſt rigorous and ſtrict meaſures are neceſſarily taken, to prevent its introduction into the garriſon, of which it would moſt undoubtedly prove the ruin. To guard againſt this dreadful malady, a lazaretto is eſtabliſhed on the neutral ground, where quarantine is performed. In the event of war on the one ſide, and peſtilence on the other, it often happens that the garriſon is compelled to live entirely on ſalt proviſion; not having even the advantage or comfort of vegetables, which are at all times ſcarce, and very dear. During the ſummer, the climate is exceſſively arid, and the reflection of the ſun from the rock almoſt melting, and very diſtreſſing to the eyes. In winter the weather is often very cold, and the damps from the heavy rains ſo great, as to render fire neceſſary for two or three months in the year. Notwithſtanding theſe inconveniences, the climate is far from being unhealthy; nor is the condition of the garriſon by any means the worſt in the world. —The rock of Gibraltar is diſtant ſixteen miles north from Ceuta, and ſeventy ſouth from Seville. Lat. 36. 8. N. lon. 11. 19. E. Peak of Teneriffe.

The poſſeſſion of Gibraltar is eſteemed of the higheſt importance to Great Britain. It not only gives us the command of the Straits and their navigation, but affords refreſhment and accommodation to our fleets in time of war, and to our merchant ſhips at all times; which, to a maritime power, is of the utmoſt advantage. From its ſituation, it divides the power of both the kingdoms of France and Spain; that is, it prevents the facility of communication by ſea between the different parts of theſe kingdoms; the great and good policy of which has been often experienced by the navy of England. It awes alſo the piratical ſtates of Barbary, and in like manner the marauding emperor of Morocco; inſomuch, that our commerce is more ſecure than that of any other European power, which gives us infinite advantages in point of freight. It is likewiſe highly favourable to our trade in every part of the Mediterranean, and gives us the entire command of the entrance into and out of that extenſive inland ſea.

Much has been ſaid of the foſſil bones found in the rock of Gibraltar; and the general idea which exiſts concerning them is that they are found in a petrified ſtate, and incloſed in the ſolid calcareous rock; but major Imrie, in his Mineralogical Account of the Rock of Gibraltar, recently publiſhed, has ſhewn this to be a miſtake, which could ariſe only from inaccurate obſervation and falſe deduction. His words are: "In the perpendicular fiſſures of the rock, and in ſome of the caverns of the mountain (all of which afford evident proofs of their former communication with the ſurface), a calcareous concretion is found, of a reddiſh brown ferruginous colour, with an earthy fracture, and conſiderable induration, incloſing the bones of various animals, ſome of which have the appearance of being human. Theſe bones are of various ſizes, and lie in all directions, intermixed with ſhells of ſnails, fragments of the calcareous rock, and particles of ſpar; all of which materials are ſtill to be ſeen in their natural uncombined ſtates, partially ſcattered over the ſurface of the mountain. Theſe having been ſwept, by heavy rains at different periods, from the ſurface into the ſituations above deſcribed, and having remained for a long ſeries of years in thoſe places of reſt, expoſed to the permeating action of water, have become inveloped in, and cemented by, the calcareous matter which it depoſits. The bones, in this compoſition, have not the ſmalleſt appearance of being petrified; and if they have undergone any change, it is more like that of calcination than that of petrifaction, as the moſt ſolid parts of them generally admit of being cut and ſcraped down with the ſame eaſe as chalk.

"Bones combined in ſuch concretions are not peculiar to Gibraltar: they are found in ſuch large quantities in the country of Dalmatia, and upon its coaſts in the iſlands of Cherſo and Oſero, that ſome naturaliſts have been induced to go ſo far as to aſſert, that there has been a regular ſtratum of ſuch matter in that country, and that its preſent broken and interrupted appearance has been cauſed by earthquakes, or other convulſions, experienced in that part of the globe. But, of late years, a traveller (abbé Alberto Fortis) has given a minute deſcription of the concretion in which the bones are found in that country: and by his account it appears, that with regard to ſituation, compoſition, and colour, it is perfectly ſimilar to that found at Gibraltar. By his deſcription, it alſo appears that the two mountain rocks of Gibraltar and Dalmatia conſiſt of the ſame ſpecies of calcareous ſtone; from which it is to be preſumed, that the concretions in both have been formed in the ſame manner and about the ſame periods."

Major Imrie found here the complete jaw-bone of a ſheep; it contained its full complement of teeth, the enamel of which was perfect, and its whiteneſs and luſtre in no degree impaired. In the hollow parts of ſome of the large bones was contained a minute cryſtallization of pure and colourleſs calcareous ſpar; but, in moſt, the interior part conſiſted of a ſparry cruſt of a reddiſh colour, ſcarcely in any degree tranſparent.

Upon the weſt ſide of the mountain, towards its baſe, ſome ſtrata occur, which are heterogenial to the mountain rock: the firſt, or higheſt, forms the ſegment of a circle; its convex ſide is towards the mountain, and it ſlopes alſo in that direction. This ſtratum conſiſts of a number of thin beds; the outward one, being the thineſt, is in a ſtate of decompoſition, and is mouldering down into a blackiſh brown or ferruginous coloured earth. The beds, inferior to this, progreſſively increaſe in breadth to ſeventeen inches, where the ſtratification reſts upon a rock of an argillaceous nature. This laſt bed conſiſts of quartz of a blackiſh blue colour, in the ſepta or cracks of which are found fine quartz cryſtals,

colourleſs, and perfectly ſimilar to thoſe found in the rocks near Briſtol, and called *Briſtol ſtones*. Theſe cryſtals are compoſed of eighteen planes, diſpoſed in hexangular columns, terminated at both extremities by hexangular pyramids. The largeſt of thoſe that major Imrie ſaw did not exceed one-fourth of an inch in length: they in general adhere to the rock by the ſides of the column, but are detached without difficulty. Their great degree of tranſparency has obtained them the name of *Gibraltar diamonds*.

The ſubterraneous galleries in the rock of Gibraltar, begun by general lord Elliot, and finiſhed by general O'Hara, are very extenſive; they pierce the rock in ſeveral places and in various directions, and at various degrees of elevation; all of them have a communication with each other, either by flights of ſteps cut in the rock, or by wooden ſtairs where the paſſages are required to be very perpendicular. The centinels may now be relieved during a ſiege from one poſt to another in perfect ſafety; whereas, previouſly to the conſtructing of theſe galleries, a vaſt number of men were killed while marching to their ſeveral ſtations. The width of theſe galleries is about twelve feet, their height about fourteen. The rock is broken through in various places, both for the purpoſe of giving light and for placing the guns to bear on the enemy. In different parts there are ſpacious receſſes, capable of accommodating a conſiderable number of men. To theſe receſſes they give names, ſuch as St. Patrick's Chamber, St. George's Hall, &c. The whole of theſe ſingular ſtructures have been formed out of the ſolid rock by blaſting with gunpowder. A place called Smart's Reſervoir is occaſionally opened for inſpection, which is a great curioſity, and not generally permitted to be ſhewn. It is a ſpring at a conſiderable depth in the body of the rock, and is above ſeven hundred feet above the level of the ſea; you deſcend into the cavern that contains it by a rope ladder, and with the aid of lighted candles proceed through a narrow paſſage over cryſtallized protuberances of the rock till you come to a hollow, which appears to have been opened by ſome convulſion of nature. Here, from a bed of gems, ariſes the ſalutary fount, clear as the brilliant of the eaſt, and cold as the icicle. When reſtored to the light of day, you perhaps obtain the key of St. George's Hall, which is upwards of an hundred feet in length, its height nearly the ſame. It is formed in a ſemicircular part of the rock; ſpacious apertures are broken through, where cannons of a very large calibre command the iſthmus, the Spaniſh lines, and a great part of the bay. The top of the rock is pierced through, ſo as to introduce ſufficient light into every part of it.

GIBRAL'TAR, a town of South America, in the country of Terra Firma, and province of Venezuela, ſituated on the eaſt coaſt of the lake of Maracaibo; in the environs of which is gathered the beſt cocoa of the province, and an excellent kind of tobacco grows, of high eſteem in Old Spain. The air is exceedingly unwholeſome in the rainy ſeaſon, on which account the merchants and planters generally retire at that time to Maracaibo. It is defended by ſome fortifications, but was taken by the French and burned in the year 1670: fifty miles ſouth-ſouth-eaſt of Maracaibo. Lat. 10. 4. N. lon. 49. 50. W. Ferro.

GIB'SON (Richard), an Engliſh painter, commonly called the *Dwarf*, was page to a lady at Mortlake; who, obſerving that his genius led him to painting, had the generoſity to get him inſtructed in the rudiments of that art. He devoted himſelf to ſir Peter Lely's manner, and copied his pictures to admiration, eſpecially his portraits: his paintings in water-colours were alſo eſteemed. He was in great favour with Charles I. who made him his page; and he had the honour to inſtruct in drawing queen Mary and queen Anne, when they were princeſſes. He married Miſs Anne Shepherd, who was alſo a dwarf; on which occaſion king Charles honoured their marriage with his preſence, and gave away the bride. Mr. Waller wrote a poem on this occaſion, entitled, The Marriage of the Dwarfs. Fenton, in his notes on this poem, obſerves that he had ſeen this couple painted by ſir Peter Lely; and that they were of an equal ſtature, each being three feet ten inches high. However, they had nine children, five of whom arrived at maturity, well proportioned, and of the uſual ſtandard of mankind. But what nature denied this couple in ſtature, ſhe gave them in length of days: for Mr. Gibſon died in the ſeventy-fifth year of his age; and his wife, having ſurvived him almoſt twenty years, died in 1709, aged eighty-nine.

GIB'SON (Edmund), a learned Engliſh prelate, born at Bampton in Weſtmoreland, in 1669. He was initiated in grammar learning at the free ſchool in his native town, whence, at the age of ſeventeen, he was ſent to Queen's college, Oxford. During the year 1691 he was admitted to the degree of bachelor of arts; and alſo offered to the public the firſt fruits of his ſtudies, in a new edition of William Drummond's *Polemo-Middiana*, and James V. of Scotland's *Cantilena Ruſtica*, 4to. In 1692, by the advice of Dr. Mill, the learned editor of the Greek Teſtament, he publiſhed a Latin tranſlation, together with the original, of that valuable remain of Saxon antiquity, the *Chronicon Saxonicum*, in 4to. accompanied with notes on the whole. Before the expiration of the ſame year, likewiſe, he gave the public, in 4to. *Librorum Manuſcriptorum in duabus inſignibus Bibliothecis, altera Teniſiona Londini, altera Dugdaliana Oxonii, Catalogus*, with a dedication to Dr. Teniſon, at that time biſhop of Lincoln, and afterwards archbiſhop of Canterbury; which proved the foundation of the author's ſubſequent fortune under the auſpices of that prelate. His next publication was a more correct edition than had before appeared of Quintilian *De Arte Oratoria*, 1693, 4to. which was followed, in 1694, by a new edition of Somner's Treatiſe on the Roman Ports and Forts in Kent; and the ſame author's *Julii Cæſaris Portus Iccius illuſtratus*, 8vo. with a new diſſertation in defence of the author. During the laſt-mentioned year, Mr. Gibſon commenced maſter of arts; and within the two following years he was elected a fellow of his college, and admitted into deacon's and prieſt's orders. His embracing the clerical life, however, did not prevent him from devoting a conſiderable part of his ſtudies to the hiſtory and antiquities of his country; and about the year 1695 he publiſhed an Engliſh tranſlation of Camden's Britannia, folio. This work was patroniſed by lord Somers, who, ſoon after its appearance, offered the author a living of two hundred pounds a-year in the iſle of Thanet, which, on account of his ill-health, he declined. In 1696 Mr. Gibſon was appointed librarian at Lambeth, by Dr. Teniſon, then archbiſhop of Canterbury, who received him into his family; and in the following year he was appointed morning preacher at Lambeth church, and produced *Vita Thomæ Bodleii, Equitis Aurati*, together with *Hiſtoria Bibliothecæ Bodleianæ*, both prefixed to the *Catalogi Librorum Manuſcriptorum, in Anglia & Hibernia, in unum Collecti*, 2 vols. folio. In 1698 he publiſhed, in folio, *Reliquiæ Spelmannianæ*; being the Poſthumous Works of Sir Henry Spelman, relating to the Laws and Antiquities of England, together with the Life of the Author. He was now made domeſtic chaplain to the archbiſhop, through whoſe means he obtained the lecture-ſhip of St. Martin's in the Fields; and, in 1700, was preſented to the rectory of Stiſted in Eſſex, a peculiar of the archbiſhop's. Mr. Gibſon had not been long chaplain to Dr. Teniſon, before he undertook the defence of his rights, as preſident of the convocation, during the conteſts between the two houſes relating

relating to the forms and extent of their reſpective powers. While this controverſy was exiſting, the degree of doctor of divinity was conferred upon Mr. Gibſon by the archbiſhop, in 1702; and in the following year he was preferred to the rectory of Lambeth, and made precentor and reſidentiary of the cathedral church of Chicheſter. Soon afterwards he was appointed maſter of the hoſpital of St. Mary, with licence to retain his precentorſhip, reſidentiaryſhip, and the rectory of Lambeth. In 1710 he was promoted to the archdeaconry of Surrey; the duties of which he diſcharged with uncommon diligence. In 1713, Dr. Gibſon publiſhed his famous *Codex Juris Eccleſiaſtici Anglicani*; or, The Statutes, Conſtitution, Canons, Rubrics, and Articles, of the Church of England, methodically digeſted under their proper Heads, &c. in folio. Upon the death of archbiſhop Teniſon in 1715, and the tranſlation of Dr. Wake to Canterbury from the ſee of Lincoln, Dr. Gibſon, in conſequence of the recommendation of the new metropolitan, was nominated his ſucceſſor, and conſecrated towards the beginning of the following year. In 1721 he was appointed dean of the royal chapel, and in 1723, upon the death of biſhop Robinſon, was tranſlated from Lincoln to the ſee of London. For this important ſituation in the church, Dr. Gibſon's abilities and benevolent demeanour peculiarly qualified him. So ſenſible were the miniſtry, at this time, of his talents and diligence, that for ſeveral years, and more eſpecially during the long declining ſtate of health of archbiſhop Wake, almoſt every thing relating to the affairs of the church was, in a great meaſure, confided to the care of the biſhop of London. Soon after his tranſlation to this biſhopric, he procured an endowment from the crown for a regular courſe of ſermons on Sundays, to be preached in the royal chapel at Whitehall, by twelve clergymen of the univerſities of Oxford and Cambridge, ſelected in equal numbers from each univerſity, and appointed by the biſhop of London for the time being. He wrote and printed ſeveral paſtoral letters, addreſſed to the clergy and laity, intended to oppoſe the growth of infidelity and enthuſiaſm; as well as viſitation charges, occaſional ſermons, and ſmall tracts againſt the prevailing vices of the age. Theſe have been often reprinted in England, and alſo in Ireland, by the particular recommendation of archbiſhop Synge; and we are informed that, in the decline of his life, biſhop Gibſon received more ſatisfaction from the repeated calls for theſe practical pieces, than from the honours conferred on him by his larger works. He died at Bath in 1748, when about ſeventy-nine years of age, with true Chriſtian fortitude, and in perfect tranquillity of mind. Mr. Whiſton has recorded the following extraordinary inſtance of his generoſity; that he freely gave two thouſand five hundred pounds, which were left him by Dr. Crow, one of his chaplains, to Dr. Crow's own relations, who were in indigent circumſtances. Beſides the works which we have enumerated, his lordſhip printed a collection of Diſcourſes publiſhed by Mr. Addiſon, and others of the laity, againſt atheiſm and infidelity, and in defence of the Chriſtian religion; which he introduced with a well-written preface, exhibiting a conciſe view of the ſentiments of Mr. Boyle, Mr. Locke, and ſir Iſaac Newton, concerning Chriſtianity. He alſo made a collection of the beſt pieces that were written againſt popery during the reign of James II. and publiſhed them with a preface in 1738, in 3 vols. folio.

GIB'STAFF, *ſ.* A long ſtaff to gage water, or to ſhove forth a veſſel into the deep. A weapon uſed formerly to fight beaſts upon the ſtage.

GID'DILY, *adv.* With the head ſeeming to turn round. Inconſtantly; unſteadily:

To roam
Giddily, and be every where but at home,
Such freedom doth a baniſhment become. *Donne.*

Careleſsly; heedleſsly; negligently:

The parts that fortune hath beſtow'd upon her,
Tell her, I hold as *giddily* as fortune. *Shakeſpeare.*

GID'DINESS, *ſ.* The ſtate of being giddy or vertiginous; the ſenſation which we have when every thing ſeems to turn round.—Megrims and *giddineſs* are rather when we riſe after long ſitting, than while we ſit. *Bacon.*

Vain ſhow and noiſe intoxicate the brain,
Begin with *giddineſs*, and end in pain. *Young.*

Inconſtancy; unſteadineſs; mutability; changeableneſs.—There be that delight in *giddineſs*, and count it a bondage to fix a belief. *Bacon.*—Quick rotation; inability to keep its place.—The indignation of Heaven rolling and turning us, 'till at length ſuch a *giddineſs* ſeized upon government, that it fell into the very dregs of ſectaries. *South.*—Frolic; wantonneſs of life:

Thou, like a contrite penitent,
Charitably warn'd of thy ſins, do'ſt repent
Theſe vanities and *giddineſſes*. *Donne.*

GID'DRI, a town of European Turkey, in the province of Albania: eight miles north of Aleſſio.

GID'DY, *adj.* [ȝiddiȝ, Sax. Johnſon ſuppoſes this word to come from *gad*, to wander, to be in motion; *gad, gid, giddy.*] Vertiginous; having in the head, a whirl, or ſenſation of circular motion; ſuch as happens by diſeaſe or drunkenneſs:

Them rev'ling thus the Tentyrites invade,
By *giddy* heads and ſtagg'ring legs betray'd. *Tate.*

Rotatory; whirling; running round with celerity:

As Ixon fix'd, the wretch ſhall feel
The *giddy* motion of the whirling mill. *Pope.*

Inconſtant; mutable; unſteady; changeful.—It may be gnats and flies have their imagination more mutable and *giddy*, as ſmall birds likewiſe have. *Bacon.*

The *giddy* vulgar, as their fancies guide,
With noiſe ſay nothing, and in parts divide. *Dryden.*

That which cauſes giddineſs:

The frequent errors of a pathleſs wood,
The *giddy* precipice, and dang'rous flood. *Prior.*

The ſylphs through myſtic mazes guide their way,
Through all the *giddy* circle they purſue. *Pope.*

Heedleſs; thoughtleſs; uncautious; wild.—How inexcuſeable are thoſe *giddy* creatures, who, in the ſame hour, leap from a parent's window to a huſband's bed. *Clariſſa.*

Too many *giddy* fooliſh hours are gone,
And in fantaſtic meaſures danc'd away. *Rowe.*

Tottering; unfixed:

Upon the *giddy* footing of the hatches,
Methought that Glo'ſter ſtumbled. *Shakeſpeare.*

Intoxicated; elated to thoughtleſſneſs; overcome by any overpowering inticement.—Art thou not *giddy* with the faſhion too, that thou haſt ſhifted out of thy tale into telling me of the faſhion. *Shakeſpeare.*

Like one of two contending in a prize,
That thinks he hath done well in people's eyes;
Hearing applauſe and univerſal ſhout,
Giddy in ſpirit, gazing ſtill in doubt;
Whether thoſe peals of praiſe be his or no. *Shakeſpeare.*

To GID'DY, *v. n.* To turn quick. *Obſolete.*

A ſodaine north-wind fetcht,
With an extreme ſea, quite about againe,
Our whole endeavours; and our courſe conſtrain
To *giddie* round. *Chapman.*

GIDDYBRA'INED, *adj.* Careleſs; thoughtleſs.—Turn him out again, you unneceſſary, uſeleſs, *giddybrain'd*, aſs! *Otway.*

GIDDY-

GIDDYHEAD'ED, *adj.* Without thought or caution; without ſteadineſs or conſtancy.—That men are ſo miſaffected, melancholy, *giddyheaded*, hear the teſtimony of Solomon. *Burton.*

And ſooner may a gulling weather ſpy,
By drawing forth heav'n's ſcheme deſcry
What faſhion'd hats or ruffs, or ſuits, next year,
Our *giddyheaded* antic youth will wear. *Donne.*

GID'DYPACED, *adj.* Moving without regularity:

More than light airs, and recollected terms,
Of theſe moſt briſk and *giddypaced* times. *Shakeſpeare.*

GIDE'LI, a town of Aſia, in the province of Cabuliſtan: fifty miles ſouth-eaſt of Cabul.

GID'EON, judge of Iſrael in the thirteenth century before Chriſt. He was the ſon of Joaſh, a perſon of great conſideration in the tribe of Manaſſeh, who lived in the city of Ophrah. At the time when the memorable events in Gideon's life commenced, the Iſraelites had been for ſeven years oppreſſed and plundered by the Midianites. Gideon was therefore commiſſioned to diſperſe the army of the Midianites, Amalekites, and their allies, which in immenſe numbers had penetrated into the valley of Jezreel, with the intention of plundering and ravaging the country. Gideon collected a body of thirty-two thouſand men from the tribes of Manaſſeh, Aſher, Zebulon, and Naphtali, with whom he advanced to meet the daring invaders. Gideon formed a ſtratagem calculated to throw the vaſt hoſt of his enemies into inextricable confuſion. He divided his choſen troops into three companies, furniſhing each man with a trumpet, and an earthen pitcher containing a lamp or a torch, with directions to follow his example in the uſe of them. A little after midnight, theſe three companies were led towards different quarters of the enemy's camp; when at a concerted ſignal they broke their pitchers, diſplayed their lighted torches, ſounded their trumpets, and ſhouted at intervals, "The ſword of the Lord and of Gideon!" This ſtratagem produced an alarm and conſternation in the enemy's camp, which involved them in complete ruin. For when, ſtarting out of their ſleep, they perceived the glare of the lights breaking in upon them on three ſeveral ſides, and heard the continued ſound of the trumpets, and the loud ſhouts of the different companies, they were filled with amazement and horror, and conceiving themſelves ſurpriſed by a multitude of foes, their diſorder became irretrievable: "And the Lord ſet every man's ſword againſt his fellow, even throughout the whole hoſt." By the terror which had ſeized them, they were rendered incapable of diſtinguiſhing their friends from their enemies, and, attacking each other, a dreadful ſlaughter enſued. The remains of the mighty hoſt which eſcaped the carnage of this fatal night, fled on all ſides; when Gideon commenced his purſuit of them, ſummoning the troops which had been diſbanded to cut off their retreat, and calling upon the Ephraimites, and the other tribes neareſt the ſcene of action, to join in completing their deſtruction. Gideon was judge of Iſrael for forty years, during which time none of their enemies dared to moleſt them; and he died in a good old age, about the year 1236 before Chriſt. *Judges*, vi. vii. viii.

GI'DI-SHEH'RI, a town of Aſiatic Turkey, in the province of Natolia: eight miles ſouth of Beiſhehri.

GIDO'LA, a town of Ruſſia, in the government of Viborg: twenty miles north of Viborg.

GI'DOM, ſituated in Paleſtine, the place where the Benjamites were purſued by the other tribes of Iſrael with great ſlaughter, two thouſand of them being ſlain there. *Judges*, xx. 45.

GI'DY, a town of France, in the department of the Loiret, and chief place of a canton, in the diſtrict of Orleans: two leagues north of Orleans.

GIEBICHEN'STEIN, a town of Germany, in the circle of Lower Saxony, and duchy of Magdeburg: one mile north of Halle.

GIEDKULISZ'KI, a town of Samogitia: twenty-four miles ſouth of Roſienne.

GIEDROY'CE, a town of Lithuania, in the palatinate of Wilna: twenty-four miles north-north-weſt of Wilna.

GIEDUN'GEN, a town of Norway, in the dioceſe of Chriſtianſtadt: eighteen miles north-weſt of Stavanger.

GIEL'LUM, a town of Norway, in the dioceſe of Aggerhuus: fifty-three miles north of Chriſtiania.

GI'EN, a town of France, and principal place of a diſtrict, in the department of the Loiret, ſituated on the Loire, and containing about 4200 inhabitants: eleven leagues ſouth-eaſt of Orleans, and ſeven ſouth of Montargis. Lat. 47. 41. N. lon. 20. 17. E. Ferro.

GIEN'GEN, an imperial town of Germany, in the circle of Swabia, ſituated on the river Brentz: its aſſeſſment in the matricula of the empire is thirty-ſix florins, and its tax to the imperial chamber twenty-ſeven rix-dollars ſix kruitzers: twenty miles weſt of Donauwert, and twenty eight north-weſt of Augſburg. Lat. 48. 37. N. lon. 27. 51. E. Ferro.

GIEN'SOR, a town of Africa: ten miles ſouth of Tripoli.

GI'ER, a river of France, which runs into the Rhône, four leagues below Lyons.

GI'ER-E'AGLE, *ſ.* [ſometimes it is written *jereagle*.] A term for the gerfalcon. See the article FALCO, vol. vii. p. 189.—Theſe fowls ſhall not be eaten, the ſwan and the pelican, and the *gier-eagle*. *Lev.* xi. 18.

GIERA'CE, a town of Italy, in the kingdom of Naples, and province of Calabria Ultra; the ſee of a biſhop, ſuffragan of Reggio: it contains thirteen churches and four monaſteries. Near it are ſome ſulphureous baths: thirty-four miles north of Reggio, and ſixty-two ſouth-ſouth-weſt of St. Severina.

GIERANO'NY, a town of Lithuania, in the palatinate of Wilna: twenty miles north-eaſt of Lida.

GIES'CHENHAGEN, a town of Germany, in the duchy of Holſtein: one mile north-weſt of Segeberg.

GIE'SIM, a town of Africa, in Nubia, between Sennaar and Abyſſinia: 150 miles eaſt-ſouth-eaſt of Sennaar.

GIES'MANSDORF, a town of Sileſia, in the principality of Neiſſe: three miles weſt-north-weſt of Neiſſe.

GIES'SEN, a town of Germany, in the circle of the Upper Rhine, and principality of Upper Heſſe. It is ſtrong, and defended by a good citadel and arſenal, and ſituated in a fertile country, on the Lahn; an univerſity was founded here in 1605: ſix miles eaſt of Wetzlar, and thirty-ſix north-eaſt of Mentz. Lat. 50. 25. N. lon. 26. 22. E. Ferro.

GIE'ZIN, a town of Samogitia: twenty-two miles eaſt-ſouth-eaſt of Roſienne.

GIFFAUMO'NT, a town of France, in the department of the Marne, and chief place of a canton, in the diſtrict of Vitry-le-François: four leagues ſouth-eaſt of Vitry.

GIF'FEN (Hubert), or *Obertus Giſanius*, an eminent philologiſt, born at Buren, in the country of Gueldres. He ſtudied at Louvain, Paris, and Orleans, at which laſt he graduated in law in 1567. He then went to Italy in the train of the French ambaſſador to Venice; and afterwards viſited Germany, where he taught philoſophy and juriſprudence at Straſburg, Altdorf, and Ingolſtadt. He was a proteſtant in his youth, but quitted that ſect for the catholic religion previouſly to his being invited to the imperial court, where the emperor Rodolph beſtowed upon him the offices of counſellor and referendary. Being ſent on a commiſſion into Bohemia, he died at Prague in 1604, aged about ſeventy. He wrote comments upon Homer, upon Ariſtotle's Politics and Ethics, and upon Lucretius. There are ſix Letters by this author in the *Sylloge Epiſt. Virorum Clariſſ.* He wrote alſo *Comment. de Imperatore Juſtiniano*; and *Index Hiſtor. Rerum Romanarum.*

GIF'FORD, [of giran, Sax. to give, or of *gib* and *fort*, Teut. *q. d.* one that is not weary of giving.] A ſurname.

GIF'HORN, a town of Germany, in the circle of Lower Saxony, and principality of Luneburg Zell, ſituated on the Allier: nineteen miles eaſt of Zell.

GIFO'NI, a town of Italy, in the kingdom of Naples, and Principato Citra: ſeven miles eaſt-north-eaſt of Salerno.

GIFT, *ſ.* A thing given or beſtowed; ſomething conferred without price.—They preſented unto him *gifts*, gold, and frankincenſe, and myrrh. *Mat.* ii. 11.

Recall your *gift*, for I your pow'r confeſs;
But firſt take back my life, a *gift* that's leſs. *Dryden.*

The act of giving:

Creator bounteous and benign,
Giver of all things good, but faireſt this
Of all thy *gifts*. *Milton.*

The right or power of beſtowing.—No man has any antecedent right or claim to that which comes to him by free *gift*. *South.*—Oblation; offering.—Many nations ſhall come with *gifts* in their hands, even *gifts* to the king of heaven. *Tob.* xiii. 11.—A bribe.—Thou ſhalt not wreſt judgment, thou ſhalt not reſpect perſons, neither take a *gift*, for a *gift* doth blind the eyes of the wiſe. *Deut.* xvi. 19.—Power; faculty.—He who has the *gift* of ridicule, finds fault with any thing that gives him an opportunity of exerting his talent. *Addiſon.*

She was lovely to attract
Thy love, not thy ſubjection, and her *gifts*
Were ſuch as made for government well ſeem'd
Unſeemly to bear rule. *Milton.*

"Look not a GIFT horſe in the mouth." The Latins ſay, *Noli equi dentes inſpicere donati*. The Italians, *A cavallao daio non guardar in bocca*. The French, *A cheval donné il ne faut pas regarder aux dents*. The Spaniards, *A cavall dáio no le mirem el diénte*. The tendency of all which is to ſhew, that whenever we find fault with the value of a free gift, we not only betray an avaricious diſpoſition, but are likewiſe guilty of a certain degree of ingratitude.

GIFT, *ſ.* in law, a conveyance which paſſeth either lands or goods. A *gift* is of larger extent than a *grant*, being applied to things moveable and immoveable; yet, as to things immoveable, when ſtrictly taken, it is applicable only to lands and tenements given in tail; but gifts and grants are ſaid to be alike in nature, and often confounded. *Wood's Inſt.* 260. The conveyance of lands by gift is properly applied to the creation of an eſtate-tail, as feoffment is to that of an eſtate in fee, and leaſe to that of an eſtate for life or years. It differs in nothing from a feoffment but in the nature of the eſtate paſſing by it: for the operative words of conveyance in this caſe are *do*, or *dedi*—*I give*, or *have given*; and gifts in tail are equally imperfect without livery of ſeiſin as feoffments in fee-ſimple. *Lit.* 59. And this is the only diſtinction that Littleton ſeems to take when he ſays, "it is to be underſtood that there is feoffor and feoffee; donor and donee; leſſor and leſſee:" *Lit.* 57; viz. feoffor is applied to a feoffment in fee-ſimple, donor to a gift in tail, and leſſor to a leaſe for life or years or at will. In common acceptation *gifts* are frequently confounded with *grants*. 2 *Comm.* 316. c. 20.

Gifts or grants for the transferring of perſonal property are thus to be diſtinguiſhed from each other: that gifts are always gratuitous; grants are upon ſome conſideration or equivalent: and they may be divided with regard to their ſubject matter into gifts or grants of chattels real, and gifts or grants of chattels perſonal. Under the former head may be included all leaſes for years of land, aſſignments and ſurrenders of theſe leaſes; and all the other methods of conveying an eſtate leſs than freehold. See the articles DEED, CONVEYANCE, ESTATE. Theſe however very ſeldom carry the outward appearance of a gift, however freely beſtowed; being uſually expreſſed to be made in conſideration of blood, or of natural affection; or of five ſhillings or ten ſhillings nominally paid to the grantor: and in caſe of leaſes, always reſerving a rent, though it be but a pepper-corn; any of which conſiderations will in the eye of the law convert the gift, if executed, into a grant: if not executed, into a contract. 2 *Comm.* 440. c. 30.

Grants or gifts of chattels perſonal are the act of transferring the right and the poſſeſſion of them, whereby one man renounces, and another immediately acquires, all title and intereſt therein: which may be done either in writing, or by word of mouth, atteſted by ſufficient evidence, of which the delivery of poſſeſſion is the ſtrongeſt and moſt eſſential. But this conveyance, when merely voluntary, is ſomewhat ſuſpicious: and is uſually conſtrued to be fraudulent, if creditors or others become ſufferers thereby; and particularly, by ſtat. 3 Hen. VII. c. 4. all deeds of gifts of goods, made in truſt to the uſe of the donor, ſhall be void, becauſe otherwiſe perſons might be tempted to commit treaſon or felony without danger of forfeiture: and the creditors of the donor might alſo be defrauded. And by ſtat. 13 Eliz. c. 5, every grant or gift of chattels as well as lands with an intent to defraud creditors or others, ſhall be void as againſt ſuch perſons to whom ſuch fraud would be prejudicial, but as againſt the grantor or giver himſelf, ſhall ſtand good and effectual: and all perſons, partakers in, or privy to, ſuch fraudulent grants, ſhall forfeit the whole value of the goods, one moiety to the king, and the other to the party grieved; and alſo on conviction ſuffer half a year's impriſonment. 3 *Rep.* 82.

A true and proper gift or grant is always accompanied with delivery of poſſeſſion, and takes effect immediately: as if A. gives to B. 100l. or a flock of ſheep, and puts him in poſſeſſion of them directly, it is then a gift executed in the donee; and it is not in the donor's power to retract it, though he did it without any conſideration or recompence, *Jenk.* 109; unleſs it be prejudicial to creditors, or the donor were under any legal incapacity, as infancy, coverture, dureſs, or the like: or if he were drawn in, circumvented, or impoſed upon, by falſe pretences, ebriety, or ſurpriſe. But if the gift does not take effect by delivery of immediate poſſeſſion, it is then not properly a gift, but a contract; and this a man cannot be compelled to perform, but upon good and ſufficient conſideration. 2 *Comm.* 441. c. 30.

As to gifts in law, when a man is married to a woman, all her goods and chattels by gift in law become the huſband's; but then he is liable for her debts: ſo if a man is made executor, the law gives him all the goods and chattels of the teſtator, ſubject to his debts. 1 *Inſt.* 351. A man by deed did give and grant, bargain and ſell, alien, enfeoff, and confirm, to his daughter certain lands: but no conſideration of money was mentioned, nor was the deed inrolled; there was likewiſe no conſideration of natural affection expreſſed, (other than what was implied in naming the grantee his daughter,) and there was no livery indorſed, or any found to have been made; nor was the daughter in poſſeſſion at the time of the deed made: and in the king's-bench it was adjudged by the court that the deed was good, and carried the eſtate to the daughter by way of covenant to ſtand ſeiſed, &c. 1 *Mod.* 157.

GIFT'ED, *adj.* Given; beſtowed:

Made of my enemies the ſcorn and gaze,
To grind in brazen fetters, under taſk,
With my heav'n-*gifted* ſtrength. *Milton's Agoniſtes.*

Endowed with extraordinary powers. It is commonly uſed ironically.—There is no talent ſo pernicious as eloquence, to thoſe who have it not under command: women, who are ſo liberally *gifted* by nature in this particular, ought to ſtudy the rules of female oratory. *Addiſon.*

GIFT'ROPE,

GIFT'ROPE, *ſ.* The rope with which the boat is faſtened to the bow of the ſhip when taken in tow.

GIG, *ſ.* [etymology uncertain.] Any thing that is whirled round in play.—Playthings, as tops, *gigs*, battledores, ſhould be procured them. *Locke.*—[*Gigia*, Iſlandic.] A fiddle. *Now out of uſe.* A quick tune or dance.

GIGALO'BIUM, *ſ.* in botany. See MIMOSA.

GIGAN'TIC, *adj.* [*gigantes*, Lat.] Suitable to a giant; big; bulky; enormous; likewiſe wicked; atrocious:

The ſon of Hercules he juſtly ſeems,
By his broad ſhoulders and *gigantic* limbs. *Dryden.*

The Cyclopean race in arms aroſe;
A lawleſs nation of *gigantic* foes. *Pope.*

GIGAN'TICNESS, *ſ.* The ſtate or quality of being gigantic.

GIGANTOM'ACHY, *ſ.* [from γιγας, a giant, and μαχομαι, Gr. to fight.] The fabulous war of the giants againſt heaven.

GIGEAU', a town of France, in the department of the Herault: ſeven miles ſouth of Montpellier.

GIG'GEO (Anthony), a learned Italian eccleſiaſtic, of the congregation of Oblati, founded by St. Charles Borromeo at Milan, and was admitted to the degree of doctor by the Ambroſian college in that city. He was the author of a Latin tranſlation of the Commentaries of R. R. Solomon, Aben Ezra, and Levi Gerſom, on the Book of Proverbs, publiſhed at Milan in 1620, 4to. and he alſo drew up a Chaldee and Targumic Grammar, adapted to the corrupted ſtate of the Chaldee dialect in the later Targums, which is preſerved in manuſcript in the Ambroſian library. But the work which principally contributed to his reputation was, *Theſaurus Linguæ Arabicæ, ſeu Lexicon Arabico-Latinum*, 1632, in four volumes, folio, which is held in great eſteem. As a recompence for the learning and induſtry which it diſcovered, pope Urban VIII. nominated him to an honourable poſt in the college *de Propaganda* at Rome; but he died when on the point of ſetting out for that city, in the ſame year in which his grand work made its appearance.

To GIG'GLE, *v. n.* [*gichelen*, Dut.] To laugh idly; to titter; to grin with merry levity:

We ſhew our preſent joking *giggling* race,
True joy conſiſts in gravity and grace. *Garrick.*

GIG'GLER, *ſ.* A laugher; a titterer; one idly and fooliſhly merry:

A ſad wiſe valour is the brave complexion,
That leads the van, and ſwallows up the cities:
The *giggler* is a milk-maid, whom infection,
Or the fir'd beacon, frighteth from his ditties. *Herbert.*

GIG'GLET, or GIGLET, or GIGLOT, *ſ.* [from *giggle.*] A wanton girl.—Away with thoſe *giglets* too. *Shakeſpeare.*

GIG'LET, *adj.* Wanton:

Young Talbot was not born
To be the pillage of a *giglet* wench.
The fam'd Caſſibelan was once at point,
Oh *giglet* fortune! to maſter Cæſar's ſword. *Shakeſpeare.*

GIGLETLI'KE, *adj.* Like a giglet; like a wanton girl.

GI'GLIO, a ſmall iſland in the Mediterranean, near the coaſt of Italy, belonging to Sienna: eleven leagues ſouth-ſouth-eaſt from the iſland of Elva. Lat. 42. 23. N. lon. 28. 40. E. Ferro.

GIG'MILL, *ſ.* A mill to dreſs woollen cloth.

GIGNAC', a town of France, in the department of the Herault, and chief place of a canton, in the diſtrict of Lodève, on the Herault: three leagues and a half ſouth-eaſt of Lodève, and four and a half weſt of Montpellier. Lat. 43. 39. N. lon. 21. 13. E. Ferro.

GI'GNY, a town of France, in the department of the Jura, and chief place of a canton, in the diſtrict of Orgelet, on the Surain: two leagues and a half ſouth-weſt of Orgelet, and four and a half ſouth of Lons-le-Saunier.

GI'GO, an iſland of Scotland, near the weſt coaſt; about five miles long, and one broad: eleven miles eaſt-ſouth-eaſt from the iſland of Ila, and a little to the weſt of the peninſula of Kintyre, in the county of Argyle. Lat. 55. 40. N. lon. 2. 35. W. Edinburgh.

GI'GOT, *ſ.* [French.] The hip joint. It ſeems to mean in Chapman a joint for the ſpit.—They broil'd on coales, and eate; the reſt, in *gigots* cut, they ſplit. *Chapm.*

GI'GOTBRANCH, *ſ.* That branch of a bridle which has the form of a leg.

GIGS, *ſ.* in farriery, a diſeaſe incident to horſes; a ſwelling on the inſide of the lips.

GI'HON, ſituated in Paleſtine, near Jeruſalem; the place where Solomon was anointed and proclaimed king of Iſrael by order of his father David. 1 *Kings* i. 33–45.

GI'HON, the name of one of the rivers that watered Paradiſe, ſaid by Moſes to compaſs the land of Ethiopia, or Cuſh. *Gen.* ii. 13.

GI'JON, a ſea-port town of Spain, in the province of Aſturia, with an ancient caſtle, formerly the capital of Aſturia, and the reſidence of king Pelagius and his immediate ſucceſſors: eighteen miles north of Oviedo. Lat. 43. 32. N. lon. 11. 5. E. Peak of Teneriffe.

GILAR'ZA, a town of the iſland of Sardinia: fifteen miles ſouth-eaſt of Boſa.

GILATTEL'KE, a town of Tranſilvania: fourteen miles north of Clauſenburg.

GIL'BERT, [of gilb, Sax. a college, and *berichten*, Teut. to inſtruct.] A proper name.

GIL'BERT (ſir Humphrey), one of the gallant adventurers of queen Elizabeth's reign, deſcended from an ancient family in Devonſhire, and born about 1539. His mother, after becoming a widow, married Mr. Raleigh, by whom ſhe had the celebrated ſir Walter, ſo that theſe congenial ſpirits were half-brothers. He firſt bore arms in the expedition to Havre, in 1563; and in that and ſeveral ſubſequent enterprizes he ſo well approved his courage and conduct, that he was ſent over to Ireland to aſſiſt in quelling the diſorders of that country, and roſe there to the chief command in the province of Munſter. As a reward for his ſucceſsful ſervices he received knighthood in 1570. In 1571, he ſerved as a burgeſs in parliament for Plymouth. His thoughts were now occupied with thoſe ſchemes for the advancement of maritime diſcovery, and the improvement of trade and navigation, which were become the moſt laudable topics of diſcuſſion in the houſe of commons; and in 1576, he publiſhed a Diſcourſe to prove a Paſſage by the North-weſt to Cathaia and the Eaſt Indies. This is ſaid to be a ſolid and ſcientific performance, written in a plain ſtyle and good method. It is probable that he himſelf deſigned to make attempts for the diſcovery of this ſuppoſed paſſage; but an anterior project was that of ſettling ſome of the countries in the northern part of America. For this purpoſe, in 1583, with the aſſiſtance of his friends, and his brother ſir Walter Raleigh, he fitted out a ſmall fleet, with which he proceeded to Newfoundland. He took poſſeſſion of the harbour of St. John, in the queen's name, and granted leaſes of the circumjacent country, as patentee, to thoſe of his company who choſe to take them. He periſhed at ſea, ſitting in the ſtern of his veſſel, with a book in his hand, and was heard to cry, "Courage, my lads! we are as near heaven at ſea as at land." He deſerves to be recorded among the benefactors to his country, for his project of ſettling Newfoundland, the fiſhery of which coaſt is of ſo much advantage to this country.

GIL'BERT (William), a phyſician and experimental philoſopher, born in 1540, at Colcheſter, of which town his father had been recorder. After ſtudying at the Engliſh univerſities, he travelled abroad for improvement. Returning to his native country, he ſettled in London about 1573, became a member of the college of phyſicians, and practiſed in his profeſſion with great reputation. Queen Elizabeth appointed him her firſt phyſician,

ſician, and gave him a penſion; and king James continued him in the ſame reſpectable poſt. He died in 1603, and was buried at Colcheſter. Dr. Gilbert has perpetuated his name by a work in natural philoſophy, which affords one of the earlieſt examples of the method of treating ſuch ſubjects on the baſis of experimental enquiry. This was his book *De Magnete, magneticiſque Corporibus, & de magno Magnete Tellure, Phyſiologia nova*, Lond. 1600, folio. This performance, the compoſition of which had occupied many years of his life, is the firſt complete ſyſtem of magnetiſm. This work has been much commended; and lord Bacon inſtances it as a very meritorious attempt to found a philoſophical theory upon experiment, according to his own principles. It may be added, that the celebrated Halley afterwards applied Gilbert's hypotheſis of a great internal magnet in the earth, to explain the variation and dipping of the needle. Dr. Gilbert's attention to the nautical art was farther evinced by his invention of two very ingenious inſtruments for aſcertaining the latitude of any place without aſſiſtance from the heavenly bodies. Long after his death a work of his was publiſhed from two manuſcript copies in the library of ſir William Boſwell, entitled *De Mundo noſtro ſublunari Philoſophia nova*, Amſt. 1651, 4to.

GIL'BERT (Jefferay, lord chief baron), born in 1674. He was appointed one of the judges of the king's bench in Ireland in 1715; and, before the end of that year, was promoted to the rank of chief baron of the exchequer, which he held till the early part of the year 1722, when he was called to England. During the time that he preſided in the court of exchequer in Ireland, he was involved in a very arduous conteſt reſpecting the right of appeal to the Britiſh houſe of lords in equity cauſes, in which he incurred the cenſure of the houſe of lords in Ireland, for "betraying the ancient undoubted rights and privileges of that houſe;" and, with his brother barons, he was ordered into the cuſtody of the uſher of the black rod. The ground of this diſpute was completely done away by the act of the 23d of Geo. III. which declares, that "the right claimed by the people of Ireland to have all actions and ſuits at law or in equity which may be inſtituted in that kingdom, decided in his majeſty's courts therein finally, and without appeal from thence, ſhall be and is thereby eſtabliſhed and aſcertained for ever."

In May 1722, ſir Jefferay Gilbert took his ſeat as one of the barons of the exchequer in England, in the room of ſir James Montague. On the 7th of January 1724, he was made one of the commiſſioners of the great ſeal, together with ſir Joſeph Jekyll and ſir Robert Raymond: the ſeal continued in commiſſion till the 1ſt of June in the year ſucceeding, when ſir Peter King was conſtituted lord keeper; and, on the ſame day, ſir Jefferay became, on the appointment of ſir Robert Eyre to the chief juſticeſhip of the common pleas, lord chief baron, which office he filled during nearly one year and a half, when he died at Bath. Thus it appears that he ſat as judge in different courts for above ſeven years in Ireland, and five in England. His moſt valuable production left to poſterity is "The Law of Evidence," an improved edition of which was publiſhed by Mr. Capel Loſft, in 2 vols. 8vo. 1791.

GIL'BERT's ISLAND, an iſland near the ſouth-weſt coaſt of Terra del Fuego. Lat. 55. 13. S. lon. 71. 7. W. Greenwich.

GIL'BERT's TOWN, a town of the American States, in Virginia: thirty miles north of Charlotteſville.

GILBER'TIA, *ſ.* in botany, a genus of the claſs decandria, order monogynia.—Calyx four or five toothed: coroſla four or five petalled; nectary cylindrical, truncate; antheræ inſerted into the margin of the nectary; capſule four-celled, the cells one-ſeeded.

Species. 1. Gilbertia decandra: leaves alternate, oblong, entire, tapering to both ends; racemes axillary. Native of the Mauritius.

2. Gilbertia ovata: leaves alternate, obovate, obtuſe, entire; peduncles one-flowered, axillary; fruit downy. 3. Gilbertia heterophylla: leaves alternate, obovate, entire, and ſinuate; peduncles one-flowered, axillary; fruit glabrous. Natives of Bourbon.

4. Gilbertia oppoſitifolia: leaves oppoſite, elliptic, rather obtuſe, entire; peduncles axillary, three-flowered. Found at the Mauritius. This genus is the Quiviſia of Cavanilles and Juſſieu.

GIL'BERTINE, *ſ.* A religious of an order thus called from St. Gilbert of Sempringham, in the county of Lincoln, who founded the ſame about the year 1148: the monks of which obſerved the rule of St. Auguſtine, and were accounted canons; and the nuns that of St. Benedict. The founder of this order erected a double monaſtery for men and women, but parted by a very high wall. St. Gilbert himſelf founded thirteen monaſteries of this order, viz. four for men alone, and nine for men and women together, which had in them ſeven hundred brethren and fifteen hundred ſiſters. At the diſſolution there were about twenty-five houſes of this order in England and Wales.

GIL'BERTINE, *adj.* [from the *ſ.*] Of the above order.—Thirteen religious houſes of the ſame order had in them ſeven hundred *Gilbertine* brethren, and eleven hundred ſiſters. *Weever.*

GILBO'A, the name of a range of mountains ſituated in Paleſtine, near which the Iſraelites under king Saul were totally defeated by the Philiſtines. In this battle the three ſons of Saul, Jonathan, Abinadab, and Malchiſhua, were ſlain in the field; and Saul being greatly wounded, at length fell a voluntary victim to his own ſword. 1 *Sam.* xxxi.

To GILD, *v. a.* pret. *gilded*, or *gilt*, [gilban, Sax.] To waſh over with gold; to cover with foliated gold:

Purchaſing riches with our time and care,
We loſe our freedom in a *gilded* ſnare. *Roſcommon.*

Her joy in *gilded* chariots when alive,
And love of ombre, after death ſurvive. *Pope.*

To colour with any yellow matter:

Thou did'ſt drink
The ſtale of horſes, and the *gilded* puddle,
Which beaſts would cough at. *Shakeſpeare.*

To adorn with luſtre:

No more the riſing ſun ſhall *gild* the morn,
Nor ev'ning Cynthia fill her ſilver horn. *Pope.*

To brighten; to illuminate.—The lightſome paſſion of joy was not that trivial, vaniſhing, ſuperficial, thing, that only *gilds* the apprehenſion, and plays upon the ſurface of the ſoul. *South.*—To recommend by adventitious ornaments:

For my part, if a lie may do thee grace,
I'll *gild* it with the happieſt terms I have. *Shakeſpeare.*

Yet, oh! th' imperfect piece moves more delight:
'Tis *gilded* o'er with youth to catch the ſight. *Dryden.*

GILD, *ſ.* [gilban, Sax. to pay.] A tax, a tribute, a contribution; a ſociety, a fraternity.

GILD'ABLE, *adj.* Liable to pay a gild.

GILD'ALE, *ſ.* A drinking-bout where every one pays an equal ſhare. *Scott.*

GIL'DAS, ſurnamed THE WISE, a Britiſh monk in the ſixth century, and the moſt ancient Britiſh writer now extant, born in the year 520. He is alſo by many authors ſurnamed BADONICUS, to diſtinguiſh him from a GILDAS ALBANIUS, who is ſuppoſed to have lived at an earlier period. He was a diſciple of Iltutus, abbot of Morgan, and became a monk of Bangor, where he diligently applied himſelf to the learning of the times; and particularly to the ſtudy of the Scriptures, in order to qualify himſelf for the duties of a public preacher. In 581, he wrote his *Epiſtola de Excidio Britanniæ, & Caſtigatione*

gatione Ordinis Eccleſiaſtici, containing a lamentation over the miſeries of his countrymen, and ſevere reproofs of the corruption and profligacy of manners in which all ranks were ſharers, and of which he draws a melancholy picture. Archbiſhop Uſher refers this epiſtle to the year 564; but Cave, on the authority of Ralph de Dicetus, Polydore Virgil, Bale, &c. gives it the date which we have adopted. This curious remain of Britiſh eccleſiaſtical antiquities was firſt printed by Polydore Virgil, in 1525, 8vo. from an imperfect and corrupt copy; which edition was followed in the eighth volume of the *Biblioth. Patr.* It was afterwards publiſhed in 1568, by John Joſſeline, from another manuſcript not much more correct than the former. The lateſt and beſt edition of it was publiſhed by the learned Dr. Thomas Gale, from a more ancient and perfect manuſcript than either of the preceding, in 1691, in the firſt volume of his *Hiſtoriæ Britannicæ, Saxonicæ, &c.* Gildas alſo wrote ſeveral Letters, of which there are numerous fragments in an old collection of Canons, preſerved among the manuſcripts in the Cotton library. Other pieces which have been aſcribed to him by Bale, Pitts, &c. are conſidered by the beſt judges to be either clearly ſuppoſititious, or the productions of other authors. In the latter number is the *Hiſtoria de Geſtis Britonum*, which was written by Nennius. With reſpect to the time of Gildas's death there is alſo much difference among writers, ſome ſtating it to have taken place at the abbey of Glaſtonbury, in the year 570; while according to others, he died at the abbey of Bangor, in 590.

There was another GILDAS, whom Bale calls the fourth of that name, who was of Iriſh extraction, but born in Wales, where he embraced the monaſtic life, and flouriſhed in 820 and the following years. He wrote a Kalendar of the Saints, which is to be found among the manuſcripts of the Cotton library, the preface of which is inſerted by archbiſhop Uſher in his *Epiſt. Hibernic.* p. 55. Leland alſo makes mention of another GILDAS, who was a poet, and who is ſaid to have drawn up the prophecies of Merlin in Latin verſe, and to have compoſed a number of epigrams, which Giraldus Cambrenſis pronounced to be not inelegant.

GIL'DEHAUSZ, a town of Germany, in the circle of Weſtphalia, and county of Bentheim: three miles ſouth-weſt of Bentheim.

GIL'DER, *ſ.* One who lays gold on the ſurface of any other body.—*Gilders* uſe to have a piece of gold in their mouth, to draw the ſpirits of the quickſilver. *Bacon.*—A coin, from one ſhilling and ſixpence to two ſhillings:

I am bound
To Perſia, and want *gilders* for my voyage. *Shakeſpeare.*

GILD'ING, *ſ.* The art of laying gold on any ſurface by way of ornament; for as mankind could not have every thing that they wiſhed for of gold, they were contented with covering over, or incruſting, many articles with this precious metal. For that purpoſe the gold was hammered into plates, with which various articles of furniture, and even the walls of apartments, were in early ages covered. It was this exceſs of vanity that incurred the cenſure of the philoſopher: "When we cover our houſes with gold," ſays Seneca, "what elſe do we do than rejoice in deception? for we know that coarſe wood is concealed under that gold." It was perhaps in imitation of this ancient luxury, that the rajah of Ghergong was induced to line his palace with plates of poliſhed braſs. See the article GHERGONG.

At firſt the plates of gold adapted to this uſe were thick, ſo that gilding in this manner was very expenſive; but in proceſs of time the expence was much leſſened, in proportion as the art was diſcovered of making theſe gold plates thinner. Articles, however, ornamented in this manner were ſtill coſtly, becauſe the valuable metal was always liable to be loſt or purloined. Yellow golden ſize, and bronze, were then tried; but theſe did not fully produce the required effect, as they wanted that ſplendour peculiar to the precious metal, and appeared languid and dull. It was not till modern times that artiſts thought of overlaying with ſilver, or ſome cheaper white metal, thoſe things which they wiſhed ſhould have the appearance of gold, and then covering them over with a yellow tranſparent varniſh, in order to give to the white metal the colour of gold, and to that colour the ſplendour of metal. This ingenious proceſs, which is employed all over Europe in gilding wooden frames, coaches, and various articles, and which was formerly uſed in the preparation of the ſplendid leather tapeſtry, was invented towards the end of the ſixteenth century. Anderſon, in his "Origin of Commerce," ſays, that it was introduced into England by one Evelyn, in 1633; and quotes, in ſupport of this aſſertion, The preſent State of England, printed in 1683. This invention, however, does not belong to the Engliſh, but to the Italians, and properly to the Sicilians. Antonino Cento, an artiſt of Palermo, found out the gold varniſh now in uſe, and in 1680 publiſhed an account of the method of preparing it, which is as follows: "Take gum lac, and having freed it from its impurities, put it into a ſmall linen bag, and waſh it, in pure water, till the water no longer becomes red; then take it from the bag and ſuffer it to dry. When it is perfectly dry, pound it very fine; becauſe the finer it is pounded it will diſſolve the more readily. Then take four parts of ſpirit of wine, and one of the gum, reduced, as before directed, to an impalpable powder, ſo that for every four pounds of ſpirit you may have one of gum: mix theſe together, and, having put them into an alembic, graduate the fire ſo that the gum may diſſolve in the ſpirit. When diſſolved, ſtrain the whole through a ſtrong piece of linen cloth; throw away what remains in the cloth, as of no uſe, and preſerve the liquor in a glaſs bottle cloſely corked. This is the gold varniſh employed for gilding any kind of wood."

For the purpoſe of gilding metals, the artizan either covers the metal directly with a leaf of gold, or he forms an amalgam of gold and quickſilver, with which he rubs the metal, and afterwards volatilizes the quickſilver by means of heat. This has been uſually called *water-gilding*; a term probably at firſt confined to ſuch proceſſes only as demand the uſe of a ſolution of gold in aqua regia, now called *nitro-muriatic acid*. The ſucceſs of this operation depends in a great meaſure on the attention that is paid to render perfectly clean the ſurface of the metal which is to be united to the gold, becauſe then the junction is more perfect. Silver, copper, braſs, and pinchbeck, may be gilded with eaſe by either of the two above-mentioned methods; but ſteel and iron oppoſe many obſtacles, and cannot be gilded in a permanent manner by any of the proceſſes hitherto diſcovered. The reaſon is, that the ſurface of ſteel and iron cannot be kept perfectly clean during the operation. In this proceſs, therefore, it is neceſſary to begin with heating the iron or ſteel upon which it is propoſed to apply the gold. This circumſtance requires particular attention on the part of the artiſt; for if he does not heat it enough, he runs the riſk of not obtaining a ſufficient power of adheſion; and if he heats it too much, he is liable to ſubject the metal to the commencement of oxydation, beſides incurring the danger of deſtroying the temper of ſharp ſteel inſtruments, as ſwords, daggers, &c. that are to be heated.

Gilding with the Amalgam and Nitrat of Mercury.—The difficulty of the operation, and the danger of its failure, are augmented, if it is intended to gild iron or ſteel by means of the amalgam; for as the metal has no affinity with the mercury, an intermediate matter is required to diſpoſe its ſurface to receive it. For this purpoſe the parts that are to be gilded are wetted with a ſolution of mercury in nitrous acid, which mordant is denomi-

nated by artiſts *mercurial water*. The acid, which has a greater affinity for the iron than for the mercury, attacks the former, and depoſits a thin layer of mercury inſtead of that of iron, which it takes away. This layer effects the union of the amalgam which is then applied with the iron; which combination would not have taken place without it. But by this proceſs the ſurface of the iron is injured by the action of the nitric acid, and the union is ſo ſlight that a brilliant and durable gilding can never be produced by this method.

Gilding with the Amalgam and the Sulphat of Copper.—Sometimes with a camel-hair pencil a ſolution of ſulphat of copper is applied to that part of the ſteel which is propoſed to be gilded. By a chemical affinity, exactly ſimilar to that juſt deſcribed, a thin layer of copper is precipitated upon the iron. The copper having an affinity for the mercury, is capable of ſerving as an intermediate ſubſtance, and effecting a kind of union between the amalgam and the iron. But in both of theſe proceſſes the ſurface of the ſteel is always injured by the action of the acid, and in both a degree of heat muſt likewiſe be employed ſufficient to volatilize the mercury. In conſequence of theſe diſadvantages moſt artiſts adopt the firſt proceſs, which conſiſts in applying the gold-leaf to the metal when hot, and in fixing it by the action of the burniſher. This proceſs is troubleſome, but the ſurface of the iron is leſs liable to be injured by it.

Improved Proceſs for gilding Iron or Steel.—This proceſs is as yet but little known. Into a ſolution of gold in nitro-muriatic acid pour about twice the quantity of ether; this mixture ſhould be made with care, and in a large veſſel. Shake the two liquids together, and as ſoon as the mixture has ſettled, the ether will be ſeen ſeparating from the nitro-muriatic acid, and floating on the ſurface. The acid becomes colourleſs, and the ether acquires a colour, becauſe it takes away the gold from the acid. The two liquids are poured into a glaſs funnel, the pipe of which muſt be very ſmall, and muſt be ſtopped till the two fluids have ſettled, when they will be completely ſeparated from each other. Being then opened, the acid which, on account of its weight, is lowermoſt, runs out the firſt; when it is entirely drawn off, ſtop the funnel, which then contains only the ſolution of gold in ether; this is put into a phial, well corked, and kept for uſe. To gild iron or ſteel with this preparation, firſt poliſh the ſurface with the fineſt emery, or rather with colcothar moiſtened with brandy. Then, with a ſmall bruſh or pencil, apply the auriferous ether; the liquid ſoon evaporates, and the gold remains. Heat, and afterwards rub it with the burniſher. By means of this ſolution of gold in ether, the artiſt may, with a pen or pencil, trace all kinds of figures upon iron, which is the method employed for plating the wares of Sohlingen. As every artiſt may not have at hand the receipts for the beſt method of preparing nitro-muriatic acid and ether, we ſhall here ſubjoin them.

For the Solution of Gold in Nitro-muriatic Acid.—Into a ſufficient quantity of nitrous acid put as much ſal-ammoniac as it is capable of diſſolving cold, and even in a cool place. Into this acid put gold reduced to filings or thin leaves, and place it in a ſituation where it will become warm till the metal is completely diſſolved. The ſolution aſſumes a yellow colour, being that of the gold, and ſtains the ſkins of animals purple.

Method of preparing Sulphuric Ether.—Into a large retort put one pound and a half of highly-rectified ſpirit of wine, to which pour ſlowly two pounds of the moſt concentrated ſulphuric acid, ſlightly agitating the mixture as you add the acid. The mixture will become warm, and the vapours that will be abundantly diſengaged will have a pungent ſmell. When you have poured in all the ſulphuric acid, add half a pound of ſpirit of wine, which will rince the neck of the retort on its paſſage; mix the whole well, and let it ſtand for ſome time, previouſly cloſing the mouth of the retort. Place it afterwards on a ſand-bath; adapt to it a large recipient, and kindle the fire: it ſhould be ſlow and moderate, and the heat ought not to be communicated to the recipient. Continue the operation till a ſulphuric ſmell is emitted from the globe of the recipient. Unlute and collect the produce, which is a mixture of ether, acidulated water, ſpirit of wine, ſulphuric acid, and a carbonic matter. To rectify this, put it again into a retort; and after adding a ſmall quantity of alkali to abſorb the acid, place the retort on the ſand-bath, which heat very moderately; the firſt half of the liquid that paſſes over is extremely pure ether. The reſidue of the firſt diſtillation may be employed to prepare a farther quantity of ether. It will be ſufficient to pour upon it ſome good ſpirit of wine, but leſs in quantity by one-third than the firſt time; diſtil, rectify, &c. Thoſe who may find a difficulty in preparing ether may ſubſtitute for that liquid an eſſential oil, as ſpirit of lavender, oil of turpentine, &c. theſe liquids poſſeſs the property of ſeparating gold from a nitro-muriatic ſolution.

Of gilding Silver cold.—Independently of the preceding methods, ſilver may be gilded cold, and with great eaſe, by means of the following proceſs. Diſſolve ſome gold in nitro-muriatic acid, and dip linen rags in the ſolution. Burn the rags, carefully preſerving the aſhes, which will be very black, and, by retaining the gold are found much heavier than common aſhes. Rub them on the ſurface of the ſilver you intend to gild, for which purpoſe a piece of leather or cork may be employed. This action attaches the particles of gold to the ſurface of the ſilver; waſh the latter, when you will perceive ſome ſlight traces of gilding; which will appear much more diſtinctly when rubbed with the burniſher. This proceſs is uſually called *dry-gilding*.

Of gilding Braſs.—The ſurface of delicate inſtruments made of braſs may be preſerved a conſiderable time uninjured, by gilding them in the following manner. Procure a ſolution of ſaturated gold, and after having evaporated it to the conſiſtence of oil, leave it to cryſtallize. Diſſolve the cryſtals in pure water, and after plunging into this ſolution the articles that are to be gilded, waſh them in pure water, and ſubmit them to the action of the burniſher. Repeat the proceſs till they are completely gilded. The ſolution of the cryſtals of nitro-muriat of gold is preferable to a ſimple ſolution of the metal, becauſe the latter always contains a portion of acid at liberty, which attacks more or leſs powerfully the ſurface of the braſs, and deſtroys its poliſh.

Method of Gold-varniſhing Braſs.—A varniſh, very much reſembling the gold varniſh of Palermo deſcribed above, may be applied to braſs, by covering it with a ſolution of gum-lac in ſpirit of wine. It preſerves its brilliancy as long as the varniſh laſts. The articles prepared in this way muſt not be rubbed with too hard a bruſh, or with chalk; they muſt only be wetted with linen rags. This varniſh is prepared in the following manner. Diſſolve two ounces of very pure gum-lac in forty-eight ounces of alkohol, and place the ſolution upon a ſand-bath in a moderate heat. To prevent part of the ſpirit of wine from evaporating, as well as the veſſel from burſting if too cloſely ſtopped, cover the neck with a bladder, in which ſeveral holes muſt be made with a pin. In another veſſel, and in the ſame quantity of ſpirit of wine, diſſolve an ounce of gum-tragacanth, in grains. Mix the two ſolutions when complete; put into it three grains of ſanders wood, and let the whole ſtand for twelve hours in a moderate heat. Filtre through paper, and keep it for uſe in a very clean phial. Sanders wood is preferable to any other ſubſtance for giving a gold colour to the varniſh made with lac. If you intend it to be pale, and not to alter the colour of the braſs, omit this colouring principle; and if you want a higher gold yellow, add half as much more wood as the quantity ſpecified above.

Painting with gold upon porcelain or glaſs, is done with the powder of gold, which remains behind after diſtilling the aqua regia, or nitro-muriatic acid, from a ſolution of that metal. It is laid on with borax and gum water, burned in, and poliſhed. The gilding of glaſs is commonly effected by covering the part with a ſolution of borax, and applying gold leaf upon it, which is afterwards fixed by burning.

The gilders of wood and other compoſitions deſigned to ſupply the place of carved work, make uſe of two methods: the one called *oil-gilding*, or gilding in oil, becauſe the gold is made to adhere by means of an oily compoſition; the other is commonly called *burniſhed gold*, on account of the burniſh it is capable of receiving, which is one of the principal advantages it poſſeſſes over the other method.

Gilding in oil is performed by means of a paint ſold under the name of gold ſize. It conſiſts of drying oil, that is to ſay, linſeed oil boiled upon litharge, and mixed with yellow ochre. It is ſaid to improve in its quality by keeping. This is laid upon the work; and when it has become ſo dry as to adhere to the fingers without ſoiling them, the gold leaf is laid on, and preſſed down with cotton. This method of gilding is proper for work intended to be expoſed to the weather.

The method of gilding in burniſhed gold, conſiſts in covering the work with parchment ſize and whiting, thinly laid on at five or ſix different times. This is covered with a yellow ſize made of Armenian bole, a little wax, and ſome parchment ſize; but in this, as in moſt other compoſitions uſed in the arts, there are variations which depend on the ſkill of the artiſt. When the ſize is dry, the gold is applied upon the ſurface previouſly wetted with clear water. A certain number of hours after this application, but previous to the perfect hardening of the compoſition, the gold may be very highly burniſhed with a tool of agate made for that purpoſe. This gilding is fit only for work within doors; for it readily comes off upon being wetted.

The edges of the leaves of books are gilded by applying a compoſition of one part Armenian bole, and one quarter of a part ſugar-candy, ground together with white of eggs. This is burniſhed with a dog's tuſk, or ivory poliſher, while the book remains in the preſs, and the gold is laid on by means of a little water.

The gold prepared for painting, or enamelling, is called *ſhell-gold* or *gold-powder*, and may be obtained by amalgamating one part of gold with eight of quickſilver, and afterwards evaporating the latter, which leaves the gold in the form of powder; or otherwiſe the metal may be reduced to powder by mechanical trituration. For this purpoſe, gold-leaf muſt be ground with honey or ſtrong gum-water for a long time; and when the powder is ſufficiently fine, the honey or gum may be waſhed off with water.

Leather may be gilded either with leaf-braſs or ſilver, but moſt commonly by the latter; in which caſe a gold-coloured varniſh is laid over the metal, as directed above. Tin-foil is now very frequently uſed inſtead of ſilver-leaf, for this leſs perfect kind of gilding; but it muſt only be uſed upon ſuch works as do not poſſeſs flexibility. Among the falſe gilding may alſo be reckoned that which is made with the thin leaves of copper or braſs, called *Dutch-leaf*, upon the ſurface of paper in diverſe figures and flowers, and denominated *gilt imboſſed paper*, commonly uſed for the coverings of children's books, and for ornaments of various kinds.

By ſeveral ancient ſtatutes, the gilding of any metal but ſilver, and church ornaments; or ſilvering any thing except the apparel of peers, &c. and metal for knights' ſpurs, is liable to forfeiture of ten times the value, and a year's impriſonment. None ſhall gild rings or other things made of copper or latten, on pain to forfeit five pounds to the king, and damages to the party deceived. For gilding ſilver wares, no perſon may take above four ſhillings and eight-pence for a pound of troy weight, under penalties. 5 *Hen.* IV. c. 13. 2 *Hen.* V. c. 4. 8 *Hen.* V. c. 3.

GILD'MERCHANT, *ſ.* One of thoſe merchants which have privilege to hold pleas of lands among themſelves. *Scott.*

GIL'DO, ſon of Nabal, and brother to the tyrant Firmus, ſerved the emperor Theodoſius in his brother's revolt in 373 with ſo much fidelity, that the forfeited patrimony of the family was beſtowed upon him, and he was raiſed to the dignity of the chief command in Africa. When diſſenſions aroſe between the eaſtern and weſtern empires, Gildo was perſuaded by the miniſter Eutropius to revolt from Honorius his legal ſovereign, and acknowledge Arcadius. In the mean time a deadly feud aroſe between Gildo and his younger brother Maſcezel, in which the latter had been obliged to take refuge at the court of Honorius. Gildo inſtantly ſatiated his vengeance upon the two children of his brother, whom he barbarouſly murdered. Maſcezel, burning for revenge, was employed by Stilicho to lead a choſen but ſmall body of Europeans to the invaſion of Africa. They landed in 398, and encamped in the face of the army of Gildo, which was ſoon overthrown and defeated. Gildo eſcaped to the ſea-ſhore, where he embarked with an intention of ſeeking a foreign refuge, but being driven by adverſe winds to the harbour of Tabraca, he was ſeized by the inhabitants and thrown into priſon. There, an act of ſuicide ſaved him from the fate he had to expect from an injured brother. His revolt was conſidered as an event of ſo much importance to the empire, that the poet Claudian made the "Gildonic war" the ſubject of one of his tributes to the honour of the hero Stilicho; but it is come down to us in a mutilated ſtate.

GILD'RENT, *ſ.* Certain rent payable to the king from any gild or fraternity.

GIL'EAD (Land of), or MOUNT GILEAD, a part of Paleſtine, ſituated eaſt of Jordan, which, previous to its conqueſt by Iſrael, formed a part of the kingdom of the Amorites, whoſe laſt king, Sihon, in attempting to hinder their paſſage through his territory, loſt both his kingdom and his life. Gilead being part of their firſt acquiſition in Paleſtine, Moſes immediately, in compliance with their requeſts, divided one half to the tribe of Gad; the other to the half-tribe of Manaſſeh in Baſhan; as a part of their reſpective inheritances. It is frequently ſtyled Mount Gilead from the range of mountains forming its eaſtern boundary; and its uncommon fertility is celebrated throughout Scripture; hence we read of the balm and the flocks of Gilead, of its being a place for cattle, and of the Iſhmaelites and Midianites trading here for ſpicery, balm, and myrrh, even in the days of the patriarch Jacob. It is alſo remarkable for ſeveral events: here Jacob was overtaken by his uncle Laban; here the Ammonites encamped againſt Iſrael in the days of Jephtha; here Iſh-boſheth the ſon of Saul was proclaimed king by Abner in oppoſition to David; and here the armies of Iſrael and of Abſalom pitched, when Abſalom rebelled againſt David his father. It is alſo celebrated in the Maccabean wars for the battles fought by them under Judas, and is diſtinguiſhed by the names of *Galaad* or *Galead*. Several eminent perſons were natives of this place: Jair, who judged Iſrael twenty-two years; Jephtha, who judged Iſrael ſix years; and Barzillia, David's friend. Elijah the prophet alſo dwelt here. *Gen.* xxxi. 23. xxxvii. 25. *Numb.* xxxii. 1. *Deut.* ii. 26, &c. iii. 1–17. *Joſh.* xiii. 24–31. *Judges*, x. 3, 17. xi. 1, 29. 2 *Sam.* ii. 9. xvii. 26, &c. 1 *Macc.* v.

GIL'EAD, the ſon of Machir, and grandſon of Manaſſeh, had his inheritance allotted him in the mountains of Gilead, whence he took his name.

GIL'EAD (Balm of). See AMYRIS.

GIL'EADITE, *ſ.* An inhabitant of Gilead; a deſcendant of Gilead.

GILES, [*ægidius*, Lat. a ſhield, of αιγις, Gr. a goat's ſkin.] A proper name of men.

GILES OF VITERBO, a learned Italian prelate, deſcended from an obſcure family in the city whence he took his ſurname; and when eighteen years of age he embraced the monaſtic life among the hermits of St. Auguſtine. He diſtinguiſhed himſelf by the progreſs which he made in different branches of literature, and was appointed ſucceſſively profeſſor of philoſophy and theology in his order. He alſo acquired a high reputation for pulpit oratory, and is ſpoken of as one of the moſt able preachers of his time. He was employed by pope Julius II. to open the council aſſembled at the Lateran in the year 1512; and in 1517 was ſent legate into Germany by pope Leo X. on which occaſion he was promoted to a cardinal's hat. Afterwards he was ſent legate into Spain, and employed in many important negociations. He was at different periods nominated biſhop of Viterbo, Neni, Caſtro, Sutri, and patriarch of Conſtantinople. He died at Rome in 1532. Among the works which he left behind him are, 1. Remarks on the firſt three Chapters of Geneſis. 2. Commentaries on ſome of the Pſalms. 3. Dialogues. 4. Epiſtles. 5. Poems in Latin, &c. Fathers Martenne and Durand, in the third volume of their *Ampliſſima Collectio veterum Monumentorum*, have inſerted many letters of this prelate and his correſpondents, which are intereſting on account of the particulars contained in them relating to the events of the period in which he lived.

GIL'GAL, [Heb. rolling.] A town of Paleſtine, ſituated on the weſt bank of Jordan, eaſtward of Jericho, and probably in the tribe of Benjamin. Here the Iſraelites encamped immediately after their paſſage through Jordan; placing twelve ſtones taken from thence in this place; from Gilgal alſo they took the like number to place in the bed of Jordan, in commemoration of that event. Here alſo the ordinance of circumciſion was renewed by Joſhua, from which circumſtance it obtained the name of *Gibeah-haaraloth*, (i. e. the hill of the foreſkins,) and alſo Gilgal; God having declared, he had rolled away the reproach of Egypt from off them. Here likewiſe they kept the paſſover; and it continued to be the head-quarters of the Iſraelitiſh army during the conqueſt of Canaan. Though in Scripture it is not expreſsly ſtiled a city, yet it may be preſumed that was the caſe, as the prophet Samuel came here yearly to adminiſter juſtice. Here he proclaimed Saul king; and here he deſtroyed Agag king of the Amalekites; here alſo the men of Judah met king David on his return from his victory over Abſalom. *Joſh.* iv. 19, 20. v. 1–10. x. 15–43. 1 *Sam.* vii. 16. xi. 15. xv. 33. 2 *Sam.* xix. 15.

GIL'GAL HAM'NITHIM, *ſ.* [Heb. the rolling of the dead.] A tradition among the Jews, that at the coming of the Meſſiah, all the dead bodies of the Iſraelites, wherever they were buried, ſhall roll under ground to the holy land, and thence be raiſed up at the reſurrection. *Scott.*

GIL'GE, a town of Pruſſia, in the province of Smaland; twenty-eight miles north-weſt of Konigſberg.

GIL'GENBURG, a town of Pruſſia, in the province of Oberland: eighty miles ſouth-ſouth-weſt of Konigſberg.

GILIBER'TIA, or GILBERTIA, of Gmelin, the ſame with the QUIVISIA of Cavanilles and Juſſieu. See GILBERTIA.

GIL'IMER, or GELIMER, a deſcendant of the famous Genſeric, and the laſt king of the Vandals in Africa. See the article VANDALS.

GIL'ITZSTAIN, a town of Germany, in the duchy of Carinthia: ten miles eaſt-north-eaſt of St. Veit.

GILL (John), a learned Engliſh nonconformiſt divine, of the baptiſt denomination, born at Kettering in Northamptonſhire, in 1697. His father, who was of the ſame perſuaſion, ſent him early to a neighbouring grammar-ſchool, where he ſoon outſtript his companions in his claſſical acquirements. He was then taken home to aſſiſt in the buſineſs of his father; though he poſſeſſed an unconquerable love of learning, and diligently improved the hours of leiſure from buſineſs, not only to preſerve, but greatly to extend, his acquaintance with claſſical literature. Without any other aſſiſtance than Buxtorf's Grammar and Lexicon, he ſurmounted the difficulties of the Hebrew tongue, ſo as to be able to read the Hebrew Bible with great eaſe and pleaſure. In the mean time he had peruſed ſuch books on theological and controverſial ſubjects, as confirmed him in the calviniſtic principles in which he had been educated, and the diſtinguiſhing tenet of the ſect to which his father belonged; and as his mind was under the influence of ſtrong religious impreſſions, he was baptiſed, and received into communion with the baptiſt church at Kettering, in 1716. He had not been long a member of this church, before he commenced preaching in private, and was ſoon afterwards called by the congregation to the occaſional exerciſe of the miniſtry in public. In 1719 he was made paſtor of the baptiſt congregation in Horſlydown, in London, when in the twenty-ſecond year of his age; the duties of which ſituation he diſcharged for upwards of fifty-one years; and at the ſame time purſued his literary ſtudies with wonderful aſſiduity, as is ſufficiently apparent from his voluminous and laborious productions. When he had, in 1748, publiſhed the third volume of his Expoſition of the New Teſtament, the degree of doctor of divinity was conferred upon him by the Mariſchal college of Aberdeen. In 1767, Dr. Gill extracted, for Dr. Kennicott's uſe, the variations from the modern printed texts in the paſſages of the Old Teſtament quoted in the Talmuds, both of Jeruſalem and Babylon, and in the Rabboth; for which Dr. Kennicott, in the ſtate of his collation printed during the ſame year, acknowledged himſelf highly indebted to him. By his very laborious application, however, Dr. Gill brought on a decay of nature, to which he fell a ſacrifice in 1771, in the ſeventy-fourth year of his age. His ſentiments were ſtrictly calviniſtic; and his moral conduct not only unimpeachable, but exemplary. He was the author of, 1. An Expoſition of the Old and New Teſtament, in 9 vols. folio, publiſhed at different periods from 1746 to 1766. 2. A Body of Divinity, 1769 and 1770, in 3 vols. 4to. 3. The Cauſe of God and Truth, 1735, in defence of Calviniſm againſt the Arminians. 4. A Supplement to Mr. Whiſton's Eſſay towards reſtoring the true Text of the Old Teſtament, 1723, 8vo. intended to vindicate the divine authority and ſpiritual ſenſe of Solomon's Song. 5. The Prophecies of the Old Teſtament reſpecting the Meſſiah, conſidered, and proved to be literally fulfilled in Jeſus, 1728, 8vo. chiefly written in anſwer to Collins's Scheme of literal Prophecy conſidered. 6. A treatiſe On the Doctrine of the Trinity, 1731, 8vo. 7. A Diſſertation on the Antiquity of the Hebrew Language, Letters, Vowel Points, and Accents, 1767, 8vo. together with numerous ſingle ſermons, controverſial tracts on baptiſm, &c.

GILL, a townſhip of the American States, in Hampſhire county, Maſſachuſetts, on the weſt bank of Connecticut river.

GILL, *ſ.* [*agulla*, Span. *gula*, Lat.] The apertures at each ſide of a fiſh's head.—Fiſhes perform reſpiration under water by the *gills*. *Ray.*

The leviathan,
Stretch'd like a promontory, ſleeps or ſwims,
And ſeems a moving land, and at his *gills*
Draws in, and at his trunk ſpouts out, a ſea. *Milton.*

The flaps that hang below the beak of a fowl.—The turkeycock hath great and ſwelling *gills*, and the hen hath leſs. *Bacon.*—The fleſh under the chin.—Like the long bag of fleſh hanging down from the *gills* of the people in Piedmont. *Swift.*—[From *gilla*, barbarous Latin.] A meaſure of liquids, containing the fourth part of a pint.—Every bottle muſt be rinced with wine:

a *gill*

a *gill* may be enough. *Swift.*—A kind of meaſure among the tinners.—They meaſure their block-tin by the *gill*, which containeth a pint. *Carew.*—In the northern counties it is half a pint of liquid meaſure.—[From *Gillian*, the old Engliſh way of writing *Julian*, or *Juliana*.] The appellation of a woman in ludicrous language.—Each Jack with his *Gill*. *Ben Jonſon.*—The name of ground-ivy. See GLECHOMA. Malt liquor medicated with ground-ivy. A place hemmed in with two ſteep brows or banks, a rivulet running between them. *Ray.*—You may continue along this *gill*, and paſſing by one end of the village and its church for half a mile, it leads to an opening between two hills covered with fir-woods. *Gray's Letters.*

GILL'-HOUSE, *ſ.* A houſe where ardent ſpirit is ſold by the gill:

Thee ſhall each alehouſe, thee each *gill-houſe*, mourn,
And anſw'ring ginſhops ſourer ſighs return. *Pope.*

GIL'LEM's BAY, a bay on the ſouth coaſt of the iſland of St. Chriſtopher: half a league weſt of Baſſeterre.

GIL'LES (Peter), born at Albi, in 1490, diſtinguiſhed himſelf as a ſcholar and a traveller. After acquiring the knowledge of the learned languages and the philoſophy of the times, he viſited the coaſts of Provence, and thence travelled into Italy, making obſervations in natural hiſtory and antiquities. After his return, he paſſed ſome time with George d'Armagnac biſhop of Rhodes, afterwards cardinal, who engaged him to compoſe his book *De Vi et Natura Animalium*; dedicated to Francis I. in 1533; and ſome time after, that prince ſent him to travel in the Levant. He neglected, however, to furniſh him with proper ſupplies, ſo that, after undergoing many hardſhips, he was obliged to enliſt in the troops of ſultan Solyman II. for a ſubſiſtence. From Conſtantinople he returned in the train of the French ambaſſador in 1550, and went to Rome to his patron the cardinal d'Armagnac, where he died in 1555. Beſides the work already mentioned, he publiſhed ſome tranſlations from the Greek; and alſo two geographical pieces, *De Boſphoro Thracio*, *Lib.* III. and, *De Topographia Conſtantinopoleos*, *Lib.* IV. which are eſteemed as learned and accurate performances.

GIL'LES (Peter), a Swiſs proteſtant divine, who flouriſhed in the ſeventeenth century. He was miniſter of the reformed church at La Tour, in the valley of Lucerne, and author of ſome controverſial pieces in defence of the proteſtants againſt the catholics; and alſo of, An Eccleſiaſtical Hiſtory of the Churches of the Vaudois, publiſhed at Geneva in 1644, in 4to.

GILLESKA'AL, a town of Norway, in the dioceſe of Drontheim: two hundred and forty miles north of Drontheim.

GIL'LET, *ſ.* [the diminutive of *gill*.] A woman, in droll ſtyle.

GIL'LIFLOWER, *ſ.* ſee DIANTHUS; STOCK, ſee CHEIRANTHUS; QUEEN's, OR DAME's VIOLET, ſee HESPERIS.

GIL'LINGHAM, a ſmall ancient town in Dorſetſhire, ſituated on the Stour, near the foreſt of its own name; where, anno 1016, Edmund Ironſide vanquiſhed the Danes. It has a fair on Trinity Monday, and September 1. It is one of the largeſt pariſhes in the county, being forty-one miles in circuit, containing ſixty-four thouſand acres, trending chiefly on the borders of Wilts and Somerſet, four miles north-weſt of Shaftſbury. It has a manufacture of linen, but the chief produce is grazing and the dairies. Near it are the traces of an ancient reſidence of Norman or Saxon kings, 320 feet long, and 240 broad, ſurrounded by a rampart of earth. Henry I. reſided here, and king John repaired it at the expence of the county. Edward I. ſpent his Chriſtmas here in 1270; but the whole of the materials are removed, and the foundation of the houſe only can be traced, which was in the form of the letter L, in length one hundred and eighty feet, by eighty broad, and the foot of the letter forty-eight by forty. The area of the houſe contained 168,000 ſquare feet. It ſtood half a mile from the church, on the road to Shaftſbury, encompaſſed by a moat, now dry, in ſome places nine feet deep and twenty broad. The rampart appears to have been thirty feet thick. Here is a free-ſchool well endowed, a workhouſe, and two ſtone bridges. In 1694 it received damage to the amount of near 4,000l. by a fire. The church is a large ancient fabric.

GIL'LINGHAM, in Kent, diſtant one mile from Brompton, three from Chatham, and on the ſame ſide of the Medway. Part of Chatham dock is ſituated in this pariſh; and here is a caſtle well furniſhed with guns that command the river. At this place ſix hundred Norman gentlemen, who came over in the retinue of the two princes Alfred and Edward, were barbarouſly murdered by earl Godwin. The archbiſhop of Canterbury had here an elegant palace, the ancient hall of which is now converted into a barn. Near it are the remains of the chapel, &c. and a great part of the whole of its original outer walls may be traced.

GILLO'RI, an iſland of the American States, on the coaſt of Weſt Florida, divided from Dauphin Iſland by a narrow channel, through which a boat may paſs with ſome difficulty; and between Gillori and the main land, on the weſt ſide of Mobile Bay, there is a chain of ſmall iſlands, through which is a paſſage of four feet, called Paſſe au Heron.

GILL'SAY, a ſmall iſland of Scotland, between Lewis and North Viſt.

GIL'LY LOU'GH, a lake of Ireland, in the county of Sligo: two miles weſt of Sligo.

GIL'LY-SUR-LOI'RE, a town of France, in the department of the Saône and Loire, and chief place of a canton, in the diſtrict of Bourbon Lancy, ſituated on the Loire: one league and a half ſouth of Bourbon Lancy.

GIL'MANTOWN, a townſhip of the American States, in Strafford county, New Hampſhire, ſouth-weſterly of lake Winnipiſeogee, and fifty-two miles north-weſt of Portſmouth. It was incorporated in 1727, and contained 775 inhabitants in 1775; and in 1790, 2613.

GI'LOH, a city of Paleſtine, belonging to the tribe of Judah, ſituated in the mountains of that province. It was the birth-place of Ahithophel, Abſalom's wife counſellor. *Joſh.* xv. 51. 2 *Sam.* xv. 12.

GIL'OLO, one of the Molucca iſlands, in the Eaſtern Indian Ocean; about ſeventy leagues long, and two hundred and fifty in circumference, ſubject to the Dutch. It is ſaid the air is very hot and unwholeſome, that the country is very fertile in rice and ſago. The natives are repreſented to be well made, but ſavage and cruel, living without laws or fixed habitations. It neither bears cloves or nutmegs. The equinoctial line runs through the ſouthern part of it. Lon. 128. E. Greenwich.

GIL'ONITE, *ſ.* An inhabitant of Giloh.

GIL'PIN (Bernard), an excellent Engliſh divine, diſtinguiſhed by the title of *Apoſtle of the North*, deſcended from a reſpectable family in Weſtmoreland, and born at Kentmire in that county, in 1517. At ſixteen years of age he was ſent to the univerſity of Oxford, and entered a ſcholar on the foundation at Queen's college. In 1539 he took his degree of bachelor of arts; and in 1541 that of maſter of arts; and about the ſame time was elected fellow of his college, and admitted into holy orders. Mr. Gilpin's attachment to an academic life, determined him to prolong his ſtay at Oxford till he reached the thirty-fifth year of his age. In the mean time he had commenced bachelor in divinity in the year 1549. In 1552 his friends obtained for him the vicarage of Norton, in the dioceſe of Durham, which with much

difficulty he was prevailed upon to accept; but before he went to reſide on it, he was appointed to preach before his majeſty at Greenwich. While Mr. Gilpin was in London, he frequently viſited Tonſtal biſhop of Durham, who was his uncle, and at that time a priſoner in the Tower under a ſentence of miſpriſion of treaſon. From London Mr. Gilpin repaired to his pariſh, where he made it his principal endeavour to inculcate moral virtue, and to diſſuade from thoſe vices which he obſerved moſt prevalent. Yet a diffidence of himſelf aroſe, which gave him ſome uneaſineſs. He thought that he had engaged too ſoon in his office; and that he could not ſufficiently diſcharge it. He therefore reſigned his living, and determined to go abroad. He went firſt to Mechlin, and then to Louvain; and made frequent excurſions to Antwerp, Ghent, Bruſſels, and other places in the Low-countries, but chiefly reſided at Louvain, where he was introduced to perſons of the greateſt reputation for their learning.

After Mr. Gilpin had reſided two years in Flanders, he left Louvain and went to Paris, where his firſt care was to ſuperintend the printing of biſhop Tonſtal's Treatiſe on the Euchariſt, which he did to that prelate's entire ſatisfaction. In Paris he continued about twelve months; and having fully ſatisfied all his ſcruples on the ſubject of religion, and being firmly convinced of the truth of the general doctrines of the Reformation, he returned to England in 1556. Immediately upon his arrival he haſtened to viſit biſhop Tonſtal, who received him with great friendſhip, and gave him the archdeaconry of Durham, to which the rectory of Eaſington was annexed. He now repaired to his pariſh, which he found in great diſorder; but with a firm reſolution of doing what good he could in it, he ſet himſelf in earneſt to reprove vice, to encourage virtue, and to explain the nature of true religion, with a freedom by no means ſuited to thoſe dangerous times. Againſt non-reſidence and pluralities he inveighed with the greateſt earneſtneſs, and cenſured with equal freedom the vices of the clergy, by which they diſgraced their order, and eſſentially injured the intereſts of religion. This ſo much irritated the clergy in the dioceſe, that a charge of hereſy, conſiſting of thirteen articles, was drawn up againſt him; and he was accuſed in form before the biſhop of Durham. But Tonſtal, by ſkilful management, found a method of diſmiſſing the cauſe ſo as to protect his nephew, without endangering himſelf. The malice of his enemies, however, would not ſuffer Mr. Gilpin to remain in peace, and they made uſe of the baſeſt arts to inflame the people againſt him. By theſe means they created him ſo much trouble, that he found himſelf incapable of undergoing the fatigue of both his places, and begged leave of the biſhop to reſign either his archdeaconry or his pariſh; but his lordſhip would not ſuffer them to be ſeparated, which occaſioned Mr. Gilpin to reſign them both, and to enter the biſhop's family in the capacity of his domeſtic chaplain. Mr. Gilpin did not remain long unbeneficed; for a vacancy taking place about this time in the rich rectory of Houghton-le-ſpring, he was preſented to that incumbency. This living was of conſiderable value, but the duty of it was proportionally laborious. It was ſo extenſive, that it contained no leſs than fourteen villages; all of which had been ſhamefully neglected. Upon his arrival, the people crowded about him, and heard him with great attention, perceiving him to be a teacher of a very different kind from thoſe to whom they had hitherto been accuſtomed; and by his truly paſtoral and affectionate treatment, he quickly gained their confidence, reſpect, and attachment. Mr. Gilpin had not been long ſettled at Houghton, before biſhop Tonſtal was deſirous of ſtill farther improving his fortune, by preſenting him to a vacant prebend in the cathedral of Durham. But Mr. Gilpin, reſolving not to accept of it, told the biſhop, "That by his bounty he had already more wealth, than, he was afraid, he could give a good account of. He begged, therefore, that his lordſhip would beſtow this preferment on one by whom it was more wanted." Mr. Gilpin now lived in a retired manner, devoting himſelf with unwearied induſtry to the inſtruction and reformation of his flock, and cautiouſly avoiding every opportunity of giving offence to the neighbouring clergy. The exemplarineſs of his conduct and manners, however, was a ſtriking ſatire on their negligence and irregularities; and their malice determined them, if poſſible, to remove ſo diſagreeable a contraſt. With this deſign they drew up a ſecond ſet of articles againſt him, and brought him once more before the biſhop of Durham; who again found means to protect his nephew. But from this period the biſhop's favour towards him viſibly declined; probably, becauſe he apprehended that his farther patroniſing his kinſman, who, he thought, in many inſtances, carried his piety and zeal to exceſs, might tend to involve himſelf in ſuſpicions and inconveniences. To ſhew his diſlike of his conduct, he ſtruck him out of his will, of which he had before made him the executor. This was not leſs than Mr. Gilpin expected. He was ſorry, indeed, to ſee the biſhop diſguſted; acknowledged his great obligations to him; and would have given up any thing to ſatisfy him, excepting his conſcience. The malice of Mr. Gilpin's enemies had now its full force. Enraged at their ſecond defeat, they cauſed thirty-two articles to be drawn up againſt him, and tranſmitted them to the mercileſs Bonner, biſhop of London. Mr. Gilpin was ſpeedily appriſed of the meaſures taken againſt him, and earneſtly entreated to provide for his ſafety by withdrawing from the kingdom. But their perſuaſions were ineffectual; for having long been preparing himſelf to ſuffer for the truth, he now determined not to ſhrink from it. He therefore waited with great compoſure for the arrival of Bonner's meſſengers, after having ordered his ſervant to provide a long garment for him, in which he might go decently to the ſtake. Within a few days he was apprehended; but before he reached London an account of queen Mary's death met him on the road, by which event he was delivered from any farther perſecution. Mr. Gilpin, thus providentially reſcued from his enemies, returned to Houghton through crowds of people, who expreſſed the utmoſt joy on his deliverance.

Upon the acceſſion of queen Elizabeth, Mr. Gilpin's friends at court thought it a good opportunity to uſe their intereſt in his favour. He was accordingly recommended to the queen, and nominated by her majeſty to the biſhopric of Carliſle; but Gilpin, who knew nothing of what was going forwards in his favour, could not by any means be perſuaded to accept it. In 1561 he had an offer made him of the provoſtſhip of Queen's college, Oxford; but this likewiſe he declined, and contented himſelf with his living of Houghton, where he beſtowed an unwearied application to his paſtoral duties. He was not ſatisfied with giving his advice in public, but inſtructed frequently in private, and encouraged his pariſhioners to come to him for the ſolution of their doubts and difficulties. Towards thoſe whom he thought well-diſpoſed, his manner was moſt engaging; and even his reproofs were urged with ſuch gentleneſs, that they rarely gave offence, and always appeared to be the effects of friendſhip. He well knew, however, that it was an eaſier taſk to prevent vice, than to correct it; to form the young to virtue, than to reform the bad habits of the old. He therefore employed much of his time in endeavouring to improve the minds of the younger part of his pariſh; ſuffering none to grow up in an ignorance of their duty, but preſſing it, as the wiſeſt part, to mix religion with their labour, and amidſt the cares of this life to have a conſtant eye upon the next. He was alſo very aſſiduous in preventing law-ſuits among his pariſhioners. His hall was often thronged with people who came to him to ſettle their differences.

differences. He had alſo a juſt concern for all under affliction, and was a much readier viſitant at the houſe of mourning than at the houſe of feaſting: and his large fund of reading and experience always furniſhed ſomething that was conſolatory. Hence he was called the good angel, by all in diſtreſs. His hoſpitable manner of living was the admiration of the whole country. Strangers and travellers found a cheerful reception at his board. All were welcome that came; and even their beaſts had ſo much care taken of them, that it was humourouſly ſaid, "If a horſe was turned looſe in any part of the country, it would make its way to the rector of Houghton." Every Sunday, from Michaelmas until Eaſter, was a ſort of public day with him; during which ſeaſon he expected to ſee all his pariſhioners and their families. He was alſo glad of the company of men of worth and letters, who uſed much to frequent his houſe. When lord Burleigh, then lord-treaſurer, was ſent by queen Elizabeth to tranſact ſome affairs in Scotland, he could not reſiſt the deſire which he felt on return to ſee a man, whoſe free diſcourſe from the pulpit to king Edward's court had early recommended him to his notice, and whoſe name he found every where mentioned with the higheſt veneration. He had not time to give notice of his intended viſit; but the economy of ſo plentiful a houſe as Mr. Gilpin's was not eaſily diſconcerted. He received his noble gueſt with ſo much true politeneſs, and treated him and his whole retinue in ſo affluent and generous a manner, that the treaſurer would often afterwards ſay, "he could hardly have expected more at Lambeth." While lord Burleigh ſtaid at Houghton, he had an opportunity of ſeeing true ſimplicity of manners, and every ſocial virtue, regulated by exact prudence. At length, with reluctance, he took his leave, embracing the worthy paſtor with all the warmth of affection. When he had mounted a hill about a mile from Houghton, which commands the vale, he turned his horſe to take one more view of the place, and having kept his eye fixed upon it for ſome time, his reverie broke out into this exclamation: "There is the enjoyment of life, indeed! Who can blame that man for not accepting a biſhopric! What does he want to make him greater, or happier, or more uſeful to mankind!"

But Mr. Gilpin's miniſterial labours were not confined to his own pariſh. With concern he obſerved ſeveral of the pariſhes around him ſunk in ſuperſtition and ignorance, owing to the ſhameful neglect of the paſtoral care in their clergy. Theſe bad conſequences induced Mr. Gilpin to ſupply, as far as he could, what was wanting in others. For this purpoſe he uſed every year regularly to viſit the moſt neglected pariſhes in Northumberland, Yorkſhire, Cheſhire, Weſtmoreland, and Cumberland; and that his own pariſh in the mean time might not ſuffer, he was at the expence of a conſtant aſſiſtant. As Mr. Gilpin had all the warmth of an enthuſiaſt, though under the direction of a calm judgment, he never wanted an audience even in the wildeſt parts; where he rouſed many to a ſenſe of religion who had contracted the moſt inveterate habits of inattention to every thing of a ſerious nature. Wherever he came, he would viſit all the gaols and places of confinement, and by his labours and affectionate manner of behaviour, reformed many abandoned perſons in thoſe places. Upon the borders of Northumberland there is a tract of country called Reads-dale and Tine-dale, of all barbarous places in the north at that time the moſt barbarous. Before the act of union it was called the *debateable land*, and was peopled by a kind of deſperate banditti, rendered fierce and ſavage by conſtant alarms. They lived by theft; uſed to plunder on both ſides of the barrier; and what they plundered on one, they expoſed to ſale on the other; by that means eſcaping juſtice. In this lawleſs country, where no man would even travel that could help it, Mr. Gilpin never failed to ſpend ſome part of every year. He had ſet places for preaching, which were as regularly crowded as the aſſize towns of a circuit. If he came to a place where there was a church, he made uſe of it; if not, of barns, or any other large building; where multitudes were ſure to attend him, ſome for his inſtructions, and others for his charity. The hazards and fatigues attending this employment were exceſſive; but theſe Mr. Gilpin cheerfully underwent, eſteeming himſelf abundantly compenſated by the advantages which he hoped would accrue from them to his uninſtructed fellow-creatures. The diſintereſted pains which he thus took among theſe illiterate people, and the good offices which he was always ready to do them, drew from them the ſincereſt expreſſions of gratitude.

On proper occaſions, likewiſe, Mr. Gilpin afforded evidence that he wanted neither reſolution nor ſpirit to reprove the vices of the great, and to maintain his own independence and dignity. One day he received a meſſage from Dr. Barnes, biſhop of Durham, appointing him to preach a viſitation ſermon on the following Sunday. As he was then preparing for a fixed journey into Reads-dale and Tine-dale, he ſent to acquaint the biſhop with the neceſſity of his keeping that appointment, and to intreat that his lordſhip would at that time excuſe him. His ſervant informed him that the biſhop had received his meſſage, but returned no anſwer. Concluding him therefore to be ſatisfied, he ſet out on his journey; but to his great ſurpriſe, when he came home, found himſelf ſuſpended: ſome perſon, out of enmity to him, having engaged the biſhop to take that haſty ſtep. A few days afterwards he received an order to meet the biſhop at Cheſter, a town in the dioceſe of Durham, where the biſhops of that ſee formerly reſided. Here many of the clergy were aſſembled, and Mr. Gilpin was ordered by the biſhop to preach that day before them. Mr. Gilpin went up, and determined to embrace that opportunity of ſpeaking ſome home truths to his dioceſan. The eccleſiaſtical court of Durham was at that time managed in the moſt ſcandalous manner. The biſhop was a well-meaning but weak man, and entirely governed by a relation who abuſed his authority. Private information of the evils and irregularities occaſioned by his miſconduct had often been conveyed to the biſhop, but without any ſucceſs. Mr. Gilpin was therefore reſolved to make his diſcourſe the medium of a public application to the biſhop for redreſs. Accordingly, he honeſtly and plainly expoſed the enormities which were committed in his dioceſe; and in a perſonal addreſs to his lordſhip boldly informed him, that for the guilt of them he would be reſponſible, if, after being fully appriſed of what was amiſs, he did not bring about an entire reformation. The freedom of Mr. Gilpin's language alarmed his friends, who as he went out of church reproved him, for giving to the biſhop that advantage over him which he had long ſought after; but Mr. Gilpin aſſured them that if his diſcourſe ſhould do the good which he intended by it, he was regardleſs what the conſequence might be to himſelf. Afterwards he waited upon the biſhop, to pay his compliments to him before he went home, when the prelate ſaid, "Sir, I propoſe to wait upon you home myſelf." This he accordingly did; and as ſoon as Mr. Gilpin had taken him into a parlour, the biſhop turned ſuddenly round, and graſped him eagerly by the hand, ſaying, "Father Gilpin, I know you are fitter to be the biſhop of Durham, than I am to be parſon of this church of yours. I aſk forgiveneſs for paſt injuries. I know you have enemies; but, while I live biſhop of Durham, none of them ſhall cauſe you any farther trouble."

We have noticed Mr. Gilpin's uncommonly generous and hoſpitable manner of living, and extenſive benevolence, to which the income ariſing from his rectory, though conſiderable, muſt have been inadequate with-

out great frugality. But he was ſtill unſatisfied with the ſervices he had rendered to his fellow-creatures; and upon queen Elizabeth's recommending the eſtabliſhment of free ſchools, to the ſurpriſe of his friends, he undertook to build and endow a grammar-ſchool: a deſign which his exact economy enabled him to accompliſh. This ſchool was no ſooner opened than it began to flouriſh; and there was ſo great a reſort of young people to it, that in a little time the town was not able to accommodate them. Mr. Gilpin, therefore, fitted up a part of his houſe for that purpoſe, where he boarded twenty or thirty children, beſtowing clothing and maintenance on the greater part of them, whoſe parents were in poor circumſtances. To inſure their good inſtruction he procured able maſters from Oxford, and himſelf conſtantly inſpected their proficiency, taking notice of and encouraging the moſt diligent and forward. He likewiſe ſent ſeveral of them to the univerſities, where he maintained them at his own expence, and endeavoured to render an academical education as uſeful to them as poſſible. For this purpoſe he held a conſtant correſpondence with their tutors, and made the youths themſelves frequently write to him and give him an account of their ſtudies; and he alſo made journeys to the univerſities, generally once every other year, to examine into their behaviour, and to give them the benefit of his perſonal advice. In the latter part of his life, Mr. Gilpin went through his duty with great difficulty. His health was much impaired, and his conſtitution broken, by the great fatigues which he had undergone during ſo many years. He died in 1583, in the ſixty-ſixth year of his age. Such was the life of Bernard Gilpin, who, for his exemplary piety, laborious virtue, and unbounded benevolence, deſerves to have his name tranſmitted to poſterity in letters of gold. To the particulars already mentioned concerning him we may add, that his imagination, memory, and judgment, were lively, retentive, and ſolid. By his unwearied application he had amaſſed a great ſtock of knowledge, and was ignorant of no part of learning at that time in eſteem. In languages, hiſtory, and divinity, he particularly excelled, and was no mean poet, though he expended little time in the purſuit of any ſtudies foreign to his profeſſion. He had a very extraordinary ſkill in the art of managing a fortune. He conſidered himſelf barely as a ſteward for other people; and took care, therefore, that his own deſires never exceeded what calm reaſon could juſtify. Extravagance with him was another word for injuſtice; and in his own manner of living he was very temperate, and rather abſtemious. And whatever his other virtues were, their luſtre was greatly increaſed by his ſincerity and humility, which his religion led him to practiſe in the moſt unaffected and amiable manner. But the moſt diſtinguiſhing parts of his character were, his conſcientious diſcharge of the miniſterial office, his extenſive benevolence, and his exalted piety, which, taken in connection with the uniform tenor of his virtuous and exemplary life, deſervedly gained him among his contemporaries the title of the "Northern Apoſtle."

GIL'SON, a townſhip of the American States, in Cheſhire county, New Hampſhire, ſituated on the eaſt ſide of Aſhuelot river, and joins Keene on the ſouth.

GILT, *ſ.* Golden ſhow; gold laid on the ſurface of any matter. *Now obſolete.*—When thou waſt in thy *gilt*, and thy perfume, they mockt thee for too much curioſity: in thy rags thou know'ſt none, but art deſpiſed for the contrary. *Shakeſpeare.*—Gold money.—Though guilt condemns, 'tis *gilt* muſt make us glad. *Middleton's Mad World.*

Have for the *gilt* of France (O guilt indeed!)
Confirm'd conſpiracy with fearful France. *Shakeſpeare.*

GILT, [the participle of GILD, which ſee].—Where the *gilt* chariot never mark'd its way. *Pope.*

GILT'HEAD, *ſ.* A fiſh; for which ſee SPARUS.—He blended together the livers of *giltheads*, the brains of pheaſants and peacocks, tongues of phenicopters, and the melts of lampreys. *Hakewill.*

GIM, *adj.* Neat; ſpruce; well dreſſed. *An old word.*

GI'MAR, a town of the iſland of Cuba: ſix miles eaſt of Havannah.

GIM'BALS, *ſ.* A contrivance by means of which barometers, veſſels of oil, the mariner's compaſs, &c. may be ſuſpended ſo as to arrange their upper parts horizontally. The nature of this contrivance will be at once underſtood, by ſhewing its application to a mariner's compaſs. It conſiſts of a hoop or ring ſupported upon two pins diametrically oppoſite each other, and iſſuing from the external ſurface of the ring in ſuch a direction, that both lie in the ſame diametrical line. When the hoop is ſuſpended on theſe pins, it is at liberty to turn freely about the diameter, of which they conſtitute the prolongation, the notches or holes of ſupport are diſpoſed horizontally. The compaſs-box itſelf is placed in a ſimilar ring with two projecting pivots; and theſe pivots are inſerted in holes made in the former ring, at equal diſtances from each of its pivots. If, therefore, the whole be left at liberty, the compaſs-box may vibrate upon the diametrical line of the outer ring, as well as upon a line formed by its own pivots, at right angles to that diametral line. The conſequence of this arrangement is, that the centre of gravity of the compaſs-box will diſpoſe itſelf immediately beneath the interſection of both lines on which it is at liberty to move: that is to ſay, if the weight of the box and its component parts be properly diſpoſed, the compaſs will aſſume a poſition in which the upper ſurface ſhall be horizontal.

GIM'BORN, a citadel of Germany, in the circle of Weſtphalia, which gives name to a lordſhip, united with Neuſtadt; erected in the year 1631, with a ſeat and voice in the circle of Weſtphalia: eight miles ſouth-ſouth-eaſt of Wipperfurt.

GIM'CRACK, *ſ.* [Suppoſed by Skinner to be ludicrouſly formed from *gin*, derived from *engine*.] A ſlight or trivial mechaniſm.—What's the meaning of all theſe trangrams and *gimcracks?* jumping over my maſter's hedges, and running your lines croſs his grounds? *Arbuthnot.*

For though theſe *gimcracks* were away,
However more reduc'd and plain,
The watch would ſtill a watch remain. *Prior.*

GI'MESCH, a town and caſtle of Hungary: ten miles weſt of Bukans.

GIMIGLIA'NO, a town of Italy, in the kingdom of Naples, and province of Calabria Ultra: ten miles eaſt of Nicaſtro.

GIM'LET, *ſ.* [*gibelet*, *guimbelet*, Fr.] A borer with a ſcrew at its point.—The *gimlet* hath a worm at the end of its bit. *Moxon.*

GIM'MAL, *ſ.* [Suppoſed by Skinner and Ainſworth to be derived from *gimellus*, Lat. and to be uſed only of ſomething conſiſting of correſpondent parts, or double. It ſeems rather to be gradually corrupted from *geometry*, or *geometrical*. Any thing done by occult means is vulgarly ſaid to be done by geometry. It may probably be a corruption of GIMBAL, which ſee.] Some little quaint devices or pieces of machinery. *Hanmer.*

I think by ſome odd *gimmals* or device
Their arms are ſet like clocks, ſtill to ſtrike on,
Elſe they could not hold out ſo as they do. *Shakeſpeare.*

GIM'MAL, *adj.* [from the *ſ.*] Conſiſting of links.—A *gimmal* ring with one link hanging. *Brewer's Lingua.*

In their pale dull mouths the *gimmal* bit
Lies foul with chew'd graſs, ſtill and motionleſs. *Shakeſp.*

GIM'MER, *ſ.* Movement; machinery.—The holding together of the parts of matter has ſo confounded me,

me, that I have been prone to conclude with myſelf, that the *gimmers* of the world hold together not ſo much by geometry as ſome natural magic. *Moore.*

GIMO'NE, a river of France, which runs into the Garonne, near Riviere-Verdun.

GIMO'NT, a town of France, in the department of the Gers, and chief place of a canton, in the diſtrict of Auch: four leagues eaſt of Auch, and ſeven ſouth-ſouth-eaſt of Lectoure. Lat. 43. 37. N. lon. 18. 33. E. Ferro.

GIMP, *ſ.* [See GIM. *Gimp*, in old Engliſh, is neat, ſpruce.] A kind of ſilk twiſt or lace.

GIMP-WORK, *ſ.* The work which is formed of gimp; the act of making gimp. *Scott.*

GIM'ZO, a city of Paleſtine, ſituated moſt probably in the tribe of Judah; taken by the Philiſtines in the reign of Ahaz king of Judah. 2 *Chron.* xxviii. 18.

GIN, *ſ.* [from *engine.*] A trap; a ſnare.—Be it by *gins*, by ſnares, by ſubtilty. *Shakeſpeare.*

He made a planetary *gin*,
Which rats would run their own heads in.—
Keep from flaying ſcourge thy ſkin,
And ancle free from iron *gin*. *Hudibras.*

Any thing moved with ſcrews, as an engine of torture.—Typhæus' joints were ſtretched on a *gin*. *Spencer.*—A pump worked by rotatory ſails.—The delfs would be ſo flown with waters, it being impoſſible to make any adits or ſoughs to drain them, that no *gins* or machines would ſuffice to lay and keep them dry. *Ray.*

[In mechanics.] A machine for raiſing great weights, uſually conſtructed of three long legs, diſpoſed in a triangular poſition.

[Contracted from GENEVA, which ſee.] The ſpirit drawn by diſtillation from juniper berries:

This calls the church to deprecate our ſin,
And hurls the thunder of our laws on *gin*. *Pope.*

To GIN, *v. n.* [uſed in poetry for] To begin.—*Ginning* in the middle. *Shakeſpeare's Prol. to Troilus & Creſſida.*

GIN, a town of China, of the third rank, in the province of Pe-tcheli: ten miles ſouth-eaſt of Chun-te.

GIN'-DRINKING, *adj.* Addicted to drinking gin.—The common ſoldier can delight himſelf with his *gin-drinking* trull. *Spenſer's Crito.*

GIN-HO'A, a town of China, of the third rank, in the province of Quan-tong: twenty-two miles north of Chao-tcheou.

GIN-HO'AI, a town of China, of the third rank, in the province of Se-tchuen: thirty-two miles ſouth of Tche-li-leou.

GIN-KIA'-CANTZE, a town of Chineſe Tartary. Lat. 41. 45. N. lon. 141. 15. E. Ferro.

GIN-KIEOU', a town of China, of the third rank, in the province of Pe-tcheli: ſeventeen miles north of Ho-kien.

GIN-PIN, a town of China, of the third rank, in the province of Chan-tong: ſeventeen miles north-eaſt of Tong-tchang.

GINAI'RI, a town of Africa, in the kingdom of Kumbo.

GINASER'VIS, a town of France, in the department of the Var, and chief place of a canton, in the diſtrict of Barjols: three leagues north-weſt of Barjols.

GIN'DANES, a people of Lybia, who fed on the leaves of the lotus. *Herodotus.*

GIN'DES, in ancient geography, a river of Albania, flowing into the Cyrus. There was another of the ſame name in Meſopotamia.

GINER'CA, a town of the iſland of Corſica, ſituated in a ſmall bay to which it gives name: thirteen miles ſouth of Calvi.

GINES'TAS, a town of France, in the department of the Aude, and chief place of a canton, in the diſtrict of Narbonne: two leagues and a half north-weſt of Narbonne, and three eaſt of Azille.

GIN'GEE, a town and fortreſs of Hindooſtan, in the Carnatic, once the capital of a kingdom of the ſame name, ſituated on a mountain, and defended by three caſtles: thirty-four miles north-weſt of Pondicherry, and ſeventy ſouth-weſt of Madras. Lat. 12. 16. N. lon. 79. 36. E. Greenwich.

GIN'GER, a ſmall iſland in the Weſt Indies: ten miles ſouth-ſouth-weſt of Virgin Gorda.

GIN'GER, *ſ.* [*zinziber*, Lat. *gingero*, Ital.] A plant of great value; for the cultivation of which ſee the article AMOMUM, vol. i. p. 480. The root of *ginger* is of a hot, acrid, and pungent, taſte, though aromatic, and of a very agreeable ſmell. The Indians eat the young ſhoots of the leaves, and the roots likewiſe.

GIN'GERBREAD, *ſ.* A kind of farinaceous ſweetmeat made of dough, like that of bread or biſcuit, ſweetened with treacle, and flavoured with ginger and ſome other aromatic ſeeds. It is ſometimes gilt.—An' I had but one penny in the world, thou ſhould'ſt have it to buy *gingerbread*. *Shakeſpeare.*

Her currants there and gooſeberries were ſpread,
With the inticing gold of *gingerbread*. *King's Cook.*

GIN'GERLY, *adv.* [Derivation unknown.] Cautiouſly; nicely.—What is't that you took up ſo *gingerly*? *Shakeſpeare.*

GIN'GERNESS, *ſ.* Niceneſs; tenderneſs.

GIN'GERWINE, *ſ.* A kind of made wine impregnated with ginger.

GINGIDI'UM, *ſ.* in botany. See ARTEDIA, DAUCUS, and TORDYLIUM.

GINGI'RO, a kingdom of Africa, ſituated to the ſouth-weſt of Abyſſinia. Lat. 5. N. lon. 30. E. Greenwich.

GINGI'VÆ, *ſ.* In anatomy, the gums; the ſpongy fleſh that ſurrounds the ſockets of the teeth.

GIN'GIVAL, *adj.* [*gingiva*, Lat.] Belonging to the gums.—Whilſt the Italians ſtrive to cut a thread in their pronunciation between D and T, ſo to ſweeten it, they make the occluſe appulſe, eſpecially the *gingival*, ſofter than we do, giving a little of perviouſneſs. *Holder on Speech.*

To GIN'GLE, *v. n.* To utter a ſharp clattering noiſe; to utter a ſharp noiſe in quick ſucceſſion:

Once, we confeſs, beneath the patriot's cloak,
From the crack'd bag the dropping guinea ſpoke,
And *gingling* down the backſtairs, told the crew,
Old Cato is as great a rogue as you. *Pope.*

To make an affected ſound in periods or cadence, as in low or mongrel verſes.

To GIN'GLE, *v. a.* To ſhake, ſo that a ſharp ſhrill clattering noiſe ſhould be made:

Her infant grandame's whiſtle next it grew,
The bells ſhe *gingled*, and the whiſtle blew. *Pope.*

GIN'GLE, *ſ.* A ſhrill reſounding noiſe. Affectation in the ſound of periods.

GIN'GLYMOID, *adj.* [γιγλυμος, a hinge, and εἶδος, Gr. form.] Reſembling a ginglymus; approaching to a ginglymus.—The malleus lies along, fixed to the tympanum, and on the other end is joined to the incus by a double or *ginglymoid* joint. *Halder.*

GIN'GLYMUS, *ſ.* In anatomy, a mutual indenting of two bones into each other's cavity, in the manner of a hinge, of which the elbow is an inſtance. *Wiſeman.*

GINGST, a town of Germany, in the circle of Upper Saxony, in Pomerania: eight miles north-weſt of Bergen.

GIN'HEIM, a town of Germany, in the circle of the Upper Rhine, and county of Hanau-Munzenberg: three miles weſt-north-weſt of Frankfort on the Maine, and eleven weſt of Hanau.

GINK'GO, *ſ.* in botany, the MAIDENHAIR TREE.—This tree grows to a prodigious ſize, with a trunk fre-

quently as thick as the largeſt oak; the branches are alternate and ſpreading. Leaves alternate, petioled, wedge-ſhaped, rounded on the upper edge, where they are ſlightly gaſhed or notched unequally, with a large ſinus in the middle, dividing them into two lobes: they come out in bundles at the knots or tubercles of the branches, are ſmooth, and finely ſtriated by numerous parallel forked veins, but they have neither rib nor nerve, and are not much unlike the leaves of maiden-hair; they are from an inch and half to three inches in width; and the petioles are about two inches long, ſlightly channelled, pubeſcent at the baſe above, with the edges of the leaf running down the top. Of the fructification we yet know very little with certainty. The flowers are male and female ſeparate, probably on different trees. The male flowers were produced in 1795, in the royal botanic garden at Kew, *but in a ſtate not ſufficiently perfect to determine the characters abſolutely.* They come out in April, before the leaves, and from the ſame bud with them, towards the ends of the branches; on aments or catkins, as Kæmpfer deſcribes them, pendant and longiſh, abounding in pollen. The female flowers are probably ſolitary or few in number in the axils of the leaves, Kæmpfer having aſſigned this ſituation to the fruits, which he ſays grow on a thick fleſhy peduncle an inch in length, and having figured them ſingle: he deſcribes them as round or oblong, of the appearance and ſize of a Damaſcene plum or damſon, with a warted ſurface becoming yellow as the fruit ripens, and a fleſhy, juicy, white, pulp, adhering very cloſely to the nut, which reſembles that of the piſtachia, but is almoſt double the ſize, and more of the form of an apricot-ſtone; the ſhell is woody, thin, brittle, and whitiſh, and the kernel is white, rather firm, ſweet, with a mixture of auſterity, or bitterneſs, when raw, but is agreeable when roaſted gently on the coals, before the ſkin is taken off. In this ſtate it is ſuppoſed to help digeſtion. Native of Japan and China. Cultivated in 1758 by Mr. James Gordon, who firſt ſent the tree to Linnæus.

GIN'LIA, a town of Italy, in the kingdom of Naples, and province of Abruzzo Ultra: twelve miles and a half north-eaſt of Teramo.

GINNA'NI (Francis), count, an eminent naturaliſt and agriculturiſt, born at Ravenna in 1716. He received a literary education in his father's houſe, and at the age of fourteen was placed at Parma as page to the duke Antony Farneſe. He there continued to purſue his ſtudies; and upon his return he particularly attended to natural hiſtory, under the direction of his uncle, count Joſeph Ginnani. He devoted himſelf to a retired and ſtudious life, collected a large and valuable muſeum, invented agricultural inſtruments and other pieces of mechaniſm, and greatly intereſted himſelf in the inſtitution of the Society of Ravenna. His writings obtained him admiſſion into the learned ſocieties of Perugia, Bern, Paris, and London; and he maintained a correſpondence with many of the moſt eminent natural philoſophers of the age. He died in 1766, at the age of forty. The principal work of the count Ginnani is entitled *Delle Malattie del Grano in Erba, Trattato ſtorico fiſico:* A phyſical Treatiſe of the Diſeaſes of growing Corn, 1759, 4to. This work is of great compaſs and erudition, treating of all the different kinds of diſeaſe affecting green corn, with their cauſes and remedies. Of his other writings the moſt conſiderable is An Account of the Natural Productions in the Ginnani Muſeum at Ravenna, 1762, 4to. with plates. He has given a Deſcription of ſome Indigenous Plants and their Inſects, in the Journal of Bern, tom. i. and A Diſſertation on the Scirpus of Ravenna, in the Ravenna Acts. He left in manuſcript a Natural and Civil Hiſtory of the Pine Foreſts of Ravenna.

GINNA'NIA, *ſ.* [ſo named by Scopoli in honour of *Giuſeppe Ginnani*, of Ravenna, uncle to the above.] In botany, a genus of the claſs enneandria, order monogynia, natural order of lomentaceæ, (leguminoſæ, *Juſſ.*) The generic characters are—Calyx: perianthium double; outer one leafed, bifid, acute; inner one-leafed, cup-ſhaped, four or five-cleft; ſegments oval, concave, obtuſe, ſpreading, one larger than the reſt. Corolla: petals three, oblong, obtuſe, fringed, ſpreading, inſerted into the larger ſegment of the calyx at the baſe. Stamina: filaments nine, filiform, flexuoſe, longer than the corolla, inſerted into the mouth of the calyx; antheræ parallelopiped, verſatile. Piſtillum: germ oblong, compreſſed, at the bottom of the calyx affixed to a pedicel, with a membranaceous wing at the top; ſtyle filiform, flexuoſe, the length of the ſtamens; ſtigma obtuſe. Pericarpium: legume long, ſtraight, one-celled, two-valved, pedicelled. Seeds: very many, oval, flatted, ſmooth.—*Eſſential Character.* Calyx double, both one-leafed; petals three, fringed, ſpreading; germ pedicelled, with a membranaceous wing at the top.

Ginnania Guianenſis, the Paloue Guianenſis of *Aublet*, is a ſhrub growing to the height of fifteen feet, beginning to be branched at one or two feet from the ground. Leaves alternate, entire, ſmooth, ovate-oblong, acuminate, ſubſeſſile; the largeſt ſix inches long, and two and a half wide. Flowers terminating, three or four together, on a ſhort peduncle, on which are four or five ſoft green ſcales, or bractes. Native of the foreſts of Guiana; flowering in February, and fruiting in May.

GIN'NET, *ſ.* [γιννος, Gr.] A nag; a mule; a degenerated breed. Hence, according to ſome, the Spaniſh *gennet* is improperly written for *ginnet*.

GINO'RA, *ſ.* [ſo named by Jacquin in honour of the marquis *Carlo Ginori*, who had a botanic garden near Florence.] In botany, a genus of the claſs dodecandria, order monogynia, natural order of ſalicariæ, *Juſſ.* The generic characters are—Calyx: perianthium one-leafed; tube bell-ſhaped; border ſix-cleft; ſegments lanceolate, ſpreading, coloured, permanent. Corolla: petals ſix, roundiſh, ſpreading, longer than the calyx, with long claws inſerted into the neck of the calyx. Stamina: filaments twelve, ſubulate, patulous, as long as the calyx, and inſerted into it; antheræ kidney-ſhaped. Piſtillum: germ roundiſh, flatted; ſtyle ſubulate, the ſame length with the corolla, permanent; ſtigma obtuſe. Pericarpium: capſule flatted and roundiſh, ſhining, coloured, ſomewhat four-grooved, four-valved, one-celled, gaping at the tip. Seeds: very many, minute; receptacle roundiſh, large.—*Eſſential Character.* Calyx ſix-cleft; petals ſix; capſule one-celled, four-valved, coloured, containing many ſeeds.

Ginora Americana, a ſingle ſpecies. It is an elegant ſhrub, with the appearance of myrtle. Leaves oppoſite. It grows upright, to the height of three or four feet, and divides into ſmooth branches, round, except that they are compreſſed at the origin of the twigs and leaves, all woody. Leaves lanceolate, acute, quite entire, ſmooth, ſpreading, an inch and half long, on very ſhort petioles. Peduncles ſlender, ſpreading, ſolitary, an inch in length. Flowers handſome, almoſt an inch in diameter, without any ſcent; calyx red; corolla blue; capſule dark-red, outwardly reſembling a berry. Native of Cuba, by river ſides, and called there *roſa del rio*, or river roſe.

GIN'SENG, *ſ.* the celebrated medicinal plant of the Chineſe; for an account of which ſee the article PANAX.

GINT'ZELLSTORFF, a town of Germany, in the archduchy of Auſtria: five miles north-north-weſt of Ebenfurth.

GINT'ZERSDORFF, a town of Germany, in the archduchy of Auſtria: ſix miles north-north-eaſt of Ziſterſdorff.

GI'O, a cape of Scotland, on the north coaſt of the iſland of Shapinſha.

GIOBAR', a town of Aſiatic Turkey, in the province of Diarbek: ten miles north-weſt of Tecrit.

GIOCON'DO (Fra Giovanni), an eminent antiquarian and architect, a native of Verona, where he was firſt a teacher of the Greek and Latin languages, in which he

he had the honour of inſtructing the celebrated Julius Cæſar Scaliger. He was well verſed in ſcholaſtic theology and in the mathematical ſciences; and was one of thoſe who contributed to the revival of claſſical learning by the collection of ancient monuments and manuſcripts. He preſented to Lorenzo de Medici a collection of ancient inſcriptions which he had made with great labour, and which is ſpoken of in the higheſt terms by Angelo Poliziano. This was compiled in Rome before the year 1492, in which Lorenzo died. Giocondo was ſome time at the court of the emperor Maximilian. He alſo viſited France, where he was employed to build two bridges over the Seine, called thoſe of Our Lady, and the Little Bridge, both ſaid to have been of admirable beauty. He had the title of architect-royal in France, as appears from the honourable mention made of him by the learned Budæus. His employment as an artiſt did not prevent him from continuing to ſerve the cauſe of letters. An edition of Pliny's Epiſtles, printed in Bologna in 1498, and another by Aldus in 1508, contained his collations with an ancient manuſcript at Paris. He alſo was one of the firſt who gave a correct edition of Vitruvius, illuſtrated with figures, publiſhed at Venice in 1511, with a dedication to pope Julius II. He alſo aſſiſted in editing *Frontinis de Aquæductis*; *Scriptores de Re Ruſtica*; Aurelius Victor; and Cæſar's Commentaries; and was the firſt who gave a deſign of Cæſar's bridge over the Rhine. On his return to Italy, he wrote, in 1506, four diſſertations addreſſed to the magiſtracy of Venice, concerning the waters of that city, which are preſerved in its archives. When the Rialto was burnt, in 1513, he gave a deſign for rebuilding it more beautiful than before; but it was rejected for a leſs coſtly deſign of another architect. Reſentment on this account cauſed him to quit Venice for Rome, where, on the death of Bramante, he was joined with Raphael and San Gallo in ſuperintending the erection of St. Peter's. His laſt known work was the rebuilding of the ſtone bridge of Verona, which took place about 1521. He probably did not long ſurvive, ſince he calls himſelf an old man, in a dedication to Juliano de Medici, in 1513.

GIO'GI, a town of Tranſilvania, ſituated near the Maros: fourteen miles ſouth-weſt of Millenbach.

GIO'IA, a town of Italy, in the kingdom of Naples, and province of Bari: fourteen miles ſouth-ſouth-weſt of Converſano.

GIO'IA, a town of Italy, in the kingdom of Naples, and province of Abruzzo Ultra: ſeven miles ſouth-eaſt of Celano.

GIO'JA (Flavio), an ingenious Italian mathematician, to whom is generally attributed the invention of the compaſs. He was born at Paſitano, near Amalfi, in the kingdom of Naples, about the year 1300. He is ſaid to have firſt diſcovered the directive power of the magnet, and to have applied it to the purpoſes of navigation under the form of a compaſs, though in a rude and imperfect ſtate. And to ſhew this inſtrument to have been the invention of a ſubject of the king of Naples, who at that time was a junior branch of the royal family of France, he marked the north point with a fleur-de-lys, by which all nations ſtill diſtinguiſh it. As a memorial of this diſcovery, the territory of Principato, in which Gioja was born, bears a compaſs for its arms. Some authors, it is true, have claimed this invention for the French; and others for the Engliſh. Others again maintain, that the Chineſe had diſcovered this inſtrument long before their intercourſe with Europeans; and that the ſecret was brought to Italy by Marco Paulo, in 1260; but the greater number of competent enquirers have concurred in attributing this invaluable diſcovery to Gioja.

GIOI'SA, a town of Italy, in the kingdom of Naples, and province of Calabria Ultra: ſeven miles ſouth of Nicotera.

GIOLI'TO DE FERRA'RI, the name of a celebrated family of Italian printers. The firſt of theſe, JOHN, a native of Trino in Montferrat, after having for ſome time exerciſed his art in his own country, removed to Venice, about 1530, where he acquired great reputation in conjunction with his ſon GABRIEL. The latter is the moſt diſtinguiſhed of the family: he employed ſeveral learned men in the correction of his editions, which, however, are more valued for the beauty of the type and paper, and the excellence of the workmanſhip, than for their accuracy. They are ſtill much ſought after by the curious in typography, and are remarkable proofs of the perfection of the art at ſo early a period after its firſt invention. Gabriel was recogniſed as noble (in conſequence of his deſcent from the Ferrari of Placenzia) by the emperor Charles V. He lived at Venice in great eſteem, and died in 1581. His two ſons, John and Giampaolo, ſucceeded him in his office.

GIORDA'NI (Vital), an Italian mathematician, born at Bitonto, in the kingdom of Naples, in 1633. Spending the early part of his life in a diſſolute manner, he committed manſlaughter, and, flying from his country, entered as a ſoldier on-board the galleys which pope Innocent X. ſent to cruiſe againſt the Turks in the Levant. He was preſent in ſeveral engagements, and by his conduct recommended himſelf to the notice of the admiral, who, perceiving in him abilities above his condition, beſtowed on him the office of purſer. After his return to Rome, in 1659, he determined to devote himſelf to mathematical purſuits; and having obtained the poſt of keeper of the caſtle of St. Angelo, which afforded him leiſure for following the bias of his mind, he ſoon made conſiderable proficiency, and acquired the character of an able geometrician. He now met with ſome friendly patrons, who encouraged him to quit the military life, and aſſiſted him in obtaining the farther knowledge neceſſary to qualify him for the office of a mathematical tutor. In this capacity he became ſo diſtinguiſhed, that Chriſtina queen of Sweden, during her reſidence at Rome, choſe him for her mathematician; and Louis XIV. appointed him to teach the mathematics in the academy of painting and ſculpture, which that monarch eſtabliſhed in that city in 1666. In 1672 pope Clement X. made him engineer to the caſtle of St. Angelo; and in 1685 he was nominated to the mathematical profeſſorſhip in the College of Wiſdom. In 1691 he was elected a member of the academy of the Arcadians. He died in 1711, in his ſeventy-eighth year. His principal works are, 1. *Euclide Reſtituto*, 1686, folio. 2. *De componendis Gravium Momentis*, 1685, folio. 3. *Fundamentum Doctrinæ Motus Gravium*, 1686, of which an enlarged edition afterwards appeared; and, 4. *Ad Hyacinthum Chriſtophorum Epiſtola*, 1705, folio.

GIORDA'NO (Luca), an eminent painter, born at Naples in 1632. So early as the age of ſeven, he produced ſome extraordinary efforts of his own genius; and at eight, he painted in freſco two children for a church, which his father had undertaken, but found himſelf embarraſſed in the execution. It is ſaid, that his father, who had brought with him a painter to the place, found one of theſe children painted; and aſking Luca who had done it, was ſo much ſurpriſed at being told that it was himſelf, that he would not credit it, till the boy took up the bruſh and painted the other. The viceroy of Naples, who was informed of this wonder, placed Luca with Ribera as his pupil, and his progreſs was aſtoniſhing. After working ſome years under this maſter, he departed for Rome, in order to improve himſelf from the excellent models in that capital. Though he copied all the maſters, he was principally taken with Titian and Paul Veroneſe, the latter of whom he chiefly propoſed as his model, uniting with his grandeur of ſtyle the harmonious colouring of Pietro da Cortona. He worked with extreme rapidity, and had a wonderful talent of imitating from memory the ſtyle of other maſters. His original works diſplay great fertility of imagination, and a ſurpriſing

a ſurpriſing freedom of hand. In 1679 he was ſent for to Florence, to paint the cupola of the chapel Corſini. The grand-duke alſo employed him in the decoration of his palaces, and treated him with great regard. In 1690 he received an invitation from the king of Spain, Charles II. to paint at the Eſcurial. Scarcely any artiſt has been honoured with more tokens of royal favour than Giordano received from this ſovereign; and the great works upon which he was employed kept him many years in Spain. He returned by Genoa, Florence, and Rome, in which laſt capital pope Clement XI. gave him a diſtinguiſhed reception. At Naples he appeared again with all the added fame of his paſt performances, and his ſchool was frequented from all parts. He lived in a ſplendid manner, kept an open table, and diſplayed his generoſity in painting gratuitouſly for the churches. He died in 1705, at the age of ſeventy-three, and left great wealth to his family. The works of Luca Giordano are extremely numerous, and are to be met with in many churches and palaces in Italy and Spain, as well as in the galleries of collectors. One of the fineſt is the grand altar-piece in the church of the Aſcenſion at Naples, repreſenting the battle of the angels. Several of his moſt valuable deſigns are engraved, and ſome are etched by his own hand.

GIORGIA'NI, the ſurname of the celebrated doctor ALSEID ALSCHERIF ABOU HASSAN, born in 740 of the Hegira, and died at Shiraz in the hegirian year 816, anſwering to 1413 of the Chriſtian era. He was the diſciple of Mobarekſchah, and of Alaeddin Mohammed Ben Atthâr al Bokhari. He was the author of the *Taârifât*, which contains an ample explanation of all the terms uſed in philoſophy and theology; of A Commentary on Euclid, as publiſhed by the famous Naſſireddin; and A Commentary on the *Adab al Aigi*, an eſteemed moral treatiſe, written by Adhadeddin Ben Ahmed.

The ſurname of GIORGIANI is alſo applied to another mathematician, called ABOULVASA, who was the author of A Commentary upon Euclid; and to a grammarian named ABOBECR BEN ABDALCAHAR, author of the *Aovamel*, or a treatiſe on the particles which enter into the conſtruction of the Arabic language; and a treatiſe on rhetoric, under the title of *Aſrar Abelagat*.

GIORGIEV', a town of Wallachia, on the north ſide of the Danube. In June, 1771, a battle was fought near this town between the Ruſſians and Turks, in which the latter were defeated, with the loſs of 5000 killed. The Ruſſians took 180 pieces of cannon; and all the artillery and baggage for 30,000 men. It is forty miles ſouth-weſt from Bucchareſt, and 235 north-weſt from Conſtantinople.

GIORGIO'NE, an eminent painter, whoſe true name was GIORGIO BARBARELLI, born in 1478 at Caſtel Franco, in the Treviſan. He was brought up at Venice, where his earlieſt paſſion was muſic, and he became a very ſkilful performer on the lute. Applying next to deſign, he entered the ſchool of John Bellini, and ſoon ſurpaſſed his maſter. His improvement was greatly owing to his ſtudy of the works of Lionardo de Vinci, from which he acquired the management of lights and ſhades. By frequent experiments he made himſelf the greateſt colouriſt of the time, ſo that Titian, who had been his fellow-pupil, worked under him to obtain the mellowneſs of his art. Giorgione, it is ſaid, diſcovered his purpoſe, and immediately diſmiſſed him. At Venice he introduced the faſhion of painting the fronts of houſes in freſco, and decorated many in that ſtyle with mythological ſubjects. His taſte in deſign approached that of the Roman ſchool, aiming more at roundneſs in his figures than correctneſs of outline. His pencil was light and free, his expreſſion ſtrong and elevated, his imagination rich, and his colouring inimitable. He painted ſome portraits of admirable ſpirit, and landſcapes of extraordinary beauty. While purſuing his art with great application, he was carried off by the plague at Venice in 1511, at the early age of thirty-three. His works are found in various parts of Italy: a Bearing of the Croſs at Venice is regarded with a kind of veneration. His eaſel pictures are few, and highly valued. Several of his deſigns have been engraved.

GIOR'NICO, a town of Swiſſerland, in the canton of Uri. In 1478, fifteen thouſand Milanois were defeated near this town by ſix hundred Swiſs; who, in conſequence of the victory, obtained an honourable and advantageous peace of the duke of Milan: thirteen miles north of Bellinzona.

GIOS'TAH, a town of Africa, in the country of Mozambique, at the bottom of a bay not far from Sofala.

GIOT'TO, the ſecond of thoſe celebrated painters who diſtinguiſhed themſelves by the revival of the art in Italy, born in 1276, in the diſtrict of Veſpignano near Florence, where his father, Bondone, was a ſimple peaſant. The natural talent of Giotto for deſign diſcovered itſelf by his drawing figures upon the ground while tending ſheep. The painter Cimabue chancing to ſee him thus employed, took him home to Florence, and inſtructed him in his art. Giotto ſet himſelf with great diligence to his favourite purſuit, and by the force of his genius greatly outſtript his maſter. He freed himſelf from the dry Gothic manner then in uſe, and gave expreſſion and vivacity to his figures. His reputation ſpread throughout Italy, many cities of which he adorned with his works, where they are ſtill exiſting. He not only painted in freſco, but in colours; and was particularly excellent in moſaic, for ſome pieces of which he received extraordinary prices. His moſaic of the Death of the Virgin at Florence was highly admired by Michael Angelo; and that of the Ship of St. Peter, placed over the grand entrance of that church in Rome, has received the encomiums of ſeveral writers. Giotto was a man of general knowledge, fond of poetry, and pleaſant in converſation. Boccacio and Sacchetti often introduce him in their novels, and record his witty repartees. He died, much eſteemed, in 1336.

GIOVA'IN, a town of Perſia, in the province of Farſiſtan: ten miles north of Schiras.

GIOVA'IN, a town of Perſia, in the province of Kerman: fifty-ſeven miles ſouth-eaſt of Sirgian.

GIOVA'IN, a town of Perſia, in the province of Segeſtan: fifty-five miles weſt-north-weſt of Zareng.

GIOVAR', a town of Perſia, in the province of Farſiſtan: fifty-five miles ſouth-ſouth-weſt of Schiras.

GIOVELLI'NO, a town of the iſland of Corſica: twenty-five miles eaſt of Corte.

GIOVENAZ'ZO, a town of Italy, in the kingdom of Naples, and province of Bari, ſituated near the ſea; containing four churches and four convents, and defended by a caſtle: eleven miles eaſt-ſouth-eaſt of Trani.

GIO'VIO (Paul), in Latin, *Jovius*, a celebrated Italian hiſtorian, born of an ancient family at Como, in 1483. He was brought up to letters, and ſtudied in Padua, Pavia, and Milan. He took his degree in phyſic at Pavia, and engaged in the practice of the profeſſion at Como and Milan. About the year 1512 he went to Rome, where for ſome time he continued to act as a phyſician. But his principal ambition was to rank among thoſe eminent literary characters whom the munificence of Leo X. had aſſembled about his court; and he had long paid particular attention to the forming of a Latin ſtyle, and acquiring a knowledge of claſſical antiquities. His peculiar ſtudy was that of hiſtory, and he was firſt made known to pope Leo by a ſpecimen of hiſtorical compoſition, which that pontiff declared to come next in elegance to the writings of Livy. He was rewarded with a penſion, and would probably have obtained higher advancement, had Leo lived longer. Adrian took from him the penſion of his predeceſſor, but conferred upon him a canonicate in his own country, upon condition, it is ſaid, that he ſhould make honourable mention of him. This, in fact, Giovio has

done in his Life of that pontiff; though in another work he ſpeaks of him with contempt. Clement VII. treated him with more liberality, aſſigning him apartments in his palace, together with the abbacy of St. Antony in Como. At the diſaſtrous ſack of Rome in 1527, he loſt not only a quantity of wrought ſilver, but the manuſcript of his Hiſtory, of which ſome books were never recovered. As a recompence, he was raiſed in the enſuing year to the biſhopric of Nocera. Through the favour of the emperors Charles V. Francis I. and other ſovereigns and perſons of diſtinction, he acquired conſiderable opulence. He built a very elegant villa on the margin of the lake of Como, in a delightful ſituation, in which was a muſeum, rich in curioſities, eſpecially the portraits of eminent men. There he paſſed much of his time in learned leiſure; but it was not till 1549 that he finally quitted Rome. In the next year he went to pay a viſit to the grand-duke Coſmo at Florence, where he died in December 1552. His remains were interred in the cathedral of St. Lorenzo, under a marble monument, with an inſcription in a high ſtyle of eulogy.

As an hiſtorian and biographer, Giovio has been more praiſed for the elegance of his ſtyle, and the variety and livelineſs of his narrative, than for his veracity and impartiality. He is charged with having ſet his pen to ſale, and having diſtributed applauſe and cenſure according to the dictates of private intereſt. His own confidential letters avow in ſome meaſure the principle of, at leaſt, colouring actions and characters according to favour; and he was accuſtomed to ſay that he had two pens, one of gold, the other of iron. Yet he frequently atteſts his impartiality, and, as a proof of it, mentions that he was accuſed equally by the French and the Imperialiſts as being devoted to the oppoſite party. Perhaps, in the general narration he may be worthy of credit, though his repreſentation of particulars may often be falſe and diſtorted. As he wrote concerning the perſons and tranſactions of his own times, though he had more temptations to infidelity, yet he had more checks. His great work is a Hiſtory, in forty-five books, commencing from the war of Naples under Charles VIII. and coming down to 1547; but of this, ſix books are wanting, from the fifth to the eleventh, and ſix more, from the nineteenth to the twenty-fourth. The firſt edition was printed at Florence in 1550. He wrote alſo the Lives of twelve Viſconti lords of Milan; the eulogies of men celebrated in arms and letters; deſcriptions of Great Britain, of Muſcovy, and of the lake of Como; and commentaries on Turkiſh affairs. All theſe works are in Latin, which he wrote with great fluency. In the ſame language he wrote a treatiſe, *De Piſcibus Romanis*. In Italian he has left a number of Letters; and *Ragionamento ſopra i Motti & Diſegni d'Arme e d'Amore*.

Benedetto Giovio, elder brother of the preceding, who paſſed a retired life at Como, was a man of letters, and left ſeveral works in manuſcript, of which the Hiſtory of his native place was printed at Venice in 1629.

Paulo Giovio the Younger, alſo biſhop of Nocera, who was preſent at the council of Trent, and diſtinguiſhed himſelf in Latin poetry, was grand-nephew to the firſt Paul.

To GIP, *v. a.* To take out the entrails of herrings.

GIP'PING, a river of England, in the county of Suffolk, which joins the Orwell, and falls with it into the Stour.

GIP'SOUS, or Gypsous, *adj.* Made of plaſter. See Gypsum.

GIP'SY, *ſ.* [Corrupted from *Egyptian*; for when they firſt appeared in Europe, they declared, and perhaps truly, that they were driven from their own country by the cruelty of their enemies. They are now more or leſs mingled with all nations.] The name is now applied to any vagabond who pretends to foretell futurity, commonly by palmiſtry or phyſiognomy:

I, near yon ſtile, three fallow *gipſies* met;
Upon my hand they caſt a poring look,
Bid me beware, and thrice their heads they ſhook. *Gay.*

A reproachful name for a dark complexion.—Laura, to her lady, was but a kitchen wench; Dido a dowdy; Cleopatra a *gipſy*; Helen and Hero hildings and harlots. *Shakeſpeare.*—A name of ſlight reproach to a woman.—The widow play'd the *gipſy*, and ſo did her confidant too, in pretending to believe her. *L'Eſtrange.*

A ſlave I am to Clara's eyes:
The *gipſy* knows her power, and flies. *Prior.*

The wandering Egyptians, or ſtrolling gipſies, are ſaid to have made their firſt appearance in Germany about the beginning of the ſixteenth century. Hiſtorians inform us, that when ſultan Selim conquered Egypt in 1517, a large body of the natives refuſed to ſubmit to the Turkiſh yoke, and revolted under Zinganeus; whence the Turks call them to this day *Zinganees*; but being at length ſurrounded and baniſhed, they agreed to diſperſe in ſmall parties all over the world, where their ſuppoſed ſkill in the knowledge of futurity gave them an univerſal reception among ignorant and ſuperſtitious perſons. In the courſe of a few years they gained ſuch a number of proſelytes, who imitated their language and complexion, and betook themſelves to the ſame arts of chiromancy, that they became troubleſome, and even formidable, to moſt of the ſtates of Europe. Hence they were expelled from France by an edict, in 1560, and from Spain in 1591. And the government of England took the alarm much earlier: for in 1530 they are deſcribed by 22 Hen. VIII. c. 10. as "an outlandiſh people calling themſelves Egyptians, uſing no craft nor feat of merchandiſe, who have come into this realm, and gone from ſhire to ſhire, and place to place, in great companies, and uſed great, ſubtle, and crafty, means to deceive the people; bearing them in hand, that they by palmiſtry could tell men's and women's fortunes; and ſo many times by craft and ſubtilty have deceived the people of their money, and alſo have committed many heinous felonies and robberies. Wherefore they are directed to avoid the realm, and not to return under pain of impriſonment, and forfeiture of their goods and chattels; and upon their trials for any felony which they may have committed, they ſhall not be entitled to a jury *de medietate linguæ*." And afterwards it is enacted, by ſtatutes 1ſt and 2d Ph. & Mary, c. 4. and 5th Eliz. c. 20. that if any ſuch perſons ſhall be imported into the kingdom, the importer ſhall forfeit forty pounds. And if the Egyptians themſelves remain one month in the kingdom, or if any perſon being fourteen years old, whether natural-born ſubject or ſtranger, which hath been ſeen or found in the fellowſhip of ſuch Egyptians, or which hath diſguiſed him or herſelf like them, ſhall remain in the ſame one month at one or ſeveral times, it is felony without benefit of clergy. And ſir Matthew Hale informs us, that at one Suffolk aſſizes, no leſs than thirteen perſons were executed upon theſe ſtatutes a few years before the reſtoration. But, to the honour of our national humanity, there are no inſtances more modern than this of carrying theſe laws into practice; and the ſanguinary act was itſelf repealed by 23 Geo. III. c. 54.

It is incredible to think how this regular ſwarm of banditti has ſpread itſelf over the face of the earth. They wander about in Aſia, in the interior parts of Africa, and, like locuſts, have over-run moſt of the European nations. In the reigns of Henry VIII. and queen Elizabeth, as we have ſeen, they were ſet up as a mark of general perſecution in England; yet their numbers did not appear for a long time to be much diminiſhed. Spain is ſuppoſed to contain forty thouſand of theſe vagrants. They became leſs numerous in France in conſequence of the ſtrictneſs of the police. In Italy they abound, eſpecially in the ſtates of the church, on

account of the prevalence of ſuperſtition, which entices them to deceive the ignorant. They are ſcattered, though not in great numbers, through Germany, Denmark, Sweden, and Ruſſia; but their chief population is in the ſouth-eaſt parts of Europe, which ſeem to be the general rendezvous of the gipſy nation. At a moderate computation, Europe contains more than ſeven hundred thouſand of theſe vagabonds. For near four centuries they have wandered through the world; and in every region, and among every people, whether barbarous or civilized, they have continued equally unchanged by the lapſe of time, the variation of climate, and the force of example. Their ſingular phyſiognomy and particular manners are the ſame in every country. Their ſwarthy complexion derives no darker ſhade from the burning ſun of Africa, nor any fairer tincture from the temperate climates of Europe; they contract no additional lazineſs in Spain, nor acquire any new induſtry in England; in Turkey they behold the moſque and the creſcent with equal indifference as they do the reformed and the catholic church in Europe. In the neighbourhood of civilized life they continue barbarous; and, beholding around them cities and ſettled inhabitants, they live in tents or holes in the earth, and wander from place to place as fugitives and vagabonds.

Niebühr, in his Travels through Arabia, met with hordes of theſe ſtrolling gipſies in the warm diſtrict of Yemen; and M. Sauer, in like manner, found them eſtabliſhed in the frozen regions of Siberia. His account of them, publiſhed in 1802, ſhews the gipſy character to be the ſame in northern Ruſſia, as with us in England. He deſcribes them as follows: "I was ſurpriſed at the appearance of detached families of gipſies throughout the government of Tobolſk; and upon enquiry I learned, that ſeveral roving companies of theſe people had ſtrolled into the city of Tobolſk. The governor thought of eſtabliſhing a colony of them; but they were too cunning for the ſimple Siberian peaſant; which induced him to ſeparate each family. He placed them on the footing of the peaſants, and allotted a portion of land for cultivation, with a view of making them uſeful to ſociety. They, however, reject houſes even in this ſevere climate, and dwell in open tents or ſheds; nor can they be brought to any regular courſe of induſtry; but they watch every traveller, and pretend to explain the myſteries of futurity, by palmiſtry or phyſiognomy. The peaſant dreads their power; and, from motives of fear, contributes to their ſupport, leſt they ſhould ſpoil his cattle and horſes. It is ſaid, that they are very ſkilful farriers and cow-leeches."

In Hungary and Tranſylvania, their ſummer habitations are tents; their winter ones, holes ten or twelve feet deep in the earth. They are fond of plate, particularly ſilver cups, which they bury under the earth for ſecurity. The principal occupations which they pretend to follow are, ſmith's work, or tinker's, or wooden ware, and horſe-dealing; they are alſo executioners of criminals, flayers of dead beaſts, and waſhers of gold. The women deal in old clothes, proſtitution, wanton dances, and fortune-telling. Notwithſtanding theſe occupations, this people are indolent beggars and thieves. They bring up their children to their own profeſſions, and appear very fond of them. They have few diſorders, except the meaſles and ſmall-pox, and weakneſſes in their eyes, occaſioned by the ſmoke; and live to an advanced age, with a ſtrong attachment to life. Their phyſic is ſaffron in their ſoups, with bleeding.

In their food theſe people are by no means choice: it is all one to them, whether it be carrion of a ſheep, hog, cow, or other beaſt, horſe-fleſh only excepted. When any one cenſures their taſte, they anſwer, "The fleſh of a beaſt which God kills muſt be better than that of one killed by the hand of man." They therefore take every opportunity of getting ſuch dainties. That they take carrion from a layſtall, as is affirmed of the gipſies in Hungary, is by no means certain, any more than that they eat horſe-fleſh. But if a beaſt out of an herd dies, and they find it before it becomes rotten or putrefied; or, if a farmer gives them notice of a cow dead, they proceed, without heſitation, to take poſſeſſion of the booty. Their favourite object is animals that have been deſtroyed by fire; therefore, whenever a conflagration has happened, either in town or country, the next day the gipſies, from every neighbouring quarter, aſſemble and draw the ſuffocated half-conſumed beaſts out of the aſhes. Men, women, and children, in troops, are extremely buſy, joyfully collecting the fleſh, upon which they gluttonize in their huts as long as this delicious fare laſts.

The gipſies have, at leaſt in Tranſylvania, a ſort of regular government, rather nominal than real or effective. They have their leaders or chiefs, whom they diſtinguiſh by the Sclavonian title, *waywode*. To this dignity every perſon is eligible who is of a family deſcended from a former waywode; but the preference is generally given to thoſe who have the moſt wealth, who are of a large ſtature, and not paſt the meridian of life. Of religion they have no ſenſe; though, with their uſual cunning and hypocriſy, they profeſs the eſtabliſhed faith of every country in which they live. They alſo ſpeak the languages of the reſpective countries, yet have a dialect of their own; from whence derived, authors differ. The only ſcience which they have attained is muſic. Their poetry is indecent rhyme.

Their general character is thus given by Grellman, in his German Treatiſe on Gipſies: "They are lively, uncommonly loquacious and chattering; fickle in the extreme, conſequently inconſtant in their purſuits; faithleſs to every body, even their own caſt; void of the leaſt emotion of gratitude, frequently rewarding benefits with the moſt inſidious malice. Fear makes them ſlaviſhly compliant when under ſubjection; but having nothing to apprehend, like other timorous people, they are cruel. Deſire of revenge often cauſes them to take the moſt deſperate reſolutions. To ſuch a degree of violence is their fury ſometimes excited, that a mother has been known, in the exceſs of paſſion, to take her ſmall infant by the feet, and therewith ſtrike the object of her anger, when no other inſtrument has readily preſented itſelf. They are ſo addicted to drinking, as to ſacrifice what is moſt neceſſary to them, that they may feaſt their palates with ardent ſpirits. Nothing can exceed the unreſtrained depravity of manners exiſting among them. Unchecked by any idea of ſhame, they give way to every libidinous deſire. The mother endeavours, by the moſt ſcandalous arts, to train up her daughter for an offering to ſenſuality; and this is ſcarcely grown up, before ſhe becomes the ſeducer of others. Lazineſs is ſo prevalent among them, that were they to ſubſiſt by their own labour only, they would hardly have bread for two of the ſeven days in the week. This indolence increaſes their propenſity to ſtealing and cheating, the common attendants on idleneſs. They ſeek to avail themſelves of every opportunity to ſatisfy their lawleſs deſires. Their univerſal bad character therefore for fickleneſs, infidelity, ingratitude, revenge, malice, rage, depravity, lazineſs, knavery, thieviſhneſs, and cunning, though not deficient in capacity and cleverneſs, render theſe people of no uſe in ſociety, except as ſoldiers to form marauding parties. Attempts have in vain been made for cultivating and civilizing them. This appears from a very intelligent Hungarian lady's experience on the ſubject, communicated in a letter as follows: 'There are a great number of them on my eſtates, but I have permitted two families in particular to eſtabliſh themſelves at the place of my own reſidence, under the expreſs condition that no others ſhall come here and join them. I took all poſſible pains to make them reaſonable creatures. I ſet the elder ones to work; the younger ones to tend the cattle.

cattle. I obſerved that they were more fond of horſes than any thing elſe; for which reaſon I placed a gipſy under each groom. I had their children clothed, that none of them might be running about naked, according to their uſual practice. It appeared, however, that cuſtom was become nature with them. The old ones worked diligently ſo long as any body ſtood over them; the moment their back was turned they all got together in a circle, their legs acroſs, facing the ſun, and chattered. Thus they cannot poſſibly earn more, indeed hardly ſo much, as would find them bread. Even in winter they cannot bear a hat on their head, nor ſhoes on their feet. The boys will run like wild things after carrion, let it ſtink never ſo much; and where a mortality happens among the cattle, there theſe wretched beings are to be found in the greateſt numbers.' The origin of this people, as we have ſeen, has been generally ſuppoſed to be Egyptian; and that belief is as old as their exiſtence in Europe. Thomaſius, Salmon, and ſignior Griſelini, have endeavoured to prove the fact by ſatisfactory evidence. This theory, however, ſeems without foundation. The Egyptian deſcent of theſe people is not only deſtitute of proofs, but the moſt poſitive evidence is found to contradict it. Their language differs entirely from the Coptic; and their cuſtoms are very different from thoſe of the Egyptians. They are indeed to be found in Egypt; but they wander about there as ſtrangers, and form a diſtinct people as in other countries."

The Egyptian deſcent of the gipſies being thus rejected by Grellman, he next endeavours to ſhew that they came from Hindooſtan. The chief baſis of his theory, however, is no other than that very dubious one, a ſimilarity of language. He adds a long vocabulary of the gipſy and the Hindoo languages; in which, it muſt be confeſſed, many words are the ſame; but many are different. The cauſe of their emigration from their country, he conjectures, not without probability, to be the war of Timur Bec, or Tamerlane, in India. In the years 1408 and 1409, this conqueror ravaged India; and the progreſs of his arms was attended with devaſtation and cruelty. All who made reſiſtance were deſtroyed; thoſe who fell into the enemy's hands were made ſlaves; of thoſe very ſlaves one hundred thouſand were put to death. As on this occaſion an univerſal panic took place, what could be more natural than that a great number of terrified inhabitants ſhould endeavour to ſave themſelves by flight? He next endeavours to trace the route by which the gipſies came from Hindooſtan to Europe: but here he juſtly acknowledges that all is mere ſurmiſe; and that there ſtill hangs a cloud over the origin of this extraordinary race of people.

GI'RAFFE, *ſ.* the Cameleopardalus. See CERVUS, vol. iv. p. 51.

GIRA'GLIA, a ſmall iſland near the north coaſt of the iſland of Corſica: twenty-three miles north of Baſtia, and one and a half from Cape Corſo.

GI'RALD (Barry), or *Giraldus Cambrenſis*. See BARRY, vol. ii. p. 761.

GIRAL'DI (Cinzio Giambattiſta), an Italian poet, born at Ferrara in 1504. He ſtudied the languages under Calcagnini, and medicine under Manardi, in which faculty he graduated. He was for twelve years profeſſor of philoſophy and phyſic at Ferrara, where duke Hercules made him his ſecretary. He was continued for ſome time in the ſame employ by duke Alphonſo; but a difference ariſing between him and Giambattiſta Pigna reſpecting a publication, cauſed him to quit Ferrara. In 1564 he accepted an invitation from the duke of Savoy to take the chair of eloquence in the univerſity of Mondovi. He was honourably diſmiſſed in 1568, and removed to a ſimilar ſituation at Pavia. Finally, he returned to Ferrara, where he died in 1573. Cinthio Giraldi diſtinguiſhed himſelf as a writer in various branches of literature. He wrote nine Italian tragedies, which were received with great applauſe. The moſt eſteemed among them was, *L'Orbecche*, firſt repreſented before duke Hercules in 1541, and ſtill accounted one of the beſt dramatic productions of that age. His paſtoral drama, entitled *Egle*, was written earlier than the *Sacrifizio* of Beccari, uſually reckoned the firſt compoſition of the kind. His poem of twenty-ſix cantos, entitled *Ercole*, printed in 1557, has fallen into oblivion. The work by which he is moſt known is his *Ecatommithi*, or Hundred Novels, 2 vols. 8vo. 1565. It has been tranſlated into different languages, and furniſhed fables for dramatic and other compoſitions. He wrote in Latin, Poems; the Hiſtory of Andrew Doria; and a Commentary on the Princes of Eſte and Ferrara, taken from the Epitome of Lilius Gyraldus.

GIRAL'DI (Giglio Gregorio; in Latin, *Lilius Giraldus*), one of the moſt learned men of his time, born at Ferrara in 1489. He ſtudied the languages and law at his native place under the inconveniences of poverty; and, after finiſhing his education, went to Naples, where he contracted a friendſhip with Pontano, Sannazaro, and the other elegant ſcholars then flouriſhing in that city. He next viſited Mirandola, Carpi, and Milan, in which laſt place he improved himſelf in Greek under Demetrius Chalcondylas. At Modena, the counteſs Rangone choſe him for preceptor to her ſon Hercules, afterwards cardinal. He accompanied that lady to Rome at the beginning of the pontificate of Leo X. and had apartments in the Vatican. He remained in Rome during the two ſucceeding pontificates, and was thought to be in the way of high promotion; yet he obtained nothing more than the office of apoſtolical prothonotary. At the ſack of Rome in 1527 he loſt all his property, and even his books. To this calamity was added that of the death of his patron, cardinal Rangone; ſo that he left the capital in great diſtreſs, and went firſt to Bologna, and then to Mirandola. In this city he was received with great kindneſs by Gianfranceſco Pico, but ill fortune ſtill purſued him. This patron was murdered in 1533, and Giraldi with great difficulty eſcaped to Ferrara with his life. From the extreme poverty to which he was reduced, he was relieved by the favour of the ducheſs Renata, and that of ſeveral of the nobility, ſo that in his latter years he was able to lay up a ſum of ten thouſand crowns. His health, however, was extremely impaired, and he finiſhed his days in 1552. He bequeathed moſt of his property to duke Hercules, though he had ſeveral poor relations; and his books to Cinthio Giraldi, who appears to have been his kinſman. The great extent of his reading is particularly ſhewn by his work, entitled, *Syntagma de Diis Gentium*, in ſeventeen diſſertations. It is the firſt treatiſe in which mythology is diſcuſſed in a truly learned manner, and there is ſcarcely any ancient author, Greek or Latin, which he does not quote. Belonging to the ſame argument are his Treatiſe on the Muſes; on the Ships of the Ancients and their Modes of Burial; on the Life of Hercules; his Explications of the Pythagorical Symbols and other ancient Enigmas; his Treatiſe of Years and Months, with the Greek and Latin Calendars; and his Thirty Dialogues on Subjects of Erudition. His other great work is, A Hiſtory of the Greek and Latin Poets; and of the Poets of his own Time; the latter of which is an exact account of the ſtate of poetry during the firſt fifty years of the ſixteenth century. He was himſelf an elegant Latin poet, and ſome of his compoſitions are joined to the Leyden edition of his works in 1696, 2 vols. folio. It was probably a ſenſe of his own misfortunes that induced him to write two ſmall pieces againſt ingratitude, and a work which became famous, entitled, *Progymnaſmata adverſus Litteras & Litteratos*: this attack upon letters, indeed, he aſſerted to be only a ſport of the imagination. He tranſlated from the Greek a work of Simon of Antioch, *De Cibariorum Facultate*.

GI'RAN, a town of Africa, in the country of Algiers: forty-five miles ſouth-eaſt of Ouran.

GI'RANCOURT, a town of France, in the department of the Voſges, and chief place of a canton, in the diſtrict of Epinal: one league and three quarters weſt of Epinal, and three and a half ſouth-eaſt of Mirecourt.

GIR'ANDOLE, *ſ.* [French.] A kind of branched candleſtick.

GIRAPIE'TRA, a town of the iſland of Candia: ſixteen miles ſouth-weſt of Settia.

GI'RAR, a ſtrong fortreſs of Hindooſtan, in the country of Malwa: forty miles ſouth-eaſt of Shanderee, and thirty-two eaſt-north-eaſt of Kimlaſſa.

GI'RARD (Gabriel), diſtinguiſhed for his writings on the French language, and as being almoner to the ducheſs of Berry, and king's interpreter for the Sclavonian and Ruſſian languages. He was admitted into the French academy in 1744, and died in 1748, at the age of ſeventy. His principal work was *Synonymes François*; the purpoſe of which was to ſhew that the French words uſually accounted ſynonymous, have, almoſt all, ſhades of difference, which, in correct ſpeech, ſhould prevent them from being uſed indifferently. This poſition he illuſtrates by ſhort ſentences, in which the words are introduced, and which are generally uſeful maxims or delicate ſentiments, choſen with much taſte and a very nice diſcrimination. No work of the grammatical kind was ever more pleaſing to read; and Voltaire ſays of it, "that it will ſubſiſt as long as the language, and will even ſerve to make it ſubſiſt." A new edition of it, much augmented, was publiſhed by M. Beauzée, in 1769, 2 vols. 12mo. The abbé Girard alſo wrote a French grammar, entitled *Principes de la Langue Françoiſe*, 2 vols. 12mo. 1747, which has conſiderable merit.

GI'RARD DE VILLETHIER'RI (John), a French prieſt, born at Paris, where he died in 1709, at the age of ſixty-eight years. He is highly praiſed for his piety and his virtues, and for being the author of a great number of practical and devotional treatiſes. His works have been frequently printed, and, according to Dupin, taken collectively, form a body of practical morality adapted to all conditions; founded on the Scriptures, the canons, the councils, and the fathers.

GIRARDON' (Francis), an eminent French ſculptor, born in 1630, the ſon of a founder at Troyes in Champagne. After acquiring taſte and practice in his native city, he went to Paris, and improved himſelf under the ſculptor Anguier. The reputation he acquired by his performances cauſed him to be ſent by the king with a liberal penſion to Rome. On his return he was admitted into the academy of painting in 1657, and obtained the patronage of Le Brun, which he returned by an unlimited deference. He wrought much from the deſigns of that painter; and was, doubtleſs, not ill-pleaſed when the diſcouragement of Le Brun cauſed the celebrated ſculptor Puget to quit Paris and return to Marſeilles. Girardon is reckoned to have had more correctneſs than invention; and he modelled with more facility than he worked in marble, for his chiſel is thought to have generally left an impreſſion of heavineſs. His works are, however, conſidered as maſterpieces in the art. Among the principal are four of the figures compoſing the group of the baths of Apollo, and the rape of Proſerpine; both in the gardens of Verſailles: the equeſtrian ſtatue of Louis XIV. the largeſt that had been caſt at a ſingle font: and the mauſoleum of cardinal Richelieu, in the church of the Sorbonne. He made a preſent to his native place of a grand medallion of white marble repreſenting Louis XIV. He cultivated the friendſhip of the fine writers of the age, ſeveral of whom have perpetuated his name. He roſe through the various dignities in the academy to that of chancellor, to which he was nominated in 1695. After having adorned the capital and other parts of the kingdom with a number of works, and riſen to the head of his profeſſion, he died in 1715, at the age of eighty-five, and was buried in the ſplendid tomb which he had erected for his wife at Troyes.

GIRASO'LE, *ſ.* [*giraſol*, Fr.] The opal ſtone, or that which is called *cat's eye*. The word is ſometimes applied to ſemi-tranſparent milk-white porcelain.

GIRCH, a river of North Wales, which runs into the ſea, near Pullhely, in Caernarvonſhire.

GIRCHS'BECK, a town of Germany, in the duchy of Holſtein: eleven miles ſouth-ſouth-weſt of Segeberg, and ſix weſt-ſouth-weſt of Oldeſlohe.

To GIRD, *v. a.* pret. *girded*, or *girt*; [ȝyrðan, Sax.] To bind round.—They ſprinkled earth upon their heads, and *girded* their loins with ſackcloth. 2 *Mac.* x. 3.—To put on ſo as to ſurround or bind.—Cords of the bigneſs of packthread were faſtened to bandages, which the workmen had *girt* round my neck. *Swift.*—To faſten by binding.—He *girt* his warlike harneſs about him. 1 *Mac.* ii. 25.

Let us riſe at once, *gird* on our ſwords,
And, at the head of our remaining troops,
Attack the foe. *Addiſon.*

To inveſt:

Stoop then, and ſet your knee againſt my foot;
And in reguerdon of that duty done,
I *gird* thee with the valiant ſword of York. *Shakeſpeare.*

To dreſs; to habit; to clothe.—I *girded* thee about with fine linen, and I covered thee with ſilk. *Ezek.* xvi. 10.

Tyſiphone there keeps the ward,
Girt in her ſanguine gown, by night and day,
Obſervant of the ſouls that paſs the downward way.
Dryden.

To cover round as a garment:

Theſe, with what ſkill they had, together ſew'd,
To *gird* their waiſt: vain covering, if to hide
Their guilt, and dreaded ſhame! *Milton.*

To furniſh; to equip:

So to the coaſt of Jordan he directs
His eaſy ſteps, *girded* with ſnaky wiles. *Milton.*

To incloſe; to incircle:

That Nyſeian iſle,
Girt with the river Triton, where old Cham
Hid Amalthea, and her florid ſon,
Young Bacchus, from his ſtepdame Rhea's eye. *Milton.*

To reproach; to gibe.—Being mov'd, he will not ſpare to *gird* the god. *Shakeſpeare.*

To GIRD, *v. n.* [by tranſpoſition from *gride* or *cut.*] To break a ſcornful jeſt; to gibe; to ſneer.—Men of all ſorts take a pride to *gird* at me. *Shakeſpeare.*

This wondred error growth
At which our critics *gird.* *Drayton.*

GIRD, *ſ.* A twitch; a pang: it may come from the ſenſation cauſed by a bandage or girdle drawn hard ſuddenly. This word is now ſeldom uſed, unleſs the former etymology be admitted.—Conſcience by this means is freed from many fearful *girds* and twinges which the atheiſt feels. *Tillotſon.*

Sweet king! the biſhop hath a kindly *gird:*
For ſhame, my lord of Wincheſter, relent. *Shakeſpeare.*

GIRDER, *ſ.* in architecture; the largeſt beam or piece of timber ſupporting a floor. Their ends are uſually faſtened into the ſummers, or breaſt-ſummers; and the joiſts are framed in at one end to the girders. By the ſtatute for rebuilding London, no girder is to lie leſs than ten inches into the wall, and their ends to be always laid in loam, &c. The ſhorter bearings a girder has, and the oftener it is ſupported by the internal or partition walls, ſo much the ſtronger will be the building in proportion as the tie is greater.

Theſe

Theſe mighty *girders* which the fabric bind,
Theſe ribs robuſt and vaſt in order join'd. *Blackmore.*

GIR'DER, *ſ.* [from *gird*, v.] A ſatiriſt.—We great *girders*, call it a ſhort ſaying of ſharp wit, with a bitter ſenſe in a ſweet word. *Lilly's Alexan. and Campaſpe.*

GIR'DLE, *ſ.* [ȝyɲbe, Sax.] Any thing drawn round the waiſt, and tied or buckled:

A cap of flowers, and a *girdle*,
Embroider'd all with leaves of myrtle. *Shakeſpeare.*

On him his mantle, *girdle*, ſword, and bow,
On him his heart and ſoul, he did beſtow. *Cowley.*

Encloſure; circumference:

Suppoſe within the *girdle* of theſe walls
Are now confin'd two mighty monarchies. *Shakeſpeare.*

The zodiac.—Great breezes in great circles, ſuch as are under the *girdle* of the world, do refrigerate. *Bacon.*

It was anciently the cuſtom for bankrupts and inſolvent debtors to put off and ſurrender their girdle in open court. The reaſon was, that our anceſtors uſed to carry all their neceſſary utenſils tied to the girdle; whence the girdle became a ſymbol of the eſtate. Hiſtory relates, that the widow of Philip I. duke of Burgundy, renounced her right of ſucceſſion, by putting off her girdle upon the duke's tomb. It was a cuſtom among the Greeks and Romans for the huſband to untie his bride's girdle. Homer, lib. xi. of his Odyſſey, calls the girdle παρθενιην ζωνην, "maid's or virgin's girdle." The poets attribute to Venus a particular kind of girdle called *ceſtus*, to which they annexed a faculty of inſpiring the paſſion of love.

To GIR'DLE, *v. a.* To gird; to bind as with a girdle:

Lay the gentle babes, *girdling* one another
Within their innocent alabaſter arms. *Shakeſpeare.*

To incloſe; to ſhut in; to environ:

Let me look back upon thee, O thou wall,
That *girdleſt* in thoſe wolves! *Shakeſpeare.*

GIR'DLE-BELT, *ſ.* The belt that incircles the waiſt:

Nor did his eyes leſs longingly behold
The *girdle-belt*, with nails of burniſh'd gold. *Dryden.*

GIR'DLE-NESS, a cape of Scotland, on the eaſt coaſt: two miles eaſt of Aberdeen.

GIR'DLE-STEAD, *ſ.* That part of the body where the girdle was worn.—Divide yourſelf into two halfs, juſt by the *girdle-ſtead*. *Eaſtward Hoe.*

GIR'DLER, *ſ.* A maker of girdles.

GIR'DLERS' COMPANY, a reſpectable company of the city of London, incorporated Auguſt 6, 1448. They are a maſter, three wardens, twenty-four aſſiſtants, eighty-four livery-men, &c. Their armorial enſigns are per feſs azure, and or a pale counter-changed, each piece of the firſt, charged with a gridiron of the ſecond. The creſt is the demy effigy of St. Lawrence, holding in his right hand a gridiron, in the left a book, the firſt of the colour, the latter of the metal aforeſaid. The motto, "Give thanks to God." Their hall is in Baſinghall-ſtreet.

GIRE, *ſ.* [*gyrus*, Lat.] A circle deſcribed by any thing in motion. See GYRE.

GIREL'LA, *ſ.* [from the Lat. *gyro*, to turn round.] A vane; a weathercock.

GIRET', a town of Perſia, in the province of Mezanderan; thirty miles ſouth of Ferabat.

GIR'GASHITES, or GERGESE'NES, an ancient people of the land of Canaan, whoſe habitation was beyond the ſea of Tiberias, where we find ſome footſteps of their name in the city of *Gergeſa*, upon the lake of Tiberias. The Jewiſh doctors record, that when Joſhua firſt came into the land of Canaan, the Girgaſhites took a reſolution rather to forſake their country than ſubmit to the Hebrews, and accordingly retired into Africa. Nevertheleſs, a good number of them ſtaid behind, ſince Joſhua, xxiv. 11, informs us that he ſubdued the Girgaſhites, and they whom he overcame were on this ſide the Jordan.

GIR'GE, or DJERGEH, a town of Upper Egypt, the capital of the Said, and reſidence of a bey, ſituated on the left bank of the Nile, in a moſt fertile diſtrict, abounding in all kinds of proviſions. It is about a league in circumference, and contains ſeveral moſques, bazars, and ſquares, but no marble buildings or remains of ancient edifices: 215 miles ſouth of Cairo, and 160 north of Syene. Lat. 26. 30. N. lon. 49. 8. E. Ferro.

GIRGEN'TI, or AGRIGENTI, a city of the iſland of Sicily, near the ſouth coaſt of the Valley of Mazara, founded near the ruins of the ancient Agrigentum; the ſee of a biſhop: ſituated on the river St. Blaiſe, about three miles from the ſea: forty-ſeven miles ſouth of Palermo. This ſee is the richeſt in Sicily. Among the curioſities belonging to the cathedral is an Etruſcan vaſe of rare ſize and preſervation. The monaſtery of San Nicolo ſtands on a little eminence in the centre of the old city, admirably ſituated. The range of hills towards the ſouth-eaſt ſinks gradually, ſo as to admit a noble view of ſea and of plain, terminated on each ſide by luxuriant groves of fruit-trees. Above appear the remains of ancient grandeur, wonderfully contraſted with the humble ſtraw cottages built at their feet. In the garden of this convent is a ſquare building with pilaſters, which is ſuppoſed to have been part of the palace of the Roman prætor. See AGRIGENTUM, vol. i. p. 207. Lat. 37. 28. N. lon. 31. 18. E. Ferro.

GIR'IA, a town of the iſland of Cephalonia: ſixteen miles weſt of Cephalonia.

GIR'KIN, *ſ.* A ſmall kind of cucumber.

GIRL, *ſ.* [Concerning the etymology of this word there is much queſtion: Meric Caſaubon derives it from χορη, of the ſame ſignification; Minſhew from *garrula*, Latin, a prattler, or *girella*, Italian, a weathercock; Junius thinks that it comes from *herlodes*, Welſh, from which, ſays he, *harlot* is very eaſily deduced. Skinner imagines that the Saxons, who uſed ceopl, for a man, might likewiſe have ceopla for a woman, though no ſuch word is now found. Dr. Hickes derives it moſt probably from the Iſlandic *karlinna*, a woman.] A young woman, or female child.—In thoſe unfledg'd days was my wife a *girl*. *Shakeſpeare.*

Tragedy ſhould bluſh as much to ſtoop
To the low mimic follies of a farce,
As a grave matron would to dance with *girls*. *Roſcommon.*

A boy, like thee, would make a kingly line;
But oh! a *girl*, like her, muſt be divine! *Dryden.*

GIRL'ISH, *adj.* Suiting a girl; youthful.—In her *girliſh* age ſhe kept ſheep on the moor. *Carew.*

GIRL'ISHNESS, *ſ.* The ſtate or quality of being girliſh.

GIRL'ISHLY, *adv.* In a girliſh manner.

GIRN, *ſ.* [a tranſpoſition of letters for] Grin.—This is at leaſt a *girn* of fortune, if not a fair ſmile. *Davenant's Wits.*

To GIRN, *v. n.* A corruption of *grin*. It is applied in Scotland to a crabbed, captious, or peeviſh, perſon.

GIROMA'GNY, a town of France, in the department of the Upper Rhine, and chief place of a canton, in the diſtrict of Béfort: two leagues north-weſt of Béfort, and nine and a half ſouth-weſt of Colmar.

GI'RON, a town of Africa, on the Ivory Coaſt.

GI'RON, *ſ.* In heraldry; a kind of triangle.

GI'RON DE LOYASA (Garcias), a learned Spaniſh prelate, born at Talavera, and purſued his ſtudies in the univerſity of Alcala. When he had completed his philoſophical and theological courſes, he applied to the ſtudy of hiſtory, and of the councils, with which he became intimately converſant. Afterwards he retired to Toledo, of which he had obtained a canonry, and where his uncle Lopez de Carvajal reſigned to him the archdeaconry

archdeaconry of Guadalajar, which is one of the dignities belonging to the church of that city. In 1585, Philip II. king of Spain, ſent for him to court, where he made him his almoner, and maſter of the royal chapel; ſoon after which he confided to his care the education of his ſon Philip, infant of Spain. When, in 1596, cardinal Albert of Auſtria went to aſſume the government of the Low-countries, he appointed Giron his vicar-general over his archbiſhopric of Toledo; and upon the ſubſequent marriage of the cardinal, the king preferred his almoner to that valuable ſee. He had but a ſhort enjoyment, however, of his new dignity; for he died in 1599, within five or ſix months after his advancement. He was the author of a valuable collection of Spaniſh Councils, publiſhed in 1594, in folio, under the title of *Collectio Conciliorum Hiſpaniæ, cum Notis & Emendationibus*.

GIRON'DE, a department of France, bounded on the north-eaſt by the department of the Lower Charente, on the eaſt by the departments of the Dordogne and Lot and Garonne, on the ſouth by the department of the Landes, and on the weſt by the ſea. It takes its name from the river Gironde. Bourdeaux is the capital.

GIRON'DE, a town of France, in the department of the Gironde, and chief place of a canton, in the diſtrict of La Reolle: one league and a half weſt of La Reolle, and three north of Bazas.

GIRON'DE, a river of France, formed by the union of the Garonne and Dordogne, four leagues north from Bourdeaux, which runs into the Atlantic after a courſe about nine leagues north-north-weſt.

GIRONEL'LA, a town of Spain, in the province of Catalonia: ſeven miles eaſt-north-eaſt of Solſano.

GIRONNE', *adj.* Having the field divided into girons.

GIRO'ST, a town of Perſia, in the province of Kerman: 125 miles ſouth of Sirgian.

GIROU'ST (James), a French Jeſuit, born at Beaufort in Anjou, in 1624. He entered on his noviciate in 1641, and, after paſſing through the uſual academic courſes, made pulpit-eloquence the principal ſubject of his attention. In this line he roſe to high reputation in his native province, and afterwards in the capital. When he was at the height of his popularity, he was incapacitated for further public ſervices by a paralytic attack; but, as he retained his faculties, he was for ſome years much reſorted to as a learned and judicious adviſer on difficult points on caſuiſtry. He died in 1689, at ſixty-five years of age. After his death, father Bretonneau publiſhed a collection of his Sermons, in 1704, in five vols. 12mo.

GIRR'OCK, *ſ.* [*acus major.*] A kind of fiſh.

GIRT, *part. paſſ.* [from *To gird.*]

To GIRT, *v. a.* To gird; to encompaſs; to encircle. *Not proper:*

In the dread ocean, undulating wide
Beneath the radiant line that *girts* the globe. *Thomſon.*

GIRT, *ſ.* A band by which the ſaddle or burthen is fixed upon the horſe:

Here lies old Hobſon, death hath broke his *girt*;
And here, alas! hath laid him in the dirt. *Milton.*

A circular bandage.—The moſt common way of bandage is by that of the *girt*, which *girt* hath a bolſter in the middle, and the ends are tacked firmly together. *Wiſeman.*—[In timber-meaſuring.] The circumference of a tree. Some uſe this word for the quarter or fourth part of the circumference only, on account of the great uſe that is made of it; for the ſquare of this fourth part is uſed as equal to the area of the ſection of the tree; which ſquare therefore multiplied by the length of the tree, is accounted the ſolid content. This content however is always about one-fourth part *leſs* than the true quantity; being nearly equal to what this will be after the tree is hewed ſquare in the uſual way: ſo that it ſeems intended to make an allowance for the ſquaring of the tree.

GIRT-LINE, *ſ.* A ſea term; a rope paſſing through a block on the head of the lower maſt to hoiſt up the rigging.—[With carpenters.] A line on the common ſliding rule, employed in the caſting up the contents of trees by means of their girt.

GIRTH, *ſ.* A band by which the ſaddle is fixed upon the horſe:

Or the ſaddle turn'd round, or the *girths* brake;
For low on the ground, woe for his ſake,
The law is found. *Ben Jonſon.*

The compaſs meaſured by the girdle, or encloſing bandage.—He's a luſty jolly fellow that lives well, at leaſt three yards in the *girth*. *Addiſon.*

To GIRTH, *v. a.* To bind with a girth.

GIRTH-WEB, *ſ.* The web of which girths are made.

GIR'TYS, an Indian town in the north-weſt territory of the United States, near the head of the navigable water or landing on St. Mary's river, where the Indians entered into the treaty of Greenville with the United States.

GIRU', a town of Perſia, in the province of Mezanderan: fifty miles eaſt of Mezanderan.

GIR'VAN, a town of Scotland, in the county of Ayr, ſituated at the mouth of the river Girvan: the principal trades carried on are tanning of leather and making of ſhoes: fourteen miles ſouth-ſouth-weſt of Ayr, and twenty-ſeven north-north-weſt of Wigton.

GIR'VAN, a river of Scotland, which riſes in the north-eaſt part of the county of Ayr, and runs into the ſea, a little below Girvan town.

GIR'VII, [from ȝyꝛ, Sax. a fen.] The ancient inhabitants of Lincolnſhire, and ſome neighbouring counties; the inhabitants of the fen country.

GI'SARM, *ſ.* An ancient military weapon, ſuppoſed to be a pike with two points.

GIS'BERT (John), a learned French Jeſuit, born at Cahors, in 1639. During ſeven years he preſided over the claſſical and rhetorical forms at Tours; and afterwards taught philoſophy for four years, and theology during an equal period, in that city. His next appointment was to the theological chair in the univerſity of Toulouſe, which he filled for eighteen years with eminent ſucceſs and reputation. After he was releaſed from the duties of his profeſſorſhip, he was appointed principal of the Jeſuits college at Toulouſe; and in 1703 was choſen provincial of the order in Languedoc. He died at Toulouſe in 1710, in the ſeventy-firſt year of his age. His principal works were, 1. *In Summam Sancti Thomæ Quæſtiones Juris & Facti theologicæ in Collegio Toloſano Societatis Jeſu propugnatæ*, 1670, folio. 2. *Diſſertationes Academicæ Selectæ, &c.* 1688, 8vo. 3. *Scientia Religionis Univerſa, ſive Chriſtiana Theologia, Hiſtoriæ Eccleſiaſticæ nova Methodo ſociata, Queſtiones Juris & Facti complectens*, 1689, in 2 vols. 8vo. 4. *Antiprobabiliſmus, ſive Tractatus Theologicus fidelem totius Probabiliſmi Staterem continens, in quo ex Rationibus divinis accuratè examinatur ſive Veritas ſeu Falſitas cujuſcunque Probabiliſmi in Materia morali*, 1703, 4to. a work which Dupin has analyſed and recommended as a performance of great merit.

GIS'BERT (Blaiſe), a French Jeſuit, and, like the preceding, a native of Cahors, born in 1567, and entered into the order in 1672. For ſome years he filled the poſts of claſſical and rhetorical tutor; but afterwards was ſelected for the ſervice of the pulpit, in which he is ſaid to have been much admired. The laſt years of his life he ſpent in the college belonging to the ſociety at Montpellier, where he died in 1731. He was the author of The Art of Educating a Prince, 1687, 4to. reprinted in the following year in 2 vols. 12mo. under the title of The Art of forming the Mind and Heart of a Prince: and Philoſophy for a Prince; or, a true Idea of the Modern and of the Ancient Philoſophy, 1689, 8vo. But the work which does him moſt honour, is his Chriſtian Eloquence, in Theory and Practice, 1714, 4to. which was republiſhed in 1728 at Amſterdam, in 12mo. with

with notes, by the celebrated James L'Enfant, who awards it a high ſhare of praiſe. The author left behind him in manuſcript a work which, if well executed, muſt be gratifying to curioſity: it is entitled A critical Hiſtory of the Art of Preaching among the French, from the early Years of the Reign of Francis I. to the Reign of Louis XV.

GIS'BOROUGH, a market-town in the North Riding of Yorkſhire, in Cleveland, in the turnpike road from Whitby to Durham, 224 miles from London, and four from the mouth of the Tees, where is a bay and harbour for ſhips. It had an abbey, founded in 1119; and its church, by the ruins, ſeems to have been equal to the largeſt cathedral in England. The ſoil, beſides its fertility in paſture, has iron ore, and mines of alum, which were firſt diſcovered in the reign of James I. and have been ſince very much improved. Sir Paul Pindar, who firſt farmed them, paid a rent to the king of 12,500l. The market is on Fridays. Fairs April 26 and 27, Whitſun-Tueſday, Auguſt 26 and 27, September 19 and 20, and Monday after November 11.—Ounſberry-Topping, is a lofty verdant mountain, adjoining to Giſborough, which has a moſt delightful proſpect, and is regarded by the ſailors as a ſea-mark. From a rock near the top of it there iſſues a ſpring, recommended for diſorders of the eyes.

GIS'BURN, a ſmall town in Craven, in the Weſt Riding of the county of York; eleven miles from Skipton, eight from Clithero, twenty-five from Preſton, and 220 from London. A very good turnpike-road through a moſt beautiful country from Skipton to Clithero paſſes through this town, and is the direct road from York, Harrowgate, &c. to the central parts of Lancaſhire. Here is no manufactory, and but little trade of any kind, the country around this pariſh, and indeed almoſt all Craven, conſiſting chiefly of large rich paſtures and meadows, from which an almoſt incredible ſupply of fat cattle, ſheep, &c. is ſent every fortnight to the trading towns in Lancaſhire. Here are five fairs annually, viz. on Eaſter Monday, and the two ſucceeding Mondays fortnight, for lean cattle; on September the 18th for fat cattle; and 19th of September for pedlary wares.

GIS'CO, ſon of Hamilco the Carthaginian general, baniſhed from his country by the influence of his enemies. He was afterwards recalled, and empowered by the Carthaginians to puniſh, in what manner he pleaſed, thoſe who had occaſioned his baniſhment. He was ſatisfied to ſee them proſtrate on the ground, and to place his foot on their neck, ſhewing that independence and forgiveneſs are two of the moſt brilliant virtues of a great mind. He was made a general ſoon after, in Sicily, againſt the Corinthians, about 309 years before the Chriſtian era; and by his ſucceſs and intrepidity he obliged the enemies of his country to ſue for peace.

To GISE, *v. a.* To graze by taking in the cattle of other people.

GISE'KIA, *ſ.* [ſo named by Linnæus in honour of *Paulus Dietericus Giſeke*, profeſſor of phyſics at Hamburgh.] In botany, a genus of the claſs pentandria, order pentagynia, natural order of ſucculentæ, (portulaceæ, *Juſſ.*) The generic characters are—Calyx: perianthium five-leaved; leaflets ovate, concave, blunt, ſcarioſe at the edge, permanent. Corolla: none. Stamina: filaments five, ſubulate, ovate at the baſe, ſhort; antheræ roundiſh. Piſtillum: germ ſuperior, roundiſh, retuſe, five-parted; ſtyles ſhort, bowed back; ſtigmas blunt. Pericarpium: capſules five, roundiſh, ſomewhat flatted, ſcabrous, blunt, approximating. Seeds: ſolitary, ovate, ſmooth.—*Eſſential Character.* Calyx five-leaved; corolla none; capſules five, approximating, roundiſh, one-ſeeded.

Giſekia pharnacioides, or trailing Giſekia, a ſolitary ſpecies. Stalks herbaceous, decumbent, ſmooth, round, ſcored with a line on the upper ſide, a foot long, with remote joints. Branches of the baſe alternate. The herb reſembles that of Illecebrum ficoideum. Leaves oppoſite, petioled, elliptic-lanceolate, quite entire, blunt, ſmooth and even, ſpreading. Flowers green on the outſide, white within, hanging down, except on the day of flowering; moſt of them axillary, on one-flowered peduncles: capſules or ſeeds black. It is an annual plant, native of the Eaſt Indies; flowering here in June.

GI'SEMENT, *ſ.* The cattle which are taken in to graze at a certain price; the money received for grazing cattle.

GI'SETAKER, *ſ.* The perſon who ſo takes cattle to graze.

GIS'GI, a town of Tranſilvania, ſituated near the Maros: fourteen miles ſouth-weſt of Millenbach.

GISHU'BEL, a town of Bohemia, in the circle of Konigingratz: twenty miles eaſt-north-eaſt of Konigingratz.

GI'SING, a town and caſtle of Hungary: fourteen miles ſouth-weſt of Steinam Anger.

GIS'LAVY, a town of Sweden, in the province of Smaland: twenty miles ſouth-weſt of Johnkioping.

GI'SLE, *ſ.* Among the Engliſh Saxons, ſignifies a pledge: thus, *Fredgiſle* is a pledge of peace; *Giſlebert* an illuſtrious pledge, like the Greek *Homerus*. *Gibſ. Camden.*

GI'SON, *ſ.* in Jewiſh antiquities, a low wall for incloſing any thing conſecrated, as the temple, the altar of burnt ſacrifices, &c.

GISO'RS, a town of France, and ſeat of a tribunal, in the department of the Eure: nine leagues north-eaſt of Evreux, and nine eaſt of Rouen. Lat. 49. 17. N. lon. 19. 22. E. Ferro.

GIST, *ſ.* A gueſt; a ſtranger.

GIST OF ACTION, in law, is the cauſe for which the action lieth; the ground and foundation thereof, without which it is not maintainable. 5 *Mod.* 305.

GIS'TAIN, a town of Spain, in Arragon, ſituated on a brook in the Pyrenees, on the confines of France: five leagues north of Ainſa.

GIS'TITZ, a town of Bohemia, in the circle of Boleſlau: four miles north of Nimburn.

GISU'ND, a town of Norway, in the dioceſe of Drontheim: forty-four miles north-weſt of Drontheim.

GITE, *ſ.* [old French.] A robe:

When Phœbus roſe, he left his golden weed,
And donn'd a *gite* in deepeſt purple dy'd. *Fairfax.*

GITH, *ſ.* [*nigella.*] The herb called Guinea pepper.

GITHA'GO, *ſ.* in botany. See AGROSTEMMA.

GI'TI, a town of Aſia, in the country of Thibet: 234 miles north-north-eaſt of Delhi. Lat. 32. 10. N. lon. 79. 36. E. Greenwich.

GIT'SCHIN, a town of Bohemia, in the circle of Konigingratz. This town was taken and ſacked by the Bohemians in the year 1442; and ſuffered greatly during the long war of the Swedes in Germany: twenty-two miles north-weſt of Konigingratz, and forty-four north-eaſt of Prague.

GIT'TAH-HE'PHER, a city of Paleſtine, belonging to the tribe of Zebulon; ſituated on the eaſtern boundary of that province. It is probably the ſame with Gath-hepher. *Joſh.* xix. 13.

GIT'TAIM, a city of Paleſtine, belonging to the tribe of Benjamin. 2 *Sam.* iv. 3. *Neh.* xi. 33.

GIT'TERN, *ſ.* A kind of harp. *Phillips.*

GIT'TITE, [from *Gath.*] A native of Gath; an inhabitant of Gath.

GIT'TITH, *ſ.* A Hebrew term frequently occurring in the Pſalms, and generally tranſlated *wine-preſſes*. The conjectures of interpreters are various concerning this word. Some think it ſignifies a ſort of muſical inſtrument; others, that the pſalms with this title were ſung after the vintage; and others, that the hymns of this kind were invented in the city of Gath. Calmet is of opinion, that it was given to the claſs of young women of Gath to be ſung by them. *Pſal.* viii. 1. lxxxi. 1. lxxxiv. 1. Dr. Hammond thinks that the pſalms with this

this title were all fet to the fame tune, and made on Goliah the Gittite.

GI'VA, a town of Aſiatic Turkey, in the province of Natolia; thirty-two miles ſouth-eaſt of Miletſ.

GIVANIROTON'DO, a town of Italy, in the kingdom of Naples, and province of Capitanata: nine miles weſt of Monte St. Angelo.

To GIVE, *v. a.* preter. *gave*; part. paſſ. *given*: [ȝiꝑen, Sax.] To beſtow; to confer without any price or reward; not to ſell.—I had a maſter that *gave* me all I could aſk, but thought fit to take one thing from me again. *Temple.*

Conſtant at church and change; his gains were ſure,
His *givings* rare, ſave farthings to the poor. *Pope.*

While tradeſmen ſtarve, theſe Philomels are gay;
For gen'rous lords had rather *give* than pay. *Young.*

To tranſmit from himſelf to another by hand, ſpeech, or writing; to deliver.—The woman whom thou gaveſt to be with me, ſhe *gave* me of the tree, and I did eat. *Gen.* iii. 12.—They were eating and drinking, marrying and *giving* in marriage. *Matt.* xxiv. 38.—We ſhall *give* an account of theſe phenomena. *Burnet.*—To put into one's poſſeſſion; to conſign; to impart; to communicate.—*Give* us of your oil, for our lamps are gone out. *Matt.* xxv.—Nature *gives* us many children and friends, to take them away; but takes none away to *give* them us again. *Temple.*—To pay as a price or reward, or in exchange.—All that a man hath will he *give* for his life. *Job*, ii. 4.

If you did know to whom I *gave* the ring,
If you did know for whom I *gave* the ring,
And would conceive for what I *gave* the ring,
You would abate the ſtrength of your diſpleaſure.
Shakeſpeare.

To yield; not to withhold.—Philip, king of Macedon, gave ſentence againſt a priſoner when he was drowſy, and ſeemed to *give* ſmall attention. The priſoner, after ſentence was pronounced, ſaid, I appeal: the king, ſomewhat ſtirred, ſaid, To whom do you appeal? The priſoner anſwered, From Philip, when he *gave* no ear, to Philip, when he ſhall *give* ear. *Bacon.*—To quit; to yield as due.—*Give* place, thou ſtranger, to an honourable man. *Eccleſ.*—To confer; to impart.—I will bleſs her, and *give* thee a ſon alſo of her. *Gen.* xvii.—To expoſe; to yield without retention:

All clad in ſkins of beaſts the jav'lin bear;
Give to the wanton winds their flowing hair. *Dryden.*

To grant; to allow.—'Tis *given* me once again to behold my friend. *Rowe.*—To yield; not to deny:

I *gave* his wife propoſal way;
Nay, urg'd him to go on: the ſhallow fraud
Will ruin him. *Rowe.*

To afford; to ſupply.—*Give* us alſo ſacrifices and burnt-offerings, that we may ſacrifice unto the Lord. *Ex.* x. 25.—To empower; to commiſſion:

Prepare
The due libation and the ſolemn pray'r;
Then *give* thy friend to ſhed the ſacred wine. *Pope.*

To enable.—God himſelf requireth the lifting up of pure hands in prayers; and hath *given* the world to underſtand, that the wicked, although they cry, ſhall not be heard. *Hooker.*

So ſome weak ſhoot, which elſe would poorly riſe,
Jove's tree adopts, and lifts into the ſkies;
Through the new pupil ſoft'ring juices flow,
Thruſt forth the gems, and *give* the flow'rs to blow. *Tickel.*

To pay.—The applauſe and approbation I *give* to both your ſpeeches. *Shakeſpeare.*—To utter; to vent; to pronounce.—Let the firſt honeſt diſcoverer *give* the word about, that Wood's halfpence have been offered, and caution the poor people not to receive them. *Swift.*—So you muſt be the firſt that *gives* this ſentence, and he that ſuffers. *Shakeſpeare.*—To exhibit; to ſhew.—This inſtance *gives* the impoſſibility of an eternal exiſtence in any thing eſſentially alterable or corruptible. *Hale.*—To exhibit as the product of a calculation.—The number of men being divided by the number of ſhips, *gives* four hundred and twenty-four men a-piece. *Arbuthnot.*—To do any act of which the conſequence reaches others.—As we deſire to *give* no offence ourſelves, ſo neither ſhall we take any at the difference of judgment in others. *Burnet.*—To exhibit; to ſend forth as odours from any body.—In oranges the ripping of the rind *giveth* out their ſmell. *Bacon.*—To addict; to apply.—He that *giveth* his mind to the law of the Moſt High, will ſeek out the wiſdom of all the ancients. *Eccleſ.* xxxix. 1.

The duke is virtuous, mild, and too well *given*,
To dream on evil. *Shakeſpeare.*

Fear him not, Cæſar, he's not dangerous:
He is a noble Roman, and well *given*. *Shakeſpeare.*

To reſign; to yield up.—Finding ourſelves in the midſt of the greateſt wilderneſs of waters, without victual, we *gave* ourſelves for loſt men, and prepared for death. *Bacon.*

Who ſay, I care not, thoſe I *give* for loſt;
And to inſtruct them will not quit the coſt. *Herbert.*

To conclude; to ſuppoſe:

Whence came you here, O friend, and whither bound?
All *gave* you loſt on far Cyclopean ground. *Garth.*

To GIVE *away*. To alienate from one's ſelf; to make over to another; to transfer.—Whatſoever we employ in charitable uſes, during our lives, is *given away* from ourſelves: what we bequeath at our death, is given from others only, as our neareſt relations. *Atterbury.*

If you ſhall marry,
You *give away* this hand, and that is mine;
You *give away* heav'n's vows, and thoſe are mine;
You *give away* myſelf, which is known mine. *Shakeſpeare.*

To GIVE *back*. To return; to reſtore.—Their vices perhaps *give back* all thoſe advantages which their victories procured. *Atterbury.*

To GIVE *forth*. To publiſh; to tell.—Soon after it was *given forth*, and believed by many, that the king was dead. *Hayward.*

To GIVE *the hand*. To yield pre-eminence, as being ſubordinate or inferior.—Leſſons being free from ſome inconveniences, whereunto ſermons are more ſubject, they may in this reſpect no leſs take than in others they muſt *give the hand*, which betokeneth pre-eminence. *Hooker.*

To GIVE *over*. To leave; to quit; to ceaſe.—Let novelty therefore in this *give over* endleſs contradictions, and let ancient cuſtoms prevail. *Hooker.*

Never *give* her *o'er*;
For ſcorn at firſt makes after love the more. *Shakeſpeare.*

To addict; to attach to.—When the Babylonians had *given* themſelves *over* to all manner of vice, it was time for the Lord, who had ſet up that empire, to pull it down. *Grew.*—To conclude loſt.—Since it is lawful to practiſe upon them that are forſaken and *given over*, I will adventure to preſcribe to you. *Suckling.*

Yet this falſe comfort never *gives* him *o'er*,
That, whilſt he creeps, his vig'rous thoughts can ſoar.
Pope.

To abandon.—The duty of uniformity throughout all churches, in all manner of indifferent ceremonies, will be very hard, and therefore beſt to *give* it *o'er*. *Hooker.*

Sleep hath forſook, and *giv'n* me *o'er*
To death's benumbing opium as my only cure. *Milton.*

To GIVE *out*. To proclaim; to publiſh; to utter.—

The

The night was distinguished by the orders which he *gave out* to his army, that they should forbear all insulting of their enemies. *Addison.*

It is *given out*, that, sleeping in my orchard,
A serpent stung me. So the whole ear of Denmark
Is by a forged process of my death,
Rankly abused. *Shakespeare.*

To show in false appearance:

His *givings out* were of an infinite distance
From his true meant design. *Shakespeare.*

To GIVE *up.* To resign; to quit; to yield.—Let us *give* ourselves wholly *up* to Christ in heart and desire. *Taylor.*—*Give* yourselves *up* to some hours of leisure. *Watts.*

Learn to be honest men, *give up* your leaders,
And pardon shall descend on all the rest. *Addison.*

Have the physicians *giv'n up* all their hopes?
Cannot they add a few days to a monarch? *Rowe.*

To abandon.—If any be *given up* to believe lies, some must be first *given up* to tell them. *Stillingfleet.*—Persons, who, through misfortunes, chuse not to dress, should not, however, *give up* neatness. *Clarissa.*—To deliver.—And Joab *gave up* the sum of the number of the people to the king. 2 *Sam.* xxiv. 9.

To GIVE *way.* To yield; not to resist; to make room for.—Private respects, with him, *gave way* to the common good. *Carew.*

Scarce had he spoken when the cloud *gave way*;
The mists flew upwards, and dissolv'd in day. *Dryden.*

The word *give* is often used with great laxity. The general idea is that of transmitting from one to another.

To GIVE, *v. n.* To rush; to fall on; to give the assault. A phrase merely French, and scarcely worthy of adoption:

Your orders come too late, the fight's begun;
The enemy *gives on* with fury led. *Dryden.*

To relent; to grow moist; to melt or soften; to thaw.—Some things are harder when they come from the fire, and afterwards *give* again, and grow soft; as the crust of bread, bisket, sweetmeats, and salt. *Bacon.*

Only a sweet and virtuous soul,
Like seasoned timber, never *gives*;
But though the whole world turn to coal,
Then chiefly lives. *Herbert.*

To move. *A French phrase:*

Up and down he traverses his ground,
Then nimbly shifts a thrust, then lends a wound;
Now back he *gives*, then rushes on amain. *Daniel.*

To GIVE *in.* To go back; to give way. *Not in use.*—The charge was given with so well-governed fury, that the left corner of the Scots battalion was enforced to *give in.* *Hayward.*

To GIVE *into.* To adopt; to embrace.—This consideration may induce a translator to *give into* those general phrases, which have attained a veneration in our language from being used in the Old Testament. *Pope.*—The whole body of the people are *giving in* with all their might *to* those very practices that are working their destruction. *Swift.*

To GIVE *off.* To cease; to forbear.—The punishment would be kept from being too much, if we *gave off* as soon as we perceived that it reaches the mind. *Locke.*

To GIVE *over.* To cease; to act no more.—Demetrius, king of Macedon, had a petition offered him divers times by an old woman, and still answered he had no leisure; whereupon the woman said aloud, Why then *give over* to be king. *Bacon.*

So Satan, whom repulse upon repulse
Met ever, and to shameful silence brought,
Yet *gives* not *o'er*, though desperate of success. *Milton.*

To GIVE *out.* To publish: to proclaim.—Simon bewitched the people of Samaria, *giving out* that himself was some great one. *Acts*, viii. 9.—To cease; to yield:

We are the earth; and they
Like moles within us, heave and cast about:
And 'till they foot and clutch their prey;
They never cool, much less *give out.* *Herbert.*

GIV'EN, (*Datum,*) a term used in mathematics, to signify something that is supposed to be known: thus, if a magnitude be known, or if we can find another equal to it, it is said to be *given* in magnitude. Or when the position of any thing is known, it is said to be *given* in position. And when the diameter of a circle is known, the circle is *given* in magnitude. Or the circle is *given* in position, when its *centre* is given in position. When the kind or species of a figure is known, or remains the same, it is *given* in specie, &c. Euclid wrote a book of *Data*, or concerning things GIVEN, in 95 propositions, usually accompanying his Elements, in the best editions, and which Pappus reckons as one of the best specimens of the analytical works of the ancients.

GIV'ER, *f.* One that gives; donor; bestower; distributor; granter:

I have not liv'd since first I heard the news,
The gift the guilty *giver* doth accuse. *Dryden.*

Both gifts destructive to the *givers* prove;
Alike both lovers fall by those they love. *Pope.*

GIVES, *f.* Fetters or shackles for the feet.

GIV'ET, a town of France, in the department of the Ardennes, and chief place of a canton, in the district of Rocroy. It anciently consisted of two small villages, in the county of Namur, on each side of the Meuse, near Charlemont, afterwards erected into two towns, one next to Charlemont, called *Givet St. Hilaire*, the other on the opposite side of the river, called *Givet Notre Dame.* The fortifications are the work of Vauban: eight leagues north of Mezieres, and five north-east of Rocroy. Lat. 50. 7. N. lon. 22. 27. E. Ferro.

GIU'LA, a town of Hungary, situated on the river Keres; taken by the Turks in 1566, and retaken, in the year 1695, by the emperor, to whom it was confirmed by the peace of Carlowitz: fifty-two miles north-north-west of Temeswar, and eighty-eight north of Belgrade.

GIULE'NEI, an island in the Caspian Sea: 130 miles south of Astrachan. Lat. 44. 15. N. lon. 65. 35. E. Ferro.

GIU'LIA NO'VA, a town of Italy, in the kingdom of Naples, and province of Abruzzo Ultra, on the coast of the Adriatic: twelve miles east-north-east of Teramo.

GIVON'NE, a town of France, in the department of the Ardennes, and chief place of a canton, in the district of Sedan: one league north-east of Sedan.

GIVO'RS, a town of France, in the department of the Rhône and Loire, and chief place of a canton, in the district of Campagne-de-Lyon: four leagues south of Lyons.

GIV'RY, a town of France, in the department of the Saône and Loire, and chief place of a canton, in the district of Châlons: one league and a half west of Châlons-sur-Saône, and two and a half south of Chagny. Lat. 46. 47. N. lon. 22. 25. E. Ferro.

GIUS'MARK, a town of Asiatic Turkey, in the province of Curdistan: eighty miles south-south-east of Betlis.

GIUST, *f.* [*giostra*, Ital.] A tilting with spears:

Full jolly knight he seem'd, and faire did sitt,
As one for knightly *giusts* and fierce encounters fitt. *Sp.*

To GIUST, *v. n.* To tilt with spears.—So foorth they went, and both together *giusted.* *Spenser.*

GIUSTENDIL', a town of European Turkey, in the province of Bulgaria; the see of a Greek archbishop: eighty miles west-north-west of Sophia.

GIUSTENDIL', a town of European Turkey, in the province of Bulgaria: twenty-four miles south of Sophia.

GIUSTINIA'NI (Auguſtin), a learned eccleſiaſtic and hiſtorian, born of a noble family at Genoa, in 1470. He entered into the order of preachers at Pavia in 1488, on which occaſion he changed his baptiſmal name of Peter for Auguſtin. In 1514 he was made biſhop of Nebbio in Corſica. He was editor in 1516 of the Pſalter in four languages, the Hebrew, Greek, Arabic, and Chaldee, with three Latin interpretations and gloſſes; which was the firſt of the Polyglott editions of the books of Scripture. The reputation he acquired by this work cauſed him to be invited to Paris by Francis I. who gave him a penſion, and appointed him to the firſt profeſſorſhip of oriental languages in that univerſity, which office he held five years. He collected a choice library, rich in Oriental, Greek, and Latin, manuſcripts, which he afterwards preſented to the republic of Genoa. After leaving France, he went to his dioceſe, and employed himſelf for ſome years in paſtoral cares, improving its revenue, building an epiſcopal palace, and performing all the duties of a good paſtor. On paſſing the ſea to his biſhopric in 1536, he was loſt with the ſhip. He reviſed and edited the treatiſe of Porchetti, entitled *Victoria adverſus impios Judæos*. After his death were publiſhed his Annals of the Republic of Genoa, from the foundation of the city to the year 1528.

GIUSTINIA'NI (Bernard), a Venetian nobleman, born in 1408. He was educated under the moſt learned perſons of his time, and obtained great reputation for his eloquence. The republic employed him on ſeveral honourable occaſions. In 1451 he was appointed to receive the emperor Frederic III. on his paſſing through the Venetian territory. He afterwards was ſent on embaſſies to Ferdinand king of Naples, to ſeveral of the popes, and to Louis XI. of France, who honoured him with knighthood. In 1467 he was made commandant of Padua, and in the progreſs of civic honours he was made counſellor, ſavio-grande, and procurator of St. Mark. He died in 1489. He was the author of a number of Orations upon public occaſions; the Life of his uncle Lorenzo Giuſtiniani; three pieces on the Life, the Tranſlation, and the Appearance, of St. Mark; a verſion of the Book of Iſocrates to Nicocles; ſome Latin Letters of his father Leonardo; and the Ancient Hiſtory of Venice, in fifteen books, from its foundation to the year 809, written in Latin. This has been ſeveral times printed, and has been tranſlated into Italian by Lodov. Domenichi: it is accounted a valuable performance, the authorities of which are derived from the beſt ſources, rejecting the fables adopted by ſome other writers.

GI'ZEH, a town of Egypt, ſituated on the weſtern bank of the Nile, nearly oppoſite the city of Cairo, and is erected on part of the ſcite of the ancient and memorable city of Memphis, near the pyramids. See the article EGYPT, vol. vi. p. 362.

GIZIGINSKA'IA, a gulf on the north-weſt extremity of the Peninſkoi Sea, extending about fifty miles in length, and ſixteen in breadth. Lat. 67. to 68. N. lon. 178. E. Ferro.

GIZ'ZARD, *ſ.* [*goſier*, Fr. *gigeria*, Lat.] The ſtrong muſculous ſtomach of a fowl.—In birds there is no maſtication in the mouth: but it is immediately ſwallowed into the crop, where it is moiſtened by ſome proper juice, and thence transferred into the *gizzard*, or muſculous ſtomach. *Ray*.

They neſtle near the throne,
By their high crops and corny *gizzards* known. *Dryden*.

It is proverbially uſed for apprehenſion, or conception of mind: as, he *frets his gizzard*, he haraſſes his imagination.

GLABEL'LA, *ſ.* [from *glaber*, Lat. ſmooth, becauſe it is without hair.] The ſpace between the eye-brows; the ſmoothneſs and clearneſs of which conſtitute great beauty in females.

GLA'BER (Rodolph), a benedictine monk of Cluni, who flouriſhed in the eleventh century. He was converſant with the learning of that dark period, and has perpetuated his name by a Chronicle or Hiſtory of France, written in Latin. It conſiſts of five books, of which the firſt relates to the events of the monarchy previous to the election of Hugh Capet, and the four ſubſequent ones to thoſe following it, to the year 1046. This work is valuable for the information it contains relative to thoſe remote ages. It has been printed in the hiſtorical collections of Pithou and Duchеſne. Glaber alſo wrote a Life of William abbot of St. Benignus at Dijon.

GLA'BRITY, *ſ.* [from *glaber*, Lat.] Smoothneſs; baldneſs.

GLA'CIAL, *adj.* [*glacial*, Fr. *glacialis*, Lat.] Icy; made of ice; frozen.

To GLA'CIATE, *v. n.* [*glacies*, Lat. *glacer*, Fr.] To turn into ice.

GLACIA'TION, *ſ.* The act of turning into ice; ice formed.—Ice is plain upon the ſurface of water, but round in hail, which is alſo a *glaciation*, and figured in its guttulous deſcent from the air. *Brown*.

GLACI'ER, *ſ.* [from *glacies*, Lat. ice, or *glacière*, Fr. an ice-houſe.] A rock or mountain covered with ice. Hence the term *glaciers* has been applied by modern philoſophers to thoſe immenſe ridges and pinnacles of ice which majeſtically crown and everlaſtingly diſtinguiſh the Swiſs and Tyrolean alps of Europe, the Andes or Cordeleras of America, the frozen coaſt of Spitzbergen, and the Thibet mountains of Aſia. The glaciers of Swiſſerland may be divided into two claſſes, one occuping the deep valleys ſituated in the boſom of the Alps, and diſtinguiſhed by the name of *Ice-valleys*; the others are thoſe which clothe the ledges and ſides of the mountains. Theſe two kinds have been diſtinguiſhed by our philoſophic countryman Mr. Coxe, into the *upper* and *lower* glaciers. The lower glaciers are by far the moſt conſiderable; ſome of them extending many leagues in length. They do not communicate with each other, as has been ſuppoſed, few of them being parallel to the central chain; but, ſtretching moſtly in a tranſverſe direction, are bordered at the higher extremity by inacceſſible rocks, and at the lower extending into the cultivated valleys. The thickneſs of the ice varies in different parts. In the glacier des Bois, which extends more than fifteen miles in length, and upwards of three in breadth, M. Sauſſure found it generally from eighty to one hundred feet; but he was credibly informed that in ſome places it was not leſs than ſix hundred feet, and even more. Theſe vaſt maſſes of ice uſually reſt on an inclined plane; where, being puſhed forward by their own weight, and but weakly ſupported by the rugged rocks beneath them, they are interſected by large crevices, and have an appearance of walls, pyramids, &c. according to the poſition of the eye in viewing them. The glacier des Bois is thus deſcribed by Mr. Coxe:—"Having advanced about a quarter of a mile, we were ſuddenly alarmed by the noiſe of a vaſt fragment of icy rock which had detached itſelf from one of the higheſt needles, and bounded from one precipice to another with great rapidity till it reached the plain below, where it was almoſt reduced to duſt. Nature now ſeemed clad in all her terrors. Before us was a valley of ice twenty miles in extent, bounded by a circular glacier of pure unbroken ſnow, named *Takul*, which leads to the foot of Mont Blanc, and is ſurrounded by large conical rocks, terminating in ſharp points like the towers of an ancient fortification; to the right roſe a range of magnificent peaks, their intervals filled with glaciers; and far above the reſt, the magnificent ſummit of Mont Blanc, his higheſt point obſcured with clouds. He appeared of ſuch immenſe magnitude, that, at his preſence, the circumjacent mountains, however gigantic, ſeemed to ſhrink before him, and *hide their diminiſhed heads*."

The upper glaciers may be ſubdivided into thoſe which cover the ſummits, and thoſe which extend along the

ſides, of the Alps. Thoſe on the very ſummit, however, though they have the appearance of ice, are not ſo in reality, but conſiſt entirely of ſnow hardened by the extreme cold. M. Sauſſure found that which covered the top of Mont Blanc to be penetrable, though with difficulty, by a ſtick; but below this hard cruſt was a ſnow like ſalt, without coherence. The ſides are covered with a mixture of ice and ſnow; by reaſon of the ſuperior power of the ſummer ſun to diſſolve the ſnow, which afterwards congeals into impenetrable ice.

Several conjectures have been made concerning the formation of theſe extraordinary bodies of ice. Mr. Coxe agrees with M. Gruner in opinion, that they are produced by the continual diſſolution of the ſnow in ſummer, and its congelation by the ſucceeding froſts. Hence, on the ſummits of the mountains where the ſun has very little power, the glacier is ſoft, and contains but little ice: as we deſcend the mountains, the conſiſtence becomes firmer, becauſe there is a conſiderable mixture of ſnow-water, the congelation of which augments the hardneſs; and in the valleys, the glacier is hardeſt of all, becauſe the portion of water is there much ſuperior to that of the ſnow; and from its rugged and ſhelving ſurface, has the exact appearance of a ſtormy ſea ſuddenly ſeized by a froſt.

The mountains which ſurround this valley or ſea of ice, are, 1ſt, Mount Charmos on the right; 2d, Mount Mallet in the back ground; 3d, Periades; 4th, the Great Jorra, of an extraordinary height; 5th, l'Aiguille du Moine; 6th, that of Dru; but the Montanverd, or green mountain, is the moſt curious, being half covered with ice and ſnow, and, in intermediate ſpaces, with rich paſtures, where cattle feed. This ſea of ice is ſuppoſed to extend about twelve leagues. A more curious, and at the ſame time a more terrific, ſcene than this cannot be conceived, at once preſenting the image of the frozen ocean and the verdure of the temperate zone. It is poſſible to deſcend from the Montanverd on the ſea of ice, and even to croſs it, but the dangers are immenſe, on account of the large crevices which it is neceſſary to ſtep over, that are more than an hundred feet deep. It is matter of much ſurpriſe, on coming to this part, to find the waves of ice, which at ſome diſtance appear inconſiderable, to be more than eighty or an hundred feet in height.

From this majeſtic ſcene we are taken by a ſteep and narrow path, through a foreſt of firs and larches, which employs about an hour to deſcend, in order to return to a place where there is a wooden bridge to croſs the Arveron; when another moſt aſtoniſhing object preſents itſelf, an entire mountain of ice, formed by the fall of a glacier, ſeen from the Montanverd, which deſcends into the valley. High mountains of granite ſurround theſe glaciers, and form, by their irregular ſtrata, ſuperb caſcades, mixing their waters with the Arveron, which iſſues from a moſt beautiful arched grotto above an hundred feet high, compoſed entirely of ice. The wonderful effects of maſſes of ice contraſted with the impending woods and rich paſtures that crown this grand and uncommon ſcene, added to the frightful noiſe ſo frequently heard of enormous bodies of it breaking off from the mountain and daſhing themſelves to pieces in the Arveron, "cannot but create," ſays M. Beaumont, "an admiration and ſurpriſe more readily felt than expreſſed, and highly deſerving the attention of the ſpeculative traveller."

Theſe vaſt reſervoirs of ice and ſnow, beſides ſupplying the Arveron, give birth to many other important rivers, whoſe ſources deeply intereſt curioſity. As an example, the account which Bourrit gives of that of the Rhone, is particularly worthy of notice. "At length we perceived through the trees a mountain of ice as ſplendid as the ſun, and flaſhing a ſimilar light on the environs. This firſt aſpect of the glacier of the Rhone inſpired us with great expectation. A moment afterwards this enormous maſs of ice having diſappeared behind thick pines, it ſoon after met our ſight between two vaſt blocks of rock, which formed a kind of portico. Surprized at the magnificence of this ſpectacle, and at its admirable contraſts, we beheld it with rapture. At length we reached this beautiful portico, beyond which we were to diſcover all the glacier. We arrived: at this ſight one would ſuppoſe one's ſelf in another world, ſo much is the imagination impreſſed with the nature and immenſity of the objects in view. To form an idea of this ſuperb ſpectacle, figure in your mind a ſcaffolding of tranſparent ice, filling a ſpace of two miles, riſing to the clouds, and darting flaſhes of light like the ſun. Nor were the ſeveral parts leſs magnificent and ſurpriſing. One might ſee as it were the ſtreets and buildings of a city, erected in the form of an amphitheatre, and embelliſhed with pieces of water, caſcades, and torrents. The effects were as prodigious as the immenſity and the height; the moſt beautiful azure, the moſt reſplendent white; the regular appearance of a thouſand pyramids of ice, more eaſy to be imagined than deſcribed. Such is the aſpect of the glacier of the Rhone, reared by nature on a plan which ſhe alone can execute: we admire the majeſtic courſe of a river, without ſuſpecting that what gives it birth, and maintains its waters, may be ſtill more majeſtic and magnificent."

An intereſting queſtion has ariſen concerning theſe glaciers of Swiſſerland, Whether they are to be conſidered as in a ſtate of increaſe, or diminution? Mr. Coxe is of opinion that they occaſionally increaſe and decreaſe; in proof of which he adduces the following obſervation: "The borders of the glacier of Montanverd are moſtly ſkirted with trees quite to the vaſt arch of ice under which the Arveron riſes with conſiderable force. Thoſe trees which ſtand at a little diſtance from the arch are about eighty feet high, and are undoubtedly of a very great age. Between theſe and the glacier the trees are of a later growth; as is evident from their texture and inferior ſize. Others, ſtill ſmaller, have been overturned and enveloped in the ice: there ſeems to be a kind of regular gradation in the age of theſe ſeveral trees, from the largeſt which are ſtanding, to the ſmalleſt that lie proſtrate."—Hence Mr. Coxe concludes, that the glacier once extended as far as the row of ſmall firs; but that, upon its gradual diſſolution, a number of trees ſhot up on the ſpot it had occupied; ſince which time the ice has again advanced, and overturned the laſt grown trees before they had attained to any conſiderable height. This he thinks alſo confirmed by the following fact: "Large ſtones of granite are uſually found at a ſmall diſtance from the extremities of the glacier. Theſe ſtones have certainly fallen from the mountains upon the ice; have been carried on in its progreſs; and have tumbled into the plain upon the diſſolution or ſinking of the ice which ſupported them. Theſe ſtones, which the natives call *moraine*, form a kind of border towards the foot of the valley of ice, and have been puſhed forward by the glacier in its advances: they extend even to the place occupied by the larger pines." In oppoſition to thoſe who maintain that there is a conſtant accumulation of ice and ſnow in the alpine regions, he alſo offers the following remarks. 1. Between the years 1776 and 1785, the glacier of Grindelevald had diminiſhed to ſuch a degree, that the ſpot which its extremity occupied in the former year, was at leaſt four hundred paces from that occupied by it in the latter. 2. In the year 1785 the Murailles de Glace, which in 1776 he had deſcribed as forming the border of the glacier of Boſſon, no longer exiſted; and young trees had ſhot up in the parts which were then covered by the glacier of Montanverd.

In the Tyrol or Rhætian Alps, now called the Brenner, the glaciers are known by the general name of *ferner*, and in the ſouth by that of *vedretta*. They receive, moreover, their particular name from the valley in which they are formed, or from the mountain (*glacière*)

to

to which they belong. Such are the Hochvernag-ferner, the Gerſlar-ferner, the Schalfthaler-ferner, &c. It is ſuppoſed, by the inhabitants of the country, that theſe glaciers, however great in number or enormous in ſize, are not of an older date than the third century. The people here ſeem to be of the ſame opinion with the Swiſs reſpecting their periodical mutations; and it is aſſerted that they increaſe and diminiſh alternately in the courſe of ſeven years. This is certain, that they are ſubject to more violent changes than in Swiſſerland; and that their augmentation is more ſenſible; the ſpace which the Gurgler-ferner now occupies, between the Schwartzberg and the Rübel-berg, was a paſture on which ſhepherds not long ago tended their flocks.

It is in the gorge of the Œtz, and in its environs, that we meet with the moſt remarkable conglomeration of glaciers; and they are there ſo greatly multiplied, that to this part of the Rhætian chain the name of *groſſe-ferner*, or great glacier, is given. Some of them here undergo great alterations on the leaſt change of temperature; at one time occupying the entire gorge, and at another even leſs than half of it. The mountain called *Neuſberg*, which terminates the Roſen-thal, has two glaciers of this kind, the Hochjock-ferner, and the Guſlar-ferner. The kind of arch compoſed of ice, from which a ſtream of water iſſues at the foot of every glacier, increaſes conſiderably during ſummer, and ſome of them become real bridges, which extend from one mountain to another, and on which travellers paſs without danger, excepting when it rains. Sometimes alſo, the ſurface of the glacier cracks perpendicularly, preſenting a multitude of pyramids, the leaſt ſolid of which breaks off and rolls with a great noiſe to the bottom of the gorge. Theſe fragments, united by a new congelation, there increaſe, and form a dyke to the ſtream which their diſſolution had increaſed. After this manner, the glacier of Roſen-thal, called Roſnerſée, was formed in 1771. A ſtream iſſuing from Hochjock-ferner fell into the gorge of Roſen; ſome blocks of ice were detached in the month of Auguſt, and ſo filled up the gorge as to make a dam acroſs it: this ſtream became a lake, and ſoon afterward a glacier, which now covers twelve thouſand metres of excellent paſturage.

The inhabitants of theſe mountains remark that, when ſuch avalanches, or blocks of ice, deſcend from a ſingle glacier, there is leſs reaſon to fear for the diſtricts ſituated below it: but that, if two glaciers diſcharge themſelves into the ſame bottom, a bank is very ſoon formed, and the new accretion of ice forces men and cattle to ſeek elſewhere for ſubſiſtence. Such accidents occurred ſeveral times during the laſt age in the gorge of Gurgler. In general, we may obſerve that all the glaciers of recent formation obtain their increaſe from the month of October to that of June, a period at which they begin to thaw; then they form a multitude of caſcades, preſenting all that variety which is admired in the Swiſs ſcenery. Streams ruſhing from beneath vaults of ice, and ſwelled by tributary water-falls, ſometimes become torrents which mark their courſe with devaſtation. When the ſoutherly winds prevail for many ſucceſſive days, the univerſal thaw ſeems to menace the valleys with a new deluge, mixed with ſand, rocks, and ice.

The icebergs, or glaciers, in the north-eaſt of Spitzbergen, preſent a ſingular appearance, being high cliffs of an emerald colour, impendent over the ſea, with cataracts of melted ſnow, and a back ground of black conic hills ſtreaked with white. The ſea itſelf contains mountains of ice, formed by aggregation; a large field forcing a ſmaller out of the water till it lodges upon the ſuperior ſurface, and the height is afterwards increaſed by the ſnow till it ſometimes riſes to 1500 feet. The ſnow in theſe high latitudes often falls as hard, and minute, as ſifted ſand.

In Aſia, Mr. Daniell has deſcribed the glaciers, which he ſays make a moſt majeſtic appearance even at the diſtance of a hundred and fifty miles, preſenting a moſt auguſt diſplay of the ſublime and beautiful. The ice riſes often into lofty ſpires on the grandeſt of ſcales; their brilliancy under the bright rays of the meridian ſun greatly ſurpaſſes all powers of deſcription; and, towards the evening, the light ſides become moſt ſuperbly tinted with a beautiful roſeate colour. If ſuch immenſe fabrics of accumulated ice preſent themſelves to our view as reſulting from the rarity of the higher region of the air in theſe milder climates, what imagination can picture to the mind's eye the boundleſs extent and magnificent grandeur of the lofty ranges of thoſe glaciers, which, amidſt the awful roar of the profound abyſs in the Frozen Ocean, muſt preſent an eternal barrier to the foot of man in the countries which ſurround the poles!

GLA'CIES MARI'Æ, *ſ.* A name given to the clear tranſparent gypſum, or vitriolated lime. It is ſeldom uſed.

GLA'CIOUS, *adj.* [*glacio*, Lat.] Icy; reſembling ice.—Although exhaled and placed in cold conſervatories, it will cryſtalize and ſhoot into *glacious* bodies. *Brown.*

GLA'CIS, *ſ.* [French.] In fortification, a ſloping bank, reaching from the parapet of the counterſcarp to the level ſide of the outwork. See the article FORTIFICATION, vol. vii. p. 591.—In architecture, an eaſy imperceptible ſlope; the cymatium of a cornice. *Aſh.*

GLAD, *adj.* [ȝlæd, Sax. *glad*, Daniſh.] Cheerful; gay; in a ſtate of hilarity.—They bleſſed the king, and went unto their tents joyful and *glad* of heart. 1 *Kings*, viii. 66.—Wearing a gay appearance; ſertile; bright; ſhowy.—The wilderneſs and the ſolitary place ſhall be *glad* for them, and the deſert ſhall rejoice and bloſſom as the roſe. *Iſaiah*, xxxv.

Then firſt ador'd
With their bright luminaries, that ſet and roſe,
Glad Ev'ning and *glad* Morn crown'd the fourth day.
Milton.

Pleaſed; elevated with joy. It has generally *of*, ſometimes *at* or *with*, before the cauſe of gladneſs: perhaps *of* is moſt proper, when the cauſe of joy is ſomething gained or poſſeſſed: and *at* or *with*, when it is ſome accident befallen himſelf or another.—He that is *glad at* calamities ſhall not be unpuniſhed. *Proverbs.*—If he be my enemy, let him triumph; if he be my friend, he will be *glad of* my repentance. *Dryden.*

The gaping wound guſh'd out a crimſon flood;
The Trojan, *glad with* ſight of hoſtile blood,
His fauchion drew. *Dryden.*

Pleaſing; exhilarating:

Her converſation
More *glad* to me than to a miſer money is. *Sidney.*

Expreſſing gladneſs:

Hark! a *glad* voice the lonely deſert cheers:
Prepare the way, a God, a God appears! *Pope.*

It is uſed in a familiar ſenſe, approaching to ludicrouſneſs.—I would be *glad* to learn from thoſe who pronounce that the human ſoul always thinks, how they know it. *Locke.*

To GLAD, *v. a.* To make glad; to cheer; to exhilarate.—Each drinks the juice that *glads* the heart of man. *Pope.*

It *glads* me
To ſee ſo many virtues thus united,
To reſtore juſtice and dethrone oppreſſion. *Otway.*

GLAD'BECK, or GLADBACH, a town of Germany, in the circle of Weſtphalia, and duchy of Juliers: ſixteen miles north of Juliers. Lat. 51. 14. N. lon. 23. 50. E. Ferro.

To GLAD'DEN, *v. a.* To cheer; to delight; to make glad; to exhilarate:

Oh,

Oh, he was all made up of love and charms!
Delight of every eye! When he appear'd,
A ſecret pleaſure *gladden'd* all that ſaw him. *Addiſon.*

GLAD'DER, *ſ.* One that makes glad; one that gladdens; one that exhilarates:

Thou *gladder* of the mount of Cytheron,
Have pity, goddeſs. *Dryden.*

GLADE, *ſ.* [from ϛlopan, to be hot, or to ſhine; whence the Daniſh *glod*, and the obſolete Engliſh *gleed*, a red-hot coal.] A lawn, or opening in a wood. It is taken for an avenue through a wood, whether open or ſhaded, and has therefore epithets of oppoſite meaning:

O might I here
In ſolitude live ſavage, in ſome *glade*
Obſcur'd, where higheſt woods, impenetrable
To ſtar or ſun-light, ſpread their umbrage broad. *Milton.*

For noonday's heat are cloſer arbours made,
And for freſh ev'ning air the op'ner *glade*. *Dryden.*

There interſpers'd in lawns and opening *glades*,
Thin trees ariſe that ſhun each other's ſhades. *Pope.*

GLA'DEN, or GLADER, *ſ.* [from *gladius*, Lat. a ſword.] Swordgraſs: a general name of plants that riſe with a broad blade like ſedge. *Junius.*

GLA'DENBACH, a town of Germany, in the circle of the Upper Rhine, and principality of Upper Heſſe: twelve miles north of Gieſſen, and eight weſt of Marburg.

GLAD'FUL, *adj.* Full of gladneſs:

There leave we them in pleaſure and repaſt,
Spending their joyous dayes and *gladful* nights. *Spenſer.*

GLAD'FULNESS, *ſ.* Joy; gladneſs. *Obſolete.*

And there him reſts in riotous ſuffiſance
Of all his *gladfulneſs*, and kingly joyance. *Spenſer.*

GLADIA'TOR, *ſ.* [Lat. from *gladius*, a ſword; *gladiateur*, Fr.] A ſword-player; a prize-fighter. Among the Romans, the ſavage and ſanguinary combats of gladiators were for ages tolerated in the amphitheatre, for the entertainment of all ranks of the people. They were uſually ſlaves or condemned criminals, who fought by compulſion; though ſometimes freemen made profeſſion of theſe combats, like our prize-fighters, for a livelihood. The Romans are ſaid to have borrowed this cruel diverſion from the Aſiatics; and that there was policy in the practice, the frequent combats of gladiators tending to accuſtom the people to deſpiſe dangers and death.

The origin of gladiators ſeems to be as follows. From the earlieſt times with which we have any acquaintance in profane hiſtory, it had been the cuſtom to ſacrifice captives, or priſoners of war, to the manes of the great men who had died in the engagement: thus Achilles, in the Iliad, lib. xxiii. ſacrifices twelve young Trojans to the manes of Patroclus; and in Virgil, lib. xi. ver. 81, Æneas ſends captives to Evander, to be ſacrificed at the funeral of his ſon Pallas. In the courſe of time they came alſo to ſacrifice ſlaves at the funerals of all perſons of condition: this was even eſteemed a neceſſary part of the ceremony; but as it would have appeared barbarous to have maſſacred them like beaſts, they were appointed to fight with each other, that the life of one might be ſaved by killing his adverſary. This ſeemed ſomewhat leſs inhuman, becauſe there was a poſſibility of avoiding death, by an exertion of ſkill and courage. This occaſioned the profeſſion of a gladiator to become an art: hence aroſe maſters of the art, and men learned ſcientifically to fight and exerciſe it. Theſe maſters bought ſlaves on purpoſe to be trained to this cruel trade, whom they afterwards ſold to ſuch as had occaſion to preſent the people with ſuch horrid ſpectacles. The exhibitions were at firſt performed near the ſepulchre of the deceaſed, or about the funeral pile; but were afterwards removed to the circus and amphitheatres, and became ordinary amuſements.

In the year of Rome 488, the ſanguinary combats between gladiators were firſt exhibited in the circus, by M. and D. Brutus, to honour the funeral of their father. The people of Campania indulged in the combats of gladiators more early, and even during their banquets. This frantic love of cruelty rapidly increaſed. In the year of Rome 536, the ſons of M. Æmilius Lepidus, intending to honour their father's memory, had games performed which continued three days, and in which twenty-two pair of gladiators combated. Thirty-three years afterward, ſeventy gladiators fought. It became cuſtomary for every general, before he undertook any expedition, to preſent this prelude of murder to the people. Cæſar maintained ſome thouſands of gladiators, at his own expence; and, when ædile, exhibited games in which three hundred and twenty pair entered the field of battle. Even Trajan, the greateſt and moſt benevolent of the emperors, indulged in this cruel practice. He gave games during a hundred and twenty days ſucceſſively, in which there were ten thouſand gladiators. To ſuch an height of extravagance was this practice carried, that Auguſtus made a law by which private individuals, who thought proper to preſent the people with ſuch ſpectacles, ſhould be limited not to expend above half their ſubſtance.

The people expreſſed their joy, when a gladiator received his death-wound, with wild ſhouts: crying, *Habet! Hoc habet!* Some of the combatants engaged each other with ſimilar weapons; as ſwords, poniards, &c. Such were often called *Samnites*, not becauſe they really were Samnites, but becauſe the Romans, full of ignoble antipathy againſt a people who had reſiſted their arms for a hundred years, delighted in beholding the murder of a Samnite. Thus we ſee that cruelty, once indulged, is not eaſily ſatiated. It requires variety of murder, and its horrible neceſſities make it inventive. Gladiators, who held an elaſtic net in their right hand, and a three-pronged weapon in the left, endeavoured to caſt the net over the head of their opponent; and then to pierce him with their prongs. If the attempt failed, the antagoniſt purſued the aſſailant to death. Hence the latter was called the *ſecutor*, purſuer; and the former *retiarius*, the net-bearer. The net-bearers combated alſo with armed Gauls, who were called *mirmillones*. The latter bore the figure of a fiſh on a helmet. Theſe mirmillones endeavoured to eſcape the net-bearer, by ducking the head, and at the ſame moment to give a blow in the foot that ſhould diſable his enemy, ſo that he might afterward deſtroy him with his ſword. It was uſual for the net-bearer, as he followed the mirmillon, to exclaim, *Non te peto, piſcem peto: Quid me fugis, Galle?* "I do not aim at thee, but at thy fiſh: Why doſt thou fly me, Gaul?"

It was the pride of the vanquiſhed gladiator, when he was doomed to die, and had received the laſt mortal wound, to fall honourably. Even when beat to the ground, and with juſt ſtrength ſufficient to ſupport himſelf on his arm, he does not abandon himſelf to grief and dejection, but is ſolicitous to maintain that firmneſs of aſpect which gladiators valued themſelves on preſerving in this ſeaſon of diſtreſs, and that invincible contempt of death which it was the principal object of theſe maſters of defence to inculcate. At this inſtant, notwithſtanding his exhauſted ſtrength, and that he has but one moment to live, he is viewed with the moſt attentive admiration; and the glory of the ſcene is to ſee him expire and fall without a groan; and without a ſymptom or expreſſion that could betray the ſmalleſt deſire of life!

If a gladiator expreſſed a ſenſe of pain, after being wounded, or aſked for his life, the people, enraged, would frequently exclaim, *Occide! ure! verbera!* "Kill! burn!

burn! whip him!" and they had even the cruelty to apply burning irons to the half-expiring victims, that they might induce them to exert their ſmall remains of power.—Sometimes the people pardoned ſuch gladiators as excelled in agility, or courage. The raiſing of the hand, with the thumb lowered, was a token that they ſhould live. The hand ſhut, with the thumb raiſed, was the ſign of death. It was uſual for the people to cry, *Recipe ferrum!* "Receive the ſword!" As ſoon as a combatant was dead, ſlaves, whoſe office it was, entered, drove a hook into his body, and dragged him away through the Porta Libitina, or gate of death, to bury him.—Thus did the moſt renowned people in the world degrade themſelves below the condition of ſavage cannibals, by the inhuman ſacrifices which polluted the amphitheatre of Rome; nor is it ſufficient that the admirers of theſe ſanguinary combats inſinuate, that the martial ſpirit of the people was preſerved by this ſchool of fortitude, which accuſtomed the Romans to the ſight of blood, and to the contempt of death; ſince this vain and idle aſſertion has been nobly and honourably confuted by the valour of ancient Greece, and of modern Europe.

Some of the gladiators were priſoners of war; and ſome were foundlings, whoſe education deſtined them to this trade. The inſtructor of theſe combatants was called *laniſta*. The ſchool in which they were trained was a large building, in which thoſe who were ſet apart to murder, or to be murdered, were exerciſed. They were not at liberty to go where they pleaſed, when not exerciſing; but were each ſhut up in a different cell. In the latter times of the republic, theſe gladiators were often made ſubſervient to the ambition of the powerful; and were let looſe, among the people, like ſo many wild beaſts.

When the people granted a gladiator his life, it was frequently only for the day: he muſt again attend the games on the morrow; and, perhaps, during their whole continuance, though they ſhould be but juſt begun. Whoever had vanquiſhed ſeveral opponents one after the other, received a ſword of wood, *rudis*; which was encircled with palm; and he was from that time releaſed from the *arena* of the gladiators. He then hung up his ſword, his ſhield, and his helmet, in the temple of Hercules. Horace has a beautiful alluſion to this cuſtom, when Mæcenas wiſhes again to induce him to write:

Prima dicte mihi, ſumma dicende Camæna,
Spectatum ſatis, et donatum jam rude quæris,
Mæcenas, iterum antiquo me includere ludo.
Non eadem eſt ætas, non mens. Vejanius, armis
Herculis ad poſtem fixis, latet abditus agro,
Ne populum extremâ toties exoret arenâ. *Lib.* i. *ep.* i. 1–6.

Free gladiators, who hired themſelves, were paid a great price; and the *rudiarii*, who had become free, a much greater: this epithet was beſtowed on thoſe who had received the wooden ſword. In the times of the emperors, the Roman citizens, knights, and ſenators, often degraded themſelves by combating with hired gladiators and ſlaves. The emperor Commodus preſented himſelf as a gladiator, and, according to Dion Caſſius, received for each day out of the gladiator's treaſury, εκ των μονομαχικων χρηματων, about fifty thouſand rix-dollars. He was alſo remarkably fond of combating with wild beaſts.

In the time of Domitian, female gladiators roſe up; and the Romans were at laſt ſo addicted to this ſanguinary game, that, like their predeceſſors the people of Campania, they had them at their feaſts. Certain combatants fought in chariots, and were called *eſſediarii*. Others fought on horſeback, with deep helmets; ſo that they could not ſee each other; and thus ran the courſe, with their ſpears, blindfold. When once a people are accuſtomed to the ſight of blood, the luſt of indulging ſuch horrible ſpectacles increaſes to the moſt outrageous phrenſy, as was fatally experienced in the late revolution in France. Political conſiderations ſhould have taught the free Romans that a ſavage nation is incapable of liberty. And how ſavage muſt that nation be, whoſe very matrons, and veſtals, were accuſtomed to ſuch ſpectacles!

The ſubjected Greeks were late in adopting theſe practices. When, in the time of the emperor Marcus Aurelius, it was propoſed to the Athenians to introduce them, in imitation of the Corinthian gladiators, the philoſopher Demonax exclaimed, with noble indignation, Oh, men of Athens, riſe, before you indulge in battles like theſe, riſe, and demoliſh the altars which your fathers have erected to Mercy.

Conſtantine, the firſt Chriſtian emperor, though not able entirely to ſuppreſs this horrid practice, forbad it; being excited ſo to do by Lactantius. Under the emperor Honorius, when Prudentius, a Chriſtian poet, had endeavoured to obtain the abolition of theſe ſpectacles, Telemachos, a hermit of the eaſt, appeared in the amphitheatre. As ſoon as the combat had begun, he deſcended, with a dignified ſimplicity, inflamed by the ſpirit of benevolence and holy zeal, into the arena, and anxiouſly endeavoured to prevent the combatants from murdering each other. The ſpectators, enraged, roſe and ſtoned him to death. Perhaps there may be ſome who will feel inclined to ridicule the ſimplicity of this dignified man, though, had it been the act of a heathen philoſopher, they would have admired and cited it as exemplary. Telemachos, however, was the laſt ſacrifice to this accurſed cuſtom. Honorius was moved, forbad the games of the gladiators, and from that period they were entirely aboliſhed.

There are two very celebrated remains of ſculpture which are ſuppoſed to be ſtatues of gladiators; the one ſtyled the *Borgheſe Gladiator*, from being erected at the Villa Borgheſe; the other, which is the moſt celebrious, and moſt highly finiſhed, is the *Dying Gladiator*, which for ages ornamented the palace of Chighi. With reſpect to the former ſtatue, M. Gibelin aſſerts, that this fine antique does not repreſent a gladiator; which indeed has been long admitted, and various conjectures have been hazarded on the ſubject. The idea of this writer is, that it is the ſtatue of a σφαιριστης, or what we call a tennis-player; and he ſupports this opinion with a great abundance of learning: adducing inſtances of ſtatues being erected in Greece to the maſters of this art. M. Mongez, on the contrary, ſuppoſes that the ſtatue at the Villa Borgheſe, repreſents either a Grecian hero, or a divinity. After having ſucceſsfully combated the opinion of Leſſing, and others, who have endeavoured to attribute this figure to Chabrias, the Athenian general, M. Mongez declines any farther controverſy, but leaves it for the conſideration of other antiquarians. The ſtatue named the *Dying Gladiator*, now removed to Paris amongſt other of the Italian ſpoils, he alſo imagines to have been wrongly named. The ſubſtance which ſurrounds the neck, and which preceding antiquaries had ſuppoſed to be a cord, he decides to be a collar worked in that form. Winckelman conceived that this was the ſtatue of a Greek herald: but M. Mongez proves, from the facial line, and the arrangement of the hair, that it repreſents a barbarian. He adds a curious obſervation, that *mouſtaches*, or whiſkers, are found on the ſtatues of barbarians only, and that this word is almoſt entirely Greek, (μυσταξ.) He hints that a dying Gaul may probably be deſigned by this figure, but he advances no abſolute conjecture.

GLADIA'TORS WAR, called alſo the *ſervile war*, was a war which the Romans ſuſtained about the year of their city 680. Spartacus, Crinus, and Oenomaus, having eſcaped, with other gladiators to the number of ſeventy-four, out of the place where they had been kept at Capua, gathered together a body of ſlaves, put

themſelves at their head, rendered themſelves maſters of all Campania, and gained ſeveral victories over the Roman prætors. At length they were defeated by Craſſus, at the extremity of Italy; having, in vain, attempted to paſs over into Sicily.

GLADIATO'RIAN, *adj.* Of gladiators.—The *gladiatorian* and other ſanguinary ſports, which we allow our people, diſcover ſufficiently our national taſte. *Shafteſbury.*

GLA'DIATURE, *ſ.* [*gladiatura*, Lat.] The feat of fighting with ſwords.

GLADI'OLUS, *ſ.* [*gladius*, Lat. a ſword; from the form of the leaves.] CORN-FLAG; in botany, a genus of the claſs triandria, order monogynia, natural order enſatæ, (irides, *Juſſ.* liliaceæ, *Hall, Boerh. Adanſon*; bulboſæ, *Ray.*) The generic characters are—Calyx: a ſpathe, two-valved, inferior, ſhorter than the corolla; valves oblong, permanent; the outer one larger, incloſing the inner. Corolla: one-petalled, ſuperior; tube cylindric, bent; border ſomewhat bell-ſhaped, ſix-parted; ſegments oblong, from erect-patulous, the uppermoſt and loweſt lateral either without or within. Stamina: filaments three, inſerted into the orifice of the tube, filiform, ſhorter than the corolla; antheræ ovate, incumbent. Piſtillum: germ inferior, triangular; ſtyle filiform; ſtigmas three, rolled back and ſpreading, blunt, villoſe. Pericarpium: capſule ovate, three-cornered, blunt, three-celled, three-valved. Seeds: very many, ſmooth: Gærtner obſerves that antholyza may very well be placed in this genus.—*Eſſential Character.* Corolla, ſix-parted, irregular, unequal; ſtigmas, three.

Species. 1. Gladiolus communis, or common corn-flag: leaves ſword-ſhaped; flowers diſtant. Root round, compreſſed, yellowiſh, covered with a brown furrowed ſkin; hence ſpring two ſword-ſhaped leaves, embracing each other at the baſe, and between them riſes the flower-ſtalk, growing near two feet high, having one or two narrow leaves embracing it like a ſheath, and terminated by five or ſix purple flowers, one above another at ſome diſtance, ranged on the ſame ſide of the ſtalk; the ſpathe covers the flower-bud before it expands, but ſplits open lengthwiſe when it opens, and ſhrivels up to a dry ſkin, remaining about the ſeed-veſſel till the ſeeds are ripe; ſeeds imbricate, as far as eight in one cell. It was cultivated by Gerarde in his garden in 1596, and it was even then very common. He gives the names not only of corn-flag, but *corn-ſedge*, and *corn-gladin*. Johnſon adds that of *ſword-flag*.

Miller makes three ſpecies of this: 1. The common ſort, deſcribed above; *G. flor uno verſu diſpoſitis* of C. Bauhin, with the flowers diſpoſed on one ſide the ſtalk, varying with white and fleſh-coloured flowers: this Gerarde calls *Italian corn flag*. 2. The Italian (G. Italicus,) *utrinque floridus* of C. Bauhin, with flowers on each ſide the ſtalk; of which he ſays there is alſo a variety with white flowers: this Gerarde and Parkinſon figure under the name of *French corn-flag*. 3. The great corn-flag of Byzantium (G. Byzantinus), which has larger roots, but of the ſame form; the leaves alſo are much broader and larger, with deeper channels; the flower-ſtalks riſe higher; the flowers are much larger, of a deeper red colour, and the ſheaths are longer. It makes a fine appearance when in flower, and is worthy of a place in every good garden; the rather, becauſe the roots do not increaſe ſo faſt as to be troubleſome. Parkinſon, beſides the French, Italian, and Byzantine, corn-flags, has three varieties; the bluſh, white, and ſmall purple. He obſerves that Gerarde miſtook the French for the Italian: and that John Tradeſcant aſſured him, that he ſaw many acres of ground in Barbary ſpread over with them.

2. Gladiolus imbricatus, or netted corn-flag: leaves ſword-ſhaped; flowers imbricate. Flowers ſmall, all directed one way, and imbricate. Native of Ruſſia.

3. Gladiolus alatus, or winged corn-flag: leaves ſword-ſhaped; the ſide petals very broad. Stem a ſpan high, thickiſh, flexuoſe between the flowers. Native of the Cape of Good Hope.

4. Gladiolus tubiflorus, or long-tubed corn-flag: leaves linear-lanceolate, villoſe, ſomewhat plaited, longer than the ſcape; tube very long; ſpathes hirſute. Leaves a ſpan long and more; ſtem round, villoſe, a finger's length. Native of the Cape of Good Hope, where it was found by Thunberg and Maſſon. It flowers in June; and was introduced in 1774.

5. Gladiolus plicatus, or hairy corn-flag: leaves oblong-lanceolate, villoſe, plaited; tube longer than the ſpathes. Leaves plaited at the nerves; flowers two or three, violet fading to white. Cultivated in 1757, by Mr. Miller, who raiſed it from ſeeds which were ſent him from the Cape of Good Hope.

6. Gladiolus ſtrictus, or upright corn-flag: leaves linear-lanceolate, villoſe, plaited; tube equal to the ſpathe. This varies with a deep blue corolla, the tube and the baſe of the ſegments a very dark purple; and with a pale purple corolla, the tube blue. It was found at the Cape by Mr. Francis Maſſon, and introduced in 1774. It flowers in June.

7. Gladiolus triſtis, or ſquare-ſtalked corn-flag: leaves linear-croſs-ſhaped; corollas bell-ſhaped. From the root come out two or three narrow leaves, a foot and half long, having a longitudinal furrow in the middle, and ending in acute points; they are of a deep green, and ſtand erect; between theſe ariſes a ſlender taper ſtalk, about the ſame length as the leaves, having one or two ſhort acute-pointed leaves on the lower part, embracing the ſtalk at their baſe. It flowers at the end of May, and the ſeeds ripen about ſix weeks after. Linnæus gave the name of *triſtis* to this ſpecies, from the gloomy colour of its flowers. They are very frequently of a pale yellow or ſulphur-colour, ſhaded in particular parts with very fine pencilings, eſpecially on the under ſide; but they vary much with different ſhades of white and green, yellow, fleſh-coloured, blue, purple, and violet. Thunberg has diſtinguiſhed ſixteen of theſe varieties. It is commonly ſaid to produce only two flowers on a ſtem, but there are frequently more: they generally give forth a moſt agreeable fragrance in their expanſion. The leaves very characteriſtically diſtinguiſh this ſpecies: they are alternately ſheathing, linear, acute, ſtriated, ſmooth, quite entire, two or three in number, the upper ones gradually ſhorter; the loweſt is thickiſh, ſcored with a deep groove within the edge, the reſt reſemble the ſpathes, and are convoluted, but they are longer. Native of the Cape of Good Hope, and cultivated in 1745, by Mr. Miller.

8. Gladiolus carinatus, or ſpotted-ſtalked corn-flag: leaves linear, keeled on both ſides, ſmooth; tube of the corolla ſhorter than the ſpathes and the borders; ſtigmas undivided, folded together. Stalk a foot and half high, and round; leaves longer than the ſtalk; flowers ſweet. Native of the Cape; flowers in April and May.

9. Gladiolus blandus, or bluſh-coloured corn-flag: leaves linear-lanceolate, nerved, ſmooth; flowers in ſpikes; the upper ſegment reflex; ſtigmas ſlightly two-lobed. Native of the Cape of Good Hope; and flowers in June.

10. Gladiolus undulatus, or waved corn-flag: leaves ſword-ſhaped; petals nearly equal, lanceolate, waved. This is of the ſame ſtature with the common ſort; ſtalk a foot and half in height; leaves ſtreaked; flowers alternate, in a double row. This ſpecies is intermediate between this genus and Ixia. Native of the Cape. See N° 14.

11. Gladiolus recurvus, or recurved corn-flag: leaves ſword-ſhaped; petals nearly equal, lanceolate, bowed back. This differs from the foregoing, in the petals not being waved, and being leſs acuminate; the tube of the corolla, not filiform, lax or pendulous; in other reſpects

reſpects very like it. Stalk ſlender; has more leaves upon it than G. triſtis; the flowers are ranged on one ſide the ſtalk towards the top, and ſtand pretty far aſunder; they have an agreeable odour; appear at the end of May, and the ſeeds ripen in July. It was raiſed in the Chelſea garden, from ſeeds which came from the Cape of Good Hope, and flowered there before the year 1760.

12. Gladiolus ſpicatus, or ſpiky corn-flag: leaves linear; ſtem extremely ſimple; flowers in ſpikes. Flowers diſtich, imbricate, blue, about twelve pairs in a ſpike of an inch in length. It differs from the next ſpecies in having larger flowers, on a ſhorter ſpike, but broader and ovate; and a ſimple ſcape.

13. Gladiolus alopecuroides, or fox-tail corn-flag: leaves linear; ſpike diſtich; imbricate. The ſpike covered as in plantain, with very numerous ſmall flowers, but in a double row: it varies with the ſcape ſimple and branched, with corollas white and blue. This, and N° 12. are natives of the Cape.

14. Gladiolus anguſtus, or narrow-leaved corn-flag: leaves linear, ſmooth; flowers in ſpikes, diſtant; the upper ſegment of the corolla ſtraight; ſtigmas ſpatulate, undivided. The ſame, according to Thunberg, with N° 10.

15. Gladiolus flavus, or yellow corn-flag: leaves lanceolate-ſword-ſhaped, flat; the throat of the upper lip of the corolla has three laminas, ſhaped like the nail, and placed perpendicularly; bractes acuminate. This differs from the next ſpecies in having the bractes acuminate, the whole corolla intenſely yellow, and the leaves a little broader. It was found near the Cape, by Mr. William Paterſon; and was introduced in 1780 by the counteſs of Strathmore. It flowers in February and March.

16. Gladiolus ſecuriger, or copper-coloured corn-flag: leaves linear-ſword-ſhaped, flat; the throat of the upper lip has three laminas, ſhaped like the nail, and placed perpendicularly; bractes obtuſe. Leaves ſmooth, more than a ſpan in length; ſtalk roundiſh, a little ſhorter than the leaves, ſometimes branched. Native of the Cape, and flowers in May.

17. Gladiolus ramoſus, or branched corn-flag: ſtem branched; leaves linear. 18. Gladiolus capitatus, or crowned corn-flag: ſtem branched; heads peduncled; root tuberous. A very large plant, with blue flowers. Theſe two are natives of the Cape. See MORÆA.

19. Gladiolus criſpus, or curled corn-flag: leaves lanceolate, crenate, waved; flowers directed the ſame way; ſpikes two; tube filiform, long. Wholly different from Ixia criſpa, in having lanceolate leaves, even on the ſtem; the tube of the corolla eight times as long as the glumes, and the petals lanceolate: whereas that has linear leaves, and a leafleſs ſtalk; the tube of the corolla hardly longer than the glume, and the petals obovate. This alſo is two feet high, and that only about four inches. Found at the Cape by Sparrmann.

20. Gladiolus junceus, or ſlender corn-flag: leaves broad-lanceolate; culm branched; flowers directed the ſame way; ſtyle ſix-parted. Stem a hand only in height, filiform, ſmooth, with one or two patulous branchlets. Found at the Cape by Thunberg.

21. Gladiolus anceps, or double corn-flag: leaves ſword-ſhaped, waved; ſtem branched, ancipital, divaricate. 22. Gladiolus gramineus, or graſſy corn-flag: petals lanceolate, briſtle-ſhaped, acuminate. 23. Gladiolus marginatus, or margined corn-flag: leaves cartilaginous-margined, ſmooth, many-nerved; ſpike lengthened; flowers alternate, nodding. 24. Gladiolus montanus, or mountain corn-flag: leaves ſword-ſhaped, nerved, ſmooth; flowers in ſpikes; corolla ringent. This, with the three foregoing, was found at the Cape by Sparrmann.

25. Gladiolus falcatus, or falcate corn-flag: ſtem ſimple; leaves ſickle-ſhaped; flowers alternate; ſtyle trifid. 26. Gladiolus flexuoſus, or flexible corn-flag: leaves linear; ſtem ſimple, flexuoſe; flowers in ſpikes, ringent; tube long. 27. Gladiolus longiflorus, or long-flowered corn-flag: ſtem round; tube of the corolla very long; ſpathes and leaves linear, ſmooth. 28. Gladiolus ſpathaceus, or flat corn-flag: ſtem branched; flowers in imbricate ſpikes; ſpathes membranaceous, awned; leaves plaited. 29. Gladiolus ſetifolius, or briſtly corn-flag: ſtem branched; corolla ringent; the loweſt leaf filiform-ſetaceous. Theſe were all found at the Cape of Good Hope by Thunberg.

30. Gladiolus cardinalis, or ſuperb corn-flag: leaves ſword-ſhaped, many-nerved; flowers directed the ſame way, many on a ſtem; corolla upright, with a bell-ſhaped border. Flowers fine ſcarlet, with large white ſomewhat rhomboidal ſpots on ſeveral of the lowermoſt diviſions of the corolla: ſtrong plants will throw up a ſtem three or four feet high, dividing at the top into ſeveral branches. It flowers with us in July and Auguſt; and is moſt probably a native of the Cape. Introduced from Holland a few years ſince, by Mr. Græffer, gardener to Ferdinand IV. king of Naples. It firſt flowered with Meſſrs. Lewis and Mackie, nurſery-men at Kingſland; and in 1790 at Meſſrs. Grimwood's and Co. at Kenſington. *Curtis's Magazine*, Pl. 135.

Propagation and Culture. The firſt requires no care; for when it is once planted in a garden, it will multiply too faſt, ſo as to become a diſagreeable weed. The Byzantine corn-flag has now, therefore, generally taken its place. This is propagated by offsets which are ſent off from the roots in the ſame manner as tulips. The roots may be taken out of the ground the end of July, when their ſtalks decay, and may be kept out of the ground till the end of September, or the beginning of October, at which time they ſhould be planted in the borders of the flower-garden, where they will thrive in any ſituation, and being intermixed with other flowers of the ſame growth, they will add to the variety. The Cape ſorts may be increaſed by offsets, which ſhould be planted in a warm border of kitchen-garden earth; and where there is a conveniency of covering ſuch border with glaſſes in the winter, if theſe roots are planted in the full ground, and protected from froſt, there will be a greater probability of their flowering than in any method of culture. They may be raiſed alſo from ſeeds, which are frequently perfected in England; theſe ſhould be ſown at the end of Auguſt, in pots filled with light earth, and placed in a ſhady ſituation till the middle of September; then the pots ſhould be removed where they may have the ſun great part of the day, and in October they muſt be placed under a hot-bed frame, where they may be protected from froſt and great rains, but enjoy the free air in mild weather. In the ſpring the young plants will appear, when they will require a little water once in eight or ten days, but it ſhould be given them ſparingly, for too much wet will rot theſe tender bulbs. In May, when the danger of froſt is over, the pots ſhould be removed to a ſheltered ſituation, where they have the morning ſun till noon; and, if the ſeaſon proves dry, they muſt be now and then refreſhed with water. Towards the latter end of June, the leaves will decay; then the roots ſhould be taken up, mixed with ſand, and kept in a dry room till the end of Auguſt, when they ſhould be planted again; and, as the roots are ſmall, four or five may be planted in each halfpenny pot, filled with light earth; theſe ſhould be placed where they may have only the forenoon ſun till the middle of September, when they ſhould have a warmer ſituation; and in October they muſt be placed under a hot-bed frame as before, and treated in the ſame way during the winter ſeaſon; and in the ſpring they muſt be placed in the open air till their leaves decay, when they may be again taken out of

of the ground, and treated in the ſame manner as before; but as the roots will have grown to a larger ſize when they are planted again, they ſhould each have a ſeparate halfpenny pot, becauſe now they will be large enough to flower, and may be treated as the old roots. See ANTHOLYZA, BUTOMUS, DRACÆNA, FERRARIA, IRIS, LOBELIA, PONTEDERIA, and XYRIS.

GLAD'KA, a fort of Ruſſia, in the government of Caucaſus, on the Malva: thirty-ſix miles weſt of Kizliar.

GLAD'LY, *adv.* Joyfully; with gaiety; with merriment; with triumph; with exultation:

For his particular, I'll receive him *gladly*;
But not one follower. *Shakeſpeare.*

GLAD'NESS, *ſ.* Cheerfulneſs; joy; exultation:

By ſuch degrees the ſpreading *gladneſs* grew
In every heart, which fear had froze before:
The ſtanding ſtreets with ſo much joy they view,
That with leſs grief the periſh'd they deplore. *Dryden.*

GLAD'SOME, *adj.* Pleaſed; gay; delighted:

The higheſt angels to and fro deſcend,
From higheſt heaven, in *gladſome* company. *Spenſer.*

Cauſing joy; having an appearance of gaiety:

Each morn they wak'd me with a ſprightly lay;
Of opening heav'n they ſung, and *gladſome* day. *Prior.*

GLAD'SOMELY, *adv.* With gaiety and delight.

GLAD'SOMENESS, *ſ.* Gaiety; ſhowyneſs; delight.

GLAIRE, *ſ.* [ȝlæȝ, Sax. amber; *glar*, Dan. glaſs; *glaire*, Fr. *glarea*, Lat.] The white of an egg.—Take the *glaire* of eggs, and ſtrain it as ſhort as water. *Peachem.*—A kind of halbert.

To GLAIRE, *v. a.* [*glarier*, Fr.] To ſmear with the white of an egg; the mode by which bookbinders give a gloſs to the covers of books.

GLAIVE, *ſ.* [French.] A weapon like a halbert.

GLAM'FORD BRIGGS, commonly called *Brigg*, a market town in the county of Lincoln, one hundred and fifty miles from London, ſituated on the river Ancholme, in the centre of the level of that name, the drainage of which was accompliſhed at a very conſiderable expence, and is ſupported by a tax on the land, and tonnage on the navigation of the river. This river is navigable from Biſhopſbridge, about ten miles ſouth of Brigg, to Ferraby Sluice, nine miles north of Brigg, where it opens into the Humber. Above and below the town the river divides into two branches, one of which runs through the town, the other a quarter of a mile weſtward of it, and has a ſmall but commodious bridge over each branch. This town forms a part of the four adjoining pariſhes of Wrawby, Bigby, Broughton, and Scawby; and has a conſiderable manufactory of ſkins, with a good trade in corn, coals, and timber. Here is a plentiful market on Thurſdays, and a fair yearly on the 5th of Auguſt. This town has alſo a large and commodious free-ſchool, with a good endowment for a maſter and uſher, both of whom are uſually in orders.

GLAMOR'GANSHIRE, a county of South Wales, bounded on the north by Brecknockſhire, on the eaſt by Monmouthſhire, on the ſouth by the Briſtol Channel, and on the weſt by Caermarthenſhire; about forty-eight miles from eaſt to weſt, and twenty-ſeven from north to ſouth. The greateſt part of the ſea coaſt forms a ſemicircular ſweep, the weſtern extremity being formed into a narrow beak between the open channel on the one hand, and an arm running round to the Caermarthenſhire coaſt on the other. Juſtin, a petty prince of this country, in the reign of William Rufus, revolting from his ſovereign, Rhys, and finding himſelf not a match for his power, by a raſhneſs, which he repented of when too late, invited over to his aſſiſtance from England, by means of one Ivo, a nobleman, to whom he had married his daughter, Robert Fitz Haimon, a Norman, ſon of Haimon Dentatus, earl of Corbul, who preſently raiſing troops, and aſſociating with him twelve knights, firſt engaged and ſlew Rhys, and then, allured by the fertility of the country, of which he had before enſured to himſelf the poſſeſſion in proſpect, turned his arms againſt Juſtin himſelf, for not keeping his word with Ivo, ſoon diſpoſſeſſed him of the patrimony of his anceſtors, and divided the country between his own followers. On the north and north-eaſt ſides it is very mountainous, the ſoil of the hills extremely varied. In ſome parts they are abſolute rocks, in others full of coal and iron. The ſurface over theſe mines produces plenty of fine wool. What corn grows in the county is principally between the ſouth ſide of the mountains and the ſea, in a ſpacious vale, or plain, open to the latter. The roads over the mountains are exceſſively ſteep, ſtony, ſtrewed, as well as the heaths on each ſide of them, with ſtones of various ſizes, detached from the rocks by the winter rains. The air on the north ſide is ſharp, occaſioned by the long continuance of the ſnow on the hills; but on the ſouth ſide mild and temperate, improved by the ſea breezes. Such is the profuſion of coal and limeſtone in this county, that lime is the general manure of it, and there is ſcarcely a cottage that is not white-waſhed regularly once a year. The plenty of coal, and the conveniency of exportation, have brought a large copper work to Swanſea. Glamorganſhire contains one epiſcopal town, Llandaff, and ſeveral others, as Cardiff, Caerphilly, Neath, Brigend, Swanſey, Llantriſant, Marthyr-Tydvil, and Cowbridge. The principal rivers are the Tave, the Neath, the Taw, the Oſmore, and the Rumney. Glamorganſhire is divided into ten hundreds and one hundred and eighteen pariſhes, which contain about fifty-eight thouſand inhabitants. Two members are returned to the Britiſh parliament, viz. one for the county, and one for the town of Cardiff.

GLAN, a river of Germany, in the circle of the Upper Rhine, which runs into the Nahe, three miles eaſt of Sobernheim, in the county of Sponheim.

GLAN, a river of Germany, in the duchy of Carinthia, which riſes near Koſtnberg, and joins the Gurck four miles eaſt of Clagenfurt.

GLANCE, *ſ.* [*glantz*, Germ. glitter.] A ſudden ſhoot of light or ſplendour:

His off'ring ſoon propitious fire from heav'n
Conſum'd with nimble *glance*, and grateful ſteam:
The other's not; for his was not ſincere. *Milton.*

A ſtroke or dart of the beam of ſight.—The aſpects which procure love are not gazings, but ſudden *glances* and dartings of the eye. *Bacon.*

Boldly ſhe look'd like one of high degree:
Yet never ſeem'd to caſt a *glance* on me;
At which I inly joy'd, for truth to ſay,
I felt an unknown awe, and ſome diſmay. *Harte.*

A ſnatch of ſight; a quick view.—The ample mind takes a ſurvey of ſeveral objects with one *glance*. *Watts.*

To GLANCE, *v. n.* To ſhoot a ſudden ray of ſplendour:

When through the gloom the *glancing* lightnings fly,
Heavy the rattling thunders roll on high. *Rowe.*

To fly off in an oblique direction:

He has a little gall'd me, I confeſs;
But as the jeſt did *glance* away from me,
'Tis ten to one it maim'd you two outright. *Shakeſpeare.*

To ſtrike in an oblique direction:

Through Paris' ſhield the forceful weapon went,
His corſlet pierces, and his garment rends,
And *glancing* downwards near his flank deſcends. *Pope.*

To view with a quick caſt of the eye; to play the eye:

Mighty dulneſs crown'd,
Shall take through Grub-ſtreet her triumphant round;
And her Parnaſſus *glancing* o'er at once,
Behold a hundred ſons, and each a dunce. *Pope.*

To cenſure by oblique hints.—He had written verſes wherein he *glanced* at a certain reverend doctor, famous for dulneſs. *Swift.*

To GLANCE, *v. a.* To move nimbly; to ſhoot obliquely:

Glancing an eye of pity on his loſſes,
Enough to preſs a royal merchant down. *Shakeſpeare.*

GLAN'CINGLY, *adv.* In an oblique broken manner; tranſiently.—Sir Richard Hawkins hath done ſomething in this kind, but brokenly and *glancingly*, intending chiefly a diſcourſe of his own voyage. *Hakewill.*

GLAND, *ſ.* [*glans*, Lat. *gland*, Fr.] All the *glands* of a human body are reduced to two ſorts, viz. conglobate and conglomerate. A conglobate *gland* is a little ſmooth body, wrapt up in a fine ſkin, by which it is ſeparated from all the other parts, only admitting an artery and nerve to paſs in, and giving way to a vein and excretory canal to come out: of this ſort are the *glands* in the brain, the labial *glands*, and teſtes. A conglomerate *gland* is compoſed of many little conglobate *glands*, all tied together, and wrapt up in the common tunicle or membrane. *Quincy.*—See the article ANATOMY, vol. i. p. 527.

The *glands*, which o'er the body ſpread,
Fine complicated clues of nervous thread,
Involv'd and twiſted with th' arterial duct,
The rapid motion of the blood obſtruct. *Blackmore.*

GLAN'DAGE, *ſ.* Maſtage; the ſeaſon of turning hogs into the woods; the feeding hogs with maſt.

GLAN'DERS, *ſ.* A fatal diſeaſe in horſes. See the article FARRIERY, vol. vii. p. 252.

GLANDE'VES, a town of France, in the department of the Lower Alps; formerly flouriſhing, and the ſee of a biſhop; but the overflowing of the Var compelled a great part of the inhabitants to leave the town, and to remove to Entrevaux, which was not far from it; and it is now almoſt abandoned.

GLAND'FORD BRIDGE. See GLAMFORD BRIGGS.

GLANDIF'EROUS, *adj.* [*glans* and *fero*, Lat.] Bearing maſt; bearing acorns or fruit like acorns.—The beech is of two ſorts, and numbered amongſt the *glandiferous* trees. *Mortimer.*

GLAN'DIUM, *ſ.* [from *glans*, a nut.] A ſmall carnous tumour like a nut.

GLAN'DORE, a town and harbour of Ireland, in the county of Cork: three miles weſt of Roſs Bay.

GLAN'DORP (John), a learned philologiſt, born at Munſter. He ſtudied under Melanchthon at Wittemberg, and diſtinguiſhed himſelf by his claſſical and critical knowledge. He was made rector of the college at Hanover, which poſt, upon ſome quarrel, he quitted in 1555, and retiring to Goſlar, was followed by moſt of his ſcholars. He had the direction of the ſchool of that town till 1560, when he removed to Marpurg, and occupied the profeſſors' chair of hiſtory in that univerſity. He died there in 1564. His works are: 1. *Sylva Carminum Elegiacorum.* 2. *Deſcriptio Gentis Antoniæ.* 3. *Familiæ Juliæ Gentis.* 4. *Diſticha Sacra & Moralia.* 4. *Annotat. in Jul. Cæſaris Commentar.* 6. *Annotat. in Ciceronis Epiſt. familiar.* 7. *Onomaſticon Hiſtoriæ Romanæ.*

GLAN'DORP (Matthew-Louis), an eminent German phyſician and ſurgeon, born at Cologne in 1595. He ſtudied at Bremen; and then viſiting Italy, he heard the lectures of Aquapendente, Spigelius, and Sanctorius, at Padua, and took the degree of doctor in that univerſity. On his return he ſettled at Bremen, where he was appointed firſt phyſician to the archbiſhop, and afterwards to the city. He was living in 1633, but the time of his death is not known. His works are: 1. *Speculum Chirurgorum*, 1619, chiefly relating to the cure of wounds. 2. *Methodus Medendæ Paronychiæ*, 1623. 3. *De Polypo Narium*, 1628. 4. *Gazophylacium Polypluſium Fonticulorum & Setaceorum*, 1633. All theſe were printed together in London in 1729, 4to.

GLAN'DULE, *ſ.* [*glandula*, Lat. *glandule*, Fr.] A ſmall gland ſerving to the ſecretion of humours.—Nature hath provided ſeveral *glandules* to ſeparate this juice from the blood, and no leſs than four pair of channels to convey it into the mouth, which are called *ductus ſalivales. Ray.*

GLANDULOS'ITY, *ſ.* A collection of glands.—In the upper parts of worms are found certain white and oval *glandulo ſities. Brown.*

GLAN'DULOUS, *adj.* [*glandulo ſus*, Lat. *glanduleux*, Fr. from *glandule.*] Pertaining to the glands; ſubſiſting in the glands; having the nature of glands.—The beaver's bags are no teſticles, or parts official unto generation, but *glandulous* ſubſtances, that hold the nature of emunctories. *Brown.*

GLANDU'LOUSNESS, *ſ.* Glanduloſity; a collection of glands. *Scott.*

GLANE, a river of France, which runs into the Dordogne, near Argental, in the department of the Correze.

GLAN'MEN, or GLOMME. See GLOMME.

GLANS, *ſ.* [perhaps from אלון *halon*, Heb. an oak.] An acorn; a cheſnut. Alſo the tip or nut of the penis is ſo named, from its likeneſs to an acorn.

GLANSHAMMAR', a town of Sweden, in the province of Nericia: ſeven miles north-eaſt of Orebro.

GLAN'VILL (Joſeph), an eminent Engliſh divine, and various writer, born at Plymouth in 1636. His early education he received in his native town, whence he was ſent to Exeter college, Oxford, in 1652. In this ſeminary he took his degree of bachelor of arts in 1655; and in the following year he removed to Lincoln college, where he took his degree of maſter of arts in 1658; and was about the ſame time appointed chaplain to Francis Rous, eſq. provoſt of Eton college, who was one of the perſons deſigned by Oliver Cromwell to compoſe his new houſe of lords. But this patron dying, Mr. Glanvill returned to Lincoln college, where he ſpent his time till the reſtoration of Charles II. in literary and philoſophical ſtudies. About this time the new philoſophy, founded upon reaſon and experiment, was beginning to triumph over the tyranny which under the name and authority of Ariſtotle had been ſo long exerciſed in the ſchools. To the principles of this philoſophy Mr. Glanvill was a convert; and when he had juſt entered the twenty-fifth year of his age, he wrote a treatiſe in defence of them, which was publiſhed in 1661, under the title of, The Vanity of Dogmatiſm or Confidence in Opinions, manifeſted in a Diſcourſe of the Shortneſs and Uncertainty of our Knowledge, and its Cauſes, with ſome Reflections on Peripateticiſm, and an Apology for Philoſophy, 12mo. As the meetings which gave riſe to the royal ſociety of London were then frequently held, and encouraged by the moſt learned men of the times, this treatiſe proved the means of introducing the author to their knowledge and acquaintance. Mr. Glanvill now entered into orders, and was preſented to the rectory of Wimbiſh, in the county of Eſſex; and in 1662 was inducted into the vicarage of Frome-Selwood in Somerſetſhire. In the ſame year he publiſhed, but without his name, an ingenious diſcourſe on the fundamental doctrine of the ancient eaſtern philoſophers, which he endeavoured to prove not contradictory to, or incompatible with, revealed religion. It was entitled, *Lux Orientalis*; or, An Enquiry into the Opinion of the Eaſtern Sages concerning the Pre-exiſtence of Souls; being a Key to unlock the grand Myſteries of Providence, in relation to Man's Sin and Miſery; 12mo. Upon the eſtabliſhment of the royal ſociety, Mr. Glanvill was encouraged to reſume his labours in defence

defence of the new method of philoſophiſing; and, making his former treatiſe the ground-work of his plan, he omitted the exceptionable parts, introduced new matter, and rendered the whole more methodical and better digeſted. His treatiſe was publiſhed in 1665, under the title of *Scepſis Scientifica*; or, Confeſſed Ignorance the Way to Science; in an Eſſay on the Vanity of Dogmatiſing and Confident Opinion, 4to. To this he added a defence of his former book againſt Mr. White, a boaſted champion of the church of Rome, and of the Ariſtotelian philoſophy; together with a well-written and learned diſcourſe concerning Ariſtotle, in the form of a letter to a friend. This work was dedicated to the royal ſociety, which was the means of admitting him among its members, about the time when the *Scepſis* made its appearance.

The credit Mr. Glanvill had acquired by his various writings, encouraged him, in 1666, to deliver his ſentiments upon the ſubject of witchcraft, the poſſibility and exiſtence of which he endeavoured to defend. His treatiſe was originally entitled, Some Philoſophical Conſiderations touching the Being of Witches and Witchcraft, 4to. but it underwent frequent alterations in ſubſequent editions. This performance, which in the preſent age will be conſidered as reflecting little credit on the author's judgment, engaged him in a controverſy which laſted as long as his life, and was conducted with great warmth and acrimony. Soon after the firſt appearance of this work, he was preſented to the rectory of the abbey church at Bath, in which city from that time he fixed his reſidence. His next work was an entertaining and inſtructive account of modern improvements, entitled, *Plus Ultra*; or, The Progreſs and Advancement of Knowledge ſince the Days of Ariſtotle, 1668, 4to. Mr. Glanvill's reputation was now ſo firmly eſtabliſhed, that he was frequently called upon to preach on public occaſions; and among others at a viſitation of the dioceſe, where he delivered a diſcourſe which met with general approbation, and was repeatedly printed. It was entitled ΔΟΓΟΥ ΘΡΗΣΚΕΙΑ: or, A ſeaſonable Recommendation of Reaſon in the Affairs of Religion, againſt Infidelity, Scepticiſm, and Fanaticiſm of all Sorts, 1760, 4to. The ſucceſs which this diſcourſe met with encouraged him to attempt removing the prejudices of ſome learned and good men againſt the new methods propoſed for the advancement of uſeful knowledge, by explaining the correſpondence between religion and the new philoſophy. This he did in a piece entitled, *Philoſophia pia*; or, A Diſcourſe of the religious Temper and Tendency of the experimental Philoſophy which is profeſſed by the Royal Society, 1671, 8vo. While he was entitling himſelf to the particular acknowledgments of the members of that body, by defending the uſeful tendency of their purſuits, he alſo contributed to their collection of inſtructive and entertaining papers, ſome obſervations on the mines in the Mendip hills, and on the natural hiſtory and ſprings of Bath, which were well received, and inſerted in the Philoſophical Tranſactions. In 1672 Mr. Glanvill exchanged his rectory of Frome for that of Streat, in the ſame county, with the chapel of Walton annexed; and about the ſame time was made chaplain in ordinary to Charles II. His next publication was a volume of Eſſays on ſeveral important Subjects in Philoſophy and Religion, 1676, 4to. conſiſting of the principal of his former pieces already noticed, reviſed and improved, together with a treatiſe, called, Antifanatic Theology and free Philoſophy; which is a kind of ſupplement to the philoſophical romance of the celebrated lord Bacon. In 1678 he publiſhed An Eſſay concerning Preaching, written for the Direction of a young Divine, 12mo. His laſt work was entitled, The zealous and impartial Proteſtant, 1680, 4to. The printing of this performance was ſcarcely finiſhed before Mr. Glanvill was attacked by a fever, which proved fatal to him when only about the age of forty-four. Soon after his death, Dr. Anthony Horneck publiſhed ſeveral of his ſermons, and other pieces, with the title of, Some Diſcourſes, Sermons, and Remains, &c. 1681, 4to. with an account of the author's life.

To GLARE, *v. n.* [*glaren*, Dut.] To ſhine ſo as to dazzle the eyes.—After great light, if you come ſuddenly into the dark, or, contrariwiſe, out of the dark into a *glaring* light, the eye is dazzled for a time, and the ſight confuſed. *Bacon.*

Alas, thy dazzled eye
Beholds this man in a falſe *glaring* light,
Which conqueſt and ſucceſs have thrown upon him.
Addiſon.

To look with fierce piercing eyes.—Look, how pale he *glares! Shakeſpeare.*

Now friends no more, nor walking hand in hand;
But when they met they made a ſurly ſtand,
And *glar'd*, like angry lions, as they paſs'd,
And wiſh'd that ev'ry look might be their laſt. *Dryden.*

To ſhine oſtentatiouſly, or with too much laboured luſtre.—The moſt *glaring* paſſages are none of the fineſt, or moſt correct. *Felton on the Claſſics.*

To GLARE, *v. a.* To ſhoot ſuch ſplendour as the eye cannot bear:

One ſpirit in them rul'd, and every eye
Glar'd lightning, and ſhot forth pernicious fire
Among th' accurſt, that wither'd all their ſtrength. *Milt.*

GLARE, *ſ.* Overpowering luſtre; ſplendour, ſuch as dazzles the eye.—I have grieved to ſee a perſon of quality gliding by me in her chair at two o'clock in the morning, and looking like a ſpectre amidſt a *glare* of flambeaux. *Addiſon.*—A fierce piercing look:

About them round
A lion now he ſtalks with fiery *glare.* *Milton.*

GLAREO'LA, *ſ.* [from *glarea*, Lat. gravel; becauſe it inhabits the gravelly ſhores.] In ornithology, the PRATINCOLE; a genus of birds belonging to the order of grallæ; the characters of which are theſe: bill ſtrong, ſhort, ſtraight, hooked at the tip; noſtrils at the baſe of the bill, linear, oblique; feet four-toed; the toes long, ſlender, connected to each other at the baſe by a membrane; tail forked, with twelve quills. There are only three ſpecies at preſent known; and three varieties: viz.

1. Glareola Auſtriaca, the Auſtrian pratincole: ſize of a blackbird; length nine inches and a quarter; bill ten lines and a half long, curved at the tip; the baſe of it red, the reſt black; upper parts of the bird greyiſh-brown; chin and throat white, ſurrounded with a black line, which begins at the hinder angle of the eye, and bounds the whole of the white parts all round; the under parts are rufous grey, growing paler towards the vent; the upper tail-coverts are alſo of this colour; quills duſky; tail much forked, and tipped with grey on the inner web; the outer web of the exterior feather white the whole of its length; the legs and cere above the knees are blood-red. This ſpecies inhabits Germany, particularly the borders of the Rhine, near Straſburgh, and lives on worms and aquatic inſects. It is alſo ſeen at times in ſome parts of France, but is in the greateſt plenty in the deſerts towards the Caſpian Sea, frequenting the dry ſandy plains in great flocks. It is common alſo throughout the whole deſert of the independent Tartars, as far as the rivers Kamyſchloſska and Irtiſh, but not farther into Siberia, the plains adapted to it being there at an end; and in general it is not obſerved beyond fifty-three degrees to the northward.

The collared pratincole is only a variety of the preceding. Bill duſky; plumage on the upper parts grey brown; on each ſide of the head a white ſpot near the eyes;

eyes; ſpace between the two ſpots, black; throat and fore part of the neck white, ſurrounded by a brown line like a collar; breaſt and under parts whitiſh; quills duſky; tail forked; legs blackiſh. It makes its neſt on the ſandy ſhores of rivers; and is always found in the neighbourhood of ſtreams. It inhabits Germany, and is ſaid to lay ſeven eggs. It is a reſtleſs noiſy bird.

A ſecond variety of this ſpecies is called the Maldivian pratincole; nine inches in length. Bill black; irides red brown; head and upper parts of the body umber-colour; wing-coverts red brown; throat white ſurrounded with a black band; quills and tail black; rump, belly, and vent, white. Native of the Maldivia Iſles.

There is a third variety of this ſpecies, with the head deep brown; neck, back, and wing-coverts, rufous grey; quills brown; under wing-coverts red brown; upper tail-coverts white; breaſt and belly pale brown; thighs and vent white; bill and legs black; irides red brown. Found about Madras, and other parts of the Coromandel coaſt in Hindooſtan.

2. Glareola Senegalenſis, the Senegal pratincole: length nine inches and a half; bill eleven lines long, and brown; general colour of the plumage brown; tail forked as in the others; legs brown. This is an African ſpecies, and inhabits Senegal.

3. Glareola nævia, the ſpotted pratincole: this is about the ſize of a thruſh. Bill black; head, neck, breaſt, and upper part of the belly, ſpotted with brown and white; upper parts of the body brown, but the ſpots leſs diſtinct; belly, ſides, and vent, rufous white, ſpotted with black; quills black; ſecond quills black and aſh-colour; tail whitiſh tipped with black; legs and cere above the knees of this laſt colour. It inhabits the gravelly ſhores of Germany.

GLAREO'SE, *adj.* [from *glare.*] Glareous; viſcous. *Scott.*

GLA'REOUS, *adj.* [*glaireux*, Fr. *glareoſus*, Lat. from *glaire.*] Conſiſting of viſcous tranſparent matter, like the white of an egg.

GLA'RING, *adj.* Applied to any thing notorious: as, a *glaring* crime.

GLA'RIS, or GLARUS, a canton of Swiſſerland, and eighth in the order of the league, ſurrounded with lofty mountains on all ſides except towards the north; theſe mountains, covered with eternal ſnow, are called *glaciers*. In the lower parts fruit trees flouriſh very well; the inhabitants cultivate but little grain: their principal riches ariſing from their meadows and paſtures. Theſe paſtures in the Alps are of a ſuperior quality; medicinal plants are abundant, ſo as even to become an object of commerce. The Alps of Glaris afford a large field not only for the botaniſt, but for natural hiſtory in general, in a prodigious variety of uncommon plants, divers metals and minerals, cryſtals, medicinal ſprings, petrifactions, large ſlate, which forms a conſiderable article of exportation, &c. It is ſuppoſed that ten thouſand head of cattle and four thouſand ſheep may be fed during the ſummer ſeaſon on the mountains of this canton. In the main, however, theſe different productions of the Alps cannot compenſate for the inconveniences ariſing from a cold and mountainous country. The great extent occupied by rocks, precipices, inacceſſible foreſts, barren heaths, and perpetual ſnow, leſſen the enjoyment of man, culture, and population; frequent inundations are cauſed by ſudden thaws or rain, always more abundant in mountainous countries; to theſe may be added the falls of ſnow, of earth and rocks from the mountains, ſtorms and tempeſts. Glaris formerly belonged to the abbey of Seckingen, in Swabia. Towards the end of the thirteenth century, it became, as a fief, ſubject to the emperor Rodolphus I. of the houſe of Auſtria. In 1351, being oppreſſed by the houſe of Auſtria, the people of Glaris entered into an alliance with the cantons of Schweitz, Lucerne, Zurich, Underwalden, and Uri; by whoſe aſſiſtance they became free, and enjoyed their liberties unmoleſted till 1388, when the Auſtrians made an irruption into the canton, with a force ſufficient, as they ſuppoſed, totally to ſubdue it; pillaging the country, and maſſacreing the inhabitants. It was then that 350 troops of Glaris, aſſiſted by thirty Switzers, reſiſted the whole ſtrength of the Auſtrian army; the former were poſted advantageouſly upon the mountains, and the latter, to the number of 15,000, at a village called Næfels. In this ſituation the Auſtrians began the attack; but were ſoon compelled to retreat with great precipitation, by a ſhower of ſtones poured upon them from the heights: in this moment of confuſion, the inhabitants ruſhed down upon the enemy with ſuch redoubled fury, that they broke their ranks; and after an immenſe ſlaughter, forced the remainder to retire from the canton. In 1523, the reformed religion was introduced into this country, but the religious war between the cantons, in 1531, prevented its becoming univerſal. The government is purely democratic; every perſon who is ſixteen years of age has a vote in the landſgemeind, or general aſſembly, which, except on extraordinary occaſions, is only held yearly, in the month of May. This general aſſembly has a right to make new laws, levy contributions, make alliances, and treat of war or peace. The executive power is entruſted to a landrath, or council, compoſed of forty-eight proteſtant members and fifteen Roman catholics. The chief of the republic is called *landamman*, who is alternately choſen from the two religions, only with this difference, that when a proteſtant, his office continues three years, and when a catholic, only two. Every man from the age of ſixteen to ſixty is obliged to regiſter himſelf in the national militia. The contribution of this canton for the army of the confederacy is four hundred men. The whole population amounts to more than ſixteen thouſand ſouls.

GLA'RIS, a town of Swiſſerland, and capital of the above-mentioned canton, ſituated upon the Linth; large and populous. The town-houſe is a handſome ſtructure. The hoſpital and the church ſerve both for proteſtants and Roman catholics. It is the ſeat of juſtice, and the aſſemblies of the people were long held here in the open air, according to the cuſtom of the ancient Gauls and Germans: thirty-two miles eaſt of Lucerne. Lat. 26. 58. N. lon. 26. 40. E. Ferro.

GLA'SENDORF, a town of Bohemia, in the circle of Konigingratz: ſix miles north-north-weſt of Trautenau.

GLA'SENDORF, a town of Sileſia, in the principality of Neiſſe: ten miles and a half ſouth-weſt of Patſchkau.

GLAS'GOW, a large and populous city of Scotland, in the county of Lanerk, ſituated on the banks of the Clyde, which, by an act of parliament, and at a conſiderable expence, has been within theſe laſt forty years made navigable for veſſels drawing ſeven feet ſix inches water. It was formerly the ſee of a biſhop, ſaid to have been founded in the ſixth century, and erected into an archbiſhopric in the fifteenth. The cathedral eſcaped the ill-directed zeal of the reformers, and ſtill remains a venerable monument of Gothic architecture. In 1172, Glaſgow was erected into a royal borough; and in 1611, the city received a charter from James VI. and, in 1636, another from Charles I. with conſiderable power and privileges, which charters were confirmed by acts of parliament in 1661 and 1690. The principal trade of Glaſgow formerly was the curing and exporting of ſalmon and herrings, the principal market for which was France, from whence they imported wines, brandy, and ſalt. But it is from the year 1707, in which the union between Scotland and England took place, that we are to date the proſperity of Glaſgow. By the union, the American trade was laid open to the inhabitants: and ſo ſenſible were they of their advantageous

London Published as the Act directs Nov.r 14.1807, by J. Wilkes.

tageous ſituation, that they began inſtantly to proſecute that commerce; an aſſiduous application to which, greatly contributed to raiſe the city to the pitch of affluence and ſplendour which it now enjoys. The city was now greatly enlarged: and as the community were ſenſible of the inconvenience that attended the want of a ſufficiency of water in the river for carrying on their commerce, they reſolved to have a port of their own nigher the mouth of the river. The magiſtrates and town-council of Glaſgow, therefore, purchaſed ſome lands on the ſouth ſide of the river Clyde for this purpoſe; and ſo expeditious were they in making their harbour, and rearing their town, that in 1710 a bailiff was appointed for the government of Port Glaſgow. It is now a very conſiderable pariſh, ſituated twenty-one miles nigher the mouth of the Clyde than Glaſgow.

The moſt ancient part of the city ſtands on a riſing ground. The foundation of the cathedral is one hundred and four feet higher than the bed of the river; and the deſcent from the high ground reaches to about one hundred yards below the college. The reſt of the city is built chiefly upon a plain, bounded ſouthward by the Clyde, and northward by a gentle ridge of hills lying in a parallel direction with that river. Theſe grounds till lately conſiſted of gardens and fields; but are now covered with buildings, in conſequence of the increaſing wealth and population of the city. The ſtreets are clean and well paved; and ſeveral of them interſecting one another at right angles, produce a very agreeable effect. The four principal ſtreets, croſſing each other in that manner, divide the city nearly into four equal parts; and the different views of them from the croſs, or centre of interſection, have an air of great magnificence. The houſes, conſiſting of four and five floors in height, are built of hewn ſtone, generally in an exceeding good taſte, and many of them elegant.

The cathedral, or high church, is a magnificent building, and its elevated ſituation is greatly to its advantage. The great tower is founded upon four large maſſive pillars, each of them about thirty feet in circumference. The tower itſelf is twenty-five feet and a half ſquare, ſurrounded by a baluſtrade, within which riſes an octangular ſpire terminated by a fane. The tower upon the weſt end is upon the ſame level, but appears not to have been finiſhed, though it is covered with lead: in this tower is a very large bell, eleven feet four inches in diameter. The principal entry was originally from the weſt; the gate eleven feet broad at the baſe, and ſeventeen feet in height. The weſt end of the choir is now appropriated for a place of divine worſhip; and is divided from the remaining part by a ſtone partition, which is incloſed by another ſtone wall parting it from the nave. It is impoſſible to form an adequate idea of the awful ſolemnity of the principal aiſle, occaſioned by the loftineſs of the roof, and the range of pillars by which the whole is ſupported. The whole length of the cathedral within the walls is two hundred and eighty-four feet, its breadth ſixty-five; the height of the choir, from the floor to the canopy, ninety feet; the height of the nave, eighty-five feet; the height of the middle tower, two hundred and twenty feet. This fabric was begun by John Achaius in 1123, and conſecrated in 1136; and continued by ſucceeding biſhops, till finiſhed in the manner in which it ſtands at preſent.

St. Andrew's church was begun by the community in 1739, and finiſhed in 1756. It is the fineſt piece of modern architecture in the city; and is built after the model of St. Martin's in the Fields, London, whoſe architect was the famous Gibbs. The length of the church is one hundred and four feet, and its breadth ſixty-ſix. It has a noble arched roof, well ornamented with figures in ſtucco, and ſuſtained by ſtone columns of the Corinthian order. Correſpondent to the model, it has a place for the altar on the eaſt, in which is a very ancient Venetian window; but the altar-place being ſeated, makes this end appear to no great advantage. The fronts of the galleries and the pulpit are done in mahogany in a very elegant manner. The ſpire by no means correſponds with the reſt of the building; and, inſtead of being an ornament, rather diſgraces this beautiful fabric. Its height is one hundred and ſeventy feet.

The college of the univerſity extends along the eaſt ſide of the high ſtreet, and is upwards of three hundred and thirty feet long. The gate at the entrance is decorated with ruſtics, and the building conſiſts of two principal courts or ſquares. The firſt is eighty-eight feet long and forty-four broad. The weſt ſide is elevated upon ſtone pillars, on which are placed pilaſters ſupporting the Doric entablature, and ornamented with arches forming a piazza. Above theſe is the public hall; the aſcent to which is by a double flight of ſteps incloſed by a handſome ſtone baluſtrade. The ſpire ſtands on the eaſt ſide, is one hundred and thirty-five feet high, and has a very good clock. Under this is the gateway into the inner and largeſt court, which is one hundred and three feet long and ſeventy-nine broad. Over the entry, in a niche, is a ſtatue of Mr. Zacharias Boyd, who was a great benefactor to the univerſity. On the ſouth ſide of the botanic garden ſtands the library; a very neat edifice, well conſtructed for the purpoſe intended, and containing a very valuable collection of books. Underneath are preſerved in caſes all the Roman inſcriptions found on Graham's Dike, together with altars and other antiquities collected from different parts of Scotland. Adjoining, there is an obſervatory, well furniſhed with aſtronomical inſtruments. The college alſo poſſeſſes, by bequeſt, the late Dr. Hunter's famous anatomical preparations, library, and muſeum: and in the department of natural philoſophy, it is furniſhed with an apparatus which is univerſally acknowledged to be the moſt extenſive and uſeful in Great Britain, and which owed its perfection to the liberality and unremitting labour of Mr. profeſſor Anderſon.

The tolbooth, or town-houſe, is a magnificent and extremely elegant building. The front is adorned with a range of Ionic pilaſters; and is elevated on ſtrong ruſticated pillars with arches, forming a piazza for merchants and others to ſhelter themſelves from the weather when engaged in buſineſs. One of the apartments was the aſſembly-hall; a neat room, forty-ſeven feet long, and twenty-four in breadth and height, finiſhed in a good taſte, though ſmall. The town-hall is a ſpacious and lofty apartment, finiſhed in a very grand manner; the ceiling is divided into different compartments well ornamented. Oppoſite to the front of this building is the exchange-walk, which is well paved with free-ſtone, and incloſed from the ſtreet by ſtone pillars. In the middle of this area is an equeſtrian ſtatue of William III. placed upon a lofty pedeſtal, and ſurrounded with an iron rail. In 1781, the exchange under the piazzas was greatly enlarged, by taking down the lower part of the town-hall and aſſembly-room; and at the ſame time, by a tontine ſcheme entered into by the inhabitants, a moſt elegant coffee-room was added, with a ſuite of buildings adjoining for the purpoſes of a tavern and hotel, aſſembly-room, and offices for notaries and underwriters. The aſſembly-room, however, being found too ſmall, a ſubſcription of above five thouſand pounds was raiſed by a ſimilar plan of a tontine for building a new one.

The guild-hall, or merchants' houſe, is ſituated upon the ſouth ſide of Bridgegate-ſtreet; and is in length eighty-two feet, in breadth thirty-one. The great hall, which is the whole length and breadth of the building, is ſo capacious, that it is better adapted for the reception of great and numerous aſſemblies than any other in the city. This houſe is adorned with a very elegant ſpire two hundred feet high.

The infirmary or hoſpital is a very neat building,

conſiſting of two wings and a large front; the length one hundred and fifty-ſix feet, the breadth of the centre thirty feet, and the depth of the wings ſixty-eight feet. Behind the building is a range of wards one hundred and twenty-ſeven feet long by twenty-five feet broad, the aſcent to which is by a flight of ſteps. The lower part of this building is appointed for the reception of lunatics. The area between the buildings is large, which, with the agreeable open ſituation of the hoſpital on the river, muſt conduce to the health of the patients.

The grammar ſchool is ſituated on the north-weſt of the town, and was built in 1787. It is a very handſome building, containing a large hall, and ſix airy commodious teaching rooms. In this ſchool there are four claſſes, the courſe being four years: each claſs is carried on the whole four years by the ſame maſter; ſo that, there being no rector, each maſter is head of the ſchool one year in rotation. It is under the direction of a committee of the town council; who, aſſiſted by the profeſſors, clergy, and other perſons of learning, frequently viſit it during the ſeſſion; and at an annual examination, prizes of books are diſtributed to the ſcholars according to their reſpective merits. The preſent number of ſcholars is above three hundred.

The New Bridge is an elegant ſtructure. It is thirty-two feet wide; with a commodious foot-way for paſſengers, five feet broad on each ſide, raiſed above the road made for carriages, and paved with freeſtone. This bridge is about five hundred feet in length; and conſiſts of ſeven arches, the faces of which are wrought in ruſtic, with a ſtrong block cornice above. The arches ſpring but a little way above low-water mark; which, though it renders the bridge ſtronger than if they ſprung from taller piers, yet diminiſhes its beauty. Between every arch there is a ſmall circular one; theſe break the force of the water when the river riſes to a flood, and add to the ſtrength of the whole. This bridge was begun in 1768, and finiſhed in 1772.

The moſt remarkable public charities in Glaſgow are as follow: Muirhead's or St. Nicholas Hoſpital; originally appointed to ſubſiſt twelve old men and a chaplain: but its revenues have, from ſome unknown cauſes, been loſt; ſo that no more of them now remains than the ſum of 128l. per annum, Scots money, or 10l. 13s. 4d. ſterling.

Hutcheſon's Hoſpital, founded and endowed in 1639 by George Hutcheſon, and Thomas Hutcheſon his brother, who was bred a preacher, for the maintenance of old men and orphans. The funds of this hoſpital were increaſed by James Blair, merchant in Glaſgow in 1710, and by ſubſequent donations. The income is now above 1400l. which is diſtributed in penſions to old people, and in educating about fifty children. The Merchants' Houſe; a charity which diſtributes in penſions about 800l. yearly.

Wilſon's Charity, for the education of boys; founded by George Wilſon, who in 1778 left 3000l. for that purpoſe. This fund is now conſiderably increaſed, and gives education and clothing to forty-eight boys, who each continues four years, ſo that twelve are admitted annually. Beſides theſe, there are many public ſchools for the education of children; as well as many inſtitutions of private ſocieties for the purpoſe of relieving the indigent and inſtructing youth, ſuch as Graham's Society, Buchanan's Society, the Highland Society, &c. Theſe laſt put annually twenty boys apprentices to trades, and during the three preceding years give them clothing and education.

The univerſity of Glaſgow owes its origin to biſhop Turnbull. From the time of its eſtabliſhment in 1450 to the reformation in 1560, the college was chiefly frequented by thoſe who were intended for the church; its members were all eccleſiaſtics, and its principal ſupport was derived from the church. The reformation brought the univerſity to the verge of deſtruction; maſters, ſtudents, and ſervants, all forſook it. The magiſtrates were ſo ſenſible of the loſs which the community had ſuſtained by this deſertion, that they endeavoured to reſtore it in 1572, by beſtowing upon it conſiderable funds, and preſcribing regulations for its management. Theſe, however, proved inſufficient; for which reaſon James VI. erected it anew, by a charter called the *Nova Erectio*, in 1577, and beſtowed upon it the teinds of the pariſh of Govan. The perſons who were to compoſe the new univerſity were, a principal, three profeſſors of philoſophy, and four ſtudents burſars. Since that time the funds of the univerſity have been conſiderably increaſed by the bounty of kings and the donations of private perſons. The profeſſors have therefore alſo been increaſed; ſo that at preſent the univerſity of Glaſgow conſiſts of a chancellor, rector, dean of faculty, principal, and fourteen profeſſors (ſix of them in the gift of the crown), together with burſars, &c. The archbiſhop of Glaſgow was formerly chancellor of the univerſity *ex officio*; at preſent, the chancellor is choſen by the rector, dean of faculty, principal, and maſters. The number of ſtudents who annually attend this college appears to be upwards of 500.

Since the ſtagnation of the American trade, already noticed, the merchants of Glaſgow have turned their attention more to manufactures, which have of late, eſpecially that of cottons and muſlins, increaſed in a very rapid degree. The manufacturing houſes, the influx of people for carrying on the manufactures, the means and encouragement which theſe afford to population, and the wealth thence derived by individuals as well as accruing to the community, have all tended greatly to increaſe the extent of the city and the elegance of the buildings. Beſides various improvements in the old ſtreets, ſeveral handſome new ones as well as new ſquares have been added; particularly George's ſquare, which is large, airy, and beautiful.

The government of the city of Glaſgow is veſted in a provoſt and three bailiffs, a dean of guild, deacon-conveener, and a treaſurer, with a common council of thirteen merchants and twelve mechanics. The provoſt and two of the bailiffs, muſt be elected from the merchant rank, and the other bailiff from the trade rank, *i. e.* the mechanics. The provoſt is, from courteſy and cuſtom, ſtyled *lord provoſt*. He is properly lord of the police of the city, preſident of the community, and is *ex officio* a juſtice of the peace for both the borough and county.

The revenue of the town ariſes from a duty upon all grain and meal brought into the city (which tax is denominated *the ladles*); from the rents of lands and houſes the property of the community; from an impoſt of two pennies Scots upon every Scots pint of ale or beer brewed, inbrought, or ſold, within the city; from certain dues payable out of the markets; from the rents of the ſeats in churches; from the dues of cranage at the quay, at the weigh-houſe, &c. As to the tonnage on the river, the pontage of the bridge, and ſtatute-work; theſe, making no part of the city revenue, are kept diſtinct, under the management of commiſſioners appointed by act of parliament.

About the time of the union, the number of inhabitants in Glaſgow was calculated at about fourteen thouſand. In 1765, when a new diviſion of the pariſhes took place, they were eſtimated at twenty-eight thouſand. In 1785, when an accurate ſurvey was made, the number was about thirty-ſix thouſand; beſides the ſuburbs, containing the Calton, Gorbals, and Anderſton, reckoned about one thouſand. Since that time many new ſtreets have been erected, and the city has become conſiderably more populous, but no cenſus has been made; though it is believed that the number of inhabitants cannot at preſent be computed at leſs than fifty thouſand.—Upon the whole, the city of Glaſgow, from the beauty of its ſituation, the general neatneſs of its appearance,

the magnificence of its public buildings, the celebrity of its univerſity, and the high and deſerved fame which it has acquired by its commerce and manufactures, is become an emporium of conſiderable importance; a nurſery for the arts of great utility and intereſt; and a ſeat of learning which has done honour to moſt branches of literature. Glaſgow is ſituated thirty-eight miles weſt of Edinburgh, and forty-three ſouth-weſt of Perth. Lat. 55. 53. N. lon. 4. 15. W. Greenwich.

GLAS'GOW, a county of the American States, in Newburn diſtrict, North Carolina. It is bounded north by Edgcomb, ſouth by Lenoir, eaſt by Pitt, and weſt by Wayne.

GLAS'HUTTEN, or GLASITTEN, a town of Hungary; celebrated for its hot baths, and near it are ſome rich gold mines: ſeven miles from Schemnitz.

GLAS'LOUGH, a town of Ireland, in the county of Monaghan: five miles north-north-eaſt of Monaghan.

GLASS, *ſ.* [glæſ, Sax. *glas*, Dut. as Pezon imagines from *glâs*, Brit. green. In Erſe it is called *klânn*, and this primarily ſignifies clean or clear, ſo denominated from its tranſparency.] An artificial ſubſtance made by fuſing fixed ſalts and flint or ſand together.—The word *glaſs* cometh from the Belgic and High Dutch: *glaſs*, from the verb *glanſen*, which ſignifies amongſt them to ſhine; or perhaps from *glacies* in the Latin, which is ice, whoſe colour it reſembles. *Peacham.—Glaſs* is thought ſo compact and firm a body, that it is indeſtructible by art or nature; and is alſo of ſo cloſe a texture, that the ſubtleſt chemical ſpirits cannot pervade it. *Boyle.*

Show'rs of grenadoes rain, by ſudden burſt
Diſploding murd'rous bowels, fragments of ſteel
And ſtones, and *glaſs*, and nitrous grain aduſt. *Philips.*

A glaſs veſſel of any kind:

I'll ſee no more;
And yet the eighth appears, who bears a *glaſs*
Which ſhews me many more. *Shakeſpeare.*

A looking-glaſs; a mirror:

He ſpreads his ſubtile nets from ſight,
With tinkling *glaſſes*, to betray
The larks that in the meſhes light. *Dryden.*

An hour-glaſs; a glaſs uſed in meaſuring time by the flux of ſand:

Were my wife's liver
Infected as her life, ſhe would not live
The running of one *glaſs*. *Shakeſpeare.*

The deſtined time of man's life:

No more his royal ſelf did live, no more his noble ſonne,
The golden Meleager now, their *glaſſes* all were run.
Chapman.

A cup of glaſs uſed to drink in:

When thy heart
Dilates with fervent joys, and eager ſoul
Prompts to purſue the ſparkling *glaſs*, be ſure
'Tis time to ſhun it. *Philips.*

The quantity of wine uſually contained in a glaſs; a draught.—While a man thinks one *glaſs* more will not make him drunk, that one *glaſs* hath diſabled him from well diſcerning his preſent condition. *Taylor.*—The firſt *glaſs* may paſs for health, the ſecond for good-humour, the third for our friends; but the fourth is for our enemies. *Temple.*—A perſpective glaſs:

The moon whoſe orb
Through optic *glaſs* the Tuſcan artiſt views. *Milton.*

When, or by whom, the art of making glaſs was firſt found out, is uncertain. Neri, an ingenious writer on the manufacture of glaſs, traces the antiquity of this art as far back as the time of Job: but Dr. Merret endeavours to prove that it is as ancient as either pottery or the making of bricks; becauſe a kiln of bricks cannot be burnt, nor a batch of pottery made, but ſome of the bricks and the ware will be ſuperficially turned to glaſs; ſo that it muſt have been known at the building of Babel, and as long before as the making of bricks was in uſe. It muſt have been known conſequently amongſt the Egyptians, when the Iſraelites were employed by them in making bricks. The Egyptians indeed boaſt, that this art was taught them by the great Hermes. Ariſtophanes, Ariſtotle, Alexander Aphrodiſæus, Lucretius, and John the Divine, put us out of all doubt that glaſs was uſed in their days.

It appears, that before the conqueſt of Britain by the Romans, glaſs-houſes had been erected in this iſland, as well as in Gaul, Spain, and Italy. Hence, in many parts of the country are to be found amulets of glaſs, having a narrow perforation and thick rim, denominated by the remaining Britons *gleincu naidreedh*, or *glaſs adders*, which were probably in former times uſed as amulets by the druids. According to venerable Bede, artificers ſkilled in making glaſs for windows, were brought into England in the year 674, by abbot Benedict, who were employed in glazing the church and monaſtery of Weremouth. According to others, they were firſt brought over by Wilfrid biſhop of Worceſter. Till this time the art of making ſuch glaſs was unknown in Britain; though glaſs windows did not begin to be common before the year 1180: and even then they were uncommon in private houſes, and conſidered as a kind of luxury, or as marks of great magnificence. Italy had them firſt, France next, from whence they came to England. Yet Venice, for many years, excelled all Europe in the ſuperiority of its glaſs; and, in the thirteenth century, the Venetians were the only people that had the ſecret of making cryſtal looking-glaſſes. Their great glaſs-works were at Muran, or Murano, a village near the city, which furniſhed all Europe with the fineſt and largeſt glaſſes.

The manufacture of glaſs was firſt begun in England in 1557: the finer ſort was made in the place called Crutched-friars, in London; the fine flint glaſs, but inferior to that of Venice, was firſt made in the Savoy-houſe, in the Strand, London. This manufacture appears to have been much improved in 1635, when it was carried on with ſea-coal inſtead of wood, and a monopoly was granted to ſir Robert Manſell, who was allowed to import the fine Venetian flint glaſſes for drinking, the art of making which was not brought to perfection in England before the reign of William III. But the firſt glaſs plates for looking-glaſſes and coach-windows were made by us in 1673, at Lambeth, through the encouragement of the duke of Buckingham; who, in 1670, introduced the manufacture of fine flint glaſs into England, by means of Venetian artiſts, with amazing ſucceſs. And an extenſive manufactory of this elegant branch of commerce was alſo eſtabliſhed in Lancaſhire, about the year 1773, through the ſpirited exertions of a very reſpectable body of proprietors, who were incorporated by an act of parliament. From this period we are to date the great improvement which has taken place in the beauty and tranſparency of the pure cryſtal glaſs in England, which is inferior to none in the univerſe.

Moſt of the glaſſes made for common uſe, conſiſt of an earthy ſubſtance, called the *baſis*; and a ſaline or metallic ſubſtance, called the *flux*. The baſis is uſually ſiliceous earth, the ſalt an alkali, and the metal lead. But various admixtures of earth and metallic calces are uſed in the actual practice of the art. None of the acids, except the phoſphoric, are ſufficiently fixed to withſtand the heat required to form the vitreous combination with an earth; and this ſalt has not yet been afforded cheap enough to be uſed, except in ſmall aſſays by the blow-pipe. The fluxes in glaſs-making are uſeful, not only becauſe more fuſible than the earthy matter, to which they communicate the ſame property, but likewiſe as ſolvents which combine with it in the dry way, and

in

in ſome inſtances produce a compound poſſeſſing greater fuſibility than belonged to any of the ingredients.

The earthy ſubſtances made uſe of in the compoſition of glaſs are, quartzoſe, ſand, flint, gypſeous ſpar, chalk, and the like, either ſingly, or in various proportions; except, however, that the ſiliceous earth is never to be diſpenſed with. The ſaline additions conſiſt either of barilla or ſoda, common pot-aſh, or wood-aſhes, and amount to about one-third part of the whole. Theſe ſubſtances are purified and pounded with greater or leſs care, according to the purity or excellence of the glaſs intended to be produced. If the materials were put into a veſſel and expoſed to fuſion, they would froth and ſwell much, partly on account of the eſcape of moiſture and other volatile matter, and partly by reaſon of ſome elaſtic fluid which appears to be extricated at the time of the combination of the baſis and the flux: various impurities of an inflammable nature would likewiſe remain unconſumed in the body of the glaſs, and injure its colour. To prevent theſe inconveniences, the compoſition is kept for the ſpace of four and twenty hours in a furnace of a particular conſtruction, at a degree of heat not ſufficient to produce complete fuſion, and with acceſs of air. It is repeatedly ſtirred during this calcination, and becomes at length converted into an imperfect glaſs called *frit*. This is put into the melting-pots, and fuſed by the ſtrong heat of a reverberatory furnace. The fuſed glaſs has then the property of adhering to an iron rod or tube, by which means it is taken out, either to aſcertain its ſtate of perfection, or to blow it into ſuch utenſils as may be required. The unvitrifiable ſalts, or ſuch as do not enter into combination with the earth, ſwim at the top of the veſſel, forming the ſubſtance called *ſandiver*, or glaſs gall, which is ſcummed off.

The proceſs of the glaſs-blower is ſimply this: The fuſed glaſs is taken out by dipping an iron tube into the pot; and the quantity firſt dipped out is ſuffered to cool a little, and ſerves as the receptacle for more glaſs to be taken up at a ſecond dip, and ſo on, until the quantity for blowing is ſufficient. The lump of glaſs may be ſoftened at pleaſure, by holding it before the mouth of the furnace. The workman renders it hollow, and of a round or ſpherical form, by blowing through the tube. This ſphere may be converted into a cone, a cylinder, or any other ſolid, whoſe tranſverſe ſection is a circle, by rolling it on a flat plate of iron. It may be ſtretched or lengthened by ſwinging the tube in the air, or giving it a vibratory motion like that of a pendulum. The workmen evince great dexterity in heating the glaſs in the various ſtages of the manipulation. They do this in ſuch parts as they are deſirous of extending; and on other occaſions they cool certain parts of their work, by fanning the air againſt it. The glaſs, in the ignited ſtate it poſſeſſes after it comes out of the pots, is ſo tough and flexible, that it may be cut with ſhears, bended with pincers, preſſed into moulds, and wrought in a variety of methods dependent on theſe properties, of which the artiſts very dexterouſly avail themſelves. Thus are all kinds of glaſs veſſels and figures made; but flat or plate glaſs is produced by running the ignited vitreous metal into tabular moulds.

As far as obſervation has hitherto directed us, it appears to be a general rule, that the hardneſs, brittleneſs, elaſticity, and other mechanical properties, of congealed bodies, are greatly affected by the degree of rapidity with which they cool, or aſſume the ſolid ſtate. This, which no doubt is referrible to the property of cryſtallization, and its various modifications, is remarkably ſeen in ſteel and other metals, and obtains in glaſs. When a drop of fuſed glaſs is ſuffered to fall into water, it is found to poſſeſs the remarkable property of flying into minute pieces, the inſtant a ſmall part of the tail is broken off. This, which is commonly diſtinguiſhed by the name of *Prince Rupert's drop*, is ſimilar to the philoſophical phial, which is a ſmall veſſel of thick glaſs ſuddenly cooled by expoſure to the air. It poſſeſſes the remarkable property of flying in pieces when the ſmalleſt piece of flint or angular pebble is let fall into it. Many explanations have been offered to account for theſe and other ſimilar phenomena, by referring to a ſuppoſed mechaniſm or arrangement of the particles, or ſudden confinement of the caloric, or matter of heat. The immediate cauſe, however, appears to be derived from the fact, that the dimenſions of bodies ſuddenly cooled, remain larger than if the refrigeration had been more gradual. Thus the ſpecific gravity of ſteel hardened by ſudden cooling in water is leſs, and its dimenſions conſequently greater, than that of the ſame ſteel gradually cooled. Hence it is probable that an effect of the ſame nature obtains in glaſs; ſo that the dimenſions of the external and ſuddenly-cooled ſurface remain larger than are ſuited to the accurate envelopement of the interior part, which is more ſlowly cooled. In moſt of the metals, the degree of flexibility they poſſeſs muſt be ſufficient to remedy this inaccuracy as it takes place; but in glaſs, which, though very elaſtic and flexible, is likewiſe exceſſively brittle, the adaptation of the parts, urged different ways by their diſpoſition to retain their reſpective dimenſions, and likewiſe to remain in contact by virtue of the coheſive attraction, can be maintained only by an elaſtic yielding of the whole, as far as may be, which will therefore remain in a ſtate of tenſion. It is not, therefore, to be wondered at, that a ſolution of continuity of any part of the ſurface ſhould deſtroy this equilibrium of elaſticity; and that the ſudden action of all the parts at once, of ſo brittle a material, ſhould deſtroy the continuity of the whole, inſtead of producing an equilibrium of any other kind.

Though the facts relating to this diſpoſition of glaſs too ſuddenly cooled are numerous and intereſting to the philoſopher, yet they conſtitute a ſerious evil with reſpect to the uſes of this excellent material. The remedy of the glaſs-maker conſiſts in annealing the ſeveral articles, which is done by placing them in a furnace over the furnace of fuſion. The glaſſes are firſt put into the hotteſt part of this furnace, and gradually removed to the cooler parts at regular intervals of time. By this means the glaſs cools very ſlowly throughout, and is in conſequence free from the flaws and defects of glaſs which has been too haſtily cooled. See the article ANNEALING, vol. i. p. 733.

It is difficult to ſpeak with exact preciſion concerning the materials, proportion, and management neceſſary to make the different kinds of glaſs, ſuch as the green glaſs for bottles, the common green and crown glaſs for windows, the white glaſs for mirrors, the white flint glaſs for decanters and jars, and the cryſtal glaſs uſed for the finer cut glaſs, not to mention the denſe white glaſs made expreſsly for optical inſtruments. All theſe are made of a better quality at ſome manufactories than at others; and it is probable that this ſuperiority of produce is rendered ſecret by the natural diſpoſition for gain, which prevails among all men whoſe pecuniary ſucceſs depends on their monopolizing the effects of their own ſkill. The green glaſs is made from inferior materials; the baſis conſiſting of a ferruginous ſtone or ſand, and the alkali ſuch as can be the moſt cheaply obtained. The colour principally depends on the iron; and the glaſs is harder, more durable, and leſs deſtructible by acids remaining in it for a long time, the leſs the quantity of alkali, and conſequently the greater the heat. Chaptal, in his Elements of Chemiſtry, mentions the ſucceſsful eſtabliſhment of a manufactory of opaque bottles of exceſſive ſtrength and lightneſs, compoſed chiefly of baſaltes; but he relates that the eſtabliſhment failed, chiefly on account of the quality of the baſaltes, which did not conſtantly prove the ſame, but, becoming in the latter ſtages of the undertaking more calcareous, produced an article of a periſhable nature, and ſubject to flaws. All the white glaſſes owe their clearneſs to the purity

purity of the materials. The fineſt ſiliceous ſand is fuſed with purified alkali. The calces of lead act as a powerful flux, and are much uſed in compoſitions of this nature. They give denſity, ſoftneſs, tranſparency, and a diſpoſition to take a brilliant poliſh.

The calces of lead have been found extremely valuable in forming the pure white glaſs for optical inſtruments. By this means the aberration of the refracting teleſcope has been corrected, and the coloured or priſmatic rays deſtroyed. The doctrine is this: Suppoſe a convex lens formed of ſuch glaſs as afforded very little colorific diſperſion of the rays, and a convex lens of ſuch glaſs as afforded much of this effect; it will follow, that when theſe two lenſes poſſeſs ſuch a figure as that the concave ſhall deſtroy the priſmatic colours produced by the convex, the exceſs of mean refraction muſt be in the latter; and conſequently, that the compound glaſs will act like a convex lens, and produce a real colourleſs focal image. The problem of conſtructing teleſcopes which ſhall be truly achromatic, depends therefore on the perfection to which the glaſs can be brought. The general facts reſpecting glaſs for this uſe are, that lead, and probably other metallic calces, increaſe the diſperſive power of lenſes more than alkalis, and theſe laſt more than earthy fluxes; and that an addition of alkali to glaſs containing lead, ſerves greatly to diminiſh the mean refraction, without much affecting the diſperſive power occaſioned by the metal. Hence it might ſeem eaſy to compoſe ſuch glaſs as the theorems of the optician demand; but the practice is by no means ſo ready. Regular refraction demands that the medium ſhould poſſeſs an uniform denſity throughout, or, in other words, that the parts of the glaſs ſhould be well combined together. This however is ſeldom the caſe, eſpecially in the denſe metallic glaſs. It is found, that the great fuſibility of the glaſs of lead cauſes it to flow, and occupy the interſtices between the particles of the ſand before theſe are melted. So that ſome very bright and apparently homogeneous glaſſes exhibit an infinity of ſmall focal images of a candle, when examined by a magnifier, which are produced by rounded particles of ſand remaining in every part of the ſubſtance. Another fault, ſtill more common, conſiſts in veins of a different denſity from the reſt, partly ariſing from imperfect fuſion, and partly from the denſity of the glaſs in the pots being greater the lower its poſition.

Various have been the attempts to remedy theſe defects, particularly ſince the board of longitude has offered a conſiderable premium for this object. We do not, however, poſſeſs any ample detail of theſe unſucceſsful experiments. It is generally underſtood, that it is in vain to endeavour to make this glaſs in ſmall furnaces, becauſe the heat in them is continually varying, and is either too low for the requiſite fluidity, or ſo high as to extricate bubbles of elaſtic matter; whereas a ſteady heat is required for the purpoſe. Macquer and others have attempted to correct the evil by repeated fuſions and pulverization of the glaſs, and by expoſing it to long-continued fires; but without complete ſucceſs. It is ſaid, that one of the practices in the Engliſh glaſs-houſes conſiſts in lading the melted matter from one pot to another in the furnace. But this, on account of the heavy duty of exciſe, and the manner in which it is levied, cannot be done to any advantageous extent. If the glaſs be ſuffered to cool in the pots after a perfect fuſion, its parts take a ſymmetrical arrangement, of the nature of cryſtallization, by which the light is acted upon in a manner independent of its figure, which is thought to be a great impediment to its optical uſe. Mr. Kier, who has had much experience in this curious inveſtigation, is diſpoſed to recommend the trial of component parts different from any which have yet been admitted into the compoſitions for common glaſs. It has been affirmed, that Mr. Dollond conſtructed his excellent three-foot glaſſes (which at preſent bear ſo high a price) with one ſingle pot of glaſs made at the glaſs-houſe near Wellcloſe-ſquare, London; and that none of the ſame quality has ſince been produced. But the proprietor of that glaſs-houſe aſſerts, that the original receipts and practice are ſtill followed in making the optical glaſs: ſo that much ſeems to depend on the accidental circumſtances in the preciſe quantity and quality of the materials, or in the effect or refinement of the matters during the fuſion; or perhaps in all theſe circumſtances combined. See Mr. Dollond's experiments under the article ABERRATION, vol. i. p. 17.

M. Reaumur was the firſt who made any direct experiments upon the converſion of glaſs into porcelain, which takes place by the evaporation or abſorption of its alkali, during the continuance of a degree of heat leſs than is ſufficient to melt it. Saline glaſſes are the beſt for this purpoſe; and the leſs ſalt they contain, the more readily they are converted. Inſtances of this effect may be obſerved among the rubbiſh of brick-kilns, where pieces of green bottles are not unfrequently ſubjected by accident to the requiſite heat; but the manual proceſs is as follows: A veſſel of green glaſs is to be filled up to the top with a mixture of white ſand and gypſum, and then ſet in a large crucible upon a quantity of the ſame mixture, with which the glaſs veſſels muſt alſo be ſurrounded and covered over, and the whole preſſed down cloſe and hard. The crucible is then to be covered with a lid, the junctures well luted, and put into a potter's kiln, where it muſt remain during the whole time that the pottery is baking; after which, the glaſs veſſel will be found transformed into a milk-white porcelain. The glaſs, on fracture, appears fibrous, as if it were compoſed merely of ſilken threads laid by the ſide of each other: it has then alſo quite loſt the ſmooth and ſhining appearance of glaſs, is very hard, and emits ſparks of fire when ſtruck with ſteel, though not ſo briſkly as real porcelain. Lewis obſerved, that the above-mentioned materials have not excluſively this effect upon glaſs; but that powdered charcoal, ſoot, tobacco-pipe clay, and bone-aſhes, produce the ſame change. It is remarkable, that the ſurrounding ſand becomes in ſome meaſure agglutinated by this proceſs, which, if continued for a ſufficient length of time, entirely deſtroys the texture of the glaſs, and renders it pulverulent.

The pots uſed in the glaſs-trade for melting the glaſs, are of two kinds: thoſe for the fine white glaſs are made of tobacco-pipe clay, which is firſt well waſhed, then calcined, and afterwards ground to a fine powder in a mill; which being mixed with water, is trod with the bare feet till it is of a fit conſiſtence to mould with the hands into the proper ſhape of the veſſels. Thoſe for the green-glaſs work are made of an inferior ſort of clay, and ſufficiently large to hold three or four hundred weight of metal.

A very conſiderable improvement in the conſtruction of the glaſs furnace, has been recently introduced by Mr. John Donaldſon of Briſtol, glaſs-manufacturer, and for which he obtained his majeſty's letters patent, dated March 5, 1802.—This improvement he deſcribes to be as follows: "After the body of the furnace itſelf is conſtructed in the uſual form and dimenſions, I proceed to incloſe the ſame within another building, adapted to prevent the external air from having any acceſs to the fire, except through the aſh-pit and grate. And I make the ſaid laſt-mentioned building of ſuch a figure and height that the rarefied air which hath paſſed through the fire, and iſſued forth from the apertures or flues of the furnace into the ſaid ſurrounding building, ſhall occupy the interior ſpace thereof, and produce the ſame effect upon the draught of air by which the fire is urged and maintained, as is produced by the heated air in any other elevated chimney, (the ſcientific cauſes of which are well known, and need not be here explained.) And

in order that the workmen may have eaſy acceſs to the working-flues, and that the heat may be moderated for working, I form certain openings in the ſaid building, which are to be cloſed by iron doors, or otherwiſe, whenever extreme heat is required, but which are opened by taking the ſame down at the time of working, and thereby permit the external air to enter between the furnace and the ſurrounding edifice, ſo as to reduce the draught to the ordinary ſtandard or force. The figure and dimenſions of the ſaid ſurrounding edifice or building are ſuſceptible of conſiderable variation, according to the circumſtances of the work itſelf, and the judgement of the operator; who muſt be ſuppoſed to poſſeſs ſufficient ſkill to perform a work of this kind in a proper manner; but in general I adviſe a conical figure, of conſiderable elevation, for the external building, having its orifice or chimney at the top, and its baſe of ſuch a diameter, as that its internal face may be leſs than one foot diſtant from the neareſt projecting part of the curvature of the furnace, with ſide-apertures, to be cloſed as aforeſaid, oppoſite the working-flues; for the ſafe and perfect conſtruction of which, the ſkill and precautions uſually employed in works of this nature will be fully ſufficient, without further inſtruction."

Of COLOURED GLASS.

It is probable that there was no great interval between the diſcovery of the art of making glaſs, and that of giving it different colours. When the ſubſtance of which it is formed contains, by accident, any metallic particles, the glaſs aſſumes ſome tint; and this happens oftener than is wiſhed; nay, a conſiderable degree of care and foreſight is neceſſary to produce glaſs perfectly colourleſs. From the different colours, therefore, which glaſs acquired of itſelf, it was eaſy to conceive the idea of giving it the tinge of ſome precious ſtone, which is nothing more than a glaſs formed by nature. This art, in ancient times, was undoubtedly carried to a very great extent. Proofs of this may be found in Pliny, who, among others, mentions artificial hyacinths, ſapphires, and that black glaſs which approached very near to the obſidian ſtone, and which in more than one place he calls *gemmæ vitreæ*. See the article GEM, p. 293, of this volume.

The glaſs-houſes at Alexandria were celebrated among the ancients for the ſkill and ingenuity of the workmen employed in them. From theſe the Romans, who did not acquire a knowledge of that art till a late period, procured for a long time all their glaſs ware. From the learned author of *Recherches ſur les Egyptiens et les Chinois*, it appears that coloured glaſs was made even in thoſe early ages. The emperor Adrian received as a preſent from an Egyptian prieſt, ſeveral glaſs cups which ſparkled with colours of every kind, and which, as coſtly wares, he ordered to be uſed only on grand feſtivals. Strabo tells us, that a glaſs-maker in Alexandria informed him that an earth was found in Egypt, without which the valuable coloured glaſs could not be made.

What materials the ancients uſed for colouring glaſs, has not been communicated to us by any of their writers. It is, however, certain that metallic calces only can be employed for that purpoſe, becauſe theſe pigments readily withſtand the heat of the furnace; and it is highly probable that ferruginous earth, if not the ſole, was at leaſt the principal, ſubſtance by which not only all ſhades of red, violet, and yellow, but even a blue colour, could be communicated, as profeſſor Gmelin has ſhewn. Reſpecting the red, there is the leſs doubt, as, at preſent, ſometimes an artificial, and ſometimes a natural, iron ochre, is often employed for that purpoſe. For common works this is ſufficient; but when pure clear glaſs, coloured ſtrongly throughout with a beautiful lively red, free from flaws and in ſomewhat large pieces, is required, iron is not fit, becauſe its colour, by the continued heat neceſſary for making glaſs, either diſappears, or becomes dirty and opaque. In the ſeventeenth century, ſome artiſts in Germany firſt fell upon the method of employing gold, inſtead of iron, and of thereby making artificial rubies, which, when they were well ſet, could deceive the eye of a connoiſſeur, unleſs he tried them with a diamond, or a file. The uſual method was to diſſolve the gold in aqua regia, and to precipitate it by a ſolution of tin, when it aſſumed the form of a purple-coloured powder. This ſubſtance, which muſt be mixed with the beſt flint, is called the precipitate or gold calx of Caſſius, gold-purple, or mineral purple.

In the year 1606, when Libavius publiſhed his Alchemy, the art of making ruby glaſs appears to have been unknown. He indeed quotes an old receipt for making rubies; and conjectures, that becauſe the real ſtones of the ſame name are found in the neighbourhood of gold mines, they may have acquired their colour from that metal; and that, by means of art, glaſs might be coloured by a ſolution of gold. The later chemiſts, however, and particularly Achard, found no traces of gold, but of iron, in that precious ſtone. The idea which Libavius conceived from a falſe deduction, has nevertheleſs been confirmed by experience. Neri, who lived almoſt at the ſame time as Libavius, was better acquainted with the gold-purple, though his receipt is very defective. According to his directions, the gold ſolution muſt be evaporated, and the remains ſuffered to continue over the fire until they become of a purple colour. One may readily believe that this colour will be produced; but glaſs will ſcarcely be coloured equally through by this powder; and, what is worſe, ſome of the gold particles will be apt to ſhew themſelves in it.

No artiſt, in the ſeventeenth century, underſtood better the uſe and preparation of gold-purple than John Kunkel, who, after being ennobled by Charles XI. king of Sweden, aſſumed the name of Lewenſtiern. He himſelf tells us, that he made artificial rubies in great abundance, and ſold them, by weight, at a high price. He ſays, he made for the elector of Cologne a cup of ruby glaſs, weighing not leſs than twenty-four pounds, which was a full inch in thickneſs, and of an equal beautiful colour throughout. He employed himſelf moſt on this art after he engaged in the ſervice of Frederic-William elector of Brandenburg, in 1679. At that time he was inſpector of the glaſs-houſes at Potſdam; and, in order that the art of making coloured glaſs might be brought to perfection, the elector expended a very large ſum. A cup with a cover, of this manufacture, is ſtill preſerved as a curioſity at Berlin.

Painting on glaſs and in enamel, and the preparation of coloured materials for moſaic work, may, in certain reſpects, be conſidered as branches of the art of colouring glaſs; and in all theſe a beautiful red is the moſt difficult, the deareſt, and the ſcarceſt. When one carefully examines the old maſter-pieces of ſtained glaſs, one finds either that the panes have on one ſide a tranſparent red varniſh burnt into them, or that the pieces which are ſtained through and through, are thinner than thoſe coloured in the other manner. It is, therefore, extremely probable, that the old artiſts, as they did not know how to give to thick pieces a beautiful tranſparent red colour, employed only iron, or manganeſe, which pigment, as already obſerved, eaſily becomes in a ſtrong heat blackiſh and muddy. Enamel painters, however, were for a long time obliged to be contented with it. A red colour in moſaic work is attended with leſs difficulty, becauſe no tranſparency, nay rather opacity, is required. At Rome thoſe pieces are valued moſt, which have the beautiful ſhining red colour of the fineſt ſealing-wax. We are told that ſuch pieces were made only out of a kind of copper droſs; and at preſent there are ſeveral artiſts in that city who prepare theſe materials, but they are not able to give them the rich and reſplendent colours of the ancients.

When coloured glaſs is to be blown, or run into ſquares, from

from the melting-pot, certain colouring ingredients are to be mixed with the materials of the white glaſs in fuſion, which forms the baſis; and this baſis muſt be cleanſed or purified, and rendered hard or ductile, in proportion as the coloured glaſs is required for cheap and common purpoſes, or for choice and coſtly wares, or the imitation of pellucid gems. In the firſt caſe, the cheapeſt colouring matters are employed, as iron or manganeſe, with which the glaſs beads and roſaries, ſo much in uſe in Roman-catholic countries, are chiefly coloured. But when rich and brilliant colours are to be produced, not only the choiceſt and moſt durable pigments are to be choſen, but the baſis or melted glaſs muſt likewiſe be pure, and adapted to the reception of the colours which is intended to be given. For this purpoſe the two following compoſitions are recommended. 1. Take twelve pounds of the fineſt white ſiliceous ſand, waſh and cleanſe it thoroughly; then add ſeven pounds of pot-aſh, one pound of ſaltpetre, and half a pound of borax: levigate, and mix them well together; and when committed to the melting-pot, a fine hard white glaſs baſis will be formed. 2. Take twelve pounds of the ſame white ſiliceous ſand equally cleanſed, ſeven pounds of pot-aſh purified with ſaltpetre, one pound of nitre, half a pound of borax, and four ounces of white arſenic: levigate, mix, and melt, as before, and a pure white glaſs baſis will be formed, conſiderably ſofter or more ductile than the firſt.

The preſent methods of imparting colours to glaſs, are as follow:

Black.—To give a deep and fine black to glaſs, take of cryſtalline and pulverine frit, of each twenty pounds; of calx of lead and tin four pounds; ſet all together in a pot in the furnace, well heated; when the glaſs is formed and pure, take ſteel well calcined and powdered, ſcales of iron that fly off from the ſmith's anvil, of each an equal quantity; levigate and mix them well; then put ſix ounces of this powder to either of the above-deſcribed baſes while in fuſion; mix, and let them boil ſtrongly together; then let it ſtand in fuſion twelve hours to purify, and after this work it. It will be a moſt elegant velvet black.

Blue.—A full blue may be given by adding ſix drams of zaffer, and two drams of manganeſe, to ten pounds of either of the compoſitions deſcribed above. For a very pure blue, half an ounce of calcined copper may be uſed inſtead of the manganeſe, and the proportion of zaffer diminiſhed to one half. Glaſs reſembling ſapphire may be made with ten pounds of the pure white glaſs in fuſion, three drams of zaffer, and one dram of the *calx caſſii*, or precipitation of gold by tin. Or a ſapphire-coloured glaſs may be made by mixing with the glaſs in fuſion one-eighth of its weight of ſmalt. A beautiful blue may alſo be produced from the calx of regulus of cobalt.

Garnet Red.—Take equal quantities of cryſtal and rochetta frit for the fuſed glaſs; and to every hundred-weight of this mixture add a pound of manganeſe and an ounce of prepared zaffer: theſe are to be powdered ſeparately, then mixed and added by degrees to the frit while in the furnace. Great care muſt be taken to mix the manganeſe and zaffer very perfectly; and when the matter has ſtood twenty-four hours in fuſion, it may be worked. Glaſs of this colour may alſo be made by adding one pound of glaſs of antimony, one dram of manganeſe, and the ſame quantity of the precipitate of gold by tin, to two pounds of either of the compoſitions or baſes above deſcribed.

Gold Yellow.—This colour may be produced by taking ten pounds of the compoſitions for hard glaſs, and for every pound of ſuch baſis adding two ounces of calcined borax, ten ounces of red tartar of the deepeſt colour, two ounces of magneſia, and two drams of charcoal. Precipitates of ſilver baked on glaſs will alſo ſtain it yellow, and likewiſe give a yellow colour on being mixed and melted with fifty times their weight of the vitreous compoſition: the precipitate from aquafortis by fixed alkali ſeems to anſwer beſt. Yellow glaſs may likewiſe be obtained with Pruſſian blue, or with antimony and lead. Equal parts of the glaſs of antimony, of flint calcined and levigated, and of minium, produce a glaſs of a bright yellow; and with two parts of glaſs of antimony, two of minium, and three of powdered flint, the colour approaches more to that of gold.

Green.—This colour may be imparted to glaſs by adding three ounces of copper precipitated from aquafortis, and two drams of precipitated iron to nine pounds of either of the compoſitions above recommended. To give an emerald-green, take five pounds of cryſtalline metal that has been paſſed ſeveral times through water, and the ſame quantity of the common white metal of polverine, four pounds of polverine frit, and three pounds of red lead; mix the red lead well with the frit, and put all into a pot in the furnace. In a few hours the maſs will be purified: then caſt the whole into water, and ſeparate the lead; return the metal into the pot, and let it ſtand a day longer in fuſion; then put in the powder of the reſiduum of the vitriol of copper, and a little crocus martis; and there will be produced a moſt lively green, little inferior to that of the oriental emerald. For a ſea-green, the fineſt cryſtalline glaſs only muſt be uſed, and no manganeſe muſt be added at firſt to the metal. The cryſtal frit muſt be melted alone; and the ſalt, which ſwims like oil on its top, muſt be ſcummed off very carefully. Then to a pot of twenty pounds of this metal add ſix ounces of calcined braſs, and a fourth part of the quantity of powdered zaffer: this powder muſt be well mixed, and put into the glaſs at three times; it will make the metal ſwell at firſt, but all muſt be thoroughly mixed in the pot. After it has ſtood in fuſion three hours, take out a little for a proof: if it be too pale, add more of the powder. Twenty-four hours after the mixing the powder, the whole will be ready to work.

Purple.—This colour may be produced by adding to ten pounds of pure white cryſtal glaſs, as a baſis, ſix drams of zaffer, and one dram of gold precipitated by tin; or to the ſame baſe, one ounce of manganeſe and half an ounce of zaffer. The colour of amethyſt may alſo be imitated in this way.

Ruby Red.—Calcine in earthen veſſels gold diſſolved in nitro-muriatic acid; the menſtruum being evaporated by diſtillation, more aqua-regia muſt be added, and the abſtraction repeated five or ſix times, till it becomes a red powder. This operation will require many days in a hot furnace. When the powder is of a proper colour, take it out, and melt the fineſt cryſtal glaſs, and purify it by often caſting it into water; then add, by ſmall quantities, enough of this red powder to give it the true colour of the ruby, with an elegant and perfect tranſparence.

Of PAINTING on GLASS.

The ancient manner of painting on glaſs was very ſimple: it conſiſted in the mere arrangement of pieces of glaſs of different colours in ſome ſort of ſymmetry, and conſtituted what is now called *moſaic work*. In proceſs of time, however, they came to attempt more regular deſigns, and alſo to repreſent figures heightened with all their ſhades: yet they proceeded no farther than the contours of the figures in black with water-colours, and hatching the draperies after the ſame manner on glaſſes of the colour of the object they deſigned to paint. For the carnation, they uſed glaſs of a bright red colour; and upon this they drew the principal lineaments, or outline, with black. At length, the taſte for this ſort of painting improving conſiderably, and the art being found applicable to the adorning of churches, halls, &c. they found out means of incorporating the colours moſt beautifully in the glaſs itſelf, by heating them in the fire to a proper degree; having firſt laid on the colours.

A French painter at Marſeilles is ſaid to have given the firſt notion of this improvement, upon going to Rome under the pontificate of Julius II. but Albert Durer and Lucas of Leyden were the firſt that carried it to much perfection.

This art, however, has frequently met with much interruption, and has been nearly loſt; of which Mr. Walpole gives us the following account, in his Anecdotes of Painting in England.—"The firſt interruption given to it, (he ſays,) was by the reformation, which baniſhed the art out of churches; yet it was in ſome meaſure kept up in the eſcutcheons of the nobility and gentry in the windows of their great halls. Towards the end of queen Elizabeth's reign it was omitted even there; yet the practice did not entirely ceaſe. The chapel of Our Lady at Warwick was ornamented anew by Robert Dudley earl of Leiceſter, and his counteſs, and the cipher of the glaſs-painter's name yet remains, with the date 1574: and in ſome of the chapels at Oxford the art again appears, dating itſelf in 1622, by the hand of no contemptible maſter.

"I could ſupply even this gap of forty-eight years by many dates on Flemiſh glaſs: but nobody ever ſuppoſed that the ſecret was loſt ſo early as the reign of James I. and that it has not periſhed ſince will be evident from the following ſeries, reaching to the preſent hour: viz. The portraits in the windows of the library at All Souls, Oxford. In the chapel at Queen's-college there are twelve windows dated 1518. P. C. a cipher on the painted glaſs in the chapel at Warwick, 1574. The windows at Wadham-college, the drawing good, and colours fine, by Bernard Van Linge, 1622. In the chapel at Lincoln's-inn, a window, with the name Bernard, 1623. This was probably the preceding Van Linge. In the church of St. Leonard, Shoreditch, two windows by Baptiſta Sutton, 1634. The windows in the chapel at Univerſity-college, Hen. Giles *pinxit*, 1687. At Chriſt-church, Iſaac Oliver, aged 84, 1700. Window in Merton-chapel, William Price, 1700. Windows at Queen's, New-college, and Maudlin, by William Price, the ſon, whoſe colours are fine, whoſe drawing is good, and whoſe taſte in ornaments and moſaic is far ſuperior to any of his predeceſſors; is equal to the antique, to the good Italian maſters, and only ſurpaſſed by his own ſingular modeſty.

"It may not be unwelcome to the curious reader to ſee ſome anecdotes of the revival of taſte for painted glaſs in England. Price, as we have ſaid, was the only painter in that ſtyle for many years in England. Afterwards one Rowell, a plumber at Reading, did ſome things, particularly for the late Henry earl of Pembroke; but Rowell's colours ſoon vaniſhed. At laſt he found out a very durable and beautiful red; but he died in a year or two, and the ſecret went with him. A man at Birmingham began the ſame art in 1757, and fitted up a window for lord Lyttelton, in the church of Hagely, but ſoon broke. A little after him, one Peckitt at York began the ſame buſineſs, and made good proficiency. A few admirers of that art collected ſome diſperſed panes from ancient buildings, particularly the late lord Cobham, who erected a Gothic temple at Stowe, and filled it with arms of the old nobility, &c. About the year 1753, one Aſciotti, an Italian, who had married a Flemiſh woman, brought a parcel of painted glaſs from Flanders, and ſold it for a few guineas to Mr. Bateman, of Old Windſor. Upon that I ſent Aſciotti again to Flanders, who brought me 450 pieces, for which, including the expence of his journey, I paid him thirty-ſix guineas. His wife made more journeys for the ſame purpoſe; and ſold her cargoes to Palmer, a glazier, in St. Martin's-lane, who immediately raiſed the price to one, two, or five, guineas, for a ſingle piece, and fitted up entire windows with them, and with moſaics of plain glaſs of different colours. In 1761, Paterſon, an auctioneer, at Eſſex-houſe in the Strand, exhibited the two firſt auctions of painted glaſs, imported in like manner from Flanders. All this manufacture conſiſted in rounds of ſcripture-ſtories, ſtained in black and yellow, or in ſmall figures of black and white; birds and flowers in colours, and Flemiſh coats of arms."

The colours uſed for painting or ſtaining glaſs, are very different from thoſe uſed in painting either in water or oil colours.—For black, take ſcales of iron, one ounce; ſcales of copper, one ounce; jet, half an ounce: reduce them to powder, and mix them. For blue, take powder of blue, one pound; ſal nitre, half a pound; mix them and grind them well together. For carnation, take red chalk, eight ounces; iron ſcales, and litharge of ſilver, of each two ounces; gum arabic, half an ounce; diſſolve in water, and grind all together; then put it in a glaſs, and let it ſtand to ſettle fourteen days. For green, take red lead, one pound; ſcales of copper, one pound; and flint, five pounds: divide them into three parts, and add to them as much ſal nitre; put them into a crucible, and melt them with a ſtrong fire; when the maſs is cold, powder it, and grind it on a porphyry. For gold colour, take ſilver, an ounce; antimony, half an ounce; melt them in a crucible; then pound the maſs to powder, and grind it on a copper plate; add to it yellow ochre, or brick-duſt calcined again, fifteen ounces; and grind well together with water. For purple, take minium, one pound; brown ſtone, one pound; white flint, five pounds: divide them into three parts, and add to them as much ſal nitre as one of the parts; calcine, melt, and grind, as before. For red, take jet, four ounces; litharge of ſilver, two ounces; red chalk, one ounce: powder them fine, and mix them. For white, take jet, two parts; white flint ground very fine, one part; mix them. For yellow, take Spaniſh brown, ten parts; leaf-ſilver, one part; antimony, half a part; put all into a crucible, and calcine them for uſe.

The grand effect produced by windows of ſtained glaſs in many of the old cathedral churches, and the additional ſplendour derived to the colours through the medium of the glaſs, naturally led to the invention of what is termed *Back-painting* on glaſs. This invention, however, is far from producing the noble effect which the art of painting on glaſs is ſuſceptible of producing, and which, if once brought to complete perfection, might become the means of preſerving portraits, and all delicate ſubjects, ſecure from that decay of colour and of canvas, which has long begun to obliterate the fineſt paintings of the greateſt artiſts whom the world has ever produced.

Might not ſomething of this kind be humbly attempted in the following way? Suppoſe, after the outline of a likeneſs be drawn, that blocks were cut from it after the ſame manner as for calicoes, or paper-hangings, only with ſuperior nicety, and in greater number, for the purpoſe of multiplying and better blending the tints. From theſe blocks, and with theſe colours, let the figure be printed on paper; and, to prevent inaccuracy in bringing the ſeparate parts, cut on the different blocks, to unite into a complete whole, let the paper be placed under a frame ſecured in an immoveable poſition. The blocks being accurately ſquared, all exactly of the ſame dimenſions, and each nicely fitting the frame, cannot, in paſſing through it to deliver their ſeveral impreſſions, make the ſmalleſt deviation from their intended places, but muſt produce an exact picture, at leaſt on the paper.

To transfer that impreſſion to glaſs, is perhaps an object of difficulty. Were it not for ſome ſmaller ſtrokes which muſt neceſſarily be in wood, the entire impreſſion might in the outſet be made on the glaſs itſelf, without any intervention of paper; ſince experience has proved to the calico-printers, that the great maſſes of colour cannot be ſucceſsfully delivered from wood; wherefore they are obliged, in thoſe parts of their patterns, to uſe bits of ſmooth worn-out beaver-hat, which might very well be preſſed on the glaſs-plate. However, from what we

we every day ſee effected in the caſe of prints affixed to glaſs without any of the paper remaining, and alſo of copper-plate embelliſhments upon porcelain and queen's ware, we doubt not that the picture, while freſh, may, by well-managed preſſure, be transferred from the paper to an even plate of ground glaſs coated with a proper gluten, which ſhall not materially offuſcate its tranſparency: and experiment muſt determine whether the paper may afterward be gently drawn or peeled off, or muſt be burned away or deſtroyed by a corroſive liquid, if any ſuch can be found which will not injure the colours.

Suppoſe, then, the operation of removing the paper be ſatisfactorily performed; proceed we now to ſecure the indelibility of the picture. Let a ſquare plate of caſt-iron, an inch or two in thickneſs, and as level and ſmooth as poſſible, be furniſhed on every ſide with a metal ledge riſing an inch or more in height, which ought to be in two ſeparate pieces, the one permanently faſtened to the plate, the other capable of being removed at pleaſure, for the purpoſe of laying in and taking out the glaſs without violence. Within that ledge let the glaſs be fitted, cloſely touching it on every ſide, and lying with the painted ſurface uppermoſt. Upon this lay another plate of glaſs, fitted in the ſame manner. Let, now, the metal frame, with the incloſed glaſſes, be expoſed to the action of fire until the glaſs plates, without being melted to abſolute fluidity, ſhall nevertheleſs become ſufficiently ſoft to coaleſce into one body under a ſtrong preſſure. The body which conveys the preſſure, and lies in immediate contact with the glaſs, muſt equally fit and completely fill the entire ſpace between the ledges, that there be no room for the ſoft glaſs to ſpread in any direction, ſo as to diſtort any of the lines of the picture.

Thoſe who have witneſſed the proceſs purſued in ſoftening tortoiſe-ſhell in the fire, and preſſing it into the various ſhapes of ſnuff-boxes, étuis, &c. will not conceive much difficulty in this uſe of the glaſs. It may be managed by the aid of a machine ſomewhat ſimilar to a common printing-preſs, with a ſolid metal platine, to fit and fill the frame, as above; though much better contrivances may be found among the multifarious engines now employed for the purpoſes of coining, and ſtriking the heavy dies, than any we can poſſibly ſuggeſt. In whatever manner the two glaſſes may be preſſed into union, the united body may be afterward ground and poliſhed: and, in proportion to the greater ſmoothneſs of the two compreſſing bodies, the leſs grinding and poliſhing will be afterward required.

For painting on glaſs by means of mezzotinto prints, ſee BACK-PAINTING, vol. ii. p. 603.

For the purpoſe of making factitious gems, a glaſs baſis is formed with the addition of a large quantity of lead. The method of making it is this: Put a quantity of lead into a potter's kiln, and keep it in a ſtate of fuſion with a moderate fire, till it is calcined to a grey powder; then ſpread it in the kiln, and give it a greater heat, continually ſtirring it to keep it from running into lumps; continue this proceſs till the powder becomes yellow; then take it out, and ſift it fine: this is one of the calces of lead. Take of this calx fifteen pounds, and cryſtalline frit twelve pounds; mix them well together; put them into a pot, and ſet them in the furnace for ten hours; caſt the whole, when perfectly melted, into water; ſeparate the looſe lead from it, and return the metal into the pot; and after ſtanding in fuſion twelve hours more, it will be fit to mix with any of the colouring matters adapted to the formation of factitious gems, or paſtes for counterfeit jewellery; for which ſee the article GEM, p. 294, of this volume.

An ingenious method of painting, ſpangling, and gilding, upon glaſs, has been invented by Mr. Tarrant Bloomſbury-ſquare, London; and he recommends the practice of it in the following words: "My method of painting, ſpangling, and gilding, upon glaſs, is well adapted for the ornamenting of carriages, furniture, muſical inſtruments, or any other matters, where ſuch kind of ornament ſhall be thought neceſſary. It is entirely new, and was never before practiſed by any perſon whatſoever. The painting muſt be performed on the back of the cryſtal, or glaſs, ſo as, when finiſhed, to appear on the front: the colours are prepared in oil, or varniſh, as in other ſimilar work. The parts of ornament which are to be of gold, muſt be firſt ſhadowed on the glaſs, and when quite dry, the gold-leaf is to be laid on: ſilver ornament may be done in the ſame manner. For ſpangling, with either metal, leave the parts to be ſpangled till the laſt, then ſhadow them, and, when dry, varniſh the parts with copal varniſh, and ſtrew the ſpangles on it while wet; when the ſpangles are quite dry, varniſh them two or three times over. If the ſpangling is to be white, uſe ſilver ſpangles. If yellow, uſe gold ſpangles. If blue, glaze the parts to be ſpangled with fine Pruſſian blue, ground very fine in oil, or varniſh, and lay on ſilver ſpangles. If green, glaze the parts with tranſparent green. If crimſon, uſe the beſt fine lake. If purple, uſe a mixture of Pruſſian blue and fine lake. To make the painting appear more raiſed, paint the ornaments, and leave the ground of the cryſtal, or glaſs, quite clear, and put another plate of glaſs coloured, behind the glaſs painted on."—See further the article GILDING, in this volume.

The preſent improved method of poliſhing and ſilvering plates of glaſs for looking-glaſſes or mirrors, is performed as follows: When the plates of glaſs have been caſt and annealed, they are pretty ſmooth on that ſide which lay upon the mould in which they were caſt; on the other ſide they are uſually rough and undulated: yet both ſurfaces are to be ground perfectly even. Before that operation is begun, they are examined, to ſee whether they have not ſome defects, ſuch as deep cavities, or cracks, which might hinder their being poliſhed in their original ſize. If any ſuch defects are found, they are cut off by means of a diamond, in ſuch a manner as to keep the plates as large as poſſible; for on their ſuperior ſize depends their value. When the plates have undergone the requiſite examination, the firſt operation is, to make them thinner. For this purpoſe they are placed on a very even table of ſtone or wood, and fixed in a true horizontal poſition, by means of a layer of plaſter. A workman gets upon the plate, and treads it, ſo as to force the plaſter to ſpread itſelf evenly under the glaſs. Other plates, eighteen inches or two feet ſquare, and alſo in the rough, are fixed, by means of plaſter, upon flat pieces of wood of the ſame dimenſions as the plates; taking care to place the ſmoothеſt ſide outwards, if the roughеſt ſide of the other plate is to be firſt poliſhed, and *vice verſa*. When the plaſter is dry, theſe ſmall plates are put upon the others; and, upon the flat piece of wood to which they are fixed, is laid a ſtone, for the purpoſe of increaſing the preſſure. This ſtone is let into a frame of wood, which has a kind of handle at each corner, and is made faſt to the board containing the upper plate of glaſs. Between the two glaſs plates is thrown water, mixed with ſand, or with powdered grit-ſtone, which ſhould be rendered finer as the work advances. The workman, by moving the machine about by means of the handles, grinds the plates, by rubbing them againſt each other, ſo that thoſe plates which ſerve to poliſh the others become alſo poliſhed themſelves; but, being much ſmaller in ſize than the under ones, they are ſooner ground ſmooth, and therefore require to be changed from time to time. A kind of ruler, laid on the plates, ſerves to diſcover what parts are moſt prominent, and require rubbing down.

The ſecond operation is to render the two plates even, after they have in the firſt place been made ſmooth. For this purpoſe two workmen, one at each end of the table, drive the machine from one to the other, making

it turn about, upon the plate, in all directions, until every part of their ſuperficies becomes even. When the ſecond operation is thus finiſhed, the workmen faſten upon another table a plate of glaſs, as large as that which is to be poliſhed, and which has already been ground to the ſame degree of ſmoothneſs. This plate is laid upon the other, and to the wooden table is fixed a light lapidary's wheel. Between the wooden table and the wheel, ſquare pieces of thin ſtone are gradually added, in order to increaſe the weight, as the glaſs becomes poliſhed. Two workmen, by means of this wheel, puſh the table backwards and forwards, and cauſe it to turn about in all directions, taking care that water, mixed with ſand, is often thrown between the plates. By this means the plates of glaſs at laſt acquire a perfectly even ſurface.

After this third operation, the plates are again examined, by holding them up to the light, in order to detect any flaws, air-bubbles, or cavities. If they have any cavity that can be taken away by freſh grinding, they are again returned to the table, and ground afreſh; but if the cavity is ſo deep that it cannot be removed, the plate is cut into various ſmall pieces, which ſerve to make looking-glaſſes of a ſmaller ſize.

The plate is next laid upon a woollen cloth, with its under ſurface coloured red, that the degree of tranſparency and brilliancy to be given it, might be aſcertained. It is then covered with a powder, compoſed of the reſiduum from the diſtillation of aqua fortis, mixed with vitriol of iron and common ſalt, which is nothing more than a very fine emery. When the plate is covered with the powder, the workman has a kind of bruſh made of felt or velvet, which is likewiſe covered with the powder, and with which he poliſhes the plate of glaſs in all directions, until it has received the ſmooth metallic brilliancy required; then it is fit for foliating or ſilvering.

This operation is alſo performed upon a table of ſtone, or of thick wood, perfectly ſmooth and flat, and covered with grey paper thoroughly ſmooth: the table is moveable on an axis, in order that it may be inclined, ſo as to cauſe the mercury to run into a groove made round the table. On the table is ſpread a ſheet of tin-foil, well hammered after being laminated. A very ſmall quantity of mercury is firſt poured upon the ſheet of tin-foil, and ſpread all over its ſurface, ſo as juſt to moiſten it. A larger quantity is then poured on, enough to cover the ſheet to a certain thickneſs all over. When the tin-foil is thus equally covered with mercury, the application of the plate of glaſs to it muſt not be too long delayed, becauſe, in that caſe, the mercury would diſſolve the tin-foil. As the ſurface of the mercury always becomes more or leſs calcined, a ſmall quantity of water is poured upon it; and, when the plate is to be laid on, a bruſh, and afterwards a hare's foot, is paſſed over it, which entirely removes the calcined pellicle, &c. A piece of parchment, extending ſome lines above the ſurface of the mercury, is put upon the edge of the table; and the plate, being firſt made very clean and dry, is ſlipped over the parchment. It is neceſſary that the plate ſhould be preſſed down upon the mercury, that bubbles of air may not get between it and the metal. When the plate is fixed down upon the tin-foil, the table muſt be gently inclined: a great part of the mercury then runs off, and the plate comes in contact with that part which adheres to the tin-foil. A ſhort time after, the plate is covered with a woollen cloth, and ſeveral weights are laid upon it, to increaſe its adherence to the tin-foil. When it has been in this ſituation a ſufficient time, the projecting edges of the tin-foil are cut off, and the plate is taken up finiſhed for uſe. This method of foliating or ſilvering looking-glaſſes and mirrors, is the proceſs now uſed at Ildefonſo in Spain, which is allowed to be the fineſt glaſs-manufactory in Europe. The largeſt mirrors are there made in a braſs frame, one hundred and ſixty-two inches long, ninety-three inches wide, ſix inches deep, and weighing nearly nine tons.

The art of *cutting* glaſs, by which ſo much brilliancy and magnificence is given to chandeliers, girandoles, glaſs ornaments, and table ſets, appears to have been brought into England from Germany in the laſt century.

The art of *engraving* external ornaments upon glaſs, according to profeſſor Beckmann, was practiſed by the ancient Greeks; and was probably in uſe at a much earlier date among the Egyptians, who certainly appear to have been the firſt people who found out the art of engraving on precious ſtones. *Etching* on glaſs is a modern invention, and is now brought to conſiderable perfection; for which ſee the article ENGRAVING, vol. vi. p. 813.

Much has been ſaid and written on the wonderful art of joining broken or fractured glaſs. All that is requiſite, however, is, to interpoſe between the fractured parts, a glaſs levigated like a pigment, but more ductile, or of eaſier fuſion, than the pieces to be joined; and then ſubjecting the whole to ſuch a heat as will fuſe the cementing ingredient, and make the pieces agglutinate, without being themſelves fuſed. A compoſition for cementing broken pieces of flint glaſs, may be made by fuſing ſome of the ſame kind of glaſs previouſly reduced to a powder, adding a little red lead and borax, or the borax only. In this manner C. Pajot of Charmes joined ſome broken glaſſes ſo firmly, that when preſented before the national inſtitute at Paris, they would rather break cloſe to the joining, than in the actual fracture.

The Armenian jewellers at Conſtantinople are in poſſeſſion of a cement of ſo clear and adheſive a property, that by the uſe of it they not only join broken glaſs and China, but ſet diamonds and precious ſtones with it in ſilver or gold; and it is ſo very ſtrong that when applied warm, the parts never ſeparate. It is thus made: Diſſolve five or ſix parts, as large as peaſe, in as much ſpirit of wine as will ſuffice to render it liquid; in another veſſel diſſolve as much iſinglaſs (which has been previouſly ſoaked in water till it is ſoft) in French brandy or rum, as will amount to two ounces by meaſure, and add two ſmall bits of gum galbanum or ammoniacum, which muſt be rubbed or ground till they are diſſolved; then mix the whole with a ſufficient heat; keep it in a phial ſtopt, and when it is to be uſed ſet it in hot water.

The firſt duties granted on glaſs were by ſtat. 6 & 7 Will. III. which duties were continued for ever by a ſubſequent act; but were afterwards taken off, by ſtat. 10 & 11 Will. III. c. 18. By ſtat. 19 Geo. II. c. 12, an exciſe duty is laid upon glaſs of 8d. per pound upon all crown, plate, and flint, glaſs imported; 2d. per pound on green glaſs imported, and 2s. per dozen on flaſks and bottles imported; and on all materials or metal uſed in making crown, plate, or flint, glaſs, 9s. 4d. per hogſhead; and for making common bottles, or green glaſs, 2s. 4d. per hogſhead; and higher duties by ſubſequent acts.

WEATHER GLASS. See BAROMETER, vol. ii. p. 735.

GLASS, *adj.* Vitreous; made of glaſs:

Get thee *glaſs* eyes,
And, like a ſcurvy politician, ſeem
To ſee the things thou do'ſt not. *Shakeſpeare.*

To GLASS, *v. a.* To ſee as in a glaſs; to repreſent as in a glaſs or mirror. *Not in uſe:*

Methinks

Methinks I am partaker of thy paſſion,
And in thy caſe do *glaſs* mine own debility. *Sidney.*

To caſe in glaſs:

Methought all his ſenſes were lockt in his eye,
As jewels in cryſtal for ſome prince to buy;
Who tend'ring their own worth, from whence they were *glaſst*,
Did point out to buy them, along as you paſt. *Shakeſp.*

To cover with glaſs; to glaze.—I have obſerved little grains of ſilver to lie hid in the ſmall cavities, perhaps *glaſſed* over by a vitrifying heat, in crucibles wherein ſilver has been long kept in fuſion. *Boyle.*

GLASS'-FURNACE, *ſ.* A furnace in which glaſs is made by liquefaction.—If our dreamer pleaſes to try whether the glowing heat of a *glaſs-furnace* be barely a wandering imagination in a drowſy man's fancy, by putting his hand into it, he may perhaps be awakened into a certainty that it is ſomething more than bare imagination. *Locke.*

GLASS'-GAZING, *adj.* Finical; often contemplating himſelf in a mirror.—A whorſon, *glaſs-gazing*, finical, rogue. *Shakeſpeare.*

GLASS'-GRINDER, *ſ.* One whoſe trade is to poliſh and grind glaſs.—The *glaſs-grinders* complain of the trouble they meet with. *Boyle.*

GLASS'-HOUSE, *ſ.* A houſe where glaſs is manufactured.—I remember to have met with an old Roman moſaic, compoſed of little pieces of clay half vitrified, and prepared at the *glaſs-houſes*. *Addiſon.*

GLASS-MAN, *ſ.* One who ſells glaſs.—The profit of glaſſes conſiſts only in a ſmall preſent made by the *glaſs-man*. *Swift.*

GLASS-MET'AL, *ſ.* Glaſs in fuſion.—Let proof be made of the incorporating of copper or braſs with *glaſs-metal*. *Bacon.*

GLASS-WORK, *ſ.* Manufactory of glaſs.—The cryſtalline Venice glaſs is a mixture, in equal portions, of ſtones brought from Pavia, and the aſhes of a weed called kali, gathered in a deſert between Alexandria and Roſetta; by the Egyptians uſed firſt for fuel, and then they cruſh the aſhes into lumps like a ſtone, and ſo ſell them to the Venetians for their *glaſs-works*. *Bacon.*

GLASS'CARRICK POINT, a cape on the eaſtern coaſt of Ireland, in the county of Wexford. Lat. 52. 35. N. lon. 6. 12. W. Greenwich.

GLASSHUT'TEN, a town of Germany, in the circle of Upper Saxony, near which is a ſilver mine: three miles from Dreſden.

GLAS'SIUS (Solomon), a learned German Lutheran divine, born in 1593. His academic education he received at the univerſity of Jena, where he was admitted to the degree of doctor of divinity, and for ſome time filled the profeſſor's chair in that faculty, with diſtinguiſhed reputation. He was afterwards appointed ſuperintendant-general of the churches and ſchools in the duchy of Saxe-Gotha, and is highly praiſed for his prudence, equity, and impartiality. He died at Gotha in 1656, at ſixty-three years of age. He was the author of *Philologia Sacra*, 1623, 4to. which Moſheim pronounces an ineſtimable work. He was alſo the author of, *Onomatologia Meſſiæ Prophetica*; *Chriſtologia Moſaica & Davidica*; *Diſputationes in Auguſtanam Confeſſionem*; *Exegeſis Evangeliorum & Epiſtolarum*, &c.

GLASS'WORT, *ſ.* in botany. See SALICORNIA and CHENOPODIUM.

GLAS'SY, *adj.* Made of glaſs; vitreous.—In the valley near Mount Carmel in Judea there is a ſand, which of all others hath moſt affinity with glaſs; inſomuch as other minerals laid in it turn to a *glaſſy* ſubſtance. *Bacon.*—Reſembling glaſs, as in ſmoothneſs or luſtre, or brittleneſs.—Whoſe womb produc'd the *glaſſy* ice. *Sandys.*

Man! proud man!
Dreſt in a little brief authority,
Moſt ignorant of what he's moſt aſſur'd,
His *glaſſy* eſſence; like an angry ape,
Plays ſuch fantaſtic tricks before high heav'n,
As make the angels weep. *Shakeſpeare.*

GLAS'TENBURG, a town of United America, in the ſtate of Connecticut: ſeventeen miles weſt-north-weſt of Windham.

GLAS'TONBURY, an ancient and much celebrated town in the county of Somerſet, diſtant one hundred and twenty-ſix miles from London, twenty-ſeven from Briſtol, twenty-ſix from Bath, five from Wells, and fifteen from Bridgewater. It is in a manner encompaſſed with rivers, and was of old called the Iſle of Avalon. This town, while under the protection of its abbots, was a parliamentary borough, but it loſt that privilege at the cruel death of abbot Whiting, in 1539. It is now a town corporate by charter from queen Anne, governed by a mayor, juſtice, eight aldermen, and ſixteen burgeſſes; but ſends no members. It conſiſts of ſix ſtreets. Here are two pariſh churches; the upper a handſome fabric with a fine tower, adorned with figures in niches; one Preſbyterian meeting-houſe, and one meeting for Quakers; two almſhouſes, one for men and the other for women, with a chapel belonging to each; and a free-ſchool for thirty boys; alſo a Sunday ſchool. The market is on Wedneſdays. Its annual fairs are held on Wedneſday in Eaſter week, September 19th, October 10th, and the Monday week after St. Andrew's day.

Glaſtonbury owes its origin to its celebrated abbey, ſituated in a low marſhy country, ſuppoſed to have been built about the year 708, in the reign of king Ina, who endowed it with great privileges. About the year 873, it was ruined by the Danes; but was re-edified by king Edmund, the ninth Saxon monarch, who exempted it from all impoſitions and oppreſſions, and rendered it entirely ſubject to, and dependent on, the abbey. In this ſtate it continued till the year 1184, when both it and the abbey were conſumed by fire. It was again rebuilt by the liberality of Henry III. but on the 11th of September, 1276, it was once more deſtroyed by an earthquake, which precipitated the church of St. Michael from the Tor-hill, and greatly damaged other ſtructures in the country. Many houſes are almoſt entirely built with ſtones from the abbey. The town comprehends two pariſhes, which contain upwards of 360 houſes.

The abbey is ſaid to owe its foundation to Joſeph of Arimathea, *who planted his ſtaff*, that is, *took up his abode here*, and built an oratory in honour of the Virgin Mary. In 542, the celebrated king Arthur, after being mortally wounded, was brought and interred here. In 605, a regular ſociety was inſtituted by St. Auguſtine, who was ſent into England by pope Gregory the Great to preach the goſpel. About this time it obtained the name of *Glaſteinbyri*, by which, with ſome little variation, it has ever ſince been called. Several biſhops and kings were great benefactors; but Ina excelled all his predeceſſors in munificence; he pulled down the old monaſtery, and rebuilt it in the moſt ſumptuous and magnificent manner, to the honour of Chriſt, and the apoſtles St. Peter and St. Paul; adorning the edifice with a coſtly chapel, garniſhed and plated over with 2640 pounds weight of ſilver, and an altar with 264 pounds weight of gold. Beſides which he gave rich ornaments thereto, as chalice, cenſer, candleſticks, baſon, bucket, images, and pall for the altar, of incredible value, with precious gems for the embroidery of the celebrating robes. Succeeding monarchs were zealous in ratifying, confirming, and adding to, all the grants that had been made to this illuſtrious foundation. In ſhort, (to uſe the words of a Glaſtonbury hiſtorian,) kings and queens, not only of the Weſt Saxons, but of other kingdoms of the heptarchy, ſeveral archbiſhops and biſhops, many dukes, and the nobility of both ſexes, thought themſelves happy in encreaſing the revenues of this venerable houſe, to obtain them a place of ſepulture

pulture therein. However, during the dreadful depredations of the Danes, both the monaſtery and town of Glaſtonbury began to drop their ſplendour, and exhibit the appearance of ruin and diſtreſs. To reſtore it to its ancient dignity was the buſineſs of king Edmund, who appointed St. Dunſtan abbot over it, and permitted him to make free uſe of his regal treaſury to enable him to rebuild it. The lands which, before the Norman conqueſt, the monaſtery of Glaſtonbury poſſeſſed, by the grants of different kings and others, were immenſe in number and in value.

Richard Whiting, the laſt abbot of Glaſtonbury, was unwilling to ſurrender his abbey to king Henry VIII. or to lend an ear to any of the ſolicitations which were offered him, whereupon, by falſe pretence, they ſeized on him at his manor-houſe of Sharpham, in 1539; and without much formal proceſs as to law or equity, he was dragged on a hurdle to the Tor-hill, where, without the leaſt regard to his age, his ſanctity, or his entreaties to reviſit his convent, he was hanged; his head ſet upon the abbey gate, and his quarters ſent to Wells, Bath, Ivelcheſter, and Bridgewater. The fate of the abbot and the abbey being thus decided, the buildings and revenues of this houſe, which had flouriſhed for ſuch a length of time, became the objects of depredation. Thoſe riches which had flowed from the treaſury of monarchs, and thoſe ſtructures which had braved the ſhock of time and the inclemencies of age, ſunk together. The eſtates of the monaſtery, devolving to the crown, were either granted or ſold away. The revenues, in 1444, were valued at 1151l. 6s. 8d. and, in 1534, at 3311l. 7s. 6d. The foundation plot of ground on which the abbey and its offices were erected, compriſed no leſs than ſixty acres of ground. Of this immenſe range of buildings, ſcarcely a veſtige now is to be ſeen; and all that remains of this once magnificent pile, are ſome fragments of the church, St. Joſeph's chapel, and the abbot's kitchen. The reſt is reduced to a heap of rubbiſh, loading the ſurface of its ſcite with unſeemly ruins.

Not only the town, but the environs of Glaſtonbury, abound with religious reliques. The moſt conſpicuous is the Tor or Tower of St. Michael, ſtanding upon a very high hill, north-eaſtward from the town, on which poor Whiting met his untimely end. On this bleak and deſolate ſpot, the ſaints Phaganus and Diruvianus erected a ſmall oratory to the honour of St. Michael the archangel, which was re-edified by St. Patrick, and beautified by ſome of his ſucceſſors. The ſucceeding abbots enlarged upon the ancient plan, and here built not only a large and elegant church and monaſtery, but alſo other buildings, dwelling houſes, and offices; and obtained many grants of privileges from ſeveral of the kings. The whole of the buildings which had been erected on this hill by ſeveral abbots, at a vaſt expence, the labour being very great to convey materials up the immenſe aſcent, were totally deſtroyed by the earthquake which happened in 1271, but afterwards more ſplendidly rebuilt, and that church erected, of which the tower ſtill remains, and lifts its head into the clouds; an object of admiration to travellers, and an ornament to the ſurrounding country.—For an account of the diſcovery of king Arthur's tomb at Glaſtonbury, and a deſcription of his curious round table, with an engraving of the ſame, ſee ARTHUR, vol. ii. p. 227.

The mineral waters of this place are ſtrongly impregnated with iron, fixed air, and foſſil alkali, from whence they derive their ſalutary properties. It is found very efficacious in all ſcorbutic and ſcrophulous complaints; and is a powerful remedy for the aſthma, dropſy, leproſy, king's evil, ulcers, St. Vitus's dance, and all other nervous affections, and bilious diſorders, where ſtrengthening the ſyſtem is neceſſary.

The Glaſtonbury thorn, ſo famous in legendary lore, buds and bloſſoms in the depth of winter. The ſtory of its budding always upon Chriſtmas-day is well known; that circumſtance, however, is falſe; though, if the winter be mild, it always buds at the latter end of December, but later if the winter is ſevere. It is a ſpecies of *medlar*, for which ſee the article MESPHILUS.

GLAS'TONBURY, a townſhip of the American States, in Bennington county, Vermont.

GLAS'TONBURY, a handſome town of the American States, in Hartford county, Connecticut, ſituated on the eaſt ſide of Connecticut river, oppoſite to Weathersfield.

GLATT, a river of Germany, in the circle of Swabia, which runs into the Neckar, two miles north from Sultz, in the duchy of Wirtemberg.

GLATZ, a principality of Sileſia, lying on the borders of Bohemia, ſurrounded on all ſides by mountains. It is every where mountainous, interſected with valleys, meadows, corn-fields, woodlands, and ſmall rivers. In a good year it produces wheat ſufficient; in bad ſeaſons it is ſupplied from the neighbouring countries. It has excellent paſture grounds, which feed great numbers of cattle; wood and game are plentiful. It contains quarries of mill-ſtones, free-ſtone, and marble. Jaſper, topazes, and cornelians, are found in ſome places. Here are mines of coal, copper, and ſilver, with ſeveral mineral ſprings. Glatz has belonged to ſeveral princes: from the year 1561 to 1742 it was annexed to the crown of Bohemia. In 1742, the empreſs Maria Thereſa ceded it to Frederic II. king of Pruſſia, and his heirs for ever, with entire ſovereignty, and abſolute independence of the crown of Bohemia. The country forms only one circle, divided into ſix diſtricts. Glatz is the capital.

GLATZ, a town of Sileſia, and capital of the principality of the ſame name, ſituated on the Neiſſe, built on the ſide of a mountain, on the ſummit of which is a large and ſtrong caſtle. The town contains about four hundred houſes within the walls, and as many in four fauxbourgs. It is a place of conſiderable trade; but has been frequently pillaged and burnt, and the ſubject of inceſſant diſcords between the Poles and Bohemians, not to mention the two deſtructive fires of 1015 and 1033. In 1056, it was alſo taken and laid in aſhes by the emperor Conrad. In 1463, 1469, and 1524, it again ſuffered by fire. Its ſevereſt ſiege, however, was that which it held out, in 1622, againſt the united forces of the emperor Ferdinand II. and his allies. In 1742, the Pruſſians took it by capitulation: twenty-five miles weſt of Neiſſe, and eighty-eight eaſt of Prague. Lat. 50. 16. N. lon. 34. 25. E. Ferro.

GLATZ KO'GEL, a mountain of Germany, in the archduchy of Auſtria: twelve miles ſouth of Steyr.

GLAU'BER (John Rudolph), a celebrated chemiſt, born in Germany. After paſſing a conſiderable time in travel, he ſettled at Amſterdam about the middle of the ſeventeenth century. He wrote a number of works, moſtly infected with the unintelligible theory of the hermetic philoſophy; yet containing ſome uſeful facts in true chemiſtry, and ſome proceſſes of his own invention. His name is perpetuated by the purgative neutral ſalt, called *Glauber's*, compoſed of the vitriolic acid and foſſil fixed alkali. Of his works an abridged collection was made in German, which was tranſlated into Engliſh in 1689; but they are now moſtly conſigned to oblivion.

GLAUBER'S SALTS. See the article CHEMISTRY, vol. iv. p. 228, 231, and 246.

GLAU'CHA, or GLAUCHAU', a town of Germany, in the circle of Upper Saxony, and lordſhip of Schonburg, on the Mulda; containing about 600 houſes; the inhabitants are engaged in manufactures of ſtuffs: forty-ſix miles weſt of Dreſden, and ſix north of Zwickau Lat. 50. 45. N. lon. 30. 16. E. Ferro.

GLAU'CHE, a town of Germany, in the circle of Lower Saxony, and duchy of Magdeburg, joining to the town of Halle, but governed by its proper magiſtrates. Here are four ſchools or ſeminaries, in which

the languages, theology, mathematics, muſic, &c. are taught by 120 preceptors. It is ſometimes conſidered a fauxbourg of Halle.

GLAU'CIUM, *ſ.* in botany. See CHELIDONIUM.

GLAUCOI'DES, *ſ.* in botany. See PEPLIS.

GLAUCO'MA, *ſ.* [Gr. *glaucome*, Fr. blue-grey.] A fault in the eye, which changes the cryſtalline humour into a greyiſh or ſea-green colour, without detriment of ſight, and therein differs from what is commonly underſtood by ſuffuſion. *Quincy.*—The *glaucoma* is no other diſeaſe than the cataract. *Sharp.*

GLAUCO'PIS, *ſ.* [Latin; ſo named becauſe the bill is ſcymetar-ſhaped; and it is called *wattle-bird*, becauſe it has wattles or gills like a cock.] In ornithology, a genus of birds belonging to the order of picæ; the characters of which are as follow: bill incurvate, vaulted; the under mandible ſhorteſt, and carunculated at the baſe; noſtrils depreſſed, half covered with a ſemi-cartilaginous membrane; tongue ſub-cartilaginous, notched and ciliated at the tip; feet ambulatory.

There is only one ſpecies of this genus as yet known, which is the Glaucopis cinerea, or cinereous wattle-bird of New Zealand. It chiefly delights on the ground, and perches but ſeldom. The body, bill, and legs, are bluiſh-black, velvety on the neck and ſhoulders; like the turkey-cock, the wattles or gills have the faculty of changing from fulvous to red, or blue: irides blue, and very large; tail long, and wedge-ſhaped, conſiſting of twelve feathers. It feeds on berries, inſects, and ſmall birds; and rarely perches but in queſt of berries or inſects. It has a piping or murmuring voice; and its fleſh is nutritive and well-taſted. It is in length fifteen inches, very ſhy, and rarely found.

GLAU'COSIS, *ſ.* With phyſicians; the glaucoma, a diſeaſe of the eyes.

GLAU'COUS, *adj.* Having a whitiſh green colour.

GLAU'CUS, ſon of Hippolochus, the ſon of Bellerophon. He aſſiſted Priam in the Trojan war, and had the ſimplicity to exchange his golden ſuit of armour with Diomedes for an iron one, whence came the proverb of *Glauci et Diomedis permutatio*, to expreſs a fooliſh purchaſe. He behaved with much courage, and was killed by Ajax. *Homer.*

GLAU'CUS, in mythology, a fiſherman of Anthedon in Bœotia, ſon of Neptune and Nais, or according to others of Polybius the ſon of Mercury. As he was fiſhing, he obſerved that all the fiſhes which he laid on the graſs received freſh vigour as they touched the ground, and immediately eſcaped from him by leaping into the ſea. He attributed the cauſe of it to the graſs, and by taſting it, he found himſelf ſuddenly moved with a deſire of living in the ſea. Upon this he leaped into the water, and was made a ſea deity by Oceanus and Tethys, at the requeſt of the gods. After this transformation, he became enamoured of the nereid Scylla, whoſe ingratitude was ſeverely puniſhed by Circe. He is repreſented, like the other ſea deities, with a long beard, diſhevelled hair, and ſhaggy eyebrows, and with the tail of a fiſh. He received the gift of prophecy from Apollo, and according to ſome accounts he was the interpreter of Nereus. He aſſiſted the Argonauts in their expedition, and foretold them that Hercules, and the two ſons of Leda, would one day receive immortal honours. The fable of his metamorphoſis has been explained by ſome authors, who obſerve that he was an excellent diver, who was devoured by fiſhes as he was ſwimming in the ſea. *Ovid.*

GLAVE, *ſ.* [*glaive*, Fr. *glaif*, a hook, Welſh.] A broad ſword; a falchion:

Two hundred Greeks came next in fight well try'd,
Not ſurely arm'd in ſteel or iron ſtrong,
But each a *glave* hath pendant by his ſide. *Fairfax.*

GLAVE'A, *ſ.* [Old Latin.] A javelin or hand-dart.

To GLA'VER, *v. n.* [*glave*, Welſh, flattery; glæpan, Sax. to flatter. It is ſtill retained in Scotland.] To flatter; to wheedle.—Kingdoms have their diſtempers, intermiſſions, and paroxyſms, as well as natural bodies; and a *glavering* council is as dangerous as a wheedling prieſt, or a flattering phyſician. *L'Eſtrange.*

GLAV'ERING, *ſ.* Flattering words.

GLAUX, *ſ.* [of Pliny and Dioſcorides. Derivation uncertain: ſome deduce it from γαλα, milk.] In botany, a genus of the claſs pentandria, order monogynia, natural order calycanthemæ, (ſalicariæ, *Juſſ.*) The generic characters are—Calyx: none, unleſs the corolla be called ſo. Corolla: petal one, five-parted, bell-ſhaped, upright, permanent; ſegments obtuſe, rolled back. Stamina: filaments five, ſubulate, upright, the length of the corolla; antheræ roundiſh. Piſtillum: germ ovate; ſtyle filiform, the length of the ſtamens; ſtigma capitate. Pericarpium: capſule globular, acuminate, one-celled, five-valved. Seeds: five, roundiſh; receptacle very large, globular, hollowed for the reception of the ſeeds.—*Eſſential Character.* Calyx, one-leafed, bell-ſhaped; capſule, one-celled, five-valved, five-ſeeded.

Glaux maritima, ſea milkwort, or black ſaltwort, a ſingle ſpecies. Root perennial, creeping; ſtems trailing, jointed, branched a little; leaves ſeſſile, oval-oblong, or oval-lanceolate, ſucculent; oppoſite at the bottom, but among the flowers alternate; flowers almoſt ſeſſile, axillary, ſolitary, from about the middle of the ſtem purple, greeniſh-white, white or ſtriped. Found on the ſea-coaſt, and on ſalt marſhes at a diſtance from the ſea; even about Upſal, which is very far from the ſea. It is a pretty little plant, enlivening large tracts of the dreary ſituations where it is found. The whole plant is ſucculent, and ſalt to the taſte; cows eat it. It flowers in June, and continues the reſt of the ſummer. It is ſeldom cultivated in gardens. See ANDRACHNE, ASTRAGALUS, ISNARDIA, and PEPLIS.

GLAY'MOUS, *adj.* Muddy; clammy. *Scott. Not much uſed.*

GLAY'MOUSNESS, *ſ.* Muddineſs; clammineſs. *Sc.*

To GLAZE, *v. a.* [*To glaſs*, only accidentally varied.] To furniſh with windows of glaſs.—Let there be two delicate cabinets daintily paved, richly hanged, and *glazed* with cryſtalline glaſs. *Bacon.*—To cover with glaſs, as potters do their earthen ware; [from the French *glaiſe*, clay.] To overlay with ſomething ſhining and pellucid.—The reaſon of one man operates on that of another in all true oratory; wherein though with other ornaments he may *glaze* and brandiſh the weapons, yet is it found reaſon that carries the ſtroke home. *Grew.*

Sorrow's eye, *glazed* with brining tears,
Divides one thing entire to many objects. *Shakeſpeare.*

GLA'ZIER, *ſ.* [corrupted from *glaſier*, or *glaſſier*, of *glaſs.*] One whoſe trade is to make glaſs windows.—Into rabbets the ſeveral panes of glaſs-work are ſet, and faſtened by the *glazier*. *Moxon.*

The dext'rous *glazier* ſtrong returns the bound,
And jingling faſhes on the penthouſe ſound. *Gay.*

And then, without the aid of neighbour's art,
Perform'd the carpenter's and *glazier*'s part. *Harte.*

Glaziers, before their knowledge of the diamond to cu glaſs, uſed for that purpoſe emery, ſharp-pointed inſtruments of the hardeſt ſteel, and a red-hot iron, by which they directed the line of ſeparation, which required extraordinary care, and employed a great deal of time. *Beckmann.*

GLA'ZING, *ſ.* The act or art of putting glaſs into windows or other frames. The art of cruſting over earthen ware by a vitreous ſubſtance, the baſis of which is generally lead. The uſual compoſition for glazing earthen ware, is formed of white ſand forty pounds, of red

red lead twenty pounds, of pearl-aſhes twenty pounds, and of common ſalt twelve pounds. Theſe ingredients are ground together, and then calcined for ſome time with a moderate heat. When the mixture is cold, it is levigated; and when wanted for uſe, it is tempered with water. The proportion of theſe ingredients may be occaſionally varied. The ware, after being turned on the wheel and dried in the open air, is covered over with the above compoſition by means of a bruſh; and when ſet in the furnace the violent heat ſoon reduces it to a perfect glaſs, covering the whole internal and external ſurface of the veſſel.

As it is well known that this common glazing by lead employed for earthen ware is of a pernicious nature, H. Nieſeman, a potter at Leipſic, has propoſed the following: Take nitre, pot-aſh, and common ſalt, of each half a pound, with double that quantity of pulveriſed glaſs, and mix them well together; then take a well-baked flat earthen diſh, cover it pretty thick with well-beat clay, ſtrew over the clay as much ſand as will adhere to it, and ſuffer it to dry. Put the above ingredients, well mixed, into this diſh, and introduce it into the furnace, that they may be all fuſed together. The diſh, however, muſt be placed within another, in order that the ingredients may not be loſt in caſe the diſh ſhould happen to crack: but if it be well covered with clay carefully beſtrewed with ſand, little danger is to be apprehended. When the ingredients have been fuſed, they are to be pounded very fine in the uſual manner, and may be employed as the common glazing of lead. The colour of this glazing inclines a little to grey, but by the addition of the common calcareous ſpar it acquires a yellow colour: manganeſe gives it a brown colour; and the addition of copper aſhes a green colour. Thus any colour may be obtained by changing the pigment. To avoid, however, every thing that has the appearance of being pernicious, this mixture of copper aſhes ſhould be employed only for veſſels which are to be uſed in waſhing. If this glazing is required for any particular purpoſe to be difficult of fuſion, a little leſs litharge may be added to it; but the quantity in all caſes muſt be ſo ſmall as to leave no room for apprehending the leaſt bad conſequences. This ſubſtitute for the common glazing is ſtrongly recommended by profeſſor Leonhardi.

M. Weſtrumb, an eminent German chemiſt, after being required by the government of Hanover to deviſe a leſs pernicious glazing for earthen ware than that in common practice, produced the following: 1. Take thirty-two parts of ſand; eleven, fifteen, or twenty, parts of purified potaſh; and from three to five parts of borax. Or, 2. Take thirty-two parts of flint-glaſs; ſixteen parts of borax; and three parts of pure potaſh. Or, 3. Take one hundred and fifty parts of cryſtallized Glauber's ſalt, with eight parts of pulveriſed charcoal, previouſly roaſted, till it has acquired a grey colour; ſixteen parts of ſand; and eight parts of borax. Either of theſe will completely anſwer the purpoſe, without ſubjecting culinary veſſels to a glazing ſo extremely pernicious as that of lead.

GLA'ZOV, a town of Ruſſia, in the government of Viatka, on the Tchevtza: fifty-ſix miles eaſt-ſouth-eaſt of Viatka. Lat. 58. 5. N. lon. 69. 44. E. Ferro.

GLEAD, *ſ.* See GLEDE.

GLEAM, *ſ.* [gelioma, Sax.] Sudden ſhoot of light; luſtre; brightneſs:

We ken the enemy from far; the ſetting ſun
Plays on their ſhining arms and burniſh'd helmets,
And covers all the field with *gleams* of fire. *Addiſon.*

To GLEAM, *v. n.* To ſhine with ſudden coruſcation:

Obſervant of approaching day,
The meek-eye'd morn appears, mother of dews,
At firſt faint *gleaming* in the dappled eaſt. *Thomſon.*

To ſhine?

On each hand the guſhing waters play,
And down the rough caſcade white daſhing fall,
Or *gleam* in lengthen'd viſtas through the trees. *Thomſ.*

GLEAM'ING, *ſ.* [from the *part.*] A gleam; a ſudden ſhoot of light.—Ye *gleamings* of departed peace.

GLEA'MY, *adj.* Fluſhing; darting ſudden coruſcations of light:

In brazen arms, that caſt a *gleamy* ray,
Swift through the town the warrior bends his way. *Pope.*

To GLEAN, *v. a.* [*glaner*, Fr. as Skinner thinks, from *granum*, Lat.] To gather what the harveſtmen leave behind.—She came and *gleaned* in the field after the reapers. *Ruth*, ii.

Cheap conqueſt for his following friends remain'd;
He reap'd the field, and they but only *glean'd*. *Dryden.*

To gather any thing thinly ſcattered.—They *gleaned* of them in the highways five thouſand men. *Judges*, xx. 45.

But Argive chiefs, and Agamemnon's train,
When his refulgent arms flaſh'd through the ſhady plain,
Fled from his well-known face with wonted fear;
As when his thund'ring ſword and pointed ſpear,
Drove headlong to their ſhips, and *glean'd* the routed rear. *Dryden.*

GLEAN, *ſ.* Collection made laboriouſly by ſlow degrees:

Plains, meads, and orchards, all the day he plies;
The *gleans* of yellow thyme diſtend his thighs. *Dryden.*

GLEAN'ER, *ſ.* One who gathers after the reapers:

For ſtill the world prevail'd, and its dread laugh,
Which ſcarce the firm philoſopher can ſcorn,
Should his heart own a *gleaner* in the field. *Thomſon.*

One who gathers any thing ſlowly and laborioufly.—An ordinary coffee-houſe *gleaner* of the city is an arrant ſtateſman. *Locke.*

GLEAN'ING, *ſ.* The act of gleaning, or thing gleaned.—The orphan and widow are members of the ſame common family, and have a right to be ſupported out of the incomes of it, as the poor Jews had to gather the *gleanings* of the rich man's harveſt. *Atterbury.*

GLEANING, or LEASING, is an ancient cuſtom in England, by which the poor are allowed to enter and glean upon another's ground, after the harveſt; as was ſuppoſed, without being guilty of treſpaſs; which humane proviſion ſeems borrowed from the Moſaical law. But it is now poſitively ſettled by a ſolemn judgment of the court of common pleas, that a right to glean in the harveſt-field cannot be claimed by any perſon at common law: neither have the poor of a pariſh, legally ſettled, ſuch right. Gould, J. diſſented from this opinion, quoting the paſſages in the Moſaical law, *Levit.* xix. 9, 10; xxiii. 22; and *Deut.* xxiv. 19; and ſee 4 *Burr.* 1927, together with the recognition of the cuſtom or privilege in a private act of parliament for an incloſure in Baſingſtoke pariſh. The other judges however were of opinion, that it would be dangerous and impolitic to admit gleaning to be a right, and in fact would be prejudicial to the poor themſelves, now provided for under various poſitive ſtatutes. They alſo remarked that the cuſtom of gleaning or leaſing was various in various places, and was in many places reſtricted to particular corn, and could not therefore be ſet up as an univerſal common-law right; that it would be opening a tempting door to fraud and idleneſs, and had never been ſpecifically recognized by any judicial determination. 1 *Hen. Black. Rep.* 51–63.

GLEBA'RIÆ, *ſ.* [Latin.] Turfs, or earth fit to burn.

GLEBE, *ſ.* [*gleba*, Lat.] Turf; ſoil; ground.—Fertile of corn, the *glebe* of oil and wine. *Milton.*

Sleeping vegetables lie,
'Till the glad ſummons of a genial ray
Unbinds the *glebe*, and calls them out to day. *Garth.*

The land poſſeſſed as a part of the revenue of an eccleſiaſtical benefice.—The ordinary living or revenue of a parſonage is of three ſorts: the one in land, commonly called the *glebe*; another in tythe; the third, in offerings beſtowed by the people. *Spelman.*—A treſpaſs done on a parſon's *glebe* land, which is a freehold, cannot be tried in a ſpiritual court. *Ayliffe.*

By the law of England, if any parſon, vicar, &c. hath cauſed any of his glebe-land to be manured and ſown at his own coſts, with any corn or grain, the incumbents may deviſe all the profits and corn growing upon the ſaid glebe by will, under ſtat. 28 Hen. VIII. c. 11. And if a parſon ſows his glebe and dies, the executors ſhall have the corn ſown by the teſtator. But if the glebe be in the hands of a tenant, and the parſon dies after ſeverance of the corn, and before his rent due; it is ſaid, neither the parſon's executors, nor the ſucceſſor, can claim the rent, but the tenant may retain it, and alſo the crop, unleſs there be a ſpecial covenant for the payment to the parſon's executors proportionably, &c. *Wood's Inſt.* 163. But, query, If this caſe would not come within the equity of ſtat. 11 Geo. II. c. 19. which gives right of action to the repreſentative of tenant for life, for any portion of rent in arrear at the time of his death?

Exchange of glebe land will not bind the ſucceſſor. *Noy*, 5. Prohibition was moved for to a parſon for digging new coal-mines in his glebe, and alſo for felling trees; for it is waſte, and prohibited by the ſtatute *de non proſternend' arbores*, &c. The court held it lay not for the mines; for then no mines in glebe could ever be opened. *Lev.* 107. By the ſaid ſtat. 28 Hen. VIII. c. 11, every ſucceſſor, on a month's warning, after induction, ſhall have the manſion-houſe and the glebe belonging thereto, not ſown at the time of the predeceſſor's death. He that is inſtituted may enter into the glebe land before induction, and has right to have it againſt any ſtranger; per Coke Ch. J. *Roll. R.* 192. There is a writ grounded on the ſtat. *articuli cleri*, c. 6, where a parſon is diſtrained in his glebe lands by ſheriffs, or other officers; againſt whom attachment ſhall iſſue. *New Nat. Br.* 386, 7.

GLE'BEC, a town of United America, in the ſtate of Virginia: ten miles ſouth-eaſt of Tappahanoc.

GLEBO'SE, *adj.* Glebous. *Not much uſed.*

GLEBOS'ITY, *ſ.* [from *gleboſe.*] The ſtate or quality of being glebous. *Scott.*

GLE'BOUS, *adj.* [from *glebe.*] Turfy.

GLE'BOUSNESS, *ſ.* [from *glebous.*] The ſtate or quality of being glebous. *Scott.*

GLEBOW', a town of the duchy of Courland: eighteen miles ſouth of Mittaw.

GLEB'ULENT, *adj.* [*glebulentus*, Lat.] Cloddy; abounding with clods, &c.

GLE'BY, *adj.* Turfy: perhaps in the following paſſage, fat or fruitful:

Pernicious flatt'ry! thy malignant ſeeds
In an ill hour, and by a fatal hand
Sadly diffus'd o'er virtue's *gleby* land,
With riſing pride amidſt the corn appear,
And choke the hopes and harveſt of the year. *Prior.*

GLECHO'MA, *ſ.* [from γληχων, the name of a plant in Dioſcorides.] GROUND-IVY; in botany, a genus of the claſs didynamia, order gymnoſpermia, natural order verticillatæ, (labiatæ, *Juſſ.*) The generic characters are—Calyx: perianthium one-leafed, tubular, cylindric, ſtreaked, very ſmall, permanent; mouth five-cleft, acuminate, unequal. Corolla: one-petalled, ringent; tube ſlender, compreſſed; upper lip erect, obtuſe, ſemibifid; lower ſpreading, larger, obtuſe, trifid; middle ſegment larger, emarginate. Stamina: filaments four, under the upper lip, of which two are ſhorter; each pair of anthers converging in form of a croſs. Piſtillum: germ four-cleft; ſtyle filiform, bending beneath the upper lip; ſtigma bifid, acute. Pericarpium: none; calyx cheriſhing the ſeeds in its boſom. Seeds: four, ovate.—*Eſſential Character.* Calyx, five-cleft; each pair of anthers converging in form of a croſs.

There is but one ſpecies of ground-ivy at preſent known; it is called Glechoma hederacea. The root is perennial, ſending out trailing four-cornered ſhoots, producing roots at the joints, and ſpreading wide; the flowering ſtalks ſpring from the joints, which are woolly; theſe are upright but weak, ſquare, hirſute with hairs turning downward, from four to ſix inches high; leaves oppoſite, wrinkled, ſomewhat hairy, on grooved petioles, as long as the leaves; they are beſet underneath with hollow dots, in which are glands ſecreting an eſſential oil, and above with little eminences, but which do not ſecrete any odoriferous oil, ſo that this ſurface being rubbed gives out no peculiar ſcent, whereas the under ſurface affords a pleaſant reviving ſmell; peduncles axillary, oppoſite, ſhort, branched, ſupporting from three to five flowers; there is a pair of floral leaves at the branching of the peduncle, and another pair under each of the lateral flowers; they are ſubulate, or ſetaceous, and very ſmall; the middle flower has none; calyx hairy, ſtreaked, with the teeth nearly equal; corolla blue, (ſometimes varying to white;) the large middle ſegment of the lower lip marked with purple ſpots of a deeper colour, and hairy at the baſe; ſtamens ſometimes in the ſpring imperfect, with filaments only half the uſual length, terminated by a reddiſh blunt point, or ſometimes by effete anthers: when perfect, the anthers, after burſting, form a croſs, or the ſhape of the letter X. It is very ſtrange that Scopoli ſhould deny this character, no leſs evident than beautiful and ſingular. We can account for it only by ſuppoſing that he muſt have examined the flowers when they were in an imperfect ſtate, which they frequently are early in the ſpring. The leaves are often deformed with red hairy tumours, which are the galls of the Cynips glechomæ. It gradually expels plants which grow near it, and thus impoveriſhes paſtures. The leaves were formerly thrown into the vat with ale to clarify it, and to give it a flavour. This was called *gill-ale*; ground-ivy being named *gill*, or *gill-creep-by-ground*, in ſome places. From this uſe of the plant, and the form of its leaves, it has alſo the names of *ale-hoof* and *tun-hoof*, &c. but it has gradually grown into diſuſe ſince the introduction of hops. Cattle ſeem rarely to touch it; according to Linnæus, ſheep eat it, horſes are not fond of it, and it is refuſed by cows, goats, and ſwine. It is ſaid to be injurious to horſes, if they eat much of it. The expreſſed juice, mixed with a little wine, and applied morning and evening, deſtroys the white ſpecks upon horſes eyes.

Ground-ivy has a peculiar ſtrong ſmell, and a bitteriſh taſte, ſomewhat aromatic. It was formerly in conſiderable credit for pectoral, detergent, aperient, diuretic, corroborant, and other, qualities; and was recommended particularly in pulmonary and nephritic complaints. In obſtinate coughs it is ſtill a favourite remedy with the common people; but it is little preſcribed by medical practitioners, and is wholly diſcarded from the materia medica of the London college. Mr. Ray gives a remarkable inſtance of its efficacy in removing a violent and inveterate head-ache by drawing the juice of the plant up the noſtrils: but Dr. Cullen will not allow it to act any otherwiſe than as an errhine. He alſo thinks the uſe of it in ale to be frivolous; and affirms, that in many caſes where he had ſeen it employed, there was no evidence either of its diuretic or pectoral effects. It is moſt uſually taken in form of an infuſion or tea; the expreſſed juice is alſo uſed with honey in coughs: a conſerve or ſyrup is alſo made with it. The diſtilled water cannot be of any avail. Some foreign phyſicians

ſeem

ſeem to have a better opinion of this herb than ours. It is ſo common under hedges, on banks, in woods, and ſometimes in dry paſtures, that it is never cultivated in gardens. It varies in ſize, as well as the degree of colour in the flower, according to its ſituation. The flowers appear in April, May, and June. Thunberg obſerved it in Japan.

A plant ſo common, and ſo much eſteemed by the multitude, has of courſe many names. To ſuch as are given above we may add thoſe of cat's-foot, hay-maids, and Robin-run-in-the-hedge. In German it is *gundelreben, gundermann, grundermann, gundelrab, gundrebe, grundrebe, gunderlunze, donnerrebe, erdepheu, erdenkranzlein, meerzourzel*; in Dutch, *aardveil, hondſdraf, onderhave*; in Daniſh, *vedbende*; in Swediſh, *jordrefvot*; in Italian, *ellera terreſtre*; in Spaniſh, *hiedra terreſtre*.

GLECO'MA, *ſ.* See GLECHOMA and STACHYS.

GLEDE, *ſ.* [ȝlıdaȝlıde, Sax.] A kind of hawk.—Ye ſhall not eat the *glede*, the kite, and the vulture. *Deut.* xiv. 13.

GLED'ITSCH (John Gottlieb), an eminent botaniſt, born in 1714 at Leipſic, where his father was a muſician. Having completed his ſtudies when profeſſor Hebenſtreet ſet out on his travels to Africa, Gleditſch undertook the care of the botanical garden, and made ſeveral botanical excurſions into the Harz and Thuringian foreſts. He afterwards repaired for improvement to Annaberg, and Berlin. Frederic-William I. recommended him to M. von Zeithen, of whoſe garden at Trebnitz he gave a deſcription, in 1736. In 1740 he obtained the degree of M. D. at Frankfort on the Oder, where he ſettled, and read lectures on botany, phyſiology, and the materia medica. In the courſe of his botanical excurſions to the Thuringian foreſt, he formed an acquaintance with Erneſt-Auguſtus, duke of Saxe Weimar, with whom he reſided ſome time; and who offered to appoint him his phyſician with a handſome ſalary; but this offer he declined, in conſequence of being invited to become a member of the revived academy of ſciences at Berlin, and to become botaniſt to the ſociety. In 1740 he was made ſecond profeſſor in the anatomical theatre, and director of the botanical garden. He was alſo invited to St. Peterſburg, with the offer of a large ſalary; but Frederic the Great retained him by adding two hundred dollars to his income. Being ordered, by royal command, to read lectures on the care and management of foreſts, he was the firſt who laid the foundation for a complete ſyſtem on this important ſubject. He died of a diſorder of the breaſt on the 5th of October, 1786, in the ſeventy-third year of his age. Gleditſch was of great ſervice to his country by the attention he paid to the economy of foreſts; and it may truly be ſaid that, in this reſpect, he was to Brandenburg what the great Linnæus was to Sweden. His works are, 1. *Diſſertatio de Methodo Botanica dubio & fallaci, Virtutum in Plantis Indice*, Francof. ad Viadr. 1742, 4to. 2. *De Fuco Subgloboſo ſeſſili & molli, in Marchia reperiundo*, Berol. 1743, 4to. 3. *Methodus Fungorum, exhibens Genera, Species, & Varietates, cum Charactere, Differentia ſpecifica, Synonimis, Solo, Loco, & Obſervationibus*, Berol. 1753, 8vo. 4. *Experientiæ circa Generationem Fungorum*, in the Tranſactions of the Royal Academy of Sciences at Berlin, 1749. 5. *Abhandlung von Vertilgung der Zugheuſchreken*; or, An Eſſay on the Means of extirpating the migratory Locuſts; Berlin, 1754, 8vo. 6. *De Locuſtis Orientalibus, quarum Agmina Itinera inſtituunt, & 1750 Marchiam Brandenb. devaſtarunt*, in the Tranſactions of the Academy of Berlin, 1752. 7. *Syſtema Plantarum in Conſideratione Situs & Nexus Staminum fundatum*, in the ſame, 1749. 8. *Vermiſchte Phyſicaliſch-botaniſch-öconomiſche Abhandlungen*; or, Miſcellaneous Phyſical, Botanical, and Economical, Eſſays; Halle, 1765, 1766, 1767, three parts, 8vo. 9. *Vermiſchte Bemerkungen, &c.* or, Miſcellaneous Obſervations in regard to Medicine, Botany, and Economy; Leipſic, 1768, 8vo. 10. *Alphabetiſches Verzeichniſs der Gewöhnlichſten Arzneygewächſe, &c.* An alphabetical Catalogue of thoſe Plants commonly uſed in Medicine; Berlin, 1769, 8vo. 11. *Pflanzen Verzeichniſs, &c.* A Catalogue of Plants, Trees, and Shrubs, cultivated in public or private Gardens, for botanical, phyſical, and economical Purpoſes; Berlin, 1773, 8vo. 12. *Syſtematiſche Einleitung, &c.* A ſyſtematic Introduction to the Art of managing Foreſts, deduced from phyſical and economical Principles; ibid. 1774, 1775, 2 vols. 13. *Betrachtung über die Beſchoffenheit des Bienenſtandes, in der Mark Brandenburg, &c.* Conſiderations on the State of Bees in the March of Brandenburg; together with a Catalogue of thoſe Plants from which Bees collect their Honey and Wax; Riga and Mietau, 1769, 8vo. 14. *Einleitung in die Wiſſenſchaft der rohen und einfachen Arzneymittel, &c.* Introduction to the Knowledge of crude and ſimple Medicines; Berlin, 1778, 1779. 15. *Phyſicaliſche-öconomiſche Betrachtung über den Heideboden, &c.* or, Economico-phyſical Conſiderations on the Heaths in the March of Brandenburg; Berlin and Leipſic, 1782, 8vo. After his death the following work, found in manuſcript, was publiſhed by Dr. Luders of Harelberg: 16. *Botanica Medica*; or, An Account of the medical Virtues of the principal Indigenous Plants; Berlin, 1788, 1789, two parts, 8vo.

GLEDIT'SIA, *ſ.* [ſo named by Linnæus in honour of *J. Gottlieb Gleditſch*, juſt mentioned.] In botany, a genus of the claſs polygamia, order dioecia, natural order lomentaceæ, (leguminoſæ, *Juſſ.*) The generic characters are—I. Male, a long, compact, cylindric, ament. Calyx: perianthium proper three-leaved, (three-cleft, *Gærtner*;) leaflets patulous, ſmall, acute. Corolla: petals three, roundiſh, ſeſſile, patulous, like the calyx; nectary turbinate, with the other parts of the fructification growing to the mouth. Stamina: filaments ſix, filiform, longer than the corolla; antheræ incumbent, oblong, compreſſed, twin.—II. Hermaphrodite in the ſame ament with the males, uſually terminating. Calyx: perianthium four-cleft, otherwiſe as in the male. Corolla: petals four, otherwiſe as in the male; nectary as in the male. Stamina: as in the male. Piſtillum, Pericarpium, and Seed: as in the female.—III. Female, a lax ament, on a diſtinct plant. Calyx: perianthium proper as in the male, but five-leaved, (five-cleft, *Gærtner*.) Corolla: petals five, long, ſharp, from upright ſpreading; nectaries two, ſhort, like filaments. Piſtillum: germ broad, flatted, longer than the corolla; ſtyle ſhort, reflex; ſtigma thick, the length of the ſtyle, along which it grows, pubeſcent at the top. Pericarpium: legume very large, broad, extremely flatted, divided by ſeveral tranſverſe partitions, and filled with pulp. Seeds: ſolitary, roundiſh, hard, ſhining.—*Eſſential Character.* Hermaphrodite: calyx, four-cleft; corolla, four-petalled; ſtamina, ſix; piſtillum, one. Male: calyx, three-leaved; corolla, three-petalled; ſtamina, ſix. Female: calyx, five leaved; corolla, five-petalled; piſtillum, one; legume.

Gleditſia triacanthos, a ſingle ſpecies, with three varieties. α. G. polyſperma, or three-thorned acacia: legumes with many ſeeds; leaflets linear-oblong. This tree is common in moſt parts of North America, where it is known by the name of *honey locuſt*; it is called by the gardeners here *three-thorned acacia*. It riſes with an erect trunk to the height of thirty or forty feet, and is armed with long ſpines, three or four inches long, which have two or three ſmaller ones coming out from the ſide, and are frequently produced in cluſters at the knots of the ſtem; leaves bipinnate, compoſed of ten pairs of leaflets, of a lucid green and ſeſſile; the flowers come out from the ſide of the young branches, and being of an herbaceous colour, make no figure; legume near a foot and half long, and two inches broad; ſeeds ſmooth, ſurrounded by a ſweet pulp. The leaves ſeldom come out till June in this country, and the flowers not till the end of July. This tree does not produce

any

any flowers till it is of a large size. There was one in the bishop of London's garden at Fulham, which produced pods, in the year 1728, that came to their full size; but the seeds did not ripen. It appears from Plukenet that it was cultivated by bishop Compton in 1700.

β. G. monosperma, single-seeded or water acacia: legumes one-seeded; leaflets ovate-oblong; spines few. This has much the appearance of the other, but has fewer spines; the leaves are smaller, and the pods are oval, containing but one seed. It was discovered by Mr. Catesby in Carolina.

γ. G. horrida, or strong-spined acacia: leaflets ovate-oblong; spines very frequent, in all the varieties axillary, and commonly triple.

Propagation and Culture. These trees are propagated by seeds, which must be procured from America; those of the first are annually sent to England in plenty, by the title of *locust* or *honey locust*, to distinguish it from the false acacia, which is frequently called *locust-tree* in America; these seeds may be sown upon a bed of light earth in the spring, burying them half an inch deep; and, if the spring should prove dry, they must be frequently watered, otherwise the plants will not come up the first year, for sometimes the seeds remain two years in the ground before they come up; therefore those who are desirous to save time, should sow the seeds as soon as they arrive, and plunge the pots into a moderate hot-bed, observing to water them frequently; by this method most of the plants will come up the same season; but these should be gradually inured to bear the open air; for, if they are continued in the hot-bed, they will draw up weak. During the summer season, those plants in pots will require frequent waterings, but those in the full ground will not dry so fast, therefore need no water, unless the season should prove very dry. In autumn, those in the pots should be placed under a hot-bed frame to protect them from frost, for these young plants generally keep growing late in the summer; and, the upper part of their shoots being tender, the early frosts of the autumn often kill the ends of them, if they are not protected, and this frequently occasions great part of the shoots decaying in winter; for which reason those plants in the full ground should be covered with mats in autumn, on the first appearance of frost; for a small frost in autumn will do more mischief to these young shoots which are full of sap, than severe frost when the shoots are hardened. The following spring they may be transplanted into nursery-beds, at a foot distance from row to row, and six inches asunder in the rows; but this should not be performed till April, after the danger of hard frost is over; for as the plants do not put out their leaves till very late, there will be no hazard in removing them any time before May. If the season should prove dry, they must be watered; and if the surface of the beds is covered with moss, or mulch, to prevent the earth from drying, it will be of great service to the plants. In these beds the plants may remain two years, during which time they must be constantly kept clean from weeds; and in the winter there should be some rotten tan, or other mulch, spread over the surface of the ground to keep out the frost. If the plants thrive well, they will be fit to transplant to the places where they are to remain after two years growth, for they do not bear removing when large; the best season for transplanting these trees, is late in the spring; they thrive best in a light deep soil, for in strong shallow ground they become mossy, and never grow large; they should also have a sheltered situation, for when they are much exposed to winds, their branches are frequently broken in the summer season, when they are fully clothed with leaves.

This being an elegant tree, it should appear singly in the openings of plantations, provided it be well sheltered from cold winds; but it is not in full leaf till the month of June.

GLEE, *s.* [ȝlizȝe, Sax.] Joy; merriment; gaiety:

She marcheth home, and by her takes the knight,
Whom all the people follow with great *glee*. *Spenser.*

The poor man then was rich, and liv'd with *glee*;
Each barley-bread untaxt, and day-light free. *Harte.*

It anciently signified music played at feasts. It is now seldom used except in ludicrous writing, or with some mixture of irony and contempt.—Is Blouzelinda dead? farewell my *glee!* *Gay.*

GLEED, *s.* [from ȝlopan, Sax. to glow.] A hot glowing coal. *A provincial and obsolete word.*

GLEE'FUL, *adj.* Gay; merry; cheerful. *Not used.*

My lovely Aaron, wherefore look'st thou sad,
When every thing doth make a *gleeful* boast? *Shakesp.*

GLEEK, *s.* [ȝligȝe, Sax.] Music; or musician.—What will you give us?——No money, but the *gleek*: I will give you the minstrel. *Shakespeare.*—A scoff.—Now where's the bastard's braves and Charles his *gleeks*? *Shakespeare.*—A game at cards.—Penny *gleek* I hope's in fashion yet. *Davenant's Wits.*—[Because three knaves in the game are a *gleek*.] A triplet.—We'll celebrate a *gleek* of marriages. *Albumazar.*

To GLEEK, *v. a.* [ȝligman, in Saxon, is a mimic or a droll.] To sneer; to gibe; to droll upon.—I have seen you *gleeking* or galling at this gentleman twice or thrice. *Shakespeare.*—In Scotland it signifies to fool or spend time idly, with something of mimicry or drollery.

GLEE'MEN, *s.* [ȝlip, or ȝligman, Sax. hence ȝligȝamen, glee-games, explained in Somner's Lexicon, by merry tricks, jests, sports, and gambols.] A kind of showmen anciently much in vogue in England. The gleemen added mimicry, and other means of promoting mirth, to their profession, as well as dancing and tumbling, with slights of hand, and variety of deceptions to amuse the spectators; it was therefore necessary for them to associate themselves into companies, by which means they were enabled to diversify their performances, and render many of them more surprising through the assistance of their confederates.

To GLEEN, *v. n.* To shine with heat or polish; it may be of the same derivation with *glow* or with *gleam*:

Those who labour
The sweaty forge, who edge the crooked scythe,
Bend stubborn steel, and harden *gleening* armour,
Acknowledge Vulcan's aid. *Prior.*

GLEE'SOME, *adj.* Joyous:

That *gleesome* hunters, pleased with their sport,
With sacrifices due have thank'd me for't. *W. Browne.*

GLEET, *s.* [It is written by Skinner *glitt*, and derived from ȝliban, Sax. to run softly.] A sanious ooze; a thin ichor running from a sore.—A hard dry eschar, without either matter or *gleet*. *Wiseman.*

To GLEET, *v. n.* To drip or ooze with a thin sanious liquor. To run slowly.—Vapours raised by the sun make clouds, which hit against the mountainous places of the globe, and by this concussion are condensed, and so *gleet* down the caverns of these mountains, whose inner parts, being hollow, afford them a bason. *Cheyne.*

GLEE'TY, *adj.* Ichory; thinly sanious.—If the flesh lose its ruddiness, and the matter change to be thin and *gleety*, you may suspect it corrupting. *Wiseman.*

GLEI'BERG, or GLITZBERG, a town of Germany, in the circle of the Upper Rhine, and principality of Nassau Weilburg: two miles north of Giessen, and eight north-east of Wetzlar.

GLEI'CHEN (Frederic-William von), furnamed RUTZWORM, lord of Greifenstein, Bonnland, and Etzelbach, knight of the Brandenburgh order of the red eagle, born at Bayreuth, in 1714. He spent the earlier part of his life as an officer in the service of Bayreuth, distinguished by his attention to military discipline. He rose to the rank of lieutenant-colonel, and obtained the

favour of the marcgrave. This, however, was not able to retain him at a court, the pageantry of which he uſed to call ſplendid miſery. In the ſpring of 1756 he obtained leave to retire with a penſion, to which was afterwards added the rank of privy counſellor; and it was after this period that he began to diſtinguiſh himſelf as a philoſopher, a naturaliſt, and a writer. He removed with his family to the eſtate of Greiſenſtein, where he devoted the reſidue of his life to the ſtudy of natural hiſtory. He died on the 16th of June, 1783, after a long and a tedious illneſs. His works are, 1. *Das neueſte Auſdem Reiche der Pflanzen, &c.* The lateſt Diſcoveries in the Vegetable Kingdom; or, Obſervations on the Parts of Fructification in Plants when in Bloom, and on the Inſects found in them; together with ſome Experiments on the Germ, and an Appendix of miſcellaneous Obſervations; Nuremberg, 1764, folio, with coloured plates. 2. *Geſchichte der Gemeinen Stubenfliege, &c.* Hiſtory of the common Houſe-Fly; Nurem. 1764, with four coloured plates. 3. *Microſcopiſche Entdeckungen bey den Pflanzen, &c.* Microſcopical Obſervations on Plants, Flowers, Bloſſoms, and other remarkable Objects; Nurem. 1777, 4to. with coloured plates. 4. *Abhandlung über di Saamen-und infuſions Thierchen, &c.* Treatiſe on ſeminal Animalcula and infuſion Animals; Nurem. 1778, 4to. with coloured plates. 5. *Verſuch einer Geſchichte der Blattläuſe, &c.* An Eſſay towards a Hiſtory of the Tree-Louſe of the Elm; with four coloured plates, and a preface by profeſſor Delius; Nurem. 1770, 4to. 6. *Von Entſtehung, Bildung, Umbildung und Beſtimmung des Erdkorpers, &c.* On the Origin and Formation of the Earth; Deſſau, 1782, 8vo. 7. *Abhandlung vom Sonnen Mikroſcop, &c.* A Treatiſe on the Solar Microſcope, &c. Nurem. 1781, 4to. Von Gleichen was the author alſo of various papers publiſhed in the Tranſactions of the Friendly Searchers into Nature at Berlin, and in the Acta Acad. Elect. Mog.

GLEI'CHENBERG, a town of Germany, in the duchy of Stiria: ten miles north of Racklſburg.

GLEICHE'NIA, *ſ.* in botany, a genus of the claſs cryptogamia, order filices. The generic characters are—Fructification three or four together, oval, ſeſſile, half immerged in an hemiſpherical hollow of the ſegments of the frond, one-celled, two-valved; ſeeds numerous, roundiſh.

Species. 1. Gleichenia polypodioides: ribs of the fronds quite glabrous; capſules in threes. 2. Gleichenia circinata: ribs of the frond pubeſcent; capſules four together.

GLEI'CHENSTEIN, a town and caſtle of Germany, in the circle of the Lower Rhine, and territory of Eichsfeld: ſeven miles ſouth-eaſt of Heilligenſtadt.

GLEINCK, a town of Germany, in the archduchy of Auſtria: two miles north of Steyr.

GLEIN'STOTTEN, a town of Germany, in the duchy of Stiria: fourteen miles ſouth-eaſt of Voitſberg.

GLEISS, a town of Swiſſerland, in the Valais: twenty-ſix miles eaſt of Sion.

GLEI'WITZ, or GLIWICE, a town of Sileſia, in the principality of Oppeln: thirty-ſix miles ſouth-eaſt of Oppeln, and twenty-three ſouth of Lublenietz.

GLEMS, a river of Germany, which runs into the Enz, about two miles north from Mark Groningen, in the duchy of Wurtemberg.

GLEN, *ſ.* [*gleann*, Erſe.] A valley; a dale; a depreſſion between two hills:

From me his madding mind is ſtart,
And wooes the widow's daughter of the *glen*. *Spenſer.*

A wide open ſpace between hills, is called a *vale*. If it be of ſmaller dimenſions, we call it a *valley*. But when this ſpace is contracted to a *chaſm*, it becomes a *glen*. A glen therefore is moſt commonly the offſpring of a mountainous country; though it is ſometimes found elſewhere, with its common accompaniments of woody banks, and a rivulet at the bottom. Theſe circumſtances, it is evident, admit an infinite variety of rural ſcenes. The *glen* may be more or leſs contracted; it may form one ſingle ſweep, or its deviations may be irregular. The wood may conſiſt of full-grown trees, or of underwood, or of a mixture of both. The path, which winds through it, may run along the upper part, or the lower. Or, laſtly, the rivulet may foam among rocks, or it may murmur among pebbles, or it may form tranſparent pools, overhung with wood; or, which is often the caſe, it may be totally inviſible, and an object only of the ear. The moſt beautiful circumſtances that attend the internal parts of a glen, are the glades, or openings, which are found in it. If the whole were a thicket, like the *full-grown copſe*, little beauty would reſult. An agreeable ſhade alone, in that caſe, muſt ſatisfy our expectations. But the glen, whoſe furniture is commonly of more fortuitous growth than that of the copſe, and not ſo ſubject to periodical defalcations, exhibits generally more beautiful ſcenery. Particularly it abounds with frequent openings. The eye is carried down, from the higher grounds, to a ſweep of the river—or to a little guſhing caſcade—or to the face of a fractured rock, garniſhed with hanging wood—or perhaps to a cottage, with its ſcanty area of lawn falling to the river on one ſide, and ſheltered by a clump of oaks on the other; while the ſmoke, wreathing behind the trees, diſperſes, and loſes itſelf, as it gains the ſummit of the glen. Or ſtill more beautifully perhaps the eye breaks out, at ſome opening, into the country; enriched with all the varieties of diſtant landſcape—plains, and woods melting together—a winding river—blue mountains—or perhaps ſome bay of the ſea, with a little harbour and ſhipping.—Shanklin, in the Iſle of Wight, affords a ſtriking example of this beautiful and romantic ſcenery.

GLEN, a lake of Ireland, in the county of Donegal: twenty-two miles weſt-north-weſt of Londonderry.

GLEN AL'MOND, a vale of Scotland, in the county of Perth: eight miles north of Crieff.

GLEN A'LOT, a vale of Scotland, in the county of Sutherland: fourteen miles north of Dornoch.

GLEN ART'NEY, a vale of Scotland, in the county of Perth: four miles north-eaſt of Callender.

GLEN CAR'RELL, a vale of Scotland, in the county of Sutherland: twelve miles north of Dornoch.

GLEN DER'BY, a vale of Scotland, in the county of Perth: ten miles north of Dunkeld.

GLEN FI'CHAN, a vale of Scotland, in the weſt part of the county of Argyle.

GLEN FID'DICH, a vale of Scotland, in the county of Banff: twelve miles ſouth-eaſt of Inverary.

GLEN FINE, a vale of Scotland, in the county of Argyle, north of Loch Fine.

GLEN FIN'GLASS, a vale of Scotland, in the county of Perth.

GLEN GAR'RY, a vale of Scotland, in the county of Inverneſs, north of Loch Garry.

GLEN GRU'DY, a vale of Scotland, in the county of Roſs, north of Loch Fairniſh.

GLEN KIN'GLASS, a vale of Scotland, in the county of Argyle: twenty miles north of George's Town.

GLEN LED'NOOK, a vale of Scotland, in the county of Perth: ten miles north-weſt of Crieff.

GLEN LO'CHY, a vale of Scotland, in the county of Argyle, north-eaſt of Glenorchy.

GLEN LY'ON, a vale of Scotland, in the county of Perth.

GLEN MORIS'TON, a vale of Scotland, in the county of Inverneſs: five miles weſt of Fort Auguſtus.

GLEN MOY, a vale of Scotland, in the county of Angus, north-weſt of Brechin.

GLEN MUIK, a vale of Scotland, in the county of Roſs.

GLEN QUEICH, a vale of Scotland, in the county of Perth: ten miles north of Crieff.

GLEN RIN'NES, a vale of Scotland, in the county of Bamff: ſeven miles ſouth-eaſt of Inveravon.

GLEN UR'QUHART, a vale of Scotland, in the county of Inverneſs.

GLEN YAL'DER, a vale of Scotland, in the county of Aberdeen, between Loch Garr and the river Dee.

GLEN'A, or GLE'NE, *ſ.* [from γληνη, Gr.] The ball of the eye; the moderate hollowneſs of the ends of the bones in articulation.

GLEN'COE, a vale of Scotland, in the county of Argyle, near Loch Leven, where, in the year 1691, the inhabitants were maſſacred, contrary to the faith of a royal proclamation: ſeventeen miles north of Inverary.

GLEN'CROY, a vale of Scotland, in the county of Argyle, on the north-eaſt ſide of Loch Lough.

GLENDAL'OCH, or city of *the Seven Churches*, in Ireland, ſituated five miles north-weſt of Rothdrum, in the county of Wicklow. The name ſignifies "the vale of the two lakes." In this valley, ſurrounded by high and almoſt inacceſſible mountains, St. Kevin, about the middle of the ſixth century, founded a monaſtery, which was much reſorted to, and at length became a biſhopric and a city. St. Kevin died the 3d of June, 618, aged one hundred and twenty; and on that day annually numbers of perſons flocked to the Seven Churches, to celebrate the feſtival of that venerated ſaint. During the middle ages, the city of Glendaloch, called by Hoveden *Epiſcopatus Biſtagnienſis*, was held in great eſteem, and its epiſcopal juriſdiction extended to the walls of Dublin. About the middle of the twelfth century, cardinal Papiro united it to the ſee of Dublin; in conſequence of which the city was ſuffered to decay, and had become nearly a deſert in 1497. From the extenſive ruins it appears to have been a place of conſequence. The cathedral, the walls of which are partly ſtanding, was dedicated to St. Peter and St. Paul. South of the cathedral ſtands a ſmall church roofed with ſtone, almoſt entire; and in ſeveral parts of the valley are a number of ſtone croſſes, ſome of which are curiouſly carved, but without inſcriptions.

GLEN'EGAD HEAD, a cape of Ireland, in the county of Donegal. Lat. 55. 20. N. lon. 7. 4. W. Greenwich.

GLEN'ELY, a river of Ireland, in the county of Antrim, which runs into the ſea, three miles ſouth of Geron Point.

GLENGAR'RIFF, an harbour of Ireland, in the county of Cork, on the north-eaſt part of Bantry Bay.

GLENIC'ZA, a river of Poland, which runs into the Obra, near Koſten, in the palatinate of Poſnania.

GLENMO'RE, a vale of Scotland, in the county of Perth: twelve miles north-eaſt of Blair Athol.

GLENOI'DES, *ſ.* [from γληνη, a cavity, and ειδος, Gr. a form.] In anatomy, the two cavities in the turning joint of the neck.

GLENOR'CHY, a village and vale of Scotland, in the county of Argyle: thirteen miles north of Inverary.

GLENSHEE', a vale of Scotland, in the county of Perth: fifteen miles eaſt of Blair Athol.

GLERS, a town of Germany, in the county of Tyrol: twenty-one miles weſt of Bolzano.

GLE'SUM, *ſ.* With old writers, amber.

GLEUCI'NUM, *ſ.* [Latin.] The oil that runs off before the olives are thoroughly preſſed.

GLEW, *ſ.* [*gluten*, Lat.] See GLUE.

GLIB, *adj.* [from λειος, Gr. *Skinner.*] Smooth; ſlippery; ſo formed as to be eaſily moved.—Liquid bodies have nothing to ſuſtain their parts, nor any thing to cement them; the parts being *glib* and continually in motion, fall off from one another, which way ſoever gravity inclines them. *Burnet.*—Smooth; voluble:

I want that *glib* and oily art
To ſpeak and purpoſe not, ſince what I well intend,
I'll do't before I ſpeak. *Shakeſpeare.*

GLIB, *ſ.*—The Iriſh have from the Scythians mantles and long *glibs*; which is a thick curled buſh of hair hanging down over their eyes, and monſtrouſly diſguiſing them. *Spenſer on Ireland.*

To GLIB, *v. a.* [from the *adj.*] To caſtrate:

I'll geld them all: fourteen they ſhall not ſee,
To bring falſe generations; they are coheirs,
And I had rather *glib* myſelf, than they
Should not produce fair iſſue. *Shakeſpeare.*

GLIB'BERY, *adj.* Smooth-faced.—Milk, milk, ye *glibbery* urchin, is food for infants. *Marſton.*

Have each meal an orphan
Served to your table, or a *glibbery* heir
With all his lands melted into a mortgage. *Randolph.*

GLIB'LY, *adv.* [from *glib.*] Smoothly; volubly.—Many who would ſtartle at an oath, whoſe ſtomachs as well as conſcience recoil at an obſcenity, do yet ſlide *glibly* into a detraction. *Government of the Tongue.*

GLIB'NESS, *ſ.* [from *glib.*] Smoothneſs; ſlipperineſs.—The tongue is the moſt ready for motion of any member, and by acceſs of humours acquires a *glibneſs* too, the more to facilitate its moving. *Government of the Tongue.*

To GLIDE, *v. n.* [gliban, Sax. *glijden*, Dut.] To flow gently and ſilently.—In double ſtream the briny waters *glide*. *Dryden.*

Where ſtray the Muſes, in what lawn or grove?
In thoſe fair fields where ſacred Iſis *glides*,
Or elſe where Cam his winding vales divides. *Pope.*

To paſs on without change of ſtep:

Ye *gliding* ghoſts, permit me to relate
The myſtic wonders of your ſilent ſtate. *Dryden.*

To move ſwiftly and ſmoothly along.—All things are beheld as in a haſty motion, where the objects only *glide* before the eye, and diſappear. *Dryden.*

Shoals of fiſh, with fins and ſhining ſcales,
Glide under the green wave. *Milton.*

GLIDE, *ſ.* Lapſe; act or manner of paſſing ſmoothly:

The ſnake unlink'd itſelf,
And with indented *glides* did ſlip away. *Shakeſpeare.*

GLI'DER, *ſ.* One that glides:

The glaunce into the heart did glide;
Hey ho the *glider*;
Therewith my ſoul was ſharply gride,
Such wounds ſoon waxen wider. *Spenſer.*

GLIKE, *ſ.* [gliz, Sax. See GLEEK.] A ſneer; a ſcoff; a ſhout. *Not in uſe.*—Where's the baſtard's braves, and Charles his *glikes*. *Shakeſpeare.*

GLIK'EON, a town of European Turkey, in the province of Epire: twenty-ſix miles weſt of Atla.

GLIM'ANY, a town of Poland, in the palatinate of Lemberg: twenty miles eaſt-north-eaſt of Lemberg.

To GLIM'MER, *v. n.* [*glimmer*, Dan. to ſhine; *glimmen*, Dut. to glow.] To ſhine faintly.—The weſt yet *glimmers* with ſome ſtreaks of day. *Shakeſpeare.*

The truth appears ſo naked on my ſide,
That any purblind eye may find it out.
—And on my ſide it is ſo well apparel'd,
So clear, ſo ſhining, and ſo evident,
That it would *glimmer* through a blind man's eye.
Shakeſpeare.

To be perceived imperfectly; to appear faintly.—The Pagan prieſthood was always in the druids; and there was a perceivable *glimmering* of the Jewiſh rites in it, though much corrupted. *Swift.*

GLIM'MER, *ſ.* Faint ſplendour; weak light. A ſpecies of micaceous earth.—The leſſer maſſes that are lodged in ſparry and ſtony bodies, diſperſedly, from their ſhining and glimmering, were an inducement to the writers of foſſils to give thoſe bodies the name of mica and *glimmer*. *Woodward.*

GLIM'MERING, *ſ.* A glimmer; a faint appearance.

GLIMPSE, *f.* [*glimmen*, Dut. to glow.] A weak faint light.—Thouſands of things, which now either wholly eſcape our apprehenſions, or which our ſhort-ſighted reaſon having got ſome faint *glimpſe* of, we, in the dark, grope after. *Locke.*—A quick flaſhing light.—Light as the lightning *glimpſe* they ran. *Milton.*

My thoughtleſs youth was wing'd with vain deſires;
My manhood, long miſled by wand'ring fires,
Follow'd falſe lights; and when their *glimpſe* was gone,
My pride ſtruck out new ſpangles of her own. *Dryden.*

Tranſitory luſtre:

If I, celeſtial fire, in aught
Have ſerv'd thy will, or gratified thy thought,
One *glimpſe* of glory to my iſſue give;
Grac'd for the little time he has to live. *Dryden.*

Short fleeting enjoyment:

If while this wearied fleſh draws fleeting breath,
Not ſatisfy'd with life, afraid of death,
It haply be thy will that I ſhould know
Glimpſe of delight, or pauſe from anxious woe;
From now, from inſtant now, great fire, diſpel
The clouds that preſs my ſoul. *Prior.*

A ſhort tranſitory view:

O friends! I hear the tread of nimble feet
Haſting this way, and now by *glimpſe* diſcern
Ithuriel, and Zephon, through the ſhade. *Milton.*

The exhibition of a faint reſemblance.—No man hath a virtue that he has not a *glimpſe* of. *Shakeſpeare.*

GLIMS HOLM, one of the ſmall Orkney iſlands: one mile and a half ſouth of Pamona.

GLI'NA, a river of Croatia, which riſes near Creutz, and runs into the Lonia.

GLINNI'NO, a town of Ruſſia, in the government of Novgorod, on the Miſta: twelve miles ſouth-eaſt of Borovigi.

GLIN'LOUGH, a lake of Ireland, in the county of Leitrim: ſeven miles north-north-eaſt of Sligo.

GLINSK, a town of Ruſſia, in the government of Tchernigov: eighty-eight miles ſouth-eaſt of Tchernigov.

GLINT'ZENDORFF, a town of Germany, in the archduchy of Auſtria: five miles north-eaſt of Entzerſtorff.

GLI'NUS, *f.* [γλινος, or γλεινος, is the name of a tree in Theophraſtus.] In botany, a genus of the claſs dodecandria, order pentagynia, natural order of caryophyllei, (ficoideæ, *Juſſ.*) The generic characters are—Calyx: perianthium five-leaved; leaflets ovate, concave, coloured within, permanent. Corolla: none; nectaries often five, flat, reſembling petals, narrow, ſhorter than the calyx, unequally bifid or trifid. Stamina: filaments about fifteen, (fifteen to twenty, *G.*) ſubulate, flat, the length of the calyx; antheræ erect, upright, compreſſed, twin. Piſtillum: germ ſuperior, five-cornered; ſtyles five, ſhort; ſtigmas ſimple; (ſtyle one, five-cleft, *Gærtner.*) Pericarpium: capſule ovate, five-celled, five-cornered, five-valved. Seeds: very many, roundiſh, in a ſingle row under the valves, tubercled, affixed at the baſe to a ſmall ſwelling membrane.—*Eſſential Character.* Calyx, five-leaved; corolla, none; nectaries, cloven briſtles; capſule, five-cornered, five-celled, five-valved, containing numerous ſeeds.

Species. 1. Glinus lotoides, or hairy glinus: ſtem hairy, leaves obovate. Root annual; capſule ovate-pyramidal, thin, puſtuled by the protuberating ſeeds; partitions inſerted in the middle of the valves; ſeeds affixed by means of very long umbilical cords to the central angle of the cells: there are about fifty in each cell, kidney-ſhaped with a beak, ſtudded with thick ſcattered dots, ſhining and ferruginous; integument double; albumen ſcarcely any; embryo ſpiral. Native of the South of Europe and the Levant.

2. Glinus dictamnoides: ſtem fruteſcent, proſtrate; leaves orbicular, tomentoſe, flat; calycine leaflets lanceolate. Stems ſcarcely the ſize of packthread, proſtrate, diffuſed, ſomewhat branched; branches alternate, both they and the ſtems tomentoſe at the top, but with hairs leſs diſtinct than in the firſt ſpecies; leaves petioled, two or four together, ſomewhat ſharp at the baſe, without veins or nerves, with ſtellate hairs ſhorter than in G. lotoides; peduncles at the joints, aggregate, ſhort. Native of the Eaſt Indies.

3. Glinus ſetiflorus: ſtem ſhrubby; leaves obovate, plaited; calycine leaflets ovate. This has the ſame habit with the two others. The whole plant is hoary with very cloſe hairs, longer than in the firſt ſpecies. Stem very much and dichotomouſly branched; branches diffuſed, jointed, a little thicker at the joints; leaves two or four at the joints, acute at the baſe, ſubretuſe; flowers axillary, ſeveral; capſule as in G. lotoides. Native of Arabia. See AIZOON.

GLI'RES, *f.* [*glis*, Lat. from γελεος, Gr. a dormouſe.] The name of the fourth order of mammalia, in the claſſification of Linnæus. See the article MAMMALIA.

GLIS, *f.* [from *gliſco*, Lat. to grow fat.] The dormouſe; ſo called becauſe it is always found fat. Alſo a thiſtle, from γλια, Gr. glue, becauſe of its property of ſticking to whatever it touches.

GLIS'CERE, *v. a.* [Latin.] To kindle; to grow light as the fire. *Scott.*

GLIS'CERE, *ſ.* The paroxyſm, the exacerbation of a fever. *Scott.*

GLISCHROCO'LOS, *ſ.* [from γλισχρος, viſcid, and χολη, Gr. the bile.] The medical epithet for bilious viſcid excrements.

GLIS'SAS, in ancient geography, a town of Bœotia, with a ſmall river in the neighbourhood. *Pauſanias.*

To GLIS'TEN, *v. n.* [*glittan*, Germ.] To ſhine; to ſparkle with light.—The ladies eyes *gliſtened* with pleaſure. *Richardſon.*

The bleating kind
Eye the bleak heaven, and next the *gliſtening* earth,
With looks of dumb deſpair. *Thomſon.*

To GLIS'TER, *v. n.* [*glittan*, Germ. *gliſteran*, Dut.] To ſhine; to be bright.—When the ſun ſhone upon the ſhields of gold and braſs, the mountains *gliſtered* therewith, and ſhined like lamps of fire. 1 *Mac.* vi. 39.

'Tis better to be lowly born
And range with humble livers in content,
Than to be perk'd up in a *gliſtering* grief. *Shakeſpeare.*

GLIS'TER, *ſ.* [properly written *clyſter*, from κλυζω.] See CLYSTER. It is written wrong even by Brown. *Johnſon.*—Choler is the natural *glyſter*, or one excretion whereby nature excludeth another; which, deſcending daily unto the bowels, extimulates thoſe parts, and excites them unto expulſion. *Brown.*

GLIT'NESS, one of the ſmaller Shetland iſlands, on the eaſt coaſt of Shetland: eleven miles north of Lerwick.

GLIT'SCHEN, a river of Swiſſerland, which runs into the lake of Thurn, near Inter Lacken, in the canton of Berne.

To GLIT'TER, *v. n.* [glitinian, Sax.] To ſhine; to exhibit luſtre; to gleam:

Before the battle joins from far
The field yet *glitters* with the pomp of war. *Dryden.*

To be ſpecious; to be ſtriking.—On the one hand ſet the moſt *glittering* temptations to diſcord, and on the other the diſmal effects of it. *Decay of Piety.*

In *glittering* ſcenes, o'er her own heart ſevere;
In crowds collected; and in courts ſincere. *Young.*

GLIT'TER, *ſ.* Luſtre; bright ſhow; ſplendour.—Flouriſh not too much upon the *glitter* of fortune, for fear there ſhould be too much alloy in it. *Collier.*

GLIT'TERAND, Shining; ſparkling. A participle uſed by Chaucer and Spenſer.

GLIT'TERING,

GLIT'TERING, *f.* The act of ſending forth a ſplendour; glitter, brightneſs.

GLIT'TERINGLY, *adv.* With ſhining luſtre.

GLIU'BIN, a town of European Turkey, in Dalmatia: eighteen miles ſouth-eaſt of Moſtar.

To GLOAR, *v. a.* [*gloeren*, Dut.] To ſquint; to look aſkew. *Skinner.*

GLOAR, *adv.* Diſagreeably; fulſomely.—She is *gloar* fat. *Scott.*

GLOAR'AND, *adj.* [the participial form in the Scotch dialect, from *gloar*.] Squinting; ſtaring.

To GLOAT, *v. n.* [written perhaps for *gloar*.] To caſt ſide glances, as a timorous lover:

Teach every grace to ſmile in your behalf,
And her deluding eyes to *gloat* for you. *Rowe.*

GLO'BARD, *f.* [from *glow*.] A glow-worm.

GLO'BATED, *adj.* [from *globe*.] Formed in the ſhape of a globe; ſpherical; ſpheroidical.

GLOB'BA, *f.* [the vernacular name by the Malayans.] In botany, a genus of the claſs diandria, order monogynia, natural order of ſcitaminæ, (cannæ, *Juſſ.*) The generic characters are—Calyx: perianthium ſuperior, one-leafed, cylindric, with a trifid mouth, permanent. Corolla: monopetalous, cylindric, with a trifid equal mouth. Stamina: filaments two, filiform, middling in length; antheræ faſtened longitudinally to the filaments. Piſtillum: germ inferior; ſtyle briſtle-ſhaped, of a middling length; ſtigma ſharp. Pericarpium: capſule roundiſh, three-celled, three-valved. Seeds: very many.—*Eſſential Character.* Calyx ſuperior, trifid; corolla equal, trifid; capſule three-celled; ſeeds very many.

Species. 1. Globba marantina, or marantina globba: ſpike terminating, erect. Stem ſimple, herbaceous. Leaves alternate, petioled, altogether like thoſe of maranta; the petioles membranaceous and ſheathing; the ſheaths truncate at the tip. Flowers remote, each involved in an ovate bracte, longer than the flower. This, and the ſecond and third ſpecies, are natives of the Eaſt Indies.

2. Globba nutans, or nodding globba: ſpike terminating, pendulous. Rumphius makes two varieties of this, the great and the ſmall. The former has a very ſtraight firm ſtem, from fourteen to eighteen feet in height, two inches in diameter at the bottom, naked for ſix feet from the root, and ſtout enough for walking canes; the upper part is ſoft, and is eaten in ſome places. Leaves three feet long, and more than two hands broad, thin, ſmooth, with many parallel tranſverſe veins, bending upwards near the edge, forming ſlight ridges on the upper, and furrows on the lower, ſurface. The trunk terminates in a jointed ſtem, three ſpans in length, with a narrow boat-ſhaped leaf at each joint, hollowed above, and of a duſky red colour. Fruit the ſize of a pigeon's egg, red. The leaves of the ſmaller ſort are more wandering, narrower, and draw more to a point at the baſe. The primary ſtem is two or three feet in length, and leafleſs, producing abundance of oblong flowers, in bunches like the hyacinth.

3. Globba uviformis, or grape globba: ſpike lateral. Stem from ſeven or eight to twelve or fourteen feet high, the thickneſs of a finger. Leaves from fourteen to ſixteen inches long, and from four to ſix fingers broad, ſmooth, and dark green above, pale green and lanuginoſe beneath. The fructification iſſues from the ſide of the ſtem, eighteen inches or two feet above the root, in a ſpathed bunch or ſpike a hand in length, containing many white flowers, which are ſucceeded by fruit reſembling grapes, but larger, white, becoming black, or of the colour of ſmoke, and ſometimes eaten.

4. Globba Japonica, or Japan globba: raceme terminating, drooping; leaves ſword-ſhaped, entire. The ſtem is ſheathed with leaves, ſimple, round, ſtreaked, ſmooth, upright, two feet high, or more. Leaves few, acuminate, ſmooth, very finely ſtreaked obliquely, a little longer than the ſheathing petioles, very thin, except the midrib, which is thick, deep green above, paler beneath, a foot long and two inches broad. Flowers many. Seeds ſurrounded by a white connecting membrane, angular, ſmooth, brown. Native of Japan; where the fruit is ripe in December and January.

GLOBE, *f.* [*globe*, Fr. *globus*, Lat.] A ſphere; a ball; a round body: a body of which every part of the ſurface is at the ſame diſtance from the centre. The terraqueous ball:

The youth, whoſe fortune the vaſt *globe* obey'd,
Finding his royal enemy betray'd,
Wept at his fall. *Stepney.*

A ſphere, in which the various regions of the earth are geographically depicted, and hence termed the *terreſtrial* globe; or in which the conſtellations of the heavens are laid down, according to their poſitions in the firmament, and thence denominated the *celeſtial* globe:

The aſtrologer who ſpells the ſtars,
Miſtakes his *globe*, and in her brighter eye
Interprets heav'n's phyſiognomy. *Cleaveland.*

[In medicine.] A ball which ſeems to aſcend from the ſtomach into the throat in hyſterical diſorders, called the *globus hyſtericus*. [In tactics.] A body of ſoldiers drawn into a circle:

A *globe* of fiery ſeraphim incloſ'd,
With bright imblazoning, and horrent arms. *Milton.*

The terreſtrial and celeſtial globes are highly neceſſary for the ſtudy of geography. The celeſtial globe ſerves to explain all the phenomena ariſing from the diurnal motion of the earth about its axis, and alſo the variation of ſeaſons ariſing from its motion about the ſun, only ſuppoſing the ſun to move in the ecliptic inſtead of the earth, which will not alter any of the appearances. To each globe there is a circular flat piece of wood, the plane of which paſſes through the centre of the globe, on which are marked the days of the month, and correſponding to them the ſigns of the ecliptic where the ſun is on thoſe days; the points of the compaſs are alſo put upon the ſame piece. This is called the *horizon*; at right angles to which there is a circular piece of braſs, on which the globe hangs, called the *brazen meridian*; it is ſupported at the loweſt point on a roller, on which it turns in its own plane, and paſſes through the horizon in two grooves cut for that purpoſe; on this circle the globe is ſupported by the extremities of its axis; and the axis paſſes through the brazen meridian, and carries an index round with it over a circular plate which is divided into hours, &c. On each globe there are two circles, one repreſenting the *ecliptic*, with the characters of the ſigns upon it, and the other the *equator*, both having their reſpective degrees correctly marked. To each of theſe circles, on the celeſtial globe, ſecondaries are drawn to every 10 or 15 degrees; but on the terreſtrial globe, they are drawn only to the equator. There is alſo a flat piece of braſs, called the *quadrant of altitude*, which is occaſionally fixed to the brazen meridian in its zenith, by a nut, and the lower end is put between the globe and the horizon, and can be turned round to any point; it is divided into degrees, &c. by which the altitudes of objects above the horizon may be found, and their azimuths determined. From one point of the brazen meridian correſponding to the equator, the degrees begin, and are continued both ways up to 90° at each pole; but for the other ſemicircle of the brazen meridian, the degrees begin at the poles, and are continued up to 90° at the equator. On the horizon, the degrees begin at the eaſt and weſt points, and are continued both ways to 90°, or to the north and ſouth points. The ecliptic and equator begin their degrees at one of their interſections, called *aries*, and they are continued round the ſame way to 360°; alſo, the former is divided into, and marked with, the twelve ſigns; and

the latter is divided from the ſame point into 24 hours. Upon the foot of the globe there is often put a compaſs, by which the brazen meridian may be ſet north and ſouth.—See figures of a pair of globes on an improved conſtruction, under the article GEOGRAPHY, p. 353, of this volume.

Euclid, at the end of his twelfth book, ſhews that ſpheres or globes are to one another in the triplicate ratio of their diameters, that is, their ſolidities are to one another as the cubes of their diameters. And Archimedes determines the real magnitudes and meaſures of the ſurfaces and ſolidities of ſpheres and their ſegments, in his treatiſe de Sphæra et Cylindro: viz. 1. That the ſuperficies of any globe is equal to 4 times a great circle of it. 2. That any ſphere is equal to $\frac{2}{3}$ of its circumſcribing cylinder, or of a cylinder of the ſame diameter and altitude. 3. That the curve ſurface of the ſegment of a globe, is equal to the circle whoſe radius is the line drawn from the vertex of the ſegment to the circumference of the baſe. 4. That the content of a ſolid ſector of the globe, is equal to a cone whoſe altitude is the radius of the globe, and its baſe equal to the curve ſuperficies or baſe of the ſector; and from hence are eaſily deduced theſe practical rules for the ſurfaces and ſolidities of globes and their ſegments; viz. 1. *For the ſurface of a globe*, multiply the ſquare of the diameter by 3·1416; or multiply the diameter by the circumference. 2. *For the ſolidity of a globe*, multiply the cube of the diameter by ·5236 (viz. $\frac{1}{6}$ of 3·1416); or multiply the ſurface by $\frac{1}{6}$ of the diameter. 3. *For the ſurface of a ſegment*, multiply the diameter of the globe by the altitude of the ſegment, and the product again by 3·1416. 4. *For the ſolidity of a ſegment*, multiply the ſquare of the diameter of the globe by the difference between 3 times that diameter and 2 times the altitude of the ſegment, and the product again by ·5236, or $\frac{1}{6}$ of 3·1416.—See the article SPHERE. And for the moſt approved methods of projecting globes and maps, ſee GEOGRAPHY, p. 359 of this volume.

Beſides the terreſtrial and celeſtial globes above deſcribed, there are others conſtructed or mounted for the following purpoſes: 1. A globe to ſhew the phenomena of the tranſit of Mercury and Venus over the Sun. 2. A globe to ſhew the phenomena of ſolar and lunar eclipſes on all places of the terreſtrial globe, called an *eclipſareon*. 3. A globe to ſhew the nature and manner of the preceſſion of the equinoxes, and thereby the difference between the ſidereal and tropical years, as alſo the apparent and direct motion of the fixed ſtars. 4. A celeſtial globe, with a teleſcope to fix on the north pole of the globe occaſionally, with a divided arc, &c. &c. An apparatus invented by Adams for obſerving any celeſtial body, and thereby, in an inſtantaneous manner, obtaining all the particulars of any phenomena preſenting themſelves in the heavens. 5. A lunar globe, or the *ſelenegraphia*, invented by Mr. John Ruſſel, R. A. forming an apparatus for exhibiting the phenomena of the moon, and the uſeful purpoſes to which it may be applied.—For a ſeries of uſeful problems on the terreſtrial and celeſtial globes, adapted to the knowledge of Geography and Aſtronomy, ſee pages 366–368 of this volume.

GLOBE-AM'ARANTH. See GOMPHRENA.
GLO'BE-ANIMAL. See ANIMALCULE.
GLO'BE-FISH. See OSTRACION.
GLO'BE-FLOWER. See TROLLIUS.
GLOBE-THIS'TLE. See ECHINOPS, vol. vi.
GLO'BED, *adj.* Round; globated.
GLOBO'SE, *adj.* [*globoſus*, Lat.] Spherical; round:

Then formed the moon
Globoſe, and ev'ry magnitude of ſtars. *Milton.*

GLOBOS'ITY, *ſ.* Sphericity; ſphericalneſs.
GLO'BOUS, *adj.* [*globoſus*, Lat.] Spherical; round.—When the accent is intended to be on the laſt ſyllable, the word ſhould be written *globoſe*, when on the firſt *globous*. *Johnſon.*—Milton has not obſerved this rule:

Wide over all the plain, and wider far
Than all this *globoſe* earth in plain outſpread. *Milton.*

Large *globous* irons fly, or dreadful hiſs,
Singeing the air. *Philips.*

GLO'BOUSNESS, *ſ.* Globoſity.
GLO'BULAR, *adj.* [*globulus*, Lat.] Having the form of a ſmall ſphere; round; ſpherical.—The figure of the atoms of all viſible fluids ſeemeth to be *globular*, there being no other figure ſo well fitted to the making of fluidity. *Grew.*

GLOBULA'RIA, *ſ.* [ſo named by Tournefort from the flowers growing many together in form of a little globe or ball.] In botany, a genus of the claſs tetrandria, order monogynia, natural order of aggregatæ, (lyſimachiæ, *Juſſ.*) The generic characters are—Calyx: common perianthium imbricate with ſcales the length of the diſk and equal; proper one-leafed, tubular, five-cleft, ſharp, permanent, (four or five-toothed, the teeth briſtle-ſhaped and acuminate, *Gærtner.*) Corolla: univerſal nearly equal; proper monopetalous, tubular at the baſe; border five-parted; upper lip very narrow, two-parted, ſhorter; lower of three larger equal ſegments. Stamina: filaments four, ſimple, the length of the corollule; antheræ diſtinct, incumbent. Piſtillum: germ ovate, ſuperior; ſtyle ſimple, the length of the ſtamens; ſtigma obtuſe. Pericarpium: none; proper calyx converging, incloſing the ſeed. Seeds: ſolitary, ovate. Receptaculum: common oblong, ſeparated by chaffs.—*Eſſential Character.* Calyx common (or none, *G.*) imbricate; proper tubular, inferior; corollets the upper lip two-parted, lower three-parted; receptacle chaffy.

Species. 1. Globularia longifolia, or long-leaved globularia: ſtem ſhrubby; all the leaves linear-lanceolate, quite entire; heads axillary. Theſe have all perennial roots. Stem ſhrubby, or herbaceous, ſimple, uſually with one head of flowers at the top; ſtem-leaves ſmall, or ſcarcely any. The leaves of all the globularias are dry black; the corollas blue. The firſt ſpecies riſes much higher than the ſecond, having a hard white wood with a large pith and a ſcabrous light brown or grey bark; the branches towards their ends very thick ſet with leaves, without any order; they are two inches long, and a third part of an inch broad in the middle; the nerves yelloviſh green. Flowers ſmall, blue, in round heads. Native of Madeira; flowers in July and Auguſt.

2. Globularia alypum, or three-tooth-leaved globularia: ſtem ſhrubby; leaves lanceolate, three-toothed, and entire; heads terminating. This has a hard woody ſtem, about two feet high, with many woody branches, beſet with leaves like thoſe of the myrtle. The flowers are produced on the tops of the branches in a ball, and are of a blue colour. Native of the ſouth of Europe: as about Montpellier, and in many parts of Narbonne and Provence; Valentia, and ſeveral other places in Spain; Nice, and the ſea-coaſt of Uneglia; alſo in Barbary. It flowers from Auguſt to November. From the violent purging quality of this ſhrub, it acquired the name of *herba terribilis*, herb terrible; but, in the abundance of purging medicines that we poſſeſs, this is ſeldom if ever uſed.

3. Globularia biſnagarica: ſtem ſhrubby; root-leaves wedge-ſhaped, retuſe; ſtem-leaves lanceolate. Stem ſhrubby. Leaves rigid, thoſe next the root-leaves rounder and cordate, but the ſtem-leaves pointed.

4. Globularia vulgaris, common globularia, or blue daiſy: ſtem herbaceous; root-leaves three-toothed; ſtem-leaves lanceolate. Stem ſlender, upright, covered with leaves, from an inch and a half to ſix inches in height, and ſometimes more, ſomewhat angular, very ſimple, ſmooth, one-flowered. Root-leaves numerous, like thoſe of the daiſy, but thicker. Scopoli obſerves, that the leaves of the former year are emarginate, with a dagger-point in the

the middle; but the freſh leaves three-toothed. He adds, that the ſtamens are ſhorter than the ſegments of the upper lip. Native of many parts of Europe; as Sweden, the ſouth of France, Germany, Swiſſerland, Auſtria, Carniola, Hungary, Savoy, Italy, and Spain. Profeſſor Martyn gathered it on Mont Saleve in flower in April 1779; but it uſually flowers in May and June. Parkinſon ſays it was (1629) very rare in our Engliſh gardens. In Gerarde's time (1597) the blue daiſy, or globe daiſy, as he calls it, was a ſtranger in England. Johnſon (Ger. emac.) gives only two figures, and adds that one might have ſerved, for they differ but in the tallneſs of their growth, and in the breadth of their leaves. He ſays nothing of their being cultivated in our gardens. It varies with a white flower; and with a leafleſs ſtalk.

5. Globularia ſpinoſa, or prickly-leaved globularia: root-leaves crenate-prickly; ſtem-leaves quite entire, mucronate. Root-leaves ſeveral, ſmall, ſtiff, notched, and at each notch a prickle; ſtem a hand in height, dark green, with oblong narrow leaves at the baſe, not notched but ending in prickles; head of flowers longer than in the foregoing, hairy. Found by Albinus on the mountains of Granada: flowers in May.

6. Globularia cordifolia, or wedge-leaved globularia: ſtem almoſt naked; leaves wedge-ſhaped, three-cuſped, the middle cuſp leaſt. Root large, woody, producing many tufts of leaves; leaves gradually widening from the baſe, emarginate, with the nerve ending in a ſhort awn or ſpinule; ſtem naked, except one little ſtrap, two inches high or little more, terminated by one head of flowers, ſmaller than in the other ſorts. Native of Swiſſerland, Auſtria, Carniola, Hungary, Piedmont, and Arragon; Ray found it at the foot of Mont Saleve in Savoy, near Geneva: it flowers in June and July.

7. Globularia nudicaulis, or naked-ſtalked globularia: ſtem naked; leaves quite entire, lanceolate. Somewhat larger than the foregoing, both in leaves and flowers; leaves firm like thoſe of the bay; ſtem naked, except a few little ſtraps or ſcales, ſix inches high; flowers uſually trifid, but ſometimes quadrifid. Native of Swiſſerland, Auſtria, Carniola, Savoy, and Piedmont; Ray obſerved it near the Grand Chartreux in Dauphiné. It flowers in July.

8. Globularia orientalis, or eaſtern globularia: ſtem almoſt naked; heads alternate, ſeſſile; leaves lanceolate-ovate, entire. Stem a foot high, herbaceous, quite ſimple; the leaves on it very ſmall, lanceolate, alternate, remote. There are from ſeven to ten heads at the top of the ſtem. Found by Tournefort in the Levant. Cultivated by Mr. Miller in 1739.

Propagation and Culture. The ſecond ſpecies may be propagated by cuttings, which ſhould be cut off in April, juſt before they begin to make new ſhoots; the cuttings ſhould be planted into pots filled with light freſh earth, and then placed into a very moderate hot-bed, obſerving to water and ſhade them until they have taken root, when they may be taken out of the bed, and inured to bear the open air by degrees. In ſummer theſe plants may be expoſed with other hardy exotic plants, and in winter they ſhould be placed under a hot-bed frame, where they may enjoy the free air in mild weather, but ſhould be ſcreened from hard froſt, which will deſtroy them if they are expoſed thereto, but in mild winters they will live in the open air. This plant never produces good ſeeds in this country. 4, 5, 6, 7, may be propagated by parting the roots after the manner of daiſies. The beſt ſeaſon for parting and tranſplanting of the plants is in September, that they may take new root before the froſty weather comes on. They ſhould be planted in a ſhady ſituation, and require a moiſt loamy ſoil, in which they will thrive much better than in a light ground and an open ſituation; but the plants ſhould not be removed oftener than every other year, if they are required to flower ſtrong. 1, 8, are ſomewhat tender, and ſhould be ſheltered from the froſt in winter, under a frame, but in ſummer ſhould be expoſed with other hardy exotic plants, and will require to be frequently watered in dry weather. This may be propagated by ſeeds, or by parting their roots, as was directed for the fourth ſort. See PROTEA and SAPONARIA.

GLOBULA'RIÆ AFFI'NIS, *ſ.* See ERIOCAULON.

GLOB'ULARNESS, *ſ.* The ſtate or quality of being globular.

GLOB'ULE, *ſ.* [*globule*, Fr. *globulus*, Lat.] A little globe; a ſmall particle of matter of a ſpherical form.—Blood conſiſts of red *globules*, ſwimming in a thin liquor called ſerum: the red *globules* are elaſtic and will break; the veſſels which admit the ſmaller *globule*, cannot admit the greater without a diſeaſe. *Arbuthnot.*

GLOB'ULOUS, *adj.* In form of a ſmall ſphere; round.—The whiteneſs of ſuch *globulous* particles proceeds from the air included in the froth. *Boyle.*

GLOCHID'ION, *ſ.* in botany. See BRADLEJA.

GLOCOV'NI, a river of Croatia, which riſes near Creutz, and runs into the Lonia.

GLODE, [old preterite of *glide.*] Glanced.—Like ſparke of fire that from the andvile *glode*. *Spenſer.*

GLOGAU', a principality of Sileſia, ſituated on each ſide of the Oder, on the borders of Poland. It produces corn and wine in plenty, the foreſts are well furniſhed with wood, and in ſome parts are mines of iron, a great number of ſheep are fed, and the wool is wrought into different manufactures. It is divided into ſix circles; Great Glogau is the capital. In 1241, it was governed by princes of its own; after that it belonged to the king of Poland, to the king of Bohemia, to the emperor, and laſt of all to the king of Pruſſia.

GLOGAU' (Great), a town of Sileſia, and capital of the principality of Glogau, built in 1110, on the ſouth ſide of the Oder, and now conſidered as a fortreſs, being taken by the Pruſſians in 1741, who ſtrengthened the fortifications. It is the ſeat of the governor, and a commandant of divers tribunals, a biſhop's court, &c. It contains two catholic churches, one of which is collegiate, three convents, a Lutheran church and ſchool, and a chapel for Calviniſts: fifty miles ſouth-ſouth-weſt of Poſen, and thirty-two north-north-eaſt of Buntzlau. Lat. 51. 39. N. lon. 33. 59. E. Ferro.

GLOGAU' O'BER, or GORNY GLOGOWICE, a town of Sileſia, in the principality of Oppeln: twenty-two miles eaſt-ſouth-eaſt of Nieſſe, and nineteen ſouth of Oppeln.

GLOG'NITZ, a town of Germany, in the archduchy of Auſtria: twenty-eight miles ſouth of Vienna, and ſixteen ſouth-weſt of Ebenfurth.

GLOGOVNIT'ZA, a town of Croatia: four miles north-north-eaſt of Creutz.

To GLOM'ERATE, *v. a.* [*glomero*, Lat.] To gather into a ball or ſphere.—A filamentous ſubſtance gathered into a ball is ſaid to be *glomerated*, but diſcontinuous particles are *conglobated*. *Johnſon.*

GLOMERA'TION, *ſ.* [*glomeratio*, Lat.] The act of forming into a ball or ſphere. A body formed into a ball.—The rainbow conſiſteth of a *glomeration* of ſmall drops, which cannot fall but from the air that is very low. *Bacon.*

GLOM'ERELLS, *ſ.* Commiſſaries appointed to determine differences between ſcholars of a ſchool or univerſity, and the townſmen of the place. In the edict of the biſhop of Ely, anno 1276, there is mention of the *maſter of the glomerells.*

GLOM'EROUS, *adj.* [*glomeroſus*, Lat.] Gathered into a ball or ſphere, as a ball of thread.

GLOM'ME, a river of Sweden, which paſſes by Tonſet, Elvedal, Konſwinger, &c. and runs into the North Sea, near Frederickſtadt.

GLON, a river of Germany, in the circle of Upper Bavaria, which runs into the Amber, near Crantzberg.

GLOOM, *ſ.* [ȝlomanȝ, Sax.] Twilight. Imperfect darkneſs; diſmalneſs; obſcurity; defect of light:

Glowing embers through the room,
Teach light to counterfeit a *gloom*. *Milton.*

Now warm in love, now with'ring in thy bloom,
Loſt in a convent's ſolitary *gloom*. *Pope.*

Cloudineſs of aſpect; heavineſs of mind; ſullenneſs:

At the bright'ning orient beam
Purge off this *gloom*. *Milton.*

To GLOOM, *v. n.* To ſhine obſcurely; as the twilight. *This ſenſe is not now in uſe.*

Scarcely had Phœbus in the *glooming* eaſt,
Yet harneſſed his fiery-footed team. *Spenſer.*

To be cloudy; to be dark. To be melancholy; to be ſullen.—A *glooming* peace this morning with it brings. *Shakeſpeare.*

GLOOM'ILY, *adv.* Obſcurely; dimly; without perfect light; diſmally. Sullenly; with cloudy aſpect; with dark intentions; not cheerfully.—See, he comes: how *gloomily* he looks! *Dryden.*—*Gloomily* retir'd the ſpider lives. *Thomſon.*

GLOOM'INESS, *ſ.* Want of light; obſcurity; imperfect light; diſmalneſs. Want of cheerfulneſs; cloudineſs of look; heavineſs of mind; melancholy.—The *gloominеſs* in which ſometimes the minds of the beſt men are involved, very often ſtands in need of ſuch little incitements to mirth and laughter as are apt to diſperſe melancholy. *Addiſon.*

GLOO'MY, *adj.* Obſcure; imperfectly illuminated; almoſt dark; diſmal for want of light.—The ſurface of the earth is clearer or *gloomier*, juſt as the ſun is bright or more overcaſt. *Pope.*

Deep in a cavern dwells the drowſy god,
Whoſe *gloomy* manſion nor the riſing ſun,
Nor ſetting, viſits, nor the lightſome noon. *Dryden.*

Dark of complexion:

That fair field
Of Enna, where Proſerpine gathering flowers,
Herſelf a fairer flow'r, by *gloomy* Dis
Was gather'd. *Milton.*

Sullen; melancholy; cloudy of look:

He on his impious foes right onward drove
Gloomy as night. *Milton.*

Heavy of heart.

GLO'RIED, *adj.* Illuſtrious; honourable; decorated with glory; dignified with honours. *Not in uſe.*

Old reſpect,
As I ſuppoſe, toward your once *glory'd* friend,
My ſon, now captivate, hither hath inform'd
Your younger feet, while mine caſt back with age
Came lagging after. *Milton.*

GLORIFICA'TION, *ſ.* [Fr. from *glorify.*] The act of giving glory.—At opening your eyes, enter upon the day with thankſgiving for the preſervation of you the laſt night, with the *glorification* of God for the works of the creation. *Taylor.*

To GLO'RIFY, *v. a.* [*glorifier*, Fr. *glorifico*, Lat.] To procure honour or praiſe to one:

Juſtice is their virtue: that alone
Makes them ſit ſure, and *glorifies* the throne. *Daniel.*

To pay honour or praiſe in worſhip.—God is *glorified* when ſuch his excellency, above all things, is with due admiration acknowledged. *Hooker.*—All nations ſhall *glorify* thy name. *Pſalms*, lxxxvi. 9.—To praiſe; to honour; to extol. To exalt to glory in heaven; to raiſe to celeſtial beatitude.—If God be glorified in him, God ſhall alſo *glorify* him in himſelf, and ſhall ſtraightway *glorify* him. *John*, xiii. 32.—Whom he juſtified, them he alſo *glorified*. *Rom.* viii. 30.—The ſoul, being immortal, will, at ſome time or other, reſume its body again in a *glorified* manner. *Ayliffe.*

GLORIO'SA, *ſ.* [from the magnificent ſplendour of its flowers.] In botany, a genus of the claſs hexandria, order monogynia, natural order ſarmentaceæ, (lilia, *Juſſ.*) The generic characters are—Calyx: none. Corolla: petals ſix, oblong-lanceolate, waved, very long, wholly reflex. Stamina: filaments ſix, ſubulate, ſhorter than the corolla, from ſtraight patulous; antheræ incumbent. Piſtillum: germ globular; ſtyle filiform, longer than the ſtamens, inclined; ſtigma triple, obtuſe. Pericarpium: capſule ſuperior, oval, three-lobed, three-celled, three-valved. Seeds: ſeveral, globular, berried, in two rows.—*Eſſential Character.* Corolla, ſix-petalled, waved, reflex; ſtyle oblique.

Species. 1. Glorioſa ſuperba, the ſuperb lily: leaves tendril-bearing. This has a long fleſhy root of a whitiſh colour, and a nauſeous bitter taſte, from the middle of which ariſes a round weak ſtem, requiring ſupport, and with that growing to the height of eight or ten feet; leaves ſmooth, about eight inches long, and one inch and a half broad at the baſe, growing narrower till within two inches of the end, which runs out in a narrow point, and ends in a tendril. See Botany Plate IV. fig. 13. Flowers at the upper part of the ſtem, from the ſide, on ſlender peduncles, hanging down, at firſt of an herbaceous colour, but changing to a beautiful flame colour. This fine plant is native of Guinea, as well as the Eaſt Indies; and was introduced here in 1690, by Mr. Bentick. It flowers in June and July, but ſeldom perfects ſeeds in this country. The ſtalks decay in autumn, the roots remain inactive all the winter, and new ſtalks come out in March. The roots and every part of the plant are poiſonous.

2. Glorioſa ſimplex, or ſimple-ſuperb lily: leaves acuminate. Leaves ſmooth, about three inches long and two broad, ending in acute points, but having no tendril; the ſtalks as yet have not grown more than two feet high, but have the appearance of climbing; the leaves have a ſtrong diſagreeable ſcent on being handled. It is ſaid to have a blue flower. The ſeeds were ſent to Mr. Miller by Monſ. Richard, gardener to the French king at Trianon, and were brought from Senegal by Monſ. Adanſon. This plant has not appeared in any of the gardens either in France or England, nor was there any ſpecimen of it in Miller's Herbarium; it is doubtful therefore what it might have been.

Propagation and Culture. As theſe plants rarely produce ſeeds in this country, they are generally propagated by their roots. Thoſe of the firſt ſort creep and multiply pretty faſt, but the ſecond has not as yet put out any offsets; but as the plants are young, we cannot as yet ſay how they may increaſe when they are of a proper age. Theſe roots may be taken out of the ground when their ſtalks are decayed, and preſerved in ſand during the winter ſeaſon, but they muſt be kept in the ſtove, or a warm room, where they can receive no injury from the cold; and in the ſpring they muſt be planted in pots filled with light earth, and plunged into the tan-bed in the ſtove; but others chuſe to let the roots continue in the ground all the winter, keeping the pots always in the tan-bed; where this is practiſed, the roots ſhould have very little water in the winter; for as they are then in an inactive ſtate, moiſture at that time frequently rots the roots. Towards the end of March, or the beginning of April, their ſtalks will appear, when there ſhould be ſome tall ſticks put down by them to ſupport them, otherwiſe they will trail over the neighbouring plants, and the firſt ſort will faſten to the plants by the tendrils. The ſtalks of this ſort will riſe ten or twelve feet high, if the roots are ſtrong, and ſome of them will produce two or three flowers; theſe make a fine appearance in the ſtove, during their continuance, which is ſeldom more than ten days or a fortnight. In ſummer, when the plants are growing, they will

will require frequently to be watered; but they muſt not have it in too large quantities, for they are very ſubject to rot with much wet at any ſeaſon. Thoſe roots which are not taken out of the pots in winter, ſhould be tranſplanted and parted the beginning of March, before they put out new fibres or ſtalks, for they muſt not be removed when they are in a growing ſtate; the pots ſhould not be too large; for unleſs they are confined, they will not put out ſtrong ſtalks; the largeſt roots may be planted in twopenny pots, but the ſmall ones will require only pots of about five or ſix inches over at the top.

GLO'RIOUS, *adj.* [*glorioſus*, Lat. *glorieux*, Fr.] Boaſtful; proud; haughty; oſtentatious.—They that are *glorious* muſt needs be factious; for all bravery ſtands upon compariſons. *Bacon.*—Noble; illuſtrious; excellent. It is frequently uſed by theological writers, to expreſs the brightneſs of triumphant ſanctity rewarded in heaven.—Let them know that thou art Lord, the only God, and *glorious* over the whole world. *Dan.*

Impartial juſtice holds her equal ſcales,
'Till ſtronger virtue does the weight incline;
If over thee thy *glorious* foe prevails,
He now defends the cauſe that once was thine. *Prior.*

GLO'RIOUSLY, *adv.* Nobly; ſplendidly; illuſtrioufly.—They inſpire with thoſe celeſtial flames which ſhine ſo *glorioufly* in their works. *Dryden.*

Great wits ſometimes may *glorioufly* offend,
And riſe to faults true critics dare not mend. *Pope.*

GLO'RY, *ſ.* [from the Latin word GLORIA.] Of this, Tully gives a juſt definition. He ſays it is "Conſentiens laus bonorum, incorrupta vox benè judicantium de excellente virtute." *Tuſc. Diſp.* "The conſentient praiſe of good men, the unbiaſſed voice of thoſe who judge well concerning ſuperior virtue." Our own divine poet has well diſcriminated real Glory and vain-Glory:

Strength from Truth divided and from Juſt,
Illaudable, nought merits but diſpraiſe
And ignominy, yet to glory aſpires
Vain-glorious, and through infamy ſeeks fame.
Milton's Par. L. vi. 381.

In a figurative ſenſe the word GLORY is applied to a luminous appearance in the ſky. Hence the elegant Tranſlator of the Iliad, improving on his Original, in that fine night-piece at the end of the Eighth Book, ſays, "A Flood of Glory burſts from all the ſkies." *Pope.*

The laborious CRUDEN has collected the various acceptations of GLORY in the Holy Scriptures. There, GLORY, is taken for worldly ſplendour and magnificence, which makes kings glorious before men. MAT. vi. 29. "Solomon IN ALL HIS GLORY," in all his luſtre, and in his richeſt ornaments, was not ſo beautiful as a lily. Thus riches, authority, ſumptuous buildings and garments which men are ready to praiſe, and which makes their poſſeſſion glorious before men, are called in Scripture GLORY. *Pſal.* xlix. 16. "WHEN THE GLORY OF THIS HOUSE IS INCREASED." By GLORY is meant the "tongue," which is that peculiar excellency, wherein chiefly, except reaſon, man ſurpaſſes all other creatures. PSAL. xvi. 9. "MY HEART IS GLAD, AND MY GLORY REJOICETH;" my tongue breaks out into holy boaſtings and praiſes. So in PSAL. c. 1. I will ſing and give praiſe even "WITH MY GLORY." The GLORY of the king of Aſſyria is his ſplendid princes, brave captains, valiant commanders, and powerful armies, which would make a gallant ſhew, and wherein he would glory, and boaſt exceedingly. ISA. viii. 7. "THE LORD BRINGETH UPON THEM THE KING OF ASSYRIA AND ALL HIS GLORY." GLORY is put for the ark of the covenant, which was a glorious type and aſſurance of God's preſence, and the great ſafe-guard and ornament of Iſrael, which they could glory in above all other nations. 1 SAM. iv. 21. The GLORY is departed from Iſrael. *Rom.* ix. 4. "To whom pertaineth the GLORY." GLORY is put for the Church, which GOD makes glorious, not only in his own eyes, but even in the eyes of the World. ISA. iv. 5. "UPON ALL THE GLORY ſhall be a defence;" upon all holy aſſemblies of ſincere Chriſtians. It is put for grace, 2 COR. iii. 18. "We are changed into the ſame image, FROM GLORY TO GLORY." The Apoſtle calls man the image and GLORY of GOD, and for this reaſon he "ought not to cover his head;" that is, ſince God would have the male ſex to be a kind of repreſentation of his glory, majeſty, and power, a man ought not, by hiding his face, wherein theſe things are moſt conſpicuous, to conceal the Glory of GOD ſhining in him. David calls God his GLORY. PSAL. iii. 3. "Thou art my GLORY;" thou art the author of that royal dignity to which I am advanced: or, thou art the matter of my glorying, thou haſt formerly given, and wilt further give me, occaſion of glorying or boaſting of thy power and favour to me. Glory is taken for the unſpeakable bleſſedneſs, joy, and felicity, of the ſaints in heaven. PSAL. lxxiii. 24. "Thou ſhalt guide me with thy counſel, and afterwards receive me to GLORY." God promiſes to be to his Church "a Wall of Fire round about, and the GLORY in the midſt;" ZECH. ii. 5, that he would protect his Church, and that his preſence and power ſhould make her glorious. It is put for the preſence of God, PSAL. lxiii. 2. When the Iſraelites forſook GOD in the Wilderneſs, "they changed their GLORY into the ſimilitude of an Ox that eateth graſs." PSAL. cvi. 20. They changed their glory; that is, their GOD, who was indeed their glory, into the golden image of an ox or calf. Joſhua ſpeaking to Achan ſays, "Give GLORY to God," JOSH. vii. 19. Confeſs the truth, and aſcribe unto God the glory of his omniſcience in knowing thy ſin, and of his juſtice in puniſhing thee according to thy deſert. When God thought fit to call his ſervant Moſes to himſelf, he directed him to go up to Mount Abarim, and die there, NUM. xxvii. 12, &c. Moſes hereupon deſired of God, that he would provide a man who ſhould be ſet over the multitude. The Lord therefore commanded him to take Joſhua the ſon of Nun, ſaying, "He is a man who is filled with the ſpirit, lay thine hand upon him, and give him a charge in the preſence of the multitude, and put ſome of thine honour [in Hebrew, of thy GLORY or SPLENDOUR] upon him." The queſtion is, what GLORY this was, that Moſes communicated to Joſhua. ONKELOS, and ſome of the RABBINS, are of opinion, that Moſes imparted to him ſome of that luſtre which appeared upon his countenance, after the converſation which he had been admitted to with GOD. Moſes, they ſay, ſhined like the ſun, and Joſhua like the moon: this was a weak and borrowed brightneſs. But it is to be underſtood of that authority and empire whereof he ſtood in need for the government of the people. Moſes laid his hands on him, and by this ceremony appointed him for his ſucceſſor in the conduct of the Iſraelites: He gave him his orders and inſtructions, that he might acquit himſelf with honour in this employment.

The GLORY OF GOD.—Moſes earneſtly begged of God to ſhew him his GLORY. EXOD. xxxiii. 18. "I beſeech thee, ſhew me thy GLORY;" that is, the higheſt manifeſtation of thy divine glory that I am capable of; or that glorious ſhape, which, together with an human voice, thou haſt now aſſumed. "The heavens declare the GLORY of GOD." PSAL. xix. 1. The viſible heavens afford matter and occaſion, in reſpect of their vaſt extent, glorious furniture, and powerful influences, to acknowledge and admire the glorious Being, infinite power, wiſdom, and goodneſs, of GOD. "The GLORY of the LORD hath filled the Houſe of the LORD;"

that is, the cloud which was an uſual token of God's glorious preſence. 1 KINGS, viii. 11. Chriſt ſays to Martha, JOHN, xi. 40, "If thou wouldeſt believe, thou ſhouldeſt ſee the GLORY of GOD;" that is, an admirable inſtance of the divine power, in raiſing thy dead brother. The miracles which our Saviour wrought, manifeſted his GLORY, or his divine power, JOHN, ii. 11. "The GLORY of the LORD ſhall be revealed," ISA. xl. 5, that is, the glorious power and goodneſs of God, ſhall be manifeſted in the deliverance of the Jews from Babylon, but more eſpecially in the redemption of all nations by our LORD JESUS CHRIST. "Whether ye eat or drink, or whatſoever ye do, do all to the GLORY of GOD;" 1 COR. x. 31. that is, let the glory and honour of God be habitually and really the chief end of all your actions.

Among military men, the love of glory gives birth to many ſplendid, and ſometimes to uſeful, actions. But, if it be not regulated by principle; if the praiſe of man be all, and the approbation of God and conſcience nothing, may it not frequently impel to actions that are highly criminal? Falſe ideas of glory have made heroes the ſcourges of the human race. Hearts that were formed for benevolence, have, by the love of glory, been hardened to the commiſſion of deeds at which humanity revolts. Murder and devaſtation have been made the inſignia of honour; and the widows' and the orphans' tears have conſtituted the pearls that form the hero's wreath!

To GLO'RY, *v. n.* [*glorior*, Lat.] To boaſt in; to be proud of.—Let them look they *glory* not in miſchief. *Shakeſpeare.*

Thou haſt ſeen Mount Atlas,
While ſtorms and tempeſts thunder on its brow,
And oceans break their billows at its feet,
It ſtands unmov'd, and *glories* in its height. *Addiſon.*

GLO'RYING, *ſ.* [from the participle.] The act of boaſting in any thing; as, Your *glorying* is not good.

GLOS LA FERRIE'RE, a town of France, in the department of the Orne, and chief place of a canton, in the diſtrict of l'Aigle: eight leagues weſt of Evreux, and two north of l'Aigle.

To GLOSE, *v. a.* To flatter; to collogue. *Hanmer.* See *To* GLOZE.

GLOSS, *ſ.* [*gloſe*, Fr. *gloſa*, It. and Sp. *gloſſe*, Germ. *gloſſa*, Lat. γλοσσομα, of γλωσσα, Gr.] A ſcholium; a comment:

If then all ſouls, both good and bad, do teach,
With gen'ral voice, that ſouls can never die;
'Tis not man's flatt'ring *gloſs*, but nature's ſpeech,
Which, like God's oracles, can never lie. *Davies.*

Superficial luſtre. In this ſenſe it ſeems to have another derivation; it has perhaps ſome affinity to *glow*.—Steel *gloſſes* are more reſplendent than plates of braſs. *Bacon.*

Weeds that the wind did toſs
The virgins wore: the youths, woven coats, that caſt
a faint dim *gloſs*. *Chapman.*

An interpretation artfully ſpecious; a ſpecious repreſentation. *This ſenſe ſeems to partake of both the former:*

Poor painters oft with ſilly poets join,
To fill the world with ſtrange but vain conceit;
One brings the ſtuff, the other ſtamps the coin,
Which breeds nought elſe but *gloſſes* of deceit. *Sidney.*

To GLOSS, *v. n.* [*gloſer*, Fr.] To comment:

Thou detain'ſt Briſeis in thy bands,
By prieſtly *gloſſing* on the god's commands. *Dryden.*

To make ſly remarks:

Her equals firſt obſerv'd her growing zeal,
And laughing *gloſs'd*, that Abra ſerv'd ſo well. *Prior.*

To GLOSS, *v. a.* To explain by comment:

In parchment then, large as the fields, he draws,
Aſſurances, big as *gloſs'd* civil laws. *Donne.*

To palliate by ſpecious expoſition or repreſentation.—Is this the paradiſe, in deſcription whereof ſo much *gloſſing* and deceiving eloquence hath been ſpent? *Hooker.*

Do I not reaſon wholly on your conduct;
You have the art to *gloſs* the fouleſt cauſe. *Philips.*

To embelliſh with ſuperficial luſtre:

The ſame ill habits, the ſame follies too,
Gloſs'd over only with a ſaint-like ſhow. *Dryden.*

GLOSSA'GRA, *ſ.* [from γλωσσα, the tongue, and αγρα, Gr. a ſeizure.] A rheumatic pain of the tongue.

GLOS'SARIST, *ſ.* The writer of a gloſſary.—Etymology is ſo clearly not a neceſſary branch of the duty of a *gloſſariſt*, that I truſt I ſhall be eaſily excuſed for not having troubled the reader with longer or more frequent digreſſions of that ſort. *Tyrwhitt.*

GLOS'SARY, *ſ.* [*gloſſarium*, Lat. *gloſſaire*, Fr.] A dictionary of obſcure or antiquated words.

GLOSSA'TOR, *ſ.* [*gloſſateur*, Fr. from *gloſs.*] A writer of gloſſes; a commentator.

GLOS'SER, *ſ.* [*gloſſarius*, Lat.] A ſcholiaſt; a commentator. A poliſher.

GLOS'SINESS, *ſ.* Smooth poliſh; ſuperficial luſtre.

GLOS'SING, *ſ.* [from the *part.*] The act of explaining by a gloſs or comment. *Dryden.*

GLOSSOCAT'OCHUS, *ſ.* [from γλωσσα, the tongue, and καταεχω, Gr. to depreſs.] An inſtrument for preſſing down the tongue. A ſpatula.

GLOSSOCE'LE, *ſ.* [from γλωσσα, the tongue, and κηλη, Gr. a tumour.] An extruſion of the tongue, with ſwelling.

GLOSSOCO'MION, *ſ.* [from γλωσσα, the tongue, and κομεω, Gr. to guard.] This word literally means a caſe for the tongue of a hautboy; and by metaphor a caſe for a fractured limb. In mechanics, a machine for raiſing great weights.

GLOSSOG'RAPHER, *ſ.* [*gloſſographe*, Fr. of *gloſſographus*, Lat. γλωσσογραφος, of γλωσσα, the tongue, and γραφω, Gr. to write.] A ſcholiaſt; a commentator.

GLOSSOG'RAPHY, *ſ.* [γλωσσα, and γραφω, Gr. to deſcribe.] The writing of commentaries.

GLOSS'OMA, *ſ.* [from γλωσσα, Gr. the tongue.] In botany, a genus of the claſs tetrandria, order monogynia, natural order rhamni, *Juſſieu.* The generic characters are—Calyx: perianthium one-leafed, turbinate, four-toothed, ſuperior, permanent. Corolla: petals four, lanceolate, acute, bowed back; nectary a rim round the baſe of the ſtyle. Stamina: filaments four, very ſhort; antheræ oblong, almoſt united into a cylinder, prolonged at the tip into a membranaceous ſtrap or ſcale, gaping on the inſide. Piſtillum: germ inferior; ſtyle filiform, the length of the ſtamens; ſtigmas four, acute. Pericarpium: drupe ſpear-ſhaped, one-celled, crowned with the calyx. Seed: ſingle, ovate, ſtreaked.—*Eſſential Character.* Calyx, turbinate, four-toothed, ſuperior; corolla, four-petalled; antheræ, almoſt united, with a membranaceous ſcale at the end; ſtigmas, four.

Gloſſoma Guianenſis, a ſingle ſpecies. It is a middle-ſized ſhrub, five or ſix feet high, the bark brown, the wood yellow, hard, and compact; branches jointed, four-cornered; leaves oppoſite, cruciate, ſix inches and a half long, and two and a half wide, entire, ſmooth, thick, elliptic, acuminate, on very ſhort petioles. Native of Guiana, and flowering in September. *Votomita* is the vernacular name.

GLOSSOPET'ALUM, *ſ.* [Gr. tongue-petalled; each petal having a ſtrap or tongue at the end.] In botany, a genus of the claſs pentandria, order pentagynia, natural order rhamni, *Juſſieu.* The generic characters are—Calyx: perianthium one-leafed, very ſmall, five-toothed, permanent. Corolla: petals five, lanceolate, ſpreading,

ſpreading, acute; at the tip of each a linear-lanceolate, truncate, ſtrap, nearly the length of the petal, and lying on it. Stamina: filaments five, very ſhort; antheræ roundiſh. Piſtillum: germ roundiſh, ſurrounded by a gland, bearing the petals and ſtamens; ſtyle none; ſtigmas five, acute. Pericarpium: berry roundiſh, five-grooved, one-celled. Seeds: five, angular.—*Eſſential Character.* Calyx, very ſmall, five-toothed; petals, five, with a ſtrap at the tip of each.

Species. 1. Gloſſopetalum glabrum, or ſmooth gloſſopetalum: leaves ſmooth. A tree, the trunk of which riſes to the height of ſixty feet and more, and is from two to three feet in diameter; the bark is ſmooth and grey; the wood white and of a looſe texture; leaves alternate, ſmooth, ſhining, firm, entire, ovate-lanceolate, ending in a long point; the midrib divides them unequally; peduncles ſolitary, axillary, two inches long, bearing many flowers in a ſpherical head; corolla yellow; berry black. Native of Guiana, flowering in November. The natives make canoes of the trunk.

2. Gloſſopetalum hirſutum, or hairy gloſſopetalum: leaves hairy. The trunk of this ſpecies is only from twenty to twenty-five feet in height; the bark is wrinkled, blackiſh marked with white; the leaves are covered with ſhort hairs on both ſides: theſe are uſed againſt inflammations in the eyes; they are bitter, as is alſo the bark. Native of Guiana and Cayenne. *Goupi* is the vernacular name.

GLOS'SY, *adj.* [from *gloſs.*] Shining; ſmoothly poliſhed:

His ſurcoat was a bearſkin on his back;
His hair hung long behind, and *gloſſy* raven black. *Dryd.*

GLOT'TIS, *ſ.* [from γλῶττα, Gr. the tongue.] In anatomy, the narrow ſlit at the upper part of the aſpera arteria, which is covered by the epiglottis when we hold our breath, and when we ſwallow. The glottis, by its dilatation and contraction, modulates the voice.

GLOU'CESTER, the metropolis of Glouceſterſhire, called by the ancient Britons *Caerglow*, the Fair City, from its fine and gently elevated ſituation; by the Romans it was named *Clevum*, or *Glevum*, to which the Saxons, according to their cuſtom, added *Ceſter*, which ſignifies a caſtle or fortification, and thus called it *Gleavceſter*, whence its preſent name. Leland ſays, that in his time it was a large place, well built with timber, and defended with ſtrong walls, except on the ſouth ſide, where it is waſhed by the Severn, over which noble river it has a good ſtone bridge. This city is allowed by all antiquarians to have been a Roman ſtation; and Camden ſays that the famous Roman way called *Ermin-ſtreet*, which begins at St. David's in Pembrokeſhire, and reaches to Wincheſter and Southampton, paſſes through Glouceſter. After the Saxon heptarchy, it continued to be a place of conſiderable note; and a little before the Norman conqueſt, Breicktric, a Saxon, was lord of Glouceſter; but, refuſing to marry Maud, who became the conſort of William the Conqueror, ſhe cauſed him to be impriſoned, and his eſtate ſeized by the crown. Afterwards it was given by Rufus to Robert Fitz Hamon, lord of Corbaille in Normandy. It has ſuffered conſiderably by fire at different periods: its abbey was burnt down in 1102, and again in 1122. It ſtands upon a hill; and from the middle of the city, where the four principal ſtreets meet, there is a deſcent every way, which keeps it not only clean and healthy, but adds to the beauty of the place. Henry VIII. made it the ſee of a biſhop, with a dean and ſix prebends. Its caſtle, which was erected in the time of William the Conqueror, is very much decayed: part of it is leaſed out by the crown; and part has been converted into a ſpacious county gaol.

King John, in the firſt year of his reign, made it a borough-town, and Henry III. erected it into a corporation. It was beſieged and taken in four days by the barons, in the reign of the laſt-mentioned king. It was, however, ſoon retaken by his ſon, who pardoned the burgeſſes upon their paying a thouſand marks. In 1272, Edward I. held a parliament here, in which ſome uſeful laws were made, now called the Statutes of Glouceſter. Richard II. held a parliament here alſo; and Richard III. in conſequence of bearing the title of duke of Glouceſter before he obtained the crown, added the two adjacent hundreds of Dudſton and King's Barton to it, gave it his ſword and cap of maintenance, and made it a county of itſelf, by the name of "the county of the city of Glouceſter;" but, after the reſtoration, the hundreds were taken away by act of parliament, and the walls of the city razed, becauſe the inhabitants had ſhut the gates, in 1643, againſt Charles I. by whom it was beſieged. The city had once eleven pariſh churches; but, ſix being demoliſhed in 1643, there only now remain five, and the cathedral. This city gives the title of duke to his royal highneſs William Henry, nephew of George III.

This large and populous city is delightfully ſituated on the banks of the Severn. It was formerly famous for its iron forges (even ſo early as the time of William the Conqueror); but thoſe have long ceaſed: its chief trade, at preſent, conſiſts in pin-making, which is carried on to a very great extent; wool-ſtapling, malting, and rope-making. The ſtreets are ſpacious, and well paved and lighted; its boundaries are about three miles in circumference.

The cathedral of Glouceſter is juſtly admired as one of the fineſt pieces of Gothic architecture in England. Aldred biſhop of Worceſter, in 1047, and afterwards archbiſhop of York, who crowned William the Conqueror, built and decorated it about the year 1060. Abbot Horton, in 1551, added the north aiſle, and a great hall in which the parliament was afterwards held, and which is now a library. In 1381, abbot Troceſter began the building of the large cloiſter; and abbot Seabrook began the ſtately tower, and appointed Robert Tull, a monk of this church, to take care of the finiſhing it, who afterwards was conſecrated biſhop of St. David's in 1450. This appears by two verſes written in the choir, over the arch of the tower:

Hoc quod digeſtum ſpecularis opuſque politum
Tulhi hæc ex onere, Seabrooke abbate jubente.

Abbot Hanley, in 1457, laid the foundation of the Virgin Mary's chapel. Abbot Parker was the laſt abbot; in whoſe time the abbey was reſigned to Henry VIII. by the prior, and not by the abbot. The abbey-church was then made a cathedral, in the year 1541, by Henry VIII. who appointed John Wakeman, abbot of Tewkeſbury, to be its firſt biſhop. Abbot Morewent, in 1419, built the frontiſpiece at the weſt end entirely from the ground. The following are the dimenſions of the cathedral as it now ſtands:—The Virgin Mary's chapel, in length ninety feet, in breadth twenty-ſeven, and in height ſixty-ſix feet. The choir is one hundred and forty-one feet in length, thirty-ſeven and a half in breadth, and in height eighty-five feet. The great window at the end of the choir is eighty-three feet high. The body of the church in length is one hundred and ſeventy-one feet nine inches, in breadth eighty-five feet, in height ſeventy-one feet. The length of the whole is four hundred and forty-four feet eight inches. Each aiſle in the large cloiſter (which contains four) is in length one hundred and forty-ſeven feet, in breadth thirteen, in height ſixteen feet and a half; and always kept locked up, unleſs in the time of divine ſervice. There is alſo a ſmaller cloiſter, which is inhabited, and contains four aiſles, and a paſſage for people to paſs through. There is a place called the Whiſpering-gallery, and very remarkable: it is a long alley from one

ſide

ſide of the choir to the other, built circular, and contains in length eighty-four feet. The voice is heard from one ſide to the other, if a perſon ſpeaks ever ſo low; as in the whiſpering gallery of St. Paul's, London. The church on the outſide is in height eighty-five feet and a half. The tower to the battlements is one hundred and ninety-eight feet high, and from the battlements to the top of the pinnacles twenty-four feet. From the bottom to the top of the tower is two hundred and eighty feet. The great bell in the tower weighs ſix thouſand pounds, and requires eight men to ring it. There is beſides a fine peal of eight bells.

Edward II. ſurnamed the Martyr, and who was murdered at Berkeley Caſtle in 1327, lies in this cathedral, in an alabaſter tomb. Out of the abundance of pious offerings to his remains, the religious built the choir; and ſo great was the number of votaries to his ſhrine, for ſome time after his death, that they could hardly find room in the town. King Oſric of Northumberland, who died about the year 600, and Robert Curthoſe duke of Normandy, eldeſt ſon to William the Conqueror, who died in 1134 at Cardiff Caſtle in Wales, were likewiſe interred here. In the chapter-houſe lies Strongbow, who conquered Ireland. The cloiſters are exquiſitely beautiful, done in the ſtyle of the chapel of King's college, Cambridge.

In the city, beſides the churches, are ſeveral meeting-houſes for the different ſects of proteſtant diſſenters. The college-ſchool is in high reputation; alſo Cript ſchool. There is likewiſe a charity-ſchool well endowed for freemen's ſons; and ſeveral private ſchools in good eſtimation. The hoſpital of St. Bartholomew, founded in the reign of queen Elizabeth, for decayed men and women, is liberally endowed, and has been recently rebuilt, in a handſome ſtyle, by the ſpirited conduct of the corporation, who generouſly gave up their cuſtomary entertainments to defray the expence, and to render the habitation of old age wholeſome and comfortable: an example highly deſerving the imitation of other corporate bodies. There are alſo two alms-houſes, under the direction of the corporation, in the vicinity of the city. The poor are provided for in a general workhouſe, incorporated by act of parliament, under the management of guardians annually choſen by the ſeveral pariſhes. Two commodious market-houſes have been lately built; as alſo an elegant theatre. In ſhort, for beauty of ſituation, ſalubrity of air, goodneſs of markets, general and internal regulations of order and cleanlineſs, Glouceſter yields to no city in the kingdom.

Here are conſiderable ruins of the abbeys of black and white friars; and of a monaſtery, founded as early as the year 710. A mile or two diſtant is Robin Hood's Hill; and contiguous to the city ſtands the county infirmary, built and ſupported by voluntary contributions.

Glouceſter has ſent repreſentatives to parliament from the twenty-third year of Edward I. and the government of the city, by charter from Charles I. is veſted in a mayor, high-ſteward, recorder, twelve aldermen, a town-clerk, two ſheriffs, common-council, treaſurer, chamberlain, ſword-bearer, and other inferior officers. According to ſir Robert Atkins's Hiſtory of Glouceſterſhire, this city was incorporated by Henry III. when he was crowned there. It was then governed by a mayor, aldermen, &c. But the inhabitants reſigning their charter, in 1672, to Charles II. he granted them another in the twenty-fourth year of his reign, by which the city and county is now governed. For the better regulating the trade of the city, there are twelve companies, whoſe maſters attend the mayor in their gowns, on all public occaſions; theſe are the mercers, in which are included the apothecaries, grocers, and chandlers; the weavers, the tanners, the butchers, the bakers, the ſmiths and hammer-men, among whom are the goldſmiths, ironmongers, coopers, and joiners; the ſhoemakers, metal-men, tailors, barbers, and glovers. The right of election is in the inhabitants and freemen. The number of voters three thouſand. Returning-officers the ſheriffs.

Glouceſter is diſtant from London one hundred and two miles, Oxford forty-ſix, Bath forty-one, Briſtol thirty-four, Hereford thirty, Worceſter twenty-ſix, and Cheltenham ten. The great roads from London to South Wales, and from the weſt to the north of England, paſs through the city. Here are plentiful markets on Wedneſdays and Saturdays; alſo four large annual fairs, on April 5, July 5, September 28 and 29, and November 28.

The navigable canal from Hereford to the river Severn, a few miles from the city of Glouceſter, is of great advantage to the two counties through which it paſſes; as well as to the trade of thoſe two opulent cities.—A vein of coal has been diſcovered near Newent, of a good quality, and of conſiderable extent. Coals are alſo found in the foreſt of Dean, and near Sudbury; but the city and a conſiderable part of the county of Glouceſter is ſupplied, by means of the Severn, with coal from the Staffordſhire and Shropſhire collieries.

At the diſtance of about half a mile from Glouceſter, are ſome remarkable ruins of a priory, ſituated in a deep ſolitary vale, encompaſſed with rocks which almoſt exclude the mid-day ſun, and was built by St. David, who there lived the life of a hermit, in the reign of Henry I. The remains of the priory are now converted into a farm-houſe and its offices, which are very extenſive. On a hill in this vicinity, are found thoſe ſtones called *aſtroites*, or ſtar-ſtones, about the ſize of a ſilver penny, as thick as a half-crown, and, when put into vinegar, they have a peculiar kind of motion. In the little iſle of Alney, near Glouceſter, the famous ſingle combat was fought between Edmund Ironſide and Canute the Dane, for the whole kingdom, in ſight of both their armies.

The GLOUCESTER MINERAL WATER is now drunk for various diſeaſes with ſingular ſucceſs; and ſince it has been analized by Dr. Hemming, its efficacy has been more generally admitted. Dr. Hemming has ſhewn by his experiments, publiſhed in 1789, that each gallon of this water contains,

Of fixed air, or acidulated gas, by meaſure,	72 ounces,
Calcareous earth combined with the ſame,	30 grains,
Aerated magneſia,	24 grains,
Aerated iron,	8 grains,
Epſom ſalt,	30 grains.

As an anſwer to objections which might be urged againſt the efficacy of the waters, on account of the ſmall proportion of iron contained in it, the author quotes the opinion of Dr. Cullen: "Mineral waters often produce cures which we in vain attempt to perform by the combinations in our ſhops, even although theſe waters contain nothing but iron. This is manifeſtly owing to the weakneſs of the doſe; in proof of which we find, that the ſtrongly impregnated waters ſeldom anſwer ſo well as thoſe weak ones we commonly reject."

GLOU'CESTER, a county of the American States, in New Jerſey, bounded north by Burlington county; ſouth by Salem, Cumberland, and Cape May counties; eaſt by the Atlantic Ocean; and weſt by Delaware river. Its length on the Delaware is about thirty miles, and on the ſea the line is about twenty-two miles. Great and Little Egg harbour rivers are both navigable for veſſels of two hundred tons about twenty miles from their mouths. The ſtreams which fall into Delaware river are navigable for ſmall veſſels, a few miles up from their mouths, and afford ſome ſhad, rock, herrings, and perch. The adjacent iſlands are Red Bank, Pett, and Old Man's Creek, Iſlands: the firſt of which is famous in the hiſtory of the American war, for the deſ-

perate defence the garriſon upon it made, to prevent the Britiſh fleet from paſſing up to Philadelphia. The ſoil of this county is a mixture of ſand and loam, and the tract bordering on the Delaware is in a high ſtate of cultivation. The chief productions are beef, pork, fiſh, hay, corn, lumber, butter, cheeſe, &c. It is divided into ten townſhips, viz. Woodbury, Waterford, Newtown, Glouceſter Townſhip, Glouceſter Town, Deptford, Greenwich, Woolwich, Egg Harbour, and Galloway. The firſt eight lie along the Delaware, and the other two on the ocean. Mulicus river divides this county from Burlington, and is navigable twenty miles for veſſels of ſixty tons. Maurice river riſes here, runs ſoutherly about forty miles through Cumberland county into Delaware bay, is navigable for veſſels of one hundred tons fifteen miles, and for ſhallops ten miles farther. It contains 13,172 inhabitants. There are found in this county quantities of bog iron ore, which is manufactured into pig and bar iron, and hollow ware. Here is alſo a glaſs manufactory. Chief town, Woodbury, nine miles ſouth of Philadelphia.

GLOU'CESTER, a county of the American States, in Virginia, remarkably fertile, and well cultivated, bounded north by Piankitank river, which ſeparates it from Middleſex; eaſt by Matthews county, and Cheſapeak Bay; north-weſt by King and Queen; ſouth and ſouth-weſt by York river, which divides it from York county. It is about fifty-five miles in length, and thirty in breadth, and contains 13,498 inhabitants. The low lands here produce excellent barley, and Indian corn, which is the ſtaple produce of the county.

GLOU'CESTER, or CAPE ANN, a townſhip of the American States, in Eſſex county, Maſſachuſetts, whoſe eaſt point forms the north ſide of the Bay of Maſſachuſetts. It contains 5317 inhabitants, and is divided into five pariſhes, and has beſides a ſociety of Univerſaliſts. It is a poſt-town, and port of entry. The harbour is very open, and acceſſible to large ſhips; and is one of the moſt conſiderable fiſhing towns in the commonwealth. At the harbour are fitted out annually from ſixty to ſeventy bankers; and from Squam and Sandy Bay, two ſmall out-ports, the bay fiſhery is carried on with great ſpirit, and to a large amount. The exports for one year, ending Sept. 30, 1794, amounted in value to 229,613 dollars. Thatcher's iſland, on which are two lights of equal height, lies cloſe to the ſouth-eaſt ſide of the townſhip, which is itſelf joined to the continent by a beach of ſand which is very rarely overflowed by the water. There is a very fine white ſand here fit for making glaſs. The harbour is defended by a battery and citadel, erected in 1795: ſixteen miles north-eaſt by eaſt of Salem, and thirty-four north-eaſt of Boſton.

GLOU'CESTER, a townſhip of the American States, and the largeſt, in Providence county, Rhode Iſland, having Connecticut on the weſt, and Maſſachuſetts on the north; and contains 4025 inhabitants.

GLOU'CESTER, a ſmall town in Glouceſter county, New Jerſey, on the eaſt ſide of Delaware river, three miles below Philadelphia. It was formerly the county town, but has now ſcarcely the appearance of a village.

GLOU'CESTER, a poſt-town of the American States, in Virginia, ſituated in the county of its own name, on a point of land on the north ſide of York River, partly oppoſite York Town, and about ſeventeen miles diſtant.

GLOU'CESTER, in the territory of the Hudſon's Bay company, is ſituated on the north ſide of Muſquacobaſton Lake, one hundred and twenty miles weſt of Oſnaburgh. Lat. 51. 24. N. lon. 86. 59. W.

GLOU'CESTER ISLAND, an iſland in the South Pacific Ocean, about two leagues long, and a mile wide, ſurrounded with rocks, againſt which the ſea beats with great violence. It is inhabited, and the men appeared armed with long pikes or poles. Lat. 19. 15. S. lon. 140. 4. W. Greenwich.

GLOU'CESTER ISLANDS, two iſlands in the South Pacific Ocean. One, lat. 20. 38. S. lon. 146. W. Greenwich. The other, lat. 20. 34. S. lon. 146. 15. W. Greenwich.

GLOU'CESTERSHIRE, an inland county of England, bounded on the north by Worceſterſhire and Warwickſhire; on the eaſt by Oxfordſhire; on the ſouth by Wiltſhire and Somerſetſhire; and on the weſt by Monmouthſhire, the Briſtol Channel, and Herefordſhire. It lies in the province of Canterbury, the dioceſe of its own name, and is included in the Oxford circuit. It contains one thouſand three hundred ſquare miles, or eight hundred and thirty-two thouſand acres, being ſixty-three miles long, forty-ſeven broad, and two hundred and ſixty miles in circumference; compriſing thirty hundreds, and two hundred and eighty pariſhes.

The county is divided into two unequal parts by the Severn, which, entering Glouceſterſhire a little above Tewkeſbury, and joined by the current of the Avon, haſtens to diffuſe fertility over the ſpacious vale through which it flows. The lower part of its weſtern boundary, remarkable for the pictureſque ſcenery of its borders, is formed by the Wye, which, reaching this county a little below Roſs in Herefordſhire, ſeparates it for the reſt of its progreſs from the county of Monmouth. Its ſouth-weſtern extremity is divided from Somerſetſhire by the Lower Avon, which, though unequal to the Warwickſhire Avon in the beauty of its ſtream, runs between more romantic banks, and forces its paſſage to the ſea, through St. Vincent's rocks, below the city of Briſtol, a conſiderable part of which lies in Glouceſterſhire, though, as a county of itſelf, it is governed by its own magiſtrates. The tides from St. George's Channel, meeting with the powerful tides from the Atlantic, enter the mouths of the Severn and its tributary ſtreams with a rapid influx; and, rolling on with a lofty head, received from our earlieſt hiſtorians the name of the *Hydra*.

Thus Glouceſterſhire ſeems naturally divided into three longitudinal ſtripes, or diſtricts, which in many reſpects differ materially from each other. The eaſtern ſtripe, which is much the wideſt, is called the *Cotſwold*. This is a long tract of elevated ground, for the moſt part bleak and bare, yet affording in many places a ſhort fine graſs for paſturage, and a moſt clear and ſalubrious air. The ſides of this long range are extremely beautiful as they ſink into the vale, extending from the hills of Stinchcomb and Nibley in the ſouth, to that of Bredon in the north. The middle ſtripe is the ſpacious and extenſive vale bordering on the Severn, whoſe fertile paſtures maintain a great abundance of fine cattle; and furniſh the kingdom with that excellent cheeſe for which the county is juſtly famous. This vale, communicating with that of Eveſham of more contracted dimenſions, has received, for no aſſignable reaſon, the ſame general title. The weſtern ſtripe, which is by much the ſhorteſt diſtrict, is wholly varied with hill and dale; and is chiefly occupied by the foreſt of Deane, once reckoned the chief ſupport of the Engliſh navy, and which it is ſaid the Spaniſh armada was expreſsly commiſſioned to deſtroy. The foreſt is now thinned of its oak by frequency of felling, and narrowed by increaſe of cultivation; but a few ſolitary deer ſtill continue to run wild in its receſſes.

The ſoil differs much in different parts. On the Cotſwold hills it is in general loamy, with ſtones; the earth ſhallow, ſeldom allowing the plough to enter more than four or five inches, beneath which is generally a kind of limeſtone. In ſome places the land is ſtiff and ſour. About Fairford and Cirenceſter the ſoil is richer and deeper. The farms in general are large; great quantities of ſheep are fed here, formerly cele-

brated for the fineneſs of their wool, and the ſmallneſs of their fleece; and hence the county became ſo celebrious for its manufactures of ſuperfine broad cloth. It is not improbable that the fine-woolled ſheep of Spain might originally have been procured from Cotſwold, ſent over by Richard I. or Edward I. This breed of ſheep has been changed for others of a larger kind, which produce a larger fleece of coarſer wool. The vale about the city of Glouceſter contains excellent meadow and paſture land. Towards Tewkeſbury the ſoil is a ſandy loam, rich and deep, chiefly employed in grazing and dairying. Mines of coal abound in Kingſwood and the neighbourhood of Briſtol, and mines of iron in the foreſt of Deane.

The rivers of Glouceſterſhire are the Severn, Wye, Coln, Chern, Stroud, eminent for dying ſcarlet, Iſis, Avon, Frome, Swiliate, Caron, Windruſh, Evendole, Leven, Lache, Iſbourne, Chilt, Badgworth, Evelm, Berkeley, and Trim. In the river Severn ſtand the iſles of Condicote, and the Alney. The moſt noted places are Kingroad and the Pill, St. Vincent's Rocks, Cotſwold Hills, four hundred and fifty yards above the Severn, Deane and Kingſwood foreſts, Mycklewood chace, and Croſs wood. Its product is coal and iron, cattle, ſheep, excellent wool, corn, timber, ſalmon, and other river fiſh. Its manufactures, beſides its excellent cheeſe, are ſtockings, muſtard balls, men's hats, leather, pins, paper, iron ware, tinned plates, braſs, ſteel, &c. But the chief trade of this county is its broad-cloth manufactory, which gives employment to many thouſands of people, and is a ſource of national wealth of the higheſt importance.—The chief iron-works in the county are at Flaxley, Lidney, Lidbrook, and Redbrook, all of which are contiguous to the foreſt of Deane. A capital ſteel and iron wire-work is carried on at Froombridge, eight miles from Glouceſter, on the Briſtol road; and at Framilode, in the ſame neighbourhood, is a tin-plate manufactory. Great quantities of cider are made in the villages on the banks of the Severn, a kind of which, called Styre cider, is almoſt peculiar to the weſtern banks of that river.

Beſides the city of Glouceſter, the principal towns are Cirenceſter, Tewkeſbury, Berkeley, Camden, Durſley, Newnham, Marſhfield, Deane, Painſwick, Tetbury, Cheltenham, Hampton or Minching-Hampton, Fairford, Sudbury, Wotton-Underedge, Lechlade, Wickware, Winchcomb, Stroud, Colford, Newent, Stow on the Wold, Morton, Northleach, Thornbury, and Stanley. There are mineral waters of well-known celebrity at Cheltenham; at Glouceſter; at Barrow and Moreden near Bodington; at Aſh-church near Tewkeſbury; at Dumbleton near Winchcomb; at Eaſington near Durſley; beſides thoſe of Briſtol Wells near Clifton. A fine ſpring alſo riſes out of a rock in the foreſt of Deane, which runs through a conſiderable part of it; and after ſupplying ſeveral mills, and three iron forges, empties itſelf into the river Severn at Weſtbury. This ſpring, near its ſource, having paſſed through a ſmall grove, falls into a ſquare baſon, made to receive it, about five feet deep, and large enough for a perſon to bathe in, with ſteps on one ſide. The baſon is called St. Anthony's well; and the water, which is extremely cold, is much celebrated in all the adjacent country, as a certain remedy for cutaneous diſorders of every kind. Ralph Bigland, eſq. late garter principal king of arms, in his Hiſtory of Glouceſterſhire lately publiſhed, ſays that "this mineral ſpring has been known to cure a cutaneous leproſy, even by a few times bathing." Eight members are returned to the Britiſh parliament, viz. for the county, Glouceſter, Cirenceſter, and Tewkeſbury, two each.

GLOVE, *ſ.* [gloꝛe, Sax. *klaffue*, Dan. to divide.] Cover of the hand.—Stat. 6 Geo. III. c. 19, reſtrains the importation and ſale of foreign gloves and mitts; and one ſection of the ſtat. 25 Geo. III. c. 55. alſo reſtrains the importation of foreign leather not completely made into gloves, but cut into ſhapes, or tranks. By this latter act a ſtamp duty was impoſed on gloves ſold, which is now repealed.

To GLOVE, *v. a.* To cover as with a glove:

A ſcaly gauntlet now, with joints of ſteel,
Muſt *glove* this hand. *Shakeſpeare.*

GLOVE-SILVER, *ſ.* Money cuſtomarily given to ſervants to buy them gloves, as an encouragement for their labours.—*Glove-money* has been alſo applied to extraordinary rewards given to officers of courts, &c. It is now given on the circuits, by the barriſters, and by juſtices of the peace, when called over in court, to the judges' crier.

GLOV'ER, *ſ.* One whoſe trade is to make or ſell gloves.—Does he not wear a great round beard, like a *glover's* paring knife? *Shakeſpeare.*

GLOV'ERS' COMPANY, one of the chartered companies of the city of London. They were incorporated a maſter, four wardens, and aſſiſtants not exceeding twenty-four; and the livery are one hundred and twenty. Their arms party per feſs ſable and argent, a pale counterchanged on every piece of the firſt, a ram ſpringant of the ſecond. Their hall is in Beech-lane.

GLOV'ER (Richard), an Engliſh poet, the ſon of a Hamburgh merchant in London, born in 1712. He received a claſſical education at Cheam; and though it was followed by no academical ſtudies, his mind became permanently imbued with a taſte for the learning of antiquity. He had alſo imbibed an attachment to ſcience, as appeared from a copy of verſes "To the Memory of Sir Iſaac Newton," written when he was only ſixteen, which had merit enough to be prefixed to the View of Sir Iſaac Newton's Philoſophy, publiſhed by Dr. Pemberton in 1728. Theſe attachments, however, did not prevent him from engaging in commercial purſuits, and he became eminent in the mercantile walk to which his father introduced him. Yet he was at the ſame time known to his intimates as a votary of elegant literature; and Green, in his poem of the Spleen, written before 1737, alludes to Glover as a youth deſtined to ſhine in the higher departments of poetry. In 1737 he married a lady with a handſome fortune; and in the ſame year he publiſhed his epic poem of Leonidas. This was a period particularly favourable to thoſe writings which were formed upon high notions of liberty. While the crown and miniſtry were obliged from peculiar circumſtances to favour popular principles of government, the oppoſition, compoſed of an union of parties, headed by Frederic prince of Wales, made uſe of the ſame principles to promote a jealouſy of exiſting power. They likewiſe endeavoured to combat the pacific policy of Walpole, by exciting a martial ſpirit in the people, and inculcating the loftieſt ideas of the national rights. Glover had already formed connections with this party; and his poem, founded upon the patriotic ſtruggles of free Greece againſt Aſiatic deſpotiſm, was admirably calculated to ſerve a generous cauſe. It therefore received the higheſt commendations from Lyttleton and other writers on that ſide, and was ſoon puſhed through ſeveral editions. Leonidas is certainly no mean performance. It abounds in noble ſentiments, and is conſiderably varied by incident and deſcription.

His poem of London, or the Progreſs of Commerce, publiſhed in 1739, is ſcarcely equal to what the ſubject might afford, being cramped by the temporary purpoſe of rouſing a ſpirit of hoſtility againſt the Spaniards. This end, together with that of throwing reproach on the miniſtry, was more effectually anſwered by his ballad of Hoſier's Ghoſt, publiſhed the ſame year, which became very popular, and is ſtill conſpicuous among the national ſongs. As Glover poſſeſſed talents not only

Neele, sculp. Strand.

GLOCESTERSHIRE.

London, Published as the Act directs, August 10th 1805 by J. Wilkes.

only for the productions of the closet, but for public life, we find him at this period entering warmly into the politics of the city. Such was the credit he gained for the extent of his information, that he was appointed by the London merchants to conduct an application to parliament, complaining of the neglect with which their trade had been treated. The speech which he pronounced at the bar of the house of commons on this subject in January, 1742, was much admired, and appeared from the press. Yet, in 1751, he was an unsuccessful candidate for the office of chamberlain of the city of London. In his retirement he wrote the tragedy of Boadicea, acted at Drury-lane in 1753. It ran its nine nights, but is ranked among those numerous performances of the kind which are better fitted for the closet than the stage. In 1761 he published Medea, a tragedy imitated from those of Euripides and Seneca; which was acted with applause. He now returned into public life, and sat as member for Weymouth in the parliament of 1761. Advancing years at length admonished him to retire; and in the bosom of domestic life, which he adorned and dignified by his virtues and accomplishments, he died in November, 1785, at the age of seventy-three. In the last edition of his Leonidas, he introduced great additions, and had extended the work from nine books to twelve; but he was not able to revive its popularity. Still attached to the theme, he composed another poem as its sequel, entitled, The Athenaid, relating in thirty books the series of wars between the Greeks and Persians, which, with poetical licence, he regards as vengeance for the death of Leonidas. This was printed in 1788, in 3 vols. 12mo. but seems totally to have failed in engaging the public notice. He wrote a sequel to his Medea; but it required such a magnificence of decoration, that it was never ventured at upon the stage.

GLOV'ER, a township of the American States, in Vermont, in Orleans county, north-east of Craftsborough.

GLOV'ERESS, *f.* A woman employed in making or selling gloves.

GLOV'ERS-STITCH, *f.* In surgery, a particular method of sewing up a wound; being the upward stitch used in making gloves.

To GLOUT, *v. n.* To pout; to look sullen. *A low word:*

Glouting with sullen spight, the fury shook
Her clotted locks, and blasted with each look. *Garth.*

To GLOW, *v. n.* [ȝlopan, Sax. *gloeyen*, Dut.] To be heated so as to shine without flame:

Not all parts like, but all alike inform'd,
With radiant light, as *glowing* iron with fire. *Milton.*

To burn with vehement heat:

How op'ning heav'ns their happy regions show,
And yawning gulphs with flaming vengeance *glow. Smith.*

To feel heat of body.—The cord slides swiftly through his *glowing* hands. *Gay.*—To exhibit a strong bright colour.—Clearer stars *glow* round the frozen pole. *Pope.*

From the mingled strength of shade and light,
A new creation rises to my sight;
Such heav'nly figures from his pencil flow,
So warm with life his blended colours *glow. Addison.*

To feel passion of mind, or activity of fancy:

Let the gay conscience of a life well spent
Calm ev'ry thought, inspirit ev'ry grace,
Glow in thy heart, and smile upon thy face. *Pope.*

To rage or burn as a passion:

A fire which every windy passion blows;
With pride it mounts, and with revenge it *glows. Dryden.*

To GLOW, *v. a.* To make hot so as to shine. *Not in use.*

On each side her
Stood pretty dimpled boys, like smiling Cupids,
With divers colour'd fans, whose wind did seem
To *glow* the delicate cheeks which they did cool.
Shakespeare.

GLOW, *f.* Shining heat. Vehemence of passion. Brightness or vividness of colour.—The red *glow* of scorn and proud disdain. *Shakespeare.*

A waving *glow* his bloomy beds display,
Blushing in bright diversities of day. *Pope.*

GLOW'-WORM, *f.* A small creeping grub with a luminous tail; for the natural history of which see the article LAMPYRIS.—A great light drowneth a smaller that it cannot be seen; as the sun that of a *glow-worm. Bacon.*

The man, who first upon the ground
A *glow-worm* spy'd, supposing he had found
A moving diamond, a breathing stone;
For life it had, and like those jewels shone:
He held it dear, 'till by the springing day
Inform'd, he threw the worthless worm away. *Waller.*

GLOXIN'IA, *f.* [so named by l'Heritier, in memory of *B. P. Gloxin*, of Colmar, author of *Observationes Botanicæ*, 1785.] In botany, a genus of the class didynamia, order angiospermia, natural order of personatæ, (campanulaceæ, *Juss.*) The generic characters are—Calyx: perianthium superior, five-leaved; leaflets equal, lanceolate, serrulate at the tip, the three upper ones nerved, the two lower bent down with the nectary, permanent. Corolla: monopetalous, irregularly campanulate; tube scarcely any; border oblique, five-cleft, segments roundish, the four upper spreading and entire, the lowest straight, concave, toothed. Stamina: filaments four, with the rudiment of a fifth, two scarcely shorter, inserted into the receptacle, fastened to the lower margin of the corolla, sickled, pubescent, converging laterally above; antheræ ovate, two-celled, peltate, united within the opening of the corolla. Pistillum: germ inferior, turbinate, striated; style filiform, the length of the stamens; stigma capitate, the length of the antheræ. Pericarpium: capsule one-celled (or half-celled); receptacles two, opposite, two-parted, fastened to the sides of the capsule by the partition. Seeds: very numerous, inserted into the receptacles.—*Essential Character.* Calyx superior, five-leaved; corolla bell-shaped, with the border oblique; filaments with the rudiment of a fifth, inserted into the receptacle.

Gloxinia maculata, or spotted gloxinia, the only species. Root perennial, thick, fleshy, divided into knots, which are scaly, somewhat like those of tooth-wort. Stems several, about a foot high, thick, succulent, purplish. Leaves oblong, thick, sessile, serrate, rough on their upper side, where they are of a dark green, but their under side is purplish. Stem terminated by a short spike of blue flowers. Native of South America, where it was discovered about Carthagena by Mr. Robert Millar, who sent the seeds to Europe. Mr. Philip Miller cultivated it in 1739.

Propagation and Culture.—This plant must be constantly preserved in the stove, and plunged into the bark-bed. During the winter season, much water will rot the roots. In the middle of March, just before it begins to shoot, the roots may be parted, and transplanted into middle-sized pots, filled with rich light earth, and plunged into the bark-bed, which should then be renewed with fresh tan. When the plants come up, they must be frequently refreshed with water in small quantities; and, as the season becomes warmer, a large share of fresh air should be admitted. They should not be placed where they are over-hung or shaded by other plants; nor should they be shifted or transplanted when they are in leaf, for that will prevent their flowering. Since this plant increases very fast by the roots, there is no necessity for using other methods to propagate it; otherwise the shoots of the young stalks will take root, if they are planted in pots

pots filled with light earth, and plunged into a hot-bed, during any of the ſummer months.

To GLOZE, *v. n.* [gleran, Sax.] To flatter; to wheedle; to inſinuate; to fawn:

So *gloz'd* the tempter, and his proem tun'd:
Into the heart of Eve his words made way. *Milton.*

Now for a *glozing* ſpeech,
Fair proteſtations, ſpecious marks of friendſhip. *Philips.*

To comment. This ſhould be *gloſs*:

Which Salique land the French unjuſtly *gloze*
To be the realm of France. *Shakeſpeare.*

GLOZE, *ſ.* Flattery; inſinuation.—Now to plain dealing; lay theſe *glozes* by. *Shakeſpeare.*—Specious ſhow; gloſs. *Not uſed.*

Precious couches full oft are ſhaked with a fever;
If then a bodily evil in a bodily *gloze* be not hidden,
Shall ſuch morning dews be an eaſe to the heat of a lover's fire? *Sidney.*

GLO'ZER, *ſ.* A flatterer.

GLUBOKAI'A, a town of Ruſſia, in the government of Kolivan: ſeventy-two miles eaſt of Semipolatnoi.

GLUCHOV', a town of Ruſſia, in the government of Novgorod Sieverſkoi: forty miles eaſt-ſouth-eaſt of Novgorod Sieverſkoi.

GLU'CINE, *ſ.* in mineralogy, a new ſpecies of earth lately diſcovered by profeſſor Vauquelin, for which ſee MINERALOGY.

GLUCK (Chriſtopher), a very eminent muſical compoſer, born in 1714, in the Upper Palatinate, on the borders of Bohemia. At an early age he learned the rudiments of muſic at Prague, and acquired a facility in playing upon various inſtruments. He then made a tour to Italy, and brought out his firſt opera at Milan. In 1745 he paid a viſit to England, where the opera-houſe, which had been ſhut on account of the rebellion, was re-opened at the beginning of 1746, with his *Caduta de' Giganti*. He produced ſeveral other pieces in this country, which he at length quitted for Germany, and fixed his principal reſidence at Vienna. He there attained a reputation which placed him nearly at the head of his profeſſion, though his ſtyle was peculiar, and did not ſuit all taſtes. Gluck aimed at ſimplifying muſic; and (ſays Dr. Burney) with unbounded invention and powers for creating capricious difficulties, and decking his melodies with meretricious ornaments, he tries all he can to keep his muſe chaſte and ſober; his three operas of *Orfeo*, *Alceſte*, and *Paride*, are proofs of this. An acquaintance which he formed at Vienna with the French poet Bailli de Roulet, for whom he ſet to muſic his opera of *Iphigenie en Aulide*, drew him to Paris in 1774, where his arrival proved a remarkable era in the muſical annals of that capital. After furniſhing the French opera with a number of compoſitions, his infirmities warned him to retire, and he ended his days at Vienna, being carried off by a fit of apoplexy in November 1787. He was a writer as well as a compoſer. His Letters on Muſic were publiſhed in the Mercure de France and the Gazette de Literature; and, together with the Dedications and Prefaces to his works, were publiſhed collectively at Paris in 1781.

GLUCK'SBURG, a town of Denmark, with a fortreſs, in the duchy of Sleſwic: three leagues eaſt of Flenſburg.

GLUCK'STADT, a ſea-port town of Germany, in the circle of Lower Saxony, and duchy of Holſtein, belonging to Denmark, ſituated on the Elbe, which at this place receives a ſmall river, called the *Rhine*. Gluckſtadt is regular and well built. The market-place looks into the main ſtreets. The adjacent country being hollow and marſhy, a ſtone cauſeway of near three quarters of a mile in length has been carried along it from Krempe. On the land ſide the town may be laid under water. There being no ſprings here, the greateſt part of the houſes have ciſterns for the receiving of rain, and thoſe which are without ſuch conveniences are obliged to uſe the harbour water, or that of the new moat. Storms and inundations being frequent in theſe parts, the inhabitants have not been negligent in making proper fences. This town is the ſeat of the king's regency, and the offices and courts connected with it. Both the garriſon and palace congregation frequent the town church. Here is alſo a free grammar-ſchool. The Calviniſts are permitted a church, the Roman-catholics a chapel, and the Jews a ſynagogue. In 1738, a commercial college was inſtituted here by Chriſtian VI. it being a place of ſome trade; and in 1750, Frederic V. eſtabliſhed an office for keeping the harbour in good condition. Adjoining to this harbour is a baſon for the reception of veſſels. Gluckſtadt was built in 1620, by permiſſion of Chriſtian IV. in a waſte called the *Wilderneſs*, who, in the patent granted to it, gave orders that it ſhould be named *Gluckſtadt*, or the Fortunate Town, conferring on it at the ſame time many cuſtoms, rights, and privileges, as enjoyed by the town of Wilſter, and ſoon after it was inveſted with the Lubec and Hamburgh rights. The palace of Gluckſburg here, which was erected by the ſame king, has been long ſince pulled down. The town has been ſeveral times beſieged, particularly in 1628, by the imperialiſts, but has never been taken. The king of Denmark attempted to oblige ſhips paſſing up the Elbe to pay toll here, but the ſtrong reſiſtance which was made to it by all the powers of Europe occaſioned it to be given up: twenty-eight miles north-weſt of Hamburgh. Lat. 53. 54. N. lon. 26. 39. E. Ferro.

GLUE, *ſ.* [*glu*, Fr. *gluten*, Lat. *glud*, Welſh.] An inſpiſſated jelly made from the parings of hides and other offals, by boiling them in water, ſtraining through a wicker baſket, ſuffering the impurities to ſubſide, and then boiling it a ſecond time. In this ſtate it is poured into flat frames or moulds; then cut into ſquare pieces when congealed, and afterwards dried in a coarſe net. It is ſaid to improve by age; and that glue is reckoned the beſt which ſwells conſiderably without melting by three or four days infuſion in cold water, and recovers its former dimenſions by drying. A very hard and permanent glue is alſo to be obtained by boiling down animal bones, of which ſeveral intereſting experiments have been made by M. Pelletier. See the article CHEMISTRY, vol. iv. p. 370.

A curious Glue for domeſtic uſes.—Take an ounce of iſinglaſs, beat it to ſhreds, and put it into a pint of brandy; when gradually diſſolved, ſtrain the ſolution through a piece of fine muſlin, and the glue will be obtained, which is to be kept in a bottle cloſely ſtopped. When uſed in the manner of common glue, it joins together the parts of wood as ſtrong or ſtronger than the wood itſelf. It is alſo remarkable that, if ſaw-duſt, or powdered wood, be made into a ball with this glue, the ball will prove ſolid and elaſtic, ſo that it may be turned, and uſed as a bowl, without breaking. Another uſe of this glue is, that of its ſerving admirably well for taking off impreſſions of medals or coins: thus, if a little of it, when melted, be poured thinly on a new guinea, ſo as to cover the whole ſurface of the piece, and ſuffered ſo to remain a day or two, till it become thoroughly dry, it will appear hard and tranſparent like a piece of Muſcovy glaſs, with the impreſſion of the guinea in intaglio on one ſide, and in relievo on the other. This glue dries into a very ſtrong, tough, and tranſparent, ſubſtance; not eaſily damaged by any thing but aqueous moiſture, which would diſſolve it. This laſt reaſon renders it unfit for any uſe where it would be much expoſed to wet or damp air. Common glue, diſſolved with linſeed oil, is of all others the beſt calculated to ſtand the weather; a ſecret perhaps little known by thoſe who would be moſt benefited by its adoption.

To GLUE, *v. a.* To join with a viſcous cement.—

Whoſo teacheth a fool is as one that *glueth* a potſherd together. *Eccleſ.* xxii. 7.—Moſt wounds, if kept clean, and from the air, the fleſh will *glue* together with its own native balm. *Derham.*—To hold together.—The parts of all homogeneal hard bodies ſtick together very ſtrongly; and for explaining how this may be, ſome tell us their bodies are *glued* together by reſt. *Newton.*—To join; to unite; to inviſcate.—Intemperance, ſenſuality, and fleſhly luſts, do debaſe men's minds, and clog their ſpirits; ſink us down into ſenſe, and *glue* us to thoſe low and inferior things. *Tillotſon.*

I hear thee, view thee, gaze o'er all thy charms,
And round thy phantom *glue* my claſping arms. *Pope.*

GLU'E-BOILER, *ſ.* One whoſe trade is to make glue.

GLU'ER, *ſ.* One who cements with glue.

GLU'EY, *adj.* Viſcous; tenacious; glutinous.—It is called balſamic mixture, becauſe it is a *gluey* ſpumous matter. *Harvey.*

GLU'ING, *ſ.* The act of uniting with glue; the juncture formed by glue.

GLU'ISH, *adj.* Clammy; viſcous, like glue. *Scott.*

GLUM, *adj.* [a low word formed by corrupting *gloom.*] Sullen; ſtubbornly grave.

GLUME, *ſ.* [*gluma*, Lat. from *glubo*, to ſkin.] Huſk or chaff. In botany, it means the calyx or corolla of corn or graſſes, formed of valves which embrace the ſeed, and which is the chaff after threſhing. See the article BOTANY, vol. iii. p. 246 and 293.

GLUM'MEN, a town of Pruſſia, in the province of Nantangen: twenty-four miles ſouth of Konigſberg.

GLU'MOUS, *adj.* [*glumoſus*, Lat. from *gluma*, chaff.] In botany, it is applied to an aggregate flower whoſe baſe is provided with a common glume or huſk. See BOTANY, vol. iii. p. 252 and 298.

GLU'RENTZ, or GLURNS, a town of Germany, in the county of Tyrol, ſituated on the river Adige, built in 1362, and ſurrounded with walls in 1530: thirty-ſix miles weſt of Brixen, and thirteen weſt of Tyrol. Lat. 46. 44. N. lon. 28. 9. E. Ferro.

To GLUT, *v. a.* [*engloutir*, Fr. *glutio*, Lat. to ſwallow; γλυζω, Gr.] To ſwallow; to devour:

'Till cramm'd, and gorg'd, nigh burſt
With ſuck'd and *glutted* offal. *Milton.*

To cloy; to fill beyond ſufficiency; to ſate; to diſguſt.—The ambaſſador, making his oration, did ſo magnify the king and queen, as was enough to *glut* the hearers. *Bacon.*

The fickle ear ſoon *glutted* with the ſound,
Condemn'd eternal changes to purſue,
Tir'd with the laſt, and eager of the new. *Pope.*

To feaſt or delight even to ſatiety.—With death's carcaſe *glut* the grave. *Milton.*

A ſylvan ſcene, which, riſing by degrees,
Leads up the eye below, nor *gluts* the ſight
With one full proſpect; but invites by many. *Dryden.*

To overfill; to load.—He attributes the ill ſucceſs of either party to their *glutting* the market, and retailing too much of a bad commodity at once. *Arbuthnot.*—To ſaturate.—The menſtruum, being already *glutted*, could not act powerfully enough to diſſolve it. *Boyle.*

GLUT, *ſ.* That which is gorged or ſwallowed:

Diſgorged foul
Their deviliſh *glut*, chain'd thunderbolts, and hail
Of iron globes. *Milton.*

Plenty even to loathing and fatiety.—Let him but ſet the one in balance againſt the other, and he ſhall find himſelf miſerable, even in the very *glut* of his delights. *L'Eſtrange.*

So death
Shall be deceiv'd his *glut*; and with us two
Be forc'd to ſatisfy his rav'nous maw. *Milton.*

More than enough; overmuch.—If you pour a *glut* of water upon a bottle, it receives little of it. *Ben Jonſon.*—Any thing that fills up a paſſage.—The water ſome ſuppoſe to paſs from the bottom of the ſea to the heads of ſprings, until they, by ſome *glut*, ſtop, arreſted in their paſſage. *Woodward.*

GLU'TA, *ſ.* In botany, a genus of the claſs pentandria, order monogynia. The generic characters are—Calyx: perianthium one-leafed, very thinly membranaceous, bell-ſhaped, obtuſe, ſhorter than the germ, deciduous. Corolla: petals five, lanceolate, longer than the calyx, ſpreading at the top, but below as far as the middle glued to the column of the germ. Stamina: filaments five, briſtle-ſhaped, of a middling length, inſerted into the tip of the column; antheræ verſatile, roundiſh. Piſtillum: germ obovate, ſitting on an oblong column; ſtyle filiform, of a middling length; ſtigma ſimple.—*Eſſential Character.* Calyx bell-ſhaped, deciduous; petals five, glued at the bottom to the column of the germ; filaments inſerted into the tip of the column; germ ſitting on an oblong column.

Gluta benghas, a ſolitary ſpecies. It is a tree, with branches leafy at the end. Leaves alternate, ſeſſile, broad-lanceolate, about a foot in length, veined, naked; on the flowering branches only a hand long, more obtuſe and crowded. Panicle terminating, peduncled, with flowers the ſize of thoſe of the cabbage. Fructification ſingular; and, if we were to ſuppoſe the petals to be ſeparated from the column, the ſituation of the ſtamens would be as in Paſſiflora. Native of Java. Compare it with Helicteres, Stercules, &c. and obſerve whether the fruit be one-celled, as in Paſſiflora, or many-celled, as in Helicteres, &c.

GLUTÆ'US, *ſ.* [from γλετος, Gr. the buttocks.] Belonging to the buttocks. The name of the muſcles whoſe office is to extend the thigh. See ANATOMY.

GLU'TEN, *ſ.* [Latin.] The glue of vegetables.—See the article CHEMISTRY, vol. iv. p. 342.

To GLU'TINATE, *v. n.* [*glutinatum*, Lat.] To glue or ſtick together.

GLUTINA'TION, *ſ.* A glueing together.

GLU'TINATIVE, *adj.* [*glutineux*, Fr. of *glutinoſus*, Lat.] That ſticks like glue; clammy.

GLUTINOS'ITY, *ſ.* Glueineſs.

GLU'TINOUS, *adj.* [*glutineux*, Fr. from *gluten*, Lat.] Gluey; viſcous; tenacious.—Nouriſhment too viſcid and *glutinous* to be ſubdued by the vital force. *Arbuthnot on Aliments.*

GLU'TINOUSNESS, *ſ.* Viſcoſity; tenacity.—There is a reſiſtance in fluids, which may ariſe from their elaſticity, *glutinouſneſs*, and the friction of their parts. *Cheyne.*

GLUT'TON, *ſ.* [*glouton*, Fr. from *glutio*, Lat. to ſwallow.] One who indulges himſelf too much in eating.—The Chineſe eat horſe-fleſh at this day, and ſome *gluttons* have cats-fleſh baked. *Bacon.*—One eager of any thing to exceſs:

The reſt bring home in ſtate the happy pair
To that laſt ſcene of bliſs, and leave them there;
All thoſe free joys inſatiably to prove,
With which rich beauty feaſts the *glutton* love. *Cowley.*

To GLUT'TONIZE, *v. n.* To play the glutton; to be luxurious.

GLUT'TONOUS, *adj.* Given to exceſſive feeding; delighted overmuch with food:

Well obſerve
The rule of not too much, by temperance taught
In what thou eat'ſt and drink'ſt; ſeeking from thence
Due nouriſhment, no *gluttonous* delight. *Milton.*

GLUT'TONOUSLY, *adv.* With the voracity of a glutton.

GLUT'TONY, *ſ.* [*gloutonie*, Fr. from *glutton.*] Exceſs of eating; luxury of the table.—*Gluttony*, a vice in a great fortune, a curſe in a ſmall. *Holiday.*

Well may they fear ſome miſerable end,
Whom *gluttony* and want at once attend. *Dryden.*

There is a morbid ſort of gluttony, called *fames canina*, "dog-like appetite," which ſometimes occurs, and renders the perſon ſeized with it an object of pity: (ſee BULIMIA, vol. iii. p. 498.)—But profeſſed gluttons may be reckoned amongſt the monſters of nature. Some people think our James I. was in the right, when a man being preſented to him that could eat a whole ſheep at one meal, he aſked "What he could then do more than another man?" and being anſwered "He could not do ſo much," ſaid, "Hang him then; for it is unfit that any ſubject ſhould live that eats ſo much as twenty men, and cannot do ſo much as one."

The emperor Clodius Albinus would devour more apples at once than a buſhel would hold. He would eat five hundred figs at his breakfaſt, one hundred peaches, ten melons, twenty pounds weight of grapes, and four hundred oyſters. "Pray God, (ſaid Lipſius,) to keep ſuch a curſe from the earth."—Our Daniſh king Hardiknute was ſo great a glutton, that an hiſtorian calls him *bocca de porco*, "ſwine's-mouth." His tables were covered four times a-day with the moſt coſtly viands, upon which he gorged: and as he lived he died; for, eating voraciouſly at a wedding-banquet at Lambeth, he fell down dead. His death was ſo welcome to his ſubjects, that they annually celebrated the day with the feſtival called *Hock-tide*.

We are told by Fuller, that Nicholas Wood, of Harriſon in Kent, ate a whole ſheep at one meal, raw; at another time, thirty dozen of pigeons. At ſir William Sidley's, in the ſame county, he ate as much victuals as would have ſufficed thirty men. At lord Wotton's manſion-houſe in Kent, he devoured at one dinner eighty-four rabbits, which, by computation, at half a rabbit a man, would have ſerved one hundred and ſixty-eight men. He ate at his breakfaſt eighteen yards of black-pudding. He devoured a hog at one ſitting; and after it, being accommodated with fruit, he ate three pecks of damoſins.—A barriſter, whoſe name was Mallet, in the reign of Charles I. ate at one time a whole ordinary provided in Weſtminſter for thirty men at twelve-pence a-piece. His fortune not being ſufficient to ſupply him with better ſort of food, he fed generally on offals, ox-livers, hearts, &c. He lived to almoſt ſixty years of age, and for the ſeven laſt years of his life ate as moderately as other men.

GLU'Y. See GLUEY.

GLY'CAS (Michael), a Greek hiſtorian, ſuppoſed to have lived in the twelfth or thirteenth century; but as there are letters in his name addreſſed to the emperor Conſtantine Paleologus, he is referred by Caſſimer Oudin to the fifteenth century. He was a native of Byzantium, but ſpent great part of his life in Sicily. It is not known what was his condition, but he appears to have been acquainted with theology, grammar, hiſtory civil and eccleſiaſtical, and the other ſciences; and the letters addreſſed to him by prelates, doctors, &c. ſhew that he ſtood high in public reputation. He is principally known by his Annals, in four parts, containing the hiſtory of the world from the creation to the birth of Chriſt, and that of the Byzantine emperors down to the death of Alexius Comnenus in 1118. Father Labbe gave an edition of the Annals of Glycas, Greek and Latin, folio, Paris, 1660, with notes; the tranſlation is by Leunclavius, but corrected by the editor. Meurſius publiſhed ſeparately the third part of the Annals, with a verſion and ſcholia, but erroneouſly attributed to Theodore Metochites. Several letters of Glycas have alſo been publiſhed in different collections.

GLY'CINE, *ſ.* [from γλυκυς, Gr. ſweet.] In botany, a genus of the claſs diadelphia, order decandria, natural order of papilionaceæ, or leguminoſæ. The generic characters are—Calyx: perianthium one-leafed, compreſſed; mouth two-lipped; upper lip emarginate, obtuſe; lower longer, trifid, acute; the middle tooth more produced. Corolla: papilionaceous; banner obcordate, the ſides bent down, the back gibbous, the tip emarginate, ſtraight, repelled, from the keel; wings oblong, towards the tip ovate, ſmall, bent downwards; keel linear, ſickle-ſhaped, bent upwards, at the tip preſſing the banner upwards, obtuſe, towards the tip broader. Stamina: filaments diadelphous, (ſimple and nine-cleft) only a little divided at the tip, rolled back; antheræ ſimple. Piſtillum: germ oblong; ſtyle cylindric, rolled back in a ſpiral; ſtigma obtuſe. Pericarpium: legume oblong. Seeds: kidney-form.—*Eſſential Character.* Calyx, two-lipped; corolla, the keel turning back the banner at the tip.

Species. 1. Glycine ſubterranea, or procumbent glycine: leaves ternate, radical; ſtalks procumbent, flexuoſe; peduncles two-flowered. Root annual; ſtalks ſeveral, a ſpan in length, very rigid, cloſe to the ground, or deſcending to it, round, hairy, unbranched; leaves alternate, upright, petioled; leaflets ſpreading, petioled, oblong, quite entire, emarginate, ſmooth, veined, flat, nearly equal; flowers upright, the ſize of thoſe in Ervum tetraſpermum, and pale yellow; legume lens-ſhaped, ſmooth, containing one round ſeed. As ſoon as it is out of flower the peduncle perforates the earth, as in Trifolium ſubterraneum and Arachis hypogæa, and the ſeeds ripen under ground. It is a native of Braſil and Surinam, whence it was brought in the year 1762 by Dahlberg, and flowered in the bark-ſtove in the botanic garden at Upſal, but did not ripen its ſeed there. It is common on the eaſtern coaſt of Africa, the ſeeds which were brought thence by Loureiro grew, bore flowers and fruit for two years in Portugal, but the third year did not produce any ſeed. In Surinam it is called *gobbe-gobbe*, and is planted there in a ſandy ſoil with the addition of a little clay. It bears abundance of fruit, which is a welcome repaſt to the inhabitants, boiled whilſt yet unripe, like peaſe.

2. Glycine monoica, or pale-flowered glycine: leaves ternate, almoſt naked; ſtalks hairy, racemes pendulous, fruit-bearing flowers apetalous. Stalk grey, with reverſed hairs; flowers like thoſe of Vicia cracca, with the banner pale violet, the wings and keel white; they have ſtamens and piſtils, but the former being effete, they bear no fruit; the lower peduncles are longer, hanging down, and one-flowered; this flower has the rudiment of a calyx and piſtil, but no corolla; it bears a legume containing one or two ſeeds. Here, therefore, the laws of fructification are the ſame as in Viola mirabilis. This alſo perfects the fruit under ground, like Lathyrus ſubterraneus. Native of North America and Japan. It flowers here in September.

3. Glycine debilis, or hairy glycine: leaves ternate; leaflets oval, hairy underneath; legumes ſubſolitary, linear, many-ſeeded; ſtyle permanent, upright. Root biennial. Native of the Eaſt Indies, where it was found by John Gerard Koenig, M.D. It flowers in June and July.

4. Glycine caribæn, or trailing glycine: leaves ternate, ſubvilloſe; leaflets rhomb-ſhaped; racemes patulous; legumes hirſute; ſtalk ſhrubby, twining. Stems aſh-coloured, the thickneſs of a quill, ſmooth; the younger branches green and herbaceous. Native of the Weſt Indies. It was cultivated before 1742, by Robert James lord Petre; and flowers in September and October.

5. Glycine triloba, or three-lobed glycine: leaves ternate; leaflets lobed; ſtalk proſtrate; peduncles two-flowered. The whole plant is proſtrate, and does not climb; root annual. The flowers are yellow, ſmall, and generally two together. Native of the Eaſt Indies. It is probably a Phaſeolus.

6. Glycine villoſa, or villoſe glycine: leaves ternate, three-lobed, villoſe; racemes axillary. Stem filiform, angular, twining, flexuoſe, tomentoſe, as is alſo the whole plant. Native of Japan.

7. Gly-

7. Glycine Javanica, or Java glycine: leaves ternate; ſtalk villoſe; petioles rough-haired; bractes lanceolate, minute. Stem twining, as in Phaſeolus, with yellow reflex hairs ſcattered over it; leaves of Phaſeolus; peduncles the length of the leaves, terminated by an ovate-oblong cloſe ſpike of nodding violet-coloured flowers, with very minute bractes between them. Native of the Eaſt Indies, and near Nagaſaki in Japan, where it is called *fajo mame*, and flowers in September and October.

8. Glycine comoſa, or bearded glycine: leaves ternate, hirſute; racemes lateral. This riſes from two to three feet high, with ſlender herbaceous ſtalks; flowers ſmall, of a fine blue colour; ſeeds with purple ſpots. Native of Virginia, in moiſt ſhady places. It flowers here in June; and is ſometimes ſucceeded by ſeeds, which ripen in Auguſt.

9. Glycine phaſeoloides, or phaſeolus glycine: leaves ternate, villoſe underneath; racemes terminating. Stem twining to a conſiderable height, and bearing many flowers towards the top. The legumes have two ſeeds, and are contracted in the middle. Native of Jamaica and Domingo.

10. Glycine tomentoſa, or downy glycine: leaves ternate, tomentoſe; racemes very ſhort, axillary; legumes two-ſeeded. Root perennial; ſtalks twining, from a foot and a half to four feet in height, three-cornered, hairy; a ſingle leaf comes out at each joint, on a foot-ſtalk; leaflets roundiſh, wrinkled, ſet with ſlender hairs, the under ſurface paler, the middle leaflet ſomewhat wider than the lateral ones. From the boſom of the leaves three or four ſmall flowers come out, on very ſhort peduncles, of a pale yellow colour; legumes the form and ſize of the lentil, brown when ripe, ſomewhat hirſute, containing two ſeeds, ſmaller than lentils, and more ſwelling, browniſh, and marked with paler ſpots. Native of Virginia, where it is called *mountain pea*. It flowers from June to September, and ripens the early flowers in autumn.

β. Dolichos pubeſcens of Linnæus's Species is probably only a variety of this, the banner not being bent back. The ſtature of this variety is that of Phaſeolus vulgaris, but the whole plant is ſofter and pubeſcent. The leaflets are almoſt naked on the upper ſurface; the middle one inclining to rhomb-ſhaped, the ſide ones gibbous without, and lanceolate within; flowers three together, ſeſſile, yelloviſh white, with a brown ſpot on the banner; legumes oblong, pubeſcent, a little bowed back.

11. Glycine reticulata, or netted-leaved glycine: leaves ternate, oblong-lanceolate, pubeſcent, the veins like network underneath; racemes axillary, ſubſeſſile; legumes oblong, compreſſed. Native of Jamaica; found there by Swartz.

12. Glycine bituminoſa, or clammy glycine: leaves ternate; flowers racemed; legumes tumid, villoſe. Native of the Cape of Good Hope; introduced in 1774, by Mr. Francis Maſſon: flowers from April to September.

13. Glycine nummularia: leaves ternate, very obtuſe; racemes with flowers in pairs; legumes ſeſſile, ſuborbiculate, compreſſed. Stem herbaceous, twining, angular, pubeſcent. Native of the Eaſt Indies.

14. Glycine labialis, or labiate glycine: twining; leaves ternate, obovate, ſomewhat hoary; flowers axillary, heaped, corolla ſomewhat two-lipped. Stalk twining, the thickneſs of a thread; ſeeds ſeven to nine, roundiſh, compreſſed, yellow. Native of the Eaſt Indies.

15. Glycine ſtriata, or ſtriated glycine: twining; leaves ternate, oblong, very ſoftly hoary; racemes axillary, the length of the leaves; legumes extremely hirſute. Stems woody, round, hirſute. It has from ſix to thirty flowers, by pairs or in threes at ſhort intervals, on their proper pedicels. Seeds ſeveral, ſhining, brown variegated. Native of South America; it flowered in the Vienna garden in 1770.

16. Glycine roſea, or roſeate glycine: twining; leaves ternate; leaflets cordate-ovate, acute, quite entire; peduncles three-flowered; legumes compreſſed, keeled, one-ſeeded. 17. Glycine lucida, or ſhining glycine: twining; leaves ternate; leaflets ovate, acuminate, quite entire; racemes terminating, glandular, pedicels in threes; legumes inflated, containing two ſeeds. Natives of the Society Iſles.

18. Glycine ſuaveolens, or ſweet-ſmelling glycine: ſhrubby, upright, hoary; leaves ternate, ovate, acute; flowers axillary, ſolitary; legumes containing two ſeeds. A ſhrub, the whole of which is hoary, clammy, and ſweet. Seeds black, ſmooth, with a callous whitiſh heart. Found by Koenig among rocks near Madras, in the Eaſt Indies.

19. Glycine apios, or tuberous-rooted glycine: leaves unequally pinnate, ovate-lanceolate, with ſeven leaflets. This has tuberous roots, from which come out in the ſpring ſlender twining ſtalks, which riſe to the height of eight or ten feet; leaves compoſed of three pairs of leaflets, terminated by an odd one. The flowers come out in ſhort ſpikes from the ſide of the ſtalks. They have little ſcent, appear in Auguſt, but do not produce ſeeds in England. The genus of this is doubtful, perhaps it may be nearer to the Aſtragali, but the corolla is different, eſpecially in the linear keel much fickle-ſhaped; colour dark purple, duſky fleſh-colour, or rather fuliginous, or a ſullen bluſh-colour. Cultivated here in 1640. Parkinſon calls it *Virginia earth-nuts*.

20. Glycine fruteſcens, or ſhrubby glycine, or Carolina kidney-bean-tree: leaves unequally pinnate; ſtalk perennial. This has woody ſtalks, which twiſt themſelves together, and alſo twine round any trees that grow near, and will riſe to the height of fifteen feet or more. The leaves are in ſhape ſomewhat like thoſe of the aſh-tree, but have a greater number of leaflets. The flowers are produced in cluſters from the axils, and are of a purple colour; they are ſucceeded by long cylindrical legumes, ſhaped like thoſe of the ſcarlet kidney-bean, containing ſeveral ſeeds, which are never perfected in England. The legume, in this and the foregoing ſpecies, two celled. It flowers from June to September. Introduced in 1724, by Mr. Mark Cateſby.

21. Glycine monophylla, or ſimple-leaved glycine: leaves ſimple, cordate; ſtalk pubeſcent, three-cornered. Stalks two feet high, branched, the thickneſs of a thread, proſtrate and decumbent, hairy. Linnæus obſerves that his plant differs in having an upright ſtalk, and narrower leaves. Native of the Cape of Good Hope. It flowers in Auguſt.

22. Glycine picta, or painted glycine: leaves ternate, lanceolate, villoſe; racemes axillary, peduncled; ſtem erect, ſhrubby. This is an upright branched ſhrub; branches angular, ſtriated, ſubtomentoſe, with purpliſh hairs. Found in Guiana by Aublet, and in the iſland of Trinidad by Von Rohr.

23. Glycine bimaculata, or two-ſpotted glycine: ſtem twining, ſmooth, and even; leaves ſimple, cordate-oblong; racemes many-flowered. This riſes up with a twining ſhrubby ſtalk to the height of ſix or eight feet and more; multiplying greatly by age, it becomes loaded with a profuſion of purple flowers growing in racemes; the richneſs of the corolla is enlivened by two green ſpots at the baſe of the banner. For the moſt part the flowers go off here without producing any ſeed-veſſels; perfect ſeeds, however, have been produced, and a plant has flowered from them in the garden of John Ord, eſq. at Walham-green. It begins to flower in February, and continues during the ſummer. In the nurſeries about town it is known by the name of G. virens, the name originally given to this plant by Dr. Solander. The characters do not appear to be peculiarly expreſſive of this genus. This is one of the firſt plants from Botany-bay that flowered in this country, and it is one of the moſt ornamental.

24. Glycine rubicunda, or red glycine: ſtem perennial,

nial, twining; leaves ternate; leaflets ſuboval, quite entire; peduncles ſubtriflorous. Stem ſhrubby, ſlender, twining, five or ſix feet high, and more, red, branched, leafy. Almoſt the whole plant is covered with hairs preſſed cloſe. It flowers from April to June. Native of New South Wales, whence it was introduced about the ſame time with the foregoing.

25. Glycine coccinea, or ſcarlet glycine: leaves ternate; leaflets roundiſh, waved. Shrubby, climbing, growing to the height of many feet, if ſupported, and producing a great number of flowers on its pendant branches. Flowers for the moſt part in pairs, of a glowing ſcarlet colour, at the baſe of the keel ſomewhat inclined to purple; the bottom of the banner is decorated with a large yellow ſpot, verging to green. It flowers from April to June. Introduced lately from New South Wales.

Propagation and Culture. Few of theſe plants have yet been cultivated in this country. The eighth and tenth are hardy enough to live in the open air in England; they may be propagated by ſeeds, or parting of the roots; the former is the beſt method where good ſeeds can be obtained: theſe may be ſown on a bed of light earth in the ſpring, and, if the ſeaſon ſhould prove dry, they muſt be frequently refreſhed with water, otherwiſe they will remain a long time in the ground before they vegetate: when the plants come up, they muſt be kept clean from weeds in the ſummer, and in the autumn, when their ſtalks are decayed, if ſome rotten tanners' bark is ſpread over the ſurface of the ground, it will protect the roots from being injured by the froſt. In the ſpring, the roots ſhould be tranſplanted to the places where they are deſigned to remain, which muſt be in a warm ſheltered ſituation, but not too much expoſed to the ſun, and in a light ſoil, where they will thrive and produce flowers annually. If theſe are propagated by parting of the roots, it ſhould be done in the ſpring, before the roots begin to ſhoot: but they ſhould not be parted oftener than every third year, for, if they be frequently removed, they will not flower ſo ſtrong. The tenth being the moſt tender of the two, the ſeeds may for greater ſecurity be ſown in a hot-bed; and ſome of the plants kept in the green-houſe, or againſt a ſouth wall, to be protected occaſionally in ſevere weather with dung put to their roots. The nineteenth is propagated by parting the roots, and each of the tubers will grow; the beſt time for this is the end of March or beginning of April, before they put out ſhoots. The roots ſhould be planted in a warm ſituation, and in hard froſt covered with tan or mulch to protect them, otherwiſe they will not live abroad in this country: where they have been planted againſt a ſouth wall they have thriven and flowered extremely well, which they ſeldom do in any other ſituation; and thoſe roots which are planted in pots rarely flower, nor do their ſtalks riſe near ſo high as thoſe which are planted in the full ground. The twentieth is to be increaſed by laying down the young branches in October, which will be rooted well by that time twelvemonth, eſpecially if they are duly watered in dry weather, and may then be tranſplanted, either in a nurſery for a year to get ſtrength, or to the place where they are to remain for good, which ſhould be in a warm light ſoil and a ſheltered ſituation, where they will endure the cold of our ordinary winters very well; and if their roots are covered with ſtraw, fern, peaſe-haulm, or any other light covering, there will be no danger of their being deſtroyed by the froſt. The reſt muſt be kept in the bark ſtove; but Mr. Curtis thinks that No. 23 and 24, may probably ſucceed in the open air, in warm ſheltered ſituations, if protected a little in inclement ſeaſons. See ABRUS, and HEDYSARUM.

GLYCYRRHI'ZA, *ſ.* [from the Greek γλυκυς, ſweet, and ριζα, a root.] LIQUORICE; in botany, a genus of the claſs diadelphia, order decandria, natural order of papilionaceæ, or leguminoſæ. The generic characters are—Calyx: perianthium one-leafed, tubular, two-lipped, permanent: upper lip three-parted; the lateral ſegment linear, the middle one broader, bifid; lower entirely ſimple, linear. Corolla: papilionaceous; banner ovate-lanceolate, ſtraight, longer; wings oblong, very like the keel, but a little larger; keel two-petalled, acute, with a claw the length of the calyx. Stamina: filaments diadelphous, (ſimple and nine-cleft,) ſtraight; antheræ ſimple, roundiſh. Piſtillum: germ ſhorter than the calyx; ſtyle ſubulate, the length of the ſtamens; ſtigma obtuſe, aſcending. Pericarpium: legume ovate or oblong, compreſſed, acute, one-celled. Seeds: very few, kidney-form.—*Eſſential Character.* Calyx two-lipped; upper lip three-parted, lower undivided; legume ovate, compreſſed.

Species. 1. Glycyrrhiza echinata, or prickly-headed liquorice: legumes prickly; leaves ſtipuled, with the terminating leaflet ſeſſile. Theſe are tall-growing, perennial, herbaceous, plants, with the ſtalks ſomewhat woody at the bottom. The ſtipules are diſtinct from the petiole. The flowers in a head or ſpike, from the axils, and at the end of the branches. The ſeed-veſſel a legume or pod, ſmooth, hairy, or prickly. The firſt ſpecies has ſtalks and leaves very like thoſe of the ſecond, but the flowers are produced in ſhorter ſpikes, and the pods are very ſhort, broad at their baſe, end in acute points, and are armed with ſharp prickles. It flowers from April to June, and in warm ſeaſons will perfect ſeeds in England. Native of Monte Gargano in Apulia, of the northern provinces in China, and of Tartary. Cultivated by Gerarde in 1596.

2. Glycyrrhiza glabra, or common liquorice: legumes ſmooth, no ſtipules, the terminating leaflet petioled. The roots run very deep into the ground, and creep to a conſiderable diſtance, eſpecially where they ſtand long unremoved. From theſe ariſe ſtrong herbaceous ſtalks, four or five feet high. Leaves compoſed of four or five pairs of ovate leaflets, terminated by an odd one: theſe and the ſtalks are clammy, and of a dark green. Flowers in axillary ſpikes, ſtanding erect, and of a pale blue colour. Pods ſhort, containing two or three ſeeds. Native of the ſouth of Europe, in France, Spain, and Italy; alſo of China. Cultivated in China, Germany, England, &c. Here particularly about Pontefract in Yorkſhire, Worksop in Nottinghamſhire, and Godalmin in Surrey; and of late years there has been much raiſed in the gardens near London. It appears from Turner's Herbal, that it was cultivated in England in 1562: and Stow informs us, that "the planting and growing of licoriſh begun about the firſt year of queen Eliſabeth," (1558.) Gerarde (1597) relates, that he had plenty in his garden; and that the poor people of the north parts of England manured it with great diligence, whereby they obtained great plenty thereof. Ray affirms, that the liquorice root of Engliſh produce is ſuperior to the foreign. The quantity now exported from Spain is ſaid to be annually not leſs than four thouſand quintals, or nearly two hundred tons, a conſiderable part of which is ſuppoſed to be purchaſed by the porter brewers in London. Liquorice root contains a great quantity of ſaccharine matter, with ſome proportion of mucilage. Lightly boiled in a little water, it gives out nearly all its ſweetneſs; the decoction, preſſed through a ſtrainer, and inſpiſſated with a gentle heat till it will no longer ſtick to the fingers, affords a better extract than that brought from abroad, and its quantity amounts to near half the weight of the root. Rectified ſpirit takes up the ſweet matter of the liquorice equally with water; and as it diſſolves much leſs of the inſipid mucilage, the ſpirituous tincture and extract are ſweeter than the watery. Liquorice is in common uſe as a pectoral or emollient in catarrhal defluctions on the breaſt, coughs, hoarſeneſſes, &c. The infuſions or extracts are commodious vehicles for other medicines.

3. Glycyrrhiza hirſuta, or hairy liquorice: legumes

hirſute, the terminating leaflet petioled. This has much the appearance of the two foregoing ſorts, but the pods are hairy and longer. Native of the Levant; whence the ſeeds were ſent to Paris by Tournefort.

4. Glycyrrhiza aſperima, or rough liquorice: legumes ſmooth; leaflets elliptic, cuſped; ſtalk hiſpid, ſcabrous. This has rather the air of an Aſtragalus. Root ſlender and very long, extremely ſweet, eſpecially in the ſpring. The flower pale violet. Diſcovered by Pallas, on ſandy hills between the Wolga and the Jaick.

Propagation and Culture. This plant delights in a light ſandy ſoil, which ſhould be three feet deep at leaſt, for the goodneſs of liquorice conſiſts in the length of the roots: the ground in which you intend to plant liquorice, ſhould be well dug and dunged the year before you plant it, that the dung may be perfectly rotted, and mixed with the earth, otherwiſe it will be apt to ſtop the roots from running down; and before you plant it, the ground ſhould be dug three ſpades deep, and laid very light; when your ground is thus well prepared, you ſhould furniſh yourſelf with freſh plants taken from the ſides or heads of the old roots, obſerving that they have a good bud or eye, otherwiſe they are ſubject to miſcarry; theſe plants ſhould be about ten inches long, and perfectly ſound.

The beſt ſeaſon for planting them is in the beginning or middle of March, which muſt be done in the following manner, viz. Firſt ſtrain a line acroſs the ground in which you would plant them, then with a long dibble made on purpoſe, put in the ſhoot, ſo that the whole plant may be ſet ſtraight into the ground, with the head about an inch under the ſurface in a ſtraight line, about a foot aſunder, or more, in the rows, and two feet diſtance row from row; and after having finiſhed the whole ſpot of ground, you may ſow a thin crop of onions, which being plants that do not root deep into the ground, nor ſpread much above, will do the liquorice no damage the firſt year; for the liquorice will not ſhoot very high the firſt ſeaſon, and the hoeing of the onions will alſo keep the ground clear from weeds; but in doing of this you muſt be careful not to cut off the top ſhoots of the liquorice plants when they appear above ground, which would greatly injure them; and alſo obſerve to cut up all the onions which grow near the heads of the liquorice; and after your onions are pulled up, you ſhould carefully hoe and clean the ground from weeds; and in October, when the ſhoots of the liquorice are decayed, you ſhould ſpread a little very rotten dung upon the ſurface of the ground, which will prevent the weeds from growing during the winter, and the rain will waſh the virtue of the dung into the ground, which will greatly improve the plants. In the beginning of March following you ſhould ſlightly dig the ground between the rows of liquorice, burying the remaining part of the dung; but in doing of this, you ſhould be very careful not to cut the roots. The ſtirring of the ground will not only preſerve it clean from weeds a long time, but alſo greatly ſtrengthen the plants.

The diſtance allowed for planting theſe plants, will, by ſome, be thought too great; but, as the largeneſs of the roots is the chief advantage to the planter, ſo the only method to obtain this is by giving them room; and beſides, this will give a greater liberty to ſtir and dreſs the ground, which is of great ſervice to liquorice; and if the plantation deſigned were to be of an extraordinary bigneſs, we ſhould adviſe the rows to be made at leaſt three feet diſtant, whereby it will be eaſy to ſtir the ground with a breaſt plough, which will greatly leſſen the expence of labour. Theſe plants ſhould remain three years from the time of planting, when they will be fit to take up for uſe, which ſhould not be done until the ſtalks are perfectly decayed; for when it is taken up too ſoon, it is ſubject to ſhrink greatly, and loſe of its weight. The ground near London, being rich, increaſes the bulk of the root very faſt; but, when it is taken up, it appears of a very dark colour, and not near ſo ſightly as that which grows upon a ſandy ſoil in an open country. See Abrus, Astragalus, and Sophora.

GLYCO'NIAN, *adj.* In ancient poetry; belonging to a verſe conſiſting of three feet, a ſpondee, a choriambus, and a pyrrhichius.

GLYM'PES, in ancient geography, a town on the borders of the Lacedæmonians and Meſſenians. *Polybius.*

GLYN, *ſ.* [Iriſh; *gleann, glyn,* plur. Erſe; *glenn,* Scottiſh.] A hollow between two mountains. See Glen.—Though he could not beat out the Iriſh, yet he did ſhut them up within thoſe two narrow corners and *glyns* under the mountain's foot. *Spenſer.*

GLYNN, a county of the American States, in the Lower diſtrict of Georgia, bounded eaſt by the ocean, north by Alatamaha river, which ſeparates it from Liberty county, and ſouth by Camden county. Chief town, Brunſwick.

GLYPH, *ſ.* [in ſculpture and architecture.] Any canal or cavity uſed as an ornament.

GLY'PHICE, *ſ.* [γλυφικη, of γλυφω, Gr. to carve or engrave.] The art of carving, cutting, or caſting, the images or reſemblances of natural things in metal.

GLYP'TIC, *adj.* [γλυπτος, Gr.] Appertaining to ſculpture.

GME'LIN (John George, M. D.), public lecturer on botany and medicine at Tubingen, member of the royal ſociety of Gottingen, and of the academy of ſciences at Stockholm, born the 12th of Auguſt, 1709, at Tubingen, where his father reſided as an apothecary. While at ſchool he applied with ſo much diligence, that when only fourteen years of age, he was able to attend the academical lectures in the place of his nativity. He took the degree of M. D. there in 1727. Some of his former teachers having about this time been invited to Peterſburgh, he reſolved to pay a viſit to that capital, where he ſoon formed an acquaintance with Blumentroſt, the director of the academy, who not only permitted him to be preſent at the meetings of the members, and to have acceſs to the muſeum, but obtained for him, in 1728, an annual penſion. He at length acquired ſo much eſteem at Peterſburgh, that being deſirous in 1729 to return to Tubingen, he was honoured with a place among the regular members of the academy, and in 1731 he was appointed profeſſor of chemiſtry and natural hiſtory. The Ruſſian government wiſhing to carry into execution a plan, formed by Peter the Great, of ſending a ſociety of learned men to explore the boundaries of Siberia, and to determine whether a paſſage to China and Japan could be opened by ſea along the coaſts of the Ruſſian empire, Gmelin, G. F. Muller, with Louis de l'Iſle de la Croyere, were ſelected for this purpoſe, and ſet out on their journey, at the expence of the government, on the 19th of Auguſt, 1733. The department of natural hiſtory was aſſigned to Gmelin, that relating to manners and cuſtoms to Muller, and the geographical part to de l'Iſle. In the month of February, 1743, Gmelin returned ſafe to Peterſburgh, after having employed nine years and a half in this long and arduous journey, which proved highly intereſting to the ſciences; and he reſumed the offices he had before filled. In 1747 he paid a viſit to his native country, and during his abſence was appointed to the profeſſorſhip vacant by the death of Bachmeiſter, which he entered upon in 1749. He was attacked in May, 1755, by a violent fever, of which he died, in the forty-fifth year of his age. Gmelin was one of the greateſt botaniſts of the eighteenth century, and has rendered himſelf celebrated by his *Flora Siberica, ſeu Hiſtoria Plantarum Siberiæ,* Petrop. 1747, 1749, two parts, large quarto, with one hundred plates: the third and fourth parts were publiſhed by S. G. Gmelin. This

work was the refult of Gmelin's travels through Siberia, and is arranged according to the method of Van Royen. In a preface, the author gives a ſhort account of the natural hiſtory of Siberia, and determines the boundaries between Europe and Aſia, which have been adopted by all the celebrated geographers ſince that time. He then gives a ſketch of his travels, which are deſcribed at length in the following work: *Reiſe durch Sibirien*, &c. Travels through Siberia between the Years 1733 and 1743; Gotting. 1751, 1752, four parts, 8vo. with plates. This journal contains a great variety of new and intereſting facts, as the author not only relates, with great modeſty, the viciſſitudes and dangers to which he and his fellow-travellers were expoſed in theſe northern countries, but deſcribes, with the utmoſt care and attention to truth, the phyſical and geographical nature of the diſtricts through which he paſſed, the character and cuſtoms of the inhabitants, the mines, curious animals, and various other things which were before unknown.

GME'LIN (Samuel Gutlieb), ſon of Philip Frederic Gmelin, born in 1743 at Tubingen, where he ſtudied, and in 1763 obtained the degree of doctor of medicine. His theſis when a candidate for this honour, *De Analepticis quibuſdam nobilioribus e Cinamomo Aniſo ſtellato & Aſſa Fœtida*, made him known as an early genius; and during his travels through France and Holland he diſtinguiſhed himſelf ſo much by his knowledge of natural hiſtory, that he was appointed to be profeſſor in the academy of ſciences at Peterſburgh. In 1767, when the empreſs of Ruſſia, in conſequence of the expected tranſit of Venus over the ſun's diſk, was deſirous of ſending learned men to explore different provinces of her extenſive empire, Gmelin and profeſſor Guldenſtadt were appointed to travel through the province of Aſtracan. Gmelin ſet out in the month of June, 1768, explored in 1769 the weſtern ſide of the Don, and ſpent the following winter at Aſtracan. In 1770 and 1771 he travelled through the Perſian provinces on the ſouth and ſouth-weſt ſide of the Caſpian Sea, and in 1772 returned to Aſtracan; after which he examined the banks of the Wolga, and in 1773 the eaſtern ſide of the Caſpian Sea, ſo dangerous to travellers. He was then recalled to Ruſſia, and had arrived within three days' journey of Kiſlar, a fortreſs on the Ruſſian borders, when he was ſeized by the chan of the Chaitaks, who treated him with great barbarity, robbed him of all his property, and detained him a priſoner for ſix months. At this time Gmelin was in a bad ſtate of health; and vexation, the effects of the climate, and improper food, brought on a ſevere indiſpoſition. To add to his misfortune, the chan intercepted the proviſions ſent to him from Kiſlar, and would not ſuffer him to receive them. As the chan required thirty thouſand roubles for his ranſom, the empreſs gave orders to reſcue him by force; but the rebellion which at that time had been excited by Pugatchef rendered this plan impoſſible. He died in confinement on the 27th of July, 1774. The ſavage prince, having now loſt all hopes of a ranſom, gave up the body that it might be buried. The death of this eminent naturaliſt was much regretted by Catharine, who made a liberal proviſion for his widow. Gmelin was a great friend to botany, as well as to natural hiſtory in general, and fell a ſacrifice to his zeal for enlarging the knowledge of theſe ſciences. His works are: 1. *Hiſtoria Fucorum*, Petrop. 1768, 4to. 2. *Reiſſen durch Ruſsland*, &c. or, Travels through Ruſſia, 1768–1774, for the Purpoſe of exploring the Three Kingdoms of Nature, in Four Parts; of which the laſt was edited after the author's death by profeſſor Pallas, in 1786. The whole was printed at Peterſburgh, in 4to. with 140 plates.

JOHN FREDERIC GMELIN, brother of the preceding, and diſtinguiſhed by the epithet of *the Younger Gmelin*, born at Tubingen in 1748. He was the author of ſeveral performances on vegetable phyſiology, and the claſſification of plants, and likewiſe publiſhed numerous works on the materia medica and chemiſtry, mineralogy, and every part of natural hiſtory. He was one of the moſt laborious and learned profeſſors of the univerſity of Gottingen. Of his numerous works, the moſt celebrious is his edition of the *Syſtema Naturæ* of Linnæus, in 7 vols. or parts, 8vo. Lipſiæ, 1791. J. Fred. Gmelin was alſo the author of a Hiſtory of Chemiſtry, forming a part of the Hiſtory of Arts and Sciences, undertaken by the profeſſors of Gottingen. The world is indebted to him for the diſcovery of ſeveral excellent dyes, extracted from vegetable and mineral ſubſtances. As a man, he poſſeſſed unimpeachable integrity; he was mild, modeſt, and laborious; a good huſband, an excellent father, and a faithful friend. He died at Gottingen in 1805.

GMELI'NA, *ſ.* [from J. G. Gmelin, noticed above.] In botany, a genus of the claſs didynamia, order angioſpermia, natural order perſonatæ, (vitices, *Juſſ.*) The generic characters are—Calyx: perianthium one-leafed, very ſmall, ſubglobular, four-toothed, permanent. Corolla: one-petalled, bell-ſhaped, patulous; the border four-cleft; the upper ſegment wider and vaulted; the lower and lateral ſegments obtuſe, ſmaller, ſpreading, rounded. Stamina: filaments four, two of which are thicker, and two bowed in and aſcending; antheræ, two thicker, parted; two ſmaller, ſimple. Piſtillum: germ roundiſh; ſtyle the length of the ſmaller ſtamens; ſtigma ſimple. Pericarpium: drupe ovate, one-celled. Seed: nut ovate, ſmooth and even, two-celled; (three-celled, with the loweſt cell barren. *Gærtner.*)—*Eſſential Character.* Calyx, ſlightly four-toothed; corolla, four-cleft, bell-ſhaped; antheræ, two-parted, two ſimple; drupe, with a two or three celled nut.

Gmelina Aſiatica, a ſingle ſpecies. It is a tree, with round, ſtiff, upright, branches; leaves oppoſite, petioled, ovate, tomentoſe underneath, having frequently a ſhorter ſharp lobe on each ſide; ſpines axillary, oppoſite, horizontal, pubeſcent at the tip, the length of the petioles; flowers from the end of the tender twigs, on peduncles; the fruit is a berried drupe, the ſize of Jujubes, black and ſmooth; the ſhell bony, thick at the top, with two ſmall lateral lobes; remarkably acuminate at the bottom. In each of the two upper cells is a ſingle ſeed, thickiſh, convex on one ſide, and flattiſh on the other; whitiſh or pale ſtraw-colour, with a ſmall umbilical caruncle below the top: there is no albumen or white, but the embryo is of the ſame form with the ſeed: the cotyledons, or ſeed-lobes, are elliptic, fleſhy, and thickiſh.

GNA'A, a town of Germany, in the duchy of Stiria: twenty-four miles ſouth-eaſt of Gratz, and eighty ſouth of Vienna.

GNA'DENHUETTEN, or GNADENHUTTEN, a ſettlement of the Moravians, or United Brethren of North America, ſituated on Muſkingum river, oppoſite to Salem, in the lands which belonged to the Mahikan Indians. In 1746 it was a pleaſant town inhabited by Chriſtian Indians, where were a chapel, miſſionary's houſe, and many Indian houſes. This, together with Schoenbrun and Salem, were reſerved by congreſs, by an ordinance, May 20, 1785, for the Chriſtian Indians formerly ſettled there. On Sept. 3, 1788, it was reſolved that the plat of each town ſhould make up four thouſand acres, and the grant was made to the United Moravians for propagating the goſpel among the heathen.—Alſo the name of a Moravian ſettlement on the ſouth-weſt bank of Lehigh river, in Pennſylvania, twenty-nine miles north-weſt of Bethlehem.

GNA'DENHUETTEN (New), a Moravian ſettlement on Huron river, which runs ſouth-eaſterly into Lake St. Clair, in the north-weſtern territory: twenty-two miles from Lake St. Clair, and twenty-eight north-weſt of Detroit.

GNAPHA'LIUM, *ſ.* [from γναφαλον, Gr. cotton or nap.]

nap.] In botany, a genus of the claſs ſyngeneſia, order polygamia ſuperflua, natural order compoſitæ diſcoideæ, (corymbiferæ, *Juſſ.*) The generic characters are—Calyx: common rounded, imbricate, with the marginal ſcales rounded, ſcarioſe, coloured. Corolla: compound; corollets hermaphrodite, tubular, with apetalous females ſometimes intermixt; hermaphrodites funnel-form, with a five-cleft reflex border. Stamina: (in the hermaphrodites,) filaments five, capillary, very ſhort; anther cylindric, tubulous. Piſtillum: germ ovate; ſtyle filiform, the length of the ſtamens; ſtigma bifid; in the females, reflex. Pericarpium: none; calyx permanent, ſhining. Seeds: ſolitary, oblong, ſmall, crowned with a capillary or feathered down. Receptaculum: naked.—*Eſſential Character.* Calyx, imbricate, with the marginal ſcales rounded, ſcarioſe, coloured; down, feathered (or ſimple); receptacle, naked.

Species. I. Shrubby, with white flowers. 1. Gnaphalium eximium, or choice gnaphalium: leaves ſeſſile, ovate, crowded, upright, tomentoſe; corymb ſeſſile. The numerous ſpecies of this genus are either underſhrubs or herbs: the leaves are placed alternately, and are for the moſt part hoary: the flowers uſually terminate the ſtem and branches in globes or corymbs: the calyx is permanent, with yellow or white ſcales. The Filagos are ſcarcely diſtinct from the Gnaphaliums, conſidered as a natural genus. The firſt ſpecies has a ſtem the thickneſs of a finger, and tomentoſe; leaves ſharpiſh, without veins, white, with nap on both ſides; flowers globular, with calyxes as large as the outer joint of a finger, conſiſting of imbricate, roundiſh, ſcarioſe, concave, obtuſe, ſmooth, purpliſh, ſcales. Native of the Cape of Good Hope.

2. Gnaphalium arboreum, or tree everlaſting: leaves ſeſſile, linear, ſmooth on the upper ſurface, rolled back along the edge; flowers in a kind of head on elongate peduncles. This is a ſhrub the height of a man, determinately branched; leaves reſembling thoſe of roſemary, crowded, ſtrict, acute, naked, underneath tomentoſe, as are alſo the branches; with ſmaller leaves alternate, remote. It flowers moſt part of the year, and was introduced in 1770, by Mr. William Malcolm. Native of the Cape.

3. Gnaphalium grandiflorum, or great-flowered everlaſting: leaves ſtem-claſping, ovate, three-nerved, lanuginous on both ſides. 4. Gnaphalium fruticans, or fruiting gnaphalium: leaves ovate, ſtem-claſping; ſtem rigid; cyme ſeſſile. 5. Gnaphalium criſpum, or criſped gnaphalium: leaves tomentoſe underneath, ſcabrous above; root-leaves petioled, oblong; ſtem-leaves embracing, waved. 6. Gnaphalium appendiculatum, or appendiculated gnaphalium; leaves ſeſſile, imbricate, lanceolate, woolly, appendicled at the tip with a ſcarioſe membrane. 7. Gnaphalium coronatum, or crowned gnaphalium: leaves ſeſſile, lanceolate; corymbs compound, ſeſſile; peduncles leafleſs; calyxes crowned. 8. Gnaphalium diſcolorum, or coloured gnaphalium: leaves ſeſſile, lanceolate; calyxes white; lower ſcales fleſh-coloured. 9. Gnaphalium muricatum, or prickly gnaphalium: leaves ſubulate, mucronate; umbel compound; calyxes cylindric, containing about three flowers. 10. Gnaphalium ericoides, or heath-leaved everlaſting: leaves ſeſſile, linear; outer calyxes rude; inner fleſh-coloured. 11. Gnaphalium teretifolium, or crowded everlaſting: leaves crowded, almoſt columnar; corymbs branched; calyxes ferruginous on the outſide.

II. Shrubby, with yellow flowers. 12. Gnaphalium mucronatum, or pointed everlaſting: leaves ſubulate, mucronate; calycine ſcales roundiſh. This, and all the foregoing ſpecies, are natives of the Cape of Good Hope.

13. Gnaphalium ſtoechas, or common ſhrubby everlaſting: leaves linear; corymb compound; branches wandlike. Stem about three feet high, with long ſlender irregular branches, the lower ones having blunt leaves, two inches and a half long, and an eighth of an inch broad at the end; thoſe on the flower-ſtalks are very narrow, and end in acute points; the whole plant is very woolly; flowers terminating in a compound corymb; calyxes at firſt ſilvery, but turning to a yellow ſulphur-colour. If they are gathered before the flowers are much opened, the heads will continue in beauty many years, if kept from air and duſt. According to Haller, all the flowers are androgynous; and have been formerly recommended as attenuants, diſcutients, and diaphoretics, but are not uſed in modern practice. Native of Germany, France, Spain, and Iſtria. By old writers it is called *gold-flower*, *God's-flower*, *goldilocks*, and *golden ſtoechas*: by Ray, *narrow-leaved goldylocks*, or *caſſidony*.

14. Gnaphalium igneſcens, or red-flowered everlaſting: leaves ſublanceolate, tomentoſe, ſeſſile; corymbs alternate, conglobate; flowers globular. Stem and leaves woolly; the former a foot high, ſending out a few ſide branches, terminated by a compound corymb, the heads of which are ſmall, of a gold colour, changing to red as they fade. Native place of growth not known. It was cultivated in 1768, by Mr. Miller.

15. Gnaphalium dentatum, or toothed everlaſting: leaves wedge-ſhaped, toothed ſeſſile; corymb ſimple. The whole plant is hoary; branches ſcarcely a ſpan long, and round; leaves blunt at the top, and three-toothed, thick, and veined; flowers at the ends of the branchlets, few, ſmall, ſhining, in oblong heads.

16. Gnaphalium ferratum, or ſerrated everlaſting: leaves ſtem-claſping, lanceolate, ſerrate, naked on the upper ſurface. This is an elegant plant, ſuffruticoſe, ſoft and ſilky, yellow, much branched, with procumbent, ſimple, pubeſcent, runners; leaves very frequent, ſoft, entire, yellow; flowers terminating, very many, in a cloſe compact head, each on ſhort pedicels.

17. Gnaphalium patulum, or ſpreading everlaſting: leaves ſtem-claſping, ſpatulate; corymbs aggregate; branches ſpreading. Branches filiform, a foot or more in length, round, white-tomentoſe, patulous, ſomewhat branched. Introduced in 1774 by Mr. Francis Maſſon. It flowers from Auguſt to January.

18. Gnaphalium petiolatum, or petiolated everlaſting: leaves ovate, quite entire, petioled; flowers crowded, terminating. Related very nearly to the foregoing, according to Linnæus, but it is not in his Herbarium.

19. Gnaphalium craſſifolium, or thick-leaved everlaſting: leaves broad-lanceolate, ſubpetioled, leathery, tomentoſe; corymb compound; ſtalk proliferous. Stem a foot high, proliferous-branched, perennial except the proliferous branch; leaves wider at the end, blunt, covered with a very thick down, ſtiffiſh, towards the flowers gradually narrower; flowers numerous; calyxes pale yellow; corollas of a deeper colour; the florets before they open appear white. Native of Majorca and Minorca. It flowers from July to September.

20. Gnaphalium maritimum, or ſea everlaſting: very much branched; leaves lanceolate, ſeſſile, ſharpiſh; inmoſt calycine ſcales gold-coloured. A ſhrub of four feet in height; the branches pubeſcent; leaves alternate, ſomewhat crowded, tomentoſe, aſh-coloured, when young very white; flowers gold-coloured. It differs from the foregoing, in having the leaves by no means narrowed at the baſe. It flowers from June to Auguſt.

21. Gnaphalium repens, or creeping everlaſting: leaves linear; ſtem creeping, ſtraight; branches upright, very ſimple. Stem creeping, rooting, perennial, perfectly ſimple, filiform, angular, four feet high; branches alternate, two inches in length, bearing both leaves and flowers; flowers yellowiſh, the ſize of hemp ſeeds.

22. Gnaphalium umbellatum, or umbellated everlaſting: leaves in bunches, ſubulate, twiſted; umbels ſimple, terminating, ſeſſile. In the herb this bears a ſtrong

ſtrong reſemblance to N° 9, but it differs in having a regular umbel, larger flowers, and the ſcales of the calyx a beautiful red, in which laſt circumſtance it reſembles a Xeranthemum.

23. Gnaphalium hiſpidum, or hiſpid everlaſting: leaves linear, ſemicylindric, grooved, hiſpid, patulous; heads terminating, ſimple. This ſpecies is eaſily known by the ſtiff briſtles on its aceroſe leaves, and by its aggregate flowers. Theſe nine ſpecies, except the 19th, are natives of the Cape of Good Hope.

III. Herbaceous, with yellow flowers. 24. Gnaphalium cylindricum, or cylindrical everlaſting: leaves ſeſſile, oblong, tomentoſe; corymbs unequal; calyxes ſmooth, cylindric, ſeſſile. Herb branched, diffuſed, a ſpan in length, tomentoſe all over; calyxes very long, imbricate, with equal, ovate, bluntiſh, ſcales. Native of the Cape.

25. Gnaphalium orientale, or eaſtern everlaſting: of which there are two kinds; the broad-leaved, and the narrow-leaved: leaves linear-lanceolate, ſeſſile; corymb compound; peduncles elongate. Stem ſeldom riſing more than three or four inches high, and putting out many heads; leaves narrow, woolly on both ſides, and coming out without order; flower-ſtems eight or ten inches high, with narrow hoary leaves all the way, terminated by a compound corymb of bright yellow flowers in large heads, coming out in May, and continuing in ſucceſſion moſt part of the ſummer. It has been long in Portugal, where in the winter ſeaſon they ornament the churches with the flowers. This is improperly called Gn. orientale, and Eaſtern everlaſting, for it is ſuppoſed to be a native of Africa. Parkinſon, who calls it *golden flowergentle*, cultivated it in 1629.

β. The ſhrubby or narrow-leaved ſort grows naturally at the Cape of Good Hope. This differs from the other in riſing with ſtalks four or five feet high, dividing into many branches, having long narrow leaves placed alternately; the corymb is looſe, with the flowers on long pedicels; whereas thoſe of the other are compact.

26. Gnaphalium arenarium, ſandy everlaſting, or broad-leaved goldilocks: leaves lanceolate, the lower ones obtuſe; corymb compound; ſtalks quite ſimple. This is an annual hoary plant, with an oblong root; ſtem upright, a foot or more in height, white with down; leaves alternate, an inch long, and three or four lines wide, half-ſtem-claſping, quite entire, white with down on both ſides, blunt and frequently recurved a little at the tip, the edges rolled back; the ſhining yellow heads of flowers are two lines in length and breadth; the calycine ſcales are ovate, blunt, and lemon-coloured, as are alſo the corollets. Native of Scania, Denmark, and Germany, in dry ſandy paſtures and hills; flowering from July to September. Alſo in Japan, where it is uſed for moxa, and as tobacco, by way-ſides and in ditches; flowering from December to April. It was formerly much recommended in dyſenteries, &c. but is now diſuſed. It is ſuppoſed to preſerve woollen clothes from the moth.

27. Gnaphalium rutilans, or ſhining-flowered everlaſting: leaves lanceolate; corymb decompound; ſtalk branched at the bottom. Stem ſlender, ſending out many lateral branches below, with very narrow leaves, hoary on their under ſide; the flowers are produced in a compound corymb at the ends of the branches; at their firſt appearance they are of a pale red, but afterwards change to a gold colour. Native of the Cape of Good Hope. It flowers from the end of June to the beginning of Auguſt.

28. Gnaphalium milleflorum, or many-flowered everlaſting: flowers corymbed, faſtigiate, reddiſh-white; calyxes ſubcylindric. Stalk a foot high, tomentoſe; corymb terminating, with above fifty flowers in it; calyxes ſmooth and even, pale, with the lower ſcales purpliſh; corollas yellow. Native of the Cape of Good Hope, where it was found by Thunberg.

29. Gnaphalium imbricatum, or imbricated everlaſting: leaves lanceolate, tomentoſe; calycine ſcales reflex; ſtalk branched. Stem aſh-coloured, tomentoſe, diffuſed, erect, ſcarcely a foot high. Native of the Cape of Good Hope.

30. Gnaphalium cymoſum, or branching everlaſting: leaves lanceolate, three-nerved, ſmooth on the upper ſurface; raceme terminating; ſtalk branched at the bottom. The flowers are entirely of a gold colour, and ſmooth, with blunt ſcales; perennial, about eighteen inches in height; ſtalks woody, cylindric; flowers very numerous, ſmall, oblong. Theſe and the leaves, when rubbed, emit an odour like that of ſouthernwood. Native of the Cape of Good Hope; and flowers from April to Auguſt.

31. Gnaphalium nudifolium, or naked-leaved everlaſting: leaves lanceolate, three-nerved, naked, with netted veins. Root-leaves lanceolate-ovate, by no means tomentoſe, ſcabrous about the edge; ſtalk ſimple, a foot high, having ſmaller leaves of a more lanceolate ſhape at the bottom, and naked at the top; flowers golden, in a compound corymb. Gærtner ſeparates this and ſome other Gnaphaliums under the name of Anaxeton, on account of the receptacle being villoſe or chaffy only towards the circumference; and the down being ſimple or capillary. Native of the Cape, and perennial.

32. Gnaphalium luteo-album, Jerſey everlaſting, or cudweed: leaves half-ſtem-claſping, ſword-ſhaped, repand, obtuſe, pubeſcent on both ſides; flowers conglomerate. This is an annual plant, and very woolly; ſtalks many, upright, a foot or eighteen inches in height. Native of the South of France, Spain, Portugal, Switſerland, Germany, the iſland of Jerſey, the ſea-coaſts of Wales, of the weſt of England, and near Bognor rocks in Suſſex; in ſandy grounds, and on dry banks and walls; alſo of New Caledonia. It flowers from July to September.

There is a variety of this with narrower leaves, not quite ſo woolly; the ſtalks riſe higher, and are more branched; the flowers grow in cloſe bunches on the top of the ſtalks, and are of a pale yellow colour.

33. Gnaphalium albeſcens, or whitiſh everlaſting: ſnowy-tomentoſe; leaves linear-lanceolate; ſtalk upright, undivided at the bottom; branches terminating, faſtigiate; flowers crowded, conical. Shrubby. Native of Jamaica.

34. Gnaphalium pedunculare, or pedunculated everlaſting: leaves ſpatulate, ſomewhat ſtem-claſping, tomentoſe underneath; calycine ſcales ſharpiſh. Stalk herbaceous, a foot and half in height, branched, diffuſed with elongated branches. Native of the Cape of Good Hope.

35. Gnaphalium odoratiſſimum, or ſweet-ſcented everlaſting: leaves decurrent, mucronate, tomentoſe on both ſides, flat. Stems about three feet high, dividing into many irregular branches, on which are oblong blunt leaves, hoary on their under ſide, but of a dark green above, decurrent; ſtems terminated by a compound corymb of flowers, cloſely joined together, of a bright gold-colour, but ſmall, and changing to a darker colour as they fade. Native of the Cape.

IV. Herbaceous, with white flowers. 36. Gnaphalium ſanguineum, or bloody gnaphalium: leaves decurrent, lanceolate, tomentoſe, flat, with a little naked point at the end. Stems about ſix inches high, with lanceolate acute leaves, woolly, terminated by a large corymb of flowers ſitting very cloſe, and of a fine red colour. Native of Egypt and Paleſtine.

37. Gnaphalium fœtidum, or ſtrong-ſcented everlaſting: leaves ſtem-claſping, quite entire, acute, tomentoſe underneath; ſtalk branched. This is an annual plant, ſending out many oblong blunt leaves near the root; ſtems a foot and half high; leaves alternate, when handled emitting a very rank odour; ſtems ter-

minated by a corymb of flowers, which have large ſilvery calyxes, that will retain their beauty ſeveral years. Native of the Cape. It varies with golden calyxes.

38. Gnaphalium undulatum, or waved everlaſting: leaves ſubdecurrent, lanceolate, waved, acute, tomentoſe underneath; ſtalk branched. Annual; ſtems about a foot high. The whole plant has a diſagreeable odour. The flowers in a terminating corymb; they are white, and appear in July. Native of the Cape of Good Hope, and alſo of North America.

39. Gnaphalium Americanum, or American everlaſting: root-leaves lingulate-lanceolate, ſnow-white beneath; ſtalk ſimple, upright, tomentoſe; flowers ſpiked and lateral, ſeſſile, crowded. Annual; ſeldom riſes above ſix or nine inches in height; flowers yellowiſh, and diſpoſed pretty thick about the top of the ſtalk, which puts on the appearance of a ſhorter ſpike. Native of Jamaica, in the coldeſt mountains of Liguanea.

40. Gnaphalium criſpum, or curled everlaſting: leaves ſtem-claſping, ſpatulate, tomentoſe; calyxes very obtuſe, plaited and waved, tomentoſe at the baſe.

41. Gnaphalium helianthemifolium, or dwarf-ciſtus leaved everlaſting: leaves ſomewhat ſtem-claſping, lanceolate; corymbs compound; calycine ſcales ſomewhat plaited.

42. Gnaphalium ſquarroſum, or ſquare everlaſting: leaves ſeſſile, tongue-ſhaped, tomentoſe; the inner calycine ſcales ſubulate, and bowed back.

43. Gnaphalium ſtellatum, or ſtarry everlaſting: leaves ſeſſile, lanceolate, villoſe; calyxes acute, fleſh-coloured on the outſide. Natives of the Cape.

44. Gnaphalium obtuſifolium, or blunt-leaved everlaſting: leaves lanceolate; ſtalk tomentoſe, panicled; flowers glomerate, conical, terminating. This is an annual plant, with woolly obtuſe leaves; ſtems ſingle, about nine inches high; flowers in ſpikes from the ſide of the ſtalks, of a dirty white-colour. Native of Virginia, Pennſylvania, and New England.

45. Gnaphalium margaritaceum, American everlaſting, or cudweed: leaves linear-lanceolate, acuminate, alternate; ſtalk branched at the top; corymbs faſtigiate. Root perennial, creeping, and ſpreading far, ſo as to become a troubleſome weed; ſtalks extremely downy, white; leaves numerous, long, ſeſſile, growing without order round the ſtem, entire at the edges, dark green, naked above, beneath covered with a thick down, and whitiſh; the flowering branches form a broad flat bunch; each branch contains numerous crowded heads, on ſhort, branched, downy, peduncles, but the middle ones ſeſſile; ſcales of the calyx bluntly ovate, white, not downy; ſeed crowned with a ſeſſile feather of few ſimple rays, as long as the calyx. Haller ſays that the flowers are all hermaphrodite, but afterwards adds, that a few females are ſometimes intermixed with them. Native of North America, where it grows in vaſt quantities in uncultivated fields, glades, hills, &c. and is called *life everlaſting*; becauſe the ſilvery heads, properly dried, will keep their beauty long without changing. It is alſo found in Kamtſchatka: and with us in England; having been obſerved near Bocking in Eſſex by Mr. Dale; and on the banks of Rymny river, for the ſpace of twelve miles, by Mr. Lhwyd. None of our old herbaliſts mention its being found wild in this iſland, but it has been long known in our gardens. It flowers from July to September. A decoction of the flowers and ſtalks is uſed in America, to foment the limbs for pains and bruiſes.

46. Gnaphalium plantagineum, or plantain-leaved everlaſting: runners procumbent; ſtalk very ſimple; root-leaves ovate, very large. Perennial; from the main ſtalk come out runners, which take root in the ground; ſtem-leaves narrower, woolly, alternate; flowers in a terminating corymb, white and ſmall, appearing in June and July. Native of North America. Linnæus obſerves, that it has altogether the air of the foregoing. He had ſeen only the female, and doubted whether it might not be a variety only of the next ſpecies.

47. Gnaphalium dioicum, mountain everlaſting, cudweed, or cat's-foot: runners procumbent; ſtalk quite ſimple; corymb ſimple; flowers divided. Root woody, brown, ſtrikes deep, throwing out a few rigid fibres; from the crown ariſe ſeveral creeping runners; ſtems erect, ſimple, from two or three to ſix or ſeven inches high, white, downy, clothed with numerous ſemi-amplexicaul linear leaves, green above, white and downy beneath; flowering heads three to eight crown the ſtem in a cloſe bunch, on ſhort peduncles; ſcales of the calyx blunt, the outer ones ſhort, green covered with down, the inner widening upwards, long, ſmooth, white, ſhining, frequently tinged with purple; the calyxes bearing female flowers are cylindrical; the ſeed ſhort, crowned by a ſeſſile down with ſimple rays, longer than the calyx. The calyxes bearing hermaphrodite flowers are globular, ſhorter, and the feather does not exceed the calyx. Haller ſuſpects that the hermaphrodite flowers are barren. It is rare that any ripe ſeed is produced, ſuch being the caſe with many plants that creep by the roots. The female heads often have imperfect ſeeds; the hermaphrodites none at all. Native of moſt parts of Europe, on open downs: with us on Newmarket heath and Gogmagog hills, Canham heath near Bury, Swaffham and Stratton heaths in Norfolk, in Cornwall, Wales, on Bernack and Wittering heaths, in the northern counties, and Scotland; flowering in May and June.

48. Gnaphalium alpinum, or alpine everlaſting: runners procumbent; ſtalk quite ſimple; head leafleſs; flowers oblong. Root perennial; ſtalk entirely ſimple, ſhorter than a finger, with three or four lanceolate leaves. Linnæus obſerved only the female flowers, and doubts whether it may not be a variety of Gn. dioicum. The colour of the flower is by no means ſhining in this; otherwiſe it has the appearance of the foregoing, the ſize, ſtalks, flowers, and runners; but the leaves are narrower, the calycine ſcales lanceolate, villoſe at the baſe, brown at the tip and edge. Native of the Lapland Alps, and of Swiſſerland.

49. Gnaphalium Indicum, or Indian everlaſting: leaves lanceolate; ſtalk very much branched, diffuſed; corymbs unequal; calyxes coloured within. Perennial; ſtalk half a foot high, tomentoſe. Native of the Eaſt Indies, and Cochinchina.

50. Gnaphalium purpureum, or purple everlaſting: leaves lanceolate, naked; ſtalk erect, quite ſimple; flowers in lateral ſeſſile ſpikes. Annual; ſtalks from a ſpan to a foot in height, ſometimes upright and unbranched, ſometimes reclining and putting out a few branches, ſlender, tomentoſe; leaves from green becoming hoary; thoſe next the root broader, and waved about the edge, quickly drying away; ſtalk-leaves narrower, till they become linear among the flowers, the heads of which are ſhort and purpliſh. It flowers in ſummer and autumn. Native of Carolina and Virginia. Cultivated in the Eltham garden before 1732.

51. Gnaphalium denudatum, or bare everlaſting: leaves ſpatulate; underneath ſnowy white, tomentoſe; ſmooth and even above. Native of the Cape of Good Hope.

V. Reſembling Filago; herbaceous. 52. Gnaphalium ſylvaticum, wood everlaſting, Engliſh or upright cudweed: ſtalk quite ſimple, upright; flowers ſcattered. This is a biennial plant. In woods one ſtem from twelve to eighteen inches high, generally grows from the root. In open ground, the root-leaves form a thick tuft, and from among them ariſe ſeveral ſhorter ſtems, ſometimes not more than three inches high, at firſt often declining, but very ſoon aſcending; root-leaves long, of a very narrow linear-lanceolate form,

green and hairy above, white and thickly downy beneath; flowers in a long ſpike, compoſed of very ſhort branches, bearing from one to five or more flowers; the lower branches ſomewhat diſtant, the upper crowded; beneath each a leaf, ſimilar to, but ſmaller than, the ſtem-leaves; flowering heads very ſmall; ſcales of the calyx bluntly oval, greeniſh at the baſe, yellowiſh-brown upwards, ſmooth with ſhining margins; exterior ſhort, interior as long as the florets; ſeeds minute, crowned with a ſeſſile feather, having ſimple rays as long as the calyx; female flowers numerous; hermaphrodites four or five. Native of moſt parts of Europe: in Britain it has been obſerved in Norwood, Surrey; on Hampſtead heath, and in the woods thereabouts; near Charlton; about Harefield; in Gamlingay park, Cambridgeſhire; in Armingdale wood near Norwich; on Naſeby field, and Thorp-Malſor, in Northamptonſhire; in rough paſtures near Fladbury in Worceſterſhire; on a ſandy heath, a mile from Shiffnall, on the road to Wolverhampton; on the banks of the canal in the pariſh of Coſely, Warwickſhire; on the great iſland in Winander-mere; and on the iſlands of Scotland. It flowers in Auguſt.

53. Gnaphalium ſpicatum, or ſpiked everlaſting: ſtems herbaceous, quite ſimple; flowers in whorls; leaves in bundles, linear, revolute. Stems ſeveral, aſcending, a finger's length, ſmooth, covered with leaves and flowers. Native of Egypt.

54. Gnaphalium verticillatum, or whorled everlaſting: ſtalk quite ſimple; flowers in whorls; leaves linear. 55. Gnaphalium oculus cati, or cat's-eye everlaſting: ſtalk proſtrate; leaves ovate; flowers glomerate, terminating, extremely villoſe. 56. Gnaphalium piloſellum, or bald everlaſting: leaves lanceolate, five-nerved, tomentoſe underneath; ſtalk naked; flowers in heads. 57. Gnaphalium declinatum, or creeping everlaſting: leaves linear-lanceolate; the calyxes with a white lanceolate ray. 58. Gnaphalium coronatum, or rayed everlaſting: leaves lanceolate; calyxes with a manifold roundiſh ray. Natives of the Cape.

59. Gnaphalium ſupinum, or dwarf everlaſting or cudweed: ſtalk ſimple, procumbent; flowers ſcattered. This reſembles Gn. ſylvaticum very much, but it is low, and the ſtalk is decumbent whilſt the plant is in flower. Perennial; root-leaves in tufts, half or three quarters of an inch long, narrow, linear-lanceolate, ſlightly hairy above, downy beneath, but greeniſh; ſtem two or three inches high, with two or three longer and narrower ſeſſile leaves; ſeeds elliptical, crowned with a ſeſſile down, having ſimple rays as long as the florets, and longer than the calyx; the florets are moſtly female, but a few in the centre of the diſk are hermaphrodites. Native of the Swiſs and Italian Alps; and the tops of the highland mountains in Scotland: found on Ben Lomond, by Dr. J. E. Smith; and five miles from Fort George, on the weſt ſide of the road to Aberdeen. It flowers in July and Auguſt.

60. Gnaphalium uliginoſum, or marſh everlaſting or cudweed: ſtalk branched, diffuſed; flowers crowded, terminating. Annual; ſtem from three or four to ſeven or eight inches and even more, upright, covered with thick white down, and much branched; branches ſpreading, lower ones often procumbent, clothed with numerous leaves, particularly towards the ſummit, and theſe thickeſt and moſt downy; leaves elliptical, tapering into a long footſtalk, ſlightly downy and greeniſh above, more ſo and whitiſh beneath: the ends of the branches are crowded with numerous heads of nearly ſeſſile flowers; ſcales of the calyx lanceolate, ſmooth, brown, ſhining; when old, blackiſh, almoſt hid in the down; feather ſeſſile, with few ſimple rays as long as the calyx. Native of the greater part of Europe, in marſhy places, eſpecially where water ſtagnates in winter. It flowers in Auguſt.

61. Gnaphalium glomeratum, or cluſter-flowered everlaſting: ſtalk diffuſed; inner ſcales of the calyxes ſubulate and naked; leaves ſomewhat ſtem-claſping. Annual; heads leafy; branches higher than the ſtalk. Native of the Cape of Good Hope.

VI. New ſpecies. 62. Gnaphalium Japonicum, or Japaneſe gnaphalium: herbaceous; upright; leaves linear-ſword-ſhaped, ſnowy-white underneath; heads terminating. Root faſcicled, with ſmall fibres, annual; ſtalks one or two, ſimple, naked at the top, white with down, a ſpan and half in height; root-leaves very many, drawn to a point below, ſharp, entire, lax, often reflex, a palm in length and half a line in breadth; ſtem-leaves ſeſſile, upright, ſhorter; flowers on the ſtalk terminating, glomerate, ſeſſile, purpliſh; the heads the ſize of a large pea. Native of Japan; flowering in Auguſt.

63. Gnaphalium trinerve, or three-nerved everlaſting: ſhrubby; leaves ſeſſile, lanceolate, three-nerved, ſilvery-white underneath; panicle corymbed, terminating, looſe. 64. Gnaphalium lanatum, or woolly gnaphalium: herbaceous, woolly; leaves linear-oblong, callous-mucronate at the tip; corymb contracted; ſtalk very ſimple. 65. Gnaphalium involucratum, or covered gnaphalium: herbaceous; leaves linear, elongate, mucronate, tomentoſe underneath; head terminating, leafy. Natives of New Zealand.

66. Gnaphalium ſinuatum, or ſinuated gnaphalium: herbaceous; branches aſſurgent; leaves ovate-lanceolate, ſinuate, toothed, hairy on both ſides. Stem four feet high, ſimple, erect; leaves large, alternate; flowers yellow, in terminating erect panicles, the marginal ſcales of the calyx being red and membranaceous. Native of Cochinchina.

Propagation and Culture. The tender ſorts, ſuch as all thoſe from the Cape, &c. 1 to 12, 15 to 24, 27 to 31, 33 to 35, 37 to 43, 51, 53 to 58, 61 to 66, Oriental everlaſting, &c. may be increaſed by ſlipping off the heads, or by cuttings, during any of the ſummer months; they ſhould be planted in a bed of light earth, or in pots in a gentle hot-bed, and covered with hand-glaſſes, or ſhaded with mats, obſerving to refreſh them frequently with water in ſmall quantities; theſe cuttings will put out roots in ſix or eight weeks, then plant them in pots filled with light earth, and place them in a ſhady ſituation till they have taken new root, when they may be removed to an open ſituation, and placed among other hardy exotics, till the middle or end of October; at which time they ſhould be placed under a common frame, where they may be protected from froſt, but in mild weather they ſhould be expoſed to the open air. N° 13, 14, 25, and 36, are ſo hardy, as in very mild winters to live abroad in warm borders near walls, with little ſhelter. The Jerſey everlaſting, N° 32, and ſome others, will come up better from ſcattered ſeeds, than when they are ſown by art; but if the ſeeds are ſown, it muſt be ſoon after they are ripe. The plants require only to be kept clean from weeds, and to be thinned where they are too cloſe. N° 45 and 46 will thrive in almoſt any ſoil and ſituation, and are eaſily propagated by their creeping roots. As to the common European ſorts, if the ſeeds are permitted to ſcatter, the plants will come up in the ſpring, with greater certainty than if they were ſown; but they are rather regarded as weeds than as garden plants. See ATHANASIA, CONYZA, FILAGO, MICROPUS, SERIPHIUM, STOEBE, and STÆHELINA.

GNAPHALOI'DES, *ſ.* See GNAPHALIUM.

GNAR, *ſ.* [*knorre*, Teut.] A hard knot in a tree.

To GNAR, or GNARL, *v. n.* [ȝnyrran, Sax. *knorren*, Dut.] To growl; to murmur; to ſnarl:

Thus is the ſhepherd beaten from thy ſide,
And wolves are *gnarling* who ſhall gnaw thee firſt. *Shakeſ.*

GNARL'ED, *adj.* [*gnar*, *nar*, or *nurr*, is in Staffordſhire

ſhire a hard knot of wood which boys drive with ſticks.] Knotty:

Merciful heav'n!
Thou rather with thy ſharp and ſulph'rous bolt
Split'ſt the unwedgable and *gnarled* oak,
Than the ſoft myrtle. *Shakeſpeare.*

To GNASH, *v. a.* [*knaſchen*, Dut. to gnaw.] To ſtrike together; to claſh:

The ſeer, who could not yet this wrath aſſwage,
Row'd his green eyes, that ſparkled with his rage,
And *gnaſh'd* his teeth. *Dryden.*

To GNASH, *v. n.* To grind or collide the teeth.—He ſhall *gnaſh* with his teeth, and melt away. *Pſ.* cxii. 10.—There ſhall be weeping and *gnaſhing* of teeth. *Matt.* viii.—To rage even to colliſion of the teeth; to fume; to growl.—They *gnaſhed* upon me with their teeth. *Pſ.* xxxv. 16.

With boiling rage Atrides burn'd,
And foam betwixt his *gnaſhing* grinders churn'd. *Dryd.*

GNAT, *ſ.* [ȝnæt, Sax.] A ſmall winged ſtinging inſect, for the natural hiſtory of which ſee the article CULEX, vol. iv. p. 461.

Her whip of cricket's bone, the laſh of film;
Her waggoner, a ſmall grey-coated *gnat*. *Shakeſpeare.*

Any thing proverbially ſmall.—Ye blind guides, which ſtrain at a *gnat* and ſwallow a camel. *Mat.* xxiii. 24.

GNAT'FLOWER, *ſ.* A flower, otherwiſe called the beeflower. See OPHRYS.

GNA'THO, *ſ.* [Latin.] A flatterer; a paraſite. *Aſh.*

GNATHONICAL, *adj.* Playing the gnatho; flattering; deceitful in words; ſoothing a perſon's humour to get by him. *Bailey.*

To GNA'THONISE, *v. n.* To play the gnatho; to flatter, &c. *Bailey.*

GNA'TIA, in ancient geography, a town of Apulia, about thirty miles from Brunduſium, badly ſupplied with water. *Horatius.*

To GNAW, *v. a.* [ȝnaȝan, Sax. *knaghen*, Dut.] To eat by degrees; to devour by ſlow corroſion:

A knowing fellow, that would *gnaw* a man
Like to a vermine, with his helliſh braine,
And many an honeſt ſoule, even quick had ſlain. *Chapm.*

To bite in agony or rage.—They *gnawed* their tongues for pain. *Rev.* xvi. 10.

Alas, why *gnaw* you ſo your nether lip?
Some bloody paſſion ſhakes your very frame. *Shakeſpeare.*

To wear away by biting:

Like rotten fruit I fall, worn like a cloth,
Gnawn into rags by the devouring moth. *Sandys.*

To fret; to waſte; to corrode. To pick with the teeth.—His bones clean pick'd, his very bones they *gnaw*. *Dryden.*

To GNAW, *v. n.* To exerciſe the teeth. It is now uſed actively.—I might well, like the ſpaniel, *gnaw* upon the chain that ties me; but I ſhould ſooner mar my teeth than procure liberty. *Sidney.*

I thought I ſaw a thouſand fearful wrecks,
A thouſand men that fiſhes *gnaw'd* upon. *Shakeſpeare.*

GNAW'ER, *ſ.* One that gnaws.

GNE'IS, *ſ.* the Saxon term, often ſtill uſed, for a rock containing mica, lapis ollaris, and quartz.

GNE'MON, *ſ.* in botany. See GNETUM.

GNE'SEN, or GNES'NO, a town of Poland, in the palatinate of Kaliſch, and ſaid to be the moſt ancient town in the country: founded in 550. In the year 1000 it was erected into an archbiſhopric; and at the council of Conſtance the primate was declared primate of Poland: one hundred miles north-eaſt of Breſlau, and one hundred and ſixty weſt of Cracow. Lat. 52. 28. N. lon. 35. 55. E. Ferro.

GNE'TUM, *ſ.* in botany, a genus of the claſs monoecia, order monadelphia, natural order piperitæ, (urticæ, *Juſſ.*) The generic characters are—Ament of whorls remote, callous, thickened, propped underneath with a partial calycle: this is peltate, orbicular, flat, quite entire, and contains ſeſſile floſcules; the males at the bottom, the females above, in the ſame whorl. I. Males. Calyx: ſcale ovate, minute, coloured. Corolla: none. Stamina: filament ſingle, filiform, longer than the ſcale; antheræ double, connected.—II. Females. Calyx: ſcale torn, rude. Corolla: none. Piſtillum: germ ovate, immerſed in the receptacle of the whorl, the length of the ſtamens; ſtyle conic, ſhort; ſtigma trifid, acute. Pericarpium: drupe ovate, one-celled. Seed: nut oblong, ſtreaked.—*Eſſential Character.* Male: an ament with ſcales; corolla, none; filament, one, with two anthers. Female: an ament with ſcales; corolla, none; ſtyle, with a bifid ſtigma; drupe, with one ſeed.

Gnetum gnemon, a ſingle ſpecies. Native of the Eaſt Indies; where the leaves, male catkins, and fruits, are eaten, but not raw. *Gnemon* is the vernacular name in Ternate, &c.

GNIAF'DA, a town of Hungary: ſeven miles weſt-ſouth-weſt of Palotza.

GNI'DIA, *ſ.* In botany, a genus of the claſs octandria, order monogynia, natural order vepreculæ, (thymeleæ, *Juſſ.*) The generic characters are—Calyx: perianthium one-leafed, funnel-form, coloured; tube filiform, very long; border four-parted, flat. Corolla: petals four, ſeſſile, flat, ſhorter than the calyx, and inſerted into it. Stamina: filaments eight, briſtle-ſhaped, erect, almoſt the length of the flower; antheræ ſimple. Piſtillum: germ ovate; ſtyle filiform, inſerted into the ſide of the germ, the length of the ſtamens; ſtigma capitate, hiſpid. Pericarpium: none; fruit in the bottom of the calyx. Seed: ſingle, ovate, obliquely acute. It differs from Paſſerina in the corolla only.—*Eſſential Character.* Calyx, funnel-form, four-cleft; petals, four, inſerted into the calyx; ſeed, one, ſomewhat berried.

Species. 1. Gnidia pinifolia, or pine-leaved gnidia: leaves ſcattered, linear; floral leaves in whorls. Theſe are ſhrubby plants, except the laſt; and moſtly natives of the Cape of Good Hope. The leaves are oppoſite only in one or two ſorts; in the reſt they are ſcattered. The firſt ſpecies has a ſtem three or four feet high, with a few ſide-branches; leaves reſembling thoſe of roſemary; the flowers come out almoſt in whorls from between the leaves at the extremities of the branches on ſhort peduncles; calyx white; petals lanceolate, ſhorter than the calyx, white; four of the ſtamens are within, and four without, the tube. Cultivated by Mr. Miller in 1768. It varies with blue flowers.

2. Gnidia radiata, or radiated gnidia: leaves ſubulate, three-ſided, erect; heads terminating, ſeſſile, radiate; bractes lanceolate. 3. Gnidia ſimplex, or flax-leaved gnidia: all the leaves linear, acute; flowers terminating, ſeſſile. 4. Gnidia tomentoſa, or rough gnidia: leaves ſcattered, ovate-oblong, ſmooth, ſcabrous about the edge. 5. Gnidia ſericea, or ſilky gnidia: leaves ovate, tomentoſe; floral leaves in fours. Introduced in 1786 by Mr. Francis Maſſon.

6. Gnidia oppoſitifolia, or oppoſite-leaved gnidia: leaves oppoſite, lanceolate. The uppermoſt leaves are blood red at the extremity. Cultivated in gardens, it acquires petals. Flowers villoſe on the outſide; ſtamens, beſides the four calluſes above the throat, are four under the throat, and four in the middle of the tube. Introduced in 1788, by Maſſon.

7. Gnidia capitata, or headed gnidia: leaves ſcattered, lanceolate, ſmooth; flowers in heads fortified with bractes; peduncles naked. Stem ſhrubby, with upright,

u pright, round, purpliſh, branches; leaves very narrow and remote, ſmooth, and even; ſtamens ten, five without and five within the throat; the flower reſembles that of Paſſerina; and perhaps it may be a ſpecies of Dais.

8. Gnidia filamentoſa, or filamentous gnidia: leaves elliptically ovate, very ſmooth, approximating; flowers in heads; filaments capillary. This is a very ſmooth ſhrub, tubercled with the ſcars of fallen leaves; leaves alternate, ſeſſile, quite entire, without apparent veins. There is a variety with narrower leaves, but it is eaſily known by the filaments.

9. Gnidia imbricata, or imbricated gnidia: leaves oblong, imbricated in four rows, ſilky; flowers terminating in the axils of the leaves. Found at the Cape by Thunberg.

10. Gnidia Sparrmanni, or Sparrmann's gnidia: leaves linear-ſubulate, flat above, ſharp; flowers in pairs, axillary. Branches ſmooth and even, not tomentoſe; leaves not prickly, convex underneath, ſmooth and even, patulous; flowers from the uppermoſt twigs, ſmooth; border ſharp, twice the length of the tube. This is the Gn. pinifolia of Linnæus. It was obſerved at the Cape by Sparrmann.

11. Gnidia daphnæfolia, or dais gnidia: decandrous; leaves oblong, flat, quite entire; head terminating, peduncled, involucred; flowers five-cleft. This has the habit, leaves, manner of flowering, involucre, form, and hairineſs, of the calyx, as in Dais cotinifolia; the ſtructure and ſituation of the parts in the flower is exactly as in this genus, but not the number; the leaves are alternate, not oppoſite, as in Dais; the involucre as in Dais, but five-leaved. Found by Thouin in the iſland of Madagaſcar.

There are two varieties. α. hirſuta: leaves oblong, ſpatulate, hirſutely hoary; flowers ſmaller. β. glabra: leaves oblong, alternated towards the baſe, almoſt naked; flowers larger. It is difficult to aſcertain the limits between Dais and Gnidia; as alſo between Daphne and Paſſerina.

Propagation and Culture. Theſe are uſually increaſed by cuttings planted during the ſummer months in pots filled with light earth, plunged into a very moderate hot-bed, covering the pots cloſely with bell or hand glaſſes to exclude the air, and ſhading them during the day. They will put out roots in ſix weeks, when they ſhould be gradually inured to the open air. In winter place them in a dry airy glaſs-caſe, where they may enjoy free air in mild weather, and be protected from froſt and damp air. See DAPHNE.

GNO'MA, *ſ.* [from the Greek γινωσκω, to know.] A ſhort inſtructive ſentence, a pertinent and uſeful obſervation. *Scott.*

GNOMES, *ſ.* With the cabaliſts, a fabulous inviſible people ſuppoſed to inhabit the internal parts of the earth. *Scott.*

GNOMOLO'GIC, or GNOMOLOGICAL, *adj.* Pertaining to gnomology.

GNOMOL'OGY, *ſ.* [from the Greek γνωμη, a ſentiment, and λογος, a diſcourſe.] A treatiſe on ſentiment.

GNO'MON, *ſ.* [γνωμων, Gr. an index.] In aſtronomy, an inſtrument or apparatus for meaſuring the altitudes, declinations, &c. of the ſun and ſtars. The gnomon is uſually a pillar, erected upon level ground. For making the more conſiderable obſervations, both the ancients and moderns have made great uſe of it, eſpecially the former; and many have preferred it to the ſmaller quadrants, both as more accurate, and more eaſily applied. The moſt ancient obſervation of this kind extant, is that made by Pytheas, in the time of Alexander the Great, at Marſeilles, where he found the height of the gnomon was in proportion to the meridian ſhadow at the ſummer ſolſtice, as 213⅜ to 600; juſt the ſame as Gaſſendi found it to be, by an obſervation made at the ſame place almoſt two thouſand years after.

Ulugh Bey, king of Parthia, uſed a gnomon in 1437, which was one hundred and eighty Roman feet high. That erected by Ignatius Dante, in the church of St. Petronius, at Bologna, in 1576, was ſixty-ſeven feet high. M. Caſſini erected another of twenty feet high, in the ſame church, in 1655. The Egyptian obeliſks are alſo ſuppoſed to have been uſed as gnomons; and it is thought by ſome modern travellers that this was the very uſe they were built for. It may be added, that the Spaniards, in their conqueſt of Peru, found pillars of curious and coſtly workmanſhip, ſet up in ſeveral places, by the meridian ſhadows of which their philoſophers had, by long experience and repeated obſervations, learned to determine the times of the equinoxes; which ſeaſons of the year were celebrated with great feſtivity and rich offerings, in honour of the ſun.

GNOMON, in dialling, is the ſtyle, pin, or cock, of the dial, the ſhadow of which points out the hours. This is always ſuppoſed to repreſent the axis of the globe, to which it is therefore parallel, or coincident, the two ends of it pointing ſtraight to the north and ſouth poles of the world. See HOROLOGY.

GNOMO'NIC, or GNOMONICAL, *adj.* Belonging to the art of dialling.

GNOMO'NICS, *ſ.* [γνωμονικη, Gr.] The ſcience of dialling; for which ſee the article HOROLOGY.

GNOMONOLO'GICAL, *adj.* Belonging to the art of dialling. *Scott.*

GNOMONOL'OGY, *ſ.* [from the Greek γνωμων, the ſtyle of a dial, and λογος, a diſcourſe.] A treatiſe on dialling. *Not much uſed.*

GNOSIM'ACHY, *ſ.* [from the Greek γνωσις, knowledge, and μαχεομαι, to oppoſe.] In church hiſtory, a ſect who oppoſed all kinds of knowledge in divinity acquired by ſtudy and learning.

GNOS'SIS, or GNOSSIA, an epithet given to Ariadne, becauſe ſhe lived, or was born, at Gnoſſus. The crown which ſhe received from Bacchus, and which was made a conſtellation, is called *Gnoſſia Stella. Virgil.*

GNOS'SUS, in ancient geography, a famous city of Crete, the reſidence of king Minos. The name of *Gnoſſia tellus* is often applied to the whole iſland. *Strabo.*

GNOS'TICS, *ſ.* [*gnoſtiques*, Fr. *gnoſtici*, It. and Lat. γνωστικοι, of γνωσις, Gr. knowledge.] A ſect of heretics which roſe up in the firſt and ſecond centuries, and then conſiſted only of the philoſophers of thoſe times, who formed for themſelves a peculiar ſyſtem of theology, agreeable to the philoſophy of Pythagoras and Plato; to which they accommodated all their interpretations of Scripture. But *gnoſtic* afterwards became a generical name for divers heretics, who, though they differed among themſelves as to circumſtances, yet all agreed in ſome common principles. They corrupted the doctrine of the goſpel by a profane mixture of the tenets of the oriental philoſophy, concerning the origin of evil and the creation of the world, with its divine truths. Such were the Valentinians, Simonians, Carpocratians, Nicolaitans, &c. They built their theology not only on the goſpels and the epiſtles of St. Paul, but alſo on the law of Moſes and the prophets, whoſe doctrines they groſsly perverted. Their perſuaſion that evil reſided in matter, as its centre and ſource, made them reject the doctrine of the reſurrection of the body, and its re-union with the immortal ſpirit. Their notion, that malevolent genii preſided over men, and occaſioned diſeaſes and calamities, wars, and deſolations, induced them to apply themſelves to the ſtudy of magic, in order to weaken the powers or ſuſpend the influence of their malignant agents.

The gnoſtics conſidered Chriſt as the ſon of God, and conſequently inferior to the Father, who came into the world for the reſcue and happineſs of miſerable mortals, oppreſſed by evil beings: but they rejected Chriſt's humanity, on the principle that every thing corporeal is

eſſentially and intrinſically evil; and therefore the greateſt part of them denied the reality of his ſufferings. They ſet a great value on the beginning of the goſpel of St. John, where they fancied they ſaw their æons or emanations under the *Word*, the *Life*, the *Light*, &c. They divided all nature into three kinds of being, viz. *hylic*, or material; *pſychic*, or animal; and *pneumatic*, or ſpiritual. On the like principle they alſo diſtinguiſhed three ſorts of men; *material*, *animal*, and *ſpiritual*. The firſt, who were material, and incapable of knowledge, inevitably periſhed; the third, ſuch as the gnoſtics themſelves pretended to be, were all certainly ſaved: the pſychic, or animal, who were of the middle nature, were capable either of being ſaved or damned, according to their good or evil actions.

With regard to their moral doctrines and conduct, they were much divided. The greateſt part of this ſect adopted very auſtere rules of life, recommended rigorous abſtinence, and preſcribed ſevere bodily mortifications, with a view of purifying and exalting the mind. Others, however, maintained, that there was no moral difference in human actions; and thus, confounding right with wrong, they gave a looſe to all the paſſions, and aſſerted the innocence of following blindly all their motions, and of living by their tumultuous dictates. The tenets of the ancient gnoſtics were revived in Spain, in the fourth century, by a ſect called the *Priſcillianiſts*.

GNU, or GNOU, *ſ.* A ſpecies of antelope. See the article CAPRA, vol. iii. p. 775.

To GO, *v. n.* pret. *I went*; *I have gone*: [ȝan, Saxon. This was probably changed to *gone*, or *gang*, then contracted to *go*. *Went* is the preterite of the old verb *wend*.] To walk; to move ſtep by ſtep:

You know that love
Will creep in ſervice where it cannot *go*. *Shakeſpeare.*

To move; not ſtand ſtill.—Riſe, let us be *going*. *Matt.* xxvi. 46.—To walk ſolemnly.—If there be cauſe for the church to *go* forth in ſolemn proceſſion, his whole family have ſuch buſineſs come upon them that no one can be ſpared. *Hooker.*—To walk leiſurely; not run.—And muſt *I go* to him?—Thou muſt run to him; for thou haſt ſtaid ſo long, that *going* will ſcarce ſerve the turn. *Shakeſpeare.*—To march or walk a-foot.—I will only *go* through on my feet. *Num.* xx. 19.—To travel; journey:

From them I *go*,
This uncouth errand ſole. *Milton.*

To proceed; to make a progreſs:

Thus others we with defamation wound,
While they ſtab us; and ſo the jeſt *goes* round. *Dryden.*

To remove from place to place:

Stept in ſo far, that, ſhould I wade no more,
Returning were as tedious as *go* o'er. *Shakeſpeare.*

To depart from a place; to move from a place; the oppoſite of *to come*.—And when ſhe had ſo ſaid ſhe *went* her way. *John*, xi. 28.—I will let you *go*, that ye may ſacrifice, only you ſhall not *go* very far away. *Exod.* viii. 28.

Go firſt the maſter of thy herds to find,
True to his charge, a loyal ſwain and kind. *Pope.*

To move or paſs in any manner, or to any end.—The mourners *go* about the ſtreets. *Eccl.* xii. 5.—The ſun ſhall *go* down over the prophets, and the day ſhall be dark over them. *Mac.* iii. 6.—Put every man his ſword by his ſide, and *go* in and out from gate to gate throughout the camp. *Exod.* xxxii. 27.

Though the vicar be bad, or the parſon be evil,
Go not for thy tything thyſelf to the devil. *Tuſſer.*

To paſs in company with others.—Thou ſhalt again be adorned with thy tabrets, and ſhalt *go* forth in the dances of them that make merry. *Jer.* xxxi. 4.—He *goeth* in company with the workers of iniquity, and walketh with wicked men. *Job.*

Away, and with thee *go*, the worſt of woes,
That ſeek'ſt my friendſhip, and the gods thy foes.
Chapman.

To proceed in any courſe of life, good or bad.—And the Levites that are *gone* away far from me, when Iſrael *went* aſtray, which *went* aſtray away from me after their idols, they ſhall even bear their iniquity. *Ezek.* xliv. 10.—To proceed in mental operations.—Thus I have *gone* through the ſpeculative conſideration of the Divine Providence. *Hale.*—I hope, by *going* over all theſe particulars, you may receive ſome tolerable ſatisfaction about this great ſubject. *South.*—To take any road.—I will *go* along by the highway; I will neither turn to the right hand, nor to the left. *Deut.* ii. 27.—Who ſhall bemoan thee? Or who ſhall *go* aſide to aſk how thou doeſt? *Jer.* xv. 5.—To march in a hoſtile or warlike manner.—Let us *go* down after the Philiſtines by night, and ſpoil them until the morning light. 1 *Sam.* xiv. 36.—The remnant of Jacob ſhall be among the Gentiles as a lion among the beaſts of the foreſt; who, if he *go* through, both treadeth down and teareth in pieces, and none can deliver. *Mic.* v. 8.

You were advis'd his fleſh was capable
Of wounds and ſcars, and that his forward ſpirit
Would lift where moſt the trade of danger rang'd;
Yet did you ſay *go* forth. *Shakeſpeare.*

To change ſtate or opinion for better or worſe.—We will not hearken to the king's words to *go* from our religion. 1 *Mac.* ii. 22.

All *goes* to ruin, they themſelves contrive
To rob the honey, and ſubvert the hive. *Dryden.*

To apply one's ſelf.—Becauſe this atheiſt *goes* mechanically to work, he will not offer to affirm that all the parts of the embryon could, according to his explication, be formed at a time. *Bentley.*—To have recourſe to.—Dare any of you, having a matter againſt another, *go* to law before the unjuſt, and not before the ſaints? 1 *Cor.*—To be about to do.—So extraordinary an example, in ſo degenerate an age, deſerves for the rarity, and, I was *going* to ſay, for the incredibility of it, the atteſtation of all that knew him. *Locke.*—To ſhift; to paſs life not quite well.—Clothes they muſt have; but if they ſpeak for this ſtuff, or that colour, they ſhould be ſure to *go* without it. *Locke.*—To decline; to tend towards death or ruin. This ſenſe is only in the participles *going* and *gone*:

He is far *gone*, and, truly, in my youth,
I ſuffer'd much extremity for love. *Shakeſpeare.*

To be in party or deſign:

They with the vanquiſh'd prince and party *go*,
And leave their temples open to the foe. *Dryden.*

To eſcape.—Timotheus himſelf fell into the hands of Doſitheus and Soſipater, whom he beſought with much craft to let him *go* with his life. 2 *Mac.* xii. 24.—To tend to any act:

There be ſome women, Silvius, had they mark'd him,
In parcels as I did, would have *gone* near
To fall in love with him. *Shakeſpeare.*

To be uttered.—His diſciples perſonally appeared among them, and entertained the report which had *gone* abroad concerning a life ſo full of miracles. *Addiſon.*—To be talked of; to be known.—It has the greateſt town in the iſland that *goes* under the name of Ano-Capreä, and is in ſeveral places covered with a very fruitful ſoil. *Addiſon on Italy.*—To paſs; to be received.—And the man *went* among men for an old man in the days of Saul. 1 *Sam.* xvii. 12.—A kind imagination makes a bold

a bold man have vigour and enterprize in his air and motion: it ſtamps value upon his face, and tells the people he is to *go* for ſo much. *Collier.*—To move by mechaniſm.—This pope is decrepid, and the bell *goeth* for him. *Bacon.*

Clocks will *go* as they are ſet; but man,
Irregular man's never conſtant, never certain. *Otway.*

'Tis with our judgments as our watches, none
Go juſt alike, yet each believes his own. *Pope.*

To be in motion, from whatever cauſe.—Clipt and waſhed money *goes* about, when the entire and weighty lies hoarded up. *Waller.*—To move in any direction.—Shall the ſhadow *go* forward ten degrees, or *go* back ten degrees? 2 *Kings*, xx. 9.—To flow; to paſs; to have a courſe:

The god I am, whoſe yellow water flows
Around theſe fields, and fattens as it *goes*,
Tyber my name. *Dryden.*

To have a tendency:

Athenians, know
Againſt right reaſon all your counſels *go*. *Dryden.*

To be in a ſtate of compact or partnerſhip.—There was a hunting match agreed upon betwixt a lion, an aſs, and a fox, and they were to *go* equal ſhares in the booty. *L'Eſtrange.*—To be regulated by any method; to proceed upon principles.—We are to *go* by another meaſure. *Spratt.*—The principles I there *went* on, I ſee no reaſon to alter. *Locke.*—To be pregnant.—Of living creatures ſome are a longer time in the womb, and ſome ſhorter: women *go* commonly nine months. *Bacon.*

The fruit ſhe *goes* with,
I pray that it good time and life may find. *Shakeſpeare.*

To paſs; not to remain.—She began to afflict him, and his ſtrength *went* from him. *Judges*, xvi. 19.—When our merchants have brought them, if our commodities will not be enough, our money muſt *go* to pay for them. *Locke.*—To paſs, or be looſed; not to be retained.—Let *go* the hand of that arch-heretic. *Shakeſpeare.*

Then he lets me *go*,
And, with his head over his ſhoulder turn'd,
He ſeem'd to find his way without his eyes. *Shakeſpeare.*

To be expended.—Scholars are cloſe and frugal of their words, and not willing to let any *go* for ornament, if they will not ſerve for uſe. *Felton.*—To be in order of time or place.—We muſt enquire farther what is the connexion of that ſentence with thoſe that *go* before it, and thoſe which follow it. *Watts.*—To reach or be extended to any degree.—No man's knowledge here can *go* beyond his experience. *Locke.*—To extend to conſequences.—It is not one maſter that either directs or takes notice of theſe: it *goes* a great way barely to permit them. *L'Eſtrange.*—To reach by effects.—Conſidering the cheapneſs, ſo much money might *go* farther than a ſum ten times greater could do now. *Wilkins.*—To extend in meaning.—His amorous expreſſions *go* no further than virtue may allow. *Dryden.*—To ſpread; to be diſperſed; to reach:

Whoſe fleſh, torn off by lumps, the rav'nous foe
In morſels cut, to make it farther *go*. *Tate.*

To have influence; to be of weight; to be of value.—'Tis a rule that goes a great way in the government of a ſober man's life, not to put any thing to hazard that may be ſecured by induſtry, conſideration, or circumſpection. *L'Eſtrange.*—To be rated one with another; to be conſidered with regard to greater or leſs worth.—I think, as the world *goes*, he was a good ſort of man enough. *Arbuthnot.*—To contribute; to conduce; to concur; to be an ingredient.—The medicines which *go* to the ointments are ſo ſtrong, that, if they were uſed inwards, they would kill thoſe that uſe them. *Bacon.*—To fall out, or terminate; to ſucceed.—I will ſend to thy father, and they ſhall declare unto him how things *go* with thee. *Tob.* x. 8.

Howe'er the buſineſs *goes*, you have made fault
I' th' boldneſs of your ſpeech. *Shakeſpeare.*

To be in any ſtate. *This ſenſe is imperſonal.*—It ſhall *go* ill with him that is left in his tabernacle. *Job*, xx.—He called his name Beriah, becauſe it *went* evil with his houſe. 1 *Chron.* vii. 23.—To proceed in train or conſequence.—Duration in itſelf is to be conſidered as *going* on in one conſtant, equal, uniform, courſe. *Locke.*

I had hope,
When violence was ceaſed, and war on earth,
All would have then *gone* well. *Milton.*

To Go *about.* To attempt; to endeavour; to ſet one's ſelf to any buſineſs.—They never *go about*, as in former times, to hide or palliate their vices; but expoſe them freely to view. *Swift.*

O dear father,
It is thy buſineſs that I *go about*. *Shakeſpeare.*

To Go *aſide.* To err; to deviate from the right.—If any man's wife *go aſide*, and commit a treſpaſs againſt him. *Numb.* v. 12.

To Go *between.* To interpoſe; to moderate between two.—I did *go between* them, as I ſaid; but more than that, he loved her; for, indeed, he was mad for her. *Shakeſpeare.*

To Go *by.* To paſs away unnoticed.—What's that to us? The time *goes by*; away. *Shakeſpeare.*

Do not you come my tardineſs to chide,
That laps'd in time and paſſion, lets *go by*
Th' important acting of your dread command. *Shakeſp.*

To find or get in the concluſion.—He's ſure to *go by* the worſt, that contends with an adverſary that is too mighty for him. *L'Eſtrange.*

In argument with men a woman ever
Goes by the worſe, whatever be her cauſe. *Milton.*

To obſerve as a rule.—The frequency of the fits, and violence of the ſymptoms, are a better rule to *go by*. *Sharp.*

To Go *down.* To be ſwallowed; to be received, not rejected.—Folly will not eaſily *go down* in its own natural form with diſcerning judges. *Dryden.*—If he be hungry, bread will *go down*. *Locke.*

To Go *in and out.* To do the buſineſs of life.—The Lord ſhall preſerve thy *going out* and thy coming *in*. *Pſalms.*—To be at liberty.—He ſhall *go in and out*, and find paſture. *John.*

To Go *off.* To die; to go out of life; to deceaſe.—In this manner he *went off*, not like a man that departed out of life, but one that returned to his abode. *Tatler.*

I would the friends we miſs were ſafe arrived,
Some muſt *go off*; and yet, by theſe I ſee,
So great a day as this is cheaply bought. *Shakeſpeare.*

To depart from a poſt:

The leaders having charge from you to ſtand,
Will not *go off* until they hear you ſpeak. *Shakeſpeare.*

To Go *on.* To make attack:

Bold Cethegus,
Whoſe valour I have turn'd into his poiſon,
And praiſed ſo to daring, as he would
Go on upon the gods. *Ben Jonſon.*

To proceed.—He that deſires only that the work of God and religion ſhould *go on*, is pleaſed with it, whoever is the inſtrument. *Taylor.*—*Go on* chearfully in the glorious courſe you have undertaken. *Addiſon.*

To Go *over.* To revolt; to betake himſelf to another

ther party.—In the change of religion, men of ordinary underſtandings don't ſo much conſider the principles as the practice of thoſe to whom they *go over*. *Addiſon*.

To Go *out*. To go upon any expedition.—You need not have pricked me: there are other men fitter to *go out* than I. *Shakeſpeare*.—To be extinguiſhed.—Spirit of wine burned till it *go out* of itſelf, will burn no more. *Bacon*.

Think'ſt thou the fiery fever will *go out*,
With titles blown from adulation! *Shakeſpeare*.

To Go *through*. To perform thoroughly; to execute.—The powers in Germany are borrowing our money, in order to *go through* their part of the expence. *Addiſon*.—To ſuffer; to undergo.—I tell thee that it is abſolutely neceſſary for the common good that thou ſhouldeſt *go through* this operation. *Arbuthnot*.

To Go *upon*. To take as a principle.—This ſuppoſition I have *gone upon* through thoſe papers. *Addiſon*.

The ſenſes of this word are very indiſtinct: its general notion is motion or progreſſion. It commonly expreſſes paſſage from a place, in oppoſition to *come*. This is often obſervable even in figurative expreſſions. We ſay, The words that *go* before and that *come* after; To-day *goes* away and to-morrow *comes*. *Johnſon*.

GO TO, *interj*. Come, come, take the right courſe. A ſcornful exhortation.—*Go to*, *go to*, thou art a fooliſh fellow. *Shakeſpeare*.

My favour is not bought with words like theſe:
Go to; you'll teach your tongue another tale. *Rowe*.

GO'-BY, *ſ*. Deluſion; artifice; circumvention; overreach.—Except an apprentice is inſtructed how to adulterate and varniſh, and give you the *go-by* upon occaſion, his maſter may be charged with neglect. *Collier*.

GO'-CART, *ſ*. A machine in which children are incloſed to teach them to walk, and which they puſh forward without danger of falling:

Young children, who are try'd in
Go-carts, to keep their ſteps from ſliding,
When members knit, and legs grow ſtronger,
Make uſe of ſuch machine no longer. *Prior*.

GO'A, an iſland in the Indian Sea, near the weſt coaſt of Hindooſtan, ſeparated from the continent by a river called Mandova, which ſoon after runs into the ſea; about eight leagues in circumference. The ſoil is fertile, eſpecially in the valleys; the trees are always covered with leaves, flowers, and fruit; and abundance of ſprings iſſue from the mountains. The rainy ſeaſon continues here from June till September or October; and the land floods bring down ſuch quantities of mud and ſand, as ſtop up the haven and impede the navigation. During this time the weather is very hot after ſun-riſe, when the rains ceaſe; yet before the rains begin, that is, in the months of April and May, the weather is ſtill more ſultry, but from October to March it is very moderate.

GO'A, a city, and capital of the Portugueſe ſettlements in India, the ſeat of a viceroy, and ſee of an archbiſhop, taken by the Portugueſe general Albuquerque, in 1510. The port of Goa is repreſented as one of the beſt in the Indies, and for this character it ſtands in ſome meaſure obliged to nature; but the Portugueſe have ſpared no pains to heighten and improve thoſe advantages, as well as to fortify it with many caſtles and towers, furniſhed with abundance of good cannon. Beyond theſe caſtles the channel becomes narrower, ſometimes to one, ſometimes to two, miles; and its banks are planted with the beſt fruits and fineſt trees India affords. Eight miles up is the town of Goa. Half way upon the right ſide, is a palace, called *Paſſo de Dangi*, where formerly the viceroys reſided, but at preſent it ſerves as a barrack for the garriſon: there begins a ſtrong broad wall, two miles in length, for a foot-path when the country is overflowed, and a great deal of ſalt is gathered round it. This channel, that makes ſo noble a port, runs many miles up the country, dividing it into ſeveral fruitful iſlands and peninſulas, which plentifully furniſh the city with neceſſaries. Adjoining to this port is the haven of Murmugon, formed by the other channel, that runs between the iſland of Goa and peninſula of Salſete, and ſupplies a ſafe retreat to the ſhips that come from Portugal, and other parts, when they are ſhut out of the port by the ſands which the river Mandova brings down, when ſwollen by the firſt rains of June; the paſſage not being open till October. This port of Murmugon is defended by the caſtle of the ſame name, ſeated in the iſland of Salſete, in which there is a good garriſon, and the fortifications are well ſupplied with cannon. At the ſouth entrance into the channel, a little beyond the forts on the right hand, are the remains of Old Goa, and from thence to the new city there is a commodious road, elegantly adorned with trees for fruit and ſhade. Yet what is ſtyled the new city, carries evident marks of decay; for, though the walls are kept in good repair, and are every where well ſupplied with cannon, ſince they occupy a ſpace of twelve miles, they ſerve to ſhew what the city once was, in compariſon of what it now is. In the time of its proſperity, there was nothing could be compared with it in the Indies; and very few cities in Europe were either larger or better built. The public ſtructures ſtill remain, and bear inconteſtible evidence of its former grandeur.

Among its other eſtabliſhments, it had a famous ſpiritual inquiſition for the puniſhment of heretics, where the moſt unheard-of cruelties were long exerciſed over thouſands of the poor ignorant unſuſpecting inhabitants, on the ſcore of religion; but for the intereſts of humanity, and the honour of the Chriſtian name, the tribunal of the inquiſition of Goa was aboliſhed by a royal decree in Portugal, under the adminiſtration of the marquis de Pombal, prime miniſter to king Don Joſeph, who died in February 1777. The building ſtill remains, and by its black outſide appears a fit emblem of the cruel and bloody tranſactions that paſſed within its walls!

Here are ſeveral beautiful churches of modern conſtruction; and in that dedicated to Bon Jeſus, is the chapel of St. Franciſco de Xaviere, whoſe tomb it contains: this chapel is a moſt ſuperb and magnificent ſtructure: the tomb of the ſaint is entirely of marble, brought from Liſbon; on the four ſides of it the principal actions of the life of the ſaint are moſt elegantly carved in baſſo relievo; theſe repreſent his converting the different nations to the catholic faith: the ſculpture is moſt admirably executed: it extends to the top in a pyramidical form, which terminates with a coronet of mother-of-pearl. On the ſides of this chapel are excellent paintings, done by Italian maſters; the ſubjects from ſcripture.

The number of inhabitants is now ſaid to be about twenty thouſand; of theſe the native Portugueſe amount to a very ſmall number; the Meſtizos are more numerous; the Canarins, or natives, are as black as jet, but have long black hair, and many of them fine features; multitudes of negro ſlaves, and pagans of different nations, make up the reſt of the people. It is generally agreed, that the men are for the moſt part proud, indolent, jealous, revengeful, and indigent; the women, lazy, laſcivious, and as well ſkilled in poiſoning as any in the world. Two hundred and fifteen miles ſouth-ſouth-eaſt of Bombay. Lat. 15. 28. N. lon. 73. 46. E. Greenwich.

GO'A, a town of the iſland of Celebes, near the ſouth coaſt. Lat. 5. 12. S. lon. 120. 30. E. Greenwich.

GOAD, *ſ*. [ȝaȝ, Saxon.] A pointed inſtrument with which oxen are driven forward.—Oft in his harden'd hand a *goad* he bears. *Pope*.

To GOAD, *v. a.* To prick or drive with the goad. To incite; to ſtimulate; to inſtigate; to drive forward:

Moſt dangerous
Is that temptation, that doth *goad* us on
To ſin in loving virtue. *Shakeſpeare.*

GOAL, *ſ.* [*gaule*, Fr.] A long pole, ſet up to mark the bounds of the race. The landmark ſet up to bound a race; the point marked out to which racers run:

As at the Olympian games, or Pythian fields,
Part curb their fiery ſteeds, or ſhun the *goal*
With rapid wheels. *Milton.*

The ſtarting poſt:

Haſt thou beheld, when from the *goal* they ſtart,
The youthful charioteers with heaving heart
Ruſh to the race? *Dryden.*

The final purpoſe; the end to which a deſign tends.—Our poet has always the *goal* in his eye, which directs him in his race: ſome beautiful deſign, which he firſt eſtabliſhes, and then contrives the means, which will naturally conduct him to his end. *Dryden.*

Each individual ſeeks a ſeveral *goal*,
But heav'n's great view is one, and that the whole. *Pope.*

It is ſometimes improperly written for GAOL, or *jail*; which ſee.

GOAR, *ſ.* [*goror*, Welſh.] Any edging ſewed upon cloth to ſtrengthen it. *Skinner.*

GOAR (James), a learned French dominican monk, born at Paris in 1601, and entered into the order of preaching friars in 1619. Being ſent on a miſſion into the Levant, he there made the doctrines and ceremonies of the Greek church the ſubjects of his diligent inveſtigation. Returning afterwards to Rome, he formed an acquaintance with the moſt learned men of the times, and particularly with Leo Allatius. He alſo carefully examined the different printed books and manuſcripts in the libraries of that city, which treat of the Greek rituals; and from the materials which he collected drew up a very learned work, conſiſting of a collection of the Greek liturgies, &c. illuſtrated with numerous valuable notes, highly uſeful in explaining the dogmas and eccleſiaſtical ceremonies of the eaſtern churches. It was publiſhed at Paris in 1647, in Greek and Latin, under the title of *Eucologion, ſive Rituale Græcorum*, folio. This work having become ſcarce, was reprinted at Venice in 1730, folio. Father Goar alſo tranſlated into Latin ſome of the Greek writers on the Byzantine hiſtory, which form the curious collection printed at the Louvre: ſuch as, 1. The Treatiſe of George Codinus concerning the Officers of the Palace, and thoſe of the Great Church at Conſtantinople, with Notes, 1648. 2. The Chronography of George Syncellus, and that of Nicephorus, Patriarch of Conſtantinople, 1652. 3. The Annals of George Cedrenus, with Notes, 1647. 4. The Chronography of Theophanes, with Notes, and the various Readings collected by Father Combeſis, 1655. 5. The Lives of the modern Emperors, by Leo the Grammarian, 1655. He died in 1653.

GOARS'HAUSEN, a town of Germany, in the circle of the Upper Rhine, and county of Katzenelnbogen, ſituated on the eaſt ſide of the Rhine: two miles eaſt of St. Goar.

GOAT, *ſ.* [ȝaꝛ, Saxon and Scottiſh.] A ruminant animal that ſeems a connecting ſpecies between the deer and ſheep. For its natural hiſtory and particular ſpecies, ſee the article CAPRA, vol. iii. p. 770.

The little bear that rock'd the mighty Jove,
The ſwan whoſe borrow'd ſhape conceal'd his love,
Are grac'd with light; the nurſing *goat's* repaid,
With heav'n, and duty rais'd the pious maid. *Creech.*

GO'AT's BEARD, *ſ.* See TRAGOPOGON.

GOAT I'SLAND, an iſland of the American States, in the ſtate of Rhode Iſland, oppoſite to the town of Newport, on which is Fort Waſhington. The fort has been lately repaired, and a citadel erected in it.

GOAT I'SLAND (Great), a ſmall iſland near the ſouth coaſt of Jamaica. Lat. 17. 53. N. lon. 76. 51. W. Greenwich.

GOAT I'SLAND (Little), a ſmall iſland, about a mile north-weſt from Great Goat Iſland.

GOAT's I'SLAND, the ſouthernmoſt of the Baſhee Iſlands, in the Eaſtern Indian Sea. Lat. 20. 6. N. lon. 121. E. Greenwich.

GO'AT's MILK, *ſ.* The milk of goats.—After the fever and ſuch like accidents are diminiſhed, aſs's and *goat's milk* may be neceſſary. *Wiſeman.*

GO'AT's RUE, *ſ.* See GALEGA.

GO'AT-SKIN, *ſ.* Skin of a goat; a veſſel made of the hide of a goat:

Then fill'd two *goat-ſkins*, with her hands divine;
With water one, and one with ſable wine. *Pope.*

GO'AT-SUCKER, *ſ.* in ornithology. See CAPRIMULGUS, vol. iii. p. 778.

GOAT's THORN, *ſ.* See ASTRAGALUS.

GO'AT WEED, *ſ.* See CAPRARIA.

GO'ATH, a place in Paleſtine, ſituated near Jeruſalem. *Jer.* xxxi. 39.

GOAT'HERD, *ſ.* [ȝaꝛ and hỳnd, Sax. a feeder or tender.] One whoſe employment is to tend goats:

Is not thilk fame *goatherd* proud,
That ſits on yonder bank,
Whoſe ſtraying herd themſelf doth ſhroud
Among the buſhes rank? *Spenſer's Paſtorals.*

GOAT'ISH, *adj.* Reſembling a goat in any quality: as, rankneſs; luſt.—The laſt is notorious for its *goatiſh* ſmell, and tufts not unlike the beard of that lecherous animal. *More.*

GOA'VE (Grand), a town of the iſland of St. Domingo: ten miles ſouth-weſt of Leogane.

GOA'VE (Petit), a ſeaport town of the iſland of St. Domingo, with a harbour capable of receiving veſſels of the largeſt ſize ſafe from winds; the environs contain plantations of ſugar, coffee, indigo, and cotton. This town is the ſtaple to which the inhabitants of Grand Goave and other places ſend their commodities: twenty miles weſt-ſouth-weſt of Leogane. Lat. 18. 30. N. lon. 55. 5. W. Ferro.

GOB, *ſ.* [*gobe*, Fr.] A ſmall quantity. *A low word.*—Do'ſt think I have ſo little wit as to part with ſuch a *gob* of money? *L'Eſtrange.*

GOB, or GEZER. See GEZER.

GO'BAN, a town of Perſia, in the province of Chuſiſtan: ſeventy-five miles ſouth of Suſa.

GO'BAR, a governor of Meſopotamia, who checked the courſe of the Euphrates, that it might run rapidly through Babylon. *Pliny.*

GOB'BET, *ſ.* [*gobe*, Fr.] A mouthful; as much as can be ſwallowed at once.—The cooks ſlice it into little *gobbets*. *Sandy.*

The giant, gorg'd with fleſh, and wine, and blood,
Lay ſtretch'd at length, and ſnoring in his den,
Belching raw *gobbets* from his maw, o'ercharg'd
With purple wine, and cruddled gore confus'd. *Addiſon.*

To GOB'BET, *v. a.* To ſwallow at a mouthful. *A low word.*—Down comes a kite powdering among them, and *gobbets* up both together. *L'Eſtrange.*

GOB'BI, a country of Africa, between the country of Camma and Cape Lopez Gonſalvo; the chief trade of the place conſiſts in elephants and ivory; the principal town is ſituated about a day's journey from the Atlantic.

To GOB'BLE, *v. a.* [*gober*, old French, to ſwallow.]

To

To ſwallow haſtily with tumult and noiſe.—The ſheep were ſo keen upon the acorns, that they *gobbled* up now and then a piece of the coat along with them. *L'Eſtrange.*

Of laſt year's corn in barn great ſtore;
Fat turkies *gobbling* at the door. *Prior.*

GOB'BLER, *ſ.* One that devours in haſte; a gormand; a greedy eater.

GOB'BO (Pietro Paolo Cortoneſe), a celebrated painter of fruit and landſcapes, born at Cortona in 1580, and acquired the principles of deſign from his father; but was afterwards the diſciple of Creſcentio at Rome, and perfected himſelf in the moſt eſſential parts of his profeſſion by ſtudying after nature. His merit ſoon recommended him to the notice and eſteem of the moſt able judges at Rome; and he found a generous patron in cardinal Borgheſe, who employed him to adorn his palace. The fruit which he painted was ſo expreſſive of nature, that nothing could poſſibly excel it. He died in 1640.

GOB'ELIN (Giles), a celebrious French dyer in the reign of Francis I. diſcovered a method of dying a beautiful ſcarlet, and his name has been given ever ſince to the fineſt French ſcarlets. His houſe, in the ſuburb of St. Marcel at Paris, and the river he made uſe of, are ſtill called *the Gobelins*. An academy for drawing, and a manufactory of fine tapeſtries, were erected under his inſpection in 1666; for which reaſon the tapeſtries are called *the Gobelins*. See the article DYING, vol. vi. p. 142.

GO'BETWEEN, *ſ.* One that tranſacts buſineſs by running between two parties. *Commonly in an ill ſenſe.*—Even as you came in to me, her aſſiſtant, or *gobetween*, parted from me: I ſay, I ſhall be with her between ten and eleven. *Shakeſpeare.*

GO'BI, an immenſe deſert of Aſia, which originates on the north ſide of the fountains of the Ganges, and of the Indus, in about latitude 37. 30. its courſe is north-eaſterly between longitude 74. 45. and 105. eaſt, bounding or dividing part of Hindooſtan, Thibet, weſtern Tartary, Tangut, and the Monguls, and ends in latitude 49. 20. at the lake Dalay-nor, in Chineſe Tartary; the whole extent is not leſs than two thouſand three hundred and ninety-ſeven miles. It is named the *Gobi*, by the Indians; and by the Chineſe, *Shamo* and *Han Kai*. It conſiſts of ſands equally fleeting and tremendous as thoſe of Arabia, which would be impaſſable had not nature placed acroſs them, at very remote diſtances, three chains of hills, or narrow tracts of ſolid ground, the roads which travellers muſt take; and amidſt this ocean of ſand were pleaſant vallies, entirely inſulated by the ſand. Occaſionally, in the middle ages, theſe roads were the paſſage which merchants took, either from the countries bordering on the Caſpian Sea, or from Europe, as their buſineſs might call them through Tartary and Bucharia into India, or the diſtant China.

GOBIOMO'RUS, *ſ.* The name of a genus inſtituted by Cepede, for ſome of the ſpecies of GOBIUS, which ſee.

GO'BIUS, *ſ.* [κωβιος, Gr. from גב *goba*, Heb.] In ichthyology, the GOBY; a genus of fiſhes belonging to the order of thoracici. The generic character is—ventral fins united and funnel-ſhaped. Theſe fins, according to ſome writers, ſerve them to faſten themſelves to the rocks; which, however, does not appear probable, as they have no capability of penetrating the ſmooth ſurface of a ſtone; from this idea they have nevertheleſs received their name, *rock-fiſh*, among us; or rather becauſe they commonly keep at the bottom of the water, among rocks or ſtones. They have a long body, covered with ſcales; and do not grow very large. The head is ſmall, laterally compreſſed in ſome ſpecies, and flattened in others; but in all, the body is ſomewhat rounded. The eyes are at the top of the head, and ſtand near together; between them, and behind one another, are two little round holes, which doubtleſs are the noſtrils and the openings of the ears. The aperture of the mouth is ſmall, and the jaws are armed with little ſharp teeth; the tongue is ſhort and truncated, and the palate armed with four rugged bones. The gills lie one over the other, and contain from four to five rays; the aperture is ſmall and round. The lateral line goes ſtraight from one end of the body to the other. One thing remarkable in this genus is, that the end of the paſſage of the ovarium turns towards the anus, and is wart-ſhaped. Theſe fiſh live on worms, aquatic inſects, ſpawn, and young fry. They are moſtly ſea-fiſh, whence they obtained the name of *ſea-gudgeons*; but ſome of the ſpecies ſince diſcovered are found to inhabit rivers. Cepede has diſtributed them into ſeveral genera, and the genera into ſubdiviſions; and the ſpecies he arranges according to the number of rays in the ſecond dorſal fin. Thirty-ſix ſpecies have been aſcertained, which are as follow:

1. Gobius niger, the black goby, or rock-fiſh. This is eaſily diſtinguiſhed by the yellow and black ſpots on a whitiſh ground, and by having fourteen rays in the ſecond dorſal fin; there are four rays in the membrane of the gills, ten in the ventral fin, twelve in the anal, fourteen in the tail, and ſix in the firſt dorſal. The whole fiſh is ſhaped like a wedge; the head is large, and diminiſhes gradually to the tail; it is alſo inſenſibly flattened; and the body, which is laterally compreſſed, becomes round towards the tail; the jaws are of equal length, armed with two rows of ſharp teeth; the eyes are lozenge-ſhaped, pupil black, iris ſilvery; the membrane of the gills is large, as well as their aperture; the back is arched, marked with black rings, the lateral line not viſible; the belly is large and yellow; the anus is in the middle of the body, which is ſtudded with little black and yellow ſpots. The fins are of a bluiſh brown, and ornamented with ſmall ſpots; the rays of the dorſal and anal fins are ſingle; the reſt branched; they are all ſoft, except thoſe of the firſt dorſal, which are ſomewhat hard; the pectoral fins are ſhort, the others long; the tail fin is rounded. See the Plate, fig. 2. This is a rapacious fiſh; feeds on the young fry, and aquatic inſects. It is found in the ſeas of Europe and Aſia. In ſpring they approach the ſhores and the mouths of rivers, to propagate; they ſpawn in May and June, caſting their ova on ſtones, as remarked by Ariſtotle and confirmed by Pontoppidan. They grow to the length of ſix inches, and while young are themſelves often the prey of ſome ſpecies of cod. The fleſh is well-taſted, reſembling the ſmaller perch. They are taken in the gulphs near Heiligoland, where they fiſh for them in the ſame manner as for cod: according to Falck, they are taken alſo in the Achtuba and Volga.

2. Gobius bicolor, the black-finned goby. Specific character, body and tail brown; fins black. There are ſix rays in the firſt dorſal fin, ſixteen in the ſecond, nineteen in the pectorals, twelve in the ventrals, fifteen in the anal, and ſeventeen in the tail. This is found in the Mediterranean; and is about three inches long. The rays of the fins appear beyond the membrane which unites them. It was firſt diſcovered by Brunniche.

3. Gobius cruentatus, the bloody goby. Specific character, the mouth ſpotted with red; the rays of the dorſal fins reaching beyond the membrane. There are five rays in the membrane of the gills, ſix in the firſt dorſal, ſixteen in the ſecond, nineteen in the pectorals, twelve in the ventrals, in the anal and tail fifteen each. This inhabits the Mediterranean, and is perhaps only a variety of the jozo; it much reſembles alſo the following ſpecies. Not the mouth only, but the throat, opercula, and ſeveral of the fins, are marked with red ſpots like pimples, whence Bonaterra calls it *puſtulcux*. The general colour is a pale white, with brown tranſ-

verſe ſtripes; there are ſmall brown bands on the tail fin, which is rounded; the ventrals are of a bluiſh colour.

4. Gobius paganellus, the ſea-gudgeon. Specific character, the firſt dorſal fin edged with yellow; the ſecond and the anal purple at the baſe. The firſt dorſal fin has ſix rays, the ſecond ſeventeen, the pectorals ſeventeen each, the ventrals twelve, the anal ſixteen, and the tail twenty. Found in the Mediterranean Sea, among rocks, whence its trivial name of ſea-gudgeon or goby. It grows ſometimes ten inches long; its colour white ſhaded with yellow, and ſometimes with green; it has beſides ſome little black ſpots; the tail fin is almoſt ſtraight; the teeth are ſmall; mouth large. According to Ariſtotle, it feeds on marine plants. The fleſh is lean, and ſomewhat criſp. They approach the ſhores to depoſit their ſpawn; as there, ſays Rondeletius, they find cool water, plenty of food, and ſafety from the attacks of larger fiſh.

5. Gobius Arabicus, the Arabian goby. Specific character, the five laſt rays of the firſt dorſal fin twice as long as the membrane, and ending in a red filament. The firſt dorſal fin has ſix rays, the ſecond fourteen, the pectorals ſixteen, the ventrals twelve, the anal thirteen, and the tail ſeventeen. Forſkael diſcovered this fiſh at Jedda in Arabia; it is not longer than one's little finger, but its colours are beautiful. The upper ſurface is moſtly of a greeniſh brown, ſet off by a great number of blue and violet ſpots, running one into the other, and moſtly upon the fins; the tips of the long rays which form the ſpecific character are red. Its ſkin is ſoft; ſcales ſmall, and ſtrongly adherent; tail fin wedge-ſhaped.

6. Gobius nebuloſus, the clouded goby. Specific character—the ſecond ray of the firſt dorſal terminating in a black filament twice as long as the membrane. The membrane of the gills is ſuſtained by ſeven rays, the firſt dorſal by ſix, the ſecond by eleven, the pectorals have eighteen each, the ventrals twelve, the anal eleven, and the tail fourteen. This alſo was found by Forſkael at Jedda; it is three inches long; of a white colour clouded with brown ſpots on the upper ſurface; the pectoral fins are ſea-green; the dorſal, anal, and tail, fins, are tranſparent; the anal edged with black; the under part of the body is entirely white, without any ſpot; the ſcales are large, rough, and lozenge-ſhaped; tail fin rounded at the end; the pupil of the eye is blue, the iris white.

7. Gobius eleotris, the Chineſe goby. Specific character—nine rays in the anal fin. There are five rays in the membrane of the gills, ſix in the firſt dorſal, eleven in the ſecond, twenty in the pectorals, ten in the ventrals, and twenty in the tail. This is a Chineſe ſpecies; the general colour white; the ſecond dorſal fin is as high as the firſt; tail fin rounded; the body is furniſhed with large, round, ſmooth, ſcales, with a violet ſpot on the back, near the gill-covert.

8. Gobius patella, Thunberg's goby. Specific character—twelve rays in the ſecond dorſal fin, jaws even, ſcales ſmall, two dorſal fins of equal height, twenty-eight rays in the caudal fin. There are five rays in the firſt dorſal fin, fifteen in each pectoral, and nine in the anal. This ſpecies, diſcovered by Thunberg in the Indian Sea, much reſembles the Chineſe goby. Its length is about four inches; there are ſeveral rows of teeth in the mouth, and the ſnout is blunt; the ventral fins are ſhorter than the pectorals; colour whitiſh, without ſpots or bars.

9. Gobius aphya, the loach goby. Specific character—brown bands on the dorſal and anal fins. The firſt dorſal fin has ſix rays, the ſecond ſixteen, the pectorals eighteen, the ventrals twelve, the anal fourteen, and the tail thirteen. This inhabits the Nile, and the Mediterranean Sea into which it falls; thus it is both a freſh and ſalt water fiſh, and has been noticed by moſt naturaliſts ancient and modern. It ſeldom reaches four inches long; its general colour is whitiſh, with ſome ſmall ſpots of black.

10. Gobius minutus, the ſmall goby. Specific character—colour white, with ferruginous ſpots, and faint ſtripes of the ſame on the dorſal and tail fins. The firſt dorſal fin has ſix rays, the ſecond and the anal eleven each. The head is depreſſed; the eyes large and prominent, iris ſapphire-colour; the dorſal fins are diſtant from each other; tail fin ſtraight. It is about three inches long, and was firſt deſcribed by Pallas.

11. Gobius jozo, the blue goby. This ſpecies is diſtinguiſhed by the blue colour of the fins, and by the rays of the firſt dorſal fin protruded beyond the membrane. There are four rays in the membrane of the gills; ſixteen in the pectoral fins, twelve in the ventrals, fourteen in the anal, ſixteen in the tail, ſix in the firſt dorſal, and fourteen in the ſecond. The head is compreſſed at the ſides; jaws equal; pupil of the eye black, iris white; the back is round, and of a brown colour; the ſides whitiſh; the ſcales middle-ſized. This fiſh inhabits the North Sea and the Baltic; being natural alſo to the Mediterranean, it was not unknown to Ariſtotle. It is commonly found near ſand banks. They live on ſpawn, crabs, ſnails, and ſmaller fiſh, growing to about ſix inches long; but are themſelves often the prey of other voracious fiſh who approach the ſhores for the purpoſe of caſting their ſpawn. They lay their eggs on ſmooth places covered with ſand; though their ova are very numerous, they do not increaſe very faſt, becauſe, being ſmall, they are ſo often devoured by larger fiſh. They are frequently caught in nets ſpread out for other fiſh; being lean and hard, they are not much eſteemed as food. The figure given of this ſpecies by Rondeletius is very incorrect: we have preſented a more exact delineation in the annexed Plate, fig. 3.

12. Gobius pectiniroſtris, the comb-toothed goby. Specific character—the teeth in the lower jaw ſtanding horizontally. There are five rays in the membrane of the gills, five in the firſt dorſal fin, twenty-ſix in the ſecond, nineteen in the pectorals, twelve in the ventrals, twenty-five in the anal, and fifteen in the tail. This ſpecies is from China. The teeth in the lower jaw are ſo diſpoſed as to reſemble the ſemicircular combs with which ladies faſten up their hair behind.

13. Gobius barbarus, the obſcure goby. Specific character—the pectoral fins ſpread like a fan. Twelve rays in the firſt dorſal fin, and thirteen in the ſecond. Nothing more is known of this ſpecies, which hence has been named *barbarus*, i. e. foreign or obſcure.

14. Gobius Schloſſeri, Schloſſer's goby. Specific character—the firſt dorſal fin conſiſting of ſpiny or ſtiff rays. There are three rays in the membrane of the gills, eight in the firſt dorſal fin, thirteen in the ſecond, ſixteen in the pectorals, twelve in the ventrals and anal, and nineteen in the tail. Pallas firſt deſcribed this ſpecies from a ſpecimen and notes ſent him by the learned Schloſſer, whoſe name he has given it. It is eight inches in length; the head long, broader than the body, and covered with ſcales; the lips are thick, hard, and rough inſide; the upper lip is double; the teeth are large, of various ſizes, ſharp, jagged, and placed without any order; the eyes are very cloſe together, and placed on the top of the head; their orbits are much raiſed, but ſo ſituated that the cornea is turned, of the one to the right, of the other to the left. The ſcales are large, round, and ſoftiſh; the lateral line is not eaſily diſtinguiſhed; the colour is blackiſh-brown on the back, on the belly whitiſh. The pectoral fins are placed at the end of fleſhy productions like arms, which enables the animal not only to move theſe fins with more eaſe by means of a longer lever, ſo as to ſwim with greater celerity in the muddy waters it inhabits, but alſo to crawl along the ſhores like many of the amphibia; by means of fins ſo formed, it can penetrate into the mud to avoid

GOBIUS, GONIUM, AND GORDIUS.

1. The Lancet Goby. 2. The black Goby. 3. The blue Goby. 4 Plumier's Goby. 5 Gonium pectorale. 6. Gordius aquaticus.

London Published as the Act directs March 22 1806 by J. Wilkes.

its enemies; and it can follow the crabs, which are its favourite food, upon the ſands. This fiſh is caught at Amboyna in marſhy places, and is eſteemed good food; the Dutch in India call it Chineſe fiſh.

15. Gobius melanuros, the black-tailed goby. Specific character—only one dorſal fin; the tail black.

16. Gobius anguillaris, the red-finned goby. Specific character—one dorſal fin, tail red. Fifty-two rays in the dorſal fin, twelve in the pectorals, ten in the ventrals, forty-three in the anal, and ten in the tail. This comes from the Eaſt, eſpecially the Indian Archipelago and China, where indeed many of the ſpecies are found. Cepede ſeparates this and the preceding into a new genus, which he calls *gobioides*, or "ſhaped like the goby," on account of their having but one dorſal fin. As its name imports, it has ſome likeneſs to the *murena anguilla*, or common eel, from the length of the dorſal and anal fins, which reach almoſt to the tail; and alſo the ſmall ſize of the pectorals, which are rounded; but eſpecially from the viſcoſity of the ſkin, which is ſo impregnated with oil as to be ſemipellucid. The jaws are furniſhed with ſmall teeth; all the fins are bright red.

17. Gobius edentulus, the toothleſs goby. Specific character—one dorſal fin, no teeth. There are ſeven rays in the membrane of the gills, forty-three in the dorſal fin, thirty-three in each pectoral, twenty-nine in the anal, and twelve in the tail. The head is large, indented with very perceptible pores, ſo that the ſkin is viſcous and oily like the preceding; along each jaw runs a bony plate inſtead of teeth; for no teeth, properly ſo called, have been hitherto diſcovered; the pectoral fins are very broad; and the dorſal riſes in height as it approaches the tail.

18. Gobius Brouſſonettii, Brouſſonet's goby. Specific character—one dorſal fin, body very long and thin, teeth in the jaws, tail fin pointed. The dorſal fin conſiſts of twenty-three rays, the pectorals ſeventeen, the ventrals ſeven each, the anal ſeventeen, the tail ſixteen. This was firſt deſcribed by Cepede from a ſpecimen in a collection, which, he ſays, the Hollanders *gave* to the French nation: he has named it after Brouſſonet, as a compliment to that gentleman's zeal for natural hiſtory. The teeth are very ſmall; the ventral fins long, and ſo joined as to form a deep funnel; the pectorals are ſmall, and rounded; the dorſal and anal fins reach to the end of the tail; the body is extremely long and taper; and the ſkin is ſufficiently tranſparent for the number and poſition of the principal muſcles to be diſtinguiſhed.

19. Gobius Boddaerti, Boddaert's-goby. Specific character—two dorſal fins, the five rays of the firſt dorſal filamentous, of which the third is very long. The ſecond dorſal has twenty-five rays, the pectorals twenty-one, the ventrals thirty-four, the anal twenty-five, the tail eighteen. This ſpecies is caught in the Indian Sea; it is named after a very celebrated naturaliſt, but more particularly deſcribed by Pallas. It grows to about ſix inches long, of a bluiſh brown above, and reddiſh white beneath; ſpots of brown and white appear on the head; the membrane of the gills and the tail fin are white ſhaded with blue; on each ſide of the back are ſeven brown ſpots; and under them, on the ſides, ſeven others dotted with white; the anal aperture is encircled with a black ring; on the lateral line are ſome ſpots as white as ſnow, and a number of very minute papillæ; the firſt dorſal fin is dotted with white, and five or ſix white lines run tranſverſely between the rays of the ſecond; the head is large, with a blunt ſnout and thick lips; the eyes incline to an oval ſhape, and are vertical, but not very prominent; behind the anus appears a fleſhy appendage of a conical ſhape, probably a paſſage for the ſpawn; which has been improperly called *pedunculus*, or a ſmall foot.

20. Gobius lagocephalus, the hare-lipped goby. Specific character—the upper jaw hemiſpherical; no tongue nor lateral line. There are three rays in the membrane of the gills, ſix in the firſt dorſal, eleven in the ſecond, fifteen in the pectorals, eight in the ventrals, ten in the anal, and twelve in the tail. The head is ſhort, thick, and free from ſcales; the upper jaw is ſemicircular, thick, covered with a double lip much protruded, fleſhy, and cleft like a hare's; there is a ſimilar cleft in the lower; the under jaw contains a few jagged teeth larger than the reſt; the palate alſo is furniſhed with numerous ſmall teeth; the eyes are near together, and veiled by a continuation of the epidermis. This fiſh is ſeldom more than a finger's length; its colours are grey, brown, and black, with ſmall ſcales; the firſt dorſal fin has ſimple rays, the ſecond and caudal branched; the tail fin rounded at the end.

21. Gobius cyprinoides, the cyprinus goby.—Specific character—the ſcales large and ſomewhat ciliated; the tail fin rounded. The firſt dorſal fin has ſix rays, the ſecond ten, the pectorals eighteen, the ventrals twelve, the anal one ſtiff and nine articulated, the tail fifteen. This received its name from a ſuppoſed reſemblance to ſome of the ſpecies of Cyprinus, on account of its large fringed ſcales; but perhaps it is more like the Sparus. It is found about the iſland of Amboyna, and was firſt deſcribed by Pallas. The upper ſurface is grey, the lower white; length about three inches; the head is rather wider than the body, and covered with lines interſected like net-work. A little black tuft or creſt riſes between the eyes; it is of a triangular ſhape, placed lengthwiſe, and might be miſtaken for a ſmall dorſal fin. The canal behind the anus has a furrow in the tail to receive it.

22. Gobius lanceolatus, the lancet goby. The broad tail, ſhaped like the end of a lancet, is the diſtinguiſhing character of this ſpecies. There are five rays in the membrane of the gills, ſixteen in the pectoral fin, eleven in the ventral, ſixteen in the anal, twenty in the tail, ſix in the firſt dorſal, and eighteen in the ſecond. The body is long, and very little larger at the extremity of the head than near the end of the tail; the head is oblong, and truncated; the jaws of equal length, armed with ſmall ſharp teeth; the covering of the gills is two little plates, and their aperture is broad; the eyes are at the top of the head, and near each other, black pupil, and gilt iris; the neck is round, ſo is the body, and of a brown colour; the cheeks are bluiſh edged with red; the ſides are compreſſed, and of a pale yellow colour. Where the two dorſal fins meet, there is a brown ſpot on each ſide; the ſcales are round in their exterior form, and lie one over the other like tiles on the roof of a houſe; thoſe at the tail are much larger than thoſe at the head; the pectoral fins are yellow bordered with blue; their rays are divided near the extremities like thoſe of the belly and tail; but the rays of the dorſal and anal fins are ſingle; and all are ſoft; thoſe of the firſt dorſal have long points which come out very far, but ſtill they are ſoft; the rays of the anal and dorſal fins are diſtant, but united by a tender tranſparent ſkin; the two ventral fins are confounded one in the other, and form a ſtrong cavity; the tail fin at its origin is a greeniſh-yellow, but the outer part is violet. See the Plate, fig. 1. This is an American ſpecies, found abundantly in the rivers and ſtreams of Martinico, where Plumier ſaw a great many. According to him, they are very good eating; and are about eight or nine inches long.

23. Gobius Plumieri, Plumier's goby. The protruſion of the upper jaw is the diſtinctive character of this ſpecies. There are four rays in the membrane of the gills, twelve in the pectoral fins, ſix in the ventrals, ten in the anal, fourteen in the tail, ſix in the firſt dorſal, and twelve in the ſecond. The body is brawny, and round; head large, lips ſtrong; mouth wide; jaws armed with ſharp teeth; pupil of the eye black, iris ſilvery; between the mouth and eyes are four minute holes,

holes; the head is reddiſh brown above, yellow at the ſides; the gill-covert is ſingle; the aperture is large, and the membrane lies partly bare; the body is covered with little ſcales; the back is round, of a brown-red colour, inclining to yellow towards the belly, which is white; the fins are all yellow; the pectorals and tail edged with black. See the Plate, fig. 4. Plumier deſcribes this ſpecies as inhabiting the ſtreams of the Antilles: it multiplies faſt; is good eating and eaſy of digeſtion. Plumier is the firſt who deſcribed it; his manuſcript calls it, *Cephalus fluviatilis minor, vulgo ſucet*; by the word *ſucet* he probably meant that by means of its ventral fins it could faſten itſelf to other ſubſtances; but this Bloch pronounces to be an error.

24. Gobius ocellaris, the one-eyed goby. Specific character—the upper jaw the longeſt; a ſpot like an eye, and ſix rays, in the firſt dorſal fin. There are five rays in the membrane of the gills, eleven in the ſecond dorſal fin, ſixteen in the pectoral fins, ſix in the ventrals, eleven in the anal, and twenty-two in the tail, which is much rounded. This ſpecies is found in the freſh waters of the iſland of Otaheite in the great equinoxial ocean; and was deſcribed and figured by Brouſſonet from an individual brought over by ſir Joſeph Banks. It is probably called *awaou* by the natives; at leaſt that is the name given it in the new Hydrographic Nomenclature preſented by Fleurieu to the national inſtitute at Paris in May 1799, and now adopted by the French writers. The body is long and compreſſed; the ſcales ciliated; head ſmall, furrowed at the top; the teeth in the lower jaw are the ſmalleſt, and there are little ſharp teeth in the throat both above and below; the belly is of a ſea-green colour; dark ſhades of olive and black prevail on the back; the anal and tail fins are greeniſh, with ſtripes of the ſame colour and of brown upon the rays and upon thoſe of the ſecond dorſal; the pectorals and ventrals are blackiſh. A black ocellated ſpot appears on the hinder edge of the firſt dorſal fin.

25. Gobius ſtrigatus, the ſtriped goby. Specific character—the ventral fins not united, ſix rays in the firſt dorſal. There are ſix rays in the membrane of the gills, twenty in the ſecond dorſal fin and in each pectoral, twelve in the ventrals, nineteen in the anal, and twenty-two in the tail. This and the three following are made a diſtinct genus by Cepede, from the ventral fins ſtanding apart or diſtinct: he calls it *gobiomorus*, "near or allied to the goby." This is alſo an Otaheitan ſpecies, and found in the Pacific Ocean. The deſcription was derived by Brouſſonet from the ſame ſource with the preceding. It is one of the moſt beautiful of the genus. The body is long and taper; ſcales almoſt ſquare, and ſomewhat ſerrated; the head is compreſſed, yet is wider than the body; the upper jaw is rather the longeſt; both are furniſhed with irregular teeth; the tongue and palate are ſmooth, but the throat is rough with ſharp teeth bending back; the rays of the firſt dorſal fin are very long; the tail fin is broad and rounded. The back is red inclining to blue; the under part whitiſh; the head is yellow mingled with green, ſtriped and dotted; brown ſtripes appear about the pectoral fins, and reddiſh ſpots on each ſide of the body and tail; the dorſal, anal, and tail, fins, are green with ſome ſhades of red and yellow, and a number of red ſtreaks in different directions; and the rays are moſtly of a bright red; the pupil of the eye is black, the iris green and white.

26. Gobius Koelreuteri, Koelreuter's goby. Specific character—ventrals diſtinct, eleven rays in the firſt dorſal. There are only two rays in the membrane of the gills, thirteen in the ſecond dorſal fin and in each pectoral, twelve in the ventrals, eleven in the anal, and thirteen in the tail. This is named after a learned naturaliſt at Baden. It is of a light grey colour, ſhort, and thick; the eyes are vertical, and very cloſe together, as in the Schlofferi, to which it bears a farther reſemblance from the pectoral fins being attached to fleſhy productions, and ſo originating at ſome diſtance from the body. The lips are double, and fleſhy; the teeth irregular, but conical in ſhape; the tail-fin is lanceolate, and behind it appears that canal which Linnæus calls *pedunculus genitale*. The firſt dorſal fin is brown edged with black; the ſecond is yelloviſh, with a longitudinal ſtripe of black, and is tranſparent.

27. Gobius Gronovii, Gronovius's goby. Specific character—ventrals apart, ten rays in the firſt dorſal fin, the tail bifurcated. There are five rays in the membrane of the gills, thirty in the ſecond dorſal fin, twenty-four in the pectorals, and ten in the ventrals. We are indebted to Gronovius for a knowledge of this ſpecies, and it juſtly bears his name: he found it amid the torrid zone, in the American Ocean. It has ſome relation to the Scomber genus. The ſcales are ſmall and ſilvery, except on the back, where they are black; black ſpots are ſpread over the ſides; the head is covered with broad ſcaly plates; the eyes are large, and at the ſides of the head, not vertical as in many ſpecies; the mouth is ſmall; both jaws and the palate are furniſhed with even rows of teeth; the tongue is ſmooth, ſmall, and rounded; the ventral fins are very large; the anus is nearly midway the whole length.

28. Gobius dormitor, the ſleeping goby. Specific character—eight rays in the anal fin and in each pectoral. This ſpecies is added by Cepede from Plumier's manuſcripts. It is found in freſh water, eſpecially in marſhy places in South America. The lower jaw is the longeſt; the tail fin is much rounded. It is named ſleepy from its dulneſs and ſlow motions.

29. Gobius Piſonis, Piſo's goby. Specific character—the lower jaw the longeſt, the ventral fins diſtinct. The dorſal fin has forty-five rays, each pectoral ſeventeen, each ventral ſix, the anal twenty-three, and the tail twelve. This ſpecies forms in Cepede a genus of itſelf, the Gobiomoroides, from the ventrals being diſtinct, and only one fin on the back. Piſo, in his work on India, has mentioned this fiſh, and ſucceeding writers have given it his name. The head is flatted and laterally compreſſed, covered with ſcales almoſt as large as thoſe on the back; there are ſeveral rows of ſtrong ſharp teeth in the jaws; but the lower jaw contains one row of larger ſtronger teeth, more bent, and ſtanding farther apart; the fin of the tail is rounded. Native of South America.

30. Gobius cephalus, the great-headed goby. Specific character—head long and large; ventrals diſtinct; only one dorſal fin, placed very far back. The dorſal fin has eight rays, the pectorals eleven, the ventrals five, the anal four or five, and the tail eleven. This again is made a diſtinct genus by Cepede, though it has the ſame characters as the preceding, namely, the ventral fins ſeparate, and but one fin on the back. Plumier, from whoſe manuſcript it is deſcribed, calls it *cephalus* and *teſtar*, from its having a large head; but the head ſeems rather long than large. It is found in the freſh waters of South America; the head is broader than the body, rounded before, rather flat at the top; the eyes are very near each other; the lips are double, and flexible; there is a ſlight indention at the hind-head, as if to diſtinguiſh the head from the body; and a ſimilar one on the back; the belly is thick, much protruded, and clearly diſtinguiſhed from the under part of the tail; the dorſal fin is very ſmall, and placed juſt upon the end of the tail near the caudal fin; a conformation ſimilar to the pike, and hence Cepede's generic term *Gobieſox*, or pike goby. The anal fin begins ſtill farther back than the dorſal, but is nearly under or oppoſite to it; the tail fin, then, is very near the anal and dorſal fins; it is moreover very broad and much rounded. The prevailing colour of this fiſh is red, darker on the back than on the lower parts; there are neither

neither ſtripes, bands, nor ſpots. The colour ſometimes ſhines like gold; and the eyes, with a beautiful blue iris, appear like two ſapphires ſet in that precious metal. This, and all the following, are introduced by Cepede.

31. Gobius alepidotus, the naked goby. Specific character—two dorſal fins; the four firſt rays of the firſt dorſal end filamentous; ſeven tranſverſe ſtripes of whitiſh on the body. The firſt dorſal fin has ſeven rays, the ſecond fourteen, the pectorals eighteen, the ventrals eight, the anal ten, and the tail, which is ſpear-ſhaped, eighteen. An account of this fiſh was ſent by citizen Boſc to Cepede, who has given it his name; Boſc obſerved it in Charleſton-bay, North America. The head is broader than the body; the jaws of equal length, with very ſmall teeth; the eyes are prominent; the noſtrils jut out; the gill-covert terminates in a point; the four firſt rays of the firſt dorſal fin are long, and each end in a thin filament or briſtle. There are no viſible ſcales; the colour is grey dotted with brown. Seven irregular bands of a pale colour appear on the ſides, and extend over the dorſal fin; the fins are brown. This is a ſmall ſpecies; about two inches long, and half an inch broad; it is not uſed as food.

32. Gobius cæruleus, the red-tailed goby. Specific character—the laſt ray of the ſecond dorſal fin twice as long as the reſt; the tail fin red edged with black. There are four rays in the membrane of the gills, ſix in the firſt dorſal, twelve in the ſecond, twenty in each pectoral, twelve in each ventral, twelve in the anal, and fourteen in the tail, which is rounded. This is deſcribed from Commerſon's manuſcripts. The body is entirely of a bright blue, lighter on the under parts than upon the back; only the tail is red with a black edging; it makes a moſt beautiful appearance in calm ſun-ſhiny weather. It is found in the ſea on the eaſtern part of Africa, at the mouth of the rivers of the Iſle of Reunion. The negroes reject it as food on account of the ſmallneſs of its ſize, being ſcarcely four inches long; ſo that it is only uſed as bait to attract larger fiſh. The ſnout is blunt; teeth ſharp, thoſe in the under jaw the largeſt; the eyes are round, prominent, and farther apart than in many of the ſpecies; the firſt dorſal fin is triangular, with briſtly rays protruded beyond the membrane; the tail fin is rounded; ſcales ſmall and rough.

33. Gobius totus niger, Commerſon's goby. Specific character—ſix rays in the firſt dorſal fin, the laſt ray ſtanding apart. The membrane of the gills has four rays, the ſecond dorſal fin, the ventrals, and the anal, twelve each, the pectorals twenty, and the tail fourteen. For this ſpecies we are alſo indebted to Commerſon. It is about ſeven inches long, very thin and narrow, not above a line broad according to Cepede. The body is entirely black, a few ſhades of blue and green only make it appear more dark and gloſſy; there is a light or livid appearance on a part of the belly. It is ſufficiently diſtinguiſhed from the Gobius niger of Linnæus by the want of ſpots and ſtripes, and by other particulars. The ſcales are very ſmall, but raiſed up ſo as to be rough to the touch. Commerſon obſerved two tubercles at the baſe of the membrane of the gills, which could only be ſeen by raiſing the operculum; he remarked alſo beyond the anal aperture the *papilla genitali* which is found in ſo many of this genus; and which he compares to a filament or barble. It is found in the Indian Sea, at the mouths of thoſe ſmall rivers which run into it, preferring a muddy bottom. It is agreeable and wholeſome food.

34. Gobius boſtrichus, the bearded goby. Specific character—colour brown, two barbles from the upper jaw. This and the two following are taken from ſome Chineſe coloured drawings belonging to a cabinet brought from Holland to the Paris muſeum. It is not eaſy to ſay how they ſhould be claſſed; for the underneath fins are not viſible from the poſition of the fiſh in the deſigns; and, if they are really wanting, then of courſe they ſhould go among the Apodes, and very near to the genus Muræna. Cepede, however, ſuppoſes that theſe fins are not wanting in the fiſhes themſelves, and has placed them in two diſtinct genera, immediately before the Echeneis. To avoid creating new genera, we have placed them in the genus to which they have the greateſt reſemblance. Cepede's generic name, *boſtrichus*, which ſignifies a filament or barble, we have taken to diſtinguiſh the preſent ſpecies. The prevailing colour is brown; on each ſide of the tail, near the fin, appears a blue ſpot encloſed in a circle, which is blue towards the body, red towards the tail. This fiſh has no viſible ſcales. The head is large; the aperture of the mouth round; gill-covert ſingle; the firſt dorſal fin much ſhorter than the ſecond; tail-fin lanceolate.

35. Gobius boſtrichus maculatus, the bearded goby with ſpots. This differs very little from the preceding. It is ſtrewed with very minute green ſpots.

36. Gobius boſtrichoides, bearded goby with one dorſal fin. Specific character—long eel-ſhaped body, one long dorſal fin ſeparate from the fin of the tail; two barbles from the upper lip. In this ſpecies ſmall ſcales are viſible on the head, body, and tail. The head is thinner than the fore-part of the body. The pectoral fins are ſmall and rounded, the caudal lanceolate. The colour is brown, with tranſverſe ſtripes of a darker ſhade, and a great number of ſmall green ſpots; a large ſpot of green encircled with red, like the pupil and iris of an eye, appears on each ſide of the extremity of the tail. In other reſpects it reſembles the two preceding ſpecies.

GOB'LET, *ſ.* [*gobelet*, Fr.] A bowl, or cup, that holds a large draught.—My figur'd *goblets* for a diſh of wood. *Shakeſpeare.*

We love not loaded boards, and *goblets* crown'd;
But free from ſurfeits our repoſe is ſound. *Denham.*

Crown high the *goblets* with a cheerful draught;
Enjoy the preſent hour, adjourn the future thought.
Dryden.

GOB'LIN, *ſ.* [French; *gobeline*, which Spenſer has once retained; writing it in three ſyllables. This word ſome derive from the *Gebellines*, a faction in Italy; ſo that *elfe* and *goblin* is *Guelph* and *Gibelline*, becauſe the children of either party were terrified by their nurſes with the name of the other: but it appears that *elfe* is Welſh, and much older than thoſe factions. *Eilff Uiſhon*, are *phantoms of the night*, and the Germans likewiſe have long had ſpirits among them named *Goboldi*, from which *gobeline* might be derived.] An evil ſpirit; a walking ſpirit; a frightful phantom.—Always, whilſt he is young, be ſure to preſerve his tender mind from all impreſſions and notions of ſpirits and *goblins*, or any fearful apprehenſions in the dark. *Locke.*

Angels and miniſters of grace defend us!
Be thou a ſpirit of health, or *goblin* damn'd,
Bring with thee airs from heav'n, or blaſts from hell!
Shakeſpeare.

A fairy; an elf.—Solemn goes the *goblin* ſtory round. *Thomſon.*

His ſon was Elfinel, who overcame
The wicked *gobbelines* in bloody field. *Spenſer.*

GOCH, a town of Germany, in the circle of Weſtphalia, and duchy of Cleves, on the Niers, ſurrounded with walls in 1291. It contains three churches. It was taken by the Spaniards in 1599: in the year 1614, it was taken by the Dutch; it paſſed after into other hands, till 1625, when it was again in the poſſeſſion of the United States till the year 1640, when it fell to the elector of Brandenburg: ſix miles ſouth of Cleves.

GOCH'SHEIM, or GOCHSEN, a town of Germany, in the circle of Swabia, and duchy of Wurtemberg: ſixteen miles ſouth of Heidelberg, and twenty-four north-north-weſt of Stuttgart.

GOCIA'NO, a town of the iſland of Sardinia: thirty miles eaſt of Algeri.

GOCLE'NIUS (Conrad), a learned philologiſt, born in 1485, in a village of Weſtphalia. He was long a profeſſor in the college of Buſleiden at Louvain, where he died in 1539. He was honoured with the intimate friendſhip of Eraſmus, from whom there is extant a very confidential letter to him. His principal works are, Notes on Cicero de Officiis; an edition of Lucian; and a tranſlation into Latin of that writer's Dialogue, entitled *Hermotimus*.

GOD, [from the Saxon Gob, which LYE interprets GOD, DEUS. And the ſame Saxon word, when uſed adjectively, means GOOD, BONUS, PROBUS.] The ſacred, awful, and revered, name of that Supreme Being and Source of all Exiſtence, who in the language of our moſt elegant, and, in this paſſage, devout Poet, is addreſſed as

Father of All! in every age
In every clime ador'd,
By Saint, by Savage, and by Sage,
Jehovah! Jove! or Lord! *Pope's Univerſal Prayer.*

The Exiſtence of GOD is demonſtrated by a very ſhort mode of proof. The Univerſe exiſts, therefore God exiſts. For as the Univerſe could not make itſelf, it muſt have been made by ſomething without itſelf, and antecedent to itſelf; and that is, GOD. Again; as the Univerſe cannot guide and preſerve itſelf, it muſt be guided and preſerved by ſomething diſtinct from itſelf; and that is, GOD. This truth is ſo obvious, that independently of all Revelation, it was known, and maintained, by the wiſeſt and beſt of the Heathens.

GOD in his Eſſential Nature is Self-originate, Eternal, Spiritual. In his Moral Attributes, GOD is infinitely perfect; moſt holy, moſt juſt, moſt good. In wiſdom, in knowledge, in power, He is univerſally Intelligent, infallibly Diſcerning, irreſiſtibly Mighty; to GOD therefore, in the moſt unbounded ſenſe of the words, (conſiſtent with every idea which implies not contradiction,) we aſcribe Omniſcience and Omnipotence.

By philoſophers, who have reaſoned deeply on the ſubject, God is conſidered as the firſt Cauſe, the firſt Being, who has exiſted from the beginning, has created the world, or who ſubſiſts neceſſarily, or of himſelf; and this knowledge of God, his nature, attributes, word, and works, with the relations between him and his creatures, make the extenſive ſubject of Theology, the ſiſter-ſcience of Aſtronomy.

Sir Iſaac Newton conſiders and defines God, not as is uſually done, from his perfection, his nature, exiſtence, or the like; but from his DOMINION. The word GOD, according to him, is a relative term, and has regard to ſervants; it is true it denotes a Being eternal, infinite, and abſolutely perfect; but a Being, however eternal, infinite, and abſolutely perfect, without dominion, would not be God. The ſame author obſerves, that the word God frequently ſignifies Lord; but every lord is not God; it is the dominion of a ſpiritual being or lord, that conſtitutes God; true dominion, true God; ſupreme, the ſupreme; feigned, the falſe god. From ſuch true dominion it follows, that the true God is living, intelligent, and powerful; and, from his other perfections, that he is ſupreme, or ſupremely perfect: he is eternal, and infinite; omnipotent and omniſcient; that is, he endures from eternity to eternity, and is preſent from infinity to infinity. He governs all things that exiſt, and knows all things that are to be known; he is not eternity nor infinity, but eternal and infinite; he is not duration or ſpace, but he endures, and is preſent; he endures always, and is preſent every where; and by exiſting always, and every where, he conſtitutes the very thing, duration and ſpace, eternity and infinity. He is omnipreſent, not only virtually, but alſo ſubſtantially; for power without ſubſtance cannot ſubſiſt. All things are contained and move in him, but without any mutual paſſion; he ſuffers nothing from the motions of bodies; nor do they undergo any reſiſtance from his omnipreſence. It is confeſſed that God exiſts neceſſarily; and by the ſame neceſſity he exiſts always, and every where. Hence, alſo, he muſt be perfectly ſimilar; all eye, all ear, all brain, all arm, all the power of perceiving, underſtanding, and acting; but after a manner not at all corporeal, after a manner not like that of men, after a manner wholly to us unknown. He is deſtitute of all body, and all bodily ſhape; and therefore cannot be ſeen, heard, or touched; nor ought to be worſhipped under the repreſentation of any thing corporeal. We have ideas of the attributes of God, but do not know the ſubſtance even of any thing; we ſee only the figures and colours of bodies, hear only ſounds, touch only the outward ſurfaces, ſmell only odours, and taſte taſtes; but do not, cannot, by any ſenſe, or any reflex act, know their inward ſubſtances; and much leſs can we have any notion of the ſubſtance of God. We know him by his properties and attributes; by the moſt wiſe and excellent ſtructure of things, and by final cauſes: but we adore and worſhip him only on account of his dominion; for God, ſetting aſide dominion, providence, and final cauſes, is nothing elſe but fate and nature.

The admirable metaphyſician and divine Dr. Clarke, has demonſtrated the being of a God, with that clearneſs and force of reaſoning, for which he is ſo eminently diſtinguiſhed, by a ſeries of propoſitions, mutually connected and dependent, and forming a complete and unanſwerable argument in proof of the attributes of the Deity. Something, he ſays, has exiſted from all eternity; for, ſince ſomething now is, ſomething always was: otherwiſe the things that now are muſt have been produced out of nothing, abſolutely and without cauſe, which is a plain contradiction in terms. There muſt have exiſted from all eternity ſome one unchangeable and independent Being; or elſe, there has been an infinite ſucceſſion of changeable and dependent beings, produced one from another in an endleſs progreſſion, without any original cauſe at all. For otherwiſe this ſeries of beings can have no cauſe of its exiſtence, becauſe it includes all things that are or ever were in the univerſe; nor is any one being in this infinite ſucceſſion ſelf-exiſtent or neceſſary, and therefore it can have no reaſon of its exiſtence within itſelf; and it was equally poſſible, that from eternity there ſhould never have exiſted any thing at all, as that a ſucceſſion of ſuch beings ſhould have exiſted from eternity. Conſequently their exiſtence is determined by nothing; neither by any neceſſity in their own nature, becauſe none of them are ſelf-exiſtent; nor by any other being, becauſe no other is ſuppoſed to exiſt. The unchangeable and independent Being, which has exiſted from eternity, without any external cauſe of its exiſtence, muſt be ſelf-exiſtent; it muſt exiſt by an abſolute neceſſity originally in the nature of the thing itſelf, and antecedent in the natural order of our ideas to our ſuppoſition of its being. For whatever exiſts, muſt either come into being without a cauſe; or it muſt have been produced by ſome external cauſe; or it muſt be ſelf-exiſtent: but the two former ſuppoſitions are contrary to the two firſt propoſitions. From this laſt propoſition it follows, that the only true idea of a ſelf-exiſtent or neceſſarily-exiſting being, is the idea of a being, the ſuppoſition of whoſe non-exiſtence is an expreſs contradiction; and this idea is that of a moſt ſimple being, abſolutely eternal and infinite, original and independent. It follows alſo, that nothing is ſo certain as the exiſtence of a ſupreme independent cauſe; and likewiſe, that the material world cannot poſſibly be the firſt and original being, uncreated, independent, and of itſelf eternal; becauſe it does not exiſt by an abſolute neceſſity in its own nature, ſo as that it muſt be an expreſs contradiction to ſuppoſe it not to exiſt. With reſpect both to its form and matter, the material world

may

may be conceived not to be, or to be in any reſpect different from what it is, without a contradiction. The ſubſtance or eſſence of the ſelf-exiſtent being is abſolutely incomprehenſible by us. We are ſure however that Eſſential Godhead can be but One. In that unity of Godhead there may co-exiſt Three Intelligences of one and the ſame nature. Dr. Clarke's words are: "Whether in the unity of the divine nature there may not co-exiſt with the ſupreme cauſe, ſuch emanations from it as may themſelves be equally eternal, infinite, and perfect, by an abſolute and complete communication of all the divine attributes, excepting only ſelf-origination; as there is nothing in bare reaſon, by which it can be demonſtrated, ſo neither is there any argument by which it can be proved impoſſible, or unreaſonable; and therefore, when made known to us by revelation, it ought to be believed." *1ſt Edit. on the Attributes, &c.*

Many of the eſſential attributes of his nature are ſtrictly demonſtrable, as well as his exiſtence. The ſelf-exiſtent being, having no cauſe of its exiſtence but the abſolute neceſſity of its own nature, muſt of neceſſity have exiſted from everlaſting, without beginning; and muſt of neceſſity exiſt to everlaſting, without end. The ſelf-exiſtent being muſt of neceſſity be infinite and omnipreſent. Such a being muſt be every where, as well as always unalterably the ſame. It follows from hence, that the ſelf-exiſtent being muſt be a moſt ſimple, unchangeable, incorruptible, being, without parts, figure, motion, diviſibility, and other properties of matter, which are utterly inconſiſtent with complete infinity. The ſelf-exiſtent being muſt of neceſſity be but one; becauſe in abſolute neceſſity there can be no difference or diverſity of exiſtence; and, therefore, it is utterly impoſſible, that there ſhould be two independent ſelf-exiſtent principles, ſuch as God and matter. The ſelf-exiſtent and original cauſe of all things muſt be an intelligent being. This propoſition cannot be demonſtrated ſtrictly and properly *à priori*; but, *à poſteriori*, the world affords undeniable arguments to prove that all things are the effects of an intelligent and knowing cauſe. The cauſe muſt be always more excellent than the effect; and, therefore, from the various kinds of powers and degrees of excellence and perfection, which viſible objects poſſeſs; from the intelligence of created beings, which is a real diſtinct quality or perfection, and not a mere effect or compoſition of unintelligent figure and motion; from the variety, order, beauty, wonderful contrivance, and fitneſs of all things to their proper and reſpective ends; and from the original of motion; the ſelf-exiſtent creating being is demonſtrated to be intelligent. The ſelf-exiſtent and original cauſe of all things is not a neceſſary agent, but a being endued with liberty and choice. Liberty is a neceſſary conſequent of intelligence; without liberty, no being can be ſaid to be an agent, or cauſe of any thing; ſince to act neceſſarily, is really and properly not to act at all, but to be acted upon. Beſides, if the ſupreme cauſe be not endued with liberty, it will follow, that nothing which is not, could poſſibly have been; that nothing which is, could poſſibly not have been; and that no mode or circumſtance of the exiſtence of any thing could poſſibly have been in any reſpect otherwiſe than what it now actually is. Farther, if there be any final cauſe in the univerſe, the ſupreme cauſe is a free agent; and, on the contrary ſuppoſition, it is impoſſible that any effect ſhould be finite; and in every effect, there muſt have been a progreſſion of cauſes *in infinitum*, without any original cauſe at all. The ſelf-exiſtent being, the ſupreme cauſe of all things, muſt of neceſſity have infinite power; ſince all things were made by him, and are entirely dependent upon him; and all the powers of all things are derived from him, and perfectly ſubject to him; nothing can reſiſt the execution of his will. The ſupreme cauſe and author of all things muſt of neceſſity be infinitely wiſe. This follows from the propoſitions already eſtabliſhed; and the proof *à poſteriori*, of the infinite wiſdom of God, from the conſideration of the exquiſite perfection and conſummate excellency of his works, is no leſs ſtrong and undeniable. The ſupreme cauſe and author of all things muſt of neceſſity be a being of infinite goodneſs, juſtice, and truth, and all other moral perfections; ſuch as become the ſupreme governor and judge of the world. The will of a being, infinitely knowing and wiſe, independent and all-powerful, can never be influenced by any wrong affection, and can never be miſled or oppoſed from without; and, therefore, he muſt do always what we know fitteſt to be done; that is, he muſt act always according to the ſtricteſt rules of infinite goodneſs, juſtice, and truth, and all other moral perfections; and, more particularly, being infinitely and neceſſarily happy and all-ſufficient, he muſt be unalterably diſpoſed to do and to communicate good or happineſs.

To this more abſtruſe argument, *à priori*, for the exiſtence of God, we may add another, more generally obvious, and carrying irreſiſtible conviction, which is deduced from the frame of the world, and from the traces of evident contrivance and fitneſs of things for one another, that occur through all the parts of it. Theſe conſpire to prove, that the material world, which in its nature is originated and dependent, could not have been the effect of chance or neceſſity, but of intelligence and deſign. The beautiful, harmonious, and beneficial, arrangement of the various bodies that compoſe the material ſyſtem; their mutual dependence and ſubſerviency; the regularity of their motions, and the aptitude of theſe motions for producing the moſt beneficial effects, and many other phenomena reſulting from their relation, magnitude, ſituation, and uſe, afford unqueſtionable evidences of the creating power and wiſe diſpoſal of an intelligent and almighty agent. The power of gravity, by which the celeſtial bodies perſevere in their revolutions, deſerves our particular conſideration. This power penetrates to the centres of the ſun and planets, without any diminution of its virtue, and is extended to immenſe diſtances, regularly decreaſing, and producing the moſt ſenſible and important effects. Its action is proportional to the quantity of ſolid matter in bodies, and not to their ſurfaces, as is uſual in mechanical cauſes; and, therefore, ſeems to ſurpaſs mere mechaniſm. But however various the phenomena that depend on this power, and may be explained by it, no mechanical principles can account for its effects; much leſs could it have produced, at the beginning, the regular ſituation of the orbs, and the preſent diſpoſition of things. Gravity could not have determined the planets to move from weſt to eaſt, in orbits nearly circular, almoſt in the ſame plane; nor could their power have projected the comets, with all the variety of their directions. If we ſuppoſe the matter of the ſyſtem to be accumulated in the centre by its gravity, no mechanical principles, with the aſſiſtance of this power, could ſeparate the huge and unwieldy maſs into ſuch parts as the ſun and planets; and, after carrying them to their different diſtances, project them in their ſeveral directions, preſerving ſtill the equality of action and re-action, or the ſtate of the centre of gravity of the ſyſtem. Such an exquiſite ſtructure of things could only ariſe from the contrivance and powerful influences of an intelligent, free, and moſt potent, agent. The ſame powers, therefore, which at preſent govern the material world, and conduct its various motions, are very different from thoſe, which were neceſſary to have produced it from nothing, or to have diſpoſed it in the admirable form in which it now proceeds.

But we ſhould exceed the limits of our plan, even if, confining our obſervation to the earth, our own habitation, we were to enumerate only the principal traces of deſign and wiſdom, as well as goodneſs, which are diſcernible in its figure and conſtituent parts, in its diurnal and annual motion, in the poſition of its axis with regard

gard to its orbit, in the benefit which it derives from the light and heat of the ſun, and the alternate viciſſitudes of the ſeaſons; in the atmoſphere which ſurrounds it, and in the different ſpecies and varieties of vegetables and animals with which it is repleniſhed. No one can ſurvey the vegetable productions of the earth, ſo various, beautiful, and uſeful, nor the various gradations of animal life, in ſuch a variety of ſpecies, all preſerved diſtinct, and propagated by a ſettled law, each fitted to its own element, provided with proper food, and with inſtincts and organs ſuited to its rank and ſituation, and eſpecially with the powers of ſenſation and ſelf-motion, and all more immediately or remotely ſubſervient to the government and uſe of man, without admiring the ſkill and deſign of the original Former. But theſe are more ſignally manifeſted in the ſtructure of the human frame, and in the noble powers and capacities of the human mind; more eſpecially in the moral principles and faculties, which are a diſtinguiſhing part of our conſtitution, and lead to the perception and acknowledgment of the exiſtence and government of God. In thoſe inſtances that have now been recited, and a variety of ſimilar inſtances ſuggeſted by them, or naturally occurring to the notice of the curious and reflecting mind, contrivance is manifeſt, and immediately, without any nice or ſubtle reaſoning, ſuggeſts a contriver. It ſtrikes us like a ſenſation; and artful reaſonings againſt it may puzzle us, without ſhaking our belief. No perſon, for example, that knows the principles of optics, and the ſtructure of the eye, can believe that it was formed without ſkill in that ſcience; or that the ear was formed without the knowledge of ſounds; or that the male and female, created and preſerved in due proportion, were not formed for each other, and for continuing the ſpecies. All our accounts of nature are full of inſtances of this kind. The admirable and beautiful ſtructure of things for final cauſes, exalt our idea of the contriver; and the unity of deſign ſhews him to be one. The great motions in the ſyſtem, performed with the ſame facility as the leaſt, ſuggeſt his almighty power, which gave motion to the earth and the celeſtial bodies, with equal eaſe as to the minuteſt particles; the ſubtilty of the motions and actions in the internal parts of bodies, ſhews that his influence penetrates the inmoſt receſſes of things, and that he is equally active and preſent every where. The ſimplicity of the laws that prevail in the world, the excellent diſpoſition of things, in order to obtain the beſt ends, and the beauty which adorns the works of nature, far ſuperior to any thing in art, ſuggeſt his conſummate wiſdom. The uſefulneſs of the whole ſcheme, ſo well contrived for the intelligent beings who enjoy it, with the internal diſpoſition and moral ſtructure of thoſe beings, ſhews his unbounded goodneſs. Theſe are arguments which are ſufficiently open to the views and capacities of the unlearned, while at the ſame time they acquire new ſtrength and luſtre from the diſcoveries of the learned. The Deity's acting and interpoſing in the univerſe, ſhew that he governs it, as well as that he formed it; and the depth of his counſels, even in conducting the material univerſe, of which a great part ſurpaſſes our knowledge, tends to preſerve an inward veneration and awe of this great Being, and diſpoſes us to receive what may be otherwiſe revealed to us concerning him. His eſſence, as well as that of all other ſubſtances, is beyond the reach of all our diſcoveries; but his attributes clearly appear in his admirable works. We know that the higheſt conception we are able to form of them, are ſtill beneath his real perfections; but his dominion over us, and our duty towards him, are abundantly manifeſt.

Another ſubſtantial argument to prove the exiſtence of God, as the creator and governor of the univerſe, may be deduced from what Grotius, in his book "De Veritate Religionis Chriſtianæ," and biſhop Wilkins, in his valuable Reflexions on "The Principles and Duties of Natural Religion," have obſerved, the univerſal conſent of mankind, and the uniform tradition of this belief through every nation and every age; it is impoſſible to conceive that a fallacy, ſo perpetual and univerſal, ſhould be impoſed on the united reaſon of mankind. No credible and ſatisfactory account can be given of this univerſal conſent, without aſcribing it to the original conſtitution of the human mind, in conſequence of which it cannot fail to diſcern the exiſtence of a Deity, and to the undeniable traces of his being, which his works afford. Fear, ſtate-policy, and the prejudices of education, to which the concurrence of mankind in this principle has been ſometimes reſolved, are founded on this univerſal principle, ſuppoſe its being and influence, and are actuated by it. It is much more reaſonable to imagine, that the belief of a God was antecedent to their operation, than that it ſhould have been produced by them; and that it was dictated by reaſon and conſcience, independent of the paſſion and policy of men. The uniform and univerſal tradition of this belief, and of the creation of the world by the divine power, affords concurring evidence both of the principle and of the fact. The exiſtence of God is alſo farther evinced by thoſe arguments which have been uſually alleged to prove, that the world had a beginning, and, therefore, that it muſt have been created by the energy of divine power. In proof of this, the hiſtory of Moſes, conſidered merely as the moſt ancient hiſtorian, deſerves particular regard. His teſtimony is confirmed by the moſt ancient writers, among the heathens, both poets and hiſtorians. It may be alſo fairly alleged, that we have no hiſtory or tradition more ancient than that which agrees with the received opinion of the world's beginning, and that of the manner in which it was produced; and that the moſt ancient hiſtories were written long after that time. And that this conſideration is urged by Lucretius, the famous Epicurean, as a ſtrong preſumption that the world had a beginning:

——— Si nulla fuit genitalis origo
Terrarum & cœli, ſemperque æterna fuere;
Cur ſupra bellum Thebanum, & funera Trojæ,
Non alias alii quoque res cecinere poetæ?

Beſides, the origin and progreſs of learning, and the moſt uſeful arts, confirm the notion of the world's beginning, and of the common era of its creation; to which alſo may be added, that the world itſelf, being material and corruptible, muſt have had a beginning; and many phenomena occur to the obſervation of the aſtronomer and mathematician, which furniſh a ſtrong preſumption, that it could have had no long duration, and that it now gradually tends to diſſolution. From theſe conſiderations we may infer the abſolute being and providence of God; even on principles of reaſon and deductions from facts, to which hitherto we have chiefly attended.

Conſidering however that we are bleſſed with the Light of Revelation, we are bound to ſet forth what the Scriptures declare on the ſubject before us. The ſubſtance of them is thus collected by CRUDEN:

"The HEBREWS give to GOD generally the name of JEHOVAH; he who exiſts of himſelf and gives being and exiſtence to others. This is a name ineffable, and myſterious, which denotes the eternity, immutability, and independence, of God, and the infallible certainty of his word and promiſes. The HEBREWS had ſuch a veneration for this holy name, that they never pronounced it; but inſtead of it made uſe of that of ADONAI, which ſignifies properly MY LORDS, in the plural number; and of ELOI, ELOHI, or ELOHIM. They likewiſe called him EL, which ſignifies STRONG; or SHADDAI, whereby may be meant one who is ſelf-ſufficient.

"GOD is taken either ESSENTIALLY for the whole Trinity, *If.* xl. 8. *John*, iv. 24. or, PERSONALLY, for

the Father, *Eph.* i. 3. for the Son, *John*, i. 1. for the Holy Ghoſt, *Acts*, v. 3, 4."

Offences againſt God and Religion were formerly proſecuted only in the eccleſiaſtical courts, which corrected the offender *pro ſalute animæ*. But now, by ſtat. 9 and 10 Will. III. c. 32, if any perſon educated in, or having made profeſſion of, the Chriſtian religion, ſhall by writing, printing, teaching, or *adviſed* ſpeaking, deny the Chriſtian religion to be true, or the Holy Scriptures to be of divine authority, he ſhall upon the firſt offence be rendered incapable to hold any office or place of truſt; and for the ſecond, be rendered incapable of bringing any action, being guardian, executor, legatee, or purchaſer of lands, and ſhall ſuffer three years impriſonment without bail. To give room however for repentance, if within four months after the firſt conviction the delinquent will in open court publicly renounce his error, he is diſcharged from all diſabilities.

GODS OF THE HEATHENS. See the article MYTHOLOGY.

GOD's MER'CY (Iſlands of), three or four ſmall iſlands at the north-weſt extremity of Hudſon's Straits. Lat. 63. 45. N. lon. 73. W. Greenwich.

GOD'ALMING, a neat and pleaſant town in the county of Surrey, delightfully ſituated in a beautiful valley, encompaſſed with fine hanging woods at a ſmall diſtance, with the river Wye running cloſe to the town, which is navigable to London. It is governed by a warden and eight aſſiſtants, with a bailiff, conſtables, &c. It has very conſiderable manufactories for the weaving of all kinds of ſtockings. The highly-eſteemed manufactory of the patent fleecy hoſiery is very extenſively carried on here; alſo a manufactory of combing wool, and making worſteds; beſides which is a large manufactory for making blankets, and another for tilts and collar-cloths. The church is deſervedly admired for its neatneſs and the height of its ſpire. Here is a charity-ſchool, and an hoſpital built and endowed for ten old men. In 1739, the ſmall-pox carried off above five hundred perſons here in three months, which was more than a third of the inhabitants. Market on Wedneſdays; fairs, February 13 and July 10. Godalming is ſituated in the great road to Portſmouth, Chicheſter, Midhurſt, and Arundel; and is diſtant from Guildford four miles; from Farnham, nine miles; from Chicheſter, twenty-eight miles; from Portſmouth, thirty-eight miles; and from London, thirty-four miles.

GODAN'NA, a town of Perſia, in the province of Irak: 105 miles eaſt of Iſpahan.

GOD'ARD, [of God, Sax. God, or good, and *aerd*, Dut. nature, *q. d.* one endowed with a compliant and divine diſpoſition of mind.] A proper name.

GODA'VERY, or GUN'GA, a river of Hindooſtan, which riſes about ſeventy miles north-eaſt of Bombay, and falls into the Bay of Bengal by ſeveral mouths, between lat. 16. 20. and 16. 50. N. lon. 81. 40. and 82. 30. E. Greenwich. It is the *Tyndis* of Ptolemy; and riſes nearly in the parallel of St. John's Point; it performs a courſe of above ſix hundred miles, of which about two-thirds are navigable for boats of one ton and a half burthen. Not far remote from its ſource is Naſſir Turmeck. The waters of the river, which in this part is named *Gunga*, are eſteemed peculiarly ſacred, and are the great reſort of pilgrims to perform their ablutions. It enters the Nizam's dominions, and croſſes ſouth-weſterly till it reaches the borders of Berar.

GOD'BOTE, *ſ.* A fine or amerciament anciently paid for offences againſt God.

GOD'CHILD, *ſ.* A term of ſpiritual relation; one for whom one became ſponſor at baptiſm, and promiſed to ſee educated as a Chriſtian.

GOD'DARD (Jonathan), a phyſician and chemiſt, born at Greenwich in 1617. In 1672 he became a commoner of Magdalen-hall, Oxford, where he continued till he was of ſtanding ſufficient for the degree of B. A. and then left the univerſity to travel abroad for improvement in the ſtudy of medicine. In 1640 he took the degree of M. B. at Cambridge, and ſoon after ſettled as a phyſician in London. In January 1642, he proceeded doctor of phyſic in Cambridge. He was elected a fellow of the college of phyſicians in 1646, and appointed to read the anatomy lecture of the enſuing year. Dr. Goddard was appointed phyſician to the parliament army, and attended Cromwell in his expeditions to Ireland and Scotland. On September 9, 1651, the parliament at Cromwell's recommendation appointed him warden of Merton-college, Oxford, upon the reſignation of ſir Nathaniel Brent; and in January, 1651-2, he was incorporated doctor of phyſic in that univerſity. After this he was choſen to repreſent the univerſity in the parliament ſummoned in 1653; and alſo appointed a member of the council of ſtate.

On November 7, 1655, Dr. Goddard was elected profeſſor of phyſic in Greſham-college, in the room of Dr. Winſton. He continued at the head of Merton-college till the reſtoration, when by a letter from Charles II. dated July 3, 1660, Dr. Reynolds was appointed warden, as ſucceſſor to ſir Nathaniel Brent, no notice being taken of Dr. Goddard, whoſe election was conſidered as illegal, and the place, of conſequence, vacant. After this he fixed himſelf at Greſham-college, and was continued a fellow of the college of phyſicians by their new charter, in 1663. He was likewiſe nominated one of the council of the royal ſociety at its firſt inſtitution in the ſame year, to which he was a peculiarly uſeful member on account of his chemical knowledge. He reſided in Greſham-college till his death, which happened on March 24, 1674. During Dr. Goddard's life, he publiſhed many papers on medical ſubjects in the Philoſ. Tranſactions; and to the ſecond edition of the *Pharmacopœia Bateana*, printed in 1691, the *Arcana Goddardiana* are ſubjoined. Theſe are ſome medicinal receipts, taken from Dr. Goddard's manuſcripts, and particularly uſed by him.

The famous *Guttæ Goddardianæ*, or *Angelicæ*, or *Arcanum Goddardianum*, for the receipt of which Charles II. is ſaid to have given fifteen hundred pounds, and which, after all, is only a volatile alkaline ſpirit impregnated with an empyreumatic oil, like ſpirit of hartſhorn, was not, as Salmon informs us, invented by this phyſician, but by Dr. WILLIAM GODDARD, a contemporary, and an older man. This perſon ſtudied and took a degree at Padua; was afterwards incorporated at Oxford in 1634, ſettled in London, and became a member of the college of phyſicians.

GOD'DAUGHTER, *ſ.* A girl for whom one became ſponſor in baptiſm. A term of ſpiritual relation.

GOD'DESS, *ſ.* A female divinity. See MYTHOLOGY.—Hear, nature hear; dear *goddeſs*, hear a father! *Shakeſpeare.*

A woman I forſwore: but I will prove,
Thou being a *goddeſs*, I forſwore not thee:
My vow was earthly, thou a heav'nly love. *Shakeſpeare.*

GOD'DESS-LIKE, *adj.* Reſembling a goddeſs:

Then female voices from the ſhore I heard;
A maid amidſt them *goddeſs-like* appear'd. *Pope.*

GODEAU' (Anthony), an eminent French writer, born at Dreux in 1605. He was one of thoſe who gave occaſion to the eſtabliſhment of the French academy of belles lettres, and became one of the original members. As he poſſeſſed a ſerious turn of mind, he was led to write ſome verſes upon religious ſubjects; and he began with a paraphraſe on the *Benedicite*. The manner in which this poem was executed, gained him no little reputation among his contemporaries; but modern critics have thought leſs favourably of its merits. Mr. Godeau took orders in 1735; and having enriched his mind with the moſt pure maxims of Chriſtian morality, he taught

them from the pulpit with an eloquence that was natural to him, and practiſed them in all his actions. As he had obtained the patronage of cardinal Richelieu, he was nominated to the biſhopric of Graſſe, in 1636. Immediately after his conſecration, he retired to his dioceſe, where he divided his time between his ſtudies and the diligent diſcharge of his epiſcopal functions. He died of a ſtroke of apoplexy, in 1672, at the age of ſixty-ſeven years. The moſt important of his works are: 1. The Hiſtory of the Church from the Commencement of the World to the End of the ninth Century, in 3 vols. folio. This is the firſt eccleſiaſtical hiſtory written in the French language; and though compoſed with leſs preciſion than that of the abbé Fleury, will be peruſed with more pleaſure by the generality of readers. 2. Paraphraſes on the Epiſtles of St. Paul, and the canonical Epiſtles, 4to. 3. The New Teſtament tranſlated and explained, in 2 vols. 8vo. to which are ſubjoined Meditations on the Epiſtle to the Hebrews. 4. Chriſtian Morality, for the Inſtruction of the Curés and Prieſts of the Dioceſe of Vence, in 3 vols. 12mo. 5. The Lives of St. Paul, St. Auguſtine, and St. Charles Borromeo, each in 4to. 6. Panegyrics on ſuch Biſhops as in all Ages of the Church have been eminent for Learning and Sanctity, 4to. 7. Homilies. 8. Tracts, and other proſe pieces. 9. The Pſalms of David, tranſlated into French Verſe, 12mo. to which might be added a long liſt of Chriſtian Eclogues, and other ſpiritual and devotional Poems, more to be admired for the ſentiments of piety which they breathe, than for their poetic beauties.

GO'DEFROI (Denys), a learned juriſt, the ſon of a counſellor of the Chatelet in Paris, where he was born in 1549. He ſtudied at Louvain, Cologne, and Heidelberg, and upon his return to France acquired great reputation in the parliament, in which he was nominated to a counſellor's place. But being of the Calviniſt perſuaſion, the civil wars on account of religion cauſed him to take refuge at Geneva, where, in 1580, he was admitted a burgher, and made profeſſor of law. Henry IV. in 1589, created him bailiff of ſome villages at the foot of mount Jura, and a ſupernumerary counſellor in the parliament of Paris. He was deprived of his employment and his library by the invaſion of the duke of Savoy, on which account he accepted, in 1524, the chair of law in the univerſity of Straſburg. In 1604, he complied with the invitation of Frederic elector-palatine to ſettle at Heidelberg. That prince, in 1618, ſent him on an embaſſy to Louis XIII. who received him with many marks of eſteem. Again purſued by the tumults of war, he quitted the palatinate in 1621, and retired to Straſburg, where he died in 1622. He was the author of, 1. *Corpus Juris Civilis cum Notis*, 4to. *Ludg.* 1583, many times reprinted; beſt editions are thoſe of Vitré, 1628, and of Elzevir, 1683, 2 vols. folio. 2. *Notæ in IV Libros Inſtitutionum.* 3. *Opuſcula varia Juris.* 4. *Praxis Civilis ex antiquis & recentioribus Scriptoribus.* 5. *Index chronologicus Legum & Novellarum a Juſtiniano Imp. compoſit.* 6. *Conſuetudines Civitatum & Provinciarum Galliæ.* 7. *Quæſtiones Politicæ.* 8. *Diſſertatio de Nobilitate.* 9. *Statuta Regni Galliæ cum Jure Communi collatæ.* 10. *Synopſis Statutorum municipalium.* 11. *Antiquæ Hiſtoriæ ex 27 Auctoribus contextæ.* 12. *Autores Latinæ Linguæ in unum redacti Corpus.*

GO'DEFROI (Theodore), eldeſt ſon of the preceding, born at Geneva in 1580. He ſtudied in Straſburg, and then went to Paris, where he embraced the catholic religion. In 1643, the office of counſellor of ſtate was conferred upon him; and he acted during the ſix laſt years of his life as counſellor and ſecretary to the French embaſſy for the general peace at Munſter. In that city he died in 1649. He was particularly verſed in the genealogical hiſtory of France, and publiſhed ſeveral learned works for its illuſtration. Of theſe are, 1. *Le Cérémonial de France*, 4to. a curious collection, afterwards republiſhed by his ſon Denys, in an enlarged form, in 2 vols. folio. 2. *Mém. concernant la Preſſéance des Rois de France ſur les Rois d'Eſpagne.* 3. *De la véritable Origine de la Maiſon d'Autriche.* 4. *Généalogie des Ducs de Lorraine.* 5. *Généal. des Comtes & Ducs de Bar.* 6. *Généal. des Rois de Portugal iſſus de la Maiſon de France.* 7. *Traité touchant les Droits du Roi Très-chrétien ſur pluſieurs Etats voiſines.* He alſo edited ſeveral ancient French biographical works, and enriched them with notes and diſſertations.

GO'DEFROI (James), brother to the above, born at Geneva in 1587, imitated his father Denys in adherence to the reformed religion, and in the ſtudies of law, hiſtory, and philoſophy. He was created profeſſor of law at Geneva, in 1619, and entered into the council in 1629. He filled with the greateſt ability every public office with which he was entruſted, and few have paſſed a more laborious life. He was made ſecretary of ſtate; was five times choſen ſyndic of the republic; and was employed in various negociations in France, Piedmont, Swiſſerland, and Germany: at the ſame time he continued his public lectures in juriſprudence, and compoſed a variety of learned works. He maintained a correſpondence with the moſt learned men of the age, by whom he was highly reſpected. Poſſeſſed of the eſteem and gratitude of his countrymen, he died, univerſally regretted, in 1652. The profound erudition of James Godefroi is diſplayed by the following works: 1. *Fragmenta Duodecim Tabularum*, 1616, republiſhed in 1653 in the *Quatuor Fontes Juris Civilis.* 2. *Animadverſiones Juris Civilis.* 3. *Opuſcula varia Juridico-politica, Hiſtorico-critica.* 4. *Commentar. de Regulis Juris.* 4. *De famoſis Latronibus inveſtigand.* 5. *De Jure Præcedentiæ.* 6. *De Salario.* 7. *De ſuburbicariis Regionibus.* 8. *De Statu Paganorum ſub Imp. Chriſt.* 9. *Fragmenta Legum Juliæ & Papiæ.* 10. *Codex Theodoſianus*; this is a poſthumous work, and is accounted a moſt valuable monument of ancient juriſprudence. He edited the works of *Cicero, cum notis Lambini & Gothofredi*; *Deſcriptio Orbis, Gr. & Lat.* and *Philoſtorgii Cappadocis Hiſt. Eccleſiaſt.* He alſo made large collections for the hiſtory of Geneva, afterwards made uſe of by Spon.

GO'DEFROI (Denys), ſon of Theodore, born at Paris in 1615. He followed the ſteps of his father in his reſearches into French hiſtory, and reprinted ſeveral of the works edited by him, adding to them new illuſtrations. He was alſo the author of *Mémoires & Inſtructions pour ſervir dans les Negotiations & les Affaires concernant les Droits du Roi*, 1665, folio, which has been attributed to the chancellor Seguier, by whoſe order it was compiled. He continued it to his own time, and corrected Feron's *Hiſt. des Officiers de la Couronne.* He was appointed, in 1668, the director and keeper of the chamber of accounts at Lille in Flanders, where he died in 1681.

GO'DEFROI (John), ſon of the preceding, ſucceeded his father in the direction of the chamber of accounts in Lille, at which place he died, much advanced in years, in 1732. He inherited a ſtrong thirſt for hiſtorical enquiries, and publiſhed, 1. The Memoirs of Philip de Comines, 5 vols. 8vo. 2. The Journal of Henry III. 2 vols. 8vo. 3. The Memoirs of Queen Margaret; and other pieces. He is allowed to have contributed more than any other writer to the elucidation of the affairs of the League. His elder brother DENYS, advocate in parliament, gave a new edition of the *Satyre Menippée*; and of the Treatiſes concerning the Hiſtory of France, collected by Peter Dupin.

GO'DERVILLE, a town of France, in the department of the Lower Seine, and chief place of a canton, in the diſtrict of Montivilliers: three leagues north-eaſt of Montivilliers, and five north-weſt of Caudebec.

GODESCHA'LC, or GOTTESCHALC, ſurnamed *Fulgentius*, a benedictine monk in the ninth century, born in ſome part of Saxony, and appears to have entered into the monaſtic order in the convent of Fulda. In the year 846 he went to Rome, to viſit the holy places there; and thence proceeded to Pannonia and Dalmatia, where he commenced preaching the doctrine of predeſtination, which he had imbibed from cloſely ſtudying the writings of

of St. Auguſtine. Upon the promulgation of this doctrine, a council was ſummoned to meet at Mentz, in 848, to which Godeſchalc preſented a juſtification of his opinions, and reſolutely perſiſted in maintaining them to be conſiſtent with the Scriptures, and the ſenſe of the orthodox fathers. The council, however, paſſed a ſentence of condemnation on him, and ſent him in cuſtody to Hincmar archbiſhop of Rheims, within whoſe juriſdiction he had received the prieſthood. Hincmar aſſembled a council at Quiercy, in 849, in which Godeſchalc was condemned a ſecond time, and ordered to be treated in a manner equally repugnant to the principles of religion, and the dictates of humanity. He was degraded from the prieſthood, and ſcourged in the ſeverеſt manner, until the force of his pain overpowering his conſtancy, obliged him, in compliance with the commands of his perſecutors, to throw into the fire the juſtification of his opinions which he had delivered to the council of Mentz. After theſe proceedings, the unfortunate monk was committed cloſe priſoner to the monaſtery of Hautvilliers, in the dioceſe of Rheims. While Godeſchalc lay in priſon, his doctrine gained him followers, his ſufferings excited compaſſion, and both together produced a conſiderable ſchiſm in the Latin church. As the ſpirit of controverſy ran high between the contending parties, Charles the Bald ſummoned a council to meet at Quiercy, in 853, in which, by the credit and influence of Hincmar, the decrees of the former council were confirmed, and Godeſchalc was again condemned. But the decrees of this council were declared null, and Godeſchalc and his doctrine vindicated and defended, in a council aſſembled at Valence in Dauphiny, in 855; the decrees of which were confirmed in the council of Langres, held in 859, and that of Touſi, held in 860. Such was the origin of the famous diſputes concerning predeſtination and grace, which from that time have divided the catholic world into two parties, and which have alſo ſubſiſted in full force among the proteſtants. In 1650, the celebrated Maguin publiſhed at Paris, in two volumes quarto, a collection of the early treatiſes produced on both ſides of this controverſy, entitled, *Veterum Auctorum qui nono Sæculo de Prædeſtinatione & Gratia ſcripſerunt, &c.* The unfortunate Godeſchalc died in priſon about the year 869, maintaining with his laſt breath the doctrine for which he had ſuffered. None of his writings have reached our times, excepting two Confeſſions of Faith, inſerted in the celebrated Uſher's Hiſtoria Godeſchalci, printed at Dublin in 1661, 4to. An Epiſtle to Ratramnus, preſerved in Cellot's Hiſtoria Godeſchalci, publiſhed at Paris in 1655; and Fragments of other pieces noticed by Cave, in his Hiſt. Lit. vol. ii.

GOD'FATHER, *ſ.* The ſponſor at the font.—Confirmation, a profitable uſage of the church, tranſcribed from the apoſtles, conſiſts in the child's undertaking in his own name the baptiſmal vow; and, that he may more ſolemnly enter this obligation, bringing ſome *godfather* with him as his procurator. *Hammond.*—See BAPTISM, vol. ii. p. 699.

GOD'FREY, [of God, Sax. God, or good, and frið or friede, peace, *q. d.* godlike peace.] A proper name.

GOD'FREY OF BOUILLON, commander of the firſt cruſade, and made king of Jeruſalem, was the ſon of Euſtace II. count of Boulogne, and in his mother's right was heir of the Lower Lorrain. When the religious enthuſiaſm of the times ſet on foot an expedition for the recovery of the Holy Land, Godfrey was one of the firſt and moſt illuſtrious of the princes who took the croſs, and the command of the principal army was entruſted to him in acknowledgment of his ſuperior talents and virtues. It is agreed by hiſtorians, that of all the leaders none was actuated by purer motives; and the prudence and moderation of his character well fitted him for directing the motions of a furious and diſunited band. He was accompanied by two of his brothers; Euſtace, who had ſucceeded to the county of Boulogne, and Baldwin. With a diminiſhed army, he at length proceeded to the great object of the enterpriſe, the conqueſt of Jeruſalem. The ſiege of this famous city began in June, 1099, and it was carried by ſtorm on July 15. The furious fanaticiſm of the victors indulged itſelf in a horrid maſſacre of the vanquiſhed, which Godfrey was probably unable to prevent. Eight days after the conqueſt, the unanimous voice of the army proclaimed Godfrey ſovereign of the new acquiſition. He was ſoon called again into the field to oppoſe the ſultan of Egypt, who advanced againſt the Chriſtians with a vaſt but undiſciplined hoſt. This was completely overthrown at the battle of Aſcalon by the ſuperior valour and ſkill of the Chriſtians, and the reduction of all Paleſtine was the conſequence of their proweſs. Godfrey eſtabliſhed the feudal inſtitution in his new kingdom; and a code of juriſprudence, under the title of The Aſſize of Jeruſalem, which gave a model of the pureſt form of European liberty in the midſt of Aſiatic deſpotiſm. But he did not long occupy a throne which he adorned. After a year's reign, he died in July, 1100, and was ſucceeded by his brother Baldwin. The fame of Godfrey is immortaliſed as the hero of Taſſo's Jeruſalem Delivered, one of the fineſt of epic poems.

GOD'FREY OF VITERBO, a writer of the twelfth century, ſuppoſed to be either a native of that Italian city, or to have derived his anceſtry thence; but, from the circumſtance of his receiving his early education at Bamberg, and paſſing the greateſt part of his life in Germany, a ſuſpicion has ariſen that Wittemberg, and not Viterbo, was the place of his birth, and one of the manuſcripts of his work entitles him *Wittembergenſis*. He was chaplain and ſecretary of the emperors Conrad III. Frederic I. and Henry IV. His chronicle, entitled Pantheon, as treating on the gods of earth, is dedicated to pope Urban III. and is a general hiſtorical record from the creation of the world to the year 1186. It is written in Latin, with a mixture of proſe and verſe, tainted with barbariſm; yet he is reckoned worthy of credit for the events of his own time. This work was firſt printed at Baſil in 1559; afterwards at Frankfort in 1584, and at Hanover in 1613, in the collection of German hiſtorians edited by Piſtorius. Muratori has reprinted in his collection that part which relates to Italy, beginning with the fourth century. Another work of this author, entitled *Speculum Regum, ſive de Genealogia omnium Regum, &c.* is preſerved in manuſcript in the imperial library of Vienna.

GODHEAB', or GOOD HOPE, a ſettlement of Weſt Greenland. Lat. 64. 25. N. lon. 50. 10. W. Greenwich.

GOD'HEAD, *ſ.* Godſhip; deity; divinity; divine nature:

> At the holy mount
> Of heav'n's high-ſeated top, th' imperial throne
> Of *godhead*, fix'd for ever firm and ſure. *Milton.*

GO'DIN (Louis), an able aſtronomer, born at Paris in 1704; ſtudied aſtronomy under the de l'Iſles, and in 1725 was made adjunct of the academy of ſciences. The academy afterwards entruſted him with the care of editing its Memoirs, and he ſuperintended the publication of eleven volumes. In 1735, when the academy ſent ſome of its members to Peru, to meaſure a degree of the meridian, Godin was placed at the head of the undertaking. He was ſome time profeſſor of mathematics at Lima; and having returned to Europe in 1751, he was next year appointed a colonel in the Spaniſh ſervice, and director of the naval academy at Cadiz, where he died in 1760. His literary labours were: 1. *Machines & Inventions approuvées par l'Academie des Sciences, Paris*, 1735, 6 vols. 4to. 2. Index to the Memoirs of the Academy from 1666 to 1740, ibid. 1743, 5 vols. 4to. 3. *Connoiſſances des Tems*, which he conducted for five years. 4. *Cours de Mathematiques*, 1756. He was the author of ſeveral aſtronomical papers in the Memoirs of the Academy, from 1726 to 1739.

GODI'VA,

GODI'VA, the name of a woman.

GOD'LESS, *adj.* Without ſenſe of duty to God: atheiſtical; wicked; irreligious; impious.—Of theſe two ſorts of men, both *godleſs*, the one has utterly no knowledge of God, and the other ſtudies how to perſuade themſelves that there is no ſuch thing to be known. *Hooker.*

For faults not his, for guilt and crimes
Of *godleſs* men, and of rebellious times,
Him his ungrateful country ſent,
Their beſt Camillus, into baniſhment. *Dryden.*

GOD'LIKE, *adj.* Divine; reſembling a divinity; ſupremely excellent.—That prince ſhall be ſo wiſe and *godlike*, as, by eſtabliſhed laws of liberty, to ſecure protection and encouragement to the honeſt induſtry of mankind. *Locke.*

Thus Adam his illuſtrious gueſt beſought,
And thus the *godlike* angel anſwer'd mild. *Milton.*

GOD'LING, *ſ.* A little divinity; a diminutive god:

The puny *godlings* of inferior race,
Whoſe humble ſtatues are content with braſs. *Dryden.*

GOD'LINESS, *ſ.* Piety to God. General obſervation of all the duties preſcribed by religion.—Virtue and *godlineſs* of life are required at the hands of the miniſter of God. *Hooker.*

GOD'LY, *adj.* Pious towards God.—Grant that we may hereafter live a *godly*, righteous, and ſober, life. *Common Prayer.*—Good; righteous; religious.—Help, Lord, for the *godly* man ceaſeth, for the faithful fail among the children of men. *Pſ.* xii. 1.

GOD'LY, *adv.* Piouſly; righteouſly. By analogy it ſhould be *godlily*, but the repetition of the ſyllable is too harſh.—The apoſtle St. Paul teacheth, that every one that will live *godly* in Chriſt Jeſus muſt ſuffer perſecution. *Hooker.*

GOD'LYHEAD, *ſ.* Goodneſs; righteouſneſs. *An old word:*

For this, and many more ſuch outrage,
I crave your *godlyhead* to aſſwage
The rancorous rigour of his might. *Spenſer.*

GOD'MAN, the Son of God; the mediator.

GOD'MANCHESTER, [from *Gorman*, or *Guthern*, a Dane, who firſt of all the Daniſh princes embraced Chriſtianity, and erected there a palace.] A ſmall neat town in the vicinity of Huntingdon, in Huntingdonſhire, the inhabitants of which are for the moſt part farmers, and vie with each other in good huſbandry; ſparing neither expence nor labour to promote every uſeful improvement. When James I. was paſſing through this town on his way to the metropolis, the farmers met him, about a mile from the place, with ſeventy ploughs drawn by as many teams of horſes; which novel ſight was ſo agreeable to the king, that he granted them a charter, to be governed by two bailiffs and twelve aſſiſtants. At the ſame time the ſocial monarch condeſcended to partake of a cold collation, which they had prepared for him under a large white-thorn; which, time having decayed, the farmers, to commemorate the grateful event, replaced it, and it ſtill goes by the name of *king's buſh*. Many ancient coins having from time to time been dug up near Godmancheſter, proves it to have been a Roman town. Its ancient name was *Duraliponte*; but, being ceded to a Daniſh general called *Gorman*, he gave it the name of *Gorman-ceſter*, which word became in time corrupted to Godmancheſter. The river Ouſe ſeparates it from Huntingdon, over which there is a noble free-ſtone bridge. The church is a venerable Gothic edifice, large, commodious, and in perfect order. Here is a free Engliſh ſchool endowed; alſo ſeveral alms-houſes, where the aged, of reduced circumſtances, experience, during the years of decrepitude, a quiet and comfortable aſylum. A fair for cattle is held annually on Tueſday and Wedneſday in Eaſter week.

GOD'MOTHER, *ſ.* A woman who has undertaken ſponſion in baptiſm. A term of ſpiritual relation.

GODOL'PHIN, [*godolcan*, i. e. a white eagle, in the dialect of Cornwall.] The name of a noble Engliſh family, which bears a white eagle in its coat of arms.

GODOL'PHIN (John), an eminent Engliſh civilian, born in the iſland of Scilly in 1617, and educated at Oxford. In 1642-3, he was created doctor of civil law; in 1653, he was appointed one of the judges of the admiralty; and at the reſtoration, he was made one of his majeſty's advocates. He was eſteemed as great a maſter of divinity as of law, and publiſhed, 1. The Holy Limbeck. 2. The Holy Arbour. 3. A View of the Admiral's Juriſdiction. 4. The Orphan's Legacy. 5. *Repertorium Canonicum, &c.* He died in 1678.

GO'DRA, a town of Hindooſtan, and capital of a circar of the ſame name, in the country of Guzerat: fifty-five miles eaſt of Amedabad. Lat. 22. 50. N. lon. 73. 40. E. Greenwich.

GOD'RIC, [of God, Sax. God, or good, and ric, rich, q. d. rich in God, or goodneſs.] A proper name.

GOD'SCAL, [of God, Sax. God, or good, and ſcalk, a ſervant.] A proper name.

GOD'SHIP, *ſ.* The rank or character of a god; deity; divinity:

Diſcourſing largely on this theme,
O'er hills and dales their *godſhips* came. *Prior.*

GOD'SON, *ſ.* One for whom one has been ſponſor at the font:

What, did my father's *godſon* ſeek your life?
He whom my father named? your Edgar? *Shakeſpeare.*

GOD'WARD, *adj.* To *Godward* is *toward God.* So we read, *Hac Arethuſa tenus*, for *hactenus Arethuſa.*—And ſuch truſt have we through Chriſt to *Godward.* 2 *Cor.*

GOD'WIN, [of God, Sax. God, or good, and pin, a conqueror, q. d. a conqueror in God.] A proper name.

GOD'WIN (Earl), a potent Saxon baron, ſon of Wolfnoth, governor of Suſſex, and father of Harold, who ſucceeded to the crown of England. He was earl of Kent, and lord of great poſſeſſions in that county, as well as in Suſſex. For his hiſtory, ſee the article ENGLAND, vol. vi. p. 555–566.

GOD'WIN (Thomas), a worthy Engliſh prelate, born at Oakingham in Berkſhire, in 1517. His early education he received at the free-ſchool in his native town; where the proofs which he afforded of excellent natural abilities, attracted the notice of Dr. Richard Layton, archdeacon of Bucks, who received him into his houſe, and took care of his farther inſtruction in claſſical literature. In 1538, Dr. Layton ſent him to Magdalen-college, Oxford, where that gentleman granted him an exhibition as long as he lived; and upon the death of that patron, Mr. Godwin's merits procured him other friends, by whoſe aſſiſtance he was enabled to purſue his academic ſtudies. He took his degree of bachelor of arts in 1543; and in the following year was elected a fellow of his college, by which event he no longer depended on his friends for pecuniary aſſiſtance. In 1547, he proceeded to the degree of maſter of arts. His ſituation in college, however, was rendered uneaſy, in conſequence of the zealous attachment to the principles of the reformation which he had imbibed in the family of Dr. Layton, and which expoſed him to the ill offices of ſome of the fellows. This circumſtance made him embrace the opportunity of a vacancy in the maſterſhip of the free-ſchool of Brackley in Northamptonſhire, which was in the gift of his college, to accept that appointment, and to reſign his fellowſhip. To this ſituation he retired in 1549, and continued there as long as king Edward lived, devoting what time he could ſpare from his attention to the ſchool, to the ſtudy of divinity and phyſic. After the acceſſion of queen Mary, he met with perſecution from Bonner biſhop of London, on account of his religious ſentiments; and, being obliged to reſign

his

his ſchool, turned his attention more particularly to medical ſtudies. In 1555, he took his degree of bachelor of phyſic at Oxford, and ſupported his family by practiſing that profeſſion till queen Elizabeth aſcended the throne. Upon this event he reſolved to enter into the church, to which he was encouraged by Dr. Nicholas Bullingham, biſhop of Lincoln, who admitted him into holy orders, and made him his chaplain. That prelate alſo introduced him to public notice, by procuring him the honour of preaching before the queen; who was ſo well pleaſed with his pathetic eloquence, that ſhe appointed him one of her Lent preachers. This poſt he filled for eighteen years; but he received no preferment in the church till 1565, when he was promoted to the deanery of Chriſtchurch, Oxford, and had, in the ſame year, the prebend of Milton-Eccleſia beſtowed upon him by biſhop Bullingham. In the following year he was promoted to the deanery of Canterbury, and attended queen Elizabeth in her viſit to the univerſity of Oxford; on which occaſion he took his degree of doctor of divinity with uncommon applauſe. After he had remained eighteen years at Canterbury, he was nominated by the queen to the vacant ſee of Bath and Wells, in 1584. He died at Oakingham, whither he had removed for the benefit of his native air, in 1590, in the ſeventy-third year of his age. He is highly ſpoken of for his learning, piety, and moderation; and was beloved and revered for his cheerful hoſpitality and benevolence.

GOD'WIN (Francis), a learned Engliſh prelate and hiſtorian, ſon of the preceding, born at Havington in Northamptonſhire, in 1561. He was ſent to Chriſtchurch college, Oxford, in the ſixteenth year of his age, and in 1578 was elected a ſcholar of that inſtitution. In that ſeminary he took his degree of bachelor of arts in 1580; and proceeded to the degree of maſter of arts in 1583, when he had the character of being one of the moſt aſſiduous ſtudents in the univerſity. About this time he wrote an entertaining philoſophical fiction, which was publiſhed five years after his death, under the title of, The Man in the Moon, or a Diſcourſe of a Voyage thither, by Domingo Gonzales, 1638, 8vo. In 1587 he was made a canon in the cathedral church of Wells, and promoted to the ſubdeanery of Exeter. The hiſtory and antiquities of his country now became favourite ſubjects of his enquiries; and in 1590 he accompanied the learned Camden into Wales, in ſearch of objects to illuſtrate them. For ſome years he devoted his leiſure hours to enquiries of this nature; but at length, leaving to Mr. Camden the more general ſubjects, he confined himſelf to ſuch antiquities as related to eccleſiaſtical cauſes or perſons. Finding afterwards that his collections relating to eccleſiaſtical matters would add ſcarcely any thing to Mr. Fox's laborious work on the ſame ſubject, he ſtill farther reſtricted his enquiries to the lives and actions of eccleſiaſtical perſons. In 1595 he took the degree of doctor of divinity; at which time, beſides poſſeſſing the dignities already mentioned, he was rector of Samford-Orcais in Somerſetſhire, prebendary of Wells, and rector of Biſhop's Lidiard in the ſame county. He was eſteemed by the beſt judges a very able preacher, and is commended for the freedom and ſpirit with which he reprehended the glaring vices of the age in which he lived. Having, in conſequence of his reſearches, digeſted into a regular chronological order the ſucceſſion of prelates in the reſpective dioceſes within this kingdom, he was encouraged, in 1601, to commit his labours to the preſs, and publiſhed a Catalogue of the Biſhops of England ſince the firſt planting of the Chriſtian Religion in this Iſland; together with a brief Hiſtory of their Lives and memorable Actions, 4to. This catalogue, which was a new attempt in Engliſh eccleſiaſtical hiſtory, met with ſuch general approbation, that, in reward of the author's diligence in compiling it, queen Elizabeth promoted him in the ſame year to the vacant ſee of Llandaff; and as this biſhopric, from the low ſtate of its perſonalities, was then but of ſmall value, he was allowed to retain in connection with it the ſubdeanery of Exeter, and to hold *in commendam* the rectory of Kingſton-Seymour, in the dioceſe of Bath and Wells. While biſhop Godwin continued to hold the ſee of Llandaff, he employed his leiſure hours in improving his Catalogue, and in making collections relative to civil and eccleſiaſtical hiſtory. In 1615, he publiſhed a new edition of his Catalogue, with conſiderable additions, and a diſcourſe prefixed, Concerning the firſt Converſion of Britain unto the Chriſtian Religion. Owing, however, to the author's great diſtance from the preſs, this impreſſion was ſo erroneouſly printed, that he determined to republiſh it, and, by the advice of his learned friends, in the Latin language. This he did in the following year, under the title of *De Præſulibus Angliæ Commentarius, &c.* 4to. In the ſame year he publiſhed *Rerum Anglicarum Henrico VIII. Edwardo VI. & Maria, regnantibus, Annales*, folio, which met with a very favourable reception, and were deſervedly admired, as well as the preceding work, for the elegance of their ſtyle. As a reward for theſe learned labours, king James tranſlated him from the ſee of Llandaff to that of Hereford, in 1617. Biſhop Godwin now devoted ſuch time as the diſcharge of his epiſcopal functions and his growing infirmities would permit, chiefly to the improvement of his former works. In ſubſerviency to this object, he publiſhed, in 1621, *Appendix ad Comment. de Præſul. Angliæ*, which contains his laſt corrections and additions to that performance. In 1628, he publiſhed the ſecond edition of his *Annales*, in a more correct form than the preceding; and in the following year his diſcourſe already mentioned on the ſeveral methods of conveying ſecret and ſpeedy intelligence, under the title of *Nuncius Inanimatus, Utopiæ*, 1629, 8vo. This diſcourſe is written in very obſcure and enigmatical language, with the deſign of concealing the author's ſecret; but from ſome of his expreſſions it ſhould ſeem that a part of it conſiſts in the uſe of ſignals, which, if reduced to a ſyſtem, might have given an earlier date to the eſtabliſhment of public telegraphs. In 1630, he publiſhed a third edition of his *Annales*, which was immediately followed by a tranſlation of them, under the title of Annales of England, &c. corrected, and enlarged; in folio. In the ſame year a learned Latin diſſertation by biſhop Godwin, on the value of the Roman ſeſterce and Attic talent, was printed at the end of Dr. Hakewell's Apology for Divine Providence, in folio. This was the biſhop's laſt literary exertion, who, in the latter part of his life, was affected with a low and languiſhing diſeaſe, which gradually terminated his life in 1633, when about ſeventy-two years of age. Of his learning, diligence in enquiry, and claſſical taſte, his works bear honourable teſtimony; and they exhibit him in the exalted light of a zealous friend to that pure religious eſtabliſhment of which he was a member.

GOD'WIN (Thomas), a learned Engliſh writer on Jewiſh antiquities, born in Somerſetſhire, in 1587. When fifteen years of age he was ſent to Magdalen-hall, in the univerſity of Oxford, where he was entered a ſcholar. In 1606, he was made a demy of Magdalen-college, and took his degree of bachelor of arts. In 1609, he proceeded to the degree of maſter of arts, and ſoon afterwards was choſen maſter of the free-ſchool at Abingdon in Berkſhire. For the benefit of his pupils, he publiſhed, in 1613, *Romanæ Hiſtoriæ Anthologia*: An Engliſh Expoſition of the Roman Antiquities, 4to. which underwent many impreſſions. Not long after this he entered into orders, and was appointed chaplain to Dr. James Montague, biſhop of Bath and Wells. In 1616, he was admitted to the degree of bachelor of divinity; and in the ſame year publiſhed *Synopſis Antiquitatum Hebraicarum ad Explicationem utriuſque Teſtamenti valde neceſſaria, &c. Lib. III.* 4to.

4to. Becoming weary of the fatigue of his ſchool, he reſigned it, upon obtaining a preſentation to the rectory of Brightwell, near Wallingford, in Berkſhire. In 1625, he publiſhed his moſt celebrated work, entitled Moſes and Aaron; civil and eccleſiaſtical Rites uſed by the ancient Hebrews, obſerved, and at large opened, for the clearing many obſcure Texts throughout the whole Scripture, 4to. This work met with ſo favourable a reception, that it paſſed rapidly through repeated editions, and has ſince been uſed as a text-book by theological tutors both at home and abroad. Annotations and comments have been written upon it by different authors, and among others by Dr. David Jennings in our own country, and the learned Hottinger in Holland. In 1636, our author was admitted to the degree of doctor of divinity. Beſides the articles already noticed, Dr. Godwin was the author of *Florilegium Phraſicon*; or, A Survey of the Latin Tongue, 8vo. and, Three Arguments to prove Election upon Foreſight of Faith. He died at his parſonage-houſe in 1642-3, when about fifty-five years of age.

GOD'WIN SANDS, ſands of the coaſt of Kent, which were formerly the lands of earl Godwin, a powerful baron in the time of Edward the Confeſſor, who died miſerably; and in the reign of William Rufus his lands were ſwallowed up by the ſea.

GOD'WIT, *ſ.* [ȝoȣ, good, and pιτa, Sax. an animal.] A bird of peculiar delicacy.—Nor ortolans nor *godwits* crown his board. *Cowley.*—See the article SCOLOPAX.

GOD'YELD, or GODYIELD, *adv.* [corrupted from *God ſhield*, or protect.] A term of thanks. *Not now uſed:*

Herein I teach you,
How you ſhould bid *godyeld* us for your pains,
And thank us for your trouble. *Shakeſpeare.*

GO'EL, *adj.* [ȝolen, Sax.] Yellow. *An old word:*

In March, at the furtheſt, dry ſeaſon or wet,
Hop-roots ſo well choſen let ſkilful go ſet;
The *goeler* and younger, the better I love;
Well gutted and pared, the better they prove. *Tuſſer.*

GO'ELAN's POINT, a promontory on the north ſide of Lake Ontario, in North America, about thirty-three miles ſouthweſterly of Fort Frontinac.

GO'ELL, a town of Germany, in the duchy of Holſtein: one mile north-eaſt of Oldeburg.

GOELWA'RA, a circar, or diſtrict, of Hindooſtan, in the diſtrict of Guzerat, ſituated on the weſt coaſt of the Gulf of Cambaye.

GO'ER, *ſ.* One that goes; a runner:

I would they were in Afric both together,
Myſelf by with a needle, that I might prick
The *goer* back. *Shakeſpeare.*

A walker; one that has a gait or manner of walking good or bad.—The earl was ſo far from being a good dancer, that he was no graceful *goer*. *Wotton.*—The foot. *Obſolete:*

A double mantle, caſt
Athwart his ſhoulders, his faire *goers* grac'd
With fitted ſhoes. *Chapman.*

GOERE'E (William), a learned Dutch bookſeller, and various writer, born at Middleburg in Zealand, in 1635. Notwithſtanding the time which he was neceſſarily obliged to devote to his buſineſs, he ſo well employed his vacant moments, that he made a conſiderable proficiency in different branches of literature, and ſucceſsfully cultivated an acquaintance with the fine arts, as well as botany and medicine. His works, written in the Dutch language, are honourable monuments of his induſtry and learning. He died at Amſterdam in 1711. The principal of his productions are: 1. Jewiſh Antiquities, in 2 vols. folio. 2. The Hiſtory of the Jewiſh Church, founded on the Moſaic Records, 1700, in 4 vols. folio. 3. Hiſtory, Sacred and Profane, 4to. 4. An Introduction to the Art of Painting, 8vo. 5. A Treatiſe on Architecture, according to the Principles of the Ancients and Moderns, &c.—His father, HUGH WILLIAM GOEREE, who died at Middleburg in 1643, is alſo entitled to be claſſed among the learned men of his time. He publiſhed a Dutch tranſlation of Peter Cunæus's treatiſe *De Republica Hebræorum*, 1682, 8vo. to which he added, A Continuation, in 2 vols. This work was afterwards augmented by a fourth volume, written by William Outram, and publiſhed in 1701. A French edition of the whole was printed at Amſterdam in 1705. —William Goeree had a ſon named JOHN, who roſe to high reputation as a painter, and who produced the beautiful pictures which adorn the burgher's-hall at the town-houſe in Amſterdam. He died at that city in 1731.

GO'ES, a town of Portugal, in the province of Beira: three leagues eaſt of Coimbra.

GO'ES, or TER-GOES, a town of Zealand, ſituated on the north coaſt of the iſland of South Bevelandt, on an arm of the Scheld, with which it is connected by means of a canal. It was beſieged by the Flemings in 1300, and the inhabitants defended themſelves with ſuch bravery, that their enemies were compelled to raiſe the ſiege, after having loſt 1800 men. It anciently belonged to the lords of Borſſele; but that illuſtrious family becoming extinct, the town deſcended to Jacqueline comteſſe of Holland, who permitted the inhabitants to build ramparts round it in 1417. It was nearly deſtroyed by an inundation of the ſea, in 1548; ſix years after, great part of it was conſumed by fire; but it ſoon recovered, by means of privileges granted it by Charles V. and its great ſale of ſalt. The Dutch became maſters of it in 1577, and prince Maurice cauſed it to be fortified. It has at preſent ſix gates, that next the water fortified with two good baſtions; on the other ſide of the town are two more. The great church being burned down in 1618, was afterwards rebuilt, and is now a handſome ſtructure; the town is not large, but carries on conſiderable trade, particularly in ſalt and grain: ten miles eaſt of Fluſhing. Lat. 51. 30. N. lon. 21. 22. E. Ferro.

GOE'TZE (George-Henry), a learned German lutheran divine, born at Leipſic in 1668. After purſuing his ſtudies in the univerſities of Wittemberg, and Jena, where he diſtinguiſhed himſelf by the learning and ingenuity of the theſes which he maintained in the public ſchools, he was admitted to the degree of maſter of arts in 1687. In 1690 he was appointed miniſter of Burg, in the duchy of Magdeburg, whence he removed in the ſame year to Chemnitz, in Miſnia, to fill the poſt of deacon in the church of that town. Four years afterwards we find him miniſter of the church of St. Sophia at Dreſden; whence he removed to Annaberg, in 1697, to exerciſe the office of ſuperintendant over the churches in that diſtrict. In 1699 he was admitted to the degree of doctor of divinity at Leipſic; and in 1702 was choſen ſuperintendant of the churches at Lubec. The reſt of his days he ſpent in that city, where he died in 1729, aged ſixty-one. He was the author of a multitude of learned Theſes, Diſſertations, &c. hiſtorical, critical, and theological; Controverſial Treatiſes againſt the Catholics, Arminians, &c.; Eulogies, &c. principally written in the Latin language, of which Moreri enumerates no fewer than one hundred and fifty-two different articles. Several of theſe pieces were collected together, and printed at Lubec under the titles of, *Selecta ex Hiſtoria Literaria*, 1709, 4to. and *Melethemata Annebergenſia*, 1706, in 3 vols. 12mo.

GO'EZ (Damian a), a learned Portugueſe, born at Alenquer. He was brought up in the court of Emanuel king of Portugal, to whom his brother Fructo was gentleman of the chamber. He had an early paſſion for travelling, which was gratified by his being employed in various negociations from his court to France, Germany,

many, Poland, and the Low-countries, in which he ſpent fourteen years. In 1534 he viſited the univerſity of Padua, in which he ſtudied four years under Lazaro Buonamico; and he contracted a friendſhip in Italy with the cardinals Bembo, Sadolet, and Madrutio. He afterwards purſued his ſtudies at Louvain, where he cultivated the acquaintance of all the men of learning in thoſe parts, and acquired a taſte for muſic, poetry, and polite literature. He married at the Hague, and then fixed his reſidence at Louvain, which city he was a principal means of defending againſt the attack of Martin van Roſſem. He was, however, ſeized upon by the enemy, under pretence of a violation of the truce, and obliged to ranſom himſelf. In an advanced age he was recalled by the king of Portugal in order to be employed in writing the hiſtory of that country; but he found the archives in ſuch a confuſed ſtate, that he was unable to finiſh more than a very ſmall part of his taſk. In conſequence of ſome calumnious accuſation, he was arreſted, and obliged to plead his cauſe in fetters. He was at length allowed to return to his own houſe, where he was found dead one morning with his body half burnt, probably from the accident of falling into the fire in a fit. The works of Damian a Goez are: 1. *Legatio magni Indorum Imperatoris ad Emanuelem Luſitaniæ Regem*, 1532. 2. *Fides, Religio, Moreſque, Æthiopum.* 3. *Hiſpaniæ Laudatio.* 4. *Urbis Lovanienſis Obſidio.* 5. *Comment. Rerum Geſtarum in India a Luſitanis.* 6. *Urbis Ulyſſiponenſis Deſcriptio.* 7. *Hiſtoria del Rey Dom Manuel.* 8. *Chronica de Principe D. Juao* II.

GOE'ZE (John Auguſtus Ephraim), a celebrated naturaliſt, born at Aſcherleben in 1731. Having received the rudiments of his education in the ſchool of that place, he was ſent to the univerſity of Halle, where he applied chiefly to theology; and ſoon after his return, in 1751, he obtained an appointment as a preacher at Quedlingburg, which he retained till the period of his death. In conſequence of ſome accidental circumſtances, he began, about the fortieth year of his age, to turn his attention to natural hiſtory. Becoming poſſeſſed of a compound microſcope conſtructed by Hoffman of Leipſic, he began to collect objects of various kinds; and every thing curious that fell in his way was ſubjected to examination. His microſcopic reſearches conducted him to the ſtudy of the natural hiſtory of inſects. He wrote down his obſervations for his own private uſe, and cauſed many of the objects he ſaw to be correctly delineated. He tranſlated Bonnet's Treatiſe on Inſectology, which was the firſt work he publiſhed, and which met with a favourable reception from naturaliſts. After this period he publiſhed various papers in the Berlin Miſcellany. He made himſelf completely acquainted with the Linnæan arrangement of inſects; after which he publiſhed his Entomological Collections, intended as a ſupplement to Linnæus, which appeared between 1771 and 1781, in four parts, and which excited the aſtoniſhment of thoſe beſt acquainted with the ſubject. The ſame plan he afterwards adopted in regard to other claſſes of the animal kingdom. His friend Dr. Wagler, of Brunſwick, who during the latter part of his life had applied to microſcopical obſervations, being a great anatomiſt, recommended to him an examination of the inteſtines of animal bodies, as likely to afford a new field for his reſearches. Goeze was ſtruck with this idea; and by an indefatigable uſe of every opportunity of diſſection which came in his way, he became poſſeſſed of a multitude of inteſtinal worms from the human body; and in a few years he had a moſt valuable collection, which he daily increaſed by diſſecting the inteſtines of quadrupeds, fiſh, and birds. All curious objects he prepared with great dexterity, examined with the utmoſt care, and cauſed drawings to be made of them. This gave riſe to his celebrated work on the natural hiſtory of inteſtinal worms, *Verſuch über die Naturgeſchichte der Eingeweide-Wurmer*, publiſhed, in quarto, in 1782, with forty-four plates. This original work, on a ſubject of ſo much curioſity and importance to the medical art, contributed not a little to increaſe his reputation as a naturaliſt. About the year 1783 the education of his children induced him to publiſh ſome ſmall works on natural hiſtory and other branches of knowledge connected with it. Being an agreeable writer, theſe productions were well received, and particularly on account of the ſimple and familiar manner in which he inculcates the principles of religion and morality. When he had communicated to the public the reſult of his obſervations on inteſtinal worms, he ſent the collection to Pavia, where it was ſold for a thouſand dollars, as he found himſelf incapable, on account of age and infirmity, to continue his labours in that department. A few weeks after the bargain was concluded, he received a letter from Dr. Hunter, who offered him 1800 dollars for the collection; but this offer arrived too late. Goeze had long ſuffered under a diſorder of the cheſt. This weakneſs, as he had to preach every Sunday, made him wiſh for ſome duty that required leſs exertion. This wiſh was gratified by the intereſt of Anna Amelia, ſiſter of Frederic the Great, who paid him a viſit to ſee his natural curioſities: he obtained the diaconate of the principal church of Quedlingburg, and he entered on his new office with the hope of living ſome years in the boſom of peace and tranquillity; but his diſorder increaſing, he died on the 27th of June, 1786.

GOFF, or GOLF, *ſ.* A very ancient Engliſh game at ball, performed with a light bat, about four feet in length, faced with horn and backed with lead in the curvature. The ball is a little one, but exceedingly hard, being made with leather and ſtuffed with feathers. There are generally two players, who have each of them his bat and ball. The game conſiſts in driving the ball into certain holes made in the ground, which he who achieves the ſooneſt, or in the feweſt number of ſtrokes, obtains the victory. It ſhould ſeem that goff was a faſhionable game among the nobility at the commencement of the ſeventeenth century, and it was one of the exerciſes with which prince Henry, eldeſt ſon to James I. occaſionally amuſed himſelf, as we learn from the following anecdote recorded by a perſon who was preſent: "At another time playing at goff, the prince lifting up his goff-club to ſtrike the ball; one ſtanding by ſaid to him, Beware that you hit not maſter Newton; wherewith he, drawing back his hand, ſaid, Had I done ſo, I had but paid my debts."

GOFFS'TOWN, a town of the American States, in Hillſborough county, New Hampſhire, on the weſtern bank of Merrimack river, three miles from Amuſkeag Falls, and ſixty weſt of Portſmouth. It was incorporated in 1761, and contains by the cenſus 1,275 inhabitants. Some pieces of baked earthenware have been dug up in this townſhip, from which it is ſuppoſed that the Indians had learned the potter's art; but of what antiquity theſe remnants are, is uncertain.

GOG, and MA'GOG, two names uſually joined together in Scripture; *Ezek.* xxxviii. 2, 3, &c. xxxix. 1, 2, &c. *Rev.* xx. 8. Moſes ſpeaks of Magog the ſon of Japhet, but ſays nothing of Gog; *Gen.* x. 2. 1 *Chr.* i. 5. Gog was prince of Magog, according to Ezekiel. Magog ſignifies the country or people, and Gog the king of that country. The generality of the ancients made Magog the father of the Scythians and Tartars; and ſeveral interpreters diſcovered many footſteps of their name in the provinces of Great Tartary. Others have been of opinion that the Perſians were the deſcendants of Magog; and ſome have imagined that the Goths were deſcended from Gog and Magog; and that the wars deſcribed by Ezekiel, and undertaken by Gog, are no other than thoſe which the Goths carried on in the fifth age againſt the Roman empire. Mr. Bryant, in his Analyſis of Ancient Mythology, has ſhewn that

Magog

Magog was the father or founder of the genuine Scythæ, and that Hierapolis in Syria, was in early times called the *city of Magog*. Bochart has placed Gog in the neighbourhood of Caucasus. He derives the name of this celebrated mountain from the Hebrew *Gog chasan*, "the fortress of Gog." He maintains that Prometheus, said to be chained to Caucasus by Jupiter, is Gog, and no other. There is a province in Iberia called the Gogarene. But the generality of commentators believe, that Gog and Magog, mentioned in Ezekiel and the Revelations, are to be taken in an allegorical sense, for such princes as were enemies to the chosen people of God. Thus by Gog in Ezekiel, they understand Antiochus Epiphanes, the persecutor of those Jews who were firm to their religion; and by the person of the same name in the Revelations, they suppose Antichrist to be meant; the great enemy of the church and faithful. Some have endeavoured to prove that Gog, spoken of in Ezekiel, and Cambyses king of Persia, were one and the same person; and that Gog and Magog in the Revelations denote all the enemies of the church, who should be persecutors of it to the consummation of ages.

GO'GARD, a town of Sweden, in the province of East Gothland: twenty-three miles north-north-west of Linkioping.

GO'GET, *s.* The sea-gudgeon. See GOBIUS.

GOG'GLE, *s.* A strained motion of the eyes.—Others will have such a divided face between a devout *goggle* and an inviting glance, that the unnatural mixture will make the best look to be at that time ridiculous. *Marq. of Halifax.*—Used adjectively by *B. Jonson.*—Give him admonition to forsake his saucy glavering grace, and his *goggle* eye. *Poetaster.*

To GOG'GLE, *v. n.* To look asquint.—Nor sighs, nor groans, nor *goggling* eyes, did want. *Dryden.*

Inflam'd all over with disgrace,
To be seen by her in such a place,
Which made him hang his head, and scoul,
And wink and *goggle* like an owl. *Hudibras.*

GOG'GLE-EYED, *adj.* [roezl egen, Sax.] Squint-eyed; not looking straight.—They are deformed, unnatural, and very unseemly to look upon, except to men that be *goggle-eyed* themselves. *Ascham.*

GOG'LAND, a small island of Russia, in the Gulf of Finland: eighty miles west of Petersburg. Lat. 60. 10. N. lon. 44. 48. E. Ferro.

GOGLIO'NIS, a town of Italy, in the kingdom of Naples, and province of Capitinata: seven miles and a half south of Termoli.

GOG'MAGOG HILLS, remarkable hills in the county of Cambridge: three miles east from Cambridge, and adjoining to an ancient Roman city. The intrenchments and other works which cover these hills, prove it to have been a Roman station of considerable strength and importance.

GOG'NO, a river of Piedmont, which runs into the Po near St. Nogaro.

GO'GO, a town of Hindoostan, in the country of Guzerat, near the Gulf of Cambay: eighty-four miles south-south-west of Amedabad, and sixty-four north-west of Surat. Lat. 21. 45. N. lon. 71. 53. E. Greenwich.

GOG'OLEV, a town of Russia, in the government of Kiov: twenty miles east of Kiov.

GO'GRA, or SOORJEW, a river of Hindoostan, which rises in lat. 33°, out of a lake in the kingdom of Thibet, called Lankee-Dee, or Dewah, almost close to the head of the Ganges; from thence it takes a southern course, pent in between parallel chains of lofty and snow-capt mountains, bursts through the great chain of the Emodus, and continues its confined passage, rushing through another chain parallel to that of Emodus, named the mountains of Kemaoon, till it gains the plains of Oude; and after a course of about eight hundred miles, is lost in the Ganges, near fifty miles above Patna.

GOGUET' (Antony-Yves), an esteemed writer, born in 1716 at Paris, where his father was an advocate. After his education was finished, he purchased the place of a counsellor to the parliament. An assiduous application to study enabled him to produce, in 1758, a work of great reputation, entitled, *Origine des Loix, des Arts, des Sciences, & de leur Progrès chez les anciens Peuples*, 3 vols. 4to. reprinted in 1778, in 6 vols. 12mo. It has been translated into English. In this performance the author treats on the origin and progress of human knowledge, from the creation to the time of Cyrus, and displays much erudition in his historical discussions, though less of science and philosophy than might have been wished. He did not long enjoy the literary credit he acquired, dying of the small-pox in 1758, at the age of forty-two. He had made a commencement of a great work on the Origin and Progress of the Laws, Arts, Sciences, &c. in France, from the beginning of the monarchy; which not being finished, was considered as a public loss.

GO'HUD, a town of Hindoostan, and capital of a circar of the same name, in the country of Agra, the revenues of which are estimated at twenty or thirty lacks of rupees per annum: fifty-five miles south-south-east of Agra. Lat. 26. 24. N. lon. 78. 44. E. Greenwich.

GO'JAK, a town of Croatia, on the river Mresnitza: eighteen miles south of Sluin.

GO'JAM, a country of Africa, and province of Abyssinia, about twenty-five leagues long, and fourteen wide, the country is generally flat and in pasture, with few mountains, but those very high. It is almost surrounded by the Nile.

GOJEE'DA, or GOJIDA, a town of Africa, in the country of Algiers: ninety miles south-east of Otan.

GOIGN (The), the southern extremity of the county of Argyle, in Scotland: seven miles south-south-west of Cambletown.

GO'IN, a town of France, in the department of the Moselle, and chief place of a canton, in the district of Metz: three leagues south of Metz.

GO'ING, *s.* The act of walking:

When nobles are their taylors tutors,
No heretics burnt, but wenches suitors,
Then comes the time, who lives to see't,
That *going* shall be us'd with feet. *Shakespeare.*

Pregnancy.—The time of death has a far greater latitude that of our birth; most women coming, according to their reckoning, within the compass of a fortnight; that is, the twentieth part of their *going*. *Grew.*—Departure:

Thy *going* is not lonely; with thee goes
Thy husband; him to follow thou art bound. *Milton.*

GOIT, a river of England, in the county of Chester, which runs into the Mersey three miles east of Stopford.

GOI'TO, a town of Italy, in the duchy of Mantua, situated on the Mincio river, taken by the allies in 1701; and by the prince of Hesse in 1706: nine miles north-north-west of Mantua.

GOI'TRE, *s.* a term given to an indurated protuberance or swelling, which forms itself on the necks or throats of a race of people called *Cretins*, who inhabit the Lower Valais at the foot of the Appenines or Alps of Swifferland. See the article CRETINS, vol. v. p. 355.

The late sir George Staunton, in his journey through that part of Tartary which the British embassy under lord Macartney was obliged to travel, observed the same deformity among the natives of the deep and gloomy vales which intersect that country; and of which he gives the following account:

"In villages dispersed through such vales, many of the inhabitants labour under a disorder observed in similar situations in the Alps, and known there by the name of *goitres*, or swelled necks. The glands of the throat begin

begin at an early age to ſwell, and gradually increaſe, in ſome, to an enormous ſize. The ſwelling begins immediately below the parotid gland, and generally extends under the jaws from ear to ear, affecting all the ſubmaxillary glands. Doctor Gillan eſtimated that nearly one-ſixth of the inhabitants he ſaw had this deformity; which is ſaid, however, not to appear ſuch in the eyes of thoſe villagers. Both ſexes are ſubject to theſe ſwellings; but females more than males; the latter removing oftener from the ſpots where the cauſes exiſt, whatever they may be, that occaſion them. Theſe preternatural tumours did not appear to be attended with any other ſymptoms affecting the general health or corporal functions of thoſe in whom they were obſerved. But the minds of many of them were much weakened, and perhaps of all in a leſs degree. Some were reduced to a ſtate of abſolute idiocy. The ſpectacle of ſuch objects, which fails not to convey a ſerious and even a melancholy impreſſion to perſons who view them for the firſt time, produces no ſuch effect upon thoſe among whom they are bred. The objects themſelves are in their general habits cheerful, and lead a mere animal life, as contradiſtinguiſhed from that in which any thought or reflection is concerned. As they act alone from inſtinct, or the mere impulſe of the ſenſes, ſo their actions, however injurious they may happen to prove to others, are free from intentional malice, and occaſion no reſentment. Their perſons are conſidered in ſome degree as ſacred; and they are maintained by their families with peculiar care. Whatever be the cauſe which occaſions goitres in the human frame, it has no perceptible effect upon other animals. This cauſe is generally ſuppoſed, both in Europe and Aſia, to be the frequent uſe of ſnow water. Melted ſnow is found indeed, to contain a little more calcareous earth than rain water, together with a very ſmall proportion of the acids of nitre and ſea-ſalt; but ſnow water, however much uſed in ſuch open countries as are often covered with ſnow, has not been obſerved to produce ſimilar obſtructions. It is likely, that a particular ſtate of the atmoſphere among mountains, muſt concur towards operating this effect. The part of Tartary where this diſeaſe abounds, has many alpine features, much reſembling Savoy and Swiſſerland.

GO'KIA, a town of China, of the third rank, in the province of Yun-nan: twenty miles eaſt-north-eaſt of King-ton.

GO'LA, *ſ.* The ſame with CYMATIUM.—In a cornice the *gola*, or cymatium of the corona, the coping, the modillions or dentelli, make a noble ſhow. *Spectator.*

GOLABAD', a town of Perſia, in the province of Irak: forty-five miles eaſt of Iſpahan.

GO'LAN, a city of Paleſtine, belonging to the half-tribe of Manaſſeh in Baſhan; one of the cities of Levites of the family of Gerſhon, and one of the ſix cities of refuge. *Joſh.* xx. 8. xxxi. 27.

GO'LAN, a town of Poland, in the palatinate of Poſnania: ten miles north-eaſt of Poſen.

GOLCON'DA, a country of Hindooſtan, in the Deccan, bounded on the north by the country of Berar, on the eaſt by the Circars, on the ſouth by the Myſore country and the Carnatic, and on the weſt by Dowlatabad and Viſiapour. The king of Golconda, at one time, maintained in his pay above five hundred thouſand ſoldiers; but, in the year 1667, the reigning prince became tributary to Aurengzebe. The kings had vaſt revenues, ariſing from the properties of lands, cuſtoms of merchandizes and proviſions; but chiefly the diamond mines; Golconda being much celebrated for the produce of diamonds. Thoſe who were allowed to work towards Maſulipatam, paid a pagoda every hour they worked, whether they found diamonds or not. In the chief mines the king had ſix thouſand men continually at work in them, who daily found near three pounds weight of theſe precious ſtones; and no one was ſuffered to dig in theſe but for the king's uſe. See the article DIAMOND, vol. v. p. 789.

This rich and fertile country once formed a part of the ancient Tellingana, which extended as far as the Bower of Viſiapour, and along the coaſt quite from the river Pennaar ſouth, to Orixa northward; and where to this day, according to major Rennell, the language of Tellingana continues to be ſpoken. In 1687, Golconda was ſubjugated by Aurengzebe, the Great Mogul, and the king ſurrendered himſelf in the moſt abject manner in ſilver chains. He was in a few days reſtored to his dominions; but in a ſhort time afterwards, the conqueror hearing of his immenſe riches, repented of his generoſity, and again took the field, fixing his head-quarters at Hydrabad, the capital of the kingdom. The unfortunate king finally took refuge in his ſtrong fortreſs of Golconda, from which the kingdom received its name. The aſſailants, unable to force the works, effected by treachery what they could not accompliſh by valour: the king was betrayed by the officers on-guard, who in the night abandoned their poſt. The enemy ruſhed in, and a dreadful carnage enſued. When the king was taken, he was treated with great inhumanity; and being brought before Aurengzebe, it is even ſaid that he cauſed him to be ſcourged in his preſence, in order to extort from him the full diſcovery of his treaſures. The rightful king, after being plundered, and ſuffering ſo many indignities, ſtill offered to pay a tribute of 3,700,000 rupees, and become his vaſſal: but the conqueror refuſed, and from that period he annexed the kingdom to the Mogul empire.

Winter begins in Golconda early in June, with rain and thunder. The thunder is of a ſhort continuance; but the rains pour down, with furious ſtorms of wind, till the middle of July, with ſome intervals of fine weather. In September, and October, great rains fall again, and ſwell the rivers to a very dangerous degree of depth and rapidity. Theſe rains render the land exceedingly fertile, eſpecially in fruits. Vines are in great plenty; and of the grapes, which are ripe in January, they make excellent white wine. They have yearly two crops of rice, and ſeveral other kinds of grain. The country alſo produces abundance of fine cattle and ſheep, with great plenty of fiſh, which are found in the numerous rivers and canals formed by the joint efforts of nature and art. Nature contributes in many parts by the vaſt hollows between the hills; but the water contained in them is increaſed by dams made acroſs their diſcharges, ſometimes half a league in length. After theſe have been completely filled by the rainy ſeaſons, the inhabitants let off the water at pleaſure into the lower country by means of ſluices, which ſpreads unſpeakable fertility over all the ſubjacent grounds.

Golconda, ſince it has been poſſeſſed by the nizam, has been enlarged by the addition of the territory of Dowlatabad, ſince named Aurungabad; and alſo part of Berar. The nizam's dominions from ſouth to north are from lat. 15. 50. near Canoul to lat. 21. 25. near Gawile. The greateſt breadth from eaſt to weſt is about three hundred and ſeventy miles.

GOLCON'DA, a fortreſs of Hindooſtan, the famed reſidence of the kings of Golconda. This fortreſs, for extent, might be called a city, in the middle of which riſes a hill like a ſugar loaf, the ſides of which are ſurrounded by the king's palace. The walls of the fortreſs are built of ſtone, three feet diameter, encompaſſed with deep ditches, divided into tanks full of water. The fortifications conſiſt of five towers, which, as well as the walls, are mounted with a great number of cannon. The lower defences were ſix miles in circumference, and above them others of far greater ſtrength, ſome of which were hewn out of the ſolid rock, and ſaid to be impregnable on every ſide. The palace is very large, and well ſituated for air, and has a good

a good proſpect over the city of Hydrabad. The ſepulchres of the king who built Golconda, and his five ſucceſſors, are about two muſket ſhot from the caſtle; each in the middle of a garden, with the tombs of their relations about them: five miles weſt-north-weſt of Hydrabad.

GOLD, *ſ.* [ʒolꝺ, Sax. *golud*, riches, Welſh. It is called *gold* in our Engliſh tongue, either of *geel*, as Scaliger ſays, which is in Dutch to mine; or of another Dutch word, which is *gelten*, and ſignifies in Latin *valere*, in Engliſh to be of price or value: hence cometh their ordinary word *gelt*, for money. *Johnſon.*] The moſt beautiful and valuable of the metals. The limits of the ductility and malleability of gold have never yet been fully aſcertained; but its tenacity is known to exceed that of every other metal. The method of extending gold uſed by the gold-beaters, conſiſts in hammering a number of thin-rolled plates between ſkins or animal membranes. By the weight and meaſure of the beſt wrought gold-leaf, it is found that one grain is made to cover fifty-ſix ſquare inches and three-quarters; and from the ſpecific gravity of the metal, together with this admeaſurement, it follows, that the leaf itſelf is $\frac{1}{282000}$ part of an inch thick. This, however, is not the limit of the malleability of gold; for the gold-beaters find it neceſſary to add three grains of copper in the ounce to harden the gold, which otherwiſe would paſs round the irregularities of the neweſt ſkins, and not cover them; and in uſing the old ſkins, which are not ſo perfect and ſmooth, they proceed ſo far as to add twelve grains. The wire which is uſed by the lace-makers is drawn from an ingot of ſilver, previouſly gilded. In this way, from the known diameter of the wire, or breadth when flattened, and its length, together with the quantity of gold uſed, it is found, by computation, that the covering of gold is only $\frac{1}{72}$ part of the thickneſs of gold-leaf, though it ſtill is ſo perfect as to exhibit no cracks even when viewed by a microſcope.

Gold is found moſtly in the metallic ſtate, though generally alloyed with ſilver, copper, iron, or all three. It is found either in ſeparate lumps, or viſible grains, among the ſands of rivers in many parts of the world. The quantity found among ſands is too often inſufficient to pay the coſt of ſeparating it; yet it is thought to be more univerſally diffuſed in ſands and earths than any other metal, except iron. Some ſands afford gold by ſimple waſhing; the heavy metallic particles ſubſiding ſooneſt: but when it is bedded in earths or ſtones, theſe ſubſtances are pounded, and boiled with one-tenth of their weight of mercury together with water. The mercury, after a certain time, abſorbs the gold, and may be ſeparated by preſſure through leathern bags, and ſubſequent diſtillation.

Mr. Park, in his Travels in the Interior of Africa, p. 300, remarks that the gold of Mandingo is never found in any matrix or vein, but always in ſmall grains, nearly in a pure ſtate, from the ſize of a pin's head to that of a pea; ſcattered through a large body of ſand or clay; and in this ſtate it is called by the Mandingoes *ſanoo munko*, "gold powder." It is, however, extremely probable, that moſt of it has originally been waſhed down by repeated torrents from the neighbouring hills. The manner in which it is collected, is nearly as follows: About the beginning of December, when the harveſt is over, and the ſtreams and torrents have greatly ſubſided, the manſa, or chief of the town, appoints a day to begin *ſanoo koo*, "gold waſhing;" and the women are ordered to be in readineſs by the time appointed. A hoe, or ſpade, for digging up the ſand, two or three calabaſhes for waſhing it in, and a few quills for containing the gold duſt, are all the implements neceſſary for the expedition. On the morning of their departure, a bullock is killed for the firſt day's entertainment, and a number of prayers and charms are uſed to enſure ſucceſs. While ſome of the party are buſied in waſhing the ſands, others employ themſelves farther up the torrent, where the rapidity of the ſtream has carried away all the clay, ſand, &c. and left nothing but ſmall pebbles. The ſearch among theſe is a very troubleſome taſk; ſometimes, however, they are rewarded by finding pieces of gold, which they call *ſanoo birro*, "gold ſtones," that amply repay them for their trouble. But the moſt certain and profitable mode of waſhing, is practiſed in the height of the dry ſeaſon, by digging a deep pit, like a draw-well, near ſome hill which has previouſly been diſcovered to contain gold. The pit is dug with ſmall ſpades, and the earth is drawn up in large calabaſhes. As the negroes dig through the different ſtrata of clay or ſand, a calabaſh or two of each is waſhed, by way of experiment; and in this manner the labourers proceed, until they come to a ſtratum containing gold; or until they are obſtructed by rocks, or inundated by water. In general, when they come to a ſtratum of fine reddiſh ſand, with ſmall black ſpecks therein, they find gold, in ſome proportion or other, and ſend up large calabaſhes full of the ſand, for the women to waſh; for, though the pit is dug by the men, the gold is always waſhed by the women.

The manner of ſeparating the gold from the ſand is very ſimple, and is frequently performed in the middle of the town; for, when the ſearchers return from the valleys in the evening, they commonly bring with them each a calabaſh or two of ſand, to be waſhed by ſuch of the females as remain at home. The operation is as follows:—A portion of ſand or clay (for the gold is ſometimes found in a brown-coloured clay) is put into a large calabaſh, and mixed with a ſufficient quantity of water. The woman, whoſe office it is, then ſhakes the calabaſh in ſuch a manner, as to mix the ſand and water together, and give the whole a rotatory motion; at firſt gently, but afterwards more quick, until a ſmall portion of ſand and water, at every revolution, flies over the brim of the calabaſh. The ſand thus ſeparated, is only the coarſeſt particles mixed with a little muddy water. After the operation has been continued for ſome time, the ſand is allowed to ſubſide, and the water poured off; a portion of coarſe ſand which is now uppermoſt in the calabaſh, is removed by the hand, and freſh water being added, the operation is repeated until the water comes off almoſt pure. The woman now takes a ſecond calabaſh, and ſhakes the ſand and water gently from the one to the other, reſerving that portion of ſand which is next the bottom of the calabaſh, and which is moſt likely to contain the gold. This ſmall quantity is mixed with ſome pure water, and being moved about in the calabaſh, is carefully examined. If a few particles of gold are picked out, the contents of the other calabaſh are examined in the ſame manner; but, in general, the party is well contented if ſhe can obtain three or four grains from the contents of both calabaſhes. Some women, however, by long practice, become ſo well acquainted with the nature of the ſand, and the mode of waſhing it, that they will collect gold where others cannot find a ſingle particle. The gold-duſt is kept in quills, ſtopt up with cotton; and the waſhers are fond of diſplaying a number of theſe quills in their hair. Generally ſpeaking, if a perſon uſes common diligence, in a proper ſoil, it is ſuppoſed that as much gold may be collected by him in the courſe of the dry ſeaſon, as is equal to the value of two ſlaves.

Thus ſimple is the proceſs by which the negroes of Africa obtain gold; and it is evident, from this account, that the country contains a conſiderable portion of this precious metal; for many of the ſmaller particles muſt neceſſarily eſcape the obſervation of the naked eye; and as the natives generally ſearch the ſands of ſtreams at a conſiderable diſtance from the hills, and conſequently far removed from the mines where the gold

was originally imbedded, the labourers are ſometimes but ill-paid for their trouble. Minute particles only of this heavy metal can be carried by the current to any conſiderable diſtance; the larger muſt remain depoſited near the original ſource from whence they came. Were the gold-bearing ſtreams to be traced to their fountains, and the hills from whence they ſpring properly examined, the ſand in which the gold is there depoſited would, no doubt, be found to contain particles of a much larger ſize; as was found to be the caſe on the diſcovery of the gold-mine at Wicklow in Ireland. But even the ſmall grains might be collected to conſiderable advantage by the uſe of quickſilver, and other improvements, with which the poor negroes are at preſent unacquainted.

Part of this gold is converted into ornaments for the women, but, in general, theſe ornaments are more to be admired for their weight, than their workmanſhip. They are maſſy and inconvenient, particularly the earrings, which are commonly ſo heavy as to pull down and lacerate the lobe of the ear; to avoid which they are ſupported by a thong of red leather, which paſſes over the crown of the head from one ear to the other. The necklace diſplays greater fancy; and the proper arrangement of the different beads and plates of gold, is the great criterion of taſte and elegance. When a lady of conſequence is in full dreſs, her gold ornaments may be worth altogether, from fifty to eighty pounds ſterling. A ſmall quantity of gold is likewiſe employed by the Slatees, in defraying the expences of their journeys to and from the coaſt; but by far the greater proportion is annually carried away by the Moors in exchange for ſalt, and other merchandize.

The iſland of Celebes or Macaſſar, in the Eaſtern Indian Ocean, is ſaid to abound very much with this precious metal. Whenever the workmen begin to dig for gold, they firſt conduct water to the ſpot; and if the ſituation of the ground will not admit of the water being conducted in furrows, they make a kind of gutters of hollow wakka trees, which they ſupport with props. When they have brought the water to the place where the mine is to be opened, they make a pit of twenty, thirty, or forty, feet in circumference, according to the number of workmen. As long as the water has room to run off, they ſuffer it to carry with it the earth, which they keep continually turning and ſtirring in the pit; but when the pit becomes ſo deep that there is no paſſage for the water, they bale it out till they arrive at the ſtones. Theſe they waſh clean, and build them up regularly around the ſides of the pit, but without lime or mortar. When the pit is carried to a conſiderable depth, they ſecure theſe ſtones by means of boards and beams of wood. When all the earth, clay, dirt, and ſtones, have been thrown from the pit, and a kind of black ſand begins to appear, they are then pretty certain that they ſhall find gold. This ſand they take up with ſmall ſhovels made for the purpoſe; and, having placed themſelves in the water, they put one handful of the ſand after another on ſmall round wooden diſhes named *dulangs*. The dulangs are about eighteen inches in diameter and ſomewhat hollow, and have a ſmall cavity in the middle which can be cloſed with a wooden cover. When all the ſand has been waſhed from the dulang by being continually ſtirred round with the hand, the gold, which is much heavier, remains in the above-mentioned cavity. When it can receive no more, they take the gold which has been collected, and hold it over the fire in a cocoa-nut ſhell till it is dry; after which they blow away the remaining ſand, and preſerve the pure gold. Frederic Dühr, a ſervant of the Dutch Eaſt-India company, viſited theſe mines a few years ago, for the purpoſe of aſcertaining more ſatisfactorily their probable extent; and from his report it appears that the iſland is very abundant in gold, both in the ſands and rocks. He obſerved that the workmen, when they had dug to the depth of five, and in ſome places of twelve, feet, came to a horizontal ſtratum of rock, which with their inſtruments they were not able to penetrate. They inſiſted, however, that they ſhould find gold below theſe rocks, if they could break through them. He alſo ſaw, where a ſtratum of ſuch rock is found, at the depth of from twelve to fifteen feet, that there were fiſſures in it, two or three inches wide, which contained a blackiſh ſubſtance almoſt like ruſt of iron, mixed with a great many pieces of gold, and which the workmen, after they waſhed the rock perfectly clean, dug out to as great a depth as they could reach with their tools. In all the mines of Celebes, the gold, when ſeparated from the ſand, is of conſiderable fineneſs. See MACASSAR.

With reſpect to the gold of China, ſir George Staunton obſerves, vol. ii. p. 539, that this precious metal is eſteemed in that country more for its rarity than its uſe, ariſing from a decree of the emperor which prohibits the mines from being worked. Small grains of it, however, are collected in the province of Yun-nan and Sechuen, among the ſand in the beds of the rivers and torrents which carry it down from the mountains. It is peculiarly pale, ſoft, and ductile. A few mandarins, and many women of rank, wear bracelets of it round the wriſt, not more for ornament than from a notion that they preſerve the wearer from a variety of diſeaſes. The Chineſe artiſts beat it into leaf, for gumming it upon paper to burn in their tripods, and for gilding the ſtatues of their deities. The ſilk and velvet weavers uſe it in their tiſſues and embroideries. Trinkets are alſo made of it at Canton, which the Chineſe do not wear; they being manufactured on purpoſe to be ſold in Europe as eaſtern ornaments.

A great deal has been ſaid relative to the gold-mine diſcovered a few years ago in Ireland; but the moſt ſatisfactory account of its production was publiſhed by Mr. Mills in the Philoſophical Tranſactions for 1796. From that gentleman's account it appears that eight hundred ounces of gold, of the average value of 3l. 15s. per ounce, were collected in the ſix weeks during which the country people were allowed to carry on their ſearch. The gold is of a bright yellow colour, perfectly malleable; the ſpecific gravity of an apparently clean piece 19·000. A ſpecimen aſſayed by Mr. Weaver, in the moiſt way, produced from 24 grains, $22\frac{58}{100}$ grains of pure gold, and $1\frac{43}{100}$ of ſilver. Some of the gold is intimately blended with, and adherent to, quartz; ſome was found united to the fine-grained iron-ſtone, but the major part was entirely free from the matrix; every piece more or leſs rounded on the edges, of various weights, forms, and ſizes, from the moſt minute particle, up to 2 oz. 17 dwt. only two pieces are known to have been found of ſuperior weight, and one of thoſe is 5, and the other 22, ounces.—See IRELAND.

The greateſt part of the gold employed in Europe, is brought from South America, where, except in Africa, it appears to abound in the greateſt plenty; as does likewiſe the valuable metal *platina*; but the Spaniſh miniſtry has now prohibited the exportation of platina from America, leſt it ſhould be uſed in adulterating their gold; though this does not appear to be a danger which need be feared, ſince chemiſtry has long been in poſſeſſion of ſeveral ſimple and expeditious methods of detecting the fraud; which, beſides, is evident to the ſight, whenever the quantity of debaſement is conſiderable. It may be queſtioned, likewiſe, whether the value of platina would not ſoon equal that of gold, if its properties and uſes were better known in ſociety. M. Guyton, the celebrated mineralogiſt, publiſhed ſeveral intereſting experiments in 1804, on purpoſe to determine how far platina could be made ſubſervient to the fabrication of counterfeit pieces of gold. For this purpoſe, it was neceſſary to arrive at ſuch proportions, that the alloy ſhould be at the ſame degree of ſpecific

weight

weight with the gold iſſued from the mint, which is that of 17·64; and that, nevertheleſs, the quantity of gold ſhould be ſufficiently reduced to afford ſome profit to the coiners. The condition of attaining the ſpecific weight, or the ſame volume for an equal weight, does not permit the ſtandard to be lowered beyond 0·700; otherwiſe the exceſs of weight would betray the fraud. The button of alloy which M. Guyton ſubmitted to this experiment, contained only 0·155 of platina; and yet the alteration of colour was ſo conſiderable, that even the paleſt gold colour could not be recognized in it. Thus we are at once able to appreciate the apprehenſions, which have been ſo much exaggerated, of the abuſe that may be made of platina alloyed or fuſed with gold. Or if platina be covered with gold-leaf, the exceſs of ſpecific weight, which is more than 19, ſoon cauſes it to be ſuſpected; and if we have any doubts, it will be ſufficient to let a drop of nitro-muriatic acid fall upon the piece, and it will inſtantly expoſe the grey colour.

Gold, till very lately, was conſidered as a metal wholly indeſtructible and unalterable by fire, or by means of any chemical proceſs. Modern chemiſtry, however, has not only convinced us of the fallacy of this hypotheſis, but has even ſhewn that the hardeſt adamant, even the diamond, the moſt fixed of every ſubſtance known, cannot reſiſt the force of caloric. But for particulars of this, and of all the chemical operations upon gold, and the method of preparing fulminating gold, &c. ſee the article CHEMISTRY, vol. iv. p. 242, 312, 314, 316, 330, and 387.—For the various uſes of gold in the manufacture of ornamental works, ſee the article GILDING, in this volume; and for the different ſpecies, and the countries producing them, ſee the article MINERALOGY.

"All is not GOLD that glitters."

The French ſay, *Tout ce qui reluit n'eſt pas or.* The Germans, *Eſt iſt nicht alles gold, was da glaentzet.* The Latins, *Fronti nulla fides.* The Italians, *Non è oro tutto quel che luce.* This proverb is intended as an admonition to us, not to found our notions and opinions of perſons and things by glittering pomp and outſide ſhow; which are oftener calculated to impoſe on the credulous multitude, than to afford to a wiſe and thinking man the ſmalleſt proof of permanent riches, or of a ſolid and durable eſtabliſhment.

"GOLD will enter in at every Gate, except that of Heaven."

The Germans ſay, *Das gold machet alle thüre auf nur des himmels nicht.* Philip of Macedon is reported to have ſaid, that he could take any fort or caſtle, let the taſk be ever ſo difficult, provided he could drive an aſs laden with gold up to the gate. This ſecret appears to have been well known to the conqueror Napoleon.

GOLD COAST, a name given to a country of Africa, near the Atlantic, about 120 leagues in length from eaſt to weſt, between the rivers Ancobar and Volta. It contains a variety of different ſtates and kingdoms, and received its name from the immenſe quantity of gold which it produces. Several of the European nations have ſettlements here. The climate is exceedingly hot from October to March, the reſt of the months are tolerable. The natives enjoy a good ſtate of health, and are ſubject to but few diſeaſes; to Europeans the climate is frequently unwholſome, and often proves fatal, eſpecially in the months of July and Auguſt. The domeſtic animals are bulls, cows, ſheep, and goats, the laſt of which are innumerable, and their fleſh excellent; the mutton and beef are neither of them good; but of all animal food dog's fleſh is moſt preferred by the negroes. Other animals are elephants, tigers, buffaloes, jackalls, wild boars, deer of different ſizes, wild cats, porcupines, ſeveral ſpecies of monkeys, rats, mice, &c. Among the birds are pheaſants, parrots, maccaws, turtle-doves, and ſeveral others. The reptiles are numerous, ſnakes, ſerpents, vipers, lizards, ſcorpions, &c. The coaſts, lakes, and rivers, abound with fiſh, and likewiſe with alligators. Among the trees are the palm, the cocoa-nut, the papay, the banana. The principal countries on the Gold Coaſt are Ancobar, Axem, Anta, Commenda, Fetu, Sabo, Adom, Agouna, Acra, Acambou, Labadde, Fantin, Incaſſan, Ningo, Sabu, and Soko.

GOLD CRO'NACH, a town of Germany, in the circle of Franconia, and principality of Bayreuth. It had formerly a gold mine, now neglected: five miles north of Bayreuth.

GOLD FOIL, *ſ.* Leaf gold.

GOLD-HEADED, *adj.* Having a head of gold.

GOLD SIKE, a little ſpring in Weſtmoreland, which caſts up ſmall thin pieces of ſubſtance which ſhines, and reſembles gold.

GOLD'APP, a town of Pruſſian Lithuania, founded in 1564, by the marggrave Albert: ſixty-eight miles eaſt-ſouth-eaſt of Komgſberg.

GOLD'APP, a river of Pruſſia, which runs into the Rominte, ſix miles north of Goldapp, in the province of Lithuania.

GOLD'AST (Melchior Heimensfeld), a learned and laborious writer, born at Biſchoffs-zell in Swifferland. He ſtudied the civil law at Altdorf, but capricious fortune prevented him from thriving in the world. After a life of poverty, he died in 1635. His works, which are chiefly compilations, were nevertheleſs much eſteemed. The principal are, 1. *Monarchia Sancti Imperii Romani*, 3 vols. folio, 1611-14; a collection of treatiſes on the civil and eccleſiaſtical juriſdiction of the empire. 2. *Alimaniæ Scriptores*, 3 vols. folio, 1730. 3. *Commentarius de Bohemiæ Regno*, 4to. 4. *Informatio de Statu Bohemia quoad Jus*, 4to. 4. *Sybilla Francica*, 4to. a collection of pieces relative to the maid of Orleans. 5. *Scriptores Rerum Suevicarum*, 4to. 6. *Collectio Conſuetudinum & Legum Imperialium*, folio. 7. *Politica Imperialia*, 2 vols. folio. A collection of letters, written to him by ſeveral men of learning, was printed at Frankfort in 1688.

GOLD'BACH, a town of Germany, in the circle of Upper Saxony, and principality of Gotha: two miles north of Gotha.

GOLD'BEATER, *ſ.* One whoſe occupation is to beat or foliate gold to gild other matter.—Our *goldbeaters*, though, for their own profit ſake, they are wont to uſe the fineſt gold they can get, yet they ſcruple not to employ coined gold. *Boyle.*

GOLD'BEATER's SKIN, *ſ.* The inteſtinum rectum of an ox, which goldbeaters lay between the leaves of their metal while they beat it, whereby the membrane is reduced thin, and made fit to apply to cuts or wounds. *Quincy.*—When your gilliflowers blow, if they break the pod, open it with a penknife at each diviſion, as low as the flower has burſt it, and bind it about with a narrow ſlip of *goldbeater's ſkin*, which moiſten with your tongue, and it will ſtick together. *Mortimer.*

GOLD'BERG, a town of Sileſia, in the principality of Lignitz. It receives its name from a gold mine near it, which was formerly very rich: ſealed earth is found in the neighbourhood, and the inhabitants are engaged in manufactures of woollen and linen: eight miles and a half ſouth-weſt of Lignitz, and eleven weſt-north-weſt of Jauer.

GOLD'BOUND, *adj.* Encompaſſed with gold:

Thy air,
Thou other *goldbound* brow, is like the firſt. *Shakeſpeare.*

GOLD'EGG, a town of Germany, in the archduchy of Auſtria: four miles weſt of St. Polten.

GOLD'EN, *adj.* Made of gold; conſiſting of gold:

Nine royal knights in equal rank ſucceed,
Each warrior mounted on a fiery ſteed,
In *golden* armour glorious to behold;
The rivets of their arms were nail'd with gold. *Dryden.*

Shining; bright; ſplendid; reſplendent.—Heaven's *golden*-winged herald late he ſaw. *Craſhaw.*

'Tis better to be lowly born
Than wear a *golden* ſorrow. *Shakeſpeare.*

Yellow; of the colour of gold.—*Golden* ruſſeting hath a gold-coloured coat under a ruſſet hair, and its fleſh of a yellow colour. *Mortimer.*—Excellent; valuable.—Thence ariſes that *golden* rule of dealing with others, as we would have others deal with us. *Watts.*

I have bought
Golden opinions from all ſort of people. *Shakeſpeare.*

Happy; reſembling the age of gold.—Many young gentlemen flock to him every day, and fleet the time careleſsly, as they did in the *golden* world. *Shakeſpeare.*

GOLD'EN AGE, *ſ.* That fabulous age of the world in which, as the poets tell us, the earth ſpontaneouſly produced every thing neceſſary for the accommodation and delight of mankind; and that, when the inhabitants had ſpent a length of days in the moſt perfect peace and harmony, exempted from all pain, diſeaſe, and infirmity, they were wafted in a kind of pleaſing dream to the regions of eternal bleſſedneſs.

GOLD'EN BULL, *ſ.* [from *golden*, and *bulla*, Lat. a ſeal.] An edict or conſtitution of the emperor Charles the Fourth, reputed to be the fundamental law of the German empire.

GOLD'EN CALF, *ſ.* in Jewiſh antiquity, the figure of a calf which the Iſraelites caſt in gold, and ſet up in the wilderneſs to worſhip it.

GOLD'EN-EYE, *ſ.* A kind of fiſh, otherwiſe called *gilthead*. See SPARUS.—B. Jonſon uſes the word for a tranſlation of SCARUS in Horace, which we now call the parrot-fiſh:

Nor Lucrine oyſters I could then more prize,
Nor turbot, nor bright *golden-eyes*.

GOL'DEN FLEECE, in ancient mythology, denoted the ſkin or fleece of the ram upon which Phryxus and Hella are ſuppoſed to have ſwam over the ſea to Colchis; and which being ſacrificed to Jupiter, was hung upon a tree in the grove of Mars, guarded by two golden-hoofed bulls, and a dragon that never ſlept; but was taken and carried off by Jaſon and the Argonauts. Many authors have endeavoured to ſhow that this fable is an allegorical repreſentation of ſome real hiſtory. Others have explained it by the profit of the wool trade to Colchis, or the gold which they commonly gathered there with fleeces in the rivers. For the fabulous account, ſee ARGONAUTS, vol. ii. p. 142.

ORDER OF THE GOLDEN FLEECE, a military order inſtituted by Philip the Good, duke of Burgundy, in 1429. It took its denomination from a repreſentation of the golden fleece, borne by the knights on their collars, as repreſented in the portrait of the emperor Charles V. in this volume. The king of Spain continues grand maſter of the order, in quality of duke of Burgundy: the number of knights is fixed to thirty-one. It is ſaid to have been inſtituted on occaſion of an immenſe profit which that prince made by wool; though others will have a chemical myſtery couched under it, as under that famous one of the ancients, which the adepts contend to be no other than the ſecret of the elixir, wrote on the fleece of a ſheep. But William biſhop of Tournay, chancellor of the order, aſſerts that the duke of Burgundy had in view both the golden fleece of Jaſon, and Jacob's fleece: in the firſt, under the ſymbol of the fleece of Jaſon, is repreſented the virtue of magnanimity which every knight ought to poſſeſs; and under the ſymbol of the fleece of Jacob, he repreſents the virtue of juſtice.

GOLD'EN FLOWER. See CHRYSANTHEMUM.

GOLD'EN ISLAND, a ſmall iſland at the entrance of the Gulf of Darien, in the province of Terra Firma, in South America; where there is a river of the ſame name, from its affording much gold-duſt after violent rains, which waſh it down from the mountains. Lat. 8. 20. N. lon. 72. 32. W. Greenwich.

GOLD'EN LAKE, a lake of the iſland of Borneo. Lat. 3. 55. N. lon. 115. 45. E. Greenwich.

GOLD'EN NUM'BER. See the article CHRONOLOGY, vol. iv. p. 538.

GOLD'EN ROD, *ſ.* in botany. See SOLIDAGO.

GOLD'EN ROD TREE. See BOSEA.

GOLD'EN RULE, alſo called the *Rule of Three*, and *Rule of Proportion*. See its extenſive uſe under the article ARITHMETIC, vol. ii. p. 170.

GOLD'ENLY, *adv.* Delightfully; ſplendidly.—My brother Jacques he keeps at ſchool, and report ſpeaks *goldenly* of his profit. *Shakeſpeare.*

GOL'DENSTETT, a town of Germany, in the circle of Weſtphalia, and county of Diepholz: eleven miles north of Diepholz.

GOLD'FINCH, *ſ.* [goldpinc, Sax.] A favourite ſinging bird. For its natural hiſtory, ſee the article FRINGILLA, in this volume.

GOLD'FINDER, *ſ.* One who finds gold. A term ludicrouſly applied to thoſe that empty jakes:

His empty paunch that he might fill,
He ſuck'd his vittels through a quill;
Untouch'd it paſs'd between his grinders,
Or't had been happy for *goldfinders*. *Swift.*

GOLD'FISH. See CYPRINUS, vol. v. p. 535.

GOL'DILOCKS, or GOL'DYLOCKS. See CHRYSOCOMA and GNAPHALIUM.

GOLD'ING, *ſ.* A kind of apple.

GOLDIN'GEN, a town of the duchy of Courland, ſituated near the river Weta, formerly the reſidence of the dukes, when it was more commercial and flouriſhing than it now is. It is defended by an old caſtle, and contains two churches: forty-eight miles weſt-north-weſt of Mittau, and one hundred north of Konigſberg. Lat. 56. 48. N. lon. 40. 6. E. Ferro.

GOLD'LACE, *ſ.* A lace made of gold thread.—By the common law, perſons that ſell orrice lace, mixed with other metal or materials than gold, ſilver, ſilk, and vellum, ſhall forfeit two ſhillings and ſixpence for every ounce: and there ſhall be allowed at leaſt ſix ounces of gold and ſilver prepared and reduced into plate, to cover four ounces of ſilk, except large twiſt, frize, &c. And laying the ſame on greater proportions of the ſilk, or in any other manner than directed, incurs the like forfeiture of two ſhillings and ſixpence the ounce. Copper, and lace inferior to ſilver, is to be ſpun upon thread, yarn, or incle, and not on ſilk; but this does not extend to tinſel apparel, uſed in theatres. No gold or ſilver lace, thread, fringe, or wire, &c. may be imported, on pain of being forfeited and burnt, and one hundred pounds penalty. 15 *Geo.* II. c. 20. 28 *Geo.* III. c. 7. The importation and making up of gold and ſilver lace, embroidery, brocade, &c. is prohibited, by 22 Geo. II. c. 36.

GOLD'LACED, *adj.* Trimmed with lace made of gold thread.

GOLD'LEAF, *ſ.* Gold beat into thin plates or leaves for gilding.

GOLD'MAN (Nicholas), a German mathematician, born at Breſlau in Sileſia, in 1623, and died at Leyden in 1665. He was the author of ſeveral works of merit, of which thoſe moſt generally eſteemed are, 1. *Elementa Architecturæ Militaris*, 1643, 8vo. 2. *De Uſu Proportionarii Circuli*. 3. A treatiſe *De Stylometricis*, 1662; and another treatiſe On Architecture, which Leonard-Chriſt. Sturm publiſhed at Wolfenbuttel, in 1696, accompanied with numerous excellent engravings, and the life of the author.

GOLDO'NI (Charles), an eminent writer of comedy, born in 1707 at Venice, of which city his father was a phyſician. His propenſity to the drama appeared in his childhood, and it was encouraged by his father, who erected a theatre in his own houſe, at which young

Goldoni with a few of his companions were performers. Comic writers were his ſtudy as ſoon as he could read, and he ſketched a plan of a comedy of his own invention when only eight years of age. He was ſent to learn rhetoric at the Jeſuits' college of Perugia, and philoſophy at Rimini. He attended, however, more to the ſtage than to Ariſtotle or Quintilian, and he made an elopement from the latter place with the company of comedians at their removal to Chiozza. His father in vain tried to initiate him in his own profeſſion, and in that of an advocate. He deſerted the bar, and went to Milan, where he was entertained by the Venetian reſident as his ſecretary. There he brought out his firſt piece for the ſtage, entitled *Il Gondoliere Veneziano*; and ſoon after, removing to Verona, he attached himſelf to a company of players, for whom he compoſed ſeveral pieces. He next came to Venice, and ſet himſelf ſeriouſly to reform the Italian ſtage, which was over-run with low farce and indecent buffoonery. He ſtudied the true character of comedy, and confined his repreſentations within the limits of nature and decorum. Probably with a view of improving his language, he viſited Tuſcany, and reſided ſome time at Florence and Piſa. He again returned to Venice; and ſuch was his induſtry and fertility, that he is ſaid in the courſe of twelve months to have produced ſixteen comedies, beſides forty-two other pieces for the theatre, and among theſe are reckoned ſome of his beſt performances. The firſt edition of his works was printed in 1753, in 10 vols. 8vo. An edition under the title of the New Comic Theatre contained ſeveral more pieces, and in 1761 his new pieces amounted to fifty-nine. At that period he received an invitation from the manager of the Italian theatre at Paris to make an engagement for two years as compoſer for that ſtage. He accordingly repaired to that capital; but his firſt attempt to ſubſtitute ſober comedy to pantomimic drollery was not ſucceſsful, and he was obliged to make ſome ſacrifice to the received character of that theatre in his ſubſequent compoſitions, of which twenty-four were the product of his engagement. When it was finiſhed, and he was about to depart for Italy, he obtained an introduction to court, and the appointment of Italian maſter to the princeſſes. He had lodgings in Verſailles, and a penſion, which, however, did not allow him to lay aſide writing for the ſtage. He even, in his ſixty-ſecond year, ventured upon the arduous taſk of compoſing in a foreign language, and brought out at the court theatre his French comedy of *Le Bourru Bienfaiſant*, which met with extraordinary ſucceſs. It was followed by *L'Avare Faſteux*. On the acceſſion of Louis XVI. he was appointed Italian teacher to the princeſſes Clotilde and Elizabeth. Infirmities at length obliged him to leave the court and retire to Paris, and he had the misfortune in his old age to be deprived of his penſion, in conſequence of the Revolution, and reduced to indigence. The French nation was about to make him honourable amends when he died, in 1792, at the age of eighty-five. He has been termed the Moliere of Italy; but the title is too flattering. His collected works were printed at Leghorn, in 31 vols. 8vo. 1788-91.

GOLDS'BOROUGH, a poſt-town of the American States, in Hancock county, diſtrict of Maine. It was incorporated in 1789, and is the ſouth-eaſternmoſt town in the county. On the waters of its harbour is the town of Waſhington. It is 47 miles eaſterly of Penobſcot, 188 ſouth-eaſt of Portland, and 330 north-eaſt of Boſton. Lat. 44. 19. N.

GOLD'SIZE, *ſ.* A varniſh of a golden colour, uſed by gilders. See the article GILDING, in this volume.

GOLD'SMITH, *ſ.* [ȝolꝺ and ꝼmiꝛ, Sax.] One who manufactures gold. A banker; one who keeps money for others in his hands.—The *goldſmith* or banker who takes all your fortune to diſpoſe of, when he has beforehand reſolved to break the following day, does ſurely deſerve the gallows. *Swift.*

Goldſmith's work is either performed in the mould, or beat out with the hammer or other engine. All works that have raiſed figures are caſt in a mould, and afterwards poliſhed and finiſhed: plates or diſhes, of ſilver or gold, are beat out from thin flat plates; and tankards, and other veſſels of that kind, are formed of plates ſoldered together, and their mouldings are beat, not caſt. The buſineſs of the goldſmiths formerly required much more labour than it does at preſent; for they were obliged to hammer the metal from the ingot to the thinneſs they wanted: but the flatting mills now reduce metals to the thinneſs that is required, at a very ſmall expence. The goldſmith is to make his own moulds; and for that reaſon ought to be a good deſigner, and have a taſte in ſculpture: he ought alſo to know enough of metallurgy to be able to aſſay mixed metals, and to mix the alloy.

Gold and ſilver goods are to be aſſayed by the warden of the goldſmiths company in London, and marked; and gold is to be of a certain touch. 28 *Edw.* I. c. 20. By 37 Edw. III. c. 7, goldſmiths were to have their own marks on plate, after the ſurveyors have made their aſſay; and falſe metal was to be ſeized and forfeited to the king. Work of ſilver made by goldſmiths, &c. is to be as fine as ſterling, except the ſolder neceſſary; and marking other work, incurs a forfeiture of double value. 2 *Hen.* VI. c. 14. Goldſmiths ſhall not take above one ſhilling the ounce of gold, beſide the faſhion, more than the buyer may be allowed for it at the king's exchange: and if the work of any goldſmith be marked and allowed by the maſter and wardens of the myſtery, and afterwards found faulty, the wardens and corporation ſhall forfeit the value of the thing ſo ſold or exchanged. 18 *Eliz.* c. 15.

Molten ſilver is not to be tranſported by goldſmiths before it is marked at goldſmiths hall, and a certificate made thereof on oath; and officers of the cuſtoms may ſeize ſilver ſhipped otherwiſe. 6 and 7 *Will.* III. c. 17. The cities of York, Exeter, Briſtol, Cheſter, Norwich, and town of Newcaſtle, are alſo appointed places for aſſaying and marking wrought plate of goldſmiths, &c. 12 *Will.* III. c. 4. 1 *Anne*, c. 9. A duty is granted on ſilver plate of ſixpence per ounce; and goldſmiths are to make entries thereof with the weight, on pain of one hundred pounds, &c. And goldſmiths muſt work their plate according to the old ſtandard; which is to be touched, aſſayed, and marked, before expoſed to ſale. 6 *Geo.* I. c. 11.

Gold-plate made by goldſmiths ſhall contain twenty-two carrats of fine gold: and ſilver plate eleven ounces and two pennyweights of ſilver, in every pound troy, or they forfeit ten pounds. And no goldſmith ſhall ſell any ſuch plate, until marked with the firſt letters of the maker's chriſtian and ſurname, the marks of the city of London, being the leopard's head, lion paſſant, &c. and thoſe made uſe of by the aſſayers at York, Exeter, &c. All perſons making plate, are to enter their marks, names, and places of abode, in the aſſay-office; they are likewiſe to ſend with the plate required to be marked, a particular account thereof, in order to be entered, &c. or forfeit five pounds. The aſſayers determine what ſolder is neceſſary about plate, and judge of the workmanſhip, and for good cauſe may refuſe to aſſay it; and if any parcel be diſcovered of a coarſer alloy than the ſtandard, it may be broke and defaced; alſo the fees for aſſaying and marking are particularly limited by 12 Geo. II. c. 26.

GOLD'SMITH (Oliver), an eminent poet and miſcellaneous writer, ſon of the Rev. Charles Goldſmith, born at Pallas, near Athlone, in Ireland, in 1729. His father had ſeven children, viz. five ſons and two daughters. Of his eldeſt ſon, the Rev. Henry Goldſmith, to whom his brother dedicated his Traveller, their father had formed the moſt ſanguine hopes, as he had diſtinguiſhed himſelf both at ſchool and at college; but he unfortunately married at the age of nineteen, which confined him to a

curacy, and brought on an early family, without any preferment in the church. Oliver was his ſecond ſon, and born very unexpectedly after an interval of ſeven years from the birth of the former child, and the liberal education which their father was then beſtowing on his eldeſt ſon bearing hard upon his ſmall income, he could only propoſe to bring up Oliver to ſome mercantile employment. With this view he was inſtructed in reading, writing, and arithmetic, by a ſchool-maſter in his father's village, who had been a quarter-maſter in the army in queen Anne's wars, in that detachment which was ſent to Spain: having travelled over a conſiderable part of Europe, and being of a romantic turn, he uſed to entertain Oliver with his adventures; and the impreſſions theſe made on his ſcholar were believed by the family to have given him that wandering and unſettled turn which ſo much appeared in his future life. Oliver, however, was from his earlieſt infancy very different from other children, ſubject to particular humours, for the moſt part uncommonly ſerious and reſerved, but when in gay ſpirits none ever ſo agreeable as he; and he began at ſo early a period to ſhew ſigns of genius, that he quickly engaged the notice of all the friends of the family, many of whom were in the church. At the age of ſeven or eight he diſcovered a natural turn for rhyming, and often amuſed his father and his friends with early poetical attempts. When he could ſcarcely write legibly, he was always ſcribbling verſes, which he burnt as he wrote them. Obſerving his fondneſs for books and learning, his mother, with whom he was always a favourite, pleaded with his father to give him a liberal education; but his own narrow income, the expence attending the education of his eldeſt ſon, and his numerous family, were ſtrong objections. Oliver, in the mean time, was placed under the Rev. Mr. Griffin, then ſchoolmaſter of Elphin, and was received into the houſe of his father's brother, John Goldſmith, eſq. of Ballyoughter near that town, who with his family conſidered him as a prodigy for his age, and have handed down the following inſtance of his early wit. "A large company of young people of both ſexes were aſſembled one evening at his uncle's; and Oliver, then but nine years old, was required to dance to a youth then playing on a fiddle. Being but newly recovered from the ſmall-pox, by which he was much diſfigured, and his figure being ſhort and thick, the muſician very archly, as he ſuppoſed, compared him to Æſop dancing; and ſtill harping on this idea which he conceived to be very bright, he had the laugh turned ſuddenly againſt him, by Oliver's ſtopping ſhort in the dance with this retort:—

Our herald hath proclaim'd this ſaying,
See Æſop dancing, and his monkey playing."

This ſmart reply decided his fortune; for from that time it was determined to ſend him to the univerſity; and ſome of the relations, who were reſpectable clergymen, kindly offered to contribute towards the expence, particularly the Rev. Thomas Contarine, who had married Oliver's aunt, a gentleman of diſtinguiſhed learning and good preferment. With this view he was removed to the ſchool of Athlone, about five miles from his father's houſe, and was for about two years there under the Rev. Mr. Campbel, who had the character of being an ingenious maſter; but he being obliged to reſign the ſchool for want of health, Oliver was ſent to the Rev. Patrick Hughes, at Edgeworthſtown, where he was fitted for the univerſity.

In June 1744, Oliver was ſent to Dublin College, and entered under the Rev. Mr. Wilder, one of the fellows, to whom, as he was the ſon of a neighbouring gentleman, the young pupil was particularly recommended. But he was a man of harſh temper and violent paſſions, and Oliver no leſs thoughtleſs and unguarded, ſo that they very ſoon diſagreed. Oliver formed ſome acquaintance in the city of Dublin, and was indiſcreet enough to invite company of both ſexes to partake of a ſupper and a dance in his rooms. This circumſtance, unfortunately for him, came to the ears of his tutor, who abruptly entered in the midſt of all their gaiety, which he ſoon extinguiſhed; for he not only proceeded to the higheſt exceſs of perſonal abuſe, but concluded with manual chaſtiſement before all the company. The diſgrace attending this ſavage treatment drove the poor ſtudent into deſpair, and he determined never more to ſee any of his friends, but to remove to ſome other country, where, totally unknown, he might ſeek his fortune. He accordingly diſpoſed of his books and clothes, and left the college, but loitered about in Dublin till he had only a ſhilling left in his pocket, when he ſet out on his travels. His intention was to go on ſhip-board at Cork, for ſome other country, he knew not whither. On this ſhilling he ſupported himſelf, as he affirmed, for three days, and then parting by degrees with the clothes off his back, was reduced to ſuch extremity of famine, that, after faſting twenty-four hours, he thought a handful of grey-peaſe, given him by a girl at a wake, the moſt comfortable repaſt he ever made. By this time he began to be ſenſible of his folly, and, like the prodigal ſon, deſirous of returning to his indulgent father. From his father's houſe he now was not ſo diſtant but that he contrived to ſend to his brother, who came to him, clothed and carried him back to college, where he effected ſomething of a reconciliation with his tutor; but, as may eaſily be imagined, they were never afterwards on cordial terms.

Soon after this event his worthy father died, of whom he gives an account in the Citizen of the World, under the character of the man in black. His good uncle Contarine endeavoured to ſupply his loſs, and wiſhed him to prepare for holy orders. But for the clerical profeſſion he had no liking, having always a ſtrong inclination for viſiting foreign countries; and when he did apply to the biſhop, he was rejected becauſe he was too young. His uncle however procured him the office of private tutor in the family of a neighbouring gentleman, where he continued about a year; but being averſe to the neceſſary confinement, he quitted his friends, and having ſaved about thirty pounds, and procured a good horſe, he left the country. His friends, after an abſence of ſix weeks, without having heard what had become of him, concluded he had quitted the kingdom; when he ſuddenly returned to his mother's houſe without a penny, upon a poor little horſe not worth twenty ſhillings. His friends, as might be expected, were highly offended; yet his brothers and ſiſters had contrived to meet him, and at length effected a reconciliation. Being required to account for the loſs of his money and linen, and the horſe on which he had departed, he told them that he had been at Cork, where he had ſold his horſe, and paid for his paſſage for America to a captain of a ſhip. But the winds proving contrary for three weeks, he had amuſed himſelf by ſeeing every thing curious in and about that city; and on the day the wind proved fair, being engaged in an excurſion into the country, his friend, the captain, had ſet ſail without him. He continued in Cork till he had only two guineas left, out of which he paid forty ſhillings for his hack; and when he wiſhed to return home, he had only the remaining change to carry him a journey of a hundred and twenty miles.

By the aſſiſtance of his uncle Contarine, to whoſe perſevering friendſhip he always acknowledged himſelf greatly obliged, Goldſmith removed, about the year 1752, from Ireland to Edinburgh, for the purpoſe of ſtudying phyſic. From Edinburgh he embarked for Holland, and paſſing though Flanders, proceeded to Leyden; where he reſided about a year, and ſtudied chemiſtry under Gaubius, and anatomy under Albinus.

In

In this ſituation, he ſuffered many viciſſitudes of fortune; for here he ſhewed himſelf addicted to gaming, a practice which occaſioned all the future hardſhips that he underwent, and in the fatal conſequences of which originated thoſe ſtains that ſullied his moral character. On leaving Leyden, he paſſed ſome time at the univerſities of Straſburg and Louvain, at the latter of which he took the degree of bachelor of phyſic, and thence accompanied an Engliſh gentleman to Geneva. At that city he was engaged as travelling tutor to a young man who had become heir to a large fortune, but who ſeems to have been deſtitute of a proportional liberality of mind. They diſagreed and parted in the ſouth of France; and Goldſmith was left to contend as he could with the hardſhips of indigence in a foreign country. But he found means to get back to England in the beginning of 1756. In a great part of thoſe peregrinations he appears to have truſted for ſupport to his own caſual efforts; and he had learning and addreſs ſufficient to enſure a hoſpitable reception at the monaſteries. A vigorous conſtitution alſo enabled him to reſiſt the fatigues of pedeſtrian travel and the inclemencies of the ſeaſon, and he could not fail to receive much gratification from the ſcenes of nature and the different forms of human life which preſented themſelves to his mind; but there were, doubtleſs, many ſolitary hours in which he ſenſibly felt thoſe circumſtances of his ſituation which form the pathetic exordium of his Traveller.

On his arrival in London, he could obtain no better employment than that of aſſiſtant in the laboratory of a chemiſt near Fiſh-ſtreet hill. Luckily he diſcovered the reſidence of his old college friend Dr. Sleigh, who liberally ſhared his purſe with him, and gave him a countenance which probably was the cauſe of his being recommended as an uſher to Dr. Milner, who kept an academy at Peckham. His activity of mind, however, allowed him to remain but a ſhort time in that ſituation, and he then took lodgings in London with a view of following the profeſſion of an author. He firſt publiſhed a weekly pamphlet, entitled, The Bee; and an Enquiry into the State of Polite Learning in Europe. He had been for ſome years exerciſing his pen in obſcurity, when, in 1765, he ſuddenly burſt from the clouds as a poet, in his Traveller, or a Proſpect of Society. This performance had lain by him ſome years in manuſcript, and it was at the inſtigation of Dr. Johnſon that he enlarged and finiſhed it for publication. That great critic liberally and juſtly ſaid that "there had not been ſo fine a poem ſince Pope's time." The public were equally ſenſible of its merit, and it conferred upon him a celebrity which gave him an introduction to ſome of the moſt eminent literary characters of the time. In 1766 was publiſhed his novel of the Vicar of Wakefield. It was received with merited applauſe, and has ever ſince borne a diſtinguiſhed rank among ſimilar compoſitions. He now took rooms in the Temple, and at the ſame time joined with a friend in a country-houſe. At the latter he compoſed one of his moſt pleaſing and ſucceſsful works, A Hiſtory of England, in a Series of Letters from a Nobleman to his Son, 2 vols. 12mo. The elegance and liberal ſpirit of this hiſtorical ſketch cauſed it to be generally attributed to lord Lyttleton. That he poſſeſſed a rich vein of comic humour he had proved by his Vicar of Wakefield; and it was further evinced by his comedy of The Goodnatured Man, acted at Covent-Garden in 1768. Yet the piece was not very ſucceſsful; which might partly be attributed to defects of plot and want of dramatic effect, and partly to the fondneſs for ſentimental writing, which then characteriſed the public taſte. By gratifying this taſte, Kelly had about the ſame time obtained great applauſe for his Falſe Delicacy; and this ſucceſs loſt him the friendſhip of Goldſmith. A Roman Hiſtory, in 2 vols. 8vo. and a Hiſtory of England, in 4 vols. 8vo. diſplayed his induſtry at this period. A periodical publication, called The Gentleman's Journal, in which he bore a ſhare with ſeveral other writers, enjoyed but a ſhort life; dying, as he himſelf ſaid, "of too many doctors."

His poetical fame reached its ſummit in 1770, by the publication of The Deſerted Village, a charming piece, which was univerſally admired. The price offered for it by the bookſeller (viz. 100l.) appeared to him ſo exorbitantly great, being nearly five ſhillings a couplet, that he refuſed at firſt to take it; but the ſale the poem met with convinced him that he might fairly appropriate that ſum out of the profit. This incident proves that he made a very modeſt eſtimate of his labours. His ſpleen againſt the ſentimental drama of Kelly, incited him to make a bold effort to bring back the reliſh of the public for broad humour; and in 1772 he produced She Stoops to Conquer; or, the Miſtakes of a Night. The characters and plot of this piece certainly make a near approach to farce; yet ſuch was its comic power, that the ſpectators received it with uncommon favour. Goldſmith cleared a conſiderable ſum by this play, and it is ſtill occaſionally repreſented to applauding audiences. This was a gainful year to him; yet thoughtleſs profuſion, and inconſiderate bounty to acquaintances in diſtreſs, left him conſiderably in debt at the cloſe of it; and he therefore continued to exerciſe his induſtry in compilation. Beſides a Grecian Hiſtory, he ſupplied the bookſellers with a Hiſtory of the Earth and Animated Nature, in 8 vols. 8vo. 1774. Goldſmith was by no means a man of ſcience; but he poſſeſſed good taſte and a charming ſtyle; and with the help of Buffon and other writers, he produced a work that was both amuſing and inſtructive. Such was the confidence he had in his native induſtry and ſkill at compilation, that he formed a plan for a much greater work; no leſs than an Univerſal Dictionary of Arts and Sciences, in which he was to receive aſſiſtance from ſome of his literary friends; but this and all other ſchemes were cut off by his untimely death. He was attacked with the ſymptoms of a fever in March, and died on April 4, 1774, aged forty-five. He was buried in the Temple church-yard; and a monument has ſince been erected to his memory in Weſtminſter-abbey, with a Latin inſcription by Dr. Johnſon.

Doctor Goldſmith (ſo he was uſually ſtyled, though only M. B.) appears to have been more admired for his genius, and beloved for his benevolence, than ſolidly eſteemed. The beſt part of his moral character was a warmth of ſenſibility, which made him in all fortunes ready to ſhare his purſe with the indigent, and rendered him in his writings the conſtant advocate of the poor and oppreſſed. His worſt feature was a tincture of envy and jealouſy of ſucceſsful rivals, which he ſometimes diſplayed in a manner not a little ridiculous. Yet, perhaps, no writer of his time was poſſeſſed of more true humour, or was capable of more poignancy in marking the foibles of other individuals. This laſt talent he has diſplayed in a very amuſing manner in his unfiniſhed poem of Retaliation, written as a kind of retort to the jocular attacks made upon him in the literary club. Under the maſk of epitaphs, he has given maſterly ſketches of ſome of the principal members, with a mixture of ſerious praiſe and good-humoured raillery. His character of Garrick, however, is particularly ſevere, and was ſo much felt by that witty actor, as to provoke a ſtill ſeverer return in kind; and it is not probable that any friendſhip could ſubſiſt between them after thoſe hoſtilities.

Goldſmith's literary fame ſtands higheſt as a poet, in which character a place may be given him perhaps at the head of the minor claſs, reſtraining the term *minor* rather to the quantity, than the excellence, of his compoſitions. It would not be eaſy to point out in the whole compaſs of Engliſh poetry pieces that are read with more delight than The Traveller, and The Deſerted Village. The elegance of the verſification; the force

force and ſplendour, yet ſimplicity, of the diction; the happy mixture of animated ſentiment with glowing deſcription; are calculated to pleaſe equally the refined and the uncultivated taſte. The moral and philoſophical views of ſociety they exhibit, may in ſome reſpects be objectionable; yet upon the whole they exert a favourable influence over the heart. In addition to theſe capital works, his pleaſing ballad of The Hermit, and ſome ſhort humorous and miſcellaneous pieces, complete the catalogue of his performances in verſe. As a proſe writer he deſerves high praiſe for ſtyle, which he adapts with great felicity to his ſubject; and which, whether elevated or plain, is always clear, pure, and unaffected. Many of his compilations have all the merit that can be required in works of that kind; and his hiſtorical abridgments have proved very uſeful in the education of youth. Dr. Johnſon's encomium in his epitaph may be admitted as juſt ſummary of his literary character; *Qui nullum fere ſcribendi genus non tetigit, nullum quod tetigit non ornavitu*; "Who left ſcarcely any kind of writing untouched, and adorned all he touched." An edition of Goldſmith's Miſcellaneous Works complete, with an Account of his Life, was publiſhed in 1806, in 5 vols. 12mo.

GOLD'WIRE. See the article WIRE.

GOLES'Z, a town of Poland, in the palatinate of Sandomirz: ſixty miles ſouth-ſouth-weſt Sandomirz.

GOLET'TA, or GOULET'TA, a fortreſs of Africa, ſituated on a canal, in the kingdom of Tunis, ſeized by Barbaroſſa in 1535. Charles V. became maſter of it in 1536, and it continued in the poſſeſſion of the Spaniards till 1574, when it was taken from them by Selim II. twenty-five miles north of Tunis.

GOL'GOM, a town of the iſland of Ceylon: forty-eight miles north-weſt of Candi.

GOLGO'THA, [i. e. the place of a ſkull.] The name of the place where Jeſus Chriſt was crucified. Matth. xxvii. 33. See CALVARY.

GOLI'ATH, [Heb. a heap.] A man's name, a giant.

GO'LICH, a town of Ruſſia, in the government of Irkutſch, on the Lena: two miles ſouth of Orlenga.

GO'LIUS (James), born at the Hague in 1596. He diſtinguiſhed himſelf at the univerſity of Leyden by the ardour with which he purſued the ſtudy of the languages, of antiquities, philoſophy, medicine, and mathematics. He particularly attached himſelf to the celebrated Erpenius, the Arabic profeſſor, under whom he acquired an accurate knowledge of the oriental tongues. In 1622 he accompanied an ambaſſador of the United States to Morocco, where he preſented to the emperor, Muley Zeidan, a requeſt written in Arabic, which excited great admiration, as being the work of a Chriſtian. The emperor deſired to ſee him, and converſed with him in his own language; while Golius replied in Spaniſh, not being able to pronounce the Arabic. After his return, he ſucceeded to the Arabic profeſſorſhip on the death of Erpenius in 1624. He obtained permiſſion in 1625 to travel in the Levant, and paſſed more than a year at Aleppo, whence he made excurſions into Arabia and Meſopotamia. Thence he travelled by land to Conſtantinople, at which capital he made friends who procured him acceſs to ſeveral libraries. During his abſence he was appointed profeſſor of mathematics; and he returned to Leyden in 1629, and applied to the duties of his double office. He died in 1667, after having with great credit filled his laborious ſtation nearly forty years, and paſſed through all the academical honours. He publiſhed the Saracen Hiſtory of Elmacin, the verſion of which was begun by Erpenius, and completed by himſelf: alſo, a Life of Tamerlane, 1636, written by an eminent Arabian author; The Aſtronomical Elements of Alfergan, with a new verſion and learned commentaries; an Arabic Lexicon, 1659; and a Perſian Dictionary, printed in London. Late in life he ſtudied the Chineſe, and became able to read books in that difficult language.

GO'LIUS (Peter), elder brother of the preceding, born at Leyden, but in what year is uncertain. He entered when young among the barefooted Carmelites of the reformed order of St. Thereſa, when he took the name of Celeſtine de Sainte Liduvine. Like his brother, he excelled in a knowledge of the Arabic language, and taught it in the ſeminary belonging to his order at Rome, where thoſe monks were educated who were intended to be ſent on miſſions into the Eaſt. By the choice of his ſuperiors, Peter Golius was deſtined to that ſervice; and, after viſiting every part of Syria and Paleſtine, he founded a monaſtery of his order on mount Libanus, over which he preſided until he was recalled to Rome. In that city he was employed as one of the principal aſſiſtants of Sergius Riſius, a Maronite, and archbiſhop of Damaſcus, in preparing his edition of the Arabic Bible, which, after the death of that prelate, was publiſhed in 1671, by the direction of the college *De Propaganda*; and he had the principal ſhare in correcting the proof ſheets of that work. Soon after it was completed, he was appointed by the general of the order, viſitor of the miſſions in the Eaſt Indies. He died while fulfilling with great zeal the duties of that appointment, at Surat, about the year 1673. He was the author of tranſlations into Arabic of The Imitation of Jeſus Chriſt, by Thomas a Kempis, 1663; Sermons upon the Evangeliſts; an hiſtoric Diſcourſe of St. Gregory of Decapolis; ſeveral ſmall devotional pieces; and a tranſlation from the Arabic into Latin of A Collection of Parables and Proverbs, taken from different Arabic writers.

GOLL, *ſ.* [corrupted, as Skinner thinks, from pal or pol, whence pealdan, to handle or manage.] Hands; paws; claws. *Uſed in contempt.*—They ſet hands, and Mopſa put her golden *golls* among them; and blind fortune, that ſaw not the colour of them, gave her the pre-eminence. *Sidney.*

GOL'LACH, a river of Germany, in the circle of Franconia, which runs into the Tauber: five miles ſouth-weſt of Aub.

GOL'LERSDORF, a town of Germany, in the archduchy of Auſtria: four miles ſouth-ſouth-eaſt of Sonneberg.

GOLLI, or COLLI, a town of Africa, near the river Grande, whoſe inhabitants trade in ſlaves, ivory, and cotton.

GOL'LING, a town of Germany, in the circle of Bavaria, and archbiſhopric of Saltzburg; twenty-two miles north-north-weſt of Radſtadt, and fourteen ſouth-ſouth-eaſt of Saltzburg.

GOL'NITZ, a town of Germany, in the circle of Upper Saxony, and duchy of Anhalt Zerbſt: ſeven miles north-weſt of Zerbſt.

GOL'NITZ, a town of Hungary, on a river of the ſame name: fourteen miles ſouth-eaſt of Kapſdorff.

GOL'NIZ, a town of Germany, in the duchy of Carinthia: three miles ſouth of St. Andre.

GOL'NOW, a town of Germany, in the circle of Upper Saxony, in Anterior Pomerania, ſituated on the Ihna, ſurrounded with walls in 1190, but much injured by fires and war: twelve miles north of Stargard, and thirteen north-eaſt of Old Stettin. Lat. 53. 31. N. lon. 32. 35. E. Ferro.

GO'LO, a department of France, one of the two formed of the iſland of Corſica. It is bounded on the north and eaſt by the Mediterranean; on the ſouth, by the department of Liamone; and on the weſt, by the Mediterranean. Its ſuperficies is about 1,017,472 ſquare acres, or 519,301 hectares; its population is about 157,874 individuals. It is divided into three communal diſtricts.

GO'LO, a river of the iſland of Corſica, which riſes nearly in the centre of the iſland, and taking a north-eaſt courſe, runs into the ſea, twelve miles ſouth-ſouth-eaſt of Baſtia, and ten north-north-weſt of St. Pellegrina.

GOLOGRIZ'ZA, a town of Auſtrian Iſtria: ſix miles ſouth of Pedena.

GOL'PHINGTON, the chief town of the American

States in Washington county, Georgia, situated near the head of Ogeechee river, about twenty-six miles east-south-east of Oconee town, thirty-seven of Augusta, and fifty north-west of Louisville.

GOLSCH, a river of Germany, in the circle of Upper Saxony, which rises a little to the south of Auerbach, in the Vogtland, and runs into the Elster, near Greitz.

GOLTCHIN'SKOI, a settlement of Russia, in the government of Tobolsk: 380 miles north of Turuchansk. Lat. 72. 5 N. lon. 103. E. Ferro.

GOLTIAVI'NA, a town of Russia, in the government of Tobolsk: 188 miles east of Eniseisk. Lat. 58. 20. N. lon. 116 E. Ferro.

GOLT'VA, a town of Russia, in the government of Kiev: 112 miles south-east of Kiev. Lat. 49. 15. N. lon. 51. E. Ferro.

GOLT'ZE, a town of Germany, in the circle of Upper Saxony, and Ucker Mark of Brandenburg: five miles south-west of New Augermunde.

GOLT'ZIUS, or Goltz (Henry), born at Mulbracht in the duchy of Juliers in 1558, was an eminent engraver, and published many prints from designs brought from Italy, which are much esteemed. He died in 1617.

GO'LUB, a town of Prussia, in the territory of Culm: twenty-four miles south-east of Culm.

GOLUBEN'SKA, a town of Russia, in the country of the Cosacs, on the Don: 200 miles east-north-east of Azoph, and forty west-north-west of Tzaritzin.

GOL'ZIUS (Hubert), an eminent antiquary, born at Venloo in 1526, was the son of Roger Goltz, a painter at Wurtzburg. Hubert was instructed in his father's art, and at the same time applied to the study of polite literature, history, and antiquities. He particularly cultivated the knowledge of medals and inscriptions, and spared neither labour nor expence in this pursuit. He resided for some years at Antwerp, whence, in 1558, he removed to Bruges. He took several journeys through the Low-countries, Germany, France, and Italy, every where finding access to the cabinets of the curious, and enriching his collection with the monuments of antiquity. His reputation obtained for him the citizenship of Rome, and he was honoured by the patronage of the emperor Ferdinand, and other persons of rank. He died at Bruges in 1583. Golzius was a printer, painter, and engraver in wood, as well as a writer. He published 1. *Fasti Romani ex Antiquis Numismatibus & Marmoribus*, folio. 2. *Icones Imp. Romanorum & Series Austriacorum*, folio; these are effigies of emperors from medals, &c. from Julius Cæsar to Charles V. 3. *Julii Cæsaris & Augusti Vit. ex numismatibus.* 4. *Sicilia & Magna Græcia ex numismat.* folio; a work of great erudition and much esteemed. 5. *Fasti Consulares.* 6. *Thesaurus Antiquitatum.* All his works were printed together at Antwerp, in three volumes folio, 1645 and 1708.

GO'MAR (Francis), the celebrated opponent of Arminius, from whom the Calvinistic party in Holland received the name of *Gomarists*, was born at Bruges, in 1563. His parents, having embraced the protestant religion, retired into the palatinate in 1578, for the sake of living in peace and security. Young Gomar was now sent to the university of Strasburg, and placed under the instructions of the famous John Sturm; after which he went to pursue his studies at Newstadt. In 1582 he came to England, and attended the divinity lectures in the universities of Oxford and Cambridge. He was admitted to the degree of bachelor in 1584. The two following years he spent at Heidelberg, where he applied himself with great assiduity to perfect his knowledge in the Greek and Hebrew languages. In 1587 he was invited to become pastor of the Dutch congregation at Frankfort, and continued to discharge his ministerial functions in that connection until 1593, when his flock was entirely dispersed by persecution. In the following year he was invited to fill the chair of theological professor at Leyden; and after he had been admitted to the degree of doctor of divinity at Heidelberg, entered on the duties of that employment. From this time, nothing is related concerning him worthy of notice till the year 1603, when James Arminius was appointed his colleague in the professorship of divinity. This celebrated man had no sooner entered on his office, than he openly declared his opinions in opposition to those of Calvin, and made many converts in the university. He soon, however, met with a zealous and violent adversary in Gomar, who disputed with him in the schools of Leyden; published treatises to excite the orthodox to make a firm stand against his doctrines, which he represented to be profane and impious; and endeavoured to provoke against him the indignation of the states of Holland, before whom the two combatants disputed twice, in the year 1608. When, upon the death of Arminius, Vorstius, who was of the same sentiments, was proposed to become his successor, Gomar and his party used all their diligence to prevent his appointment, but without success. This defeat determined Gomar no longer to continue in a situation where his adversaries were daily increasing in numbers and reputation; and in 1611 he resigned his post, and retired to Middleburg. In that city he officiated as minister, and delivered public lectures till 1614, when he accepted of an invitation to become professor of divinity in the academy at Saumur. After exercising that employment for four years, he removed to the university of Groningen, where he was first appointed to the professorship of divinity, and afterwards to that of the Hebrew language. He was present in the synod of Dort, and took an active part in procuring the persecuting decrees by which the Arminians were condemned, and proscribed as corrupters of the true faith, and enemies to their country. He was also concerned in revising the translation of the Old Testament, printed at Leyden, with notes, in 1637. He died at Groningen in 1641, deservedly commended for his great learning, particularly in the oriental languages, but under the reproach of having disgraced his character as a Christian minister, by bigotry and intolerance. The different treatises which he wrote on controversial and other subjects were collected together, and printed at Amsterdam, in 1645.

GOMAUN', mountains of Asia, which separate Hindoostan from Grand Thibet, the same with Himmalch. Lat. 30. 30. to 31. 20. N. lon. 76. to 77. E. Greenwich.

GOM'BAULD (John Ogier de), a French poet, native of St. Just de Luffac, in Saintonge. He was a younger son of a gentleman of the protestant religion, to which he adhered. Possessing more quality than wealth, after finishing his education at Bourdeaux, he came to Paris about the time of the death of Henry IV. and frequented the court of queen Mary de Medicis. He so well ingratiated himself with her, that he not only obtained a pension, but was also appointed gentleman in ordinary of the king's chamber, and had some patrons of rank; yet he passed his life in a state little above indigence. He took a seat among the wits and poets of the time, was a constant visitor at the hotel de Rambouillet, and was one of the first members of the French academy. By means of regularity and sobriety he protracted his life to an advanced period, dying in 1666. The works of this writer were tragedies, tragi-comedies, pastorals, romances, sonnets, epigrams, &c. which obtained reputation in their time, but are at present little esteemed. He also engaged in theological controversy, and wrote Treatises and Letters concerning Religion, in favour of the principles of the Protestants.

GOM'BERVILLE (Marin le Roi, sieur de), a man of letters, born in 1599 at Chevreuse in the diocese of Paris. He made himself known at the age of fourteen by a collection of quatrains in honour of old age. Some romances and other works gave him a reputation which caused him to be one of the number of literary men assembled by cardinal Richelieu in 1635, for the purpose

of founding the French academy. He is mentioned in high terms of commendation by Flechier, who ſpeaks of him as having joined the chriſtian virtues to thoſe of morality. He died in 1674. His works are: 1. *Poeſies Diverſes*, in the collection of Lomenie de Brienne; of theſe, his ſonnets on the Holy Sacrament, and on Solitude, are thought excellent. 2. Romances, viz. *Polexandre*; *La Cytherea*; *La Jeune Alcidiane*; theſe were for a time popular. 3. *Diſcours ſur les Vertus & les Vices de l'Hiſtoire, & de la Manière de bien écrire*; a ſenſible and judicious performance. 4. An edition of the Memoirs of the Duke de Nevers, with additions. 5. A Relation of the River of the Amazons, from the Spaniſh. 6. *La Doctrine des Meurs, tirée de la Philoſophie des Stoiques*; a work more in requeſt for its hundred plates, than for the hundred diſcourſes illuſtrating them.

GOMBEZCA'LA, a town of Perſia, in the province of Farſiſtan; one hundred miles north-north-weſt of Schiras.

GOM'BIN, or GAMBIN, or GABIN, a town of Poland, in the palatinate of Rawa, ſituated on the Bſura river: thirty-four miles north-north-eaſt of Rawa.

GOMBROO'N. See GAMBRON.

GOME, *ſ.* a provincial term for the tar or black greaſe of a cart-wheel.

GOMEG'NIES, a town of Hanaut: four miles eaſt of le Queſnoy.

GO'MER, [גומר, Heb. conſuming.] A man's name; a ſon of Japhet. Alſo a Jewiſh meaſure of dry things, containing five hundred and ten pints, one ſolid inch, and two hundred and eleven decimal parts.

GOM'ERA, or VELEZ DE GOMERA, or VELEZ DE PEGNON, a fortreſs of Africa, built on a rock near the coaſt of the Mediterranean, in the kingdom of Fez: eighty-five miles weſt of Melilla, and fifty-five eaſt of Tetuan.

GOM'ERA, a river of Africa, which runs into the Straits of Gibraltar, near Velez de Gomera, in the kingdom of Fez.

GOM'ERA, a ſmall iſland of Scotland, near the weſt coaſt of the iſland of Mull.

GOM'ERA, or GOMARA, one of the Canary iſlands, about twenty miles long, and ten wide, with a capital of the ſame name. It is well cultivated and fertile, producing abundance of ſugar-canes and wine, with corn enough to ſupply the want of the inhabitants. The town is ſituated on the eaſt coaſt, and has a good harbour, where the Spaniſh Weſt India fleet ſtops to take in wine and fruits, and other proviſions of the country: ſix leagues ſouth-weſt from the iſland of Teneriffe. Lat. 28. 6. N. lon. 17. 8. W. Greenwich.

GO'MEZ DE CIVIDAD REAL (Alvarez), a Latin poet, in born in 1488, at Guadalaxara in Spain. He was page of honour to the archduke Charles, afterwards emperor. He married a natural daughter of the duke d'Infantado, and died in 1558. Gomez poſſeſſed a great facility in writing Latin verſe, which he proved by ſeveral works of conſiderable length. Theſe are, 1. *Thalia Chriſtiana*, or the Triumph of Jeſus Chriſt, in twenty-five books; 2. *Muſa Paulina*, or the Epiſtles of St. Paul, in elegiac verſe; 3. The Proverbs of Solomon; 4. The Seven Penitential Pſalms; 5. *De Principis Burgundi Militia quam Velleris aurei vocant, Lib. V.* This laſt poem, on the order of the Golden Fleece, is reckoned his maſterpiece. He alſo compoſed poems in the Spaniſh language, but their reputation is not great.

GO'MEZ DE CASTRO (Alvarez), a native of St. Eulalia, near Toledo, was educated at Alcala, where he obtained a high character for learning. He was recommended to Philip II. who engaged him to prepare an edition of the works of St. Iſidore, which death prevented him from completing. He compoſed ſeveral works in proſe and verſe, of which the moſt eſteemed is a Life of Cardinal Ximenes, inſerted in a collection of the writers on Spaniſh hiſtory. He died in 1580, at the age of ſixty-five.

GO'MEZ (Magdalen-Angelica Poiſſon de), born at Paris in 1684, was the daughter of Paul Poiſſon, an actor. Don Gabriel de Gomez, a Spaniſh gentleman, married her with the hopes of finding a reſource againſt indigence in her talents. She, on the other hand, took him for a man of fortune; but finding her miſtake, ſhe ſat quietly down to obtain a livelihood by writing. Her fertile pen poured forth a great variety of productions of the gallant and romantic claſs, which were much read at the time. Of theſe the principal are: 1. *Les Journées Amuſantes*, 8 vols. 12mo. 2. *Anecdotes Perſanes*, 2 vols. 12mo. 3. *Hiſt Secrète de la Conquête de Grenade.* 4. *Hiſtoire du Comte d'Oxford, avec celle d'Euſtache de St. Pierre.* 5. *La Jeune Alcidiane.* 6. *Les Cent nouvelles Nouvelles*, 8 vols. 12mo. Mad. de Gomez alſo wrote ſome tragedies, but her genius had not ſtrength enough for this ſpecies of compoſition. She died at the age of eighty-ſix in 1770.

GO'MI, a town of China, of the third rank, in the province of Se-tchuen: twelve miles weſt-north-weſt Kia-ting.

GOM'MERN, a town of Germany, in the circle of Upper Saxony, and electorate of Saxony, ſituated on the river Ehle: eight miles ſouth-eaſt of Magdeburg, and twenty north-weſt of Deſſau. Lat. 52. 5. N. lon. 29. 36. E. Ferro.

GOM'MERVILLE, a town of France, in the department of the Eure and Loire, and chief place of a canton, in the diſtrict of Janville: three leagues and a half north of Janville.

GOMOR'RAH, or GOMOR'RHA, a city of Canaan, ſituated in the vale of Siddim, or Sodom, (now the Dead Sea,) and was the ſeat of ſome of the Canaaniſh kings, the laſt of which was named Birſha. It was deſtroyed (together with Sodom, Admah and Zeboim), by fire and brimſtone rained as it were from heaven, in the days of the patriarch Abraham, and Lot. *Gen.* xiv. 2, 3, 10. xix. 24.

GOMO'ZIA, *ſ.* in botany. See NERTERIA.

GOM'PHI, in ancient geography, a town of Theſſaly, near the ſprings of the Peneus.

GOM'PHIA, *ſ.* [from γομφος, Gr. a nail, knob, or button, the flowers being of a roundiſh form before they open.] In botany, a genus of the claſs decandria, order monogynia. The generic characters are—Calyx: perianthium five-leaved; leaflets lanceolate, ſharpiſh, nerved, coloured, deciduous; two with a membrane on both ſides, one with a membrane on one ſide only, and two without any. Corolla: petals five, ſpreading, longer than the calyx, ſomewhat unequal; claws ſhorter than the calyx, widening gradually into roundiſh, flat, entire, laminas. Stamina: filaments ten, thick, angular, very ſhort; antheræ upright, parallelopiped, drawn to a point at the top, gaping at the tip on the outſide with a double hole, ſhorter than the calyx. Piſtillum: germ ſitting on a ſhort, fleſhy, angular, receptacle, five-cornered, and five-cleft; ſtyle longer than the ſtamens, five-furrowed; ſtigma ſharp. Pericarpium: berries from one to five, generally two, ovate, obliquely attenuated at the baſe, ſomewhat compreſſed, obtuſe, upright, ſitting on a very large globular receptacle (for receiving a ſingle berry) or lobed for ſeveral berries, each fixed to each lobe. Seeds: ſolitary, ovate.—*Eſſential Character.* Calyx, five-leaved; corolla, five-petalled; berries, one to five, on a large receptacle; ſeed, ſolitary.

Species. 1. Gomphia anguſtifolia, or rough-leaved gomphia: leaves lanceolate, ſerrate on the outſide; panicle terminating; petals longer than the calyx. This tree is only about twelve feet high, with a ſlender trunk; the bark is browniſh-red, the wood whitiſh, with a greeniſh heart; the flowers are yellow, and have no ſcent. Native of the Eaſt Indies.

2. Gomphia

2. Gomphia nitida, or clean gomphia: leaves ovate-lanceolate, acuminate, ferrate; panicles terminating; calyxes equal to the corolla. Native of the Weſt Indies.

3. Gomphia lævigata, or ſmooth gomphia: leaves lanceolate, very obtuſe, quite entire, emarginate; panicle terminating. Very ſmooth. Native of the Eaſt Indies.

GOMPHI'ASIS, *ſ.* [Greek.] A diſtemper of the teeth, when they are looſe, and ready to drop out.

GOMPHOLO'BIUM, *ſ.* In botany, a genus of the claſs decandria, order monogynia. Generic characters—Calyx: campanulate, ſimple, five-parted. Corolla: papilionaceous; ſtigma ſimple, acute; legume ventricoſe, one-celled, many-ſeeded. There is but one ſpecies, a native of Auſtralaſia. It is a ſhrub, with the leaves ternate or unevenly pinnate. From the Linn. Tranſ. vol. iv.

GOM'PHOSIS, or GOMPHO'MA, *ſ.* [γομφωμα, Gr. from γομφος, a nail.] In anatomy, a ſpecies of articulation which reſembles a nail driven in, of which the teeth in their ſockets are an inſtance.

GOM'PHOSUS, *ſ.* [γομφος, Gr. a nail, from the ſhape of the ſnout.] The name of a genus of fiſhes inſtituted by Cepede; for the ſpecies of which, ſee LABRUS.

GOMPHRE'NA, *ſ.* [of Pliny: from γομφος, Gr. a nail, knob, or button.] GLOBE AMARANTH; in botany, a genus of the claſs pentandria, order digynia, natural order amaranthi, *Juſſ.* miſcellaneæ, *Linn.* The generic characters are—Calyx: perianthium coloured; outer three-leaved; leaflets two, converging, keeled. Corolla: five-petalled, upright; petals ſubulate, permanent, rude, villoſe; nectary, a cylindric tube, the length of the corolla, with a five-toothed, patulous, mouth. Stamina: filaments five, ſcarcely obſervable, within the mouth of the nectary; antheræ upright, cloſing the mouth of the nectary. Piſtillum: germ ovate, with a point; ſtyle cloven half way, filiform; ſtigmas ſimple, the length of the ſtamens. Pericarpium: capſule roundiſh, circumciſed. Seed: ſingle, large, roundiſh, with an oblique tip.—*Eſſential Character.* Calyx, coloured; outer, three-leaved; leaflets, two, converging, keeled; petals, rude, villoſe; nectary, cylindric, five-toothed; ſtyle, cloven half way; capſule, one-ſeeded.

Species. 1. Gomphrena globoſa, or annual globe amaranth: ſtem upright; leaves ovate-lanceolate; heads ſolitary; peduncles two-leaved. This is an annual plant, riſing with an upright branching ſtalk, about two feet high; leaves oppoſite, ſeſſile, quite entire, hiſpid; branches and peduncles alſo oppoſite; the latter axillary, long and naked, except that there are two ſhort leaves cloſe under each head of flowers; theſe heads at their firſt appearance are globular, but as they increaſe in ſize become oval. Native of India. It was cultivated in 1714 by the ducheſs of Beaufort; but was not common in the Engliſh gardens till 1725. It was raiſed firſt in Holland about 1670. Mr. Miller ſays that he received ſeeds of the white ſort from Holland in 1722. The flowering heads are beautiful, and, if gathered before they are too far advanced, will retain their beauty ſeveral years. The ſeed ripens late in autumn, and the plant decays ſoon after.

There are two varieties, one with fine bright purple heads, the other has white or ſilvery heads, and theſe never alter from ſeeds, ſo that they are permanent varieties, though in other reſpects they do not differ. There are alſo two varieties of this which grow naturally in the Weſt Indies, one with purple, and the other with white heads, which are much ſmaller and rounder than thoſe before-mentioned. The plants grow much larger, and ſpread more into branches, and they are later before they flower, ſo that in cold ſeaſons the ſeeds rarely ripen in England; theſe are called *bachelors buttons* by the inhabitants of America. Loureiro alſo mentions a variety in Cochinchina, with white ovate heads, in which all the florets are fertile; whereas in the purple variety moſt of them are barren.

2. Gomphrena perennis, or perennial globe amaranth: leaves lanceolate; heads two-leaved; florets ſeparated by a proper perianth. Stems upright, hairy, ſlender; heads of flowers terminating, ſmall, ſpreading ſo that the calyxes appear diſtinct; they are of a pale ſtraw-colour, and appear in July. It was cultivated in the Eltham garden before 1732, and was there raiſed from ſeeds brought from Buenos Ayres.

3. Gomphrena hiſpida, or hairy globe-amaranth: ſtem upright; heads two-leaved; leaves crenate. Height a cubit and half; heads of flowers rounded-oblong, at firſt white, but becoming blue. Native of Malabar.

4. Gomphrena Braſilienſis, or Braſilian globe-amaranth: leaves ovate-oblong; ſtem upright; heads pedunculed, globular, leafleſs. This is ſomewhat higher than the firſt ſort; the heads are white, ſmaller, and compoſed of ſmaller calyxes, without any leaves at the baſe. Native of Braſil.

5. Gomphrena ſerrata, or ſerrated globe-amaranth: ſtem upright, brachiate; heads ſolitary, terminating, ſeſſile; calyxes ferrate. Stems more ſlender and tall than thoſe of the firſt, and growing irregularly; leaves ſmaller, but of the ſame ſhape; flowers in ſpikes at the ends of the branches, broken or divided into three or four parts, ſmall, and of a pale purple colour. The ſeeds were ſent by Dr. Houſtoun from Campeachy; and it was cultivated by Mr. Miller before 1733.

6. Gomphrena interrupta, or interrupted globe-amaranth: ſtem almoſt upright; ſpike interrupted. Root annual; ſtem ſhrubby at the bottom, from one to two feet high. Native of dry ſandy fields in the ſouthern parts of Jamaica; and other parts of the Weſt Indies. Introduced into Kew garden in 1784 by Monſ. Thouin. See CELOSIA *procumbens*.

7. Gomphrena flava, or yellow globe-amaranth: peduncles oppoſite, bifid, three-headed; middle head ſeſſile. Native of Vera Cruz, where it was found by Houſtoun.

8. Gomphrena arboreſcens, or arboreſcent gomphrena: arboreſcent, hairy, ſomewhat twining. Found in New Granada, by Mutis.

9. Gomphrena anguſtifolia, or rough-leaved globe-amaranth: leaves linear-lanceolate, ſmooth; heads terminating, oblong, ſubtriphyllous. Native of the Eaſt Indies, where it was found by Koenig.

Propagation and Culture. The firſt ſort is a very ornamental plant in gardens, and is now very commonly cultivated in the Engliſh gardens. In Portugal, and other warm countries, it is cultivated to adorn their churches in the winter; for if the flowers are gathered when they are fully grown, and dried in the ſhade, they will retain their beauty a long time, eſpecially if they are not expoſed to the air; this plant is annual, and therefore is only propagated by ſeeds, which ſhould be ſown on a good hot-bed the beginning of March; but if the ſeeds are not taken out of their chaffy covering, it will be proper to ſoak them in water for twelve hours before they are ſown, which will greatly facilitate their growing. When the plants are come up half an inch high, they ſhould be tranſplanted on a freſh hot-bed, at about four inches diſtance, obſerving to ſhade them till they have taken root; then they ſhould have freſh air admitted to them every day, in proportion to the warmth of the ſeaſon; they will alſo require to be frequently refreſhed with water. In about a month's time, if the hot-bed is of a proper warmth, the plants will have grown ſo large as nearly to meet, therefore they will require more room, otherwiſe they will draw up weak; then a freſh hot-bed ſhould be prepared, into which there ſhould be a ſufficient number of three-farthing pots plunged, filled with light rich earth, and when the bed

bed is in a proper temperature of warmth, the plants ſhould be carefully taken up with balls of earth to their roots, and each planted into a ſeparate pot, obſerving to ſhade them till they have taken new root; afterward they muſt be treated in the ſame manner as other tender exotic plants. When the plants have filled theſe pots with their roots, they ſhould be ſhaken out of the pots, and their roots on the outſide of the ball of earth muſt be carefully pared off; then they ſhould be put into pots a ſize larger, and, when there is conveniency of a deep frame to plunge the pots into another gentle hot-bed, it will bring the plants early to flower, and cauſe them to grow much larger than thoſe which are placed abroad. In July the plants ſhould be inured gradually to bear the open air, into which they may be removed about the middle of that month, and intermixed with other annual plants to adorn the pleaſure-garden; but it will be proper to keep a plant or two of each ſort in ſhelter for ſeeds, becauſe when the autumn proves cold or wet, thoſe plants which are expoſed abroad, ſeldom produce good ſeeds. The fifth ſort will live two or three years in a ſtove; and the ſeeds will ſometimes ripen in England. See ILLECEBRUM.

GOM'RON. See GAMBRON.

GOMS, a town of Swiſſerland, which gives name to one of the departments of the Valais: thirty-three miles eaſt of Sion.

GONAG'RA, *ſ.* [from the Greek γονυ, the knee, and αγρα, a capture.] The gout in the knees.

GONAI'VES (Les), a ſeaport town of the iſland of St. Domingo, with an excellent harbour. Here is a medicinal ſpring; and, in the year 1772, baths were erected, with lodgings to accommodate company, and an hoſpital for ſoldiers and ſailors. Lat. 19. 36. N. lon. 54. 40. W. Ferro.

GONA'PI, or GOUNONG-API, one of the Bandas or Spice Iſlands belonging to the Dutch, ſituated in the Eaſtern Indian Sea, in the middle of which is a volcano. This iſland, from having been overwhelmed with burning lava, is become wholly uninhabited. In 1621, its volcano emitted fire, ſmoke, and cinders; and had, perhaps, long before left neither woods, fruits, nor water. The eruptions continued at times ſo violent as to carry deſolation to part of the neighbouring iſland of Banda, overwhelming the woods and loftieſt trees, and to fling ſtones of three or four tons weight from one iſland to the other. In the Phil. Tranſ. Abridg. vol. ii. p. 393, is an account of a moſt horrible eruption of this mountain in November 1694, attended with noiſes like the diſcharge of artillery. It caſt up ſuch a quantity of ſtones, as entirely to fill a noted fiſhing place in the neighbouring ſea of the depth of forty fathoms, ſo as to leave it entirely dry. The ſame volume fully accounts for the appearance of theſe iſlands, and the Banda, ſo graphically deſcribed by the abbé Raynal, who thus ſpeaks of them: "The Banda, or Spice Iſlands, ſeem to have been thrown up by the ſea, and may with reaſon be ſuppoſed to be the effect of ſome ſubterraneous fire. Lofty mountains, the ſummits of which are loſt in the clouds, enormous rocks heaped one upon another, horrid and deep caverns, torrents which precipitate themſelves with extreme violence, volcanoes perpetually announcing impending deſtruction; are the phenomena that give riſe to this idea, or aſſiſt in confirming the riſe of theſe barren rocks, fertile only in ſpiceries."

In 1693 and 1694, ſeveral other iſlands, as if by mutual conſent, raged with volcanic fury. The mountains of Celebes, Sorea, Ternate, Banda, and Neyra, at one and the ſame time, caſt up fire, lava, aſhes, cinders, and boiling water. There was no approaching the water by reaſon of the exceſſive heat. In Sorea the ground ſunk in and diſcovered a great lake:

A fiery deluge, fed
With ever-burning ſulphur unconſum'd:

Which, ſpreading farther and farther, threatening the whole iſland, terrified the inhabitants ſo much, that they unanimouſly tranſported themſelves to Banda, leaving their moveables behind for want of veſſels. All theſe iſlands are ſubject to terrible earthquakes, which affect the ſea ſo greatly as particularly to endanger the ſhips lying at anchor in the contiguous harbour. See the article BANDA ISLANDS, vol. ii. p. 666.

GONAQUA'IS, a tribe or nation of Africa, bordering on the Cape of Good Hope. See HOTTENTOTS.

GONAR'CHA, *ſ.* in antiquity, a dial delineated in ſeveral ſurfaces.

GONATOCAR'PUS, *ſ.* [from γονυ, γονατος, Gr. the knee, and καρπος, fruit.] In botany, a genus of the claſs tetrandria, order monogynia. The generic characters are—Calyx: none. Corolla: four-cleft, permanent. Stamina: filaments four, inſerted into the corolla. Piſtillum: germ inferior; ſtyle ſingle. Pericarpium: drupe ſubglobular, eight-cornered, crowned with the permanent corolla, one-celled. Seed ſingle.—*Eſſential Character.* Corolla, four-cleft; drupe, eight-cornered, one-ſeeded.

Gonatocarpus micranthus, a ſingle ſpecies. Root fibrous, annual; ſtem one or more, four-cornered, decumbent at the baſe, branched at the top, ſcarcely a ſpan in height; leaves oppoſite, on very ſhort petioles, ovate, acute, ſerrate, ſmooth, ſpreading, a line in length; flowers on the branches in ſpikes, remote, moſtly on one ſide, drooping, minute. Found by Thunberg abundantly about Nagaſaki, flowering in Auguſt.

GONA'VE (La), an iſland in the Weſt Indies, thirty miles long, and five wide, near the weſt coaſt of St. Domingo. Lat. 18. 51. N. lon. 73. 4. W. Greenwich.

GON'CELIN, a town of France, in the department of the Iſere, and chief place of a canton, in the diſtrict of Grenoble: four leagues and a half north-north-weſt of Grenoble.

GON'DAR, a town of Africa, and capital of Abyſſinia, ſituated on a hill of conſiderable height, ſurrounded on every ſide by a deep valley. It conſiſts of ten thouſand families in time of peace; the houſes are chiefly of clay, the roofs thatched in the form of cones, which is always the conſtruction within the tropical rains. On the weſt end of the town is the king's houſe, formerly a ſtructure of conſiderable conſequence; it was a ſquare building, flanked with ſquare towers; it was formerly four ſtories high, and, from the top of it, had a magnificent view of all the country ſouthward to the lake Tzama. Great part of this houſe is now in ruins, having been burnt at different times; but there is ſtill ample lodging in the two loweſt floors of it; the audience chamber being above one hundred and twenty feet long. The palace, and all its contiguous buildings, are ſurrounded by a ſubſtantial ſtone wall, thirty feet high, with battlements upon the outer wall, and a parapet roof between the outer and inner, by which you can go along the whole and look into the ſtreet. There appears to have never been any embraſures for cannon, and the four ſides of this wall are above an Engliſh mile and a half in length.

GON'DEBAUD, or GUNDOBALD, third king of the Burgundians, deſerves to be recorded as a legiſlator. He was one of the ſons either of Gondicaire or of his ſon Gundiac, and by the maſſacre of his brother Chilperic, after a civil war between them, obtained the crown of Burgundy in 491. In the firſt year of his reign, under pretence of aſſiſting Odoacer againſt Theodoric king of the Oſtrogoths, he entered Italy, and carrying fire and ſword through Æmilia and Liguria, as narrated in the article FRANCE; which ſee. He reigned with great clemency over the Burgundian nation, which

he rendered flouriſhing by the arts of civiliſation, and by a regular ſyſtem of laws. Theſe were in general founded upon the principles of equity, and diſplay conſiderable ſagacity in preventing all cauſes of diſpute; yet they enjoin the barbariſm of judicial combats, which the legiſlator juſtified as an inference from the admitted doctrine of the interference of a particular providence in human affairs. The Burgundian code, called *La Loi Gombette*, has been publiſhed in ſeveral collections of ancient laws. Gondebaud died in 516; and two of his letters, upon theological topics, to Avitus biſhop of Vienne, are extant.

GON'DELAY, *ſ.* Uſed by Spenſer for *Gondola*, which ſee.

GON'DET, a town of France, in the department of the Upper Loire, and chief place of a canton, in the diſtrict of Le Puy-en-Velay: ten miles ſouth of Le Puy.

GON'DI (John Francis Paul), cardinal de Retz, ſon of Philip Emanuel de Gondi, count de Joigny, born in 1613. From a doctor of the Sorbonne, he became coadjutor to his uncle John Francis de Gondi, whom he ſucceeded in 1654 as archbiſhop of Paris; and was finally made a cardinal. At the age of 23, he was at the head of a conſpiracy againſt the life of cardinal Richelieu; he precipitated the parliament into cabals, and the people into ſedition; and is ſaid to have been the firſt biſhop who carried on a civil war without the maſk of religion. However, his intrigues and ſchemes turned out ſo ill, that he was obliged to quit France; and he lived the life of an exile for ſix years, till the death of his enemy cardinal Mazarin, when he returned on certain ſtipulated conditions. After aſſiſting in the conclave at Rome, he retired from the world, and ended his life like a philoſopher in 1679; which made Voltaire ſay, that in his youth he lived like Catiline, and in his old age like Atticus. He wrote his Memoirs in his retirement; the beſt edition of which is that of Amſterdam, 4 vols. 12mo. 1719.

GON'DOLA, *ſ.* [Italian; *gondole*, Fr. Du Cange derives it from κουνέλλας, a bark; Lancelot, from γονδυ, a term in Athenæus for a ſort of vaſe.] A boat, very long and narrow, chiefly uſed at Venice to row on the canals. The middle-ſized gondolas are about thirty feet long and four broad: they always terminate at each end in a very ſharp point, which is raiſed perpendicularly to the full height of a man. The addreſs of the Venetians, in paſſing along their narrow canals, is very remarkable: there are uſually two men to each gondola, and they row by puſhing before them. *Gondola* is alſo the name of a paſſage-boat of ſix or eight oars, uſed in other parts of the coaſt of Italy.

GONDOLI'ER, *ſ.* A boatman; one that rows a gondola:

Your fair daughter,
Tranſported with no worſe nor better guard,
But with a knave of hire, a *gondolier*,
To the groſs claſps of a laſcivious moor. *Shakeſpeare.*

GON'DON, a town of France, in the department of the Upper Pyrenees: ſeven miles ſouth-eaſt of Tarbes.

GON'DORF, a town of Germany, in the circle of the Lower Rhine, and archbiſhopric of Treves: four miles eaſt-north-eaſt of Munſter Mainfeld.

GON'DRAIN, a town of France, in the department of the Gers, and chief place of a canton, in the diſtrict of Condom: two leagues and a half ſouth-weſt of Condom, and ſix and three-quarters north-weſt of Auch. Lat. 44. 53. N. lon. 17. 53. E. Ferro.

GON'DRECOURT, a town of France, and ſeat of tribunal, in the department of the Meuſe: ſeven leagues ſouth-ſouth-eaſt of Bar-le-Duc, and three ſouth-weſt of Vaucouleurs.

GON'DREVILLE, a town of France, in the department of the Meure, on the Moſelle: one league north-eaſt of Toul.

GONDWA'NAH, or KONDUANNAH, mountains of Hindooſtan, ſituated in the ſouth-eaſt part of the country of Malwa, extending from Huſſingabad to Mundellah, about one hundred and ſeventy miles in length. Lat. 22. 40. to 23. N. lon. 78. to 81. E. Greenwich.

To GONE, *v. n.* [the old word for] To go:

Down from the hill deſcended moſt and leaſt,
And to the Chriſtian duke by heaps they *gone*. *Fairfax.*

GONE, *part. preter.* [from *go*. See *To* Go.] Advanced; forward in progreſs.—I have known ſheep cured of the rot, when they have not been far *gone* with it, only by being put into broomlands. *Mortimer.*—Ruined; undone.—He muſt know 'tis none of your daughter, nor my ſiſter; we are *gone* elſe. *Shakeſpeare.*—The particular accidents *gone* by. *Shakeſpeare.*—Loſt; departed. When her maſters ſaw that the hope of their gains was *gone*, they caught Paul and Silas. *Acts.* xvi. 19.—Speech is confined to the living, and imparted to only thoſe that are in preſence, and is tranſient and *gone*. *Holder.*—Dead; departed from life.—I mourn Adonis dead and *gone*. *Oldham.*

GONET' (John-Baptiſt), a French eccleſiaſtic, born at Beziers in 1616. In 1640 he was admitted to the degree of doctor by the univerſity of Bourdeaux. From that time he filled the chair of profeſſor of theology in that univerſity until 1671, when he was appointed provincial of his order. He died at his native place in 1681, aged ſixty-five. He was the author of a ſyſtem of divinity, entitled *Clypæus Theologiæ Thomiſticæ, contra novos ejus Impugnatores*, firſt publiſhed at Bourdeaux in 1666, in 18 vols. 12mo. and afterwards at Paris in 1669, in 5 vols. folio. M. Gonet was alſo the author of a *Manuale Thomiſtarum, ſeu brevis Theologiæ Curſus*, which has paſſed through different editions, the beſt of which was publiſhed at Lyons in 1681, in folio; and *Diſſertatio Theologica de Probabilitate*, 1664, 12mo.

GON'FALON, or GON'FANON, *ſ.* [*gonfanon*, Fr. Iſlandic, from *gunn*, a battle, and *fani*, a flag.] An enſign; a ſtandard:

Ten thouſand thouſand enſigns high advanc'd,
Standards and *gonfalons*, 'twixt van and rear,
Stream in the air. *Milton.*

GONFALONI'ER, *ſ.* The pope's ſtandard-bearer.

GON'FEDE, a town of Africa, near the river Grande.

GON'GA, a town of European Turkey, in Romania, ſituated near the Sea of Marmora: thirty-ſix miles north-eaſt of Gallipoli.

GON'GA, or BAIN GONGA, a river of Hindooſtan, which riſes near the circar of Gurry-Mundella, and joins the Godavery, thirty-five miles north of Rajamundry.

GON'GORA (Louis), a celebrated Spaniſh poet, born of a noble family at Cordova in 1562. He ſtudied at Salamanca, and, being brought up to the church, was made chaplain to the king, and a prebendary of the cathedral of Cordova, where he died in 1627. Gongora obtained high reputation by his poems, of which a volume in quarto was publiſhed under the title of *Obras de Dom. Louis de Gongora-y-Argore*. They conſiſt of a variety of compoſitions, chiefly of the ſhorter kind, eſpecially lyrical, in which ſtyle he ſo much excelled, as to be termed by his countrymen "the prince of lyric poets." He is applauded for having enriched the language by the introduction of a number of Latin words, happily employed.

GO'NI, a town of China, in the province of Se-tchuen; fifty-ſeven miles weſt of Oumong.

GO'NIA, a town of Aſiatic Turkey, in the province of Natolia: ſixteen miles weſt of Aphiom Karahiſſar.

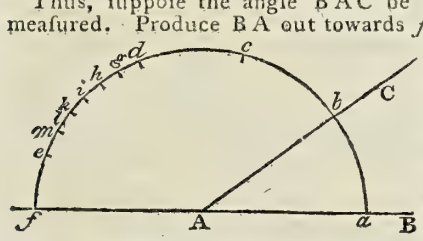
GO'NINS, a town of Poland, in the palatinate of Bielſk; forty-eight miles north-weſt of Bielſk.

GONIOMET'RICAL *Lines*, are lines uſed for meaſuring or determining the quantity of angles: ſuch as ſines, tangents, ſecants, verſed ſines, &c.

GONIO'METRY,

GONIO'METRY, a method of meaſuring angles, ſo named by M. de Lagny, who publiſhed ſeveral papers, on this method, in the Memoirs of the Royal Academy for 1724, 1725, 1729. The method conſiſts in meaſuring the angles with a pair of compaſſes, and that without any ſcale whatever, except an undivided ſemicircle. Thus, having any angle drawn upon paper, to be meaſured; produce one of the ſides of the angle backwards behind the angular point; then with a pair of fine compaſſes deſcribe a pretty large ſemicircle from the angular point as a centre, cutting the ſides of the propoſed angle, which will intercept a part of the ſemicircle. Take then this intercepted part very exactly between the points of the compaſſes, and turn them ſucceſſively over upon the arc of the ſemicircle, to find how often it is contained in it, after which there is commonly ſome remainder: then take this remainder in the compaſſes, and in like manner find how often it is contained in the laſt of the integral parts of the firſt arc, with again ſome remainder: find in like manner how often this laſt remainder is contained in the former; and ſo on continually, till the remainder become too ſmall to be taken and applied as a meaſure. By this means M. de Lagny obtained a ſeries of quotients, or fractional parts, one of another, which being properly reduced into one fraction, give the ratio of the firſt arc to the ſemicircle, or of the propoſed angle to two right angles, or 180 degrees, and conſequently that angle itſelf in degrees, and minutes.

Thus, ſuppoſe the angle BAC be propoſed to be meaſured. Produce BA out towards *f*; and from the centre A deſcribe the ſemicircle *abcf*, in which *ab* is the meaſure of the propoſed angle. Take *ab* in the compaſſes, and apply it 4 times on the ſemicircle, as at *b*, *c*, *d*, and *e*; then take the remainder *fe*, and apply it back upon *ed*, which is but once, viz. at *g*; again take the remainder *gd*, and apply it 5 times on *ge*, as at *h*, *i*, *k*, *l*, and *m*; laſtly, take the remainder *me*, and it is contained juſt 2 times in *ml*. Hence the ſeries of quotients is 4, 1, 5, 2; conſequently the 4th or laſt arc *em* is $\frac{1}{2}$ the third *ml* or *gd*, and therefore the 3d arc *gd* is $\frac{1}{5\frac{1}{2}}$ or $\frac{2}{11}$ of the 2d arc *ef*; and therefore again this 2d arc *ef* is $\frac{1}{1-\frac{2}{11}}$ or $\frac{11}{13}$ of the 1ſt arc *ab*; and conſequently this 1ſt arc *ab* is $\frac{1}{4\frac{11}{13}}$ or $\frac{13}{63}$ of the whole ſemicircle *af*. But $\frac{13}{63}$ of 180° are $37\frac{1}{2}$ degrees, or 37° 8′ 34″ $\frac{2}{7}$, which therefore is the meaſure of the angle ſought. See GEOMETRY of the COMPASS, p. 443 of this volume.



GONI'UM, *ſ.* [γονη, Gr. ſo named from its reſemblance to ſemen or ſeed.] In helmintology, a genus of worms belonging to the order of infuſoria; the characters of which are: body very ſimple, flat, angular and inviſible to the naked eye. There are five ſpecies, viz.

1. Gonium pectorale: quadrangular, pellucid, with ſixteen ſphærical molecules, nearly equal in ſize, of a greeniſh colour, and ſet in a quadrangular membrane like jewels, reflecting light on both ſides. Its animality is evinced by its ſpontaneous motion, advancing alternately towards the right and left; theſe little bodies ſeem oval when in motion, and round when at reſt. It is found in pure water.—This ſpecies is correctly repreſented in the engraving at fig. 5, as it appears under a powerful magnifier.

2. Gonium pulvinatum: body opake, with four cylindrical protuberances. This appears like a little quadrangular membrane, plain on both ſides; but with a large magnifier it looks like a bolſter, formed of three or four cylindric pillows, flattened or ſunk here and there. Thus it appeared to Müller on his firſt examination; ſome days after all the ſides were plain, without any convexity, and divided into little ſquare ſpaces by lines croſſing each other. It is found upon dunghills.

3. Gonium polyſphæricum: body orbicular, pellucid, with innumerable ſphærical molecules connected in a membrane. It is found in ſtagnant water, and is of a greeniſh-yellow colour.

4. Gonium rectangulum: body rectangular, the hind-part a little arched. It forms a right angle at the baſe; and the larger veſicle is tranſparent, the reſt green.

5. Gonium truncatum: body compoſed of obtuſe angles, the hind-part arched. This is larger than the preceding; but its motion appears more languid; the fore-part conſiſts of a ſtraight line, with which the ſides form obtuſe angles, the ends of the ſides being united by a curved line; the internal molecules are of a dark green, with two little bright veſicles in the middle. It is found in pure water.

GON'KEER, a town of Chineſe Tartary. Lat. 44. 50. N. lon. 135. 37. E. Ferro.

GONKO'FEN, or GANKOFEN, a town of Germany, in the circle of Lower Bavaria: ten miles ſouth of Dinglefingen, and fourteen eaſt of Landſhut.

GON'NESSE, a town of France, and principal place of a diſtrict in the department of the Seine and Oiſe: three leagues north of Paris.

GONNEVIL'LE, a town of France, in the department of the Lower Seine, and chief place of a canton, in the diſtrict of Montivilliers: two leagues north of Montivilliers.

GON'NI, or GONOCOND'YLOS, in ancient geography, a town of Theſſaly at the entrance into Tempe. *Livy.*

GON'NORD, or GONNORT, a town of France, in the department of the Mayne and Loire, and chief place of a canton, in the diſtrict of Vihiers: one league and a half north-north-weſt of Vihiers, and five ſouth of Angers.

GO'NON-BESAR, a mountain on the eaſtern ſide of the iſland of Java; celebrated for the quantity of pepper gathered from the trees which grow on it.

GONOES'SA, a town of Troas. *Seneca.*

GONORRHŒ'A, *ſ.* [γονυῤῥοια, from γονη, the ſeed, and ῥεω to flow.] An involuntary diſcharge of the ſeminal fluid. This word is improperly applied to the diſcharge of a whitiſh fluid from the urethra in conſequence of a venereal taint.

GONS, a town of Hungary: twenty-two miles ſouth-ſouth-weſt of Zatmar.

GON'TANT, or GONTAUT, a town of France, in the department of the Lot and Garonne, and chief place of a canton, in the diſtrict of Tonneins: one league and a quarter north of Tonneins, and two eaſt-ſouth-eaſt of Marmande.

GONUS'SA, in ancient geography, a town of Sicyon. *Pauſanias.*

GONYAL'GIA, *ſ.* [from γονυ, the knee, and αλγος, Gr. pain.] The gout in the knee.

GONZA'GA, a town of Italy, in the duchy of Mantua: ſixteen miles ſouth of Mantua.

GONZA'GA (Lucretia), an illuſtrious lady of the 16th century, celebrated for her wit, learning, and delicate ſtyle of writing. Hortenſio Lando wrote a beautiful panegyric upon her, and dedicated to her his dialogue of moderating the paſſions. Her beautiful letters have been collected and publiſhed with the greateſt care. Her huſband John Paul Manfrone, was engaged in a conſpiracy againſt the duke of Ferrara; but though condemned by the judges, he was not put to death. She did all in her power to obtain his enlargement; but he died in priſon. She never would liſten afterwards to any propoſals of marriage, though ſeveral were made to her. All that came from her pen was much eſteemed.

GONZA'GA

GONZA'GA (Scipio), cardinal, born in 1542. He was carefully inſtructed in letters, and ſent to ſtudy at Padua, where he diſtinguiſhed himſelf in claſſical literature. In that city he inſtituted the academy Degli Eterei, of which he was the head and patron; and ſome of his verſes appear in their firſt publication in 1567. He afterwards turned his ſtudies to theology and philoſophy, in which he acquired a great name. The learned Muretus in 1571 dedicated to him the firſt volume of his Orations with a high panegyric. Guarini ſubmitted his *Paſtor Fido* to his criticiſm, and he held an intimate correſpondence with Taſſo. On account of ſome difference with the duke of Mantua, he was arreſted at Rome by order of pope Gregory XIII. but he was liberated by Sixtus V. who created him cardinal in 1587. He died at Sanmartino in 1593. He left in manuſcript, commentaries of his own life, written in elegant Latin.

GONZA'GA (Veſpaſian), duke of Sabbioneta, born in 1531, obtained great reputation as a commander in the ſervice of Charles V. and Philip II. He is, however, chiefly worthy of commemoration as a ſplendid promoter of the arts and ſciences. He built from the ground the little city of Sabbioneta, which, for the breadth and regularity of its ſtreets, the architecture of the private houſes, the beauty of the churches, the elegance of the public places, and the ſtatues and pictures which adorn the whole, excited univerſal admiration. He alſo founded in it a public ſchool for the Latin and Greek languages, to which he invited as a profeſſor Mario Nizzoli, one of the moſt learned men of the age. His palace was always full of men of learning, of whom he was the liberal patron. He employed the celebrated Scammozi in the erection of a very fine theatre for the performance of dramatic pieces; and he is recorded as being himſelf an elegant Italian poet. He was likewiſe a great collector of books. Taſſo mentions him with high commendation. He died in 1591.

GONZA'LEZ (Thyrſus), a Spaniſh Jeſuit, whoſe merits raiſed him to the poſt of general of his order, died at Rome in 1705. Among other pieces, he was the author of an acute treatiſe On the Doctrine of Probability, 1694, folio; in which he ably refuted the opinions on that ſubject maintained by the greater part of the caſuiſts belonging to his order; but he did not attempt dogmatically to impoſe his ſenſe of the doctrine on the brotherhood, declaring that he wrote merely in the character of an individual, and not as general.—He had a contemporary, named EMMANUEL GONZALEZ-TELLEZ, who was a profeſſor of law in the univerſity of Salamanca, and publiſhed A Commentary on the Decretals, 1693, in 4 vols. folio.

GONZIN'GEN, a town of Germany, in the circle of the Upper Rhine, and county of Salm: four miles north-eaſt of Creutznach.

GOOCH'LAND, a county of the American States, in Virginia, ſurrounded by Louiſa, Fluvanna, Henrico, Hanover, and Powhatan, counties. It is about forty miles long and fourteen broad, and contains, by the cenſus, nine thouſand and fifty-three inhabitants.

GOOD, *adj.* [comp. *better*, ſuperl. *beſt*; ȝoð, Sax. *goed*, Dut.] Having, either generally or for any particular end, ſuch phyſical qualities as are expected or deſired. Not bad; not ill.—God ſaw every thing that he had made, and behold it was very *good*. *Gen.* i. 31.

Ah! ne'er ſo dire a thirſt of glory boaſt,
Nor in the critic let the man be loſt!
Good nature and *good* ſenſe muſt ever join;
To err is human, to forgive, divine. *Pope.*

Proper; fit; convenient; right; not wrong.—Amongſt a man's inferiors one ſhall be ſure of reverence, and therefore it is *good* a little to be familiar. *Bacon.*—It was a *good* time to comply with the importunity of the gentlemen of Suſſex. *Clarendon.*—Conducive to happineſs.—It is not *good* that the man ſhould be alone. *Gen.* ii. 18.—We may as well pretend to obtain the *good* which we want without God's aſſiſtance, as to know what is *good* for us without his direction. *Smalridge.*—Uncorrupted; undamaged.—He bartered away plumbs, that would have rotted in a week, for nuts, that would laſt *good* for a whole year. *Locke.*—Wholeſome; ſalubrious:

A man firſt builds a country ſeat,
Then finds the walls not *good* to eat. *Prior.*

Medicinal; ſalutary.—The water of Nilus is ſweeter than other waters in taſte, and it is excellent *good* for the ſtone and hypochondriac melancholy. *Bacon.*—Pleaſant to the taſte.—Eat thou honey, becauſe it is *good*; and the honeycomb, which is ſweet. *Prov.* xxiv. 13.—Complete; full.—The proteſtant ſubjects of the abbey make up a *good* third of its people. *Addiſon on Italy.*—Uſeful; valuable.—All quality, that is *good* for any thing, is originally founded upon merit. *Collier.*—Sound; not falſe; not fallacious.—He is reſolved now to ſhew how ſlight the propoſitions were which Luther let go for *good*. *Atterbury.*—Legal; valid; rightly claimed or held.—According to military cuſtom, the place was *good*. *Wotton.*—Confirmed; atteſted; valid:

Ha! am I ſure ſhe's wrong'd? Perhaps 'tis malice!
Slave, make it clear, make *good* your accuſation. *Smith.*

With *as* preceding. It has a kind of negative or inverted ſenſe; *as good as*; no better than.—Therefore ſprang there even of one, and him *as good as* dead, ſo many as the ſtars of the ſky in multitude. *Heb.* xi.—With *as* preceding. No worſe.—The maſter will be *as good as* his word, for his own buſineſs. *L'Eſtrange.*—Well qualified; not deficient.—If they had held their royalties by that title, either there muſt have been but one ſovereign over them all, or elſe every father of a family had been *as good* a prince, and had *as good* a claim to royalty as theſe. *Locke.*—Skilful; ready; dexterous.—Thoſe are generally *good* at flattering, who are *good* for nothing elſe. *South.*

I make my way where-e'er I ſee my foe;
But you, my lord, are *good* at a retreat. *Dryden.*

Happy; proſperous.—Behold how *good* and how pleaſant it is for brethren to dwell together in unity. *Pſ.* cxxxiii. 1.

Many *good* morrows to my noble lord!
—*Good* morrow, Cateſby; you are early ſtirring. *Shakeſp.*

Honourable:

Silence, the knave's repute, the whore's *good* name,
The only honour of the wiſhing dame. *Pope.*

Cheerful; gay. Joined with any words expreſſing temper of mind.—They may be of *good* comfort, and ever go cheerfully about their own affairs. 2 *Mac.* xi. 26.—Conſiderable; not ſmall, though not very great.—A *good* while ago God made choice that the Gentiles by my mouth ſhould hear the word. *Acts*, xv. 7.—The plant doth prey upon the graſs a *good* way about, by drawing the juice of the earth from it. *Bacon.*—Real; ſerious; not feigned.—Love not in *good* earneſt, nor no farther in ſport neither, than with ſafety of a pure bluſh thou may'ſt in honour come off again. *Shakeſpeare.*—Rich; of credit; able to fulfil engagements.—Antonio is a *good* man: my meaning, in ſaying that he is a *good* man, is to have you underſtand me that he is ſufficient. *Shakeſpeare.*—Having moral qualities, ſuch as are wiſhed; virtuous; pious; religious; applied both to perſons and actions. Not bad; not evil.—For a *good* man ſome would even dare to die. *Rom.* v. 7.—The woman hath wrought a *good* work upon me. *Matt.*

All man's works on me,
Good or not *good*, ingraft; my merit, theſe
Shall perfect, and for theſe my death ſhall pay. *Milton.*

No farther intercourſe with Heav'n had he,
But left *good* works to men of low degree. *Harte.*

Kind; ſoft; benevolent. Favourable; loving.—But the men were very *good* unto us, and we were not hurt. 1 *Sam.* xxv. 15.—Truly God is *good* to Iſrael, even to ſuch as are of a clean heart. *Pſ.* lxxiii. 1.—You have *good* remembrance of us always, deſiring greatly to ſee us, as we alſo to ſee you. 1 *Theſſ.* iii. 6.—Companionable; ſociable; merry. Often uſed ironically.—Though he did not draw the *good* fellows to him by drinking, yet he eat well. *Clarendon.*—It is ſometimes uſed as an epithet of ſlight contempt, implying a kind of negative virtue or bare freedom from ill.—She had left the *good* man at home, and brought away her gallant. *Addiſon.*—Hearty; earneſt; not dubious.—The *good* will of the nation to the preſent war has been ſince but too much experienced by the ſucceſſes that have attended it. *Temple.*

Good will, ſhe ſaid, my want of ſtrength ſupplies;
And diligence ſhall give what age denies. *Dryden.*

In GOOD *time.* Not too faſt.—In *good time*, replies another: you have heard them diſpute againſt a vacuum in the ſchools. *Collier.*

In GOOD *ſooth.* Really; ſeriouſly:

What! muſt I hold a candle to my ſhame?
They in themſelves, *good ſooth*, are too too light. *Shakeſp.*

To make GOOD. To keep; to maintain; not to give up; not to abandon.—He forced them to retire in ſpite of their dragoons, which were placed there to *make good* their retreat. *Clarendon.*

He without fear a dangerous war purſues;
As honour made him firſt the danger chuſe,
So ſtill he *makes* it *good* on virtue's ſcore. *Dryden.*

To confirm; to eſtabliſh.—Theſe propoſitions I ſhall endeavour to *make good.* *Smalridge.*

I farther will maintain
Upon this bad life to *make* all this *good.* *Shakeſpeare.*

To perform:

While ſhe ſo far extends her grace,
She *makes* but *good* the promiſe of her face. *Waller.*

To ſupply.—Every diſtinct being has ſomewhat peculiar to itſelf, to *make good* in one circumſtance what it wants in another. *L'Eſtrange.*

GOOD, *ſ.* That which phyſically contributes to happineſs; benefit; advantage; the contrary to evil or miſery.—The leſſening or eſcaping of evil is to be reckoned under the notion of *good:* the leſſening or loſs of *good* is to be reckoned under the notion of evil. *Wilkins.*—*Good* is what is apt to cauſe or increaſe pleaſure, or diminiſh pain in us; or elſe to procure or preſerve us in the poſſeſſion of any other *good*, or abſence of any evil. *Locke.*—A thirſt after truth, and a deſire of *good*, are principles which ſtill act with a great and univerſal force. *Rogers.*

Thus may our life, exempt from public haunt,
Find tongues in trees, books in the running rill,
Sermons in ſtones, and *good* in every thing. *Shakeſpeare.*

Proſperity; advancement:

If he had employ'd
Thoſe excellent gifts of fortune and of nature
Unto the *good*, not ruin, of the ſtate. *Ben Jonſon.*

Earneſt; not jeſt.—The good woman never died after this, 'till ſhe came to die for *good* and all. *L'Eſtrange.*—Moral qualities, ſuch as are deſireable; virtue; righteouſneſs; piety; the contrary to wickedneſs.—Depart from evil, and do *good.* *Pſ.* xxxiv. 14.—Not only carnal good from evil does not juſtify; but no *good*, no not a purpoſed *good*, can make evil good. *Holyday.*

Nor holds this earth a more deſerving knight,
For virtue, valour, and for noble blood,
Truth, honour, all that is compriz'd in *good.* *Dryden.*

GOOD placed after *bad*, with *as*, ſeems a ſubſtantive; but the expreſſion is vicious; and *good* is rather an adjective elliptically uſed, or it may be conſidered as adverbial. See GOOD, *adv.*—The pilot muſt intend ſome port before he ſteers his courſe, or he had *as good* leave his veſſel to the direction of the winds, and the government of the waves. *South.*—Without good-nature and gratitude, men had *as good* live in a wilderneſs as in a ſociety. *L'Eſtrange.*—Proper behaviour:

In word and deede that ſhew'd great modeſtee,
And knew his *good* to all of each degree. *Spenſer.*

GOOD, *adv.* Well; not ill; not amiſs.

As GOOD. No worſe.—Says the cuckow to the hawk, Had you not *as good* have been eating worms now as pigeons? *L'Eſtrange.*

GOOD, *interj.* Well! right! It is ſometimes alſo uſed ironically.

"GOOD wine needs no buſh."

Morally, this proverb intimates, that virtue is valuable on its own innate account; and that internal goodneſs ſtands in need of no external ornaments to recommend it. It ſeems to be of Latin original: as, *Vino vendibili hedera ſuſpenſa nihil eſt opus*; and accordingly the French ſay, *A bon vin il ne faut point d'enſeigne.*—The origin of the proverb, in its literal ſenſe, is explained thus: In early times, before inns were eſtabliſhed on public roads, thoſe who had wine to ſell, by way of ſign hung out a buſh; and hence it came to be a ſaying, "that good wine would find cuſtomers without a buſh."

GOOD ABEAR'ING, *ſ.* [*bonus geſtus*, Lat.] In law, ſignifies an exact carriage or behaviour of a ſubject towards the king and the people; whereunto ſome perſons, upon their miſbehaviour, are bound; and he that is bound to this, is ſaid to be more ſtrictly bound than to the peace; becauſe where the peace is not broken, the ſurety *de bono geſtu* may be forfeited by the number of a man's company, or by their weapons. See ſtat. 34 *Edw.* III. c. 1. GOOD BEHAVIOUR, differs very little from *good abearing.* A juſtice of the peace may demand it *ex officio*, according to his diſcretion, when he ſees cauſe; or at the requeſt of any other under the king's protection: his warrant alſo is to be iſſued when he is commanded to do it by writ of ſupplicavit out of chancery, or the court of king's bench.

GOOD-BREED'ING, *ſ.* Elegance; decency; delicate behaviour.—If the critic has publiſhed nothing but rules and obſervations in criticiſm, I then conſider whether there be a propriety and elegance in his thoughts and words, clearneſs and delicacy in his remarks, wit and *good-breeding* in his raillery. *Addiſon.*

GOOD-CHE'AP, *adj.* Reaſonably cheap:

I wonder
That we ſhould wiſh more rivers in the city,
When they ſell water ſo *good-cheap.* *Webſter's White Devil.*

GOOD-CONDI'TIONED, *adj.* Without ill qualities or ſymptoms. Uſed both of things and perſons, but not elegantly.—No ſurgeon dilates an abſceſs of any kind by injections, when the pus is *good-conditioned.* *Sharp.*

GOOD'-FELLOW, *ſ.* A jolly companion.—Shall the king of gods turn the king of *good-fellows?* *B. Jonſon.*

GOOD-FEL'LOWSHIP, *ſ.* Jolly ſociety.—The firſt and moſt owned is that which they call *good-fellowſhip:* one man drinks to keep another company at it. *Whole Duty of Man.*

GOOD FOR'TUNE, or PORA, an iſland in the Eaſtern Sea, near the weſt coaſt of Sumatra, about twelve leagues long, and two broad. Lat. 1. 5. S. lon. 98. 30. E. Greenwich.

GOOD FRI'DAY, a ſolemn faſt of the Chriſtian church, in memory of the ſufferings and death of Jeſus

Chriſt. It is obſerved on the Friday in *holy* or *paſſion week*; and it is called, by way of eminence, *good*, becauſe of the bleſſed effects of our Saviour's ſufferings, which were a propitiatory or expiating ſacrifice for the ſins of the world. The commemoration of our Saviour's ſufferings has been kept from the very firſt ages of Chriſtianity, and was always obſerved as a day of the ſtricteſt faſting and humiliation. Among the Saxons it was called *Long-Friday*; on account of the long faſtings and prayers then uſed.

GOOD HEN'RY, *ſ.* in botany. See CHENOPODIUM.

GOOD HOPE, a valuable ſettlement or colony planted by the Dutch, on that peninſula or neck of land, which forms the moſt ſouthern part of Africa, and which, according to Mr. Barrow's ſtatiſtical account publiſhed in 1804, contains upwards of 120,000 ſquare miles; and yet the population of the whole colony is ſaid to amount to no more than 60,000 perſons! a moſt ſtriking inſtance of bad policy and internal miſmanagement; ſince, though the land is in many places barren and arid, yet food is in great abundance, and many parts of the interior highly capable of improvement for objects of commerce. The whole extent of this ſettlement has been uſually confounded under the general name of the *Cape of Good Hope*; but the Cape itſelf is only the lofty promontory or elevated point of land, uſually called the moſt ſoutherly extremity of Africa; though it is not truly ſo; for there is a point of land to the eaſtward of it, called the *Needle Cape*, which certainly projects ſtill more to the ſouthward. Cape Town is the capital of this ſettlement, ſecured on a bold ſhore about thirty miles within the Cape, at the entrance of a rich vale.

The moſt remarkable eminences which ſtrike the eye on a near approach to theſe ſhores, are, firſt, the Table mountain, ſo called becauſe it terminates at the top in a flat horizontal ſurface, like a table, from which the face of the rock deſcends almoſt perpendicularly. Second, the Lion mountain; which is divided into the lion's head, and lion's rump; for when a view is taken of the whole, it very much reſembles that animal with the head erect. Third, the Devil mountain, or devil's head, ſeparated by a ſmall chaſm, to the eaſtward of the Table mountain; and thus named, becauſe the violent and ſudden guſts of wind which occaſionally pervade this ſettlement, were ſuppoſed to iſſue from it, and which uniformly ſet in from the eaſtward. At a ſmall diſtance from the declivity or foot of the Table and Lion mountains Cape Town is ſituated, extending in a line from the one towards the other; its ſcite occupying the ſouth-eaſt angle of Table bay.

The promontory or cape was firſt diſcovered in 1487, by Bartholomew Diaz, a Portugueſe; who, though he did not venture to land, was an officer of diſtinguiſhed ſagacity and fortitude; and he called it, on account of the violence of the tempeſts which he encountered in thoſe ſeas, *Cabo Tormentoſa*, the Stormy Cape; but John II. king of Portugal, conceiving that Diaz had at laſt found out the long-deſired route to India, gave it a name of better omen, viz. "The Cape of Good Hope." In 1497, Emanuel king of Portugal, inheriting the enterpriſing genius of his predeceſſor, and perſiſting in the grand ſcheme of opening a paſſage to the Eaſt Indies by the Cape, equipped three veſſels for this important voyage, and gave the command of it to the celebrated Vaſco de Gama. Accordingly Gama ſet ſail from Liſbon on the 9th of July, and, after ſtruggling for four months with contrary winds, reached the Cape on the 20th of November. During an interval of calm weather he doubled the promontory, which had ſo long been the boundary of the European navigation; and, after touching at ſeveral parts along the eaſtern African coaſt, he terminated his voyage at Calicut on the coaſt of Malabar. De Gama, however, made no attempt to form a ſettlement at the Cape. Next to him was the Portugueſe admiral Rio d'Infante, who, in his voyage to India in 1498, went aſhore at ſome diſtance from the Cape; and, on his return, ſtrongly recommended to his government the eſtabliſhment of a colony on the ſouthern continent of Africa; and he fixed upon a ſpot for that purpoſe, to which was given his own name; but it is now called the "Great Fiſh River." Some other attempts, by different Portugueſe navigators, were made to colonize the Cape, but they all proved abortive.

After theſe events, the Engliſh and Dutch, equally adroit in the purſuit of Aſiatic luxuries, frequently viſited the bays of the Cape; and, in their voyages to and from the Eaſt Indies, called here as at a half-way-houſe, to take in water and proviſions, and to land and air their ſick and infirm, as the caſe might happen to require; and to whom the native Hottentots endeavoured to adminiſter every comfort and aſſiſtance that was in their power to give. The Engliſh, in their outward-bound voyages, had a cuſtom of burying their diſpatches for the directors under ſome large ſtone laid on a particular ſpot; and the Dutch uſed in like manner to bury a regiſter of the ſtate of their veſſels and cargoes outward-bound, which the next ſhips in coming home took up and carried to England and Holland for the information of the directors. In this manner the Engliſh, the Dutch, and the Portugueſe, continued, for more than a century, to refreſh at the Cape, without any deſign on the part of the two former of appropriating the ſoil, until the year 1620, when the commanders of two fleets of Engliſh ſhips, bound for Surat and Bantam, took a formal poſſeſſion of the ſoil, for, and in the name of, king James of Great-Britain, becauſe they diſcovered that the Dutch intended to eſtabliſh a colony there in the following year. It was not, however, until more than thirty years had expired after this event, that any ſettlement was really attempted to be made at the Cape. But at length, John Van Riebeck, who had previouſly made this voyage, and had conciliated the friendſhip of ſome of the natives, was ſent out with four ſhips, and a numerous colony, by the Dutch Eaſt-India company; and on their arrival in 1653, they laid the foundation of Cape Town, and took every prudent meaſure to fortify themſelves againſt any haſty or unforeſeen attack from the interior country. Like an able politician, Riebeck inſtantly employed every method to win upon the unſuſpecting natives, and to bind them ſecurely to his intereſt. But this proved a fatal epoch to the independence of the Hottentots. Beguiled by brandy and tobacco, the ſpecious deluder covered with honey the edge of the poiſoned bowl, and thus gained over to all his views theſe harmleſs ſavages, till then the unreſtrained maſters of all this part of Africa; but who did not perceive how many of their rights, and how much authority and happineſs, this guilty profanation would deprive them of. Indolent by nature, and little addicted to agriculture, they were not uneaſy that ſtrangers ſhould ſeize on a ſmall corner of their land, which was moſtly uninhabited. They thought that whether a little farther, or a little nearer, it was of no importance where their flocks, the only riches worthy of engaging their attention, ſought for their food, provided they could find it. The avaricious policy of the Dutch had a view of great hopes from ſo peaceful a beginning; and as it knew how to embrace the advantages offered it by fortune, ſo it did not fail completely to realize them. From that moment theſe unhappy ſavages bade adieu to that liberty which mankind inherit from nature; while the colony, inſenſibly increaſing, and acquiring more ſtrength, that formidable power, which now dictated laws to all this part of Africa, and removed to a great diſtance every thing that attempted to oppoſe its eager ambition, was ſeen to riſe on foundations that could no longer be ſhaken. The fame of its proſperity was ſoon ſpread, and drew thither every day a number of new ſettlers. It may be eaſily judged, that, according to the uſual practice, founded upon a logic which deſtroys the

the laws of property, ſo ſacred and ſo reſpectable, the will of the ſtronger party was a ſufficient title for it to extend its poſſeſſions. The Dutch ſeized indiſcriminately, at different times, and even without having occaſion for them, on all the lands which individuals, favoured by government, thought proper, or found convenient, to claim for themſelves. The Hottentots, thus confined, preſſed, and haraſſed on all ſides, divided themſelves, and purſued plans entirely oppoſite. Thoſe who were ſtill intereſted in the preſervation of their flocks, penetrated among the mountains towards the north and north-eaſt; whilſt others, and by far the greateſt number, for the ſake of brandy and tobacco, at firſt freely adminiſtered to them, became the ſlaves of their new maſters.

It does not appear that theſe ſelf-intereſted and wily people, at any period, have turned this acquiſition to any great account; at leaſt not to ſuch as its natural advantages and internal reſources might eaſily afford. Ever jealous of the commerce of other nations, the Dutch ſuffered no trade to be carried on with this ſettlement but what paſſed through the hands of their own ſervants; and theſe offered no encouragement to induſtry or exertion amongſt the farmers and planters in the interior; ſo that one general ſyſtem of ſelfiſhneſs, of indolence, and ſupineneſs, pervaded the whole colony. Such was its condition, when the menacing ſtrides of the French republican government, and their ſeizure of Holland, rendered it expedient that the Cape ſhould fall into the hands of the Engliſh. For this purpoſe an armament was diſpatched under admiral ſir G. Elphinſtone, and major-generals Clarke and Craig, who took poſſeſſion of the ſettlement by capitulation, in September 1795, after a faint reſiſtance, and very little loſs on either ſide. It continued under the Britiſh government till the peace of Amiens in 1802, when it was reſtored to the Batavian republic, ſubject to its being a free and open port for all the ſhips of the other contracting powers. But immediately after the war was re-commenced, in conſequence of the diſpute concerning the poſſeſſion of Malta, another armament was diſpatched to retake the Cape, under the command of admiral ſir Home Popham, and general ſir David Baird. This armament arrived at its deſtination the beginning of January 1806; a deſcent was made on the 6th and 7th of January; and an engagement took place on the 8th between the Britiſh troops conſiſting of 4000 men, and the troops of the garriſon conſiſting of 5000. The loſs of the Engliſh was about 200 men in killed and wounded; while that of the Batavians amounted to upwards of 700. A capitulation was ſigned on the 10th of January, by which the whole colony was again ſurrendered to the king of Great Britain.

While the ſettlement of Good Hope continued in the hands of the Dutch, very little was known of its internal polity, and ſcarcely any thing was done towards aſcertaining the geography of the country. When it came into the hands of the Engliſh, however, the interior of the country began to be explored, and a faithful and correct deſcription of it was given by our own countrymen, which we ſhall here epitomiſe.

On entering Cape Town by the way of the Caſtle, the eye is ſtruck with a number of elegant buildings. On one ſide is preſented the whole length of the gardens formerly belonging to the Dutch Eaſt-India Company; which are open to all genteel perſons. On the other are the fountains, whoſe waters deſcend from Table-Mountain by a channel, which may be ſeen from the town, and every part of the road. This water is excellent, and abundantly ſupplies the inhabitants, as well as the ſhipping in Table Bay. The number of houſes amounts to near ſix hundred, inhabited by about 5500 white people, and upwards of 10,000 blacks. In a town where ſo many perſons are continually arriving, it ſeems ſurpriſing that there ſhould have been neither coffee-houſe nor tavern; but the truth is, every private houſe is made to anſwer that purpoſe, by taking in ſtrangers to board and lodge, and who are abundantly ſupplied with the neceſſaries and comforts of life. But whatever enthuſiaſts may ſay of the Cape, it ſeems that the European fruits have much degenerated there. Nothing of the kind is very delicious except the grape. Moſt of the European vegetables ſeem indeed naturalized, and are gathered all the year, if the ſouth-eaſt wind does not dry the earth in ſuch a manner as to render it incapable of culture. This wind, when it ſets in, rages with ſuch fury, that in order to preſerve the plants, they are obliged to make a fence of hornbeam round each diviſion of the garden. They take the ſame care of the young trees; but notwithſtanding all their precaution, they never put out branches on the ſide next the wind, and always incline in an oppoſite direction, which gives them a very diſagreeable appearance; in general it is difficult to rear them; for the ravages of this wind are ſo great, that in the ſpace of twenty-four hours, the beſt cultivated gardens are ſometimes laid waſte; it rages moſt from January to April about the Cape, and much earlier up the country. This wind announces itſelf at the Cape by a ſmall white cloud, which at firſt reſts on the top of Table Mountain, on that ſide next the Devil Mountain: the air ſoon begins to freſhen; by degrees the cloud augments, enlarging in ſuch a manner that the whole ſummit appears covered; at this time they uſually ſay, "the mountain has put on its perriwig;" it now ſinks rapidly; and, hovering over the town, ſeems to threaten it with an immediate deluge; but as it approaches the foot of the mountain, it begins to diſappear, to evaporate, and reduce itſelf to nothing; the ſky continues uninterruptedly calm and ſerene; the mountain alone appears in mourning, which ſhrouds it from the radiance of the ſun. The inhabitants account for this phenomenon in the following manner: the wind at firſt blows very feebly, gently driving before it a ſort of miſt, which ſeems to detach itſelf from the ſurface of the ſea; this miſt collects, and preſſed together by means of the obſtacle it finds in its paſſage on the ſouth ſide of Table Mountain, not being able to free itſelf, heaps up by degrees, till it is elevated to the ſummit; it then exhibits to the town that ſmall white cloud which announces the wind, which in fact, has begun to blow ſome hours before on the ſides of the mountain, in the road or bay, and parts adjacent. The general duration of this kind of ſtorm is three days ſucceſſively; ſometimes it continues without intermiſſion much longer; it often likewiſe ceaſes all at once, the atmoſphere then becomes extremely ſultry; and, if during three months (the time it uſually prevails) it ſhould happen in this manner to have ſeveral ſudden intermiſſions, it is a certain prognoſtic of a great deal of ſickneſs.

Though this wind is not abſolutely dangerous to ſhipping, inſtances are not wanting of its ill effects on ſeveral; and when it becomes very impetuous, it is prudent, in order to avoid an accident, to gain the open ſea; when it does not bear the miſts, it only blows in the road, and is of no conſequence in the town, for it is only a vaſt collection of theſe fogs ruſhing violently along, that occaſions thoſe terrible hurricanes which they thus experience, and which render it almoſt impoſſible to walk in the ſtreets; and notwithſtanding the exactitude and care, with which they ſhut their doors and windows, the duſt at this time penetrates even into their cupboards and trunks. Yet whatever inconveniences may accompany it, this wind is of infinite ſervice to the town, by purging it of thoſe noxious vapours which ariſe from the filth that is naturally collected about the ſea coaſt, and from its peculiar ſituation. The moſt cruel and dangerous diſeaſe here is the ſore throat. People of the moſt robuſt conſtitutions, fall victims to this malady in three or four days. It is a ſudden and violent ſtroke which gives no warning. While the ſmall-pox is alſo another

another ſcourge to the colony. This part of the globe was a ſtranger to it till the arrival of the Europeans; while it was under the dominion of the Dutch, this diſorder once brought it to the very brink of deſtruction; when it firſt made its appearance, it ſwept off more than two thirds of the coloniſts. Its ravages were ſtill more dreadful among the Hottentots, both at the Cape and inland; it ſeemed as if this malady attacked them in preference to others, and even now they are extremely ſubject to it; inſomuch that all veſſels on their arrival in the road, are ſcrupulouſly examined, and, if they diſcover the leaſt veſtige of this diſorder, all communication with the inhabitants is rigorouſly forbidden; an embargo is laid on the cargo, of which they will not ſuffer the ſmalleſt article to be landed, and they keep day and night a very ſtrict guard over them.—It is however to be preſumed, that while the colony continues in the hands of the Engliſh, this fatal malady will be overcome by the mild influence of inoculation.

The rainy ſeaſon uſually commences about the end of April. It is more abundant and more frequent in the town than its environs; the natural reaſon of which is, that the north wind then brings a great number of clouds with it, which as they approach the town, are encountered and broken by the Table, Devil, and Lion, mountains. At this time it rains without intermiſſion at the Cape, though at two leagues diſtance all round they perhaps enjoy a clear ſky and dry weather. Sometimes the rain ſpreads over the whole ſpace between Table Bay and Falſe Bay, to the eaſt of that chain of mountains which extend themſelves to the very extremity of Africa, while the weſtern ſide is clear and without a cloud. This is a feeble image of what happens on the coaſt of Coromandel and Malabar, except that here this ſpectacle is more wonderful, becauſe, being nearer, it is more obvious, and is not unfrequently inſtanced in the following manner: ſuppoſe two friends were ſet off from the town at the ſame inſtant for Falſe Bay, he that takes the eaſt ſide of the mountain ſhould carry his *parapluie*, while he that takes the weſt would have occaſion for his *paraſol*: they arrive at the place of rendezvous, the one fatigued with heat, and panting under the burning ray; the other frozen with cold, or dropping with rain. The Table mountain, when viewed from the Bay, ſeems to join the town, though in fact it is a league diſtant from it. The ſkirts of this mountain are incumbered with a great quantity of fragments of rock, which ſeem at different times to have been broken from it; its baſe is formed of pure granite, and to its very ſummit it is compoſed of horizontal layers of granite and earth alternately. Its height, as lately computed, is four thouſand feet above the level of the ſea; and can only be climbed by the chaſm, through which the water flows, which ſupplies the town; this paſſage is extremely dangerous, particularly towards the top, where it runs very narrow, and is almoſt perpendicular. It requires two hours' labour to gain the ſummit; then we arrive at a very ſpacious plain, confuſedly ſcattered over with huge pieces of rock mingled with buſhes, which all together has the appearance of an immenſe city in ruins. Time, in conjunction with the clouds and winds, has worn off their aſperities, and given them a kind of uniformity. Here are ſome ſtones as completely rounded as thoſe pebbles which are picked up on the ſea ſhore. Towards the middle of the plain, there is a baſon of three or four hundred paces in circumference, from whence the waters flow which ſupply the town by the channel above-mentioned. Whether this water is ſupplied by ſprings, by rain, or by miſts, is a queſtion hitherto undecided; but it is a fountain which never fails. The mountain is interſected by a number of channels, which diſtribute theſe waters in every direction, and fertilize the ſcattered plantations which ſurround it. This place is the haunt of a great number of vultures, which are frequently driven from the mountains, by the ſouth-eaſt wind, with great precipitation into the very ſtreets of the town, where they are knocked down with ſticks by the inhabitants.

When people aſcend Table mountain for the firſt time, while climbing the chaſm, they are ſure to imagine that it rains, however fine the weather may be. This effect is cauſed by the water that is continually dropping from the rocks above, which in falling ſo far forms a kind of rain, which is ever more abundant in the morning than the reſt of the day; the damps and dews of the night eaſily account for this. At about a third of the way up this chaſm, the eye is preſented with a beautiful caſcade which falls from a flat piece of rock of conſiderable extent. From the town to this ſpot is a uſual walk; even the ladies can proceed thus far without difficulty, and enjoy the ſatisfaction of a moſt charming and picturesque ſcene which preſents itſelf from this place. It is impoſſible to paſs from Table to Devil mountain, though their ſummits ſeem only to have been ſeparated by earthquakes, or ſome other ſuch cauſe; but we can eaſily go from that to Lion mountain, which appears alſo to have been originally a part of the ſame; the top of the latter can only be gained by means of a rope, with which, by great difficulty, they help themſelves up. From this place, they give ſignals to ſhips at ſea.

During the prevalence of the winter months, Table Bay, which lies on the weſt ſide of the ſouth point of the Cape, is conſidered as very dangerous anchorage; a proof of which is, that in 1722, no leſs than twenty-five ſhips were daſhed to pieces on the rocks; and in 1736 ſeven more were loſt in a ſimilar manner; ſo that from June to September all the ſhips quit this bay, and run round the Cape to the eaſt ſide of the peninſula into a ſpacious harbour called Falſe Bay, which is very commodious, particularly that part of it which is called Simon's Bay. From Cape-town to this bay acroſs the iſthmus is only about nine miles; whereas by water it is more thirty leagues. The iſthmus is ſeen acroſs from Table Bay; and the Cape itſelf appears at that diſtance like a hanging iſland in the ſea, united to the continent by a ſmall neck of land. There are a number of other bays and ſafe harbours on both the eaſtern and weſtern ſides of the peninſula; but theſe are ſeldom viſited by any ſhipping except the ſmall craft which belongs to the country.

Behind Table mountain are the vineyards of Conſtantia. Round the vineyards are pleaſant groves of the ſilver-tree, beſides oak, elms, and other ſmaller plants, which completely ſhelter them from the violence of the winds. There are two diſtinct plantations of vines here, each of a different colour and quality, though both are called Conſtantia wines. The firſt farm, called Great Conſtantia, produces the red wine of that name; and at Leſſer Conſtantia, the white is made. The grape from which this wine is extracted is a ſpecies of the Muſcadel, extremely rich, ſweet, and luſcious. Its qualities proceed in ſome meaſure from the ſituation and ſoil, which are particularly favourable; but the exquiſite flavour is chiefly to be attributed to the great care taken in the rearing, dreſſing, and encouragement, of the vines, in preſerving the grapes wholly clean from ſand, and free from the ravages of the inſects which uſually attack them when full ripe. With the cleanlineſs and healthy ſtate of the grape when put into the preſs, another cauſe contributes much to the goodneſs of the wine, the not ſuffering the leaves, ſtalks, or unripe fruit, to be mixed in the preſs, as is too commonly the caſe. If the ſame attention were paid to the vines in other parts of the colony, and the ſame precautions uſed in compreſſing the fruit, Cape wine would no longer labour under its preſent diſrepute. The grapes of Conſtantia are indeed larger, and have a richer and more fleſhy pulp than thoſe of the other plantations, and conſequently give more juice in proportion. But there muſt be many parts of the ſoil equally adapted to the

rearing

rearing of grapes as this of Conſtantia, although from negligence overlooked. The quantity of wine made at Conſtantia, on an average, is about ſeventy-five leagers a-year, each leager containing upwards of one hundred and fifty gallons of our meaſure. It is even here exceſſively dear and difficult to be procured, and muſt be often beſpoke a conſiderable time. The captains of veſſels touching at the Cape, who have wiſhed to procure a quantity of it, have been frequently obliged to contract for it a year or two before the wine was made.

Under the Dutch government the farmer divided the produce into three parts; one-third he was obliged to furniſh, at a certain price, to the Dutch Eaſt-India Company, who ſent it to the government in Holland. Another proportion was furniſhed to certain of the inhabitants of Cape Town, chiefly the people in high office and power, at the ſame rate; and the remaining quantity he was at liberty to diſpoſe of at what price he could to the paſſengers, and captains of ſhips of all nations. The Dutch inhabitants in Cape Town, at whoſe houſes and tables the paſſengers are accommodated, rarely ever produce a drop of this wine, except upon very extraordinary occaſions. The next wine in eſtimation to the Conſtantia is a kind of Muſcadel, or as they call it here Cape Madeira. The colour of this wine is a deep violet, and the appearance thick and muddy. Cape Madeira is a heavy, ſweetiſh, wine, with a ſtronger body than the generality of what is made here; for the various kinds of white wines at the Cape are moſtly thin, light, and acid: it is this wine which is generally uſed at the tables of the coloniſts. Except the red Conſtantia, no wine made at the Cape is ever ſo high-coloured as port or claret.

The whole ſpace acroſs the iſthmus from Table Bay to Falſe Bay, is interſperſed with ſummer houſes, and beautiful habitations, where they cultivate vegetables, fruits, and vines. The moſt eſteemed, and whoſe produce approaches the neareſt to the wine of Conſtantia, are thoſe of Becker and Hendrick. The Cape wine-merchants purchaſe theſe, and obtrude them upon the ignorant for real Conſtantia. Beſides their ſweet wines, other cantons of the colony, as Perle, Stellemboſch, and Drageſtein, furniſh thoſe dry wines, which are in ſo great eſtimation. Stellemboſch, Drageſtein, Franſche-Hoeek, Perle, and Dutch Hottentot, otherwiſe called Hottentot Holland, are different cantons, ſituated between the Cape and a great chain of mountains; theſe furniſh abundance of fruit and wine. The Stellemboſch diſtrict has a little town, where ſeveral inhabitants have retired from the Cape, who cultivate their own lands; they have a church and a miniſter of their own. The Franſche-Hoeek, in the heart of the mountains, between the Stellemboſch and the Drageſtein, has received its name from ſome French refugees that ſettled there about the end of the ſixteenth century, and who then firſt introduced the wine into this colony. The land here is good, and furniſhes plenty of corn and wine. The diviſion called Hottentot Holland, is ſo named becauſe this canton (originally inhabited by Hottentots) was the firſt that the Dutch violently ſeized upon. It furniſhes vegetables, fruit, and corn; the Stellemboſch bounds it on the north, a chain of mountains on the eaſt, Falſe Bay on the weſt, and the mountains where the native Hottentots ſtill retain ſome habitations, on the ſouth.

The firſt chain of mountains that are ſeen from Table Bay, are called the Tiger Mountains; on them are ſcattered excellent plantations for the growth of corn, which covering the hills, is a beautiful view from the town in the harveſt ſeaſon; their fruitfulneſs having given them the name of corn magazines to the whole colony. The farms on the other ſide of theſe mountains are but partially cultivated, as not being thought very profitable; whilſt thoſe in the neighbourhood of Cape Town are very profitable, on account of the eaſe with which they convey their vegetables, fruit, eggs, milk, and all other neceſſary proviſions to the market, an advantage which thoſe at a greater diſtance do not enjoy.

For twelve leagues round Cape Town the coloniſts do not ſo much employ Hottentots, as Negro, Moſambique, and Malay, ſlaves; but further inland, the Hottentots are atmoſt the only ſlaves; but to all of them the Dutch appear to have been in the habit of exerciſing the greateſt cruelties. The Malay ſlaves are ſaid to be the moſt active and docile, faithful and honeſt, but dangerous on account of their impetuous temper. Mr. Barrow relates an inſtance of refinement of revenge in one of theſe people, which is very extraordinary: a Malay ſlave, conceiving that he not only had ſerved his maſter ſufficiently long, and with great fidelity, but had alſo paid him ſeveral ſums of money, he was tempted to demand his liberty, and met with a refuſal. The following morning the Malay murdered his fellow-ſlave. On being taken and brought up for examination before a commiſſion of the court of juſtice, he acknowledged that the boy he had murdered was his friend; but he had conſidered that the moſt effectual way to be revenged of his maſter was, not by taking away his life, but by robbing him of the value of a thouſand rix-dollars, by the loſs of the boy, and another thouſand by bringing himſelf, in ſo doing, to the gallows; the recollection of which would prey upon his avaricious mind for the remainder of his life!—Many other inſtances of ſullen and outrageous conduct in the ſlaves is likewiſe mentioned; but when the cruelties of their Dutch maſters are conſidered, we muſt not wonder that human nature ſhould revolt. We have however to remark, with heart-felt exultation, that the uſe of the torture was aboliſhed by the Engliſh governor, immediately on his taking poſſeſſion of the Cape. Among the implements of death employed by the Dutch, were found many diſgraceful inſtruments of torture, all of which were deſtroyed by our people, as a reproach to human nature.

The mode of travelling and conveying merchandize at Good Hope, is in waggons. No object, ſays captain Percival, ſooner attracts the eye of a ſtranger at the Cape, than the conſtruction of theſe waggons, the number of cattle yoked to them, the uncommon manner in which they are driven, and the aſtoniſhing dexterity of the drivers. Theſe waggons are made extremely large and ſtrong; all great journies are undertaken in them; and for ſize and accommodation they may be compared to travelling houſes; while the very uneven and rugged roads require them to be very ſtrong, and of great ſolidity. The body of the waggon reſts on an axle or pole, running lengthwiſe; below, it is not unlike a coach, except that the body is ſeldom hung on ſprings. They are made broad, to prevent overturning, when driven over rocks and declivities at full gallop; it being a principle with the drivers never to ſpare the poor cattle. The inſide is roomy and ſpacious, with platforms and benches, which are employed for ſitting on, for bedſteads, or for holding goods. At one end they are furniſhed with a place for cooking. The ſides are conſtructed with ſtrong boards well put together, and ſecured by ſtrong pieces of wood placed perpendicularly. The roof is formed of boards, or thick ſail-cloth, well tarred, to keep out the rain. The Dutch planters, who inhabit the interior, during their long journies to Cape Town, entirely live in theſe moving habitations; whilſt at night, or when they ſtop to bait and refreſh their cattle, their ſlaves find ſhelter under the waggon, and the cattle quietly graze hard by, in a ſpot that has been pitched upon for its herbage, this being the only method of procuring provender in that country. In general the horſes and oxen are well made, ſtrong, and ſteady.

From four to ten or twelve pair of horſes or oxen are yoked to one waggon. The horſes, though a ſmall race, do a great deal of work on little food, and are capable of enduring great fatigue. A bunch or two of

carrots is ſometimes their only ſuſtenance during a long journey. Their hoofs being much harder than thoſe of the European horſes, they are not in general ſhod; and when they are, it is only on the fore feet. The Cape horſes are not ſwift travellers; they hardly ever exceed fourteen hands in height; and on account of the flies, which are exceedingly troubleſome, their tails are ſeldom cut. The Dutch never paid any attention to improving the breed of horſes; they ſcarcely ever thought of introducing thoſe of another country to croſs the breed, and improve the blood. The oxen are ſtrong, large, and bony; though of an aukward ſhape, being lank and long-legged. In general they are yoked both by the horns and the neck; and aſſiſt the draught with their heads as well as their breaſt and ſhoulders. In front of the body of the waggon there is a bar or piece of wood for a ſeat, like that placed before our hackney coaches: on this two of their ſlaves ſit, and from this ſtation guide the horſes or oxen. One of the ſlaves guides the reins, whilſt the other ſits beſide him with a long whip that trails on the ground till he has occaſion to uſe it on the cattle, which he does with both his hands. The handle of this prodigious whip is of bamboe, from twelve to fifteen feet long, and is fixed to a thick leather thong of buffalo hide, rudely platted, and of an equal length with the handle, with a laſh nearly three feet long attached to the extremity. The drivers are ſo very expert in the uſe of this immenſe whip, that they can touch a team of ten or twelve pair of cattle in any part they have a mind. When they come to a deep place in the road, or ſteep and difficult aſcent, they keep cutting amongſt the cattle to make them all pull together, and exert their ſtrength equally. By this means the animals will draw the waggon over the moſt difficult places, even rocks and precipices, whilſt the fellow who holds the reins, equally dextrous on his part, will guide them in complete ſafety. The means employed to render the cattle thus manageable are, however, revolting to humanity. It excites not only compaſſion but horror to ſee many of thoſe unfortunate beaſts cut and mangled, as they are, in various parts of the body; for a Dutch boor, or farmer, if he find his cattle lazy, or ſtopping from fatigue, or where they meet with obſtacles which their ſtrength cannot eaſily ſurmount, will not heſitate to draw out his knife and ſcore their fleſh, or even cut ſlices off, without mercy. Every waggon is provided with ſtrong chains, or drags, like thoſe uſed by our mail coaches, to prevent their being overturned in going down the precipices and ſteeps. Sometimes they are obliged to drag all the four wheels, and have for this purpoſe a machine which they call a lock-ſhoe, being a kind of ſledge or trough ſhod with iron, into which the wheels are ſet. This prevents the waggon from running down the cattle, and certainly is very ingenious in the invention.

Of the manners and cuſtoms of the inhabitants of Cape-Town, Mr. Barrow has given a very intelligent account.—"The education of their youth has hitherto been much neglected. The government never adopted any ſucceſsful plan for the eſtabliſhment of public ſchools; and the individua' had no other ambition but that of qualifying his ſons, by writing and accounts, to become ſervants of the company." This body of merchants had a number of perſons in their employ who were very ill paid. Their ſalaries were inſufficient to afford them a bare ſubſiſtence; but it allowed them to negociate for themſelves. The conſequence was, that every one became a kind of petty dealer. Each had his little private ſhop in ſome corner of his houſe. The moſt paltry articles were in the liſt of their commodities for ſale; and thoſe who ranked high in the government, and aſſumed a ſtring of ſounding epithets to their names, felt no ſort of indignity in retailing the produce of their gardens; not indeed avowedly, but through the medium of their ſlaves. In fact, the minds of every claſs, the governor, the clergy, the fiſcal, and the ſecretary of the court of juſtice excepted, were wholly bent on trade. *Koopman* or merchant was the title that conferred rank at the Cape, to which the military even aſpired. That portion of the day, not employed in the concerns of trade, they devoted to the gratification of the ſenſual appetites. Few have any taſte for reading, and none for the cultivation of the fine arts. They have no kind of public amuſements except occaſional balls; nor is there much ſocial intercourſe but by family parties. Money-matters and merchandiſe engroſs their whole converſation. Yet none are opulent, though many are in eaſy circumſtances. There are no beggars in the whole colony; and but a few who are the objects of public charity. The ſubſiſtence for theſe is derived from the intereſt of a fund eſtabliſhed out of the church ſuperfluities, from alms, donations, and collections made after divine ſervice, and not from any tax laid upon the public. Except, indeed, a few colonial aſſeſſments for the repairs of the ſtreets and public works, the inhabitants of this colony have little drawback on their profits or the produce of their labour.

"It has been the remark of moſt travellers that the ladies of Cape-Town are pretty, lively, and good-humoured; poſſeſſing little of that phlegmatic temper which is a principal trait in the national character of the Dutch. The difference in the manners and appearance of the young men and the young women, in the ſame family, is inconceivably great. The former are clumſy in their ſhape, aukward in their carriage, and of an unſociable diſpoſition; whilſt the latter are generally of a delicate form, below the middle ſize, of eaſy and unaffected manners, well dreſſed, and fond of ſocial intercourſe, an indulgence in which they are ſeldom reſtrained by their parents, and which they as ſeldom turn to abuſe. They are here indeed leſs dependant on, and leſs ſubject to, the caprice of parents than elſewhere. Primogeniture entitles to no advantages; but all the children, male and female, ſhare alike in the family property. No parent can diſinherit a child without aſſigning, on proof, one at leaſt of the fourteen reaſons enumerated in the Juſtinian code. By the law of the colony, a community of all property, both real and perſonal, is ſuppoſed to take place on the marriage of two perſons, unleſs the contrary ſhould be particularly provided againſt by ſolemn contract made before marriage. Where no ſuch contract exiſts, the children, on the death of either parent, are entitled to that half of the joint property which was ſuppoſed to belong to the deceaſed, and which cannot be withheld on application after they are come of age.

"It is but juſtice to the young females of the Cape to remark, that many of them have profited much more than could be expected from the limited means of education that the place affords. In the better families, moſt of them are taught muſic, and ſome have acquired a tolerable degree of execution. Many underſtand the French language, and they are now making great proficiency in the Engliſh. They are expert at the needle, at all kinds of lace, knotting, and tambour work, and in general make up their own dreſſes, following the prevailing faſhions of England brought from time to time by the female paſſengers bound to India, from whom they may be literally ſaid to

"Catch the manners living as they riſe."

Neither are the other ſex, while boys, deficient in vivacity or talent; but for want of the means of a proper education, to open their minds and excite in them a deſire of knowledge, they ſoon degenerate into the common routine of eating, ſmoaking, and ſleeping. Few of the male inhabitants ſeem anxious to aſſociate with the Engliſh, except ſuch as hold employments under the government. This backwardneſs may be owing in part to the different habits of the two nations, and partly,

partly, perhaps, to the reluctance that a vanquiſhed people muſt always feel in mixing with their conquerors. No real cauſe, however, of complaint or diſaffection could poſſibly be alleged againſt the Engliſh government at the Cape. No new taxes have been impoſed ſince the conqueſt; but, on the contrary, ſome of the old ones have been diminiſhed, and others modified. The demand and value of every production of the colony have very conſiderably increaſed, while the articles of import have fallen, in their prices. More than two hundred thouſand rix-dollars of arrears in rent of land have been remitted to the inhabitants by the Britiſh government, as well as one hundred and eighty thouſand rix-dollars of dubious debts. They have preſerved their laws and their religion, both of which continue to be adminiſtered by their own people. They enjoy as great a ſhare of rational liberty as men, bound to each other, and to the whole, by the ties that a ſtate of ſociety neceſſarily impoſes, could poſſibly expect, and much greater than under their former government. Property has been ſecured in every inſtance, and has been raiſed to double its former value: and none has the loſs of life of any friend or relation to lament ſince the capture. Their paper currency, fabricated by the government in order to get over a temporary diſtreſs, but which it had never been able to take out of circulation, bore a depreciation of 40 per cent. and a ſilver dollar was ſcarcely to be ſeen. The former is now at par with ſpecie, and not leſs than two millions of the latter have been ſent from England and thrown into circulation. Every perſon enjoys his ſhare of the general proſperity. The proprietor of houſes in town has more than doubled his rent; and the farmer in the country, where formerly he received a rix-dollar for each of his ſheep, now receives three." Thus increaſing proſperity, uninterrupted peace, and domeſtic tranquillity, have been the happy lot of the inhabitants of the ſettlement of Good Hope; ſince it has been in the hands of the Engliſh.

With reſpect to the interior of the colony, Mr. Barrow was deputed by earl Macartney, to whoſe government he was attached, to make ſeveral excurſions of enquiry and reſearch. He relates his journey from the Cape acroſs the Karroo, or Arid Deſert, to the Droſdy of Graaff Reynet, in the month of July 1797; and he thus deſcribes the character of the people, and the ſtate of population:—"A Dutch farmer or boor, as he ſtyles himſelf, has not the ſmalleſt idea of what an Engliſh farmer means by the word comfort. Placed in a country where not only the neceſſaries, but almoſt every luxury of life might by induſtry be procured, he has the enjoyment of none of them. Though he has cattle in abundance, he makes very little uſe of milk or of butter. In the midſt of a ſoil and climate moſt favourable for the cultivation of the vine, he drinks no wine. He makes uſe of few or no vegetables nor roots. Three times a-day his table is loaded with maſſes of mutton, ſwimming in the greaſe of the ſheep's tail. His houſe is either open to the roof, or covered only with rough poles and turf, affording a favourable ſhelter for ſcorpions and ſpiders; and the earthy floors are covered with duſt and dirt, and ſwarm with inſects, particularly with a ſpecies of *termes*, which, though not ſo deſtructive as ſome others of this genus, is nevertheleſs a very troubleſome and diſagreeable animal. His apartments, if he happens to have more than one, which is not always the caſe among the grazing farmers, are nearly deſtitute of furniture. Yet he is abſolute maſter of a domain of ſeveral miles in extent; and he lords it over a few miſerable ſlaves or Hottentots without controul. His pipe ſcarcely ever quits his mouth, from the moment he riſes till he retires to reſt, except to give him time to ſwallow his *ſopie*, or a glaſs of ſtrong ardent ſpirit, to eat his meals, and to take his nap after dinner. Unwilling to work, and unable to think; with a mind diſengaged from every ſort of reflexion, indulging to exceſs in the gratification of every ſenſual appetite, he grows to an unweildy ſize, and is carried off the ſtage by the firſt inflammatory diſeaſe that attacks him. How different is the lot of the labouring poor of England, who for ſix days in the week are doomed to toil for twelve hours every day, in order to gain a morſel of bread for their family, and the luxury of a little animal food for the ſeventh day!" The wives alſo of theſe farmers appear, in liſtleſs inactivity, to ſleep along the blank of life; exciting no love, interchanging no affections, harbouring no ſympathies, but alike inſenſible to the ſedate pleaſures of ſocial intercourſe, and to the tumultuous exhilarations of public feſtivals, paſs their time from the cradle to the grave. Yet, rude and illiterate as theſe people are, the virtues of hoſpitality are cultivated by them to exceſs; and all travellers are equally welcome to the beſt food and accommodation which their means can ſupply.

In croſſing the deſert, Mr. Barrow met with large quantities of a ſpecies of ſalſola or ſalt-wort, from the aſhes of which the Hottentots make their ſoap. He obſerves that theſe aſhes, when carefully burnt and collected, are a pure white cauſtic alkali, a ſolution of which, mixed up with the oily fat of the large broad tails of the ſheep of the colony, and boiled ſlowly for five or ſix days, takes the conſiſtency and the quality of an excellent white ſoap. This ſalſola grows in almoſt every part of Southern Africa, but particularly on thoſe plains known by the name of Karroo, and in ſuch abundance that, ſuppoſing the plant, after being cut down and burnt, to be re-produced in five years, the quantity of ſoda, or barilla, that might annually be made from the aſhes, would be ſufficient, beſides ſerving the colony, for the whole conſumption of Great Britain; and as enormous ſums of money have always been, and continue to be, drawn from England to pay the imports of this article, it may perhaps be conſidered as an object worthy the conſideration of the Britiſh government.

On the thirtieth day of his travels, Mr. Barrow reached the juriſdiction of Graaff Reynet, the reſidence of a *landroſt*; whoſe importance will not excite much envy, when his ſituation is duly appreciated. The village is chiefly inhabited by mechanics, and ſuch as hold ſome petty employment under the landroſt. Its appearance is more miſerable than that of the pooreſt place in England. The neceſſaries of life are with difficulty procured in it; for, though there be plenty of land, few are found induſtrious enough to cultivate it. No milk, no butter, no cheeſe, no vegetables, are to be had upon any terms. There is no butcher, no grocer, no baker. Every one muſt provide for himſelf as well as he can. They have neither wine nor beer; and the chief beverage of the inhabitants is the water of the Sunday river, which, in the ſummer ſeaſon, is ſtrongly impregnated with ſalt. When the landroſt, who accompanied Mr. Barrow, came to the *droſdy*, or houſe of reſidence, a long liſt of grievances was preſented, relative to the incurſions of the Caffers. Previouſly to the arrival of the landroſt, the farmers, actuated chiefly by the hope of plunder, had prepared to carry war into the country of the Caffers: but, very humanely and politically, theſe preparations were ſtopped.

On the 18th of Auguſt, Mr. Barrow arrived at Zwartkops, or Algoa bay, ſituated in latitude 33. 56. S. longitude 26. 53. E. Greenwich, and diſtant from the Cape in a direct line five hundred miles. He is of opinion that, from the vicinity of this place to the ſalt pans, from the eaſe of procuring bullocks incredibly cheap and in good condition, and from the abundance of excellent fiſh on the coaſt, great benefits would accrue to the Engliſh Eaſt India company, if an eſtabliſhment were formed there for the preparation of ſalted beef and fiſh.

Twenty years ago, the country beyond Camtoos river, which

which was then the eaſtern limit of the colony, abounded with villages of Hottentots, out of which the inhabitants came to meet travellers by hundreds in a groupe. Some of theſe villages might ſtill have been expected to remain in this remote part of the colony; but not one was to be found. There is not now in the whole extenſive diſtrict of Graaff Reynet a ſingle horde of independent Hottentots; and perhaps not a ſcore of individuals who are not actually in the ſervice of the Dutch; ſo completely have the natives been ſubjugated, or driven out. This has been effected by a diſcipline and practice highly diſgraceful to humanity. Beating and cutting them with thongs of the hide of the ſea-cow or rhinoceros, is a gentle puniſhment, though theſe ſort of whips, which they call *ſhambos*, are moſt horrid inſtruments, tough, pliant, and heavy almoſt as lead. Firing ſmall ſhot into the legs and thighs of a Hottentot is a puniſhment not unknown to ſome of the monſters who inhabit the neighbourhood of Camtoos river. Inſtant death is not unfrequently the conſequence of puniſhing theſe poor wretches in a moment of rage. This appears of little conſequence to the Dutch farmer; for though they are to all intents and purpoſes his ſlaves, yet they are not transferable property. It is this circumſtance which, in his mind, makes their lives leſs valuable, and their treatment more inhuman. For ſmall offences, the Dutch farmer flogs his ſlaves, not by any given number of laſhes, but by time; and as they have no clocks, he has invented an excuſe for the indulgence of one of his moſt favourite ſenſualities, by flogging them till he has ſmoked as many pipes as he may judge the magnitude the crime to deſerve! We truſt, however, that the Engliſh will ſpeedily ameliorate the miſerable condition of theſe wretched victims.

After Mr. Barrow had finiſhed his obſervations at Algoa bay and the adjacent country, he and his party proceeded along the ſea-coaſt into the country of the Caffers. Having croſſed the rivers Bosjeſmans and Haſſagai-boſch, they viſited the mouth of the *Infanté*, or Great-fiſh river; and then proceeded to the reſidence of the king of the Caffers, who readily concluded a treaty with the repreſentatives of the Engliſh government. See the article CAFFRARIA, vol. iii. p. 595, and the correſpondent Engraving.

The party next proceeded to examine the mouth of the river Keiſkamma: which is nearly as wide as the Thames at Woolwich, and apparently of great depth: but the entrance is guarded by a ſhore of ſand, on which the ſurf breaks with great violence. From the Keiſkamma, they returned by a new route to Graaff Reynet, which place they reached on the 30th September. They next proceeded northward, acroſs the Sneuwberg, in order to obſerve the manners of the race of ſavages called *Bosjeſmans*, or men of the buſhes, who neither cultivate the land nor breed cattle, but live by depredation; for an account of whom, ſee the article HOTTENTOTS. The travellers proceeded a conſiderable way along the bank of the Sea-cow river, and then came to its junction with a vaſt ſtream, called the Orange river; which, in ſize and bulk of water, more than equals all the other rivers of the colony taken collectively; its general breadth at five hundred miles diſtance from its mouth being three hundred yards, when free from inundations; for, like the Nile, the Orange river has its periodical overflowings.

In the route from Graaff Reynet back to the Cape, Mr. Barrow croſſed a chain of mountains; and encountered the point of the paſſage called *the Devil's head*: here the road is dreadfully ſteep and ſtoney, formed by ſteps, over ſome of which it was neceſſary to lift the waggons by main ſtrength. Juſt as they reached the ſummit, the weather, which had been remarkably pleaſant, the thermometer ſtanding at 74°, began inſtantly to be overcaſt, the wind blew freſh, and an immenſe ſheet of black vapour was obſerved to approach, borne upon the ſouth-eaſt wind from the ſea. Aſcending rapidly in rolling volumes, it completely immerſed the travellers upon the ſummit of the mountain. The temperature of the air was at once decreaſed to 39° of Fahrenheit. Before the waggon had got over the higheſt peak, the weather began to clear up, and it was curious to obſerve, that part of the country between the mountain and the ſea was involved in denſe clouds, and deluged with rain, whilſt the northern ſide of the ſame mountains enjoyed a ſunſhine unſullied by a ſingle cloud. Having next croſſed the Crocodile river, the Gauritz river, the ſudden and copious riſe of which is ſo extraordinary, as to have once deſtroyed a houſe nearly an hundred feet above the level of its channel, and various other ſtreams, the travellers reached Cape Town on the 18th of January 1788, after a tour of ſeven months' duration. A journey was then undertaken to explore the country of the Namaaquas, which the reader will find detailed under the article HOTTENTOTS.

Theſe journeys enabled Mr. Barrow to form a chart of the ſettlement of Good Hope, conſtructed entirely from actual obſervations of latitude and of bearings, from the eſtimation of diſtances, and from frequent angular interſections of remarkable objects, by which it appears that the extent and dimenſions of the territory compoſing the whole colony as now permanently fixed, are as follow:

Length from weſt to eaſt.	Miles.
Cape Point to Caffer Land - - - -	580
River Kouſſie to Zuureberg - - - -	520
Breadth from ſouth to north.	
River Kouſſie to Cape Point - - -	315
Nieuwveldt Mountains to Plettenberg's Bay -	160
Mouth of Tuſh-river to Plettenberg's baaken -	225

This gives a parallelogram whoſe mean length is 550, and mean breadth 233, Engliſh miles, comprehending an area of 120,100 ſquare miles. This great extent of country, deducting the population of Cape Town, is peopled by about fifteen thouſand white inhabitants; the reſidue, making a population of one hundred and ſixty thouſand, are blacks. A very great portion, however, of this territory, may be conſidered as an unprofitable waſte, unfit for culture, or even to be employed as paſture for the ſupport of cattle. Level plains, conſiſting of a hard impenetrable ſurface of clay, thinly ſprinkled over with cryſtallized ſand, condemned to perpetual drought, and producing only a few ſtraggling tufts of ſucculent plants, and chains of vaſt mountains that are either totally naked, or clothed in parts with ſour graſſes, compoſe nearly one half of the colony. The whole territory is divided into four diſtricts, viz. 1. The Cape-Town diſtrict. 2. Stellenboſch and Dragenſtein. 3. Zwellendam diſtrict. 4. Graaff Reynet. Over each diſtrict preſides a landroſt, who, with a council of ſix country burghers, regulates the police, ſuperintends the government, and determines petty cauſes; but his deciſions are ſubject to an appeal to the court of judicature in Cape Town.

Timber of all kinds for building is very ſcarce in the vicinity of Cape Town; yet little pains have been taken to cultivate it. In parts of the country not far diſtant, however, plantations of oak trees, of the white poplar, and of the ſtone pine, are to be found, and they thrive rapidly. The article of fuel was ſo ſcarce at Cape Town, that a ſmall cart load compoſed of the branches of the ſilver tree, of the larger heaths, &c. ſold from twenty to eight-and-twenty ſhillings. To remedy this evil, lord Macartney ordered a ſearch to be made for foſſil coal; and the miners had the good luck to diſcover a vein.

Though this ſettlement is annoyed by wild and ferocious animals, and poiſonous reptiles, it is nevertheleſs compenſated by plenty of antelopes, red deer, and other veniſon, numerous oxen, and large flocks of ſheep;

ſheep; ſo that the wool and hides might here be made valuable articles of commerce. Lions and tigers abounded in ſuch numbers, that the early ſettlers were obliged to levy a kind of capitation tax, called lion and tiger money, to reward thoſe who had courage to hunt and deſtroy them, and bring in their hides. This tax ſtill exiſts; but as the colony is no longer annoyed by theſe animals, the money is applied towards the repairs of the roads, water-courſes, and other public works. Zebras and wild horſes are found in the interior; and Mr. Barrow, noticing the figure of an unicorn cut on the ſmooth ſide of a cavern, ſuppoſed to have been the work of the wild Bosjeſmen, he concluded that this animal muſt be in exiſtence in Southern Africa; and he employed the moſt laborious ſearch in queſt of it, but in vain. Indeed, Vaillant, who explored almoſt the whole of this part of Africa, for the purpoſe of collecting curious ſubjects of natural hiſtory, never mentions the unicorn; though he figures and deſcribes the cameleopardalus, and other wild animals. And here, too, he collected the originals of thoſe curious and magnificent birds, which form his ſplendid and coſtly work in ornithology; the engravings of moſt of which will be found in this Encyclopædia.

The hippopotamus and elephant were formerly reckoned among the moſt valuable ſpoils of the hunters in this colony; but ſo ſucceſsful have their purſuits after ivory been, that, like the lion and tiger, theſe animals are now but ſeldom found within the territories of the ſettlement; and of courſe its trade in ivory is become very trifling; and ſuch muſt ever be the effects of agriculture and civilization: the empire of man will increaſe, while that of ferocious animals is narrowed, and their howlings confined to the arid waſtes of the deſert.

As to the policy of annexing this ſettlement in future to the permanent Britiſh dominions, much has been ſaid and written. The ſoil, it has been ſuggeſted, will afford us no encouragement, becauſe, in ſome ſeaſons, it labours exceſſively with drought: but this evil might, Mr. Barrow ſays, be remedied by planting trees, and incloſing the country. The want of ſprings, however, is too ſeverely felt; and this circumſtance renders the beſt bay in the colony uſeleſs for ſhipping. The reaſon aſſigned for this ſcarcity of ſprings appears to us very juſt, and it alſo points out the plan to be adopted in procuring water. All the continued chains of mountains in Southern Africa are compoſed of ſandſtone reſting upon a baſe of granite. This granite baſe is ſometimes elevated conſiderably above the general ſurface of the country, and ſometimes its upper part is ſunk as far beneath it. In ſituations where the former happens to be the caſe, numerous ſprings are ſure to be found, as in the inſtance of Table Mountain, where, on every ſide, copious ſtreams of pure limpid water, filtered through the immenſe maſs of ſuperincumbent ſandſtone, glide over the impenetrable ſurface of granite, furniſhing an ample ſupply to Cape-Town, the gardens, and the adjacent vineyards. But in all thoſe places where the ſandſtone continues to deſcend *below* the ſurface, and the upper part of the granite baſe is ſunk beneath the general level of the country, the ſprings that make their appearance will be few and ſcanty. The reaſoning that ſuggeſts itſelf on theſe facts, will lead to the following concluſion:—That the ciſterns or cavities in the ſandſtone mountains, being corroded and fretted away, in the lapſe of ages, to a greater depth than the openings or conduits which might, perhaps, at one time have given their waters vent, the ſprings can no longer find their way upon the ſurface, but, oozing imperceptibly between the granite and the ſandſtone, below the general level of the country, glide in ſubterraneous ſtreams to the ſea.

This concluſion has been verified from the experience of ſeveral facts. When admiral ſir Roger Curtis directed a ſpace of ground, between the Admiralty-houſe and the ſhore of Table Bay, to be incloſed as a naval yard, the workmen met with great impediment from the copious ſprings of pure freſh water that ruſhed out of the holes which they found neceſſary to ſink in the ſand for receiving the upright poſts. It is a well-known fact, that on almoſt every part of the iſthmus that connects the mountainous peninſula of the Cape to the continent, freſh water may be procured at the depth of ten or twelve feet below the ſandy ſurface. Even in the ſide of the Tiger Hills, at an elevation of twenty feet, at leaſt, above the general ſurface of the iſthmus, when the workmen were driving a level in ſearch of coal, a copious ſtream of water was collected within it in the month of February, which is the very dryeſt ſeaſon of the year. And on boring, for the ſame purpoſe, on Wynberg, they came to a rill of water at the depth of twenty feet below the ſurface.

But, ſuppoſing the ſoil to admit of every improvement, yet ſtill there are many various opinions concerning the importance and utility of making the Cape a military ſtation. It is aſſerted that the miniſtry of this country, who have recourſe to the beſt documents, have decided this poſt to be an important one, as the defence of the Eaſt Indies: but, on the other hand, the Eaſt India directors are ſaid to hold it cheap; and of late they have not even uſed it as a half-way houſe, but have ordered their ſhips not to touch at it. An Engliſh crew, they ſay, can bear the whole voyage without a halt: but, when the crew is compoſed of Laſcars, who require freſh proviſions, it is almoſt indiſpenſably neceſſary for their health, to ſtop at the Cape. It can ſcarcely be denied that this ſettlement, in the poſſeſſion of our enemies, would afford them the means of greatly annoying our trade; and in the former wars, the celebrated Suffrein went thither after his actions, to refit and revictual his ſhips; ſince which time the French do not ſeem ignorant of its importance. According to Mr. Barrow's account, this ſtation is admirably fitted to ſeaſon troops; ſince it is very healthy, proviſions are cheap and plentiful, and a few months' reſidence there enables ſoldiers to bear the Indian climate extremely well. Very convenient drafts were recently made from our force at the Cape, to Egypt and India; and the expedition under ſir Home Popham is ſaid not to have loſt a man by ſickneſs.

Conſidered as a naval ſtation, a fleet at this port may very cheaply be provided with beef, wine, and ſpirits. It is a convenient place for ſhips in diſtreſs; always neceſſary as a half-way houſe for tranſports carrying out raw ſoldiers to the Eaſt Indies; and it enabled our fleet to clear the Indian Sea of privateers. As for geographical advantages, the poſition of the Cape throws a vaſt weight into the ſcale of its importance to England. Its happy ſituation, with regard to climate, and the productions of the ſoil, ſtamp its value as a depoſitory of troops and ſeamen; and its relative poſition on the globe enhances that value by the ready communication it commands with almoſt every part of the world. We have ſeen during a former war, with what expedition more than two thouſand troops were thrown from hence into India, to the very walls of Seringapatam; and, on another occaſion, twelve hundred effective men into Egypt. With equal facility and diſpatch could the ſame, or a greater, number, have been conveyed to the eaſt coaſt of North America, the Weſt India iſlands, or the weſt coaſt of South America. At a month's notice, the whole coaſt of Brazil could be lined with cruizers from the Cape. The whole eaſtern coaſt of Africa, and the various iſlands contiguous to it, are at the mercy of whatever power holds the Cape; and the large iſland of Madagaſcar may be approached in ten or twelve days, thoſe of France and Bourbon in much leſs than a month, the Red Sea in five or ſix weeks, and the coaſts of Malabar and Coromandel in ſeven or eight weeks.

Theſe paſſages undoubtedly depend much on the ſeaſon of the year in which they are to be made, but when this is properly choſen, the different places may be arrived at within the periods here mentioned.

If, at any time, troops ſhould be wanted in the Weſt Indies, the homeward-bound Eaſt-Indiamen might be employed to tranſport them thither from the Cape, without retarding their paſſage more than ſixteen or twenty days, as the common practice of croſſing the line is now as far to the weſtward as twenty-ſix degrees of weſt longitude. Detachments of Hottentot corps might be well calculated for ſervice in the Weſt India iſlands. Should, at any future period, the French reſume their projects on India by the Red Sea, in three months from the time it was firſt known in England, a force from the Cape might be in poſſeſſion of the ſtraits of Babelmandel, and, by thus anticipating, completely fruſtrate their deſigns; but which, with the Cape in their poſſeſſion, or in that of the Dutch, they would eaſily accompliſh.

With reſpect to the Hottentots as ſoldiers, a very favourable idea is given by captain Percival in his account of the ſettlement of Good Hope recently publiſhed, and which has been peruſed with pleaſure. He ſtates as follows:—"When I firſt ſaw the corps of Hottentots in our ſervice, and converſed with the Engliſh officers who had an opportunity of knowing them, and the qualities they poſſeſſed, as well as the ſtate they were capable of being brought to, I had reaſon to conceive a very favourable opinion of the diſpoſition, as well as the talents, of a Hottentot. This corps formed a regiment, upwards of ſeven hundred ſtrong, many of them fine, active, and ſoldier-like, men; they ſeemed well diſciplined, and many exhibited a pride in their gait, that would do credit to an European ſoldier. They ſeemed much attached to the Engliſh; and ſhould the Cape ever fall permanently into the hands of Great Britain, thoſe people, under proper management, may ſpeedily arrive at a great degree of civilization. Their induſtry may be excited, and be turned to produce the moſt important advantages to the colony. By inſtructing them in the arts of huſbandry, by accuſtoming them to a mild and equitable treatment, by granting them thoſe rights which ought to be common to the whole human race, although barbarouſly withheld from them by the Dutch; the Hottentots would ſpeedily be allured from the remote parts and wilds of the interior of Southern Africa, to colonize the country nearer the Cape. The progreſs of civilization would ſoon inſpire thoſe already in the colony with confidence in themſelves, as a people who have a certain part to act in life, and recover them from that ſtate of utter degradation to which they have been reduced; while the knowledge of the comforts of life, and the means by which they are to be procured, would ſtimulate them to exertions of which they are at preſent incapable."

Mr. Barrow diſcuſſes the importance of the Cape of Good Hope, conſidered in a commercial point of view, and as a depôt for the Southern whale fiſhery. In its preſent condition, it is of very little importance to any nation, conſidered with reſpect to the articles of commerce it ſupplies for exportation to foreign markets. The ſurplus produce, beyond the ſupply of its own inhabitants, a garriſon, and navy of eight or ten thouſand men, and the refreſhments furniſhed to ſhips trading and caſually calling there, is ſo trifling as to merit no conſideration. But, by a new ſyſtem of things, it is certainly ſuſceptible of great improvement; and the ſupply of the moſt important articles might be extended to an almoſt indefinite amount.

It is further to be remarked, that though the ſugar-cane grows ſpontaneouſly at the Cape, the Dutch have never attempted to manufacture either ſugar or rum: yet both of theſe commodities might be produced in this part of Africa with greater facility than in the Weſt Indies. Every European nation acknowledges the importance of the Weſt India iſlands, from the two great ſtaple commodities of ſugar and rum. How much blood has been ſhed between the different powers in the conqueſt and attainment of them; while numberleſs lives have fallen victims to the unhealthy climate. Properties to an immenſe amount, conſiſting of large plantations of ſugar-canes, have often been deſtroyed in one night by furious hurricanes and tornadoes. Inſects and vermin deſtroy another great proportion; while the heat is ſo intolerable, that the planter cannot overſee his own works, much leſs aſſiſt by any exertion of his own. Thoſe diſadvantages are however ſtill borne up againſt from the value of the ſugar and rum which they afford. The Cape labours under none of thoſe diſadvantageous circumſtances. Though it is ſometimes ſubject to violent winds, yet they never ariſe to that degree as the tornadoes in the Weſt Indies, nor are their conſequences to be at all compared. The climate is mild, temperate, and healthy; the ſoil clean, and not ſubject to thoſe weeds and other obſtructions uſually found in tropical climates, which ſuddenly ſpring up and choak the tender plants. Inſects and vermin do but little damage compared to what is experienced in other parts of the world which can afford the ſame produce. The planter here can ſtand the whole day expoſed to the ſun without any ill conſequences, and can aſſiſt with his own bodily labour, if his circumſtances require it, or inclination prompt him. When the ſugar-cane grows ſo well ſpontaneouſly, it is ſurely capable of being brought to much more perfection by the care and culture of man. The Dutch, in exculpation of their own want of enterpriſe, allege that it would require more ſlaves than they can afford, or would riſk introducing into the colony; and that thoſe already in their poſſeſſion are only ſufficient for their houſhold and domeſtic purpoſes. Theſe reaſonings with regard to foreign ſlaves may hold good; but there is a ſtill greater benefit to be derived from entirely evading that objection, and employing the Hottentots and other natives of the interior as huſbandmen and ſervants. By theſe means the valuable articles in queſtion might be raiſed, and at the ſame time the natives brought to a degree of civilization and to habits of induſtry; from which comfort to themſelves and wealth to their employers would ſpeedily ariſe.

The colony of Good Hope is alſo capable of producing great quantities of tobacco; however, very little is exported, though it is ſaid to be good, when duly prepared, as that of Virginia. As all male perſons, old and young, ſmoke in this colony, and as American tobacco generally bears a high price, the conſumption of that of native growth is conſiderable. The inferior ſort is uſed by ſlaves and Hottentots. The total value of every kind of colonial produce, exported in four years, from 1799 to 1802, amounted to no more than 300,925 rix-dollars, or 60,185l. currency. The goods imported from England into the Cape during the ſame period, conſiſted of woollen cloths, Mancheſter goods, hoſiery, haberdaſhery, and millinery, boots, ſhoes, and hats, cutlery, iron tools, ſtationary, bar and hoop iron, ſmiths' coals, houſehold furniture, paint and oils, earthen ware, naval ſtores, tongues, hams, cheeſe, and pickles; and from India and China were imported Bengal, Madras, and Surat, piece-goods, tea, coffee, ſugar, pepper, ſpices, and rice. The Americans brought thither lumber, cargoes of deal plank, ſtaves, balk, ſalt-fiſh, pitch, turpentine, &c.; and the Danes, Swedes, and Hamburgh ſhips, aſſorted cargoes of iron, plank, French wines, beer, gin, Seltzer water, coffee, preſerves, pickles, &c. in exchange for refreſhments, to defray the charges of repairs and other neceſſaries, or for money to carry to India or China. The whole importation into the Cape by Britiſh or foreign bottoms, from Europe, Aſia, and America, in four years, including the value of the prize goods brought in, and of the

ſlaves

ſlaves imported within the ſame period, amounted to 5,977,535 rix-dollars 7 ſk. or 1,195,507l. 3s. 6d. currency. Thus we ſee how great the balance of trade is againſt the colony.

The revenues of the colony are derived from the following ſources; viz. land revenue ariſing from rents of the colonial farms belonging to the government, which are in number 1974; places for grazing cattle taken by the month, and ſalt-pans; duties on grain, wine, and ſpirits, levied at the barrier; transfer duty on ſale of immoveable eſtates; duty ariſing from the ſale of buildings on loan farms; public vendue duty; fees received in the ſecretary's office on regiſtering the transfer of property; cuſtoms; port fees; poſtage of letters; ſeizures, fines, and penalties; licences to retail wine, beer, and ſpirituous liquors; intereſt of the capital lent out through the loan-bank; and duty ariſing from ſtamped paper. The whole amount of this revenue in 1801 was 90,142l. 13s. 4d. This revenue is applied to the payment of ſalaries on the civil eſtabliſhment, the expences of the ſeveral departments, the repairs of government buildings, and the contingencies and extraordinaries of the colony; and during the government of lord Macartney, the revenue was more than adequate to the expenditure.

The members of the court of juſtice at the Cape are choſen out of the burghers of the town. The fiſcal, who is the public accuſer in criminal matters, and the ſecretary of the court, are the only perſons poſſeſſed of legal knowledge. The office of fiſcal, one of the moſt important in the colony, conſiſted under lord Macartney's eſtabliſhment, of the principal and a deputy, a clerk, two bailiffs, two jailors, eight conſtables, and nineteen Malays. The whole expence to government was under 10,000 rix-dollars; the court of juſtice and ſecretary's office amounted to about the ſame ſum; ſo that the adminiſtration of juſtice coſt the government about 4000l. ſterling a-year. The court of commiſſaries for trying petty ſuits, not exceeding 40l. and for matrimonial affairs, or granting licences, conſiſts of a preſident, vice-preſident, and four members, whoſe ſituations are honorary and biennial. The "Weeſkammer," or chamber for managing the effects of minors and orphans, is one of the original inſtitutions of the colony, and it is managed by a preſident and four members, a ſecretary and ſeveral clerks. For the ſupport of this inſtitution, all orphan property, paſſing through the chamber, ſuffers a reduction of 7½ per cent. upon the capital.

The eſtabliſhed religion of the colony is Calviniſm, or the reformed church. Other ſects are tolerated; the Lutherans have a church; a Methodiſt chapel has been lately built; the Moravians have a church; but the Malay Mahometans, being refuſed a church, perform their public ſervice in the ſtone quarries at the head of Cape-town. The clergy are ſuitably provided for, and generally reſpected; and they rank next to the preſident of the court of juſtice in town, and the landroſt in the country. Beſides their clerical duties, they have alſo the direction of the funds for the relief of the poor; which are raiſed by weekly donations at church, by legacies, and by the ſums which the church demands on the emancipation of ſlaves. The amount of the funds belonging to the reformed church in Cape Town, in 1798, was 22,168l. 8s. 8d. and the ſubſiſtence granted to the poor was 1112l. 17s. The funds of the Lutheran church were 14,829l. 13s. 2d. and the relief granted to the poor 194l. 9s. 2d.

The citadel or caſtle is a regular pentagon fort, with two ravelins and ſome other outworks, ſurrounded by a wet ditch: but it is ſo injudiciouſly ſituated, that though it commands the town and part of the anchorage, it is itſelf commanded by the ground riſing from it in a ſlope to the Devil's hill, which therefore renders it indefenſible. This ſlope is now occupied as high as the commencement of the perpendicular rocky ſide of the Devil's hill, by various redoubts, batteries, and block-houſes, commanding each other, and the advance ground to the caſtle, all of which were added by general ſir James Craig. He alſo made ſome other important additions to the fortifications of this place. Fort Knokke is connected with the citadel by a rampart drawn along the ſhore, called the *ſea lines*, defended by ſeveral batteries, mounted with heavy guns, and furniſhed with ovens for heating ſhot. Within theſe lines is a powder magazine and a long range of low buildings that were converted by the Engliſh into a general hoſpital, with lodgings for the inſpector, ſtore-keeper, and apothecary to the forces. On the weſt of Table Bay are three ſtrong batteries, viz. the Rogge-Bay battery, the Amſterdam battery, and the Chavonne battery, all the guns of which bear directly upon the anchorage. There is alſo a ſmall battery, called the *Mouille*, commanding the entrance of the bay. A little farther, on a ſmall ſandy cove, a work is thrown up with a few light guns and a heating furnace, for preventing a landing at this place, which is further impeded by three anchors fixed acroſs the inlet. At Camp's Bay, on the weſtern coaſt of the peninſula, there are alſo a few ſmall batteries, and a military poſt on the height above it, directly between the Table Mountain and the Lion's Head. An army landing here, and at Three Anchor Bay, might take the town and all the batteries in their rear; or, by a more important movement, might get poſſeſſion of the Lion's Rump, from whence, with a few howitzers, the town and citadel, and the ſtrong batteries on the weſt ſide of Table Bay, would be completely commanded. This hill has the very great advantage of not being commanded by any other point. Sir James Craig propoſed to erect a citadel on this eminence, with ſuitable appendages and accommodations, which would, in his opinion, be ably defended in time of war by 1200 men; and would render the town, the batteries, and the caſtle, untenable by an enemy, all of which might be totally deſtroyed from this height in twenty-four hours.

Beſides the caſtle and the forts, the public buildings of Cape Town are, a large and well conſtructed barrack for two thouſand men; a quadrangular building with an area in the centre, where the government ſlaves are lodged to the number of about four hundred; the reformed church, which is a ſpacious and neat ſtructure; the Lutheran church; the town-houſe; the court of juſtice; and a theatre. The Cape of Good Hope is ſituated in S. lat. 34° 29′. E. lon. 18° 23′ 15″. Cape Town is in S. lat. 33° 55′ 42″ E. lon. 18° 23′ 15″.

GOOD-MA'NNERS, *ſ.* Polite behaviour.—*Good-manners* is ſuch a part of good ſenſe, that they cannot be divided; but that which a fool calleth good-breeding is the moſt unmannerly thing in the world. *Marq. of Halif.*

GOOD' NOW, *interj.* In good time; *à la bonne heure.* A gentle exclamation of intreaty. *It is a low word:*

Good-now, ſit down, and tell me, he that knows,
Why this ſame watch? *Shakeſpeare.*

A ſoft exclamation of wonder.—*Good-now, good-now*, how your devotions jump with mine! *Dryden.*

GOOD'-WIFE, *ſ.* Miſtreſs of a houſe, but below a gentlewoman:

By this had chanticleer the village cocke
Bidden the *good-wife* for her maids to knocke. *W. Browne.*

It ſerves the maiden female crew,
The ladies and the *good wives* too. *Suckling.*

GOODE'NIA, *ſ.* [ſo named by Dr. Smith, preſident of the Linnæan Society, from the Rev. *Samuel Goodenough*, L.L.D. F.R.S. treaſurer of the Linnæan Society, author of Obſervations on the Britiſh Species of Carex, &c.] In botany, a genus of the claſs pentandria, order monogynia, natural order of campanulaceæ, *Juſſ.* The generic characters are—Calyx: perianthium five-leaved; leaflets equal, awl-ſhaped, erect, permanent. Corolla: one-petalled, ſuperior; tube cloven on the upper ſide from

from the top to the bottom; limb five-cleft; ſegments equal, obovate, directed forwards. Stamina: filaments five, ſhorter than the tube, and projecting through its fiſſure; antheræ linear, vertical, two-celled. Piſtillum: germ inferior, five-angled; ſtyle ſimple, longer than the ſtamens, and ſtanding out with them; ſtigma cup-ſhaped, ciliated. Pericarpium: capſule two-celled, two-valved, burſting at the top, and becoming revolute; the partition, which is parallel to them, remaining erect. Seeds: ſeveral in each cell, imbricated, lenticular.—*Eſſential Character.* Corolla longitudinally cloven on the upper ſide, expoſing the organs of fructification; border five-cleft, leaning one way; antheræ linear; ſtigma cup-ſhaped, ciliated; capſule two-celled, two-valved, with a parallel partition; ſeeds many, imbricated.

This genus ſhould be inſerted between Scævola and Cinchona in the Linnæan ſyſtem, and between Cyphia and Scævola in that of Juſſieu. It differs eſſentially from Scævola in its fruit; from Cyphia in its corolla; and from Lobelia in its ſtamens. Dr. Smith has given this new and moſt diſtinct genus the name of *Goodenia*, in honour of his worthy friend the Rev. Dr. Goodenough. In the conſtruction of this name he has followed the example of Tournefort, in forming *Gundelia* from Gundelſcheimer. Dr. Goodenough's name might however have been ſoftened into *Goodenovia*, without being either too long, or offending a delicate ear. Theſe plants are all natives of New South Wales, about Port Jackſon. See Linn. Tranſ. ii. 346–349.

Species. 1. Goodenia ovata, or ovate yellow goodenia: leaves ovate, toothletted-ſerrate, both they and the corollas ſmooth; fruit linear. Stem ſhrubby, erect, angular, branched, leafy. Leaves alternate, varying a little in breadth, acute, ſerrated with fine ſharp ſpreading unequal teeth, of a bright green, veiny, ſmooth on both ſides, paler beneath: flowers yellow, from three to five in a dichotomous panicle, ariſing ſolitary from each axil of the uppermoſt leaves, and above half as long as the correſponding leaf: germ long, ſlender, ſmooth: ſtyle ſmooth: ſtigma large, bent down towards the ſtamens, finely ciliated: capſule oblong, crowned with the calyx: ſeeds roughiſh, encircled with a groove. This plant is in the garden of the duke of Northumberland at Sion, and was preſented in flower, on the 4th of December 1792, to the Linnæan Society, by Mr. Thomas Hoy, one of the fellows.

2. Goodenia albida, or white-flowered goodenia: leaves obovate, toothed, both they and the corollas ſmooth; ſtyle and ſtem hairy. Gathered by John White, eſq. ſurgeon, at Port Jackſon.

3. Goodenia paniculata, or panicled yellow goodenia: leaves obovate-lanceolate, toothed, both they and the corollas hairy; ſtem almoſt naked, panicled. Gathered at the ſame place, by Mr. David Burton.

4. Goodenia bellidifolia, or daiſy leaved yellow goodenia: leaves obovate, toothletted, fleſhy; ſtem almoſt naked, ſpiked; corolla hirſute on the outſide; fruit four-valved. Found at the ſame place by John White, eſq.

5. Goodenia ſtricta, or rigid blue goodenia: leaves lanceolate, entire or toothed, fleſhy, ſmooth; corolla hirſute on the outſide; ſtigma contracted at the mouth. This grows naturally in marſhy ground at Port Jackſon, flowering there in October, and was found by the ſame gentleman.

6. Goodenia ramoſiſſima, or branching blue goodenia: leaves linear-lanceolate, ſomewhat toothed, both they and the ſtem hiſpid; ſtyle very hirſute at the top; corolla hairy on the outſide. Stem herbaceous, two or three feet high, much branched and ſtraggling, round, rough with ſhort ſtiff hairs, as are alſo the leaves. Flowers ſolitary, terminating the branches, and appearing in October. Found by John White, eſq. at Port Jackſon.

7. Goodenia heterophylla, or various-leaved goodenia: leaves entire, toothed or lobed, hairy; fruit roundiſh; corolla almoſt naked. 8. Goodenia hederacea, or trailing goodenia: leaves roundiſh, entire or five-lobed; corolla woolly on the outſide; ſtem proſtrate. Natives of the ſame place, and found by the ſame gentleman. We do not yet know the colour of their flowers.

9. Goodenia lævigata, or ſmooth goodenia: leaves ovate-lanceolate, toothed, ſmooth. Stems round, ſmooth, green below, purpliſh above. Leaves alternate, on foot-ſtalks gradually widening into them, ſomewhat ovate, deeply toothed, of a full bright green. Flowers axillary, forming a thin ſpike, ſeſſile, pale violet, having a peculiar, rather an unpleaſant ſmell. This was raiſed by Mr. Curtis in the ſummer of 1793, from ſeeds brought over in ſpecimens of earths from Botany Bay by captain Tench to Samuel Tolfrey, eſq. It flowers from July to October.

Propagation and Culture. Theſe plants muſt be raiſed from ſeeds brought from their native country. When once obtained, they may readily be increaſed from cuttings. They are not very tender, but may be preſerved in the dry ſtove, or a good glaſs caſe.

GOODLA'CK, *interj.* Implying wonder or admiration.

GOOD'LINESS, *ſ.* Beauty; grace; elegance.—She ſung this ſong with a voice no leſs beautiful to his ears, than her *goodlineſs* was full of harmony to his eyes. *Sidney.*

GOOD'LUCK BAY, a bay in the Straits of Magellan. Lat. 53. 26. S. lon. 74. 33. W. Greenwich.

GOOD'LY, *adj.* Beautiful; graceful; fine; ſplendid.—Rebekah took *goodly* raiment of her eldeſt ſon Eſau, and put them upon Jacob. *Gen.* xxvii. 15.—There was not among the children of Iſrael a *goodlier* perſon than he. 1 *Sam.* ix. 2.

How full of ornaments is all I view
In all its parts! and ſeems as beautiful as new:
O *goodly* order'd work! O power divine!
Of thee I am, and what I am, is thine! *Dryden.*

Bulky; ſwelling; affectedly turgid:

Round as a globe, and liquor'd every chink,
Goodly and great he falls behind his link. *Dryden.*

Happy; deſireable; gay.—We have many *goodly* days to ſee. *Shakeſpeare.*

GOOD'LY, *adv.* Excellently. *Obſolete:*

There Alma, like a virgin queen moſt bright,
Doth flouriſh in all beauty excellent;
And to her gueſts doth bounteous banquet dight,
Attemper'd *goodly* well for health and for delight. *Spenſ.*

GOOD'LYHOOD, *ſ.* Grace; goodneſs. *Obſolete:*

But mote thy *goodlihood* forgive it me,
To meet which of the gods I ſhall thee name. *Spenſer.*

GOOD'MAN, *ſ.* A ſlight appellation of civility: ſometimes ironical. A ruſtic term of compliment; gaffer.—Nay, hear you, *goodman* delver. *Shakeſpeare.*

But ſee the ſun-beams bright to labour warn,
And gild the thatch of *goodman* Hodge's barn. *Gay.*

Maſter.—If the *goodman* of the houſe [οἰκοδεσποτης] had known what hour the thief would come, he would have watched. *Luke*, xii. 39.

The *goodman* of this houſe was Dolon hight,
A man of ſubtill wit and wicked minde. *Spenſer.*

GOODNA'TURE, *ſ.* Complacency of mind; philanthropy. A very accurate diſtinction is made in Knight's "Principles of Taſte," between *goodnature*, and *goodhumour*; and, as theſe words are often indiſcriminately uſed, we ſhall ſubjoin the definitions: "Thoſe perſons, who are moſt prone to laughter, and moſt ready to enjoy every kind of ſocial pleaſantry or ridicule, without reflecting at whoſe expence it is indulged, are commonly called *goodnatured*; while thoſe, on the contrary, who ſhow no ſuch diſpoſition, but who chill with grave looks, or check with moral obſervations, the mirth, which a gay circle is deriving from a ludicrous diſplay of the follies and foibles

foibles of a perſon, whom they, perhaps, all reverence and eſteem, are as commonly ſtyled *moroſe, ſour, illnatured, fellows*. But in this caſe we confound two qualities, which are extremely different, *goodnature*, and *goodhumour*. *Goodnature* is that benevolent ſenſibility of mind which diſpoſes us to feel both the happineſs and miſery of others; and to endeavour to promote the one, and prevent or mitigate the other: but, as this is often quite impoſſible, and as ſpectacles of miſery are more frequent and obtruſive than thoſe of bliſs, the goodnatured man often finds his imagination ſo haunted with unpleaſant images, and his memory ſo loaded with diſmal recollections, that his whole mind becomes tinged with melancholy; which frequently ſhows itſelf in unſeaſonable gravity, and even auſterity of countenance and deportment; and in a gloomy roughneſs of behaviour; which is eaſily miſtaken for the ſour moroſity of the worſt ſpecies of malignant temper. *Goodhumour*, on the contrary, is that prompt ſuſceptibility of every kind of ſocial or feſtive gratification, which a mind void of ſuffering or ſorrow in itſelf, and incapable, through want of thought or ſenſibility, of feeling the ſufferings or ſorrows of others, ever enjoys. A certain degree of vanity, or light pride, is abſolutely neceſſary to feed and ſupport it; and, though it is never allied to dark envy or atrocious malignity, it is never entirely free from a certain ſhare of ſordid ſelfiſhneſs: for, as the perpetual ſmile of gaiety can only flow from the heart which is perpetually at eaſe, it can only flow from *that* which carries the ingredients of perpetual eaſe always within itſelf; and theſe are affections, which never diverge far from its own centre."

GOODNA'TURED, *adj.* Benevolently diſpoſed.—In all domeſtic relations he was *goodnatured*. *Cheſterfield*.

GOOD'NESS, *ſ.* Deſireable qualities either moral or phyſical; kindneſs; favour.—I take *goodneſs* in this ſenſe, 'the affecting of the weal of men,' which is that the Grecians call *philanthropia*. *Bacon*.—There is a general or natural *goodneſs* in creatures, and a more ſpecial and moral *goodneſs*. *Perkins*.—The *goodneſs* of every thing is meaſured by its end and uſe. *Tillotſon*.

GOODS, *ſ.* Moveables in a houſe. Perſonal or moveable eſtate.—This hinders nothing the proceedings of the civil courts, which reſpect the temporal puniſhment upon body and *goods*. *Leſley*.

That a writ be ſu'd againſt you,
To forfeit all your *goods*, lands, tenements. *Shakeſpeare*.

Wares; freight; merchandiſe:

Salee, that ſcorn'd all pow'r and laws of men,
Goods with their owners hurrying to their den. *Waller*.

"GOODS ill gotten ſeldom proſper."

The Latins ſay, *Mala lucra æqualia damnis*. The Greeks, Κατα κερδεα ιζ' ατησιν. The Italians, *Vien preſto conſumato l'ingiuſtament acquiſtato*. The French, *De mal eſt venu l'agneau, et à mal retourne le peau*. The Germans, *Nebel gewohnen, nebel geronnen*. A very ancient, and a very impreſſive proverb, calculated to inſtil into every mind the neceſſity as well as advantage of being honeſt.

GOOD'WIN (John), a learned Engliſh divine, of the Arminian ſect, born in 1593. His academical education he received at Queen's-college, in Cambridge; and after he was admitted into orders, was much admired for the erudition and elegance which diſtinguiſhed his pulpit compoſitions. In 1633 he was preſented to the vicarage of St. Stephen, Coleman-ſtreet, London; from which he was ejected in 1645, for nonconformity with the canons of the church. He afterwards became miniſter to a private congregation in Coleman-ſtreet pariſh, where he continued until his death in 1665, when about ſeventy-two years of age. He was the author of numerous works, which diſplay conſiderable learning; among which are, 1. Redemption Redeemed, 1651, folio. 2. The Divine Authority of the Scriptures, 1648, 4to. 3. *Imputatio Fidei*; or, A Treatiſe of Juſtification, 1642, 4to. 4. An Expoſition of the Ninth Chapter of the Epiſtle of Paul to the Romans, 1653, 4to. 5. Of being filled with the Spirit, 4to. 6. The Pagan's Debt and Dowry, 8vo. 7. A Catechiſm, or Principal Heads of the Chriſtian Religion; and, 8. A Treatiſe for Infant Baptiſm, 1655, 4to.

GOOD'WIN (Thomas), an eminent Engliſh nonconformiſt divine, born at Rolesby in Norfolk, in the year 1600. He was ſent at an early age to Chriſtchurch-college, Cambridge, where he applied with ſuch diligence to his ſtudies, as to attract much notice in the univerſity. In 1619 he removed to Catharine-hall, in the ſame univerſity, of which he became afterwards a fellow. It is uncertain when he entered into orders; but we find that he was choſen lecturer of Trinity church, in Cambridge, in 1628; and that he was preſented by the king to the vicarage of the ſame church in 1632. Becoming, however, diſſatisfied with the terms of conformity, he relinquiſhed his preferments, and quitted the univerſity in 1634. When afterwards the puritans were perſecuted by the epiſcopal conſiſtories, he was one of thoſe who in the year 1639 fled into Holland, to enjoy liberty of conſcience; where he became paſtor of an independent congregation at Arnheim. About the beginning of the long parliament he returned to England, and was choſen paſtor of a church in London, and alſo a member of the aſſembly of divines. He became a favourite with Cromwell, through whoſe influence he was in 1649 appointed preſident of Magdalen-college, Oxford. He attended Cromwell on his death-bed; on which occaſion he was overheard by Dr. Tillotſon to expreſs himſelf, boldly and enthuſiaſtically confident of the protector's recovery. Soon after the reſtoration he was diſmiſſed from his preſidentſhip, when he returned to London, and continued the exerciſe of his miniſtry till his death, in 1679, in the eightieth year of his age. He was the author of numerous ſermons, expoſitions, pious and controverſial treatiſes, &c. ſome of which were printed in his lifetime, and afterwards inſerted in the collection of his works publiſhed after his death, in five volumes folio, which continue to be much read and eſteemed by calviniſtic independents.

GOOD'WIN, or GOD'WIN, duke of Weſſex, and earl of Kent, in the reign of Edward the Confeſſor; for whoſe hiſtory and intriguing character, ſee the article ENGLAND, vol. vi. p. 555, 556.—To which it might be intereſting here to add the account given of this nobleman by the ancient hiſtorian Lambert: "There lived in the time of king Edward called the Confeſſour a noble man named Goodwine, whoſe daughter Edgithe the ſame king took unto wife; by reaſon whereof, not only this Goodwine himſelfe (being at the firſt but a couheard's ſonne, and afterwards advaunced to honour by king Canutus, whoſe ſiſter by fraude he obtained to wife) became of great power and authoritie within this realme; but his ſonnes (who being five in number) were, by the king's gyfte, advaunced to large livelyhoodes and honourable poſſeſſions—for Goodwine was earle of Kent, Suſſex, Hamſhire, Dorſetſhire, Devonſhire, and Cornwall. But as it is hard in great proſperitie to keepe due temperance, for *ſuperbia eſt vitium rebus ſolenne ſecundis*, ſo this man and his ſonnes, being puffed up with pride of the king's favour, their own power, pollicie, and poſſeſſions, contemned all other, and forgate themſelves; abuſing the ſimplicitie of the king by evil council, treading under foote the nobilitie by great diſdaine, and oppreſſing the common people by inſatiable rapine, extortion, and tirannie; ſo that, immediately and at once, they pulled upon their heads the heavie diſpleaſure of the prince, the immortale hatred of the noblemen, and the bitter execration and curſe of the common ſorte. And, amongſt other things, touching the judgements upon Goodwine himſelf, they feyned, that he was choked at Wincheſter with a morſel of bread, and that his land in Kent (now the Goodwine ſands) ſunk ſodainely into the

the ſea. Ealred, the abbot of Ryuauxe, who tooke paynes to pen the hyſtorie, ſaith, 'that while the king and Goodwine ſate at the table, accompanied with others of the nobilitie, it chaunced the cup-bearer as he brought wyne to the board to ſlip with the one foote, and yet, by good ſtrength of his other legge, to recover himſelf without falling; which thing the earle earneſtly marking, ſayde, pleaſantly, "that there one brother had well helped another." "Marry," quoth the king, "ſo might me mine, ne haddeſt thou been, earle Goodwine" —(caſting in his diſhe the murder of his brother Alfred, which was done to death at Elie by the counſell of Goodwine, as hereafter, in fitte place for it, ſhall appear). Thereat the earle was ſore moved; and, thinking it more than time to make his purgation, tooke a morſell of bread into his hand, and praying, with great and vehement obteſtation, that it might choke him if he, by any means, cauſed the ſlaughter or conſented thereto, he put the bread into his mouth, and was immediately ſtrangled therewithall.'

GOOD'WIN SANDS, a bank in the ſea, near the coaſt of Kent, ſaid to have been formerly part of the eſtate of earl Goodwin; till, by neglect of preſerving the dikes and walls, the whole was drowned by the ſea. They lie oppoſite the town of Deal, at the diſtance of about five miles, extending north-north-eaſt and ſouth-ſouth-weſt about four leagues. They were overflowed about the end of the reign of William Rufus, or the beginning of that of Henry I. as appears by the account given of them by William Lambard, in his "Perambulation of Kent," written in the year 1570, which is as follows: "Silveſter Giraldus, (in his Itinerarie of Wales,) and many others, doe write, that, about the end of the reigne of king William Rufus, or the beginning of Henrie the Firſt, there was a ſodaine and mightie inundation of the ſea, by the which a great part of Flaunders, and of the lowe countries there-about, was drenched and loſt, ſo that many of the inhabitants (being thereby expulſed from their ſeates) came over into England, and made ſuite to the ſame king Henrie, for ſome place of dwelling within his dominions. The king, pitying their calamitie, and ſeeing that they might bee profitable to his realme, by inſtructing his people in the art of clothing, wherein at that time they chiefly excelled, firſt placed them about Carliſle in the north countrie, and afterwards (upon cauſe) removed them to Roſſe and Hauerford in Wales. Now at the ſame time that this happened in Flaunders, the like harme was done in ſundrie places, bothe of England and Scotland alſo; as Hector Boethius, the Scottiſhe hyſtoriographer, moſt plainly writeth, affirming, that, amongſt others, this place, being ſome tyme of the poſſeſſion of the earle Goodwine, was then firſt violently overwhelmed with a light ſande, wherewith it not only remaineth covered ever ſince, but is become withall (*nanum ſurges et vorago*) a moſt dreadful gulfe, and ſhippe ſwalouer."—This large tract of land was defended from the ſea by a great wall, the maintaining of which in good and ſufficient repair to reſiſt the impetuoſity of the waves, was ſuch as to require the moſt conſtant and regular attention. Theſe ſands break off the force of the ſea on the eaſt and the ſouth and ſouth-weſt, ſo as to make the Downs a tolerable road; but when the wind blows very hard at ſouth-eaſt or at eaſt-by-north and eaſt-north-eaſt, ſhips are frequently driven from their anchors, and are either forced on theſe ſands, or obliged to run for Sandwich Bay or Ramſgate Pier.

The Goodwin ſands conſiſt of two parts, called the North and South ſands; of theſe, the latter half lies nearly from north-north-eaſt to ſouth-ſouth-weſt towards the South Foreland, and the northern half lies nearly north and ſouth, but rounds a little on the eaſt ſide, and is in moſt places ſteep, having indifferent good ſhoaling at the north end. This ſand, by ſtorms and ſtrong tides, partially alters every year; it is very broad, and a great part of it dries, but moſt to the north end. In coming in or going out of the Downs, a ſhip ſhould come no nearer to the Goodwin Sands than thirteen fathoms. Their extent is known by the diſtance from the North to the South Sand Head; and a ſhip will be abreaſt of the latter, when Upper Deal Mill and Warner Caſtle are in one, and abreaſt of the North Sand Head when the North Foreland bears at north-weſt-by-weſt. Ships that will work well may turn to twelve or fourteen fathoms all along the back of the Goodwin; and if the water ſhoals on the other tack, it may be depended on as the Falls.

A general obſervation has been made of all ſands which dry or become nearly ſo at the ebb, with reſpect to the currents and tides near them. The firſt part of the flood and the laſt part of the ebb will regularly ſet as the edge of the ſands lies; the ſecond part of the flood and ebb will ſet bodily over ſuch ſands to the lee-tide channels; and the laſt part of the flood and firſt part of the ebb, will ſet nearly as the regular tide does. But if the ſands curve, as ſoon as the ends are under water, the young flood and correſponding ſtate of the ebb will ſet over the different ends into the curve, and on the other ſide run as the ſands lie. It is obſervable, for example, that the firſt of the flood on the Goodwin Sand ſets ſtrong over the South Sand Head into the bight to the Bunt Head, and out again over the North Sand Head; that the middle of the flood ſets more over the ſand for the Gull Stream; and that the laſt of the flood ſets nearly regular for the Foreland. And as to the ebb, it ſets nearly regular for the South Foreland; the middle more for the Gulls; and the laſt over the North Sand Head for the Bunt, and out again over the South Sand Head. The depth of the channel alſo has been obſerved to be nearly as follows: that a little without the Flemiſh Banks there is from eighteen to twenty fathoms, and towards the Goodwin from twenty-ſix to thirty, but the nearer to the Goodwin the deeper, and when a ſhip is thwart of the Goodwin in from twenty-eight to twenty-nine fathoms, ſhe is not two gun-ſhot from it.

GOOD'Y, *ſ.* [corrupted from *good wife*.] A low term of civility uſed to mean perſons.

Plain *goody* would no longer down;
'Twas madam in her grogram gown. *Swift.*

GOOD'YSHIP, *ſ.* The quality of goody. *Ludicrous*:

The more ſhame for her *goodyſhip*.
To give ſo near a friend the ſlip. *Hudibras.*

GOOLDS, or GOLD, a word uſed by Spenſer for the corn-marygold, or CHRYSANTHEMUM ſegetum. See vol. iv. 568.

GOOLE, [*goulet*, Fr.] A breach in a ſea-bank or wall; or a paſſage worn by the flux and reflux of the ſea. 16 and 17 *Car.* II. *c.* 11.

GOOLL, a river of Hindooſtan, which runs into the Taptee, eight miles ſouth of Chuprah.

GOOM'TY, a river of Hindooſtan, which runs into the Ganges, fifteen miles north-north-eaſt of Benares.

GOOND'WANAH, a diſtrict of circar of Hindooſtan, in the northern part of the country of Berar, now more generally called Nagpour.

GOORACPOUR', a town of Hindooſtan, in the country of Oude: ſixty-five miles eaſt of Fyzabad. Lat. 26. 45. N. lon. 83. 35. E. Greenwich.

GOOSE, *ſ.* plural, *geeſe*; [ȝoȝ, Sax. *goes*, Dutch; *gawe*, Erſe, ſing. *gewey*, plural.] A large water-fowl. For its natural hiſtory, and various ſpecies, ſee the article ANAS, vol. i. p. 516.

Nor watchful dogs, nor the more wakeful *geeſe*,
Diſturb with nightly noiſe the ſacred peace. *Dryden.*

A tailor's ſmoothing iron.—Come in, tailor: here you may roaſt your *gooſe*. *Shakeſpeare.*

GOO'SE, a game with dice, uſually played by two perſons; but it will readily admit of many more. It

is

is of German invention, and is well calculated to make children ready at reckoning the produce of two given numbers. The table for playing at *gooſe* is uſually about the ſize of a ſheet almanac, and divided into ſixty-two ſmall compartments arranged in a ſpiral form, with a large open ſpace in the midſt marked with the ber ſixty-three; the ſmaller compartments have ſingly an appropriate number from one to ſixty-two incluſive, beginning at the outmoſt extremity of the ſpiral lines. It is played with two dice, and every player throws in his turn as he ſits at the table; he muſt have a counter, or ſome other mark which he can diſtinguiſh from the marks of his antagoniſts; and according to the amount of the two numbers thrown upon the dice he places his mark, that is to ſay: if he throws a four or a five, which amount to nine, he places his mark at nine upon the table, moving it the next throw as many numbers forward as the dice permit him, and ſo on until the game be completed; namely, when the number ſixty-three is made *exactly*; all above it the player reckons back and then throws again in his turn. It is called the game of the *gooſe*, becauſe at every fourth and fifth compartment in ſucceſſion a *gooſe* is depicted, and if the caſt thrown by the player falls upon a gooſe, he moves forward double the number of his throw.—There is likewiſe the game of *ſnake*, and the more modern game of *matrimony*, with others of a ſimilar kind formed upon the ſame plan as that of the gooſe; but none of them appear in the leaſt improved by the variations.

WINCHESTER GOOSE, a ſwelling or tumour in the groin; an old name for a venereal bubo, ſo called, becauſe the biſhop of Wincheſter had the licenſing of the ſtews and brothels in Southwark, in former times.

GOOSE CREE'K, a river of North America, which falls into Potowmac river, about a mile ſouth-eaſt of Thorpe, in Fairfax county, Virginia.

GOO'SE-FOOT, *ſ.* in botany. See CHENOPODIUM.

GOO'SE-GRASS, *ſ.* in botany. See GALIUM APARINE, and ASPERUGO.

GOOSE I'SLAND, a ſmall iſland in the Gulf of St. Laurence, near the coaſt of Labrador. Lat. 50. 52. N. lon. 52. 10. W. of Greenwich.

GOOSE LA'KE, a lake of North America. Lat. 52. 25. N. lon. 59. 10. W. Greenwich.

GOOSE-TONGUE *ſ.* in botany. See ACHILLEA.

GOO'SEBERRY, *ſ.* in botany. See RIBES.

GOO'SEBERRY ISLANDS, ſmall iſlands near the eaſt coaſt of the iſland of Newfoundland: eight leagues north-weſt of Cape Bonaviſta.

GOO'SEBERRY ROCKS, rocks near the coaſt of the ſtate of Maſſachuſetts: two miles north of Marblehead.

GOO'SECAP, *ſ.* A ſilly perſon.

GOO'TY, a town and fortreſs of Hindooſtan, and capital of a diſtrict of the ſame name, in the Myſore country: 138 miles weſt-north-weſt of Mellore, and 170 north of Seringapatam. Lat. 15. 15. N. lon. 77. 48. E. of Greenwich.

GOP'LO, a lake of Poland, in the palatinate of Brzeſc, ſixteen miles long, and four wide: twenty-four miles weſt of Brzeſc.

GROP'PINGEN, a town of Germany, in the circle of Swabia, and duchy of Wurtemberg, ſituated on the Fils, or Vils, in a fertile country. Here are conſiderable manufactures of woollen goods; and near it is a medicinal ſpring: twenty-two miles eaſt-ſouth-eaſt of Sturtgart, and twenty north-north-weſt of Ulm.

GOR, a town of Perſia, in the province of Farſiſtan: fifty-ſeven miles north-weſt of Schiras.

GORAGOT', a town of Hindooſtan, in the country of Bengal: ſixty miles eaſt of Maulgah, aud eighty north-north-eaſt of Moorſhedabab.

GOVAN'TO', a town of Aſiatic Turkey, in the province of Caramania: eighty miles ſouth-weſt of Satalia.

GORBA'RA, a town of the iſland of Corſica: eight miles north-eaſt of Calvi.

GORBA'TA, a town of Africa, in the kingdom of Tunis: twenty miles ſouth of Gaſſa.

GORBATOV', a town of Ruſſia, in the government of Nizegorod, on the Oka: twenty-eight miles weſt-ſouth-weſt of Niznei-Novgorod. Lat. 56. 5. N. lon. 61. E. Ferro.

GOR'BELLY, *ſ.* [from ɣoɲ, dung, and *belly*, according to *Skinner* and *Junius*. It may perhaps come from *gor*, Welſh, beyond, too much; or, as ſeems more likely, may be contracted from *gormand*, or *gorman's belly*, the belly of a glutton.] A big paunch; a ſwelling belly. A term of reproach for a fat man.

GOR'BELLIED, *adj.* Fat; bigbellied; having ſwelling paunches.—Hang ye, *gorbellied* knaves, are you undone? No, ye fat chuffs, I would your ſtore were here. *Shakeſpeare.*

GOR'CUM, a town of Holland, ſituated on the river Linge, at its union with the Wahal. It was anciently called *Gorichem*, which name is now given it in all public acts, Gorcum being only a corruption. It was built in 1230, by one of the lords of Arckel, of which country it is the capital; with a caſtle, which was deſtroyed by the citizens, in 1578, during the revolution. From the ſteeple of the principal church, may be ſeen twenty-two walled cities, beſides a great number of towns and villages; before the revolution it had one pariſh church, and three religious houſes. The city was governed by two burgomaſters, an officer called Droſſart or grand baily, and ſeven echevins, who are choſen by the common council, and changed every year. The comte de Lumay, after he had taken Gorcum for the States, in 1572, put to death nineteen prieſts and other religious people, with the moſt cruel torments, cutting off their noſes and their ears, and then hanging them in a row near the Brill; to the credit of the prince of Orange and the States, he was diſgraced; he died a few years after at Liege, from the bite of a mad dog. Twelve miles eaſt of Dort, and thirty ſouth of Amſterdam. Lat. 51. 51. N. lon. 22. 25. E. Ferro.

GORD, *ſ.* An inſtrument of gaming. *Warburton.*—Thy dry bones can reach at nothing now but *gords* and ninepins. *Beaumont and Fletcher.*—Let vultures gripe thy guts; for *gords* and Fulham holds. *Shakeſpeare.*

GORDELI'ZA, a town of Spain, in the province of Leon: twenty-two miles ſouth-ſouth-eaſt of Leon.

GOR'DES, a town of France, in the department of the Mouths of the Rhone, and chief place of a canton, in the diſtrict of Apt: five leagues and a half eaſt of Avignon, and three weſt of Apt.

GORDIÆ'I, in ancient geography, mountains in Armenia, where the Tigris riſes, ſuppoſed to be the Ararat of ſcripture.

GOR'DIAN, or GORDIA'NUS, I. II. and III. Roman emperors. See the article ROME.

GOR'DIAN, *adj.* [from the *Gordian* knot.] Intricate:

Cloſe the ſerpent fly
Inſinuating wove with *Gordian* twine
His braided train. *Milton.*

GOR'DIAN KNOT, in antiquity, a knot made in the harneſs of the chariot of Gordius king of Phrygia, ſo very intricate, that no one could untie it. See the article GORDIUS.

GORDIA'NUS, M. Antonius Africanus, father and ſon, diſtinguiſhed and illuſtrious Roman emperors; for an account of whom ſee the article ROME.

GOR'DIUM, a town of Phrygia. *Juſtin.*

GOR'DIUS, a Phrygian, who, though originally a peaſant, was raiſed to the throne, and proclaimed king. During a ſedition the Phrygians conſulted the oracle, and were told that all their troubles would ceaſe as ſoon as they choſe for their king, the firſt man they met going to the temple of Jupiter, mounted on a chariot or car. Gordius was the object of their choice, and he immediately conſecrated his chariot in the temple of Jupiter. The knot which tied the yoke to the

draught tree, was made in such an artful manner, that the ends of the cord could not be perceived. From this circumstance, a report was spread that the empire of Asia was promised by the oracle to him that could untie the Gordian knot. Alexander in his conquest of Asia, passed by Gordium; and as he wished to leave nothing undone, which might inspire his soldiers with courage and make his enemies believe that he was born to conquer Asia, he cut the knot with his sword; and from that circumstance asserted that the oracle was really fulfilled, and that his claims to universal empire were fully justified. *Justin.*

GOR'DIUS, *s.* [so named from the Gordian knot, because of its nimble and numerous contortions.] In helminthology, the HAIRWORM; a genus belonging to the order of intestina; the characters of which are: body round, filiform, equal, and smooth. Five species have been ascertained, which are as follow:

1. Gordius aquaticus: body pale, brown, with dark extremities. This inhabits stagnant waters, and is mostly from four to six inches long; it twists itself into numerous contortions and knots, and if incautiously handled will inflict a bite at the end of the fingers, and occasion the complaint called a whitlow. See a correct figure of this worm in the engraving, at fig. 6. A much larger variety of this species is found on the sea-shores, called *Gordius marinus.* Several of these have been taken up on the coast of Devonshire, and an account of them published in the 7th volume of the Linnæan Transactions in 1804, as follows: "They are of so prodigious a length, that it is impossible to fix any bounds; some of the fishermen say thirty yards, but perhaps as many feet is the utmost: those specimens which have come under our inspection did not appear to exceed twenty feet, and more commonly from eight to fourteen or fifteen. If the animal be wounded, or the body divided, small threads of milky appearance issue from the wound, and do not mix with the water without agitation. The expansion and contraction are so unlimited, that it is scarcely possible to ascertain the utmost length of this worm: one, which was esteemed to be about eight feet long, was put alive into spirits, and instantly contracted to about one foot, at the same time increasing double the bulk, which originally was about the diameter of a crow's quill. In the vast exertion of the muscles, the animal is generally divided at those parts which had been twined into knots. This worm is very difficult to preserve perfect without contraction; for, if suffered to die in its natural element, one part will decay, while the other is alive; and the addition of any thing offensive produces contraction; even fresh water.—This worm, under the name of *Gordius medinensis,* has been often confounded with the *dracunculus,* or worm that enters the cuticle, and lies between that and the muscles; but for which see the article FILARIA, vol. vii. p. 366, and the correspondent engraving.

2. Gordius argillaceus: body uniformly yellowish: found in clay at the bottom of stagnant waters, which it pierces through; and is hardly distinguishable from the preceding.

3. Gordius filum: body filiform, whitish, and hyaline: found in the bark of old wooden pipes which have been placed in the ground for the purpose of conveying streams of water; it is extremely slender, and a little tapering at one end.

4. Gordius lacteus: body uniformly white, and opake: found in stagnant waters: when touched it contracts itself in a moment, and afterwards expands.

5. Gordius arenarius: body fulvous, and obtuse. This inhabits the sandy bottom of Christian's Bay, in Norway.

GOR'DON (Alexander), a learned writer of the eighteenth century; a native of Scotland. He was successively secretary to the Society for the Encouragement of Learning, to the Egyptian Club, and to the Antiquary Society. At length he accompanied governor Glen to Carolina, where he occupied various posts in the province, and received a grant of land. He died in that country after publishing the following works: 1. *Itinerarium Septentrionale,* or a Journey through most Parts of Scotland, 1726, folio. 2. Additions and Corrections to the above; containing an Account of Roman Antiquities in Scotland, and ancient Monuments in the North of England, 1732, folio. 3. The Lives of Pope Alexander VI. and his Son Cæsar Borgia, 1729, folio. 4. A complete History of ancient Amphitheatres, translated from the Italian, 1730, 8vo. 5. An Essay towards explaining the hieroglyphical Figures on the Coffin of a Mummy, 1737, folio. 6. Twenty-five Plates of all the Egyptian Mummies in England, and other Egyptian Antiquities, 1739, folio.

GOR'DON (Andrew), professor of philosophy in the Scots monastery of the Benedictines at Erfurt, and correspondent of the Academy of Sciences at Paris, born near Aberdeen in Scotland, in 1712. In 1731 he undertook a tour through Austria, Italy, and France; and on his return in 1732, he entered into the order of the Benedictines in the Scots monastery, where he applied to philosophy, and got himself ordained a priest. In 1735 he went to Salzburg to study law, and at the same time attended the theological lectures, till he was invited to Erfurt, in 1737, to be professor of philosophy. His discoveries in electricity made his name well known, not only in Germany, but also in Holland, England, France, and Italy. He was invited to be superintendant of the Zaluski library, in Poland; but this offer he declined, and died in August 1751. Besides his occasional and controversial writings, he was author of the following works: 1. *Phenomena Electricitatis exposita; Erfurt,* 1744, 8vo. 2. *Philosophia utilis & jucunda; Stadt am Hof.* 1745, 3 vols. 8vo. 3. Impartial Account of the Origin of the present War in Great Britain; Strasburgh, 1745, 4to. 4. *Physicæ experimentalis Elementa; Erfurt,* 1751, 8vo. He is mentioned by Dr. Priestley as the first person who used a cylinder instead of a globe in the electrical apparatus.

GOR'DON (James), a Jesuit, born in 1553, and entered into that order when he was twenty one years old. He was the author of a Commentary upon the Bible, which he published at Paris in 1632, in 3 vols. folio, under the title of, *Biblia Sacra, cum Commentariis ad Sensum Literæ, & Explicatione Temporum, Locorum, Rerumque omnium quæ in Sacris Codicibus habent Obscuritatem: unâ cum Textu Biblico;* which Dupin pronounces it to be a very useful and judicious work. He was likewise the author of, 2. *Opus chronologicum, Annorum Seriem, Regnorum Mutationes & Rerum Ordo Orbe gestarum Narrationem a Mundi Exordio usque ad Annum Christi* 1617 *complectens;* 1617, folio. 3. A System of moral Theology; and other works in the Latin language.

GOR'DON (Thomas), a distinguished writer, born at Kirkudbright in Scotland. After receiving an academical education in his own country, he came to London, and maintained himself by teaching the learned languages. He also interested himself in the politics of the time, and was employed by the earl of Oxford in queen Anne's reign. When the Bangorian controversy took place, he wrote two pamphlets in defence of bishop Hoadley. He was afterwards connected with Mr. Trenchard in the publication of Cato's Letters, and The Independent Whig. Besides his political works, Gordon made himself known by translations of Tacitus in 1739, and of Sallust in 1743, with discourses relative to the subjects of each author prefixed. He died at the age of sixty-six.

GORDO'NA, a town of Italy, in the kingdom of Naples, and province of Molise: six miles south-west of Molise.

GORDO'NIA, *s.* [so named from Mr. *James Gordon,* an eminent nurseryman at Mile-end, near London.] LOBLOLLY BAY; in botany, a genus of the class monadelphia,

nadelphia, order polyandria; or claſs polyandria, order monogynia; natural order columniferæ, (malvaceæ, *Juſſ.*) The generic characters are—Calyx: perianthium (double; outer four-leaved, deciduous; *Cavan.*) inner five-leaved; leaflets roundiſh, concave, (ciliate, *Withering*,) permanent. Corolla: petals five, obovate, concave, large, united at the baſe, (one of them ciliate, *W.*) Stamina: filaments numerous, filiform, coaleſcing at the baſe into an obtuſe body, (campanulate, with a five-cleft border, *W.*) anthers oval, upright. Piſtillum: germ ovate. Style ſhort, five-cornered; (cylindric, *W.*) ſtigmas five, ſharp, horizontal. (Stigma five-cornered, *W.*) Pericarpium: capſule ovate, ſharp, five-celled: cells bifid half-way, five-valved. Seeds: two, with a leafy wing on one ſide. (Seeds in two rows in each cell. *L'Herit.*)—*Eſſential Character.* Calyx, five-leaved; petals, five; united at the baſe by means of the nectary; filament, inſerted into the nectary; capſule, ſuperior, five-celled; ſeeds winged.

Theſe are ſhrubs with flowers ſolitary from the axils. In habit they differ ſomewhat from the Malvaceous tribe, and they have no ſtipules, but the corcle or heart of the ſeed is furniſhed with corrugated lobes. The filaments not being united at bottom, but only inſerted into the nectary, theſe ſhrubs do not properly belong to the claſs Monadelphia, but to that of Polyandria.

Species. 1. Gordonia laſianthus, or ſmooth loblolly bay: leaves leathery, ſmooth on both ſides, flowers peduncled. Cateſby deſcribes the loblolly bay as a tall and very ſtraight tree, with a regular pyramiddal head, and adds that the leaves are ſhaped like thoſe of the common bay, but are ſerrated. Swartz ſays it is a low tree, with a white, ſoft, brittle wood; the leaves ovate-lanceolate, flat, ſomewhat leathery, of a duſky green colour. According to Mr. Miller, the ſtem is five or ſix feet high, and branched; the leaves four inches long, and one inch and a half broad in the middle, ſlightly indented on their edges, and of a thick conſiſtence; the flowers axillary, on very long peduncles; the petals are yellow and thick; the ſtamens are joined at their baſe to the ſtyle, and form a ſhort column, but ſpread open at top, filling the mouth of the tube. Native of North America. Introduced about 1768, by Benjamin Bewick, eſq. It flowers in Auguſt and September. Dr. Dale ſent ſeeds of it to Mr. Miller from South Carolina, and he raiſed plants from them.

2. Gordonia pubeſcens, or pubeſcent loblolly bay: leaves pubeſcent beneath, flowers ſubſeſſile. Branches ſubpubeſcent. Leaves as in the foregoing, but with the lower ſurface very ſoftly tomentoſe. Flowers axillary, ſolitary, ſeſſile towards the tops of the branches. Native of South Carolina; flowers in September. It has been long in the open air in the garden at Trianon in France; but, like the reſt of the trees and ſhrubs from South Carolina, not very patient of cold. The flowers are white, but they come out ſo late, that the froſt deſtroys them before they expand.

3. Gordonia Franklini, or Franklin's Gordonia: leaves ſmooth, flowers ſeſſile, fruits globular. This beautiful tree-like ſhrub riſes with an erect trunk to the height of about twenty feet, with alternate branches. Leaves oblong, narrowed towards the baſe, ſerrate, alternate, ſeſſile or ſubſeſſile. Flowers towards the extremity of the branches, ſolitary, ſitting cloſe in the boſom of the leaves, often five inches in diameter when fully expanded; petals ſnow-white, the lower one hollow, formed like a cap or helmet, entirely including the other four, until the moment of expanſion; its exterior ſurface is covered with a ſhort ſilky hair; the borders of the petals are curled or plaited. Fruit, a large, round, dry, woody, pericarp, opening at each end oppoſitely by five alternate fiſſures, containing ten cells, each filled with dry woody cuneiform ſeeds. Capſules umbilicate, with the partitions in the middle of the valves. Seeds very many, lying over each other in two rows, in each cell, obſcurely cornered, ſomewhat like thoſe of the cypreſs, ſlightly edged at the corners. Native of South Carolina and Georgia. Not having yet flowered in Europe, it is doubtful whether this ſpecies belongs to the genus Gordonia or Stuartia. As far as can be judged from ſpecimens, it rather appertains to the latter. It has the habit and calyx of the former, but the inſertion of the ſtamens, and the manner of flowering, are the ſame as in Stuartia; the capſule alſo agrees rather with the latter, but the ſeeds are in two rows, edged however at the corners, not winged as in Gordonia. The flowers have the fragrance of a China orange. It was firſt obſerved by Mr. John Bartram on the Alatamaha river in Georgia, in the year 1760; and was brought into Pennſylvania fifteen years after, by his ſon William Bartram.

Propagation and Culture. The loblolly bay, growing naturally in water, is not kept alive in this country without difficulty. Mr. Miller raiſed ſeveral plants, which continued till winter, but not one of them ſurvived, though he placed ſome of them in the ſtove, and ſupplied them well with water.

GORE, *ſ.* [ȝoꝛe, Sax. *gór*, Welſh, ſanious matter.] Blood effuſed from the body:

Another's crimes the youth unhappy bore.
Glutting his father's eyes with guiltleſs *gore*. *Dryden.*

Blood clotted or congealed:

His horrid beard and knotted treſſes ſtood
Stiff with his *gore*, and all his wounds ran blood. *Denham.*

In heraldry; one of the abatements of honour, two diagonal lines croſſing one another. In old records; a narrow piece of land, a ſlip of ground. A ſlanting piece ſewed on to a garment in order to widen it.

To GORE, *v.a.* [ȝebeꝛian, Saxon.] To ſtab; to pierce.

No weaker lion's by a ſtronger ſlain;
Nor from his larger tuſks the foreſt boar
Commiſſion takes his brother ſwine to *gore*. *Tate.*

To pierce with a horn.—Some toſs'd, ſome *gor'd*, ſome trampling down he kill'd. *Dryden.*

He idly butting, feigns
His rival *gor'd* in every knotty trunk. *Thomſon's Spring.*

GORE's ISLAND, an iſland in the North Pacific Ocean. Lat. 60. 40. N. lon. 172. 30. W. Greenwich.

GOREE', or GOEREE, an iſland in the German Ocean, near the mouth of the Meuſe, about ten miles in circumference: two miles north of Schowen. Lat. 51. 49. N. lon. 20. 26. E. Ferro.

GOREE', a ſeaport town in the iſland of the ſame name, ſituated near the eaſt coaſt, on a canal which communicates with the Meuſe, formerly a place of conſiderable trade; but the harbour is now choaked up with ſand: ſix miles weſt of Helvoetſluys.

GOREE', a ſmall iſland in the Atlantic, near the coaſt of Africa, about two miles in circumference, within a cannon ſhot of the ſhore. Notwithſtanding its ſituation, the air is ſaid to be cool and temperate all the year round, and the inhabitants refreſhed by alternate breezes from the land and ſea. Beſides the multitude of ſurrounding rocks, that render it almoſt inacceſſible, except at two particlar bays, a late director, M. de St. Jean, has embelliſhed the fort with ſeveral new buildings, as well as fortified it by works, which render it a place of great ſtrength. By the diligence of this gentleman, ſeveral fine ſprings, ſo much wanted, have been diſcovered in the iſland: the gardens have been planted with excellent fruit trees: all kinds of vegetables have been raiſed in great abundance; and from a ſmall, barren, and deſpicable, iſland, he has made it one of the ſafeſt, pleaſanteſt, and moſt important, ſettlements on the coaſt of Africa. Goree was ceded to the Dutch, in 1617, by Biram king of Cape Verd, and they immediately ſecured it by a fort, built on a rock to the north-

weſt, to which they gave the name of Naſſau Fort; but, finding that this ſituation did not command the harbour, they erected another fortification, called Orange Fort, ſomewhat nearer the ſhore. This eſtabliſhment they kept till they were driven out by admiral Holmes, in 1663, who placed an Engliſh garriſon in it. Two years after, it was retaken by De Ruyter, when Mr. Abercromby, the governor, and garriſon, were forced to ſurrender priſoners of war. Upon this the Dutch augmented the fortifications, and the iſland enjoyed a perfect tranquillity till 1677, when a French ſquadron, commanded by the count d'Eſtrées, arrived off the harbour, on the 30th of October. Next day, Hapſar, the Dutch governor, was ſummoned to ſurrender, and on his refuſal, the count made preparations to bombard Orange Fort, which obliged the garriſon to evacuate it, and retire to Fort Naſſau, where they expected to capitulate upon honourable terms, though they were ſoon forced to ſurrender at diſcretion. The next year M. du Caſſe arrived at Goree with a forty-gun ſhip, and ſolemnly took poſſeſſion of the iſland in the name of the French Senegal company, and concluded a treaty with the king and negroes of the neighbouring country, on the ſame conditions the Dutch enjoyed while they poſſeſſed the iſland. As this meaſure, which he had taken voluntarily, was approved on his return by the court, he was ſent back the following year in quality of governor, with preſents to the negro kings; and the ſame year this conqueſt was ſecured to the company by the treaty of Nimmegen. No ſooner were the French in full poſſeſſion, than they ſet to work, in repairing and adding new works to both the forts, calling the lower fort Vermandois, and the higher St. Michael. Before the year 1681, ſeveral unſucceſsful attempts were made by the Dutch to recover a place of ſuch importance to trade; but all of them proved abortive. This famous negro ſettlement was taken by the Engliſh in 1758, by a ſquadron under the command of commodore Keppel; and it was for cruelties exerciſed in this garriſon, that governor Wall ſuffered death before Newgate, on the 28th of January, 1802. Lat. 14. 40. N. lon. 17. 30. W. Greenwich.

GO'REY. See NEWBOROUGH.

GO'REY MOUNTAINS, mountains of Ireland, in the county of Donegal: fourteen miles ſouth-weſt of Londonderry.

GOR'GA, a river of Italy, in the kingdom of Naples, which runs into the Liban, in the province of Calabria Citra.

GOR'GAST, a town of Germany, in the circle of Upper Saxony, and Middle Mark of Brandenburg: four miles weſt of Cuſtrin.

GORGE, *ſ.* [French.] The throat; the ſwallow.—How abhorred in my imagination it is: my *gorge* riſes at it. *Shakeſpeare.*

[In architecture.] The narroweſt part of the Tuſcan or Doric capitals, lying above the ſhaft of the pillar, between the aſtragal and the annulets.

[In fortification.] The entrance into a baſtion, or a ravelin, or other out-work. See FORTIFICATION.—A ſtrait or narrow paſſage between hills and mountains.

To GORGE, *v. n.* [*gorger*, Fr.] To fill up the throat; to glut; to ſatiate.—*Gorge* with my blood thy barbarous appetite. *Dryden.*

Nor would his ſlaughter'd army now have lain
On Afric's ſands, diſfigur'd with their wounds,
To *gorge* the wolves and vultures of Numidia. *Addiſon.*

To ſwallow: as, The fiſh has *gorged* the hook.

GOR'GE, a daughter of Œneus king of Calydon, by Althæa daughter of Theſtius. She married Andremon, by whom ſhe had Oxilus, who headed the Heraclidæ, when they made an attempt upon Peloponneſs. *Pauſanias.*—One of the Danaides.

GOR'GED, *adj.* Having a gorge or throat:

Look up a height, the ſhrill-*gorged* lark ſo far
Cannot be ſeen or heard. *Shakeſpeare.*

GOR'GEOUS, *adj.* [*gorgias*, old French. *Skinner.*] Fine; ſplendid; glittering in various colours; ſhowy; magnificent:

O, that deceit ſhould dwell
In ſuch a *gorgeous* palace! *Shakeſpeare.*

GOR'GEOUSLY, *adj.* Splendidly; magnificently; finely.—The duke, one ſolemn day *gorgeouſly* clad in a ſuit all over ſpread with diamonds, loſt one of them. *Wotton.*

GOR'GEOUSNESS, *ſ.* Splendour; magnificence; ſhow.

GOR'GET, *ſ.* The piece of armour that defends the throat:

About his neck a threefold *gorget*,
As rough as trebled leathern target. *Hudibras.*

GOR'GIAS. A man's name. 1 *Mac.*

GOR'GIAS, a celebrated ſophiſt and orator, ſurnamed *Leontinus*, becauſe born at Leontium in Sicily. He was ſent by his countrymen to ſolicit the aſſiſtance of the Athenians againſt the Syracuſans; and through the force of his eloquence was ſucceſsful in his embaſſy. His reputation was in conſequence prodigious. He was highly venerated in Leontium, his native city; and money was coined with his name upon it. In the latter part of his life he eſtabliſhed himſelf at Athens; and lived till he had attained the great age of one hundred and five years; and after his death, a golden ſtatue was erected in his honour at Delphi. Hermogenes has preſerved a fragment of his writing, from which we ſee ſomething of his ſtyle and manner. It is rather quaint and artificial; full of antitheſis and pointed expreſſion; and ſhews how far the Grecian ſubtilty had at that time carried the exerciſe and ſtudy of their language. He died in the year 400 before Chriſt.

GORGOGLIO'NE, a town of Italy, in the kingdom of Naples, and province of Baſilicata: fifteen miles eaſt of Venoſa.

GORGO'NA, a ſmall iſland in the Mediterranean, about ſixteen miles from the coaſt of Tuſcany; celebrated for the anchovy fiſhery on its coaſts. Lat. 43. 22. N. lon. 27. 41. E. Ferro.

GORGO'NA, an iſland in the Pacific Ocean, about ſix leagues from the coaſt of Peru: ten miles in circumference. Lat. 3. 6. N. lon. 77. 52. W. Greenwich.

GORGO'NES, in mythology, three celebrated ſiſters, daughters of Phorcys and Ceto, whoſe names were Stheno, Euryale, and Meduſa, all immortal except Meduſa. According to the mythologiſts, their hairs were intwined with ſerpents, their hands were of braſs, their body covered with impenetrable ſcales, and their teeth were as long as the tuſks of a wild boar, and they turned to ſtones all thoſe on whom they fixed their eyes. Meduſa alone had ſerpents in her hair, according to Ovid, and this proceeded from the reſentment of Minerva, in whoſe temple Meduſa had gratified the paſſion of Neptune, who was enamoured of the beautiful colour of her locks, which the goddeſs changed into ſerpents. Æſchylus ſays, that they had only one tooth and one eye between them, of which they had the uſe each in her turn; and accordingly it was at the time that they were exchanging the eye that Perſeus attacked them, and cut off Meduſa's head. According to ſome authors, Perſeus, when he went to the conqueſt of the Gorgons, was armed with an inſtrument like a ſcythe by Mercury, and provided with a looking-glaſs by Minerva, beſides winged ſhoes, and a helmet of Pluto, which rendered all objects clearly viſible and open to the view, while the perſon who wore it remained totally inviſible. With weapons like theſe, Perſeus obtained an eaſy victory; and after his conqueſt, returned his arms to the different deities, whoſe favours and aſ-

London. Published as the Act directs. March 29 1806 by J. Wilkes.

ſiſtance he had ſo recently experienced. The head of Meduſa remained in his hands; and after he had finiſhed all his laborious expeditions he gave it to Minerva, who placed it on her ægis, with which ſhe turned into ſtones all ſuch as fixed their eyes upon it. It is ſaid, that after the conqueſt of the Gorgons, Perſeus took his flight in the air towards Æthiopia; and that the drops of blood which fell to the ground from Meduſa's head were changed into ſerpents, which have ever ſince infeſted the ſandy deſerts of Libya. The horſe Pegaſus alſo aroſe from the blood of Meduſa, as well as Chryſaor with his golden ſword. The reſidence of the Gorgons was beyond the ocean towards the weſt, according to Heſiod. Æſchylus makes them inhabit the eaſtern parts of Scythia; and Ovid, as the moſt received opinion, ſupports that they lived in the inland parts of Libya, near the lake of Triton, or the gardens of the Heſperides. Diodorus, and others, explain the fable of the Gorgons, by ſuppoſing that they were a warlike race of women near the Amazons, whom Perſeus, with the help of a large army, totally deſtroyed. *Heſiod.*

GORGO'NIA, a ſurname of Pallas, becauſe Perſeus, armed with her ſhield, had conquered the Gorgon, who had polluted her temple with Neptune.

GORGO'NIA, *ſ.* [Greek; ſo called, from the fable of the Gorgons.] In helmintology, a genus belonging to the order of zoophytæ; the generic characters of which are:—Animal growing in the form of a plant; ſtem coriaceous, corky, woody, horny, or bony, compoſed of glaſſy fibres, ſtriate, tapering, dilated at the baſe, covered with a vaſcular or cellular fleſh or bark, and becoming ſpongy and friable when dry; mouths or florets covering the ſurface of the ſtem, and polype-bearing. Forty-one ſpecies have been aſcertained, which are as follow:

1. Gorgonia ceratophyta: this gorgon grows with branched, divaricate, erect, ſubdiviſions, each marked with two furrows; the polypees or florets are white, placed in irregular rows; fleſh purple; bone black, and horny. It is found in the Mediterranean, Atlantic, and South American, Seas; on rocks and ledges, about a foot high. Its bright purple fleſh, and ſilvery polypees, make a moſt beautiful appearance. See a figure of this in the Gorgonia Plate I.

2. Gorgonia nobilis, the red coral; with ſpread irregular ſlightly-tapering branches; fleſh beautifully red, ſoft, ſlippery, and full of minute pores; bone ſtony, and irregularly ſtriate. It is found on coral rocks in the Mediterranean and Red Sea; is very valuable, and grows to about a foot in height; the pores or florets are irregularly placed, and a little prominent, conſiſting of eight valves, from which proceed the polypees, with eight tentacula. See a correct figure of this ſpecies in the ſame engraving.

3. Gorgonia lepadifera: dichotomous, with crowded imbricate reflected campanulate mouths or florets. Found on rocks in the Norway ſeas, near two feet high; fleſh pale, covered with minute whitiſh ſcales; florets covered with white imbricate ſcales, and have the appearance of ſmall bernacles; ſtem white, with a ſtony baſe and cartilaginous branches.

4. Gorgonia verticillaris: pinnate, branched, with alternate parallel ſubdiviſions covered with verticillate incurved florets. Found in the Mediterranean and North Seas; from two to three feet high: ſtem very brittle, white or yellowiſh, compoſed of layers of a ſhining pearly ſhelly ſubſtance; fleſh covered with white glaſſy ſcales; branches flexile.

5. Gorgonia placomus: branching both ways, with flexuous rarely anaſtomoſing branches covered with conic florets. Inhabits the European and Indian ſeas; two feet high: ſtem erect, woody, yellow, ſcarlet, reddiſh, or cinereous; branches flattiſh, bending irregularly towards each other and rarely uniting; florets ſurrounded at the top with ſmall ſpines.

6. Gorgonia mollis: coriaceous, dichotomous, with perpendicular tubular florets. Found on the rocks of the Mediterranean; nearly a foot and half high: brown-violet, with long ſlender branches and brown ſtem.

7. Gorgonia ſuccinea: round, amber-colour, dichotomous, rigid; the ſtem covered with tubercular gaping florets. This is very rare; about half a foot high, with a teſtaceous ſtem.

8. Gorgonia Americana: branched and ſubdivided; the ſubdiviſions nearly oppoſite, depreſſed with rows of ſuckers on each margin; fleſh yellowiſh, pale purple within; bone horny. Found on the rocks and ſhores in the Weſt Indies; purpliſh, or yellowiſh.

9. Gorgonia exſerta: round, with a few alternate branches; florets alternate, eight-valved; fleſh covered with minute white ſcales; bone browniſh, horny. Found in the Weſt-Indian ſeas; about two feet high; branches long, ſlender, white; polypees with eight tentacula, and exſerted.

10. Gorgonia patula: compreſſed, with flexuous ſubpinnate branches, crimſon; with two rows of florets each ſide, each ſurrounded with a whitiſh ring; bone browniſh, horny. Found on the rocks in various parts of the Mediterranean Sea.

11. Gorgonia juncea: with a very ſimple round ſtem tapering both ways; bone duſky, horny; fleſh orange-colour, with two furrows; florets longiſh. Found on the rocks and ſea-ſhores in the American iſlands; ſometimes adhering to ſtones; about three feet long, and very flexible when alive.

12. Gorgonia antipathes: ſhrubby, with erect alternate panicled branches; bone with flexuous ſtriæ. Found on the rocks in the Indian and Mediterranean ſeas; from two to three feet high; horny, deep gloſſy black, with a grey bark. This affords the moſt beautiful ſmooth black coral of the ſhops; and is repreſented in the Gorgonia Plate II. fig. 1. See alſo the article CORAL, and CORAL ROCKS, vol. v. p. 187–9.

13. Gorgonia muricata: round, with depreſſed, ſubdivided, branches; fleſh firm, whitiſh, covered at the ends with cylindrical ſpinous florets; bone two-edged, blackiſh. Found on rocks and ſtones about the ſhores of the American iſlands; from two to three feet high; coriaceous, horny, with a white medullary nerve. This is repreſented in the Gorgonia Plate II. fig. 2.

14. Gorgonia flammea: compreſſed, branched, and ſubdivided: bone flat, horny; fleſh ſcarlet, covered with minute florets. Found on the ſhores round the Cape of Good Hope; it is of a bright flame-colour.

15. Gorgonia umbraculum: fan-ſhaped, ſubreticulate, with numerous round, divergent, branches; fleſh reddiſh, covered with florets or polypees. It inhabits the Indian Ocean; ſtem ſhort, riſing from a broad baſe, ſending forth two or three thick branches, from which proceed many long ſlender ſmaller ones, all tending to the circumference, and united here and there by ſmaller ſide ones, forming a kind of net-work.

16. Gorgonia purpurea: ſubdichotomous, with divaricate ſlender branches; fleſh violet colour, covered with minute tubercles; round, ſmooth, blackiſh; the ends of the branches yellow. Found on the coaſts of South America; adhering to rocks and ſtones.

17. Gorgonia ſaſappo: dichotomous, round, with divaricate, ſlender, branches; fleſh red, with numerous hairy florets. Found in the Indian Ocean; a foot long; black, horny, and frequently found with bernacles adhering to it.

18. Gorgonia palma: flat, with numerous, very long, ſimple, diviſions; fleſh ſmooth, with ſcattered ſimple pores. This alſo inhabits the Indian Ocean; from two to ſix feet long; brown, horny, covered with a calcareous coat, and flexile.

19. Gorgonia radicata: very much branched, corky, with very minute ſcattered pores, and many-cleft at the baſe. Found on the rocky ſhores of the African ſeas;

ſubdichotomous, grey, of the ſubſtance and appearance of cork, with a branched trunk two inches high.

20. Gorgonia ſuberoſa: woody, very much branched, diffuſe, the branches compreſſed and grooved, and covered with ſubſtellate ſcattered pores. Inhabits the Indian and African ſeas; near three feet high; fleſh red, ſpongy; bone pale red, corky; branches long, round, erect.

21. Gorgonia coralloides: woody, erect, ſubdichotomous and variouſly ſhaped; fleſh roſy, tuberous, with ſtellate tuberculate florets. Found on the rocks in the Mediterranean Sea; near a foot long; pale grey, very tough, with yellow florets.

22. Gorgonia elongata: dichotomous, divaricate, with the fleſh red, and covered with papillous, ſcattered, ſubimbricate, pores, through which the polypees advance their tentacula or feelers. It is found on the rocks of the Atlantic Ocean; pale, brittle; four feet long; branches ſquare, with rows of florets at the angles.

23. Gorgonia ſcirpea: very ſimple, ſtraight, with a decompoſite leafy baſe, and ſoft tuberculate fleſh. This inhabits the Indian ſeas; brown, tapering towards the tip; the fleſh cinereous when dry.

24. Gorgonia ſetacea: ſimple, rigid, with a calcareous, white, ſubtuberculate, fleſh. Inhabits the rocks of the American Ocean; blackiſh.

25. Gorgonia viminalis: very long, depreſſed, branched, with erect ſubdiviſions; fleſh yellow; florets ſeated along each margin of the branches. Inhabits the Mediterranean and Atlantic; above a foot high; branches ſlender; florets or polypees white, with eight tentacula or claws; bone blackiſh, horny.

26. Gorgonia verrucoſa: bifarious, with round flexuous branches, and an orange or yellow calcareous bark, covered with white prominent florets, which are the mouths whereby the animal takes in its food. This inhabits the Mediterranean, Weſt Indian, and Britiſh, ſeas; and is found adhering to rocks and ſtones; ſometimes three feet high or more, and grows in a fan-ſhaped manner; when dry it is of a dirty-white or cinereous colour; bone of a ſubſtance between wood and horn. This is exhibited on the Gorgonia Plate III.

27. Gorgonia anceps: ſlightly branched, with compreſſed ſtem and branches, each with a row of florets along both the margins. Found on the American and Britiſh coaſts; nearly two feet high; fleſh calcareous; bone roundiſh, ſmall at the ends, of a horny leathery texture; when recent it is of a fine violet colour, but when dry yellowiſh or white.

28. Gorgonia craſſa: round, dichotomous, with long, thick, divaricate, erect, branches; fleſh thick, violet-colour, with ſmall, prominent, approximate, equidiſtant, pores; bone dark-brown, and horny. Found on the rocks and ſhores of the Weſt-Indian ſeas; florets with eight tentacula.

29. Gorgonia pinnata: compreſſed and pinnate, with very ſimple branches; fleſh red, with oblong pores. Inhabits the African and North ſeas; from one and a half to four feet high; horny, brown, and yellowiſh on the branches.

30. Gorgonia ſanguinolenta: flat, very much branched and ſubdivided, with yellow bark, and purple pores in double rows. Inhabits the Mediterranean and Atlantic ſeas; a foot high; trunk flat, branched; the branches pinnate, the ſmaller ones often ſubdivided and dichotomous; bone horny; fleſh ſmooth, with numerous minute tuberculate pores diſpoſed in a double row on the margins of the branches.

31. Gorgonia violacea: a little depreſſed, with pinnate branches; bark violet, nearly ſquare, with ſomewhat prominent pores. Found on rocks and ledges in the American ſeas; above a foot long, horny, and often with ſhells adhering to it.

32. Gorgonia ſetoſa: round, pinnate, with diffuſe ſubdiviſions and purpliſh bark. This inhabits the Mediterranean and American ſeas; very upright, nearly two feet high; the old bark often greyiſh or incruſted with a yellowiſh or white calcareous matter.

33. Gorgonia petechizans: ſubdichotomous, very much branched, with a yellow two-grooved bark, covered with red pores. This is a beautiful ſpecies, about two feet high; horny, black, with amber-coloured ramifications.

34. Gorgonia pectinata: round, with parallel, aſcending, ſimple, branches, inclining the ſame way; bark red, with gibbous, ſcattered, pores; bone white, hard, and brittle. This is found on rocks and ſtones on the ſhores of the Eaſt Indian ſeas; the branches all put out from one ſide.

35. Gorgonia abietina: branched and ſubdivided: bark yellow, with rows of purple florets on each ſide; bone horny, yellowiſh. Found on the rocks and ſhores of Africa; about a foot high, and often covered with ſmall bernacles; ſtem flat, with the older branches irregular; the younger ones pinnate.

36. Gorgonia calyculata: branched and ſubdivided, with erect, thick, ramifications, covered with truncate papillæ; fleſh cinereous without, and purpliſh within, furniſhed with large cup-ſhaped florets; bone dark brown, and horny.

37. Gorgonia briareus: with very thick branches, and dilated baſe; fleſh pale-grey without, and whitiſh within; bone compoſed of ſmall purple, glaſſy, needles, irregularly and cloſely diſpoſed longitudinally. Found on the ſhores of the Weſt-Indian iſlands; florets large, prominent, numerous, and irregularly diſpoſed.

38. Gorgonia ventalina: reticulate, with the branches compreſſed externally at the ſides; bark red. This inhabits the Indian Ocean; fleſh black or brown.

39. Gorgonia reticulum: branches reticulate, with very cloſe-ſet ramifications, and red tuberculate bark. This alſo inhabits the Indian Ocean; it is very ponderous, and grey when dead.

40. Gorgonia clathrus: branches reticulate and woody, with round ramifications, and ſmooth bark, covered with ſimple pores. This is only about two palms high; pale, with a thin reddiſh-grey bark.

41. Gorgonia flabellum: beautifully and moſt delicately reticulated, with the branches compreſſed on the inner ſide; bark participating of various ſhades of colours while in a living ſtate; bone blackiſh, horny, and ſlightly ſtriate on the larger branches. This inhabits moſt ſeas, and is often found ſeveral feet high, and expanded into a large fan-ſhaped ſurface; it is flexile, horny, and black; the older bark whitiſh or grey; pores irregularly placed, but generally in the form of a quincunx; trunk and branches pinnate, and by means of the ſmaller branches blending together, forms an elegant kind of net-work; polypees with eight claws.—From the great beauty and delicacy of this ſpecies, it has received the name of VENUS'S FAN; and is correctly figured in the Gorgonia Plate IV.

GORGO'NIAN, *adj.* As if proceeding from Gorgon:

The reſt his look
Bound with *Gorgonian* rigour not to move. *Milton.*

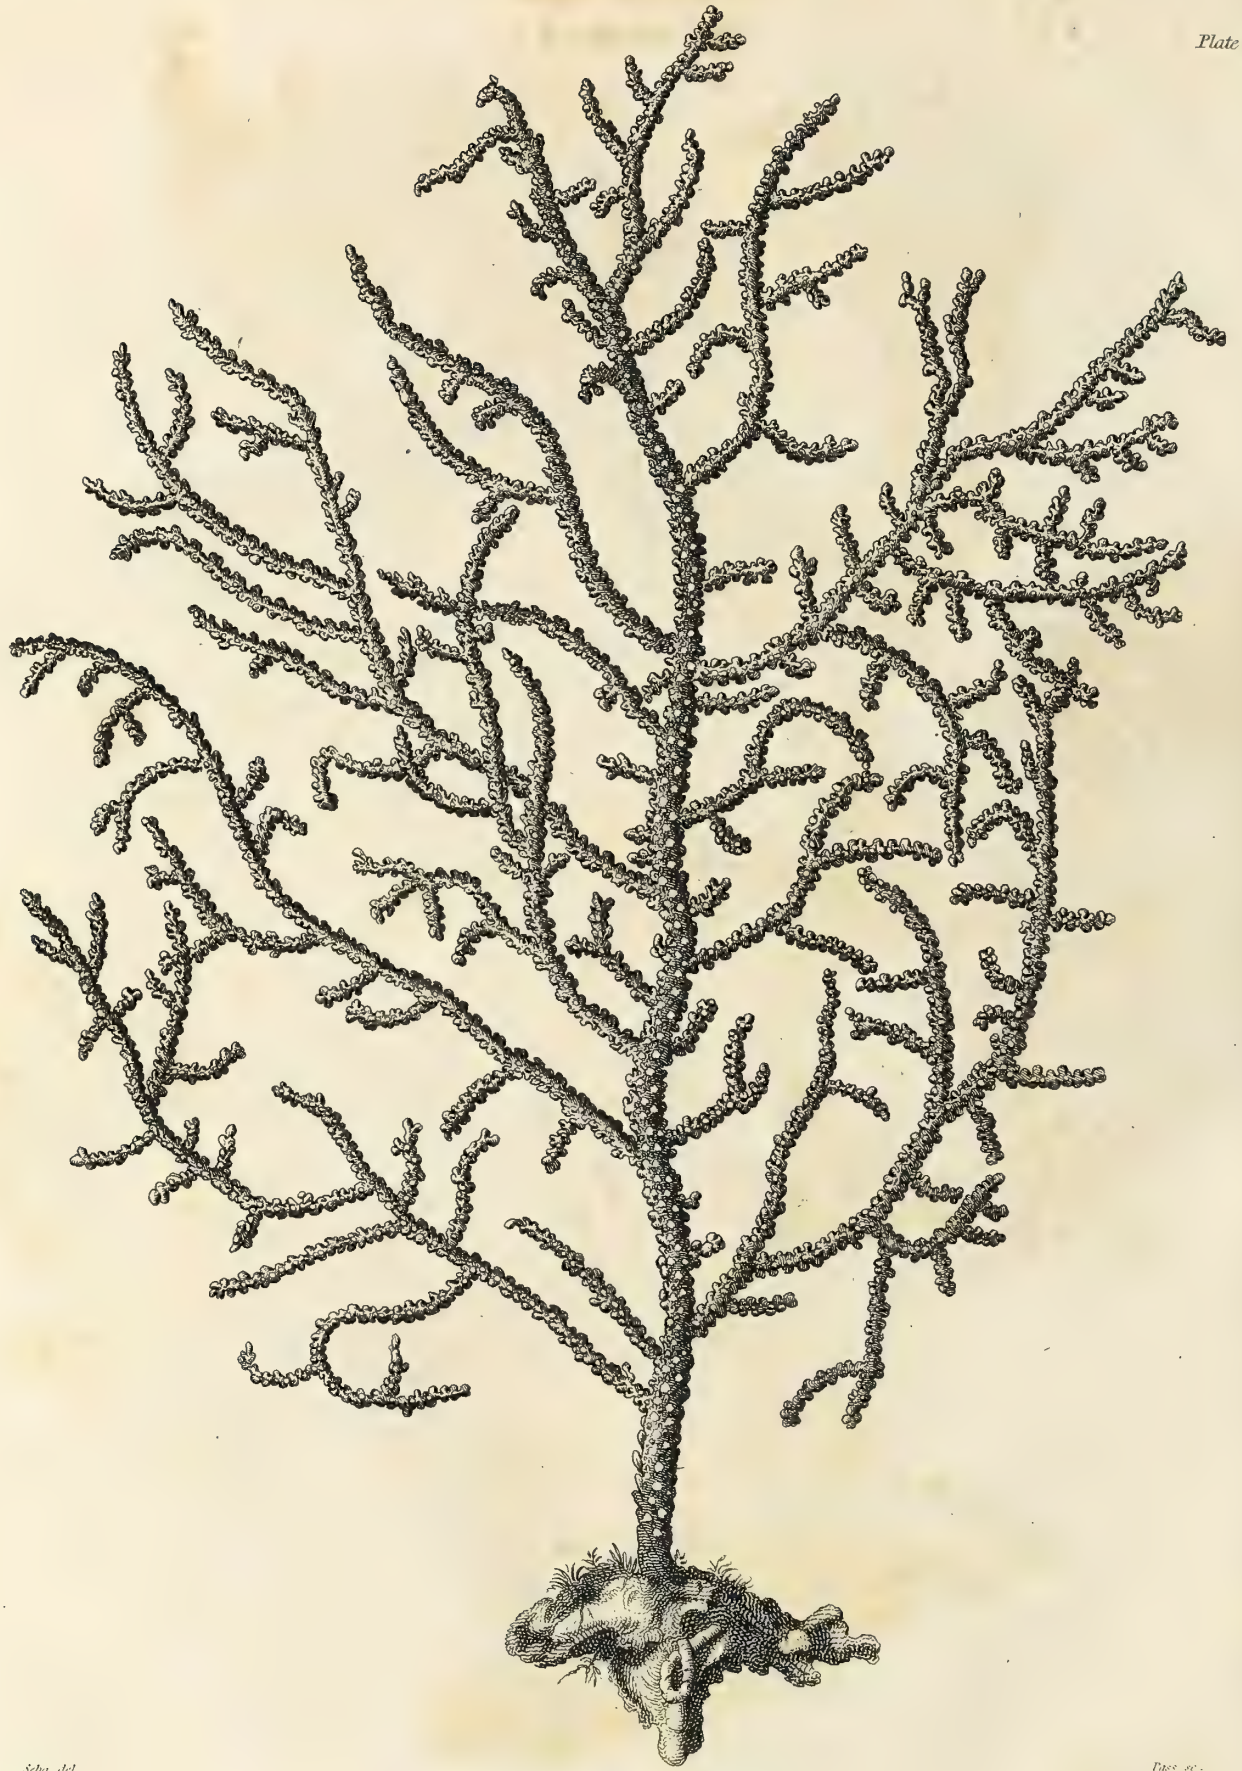
GORGOPH'ONE, a daughter of Perſeus and Andromeda, who married Perieres king of Meſſenia, by whom ſhe had Aphareus and Leucippus. After the death of Perieres, ſhe married Œbalus, who made her mother of Icarus and Tyndarus. She is the firſt whom the mythologiſts mention as having had a ſecond huſband. *Apollodorus.*

GORGOPH'ORA, a ſurname of Minerva, from her ægis, on which was the head of the gorgon Meduſa.

GOR'GORA, an iſland of Abyſſinia, in Lake Dembea, where father Pays built a palace, in which the emperor uſually reſides in the winter: fifteen miles north-weſt of Gondar.

GOR'GUE (La), a town of France, in the depart-

ment



Seba del.

Pass sc.

The Gorgonia Verrucosa.

London, Published as the Act directs, June 28. 1806, by J. Wilkes.

Gorgonia Flabellum, or Venus's Fan.

London, Published as the Act directs, May 3d 1806, by J. Wilkes.

ment of the North: four leagues and a quarter west of Lille, and two and a half south-west of Hazebrouck.

GOR'GUS, the son of Aristomenes the Messenian. He was married, when young, to a virgin, by his father, who had experienced the greatest kindnesses from her humanity, and had been enabled to conquer seven Cretans, who had attempted his life, &c. *Pausanias.*

GORG'WITZ, a town of Germany, in the circle of Upper Saxony, and county of Reus: one mile north-west of Tchleitz.

GORGY'THION, a son of Priam, killed by Teucer. *Homer.*

GOR'HAM, a kingdom of Africa, situated between lat. 10. and 15. N. and lon. 24. and 29. E. Greenwich.

GOR'HAM, a township of the American States, in Cumberland county, Maine, on the north-east side of Saco river, fifteen miles from Pepperelborough at the mouth of the river, and one hundred and thirty miles north-by-east of Boston. It was incorporated in 1764, and contained 2,244 inhabitants.

GO'RIO (Antony-Francis), a learned antiquary of the eighteenth century, born at Florence. He published the following works: 1. *Musæum Florentinum,* or a Description of the Cabinet of the Grand-duke, 11 vols. folio, *Florence,* 1731 to 1764, with a great number of plates. 2. *Musæum Etruscum,* 3 vols. folio, 1737 *& seq.* 3. *Musæum Cortonense,* folio, 1750. 4. Ancient Inscriptions in the Towns of Tuscany, 3 vols. folio, 1727 *& seq.*

GO'RION. See JOSEPH BEN GORION.

GO'RITZ, or GORZ, a county of Germany, in the circle of Austria, bounded to the north, east, and south, by the duchy of Carniola, and on the west by the Venetian States. This county has been invested in the house of Austria from the year 1436, and, with Gradisca, contributes yearly 41,502 florins to the maintenance of the army. The chief produce of the county consists in wine and fruit, with some corn and silk; the horses and oxen are few, but goats numerous. The language of the country is Sclavonian, and the religion Roman catholic. In 1751, it was erected into an archbishopric, which was suppressed in 1784. The town of Goritz is divided into Upper and Lower Town; the former is ancient, situated on a mountain, and defended by a castle; the latter is situated on a plain on the river Lisonzo. Besides the church, which was heretofore metropolitan, it has seven convents, nine chapels, and a college: twenty miles north-north-west of Trieste. Lat. 46. 11. N. lon. 31. 23. E. Ferro.

GO'RITZ, or GORITIA, a city of Germany, situated in the county of the same name, on the river Lisonzo: sixteen miles south-east of Friuli, and one hundred and seventy-six south-south-west of Vienna. It was taken by the French republicans in 1797, with abundance of military stores and clothing. Lat. 46. 12. N. lon. 31. 20. E. Ferro.

GOR'KAH, a country of Asia, between the country of Thibet and the province of Oude.

GOR'KAH, a town of Asia, in the north-east part of the country so called, and the capital of that country, on the borders of Napaul: thirty-five miles north-west of Catmandu, and two hundred north of Benares. Lat. 28. 25. N. lon. 84. 36. E. Greenwich.

GOR'KEM, *s.* A small kind of cucumber.—Take the *gorkems,* or smaller cucumbers, &c. *Evelyn.*

GORLÆ'US (Abraham), a celebrated medallist, born at Antwerp in 1549. Of his history nothing is known, but that he gave himself up entirely to the collecting of ancient medals, seals, rings, and other curious gems; and that he fixed his residence at Delft, where he died in 1609. His works are much valued by those addicted to similar studies. They are, 1. *Dactyliotheca, seu Annulorum Sigillorumque e Ferro, Ære, Argento, atque Auro, Promptuarium, Leyd.* 4to. 1600, several times reprinted. 2. *Thesaurus Numismatum familiarum Roman.* 1608, folio. 3. *Paralipomena Numismatum.* His large and valuable collection was sold to the prince of Wales.

GOR'LITZ, a town of Lusatia, situated on the river Neisse, the second in rank of Upper Lusatia, but the first for size, population, and riches. It contains three churches within the walls, and three without. The principal trade is brewing; with manufactures of woollen and linen cloth: fifty miles west of Dresden, and sixty-eight north of Prague.

GORLIT'ZEN AL'BEN, a mountain of Germany, in the duchy of Carinthia: six miles north of Willach.

GOR'MAND, *s.* [*gourmand,* Fr.] A greedy eater; a ravenous luxurious feeder.—Many are made *gormands* and gluttons by custom, that were not so by nature. *Locke.*

To GOR'MANDIZE, *v. n.* [from *gormand.*] To eat greedily; to feed ravenously:

Thou shalt not *gormandize,*
As thou hast done with me. *Shakespeare.*

GOR'MANDIZER, *s.* A voracious eater.

GOR'MAZ, or ST. ESTEVAN DE GORMAZ, a town of Spain, in Old Castile, on the Duero: two leagues below Borgo d'Osma.

GOR'MES, a town of Germany, in the archduchy of Austria: five miles east-north-east of Ehrnsprunn.

GOROCHOVE'TZ, a town of Russia, in the government of Vladimir, on the Kliazma: seventy-two miles east of Vladimir. Lat. 56. 10. N. lon. 60. 20. E. Ferro.

GORODITS'CHE, a town of Russia, in the government of Penza, thirty-two miles east-south-east of Penza. Lat. 53. 20. N. lon. 64. 20. E. Ferro.

GORODITS'CHE, a town of Russia, in the government of Kiev: 112 miles south-east of Kiev. Lat. 49. N. lon. 50. 40. E. Ferro.

GORODITS'CHE, a town of Russia, in the government of Tobolsk: twenty miles east-south-east of Eniseisk.

GOROD'NIA, a town of Russia, in the government of Tver, on the Volga: twenty miles east of Tver.

GORODNIT'ZSK, a town of Russia, in the government of Tchernigov, on the Snov: thirty-two miles north-north-east of Tchernigov.

GORODOK', a town of Russia, in the government of Poletsk: fifty-six miles east of Poletsk. Lat. 55. 36. N. lon. 47. 40. E. Ferro.

GO'RON, a town of France, in the department of the Mayenne, and chief place of a canton, in the district of Ernée: two leagues and three quarters north-east of Ernée, and three north-west of Mayenne.

GORONTA'LE, or GORONTA'NO, a town on the eastern coast of the island of Celebes.

GOR'NEY, or GUR'NEY, [of *Gournay,* a town in Normandy.] A surname.

GOR'RAN (Nicholas de), a learned French dominican monk in the thirteenth century, native of the province of Maine. He principally resided at Paris, where he taught theology for some time with great reputation. He was a celebrated preacher, and composed a vast number of works, among which were Commentaries upon almost the whole of the Bible. Excepting, however, A Commentary on the Four Evangelists, first published at Cologne in 1537, folio, and some Sermons, printed at Paris in 1509 and 1523, they still remain in manuscript. He died about the year 1295.

GORSE, *s.* [ʒopr, Sax.] Furze; a thick prickly shrub that bears yellow blossoms in winter. See ULEX.

GORS'KIUS (James), a learned Polish catholic divine, born in the province of Massovia. He was educated in the university of Cracow, where he distinguished himself by his proficiency in theology, the languages, and civil and canon law. He filled the chair of professor of law with great reputation, and is spoken of as one of the most illustrious ornaments of that seminary of learning. Besides his post of professor, he was presented

ferred to the archdeaconry of Gnesna; made canon, and archprieſt of Cracow; and vice-chancellor of the univerſity. He died in 1585. Among other works he publiſhed, 1. *Animadverſiones, ſeu Cruſius in Theologos Wittembergenſes, &c.* 2. *De Uſu legitimo Euchariſtiæ.* 3. *De Paſtore.* 4. *De Baptiſmo Prædeſtinatorum.* 5. *Victoria Regis Stephani.* 6. *Præſtantiſſimorum Polonorum Epiſtolæ, Lib. XXX. &c.*

GORT, a town of Ireland, in the county of Galway: ſixteen miles ſouth-ſouth-eaſt of Galway.

GOR'TER (John, M.D.), member of the academy, of ſciences at Peterſburgh, born in 1689, at Enkhuyſen in Weſt Frieſland. In the early part of his life he learned ſurgery, but afterwards applied to polite literature, and made ſuch rapid progreſs, that in the courſe of ſixteen months he was fit to enter on his academical ſtudies, which he did at Leyden in 1709. He diſputed ſeveral times, under the preſidency of Albinus, on phyſiological and pathological ſubjects; and in 1712, after defending a theſis *De Obſtructione*, obtained the degree of doctor of medicine. He then returned to his native place, where he practiſed as a phyſician, and on the death of Van Moor was invited, in 1725, to Harderwyk, to be public lecturer on medicine, and town phyſician. After remaining in this ſituation twenty-nine years, he was invited to Ruſſia, with his ſon David, to be one of the imperial phyſicians at Peterſburgh, to which he repaired in 1754; but he returned to Holland in 1758, and died in 1762. His principal works are, 1. *Tractatus de Perſpiratione inſenſibili Sanctoriana Batavia, Leyden*, 1725, 4to. *cum fig.* 2. *De Secretione Humorum e Sanguine, ex Solidorum Fabrica præcipue & Humorum Indole demonſtrata, ibid.* 1727, 4to. 3. *Compendium Medicinæ: Pars I. De Morbis generalibus, ibid.* 1731, 4to. *Pars II. Therapeuticam exhibens, ibid.* 1737, 4to. 4. *Morbi epidemici brevis Deſcriptio & Curatio, Harderwyk*, 1733, 4to. 5. *Materies Medica Compendio Medicinæ accommodata, exhibens Formulas, in Uſum ſtudioſorum conſcriptas, ibid.* 1733, 4to. 6. *Exercitationes Medicæ quatuor: I. de Motu vitali; II. de Somno & Vigilia; III. de Fame; IV. de Siti; Amſterdam*, 1737, 4to. 7. *Medicina Hippocraticæ, exponens Aphoriſmas Hippocratis, ibid.* 1739–1741, 4to. 8. *Medicina Dogmatica, tres Morbos particulares, Delirium, Vertiginem, et Tuſſim, aphoriſtice conſcriptos & Commentariis illuſtratos, pro Specimine exhibens, Harderwyk*, 1741, 4to. 9. *Chirurgia Repurgata, Leyden*, 1742, 4to. 10. *Praxis Medicæ Syſtema, Harderwyk*, 1750, 8vo. 11. *Formulæ Medicinales cum Indice Virium, ibid.* 1752, 8vo. 12. *Methodus dirigendi Studium Medicum, ibid.* 1753, 4to. 13. *Opuſcula Varia Medico-theoretica, Padua*, 1751, 4to. 14. *Opuſcula Medico-practica, ibid.* 1751, 4to.

GORTE'RIA, *ſ.* [ſo named in honour of *David de Gorter*, author of Flora Zutphanica & Ingrica.] In botany, a genus of the claſs ſyngeneſia, order polygamia fruſtranea, natural order of compoſitæ capitatæ, (corymbiferæ, *Juſſ.*) The generic characters are—Calyx: common one-leafed, imbricate with ſpiny ſcales, the inner ones gradually longer, ſtraight, briſtle-ſhaped, rigid. Corolla: compound radiate; corollets hermaphrodite, ſeveral in the diſk; female fewer in the ray; proper of the hermaphrodite funnel-form, five-cleft; of the female ligulate, lanceolate. Stamina: in the hermaphrodites, filaments five, ſhort; antheræ cylindric, tubular. Piſtillum: of the hermaphrodites, germ villoſe; ſtyle filiform, the length of the corollet; ſtigma bifid: of the females, germ obſolete, ſtyle none, ſtigma none. Pericarpium: calyx unchanged, deciduous. Seeds: in the hermaphrodites, ſolitary, roundiſh; down ſimple, woolly; in the females, none.—*Eſſential Character.* Calyx imbricate, with ſpiny ſcales; corolla of the ray ligulate; down woolly.

Species. 1. Gorteria perſonata, or annual gorteria: leaves lanceolate, entire and ſinuate, ſtem upright, flowers peduncled. Stems a ſpan high, little branched, roundiſh, hairy. Leaves alternate, narrow-lanceolate, ſeſſile, hiſpid, white-tomentoſe underneath; the larger ones uſually cut with two deep gaſhes on each ſide. Seeds woolly, but without down or feather. When the flower comes to maturity, the aperture of the calyx being very narrow, the ſeeds do not fall out, but the whole drops together. Hence, when one of them germinates, the radicle not only perforates the bottom of the calyx, but is ſo firmly united to it, that the young plant bears the maternal calyx, permanent above the root. There is no other inſtance of this economy, except in Neurada. Introduced in 1774, by Mr. Francis Maſſon. It flowers in July and Auguſt.

2. Gorteria rigens, or great-flowered gorteria: leaves lanceolate, pinnatifid; ſtem depreſſed; ſcapes one-flowered. This is a low ſpreading plant, with woody ſtalks ſix or eight inches long, trailing on the ground, having two or three ſide branches, each terminating in a cloſe head of leaves, which are narrow, green on their upper but ſilvery on their under ſurface, and cut into three or five ſegments at the end. The peduncles ariſe from theſe heads, are ſix inches long, naked, and ſupport one large orange-coloured flower: each floret in the ray has a dark mark towards the baſe, with white intermixed. It flowers in May and June. The green-houſe can ſcarcely boaſt a more ſhowy plant. The flowers, when expanded by the heat of the ſun, (and it is only when the ſun ſhines on them that they are fully expanded,) exhibit an unrivalled brilliancy of appearance. Mr. Miller cultivated it in 1755; he received it from Adrian van Royen, profeſſor of botany at Leyden, and diſtributed it to many curious perſons in England.

3. Gorteria echinata, or prickly gorteria: leaves oblong, ſinuate-gaſhed, with ſmall thorns; ſtems aſcending; receptacles chaffy. Stems a foot high, angular, red, commonly ſmooth, but ſometimes lanuginous here and there. Native of the Cape of Good Hope; flowers in July.

4. Gorteria ſquarroſa, or cobweb gorteria: leaves lanceolate, decurrent, adnate, ciliate-ſpinulous; flowers ſeſſile. It flowers from June to Auguſt.

5. Gorteria ſetoſa, or briſtly gorteria: leaves lanceolate, decurrent, adnate, ciliate-ſpinous; flowers terminating. Stem five feet high, upright, very much branched. Flowers yellow, the ray violet-coloured underneath. It differs from the foregoing, in the ſtem being neither villoſe nor proliferous; the leaves not imbricate downwards, but broader, ſhorter, with yellow briſtles ſtanding out on the edge; the flowers peduncled, not ſeſſile, and finally in the colour of the ray beneath. Native of the Cape, and of China.

6. Gorteria ciliaris, or ciliate gorteria: leaves imbricate, ciliate, in two rows; the outer cilias and the terminating ſpine reflex. The leaves are imbricate, and preſſed to the ſtalks, ſo as to cover them in an extraordinary manner. It flowers in May and June.

7. Gorteria fruticoſa, or ſhrubby gorteria: leaves lanceolate, entire, tooth-ſpinous, tomentoſe beneath; ſtem ſhrubby. Stem ſlender, three feet high, ſending out a few weak branches, which are tomentoſe and white. Leaves like thoſe of privet, alternate, ſharp, petioled, having ſix or ſeven ſerratures briſtly at the end. Flowers in Auguſt and September. This is entirely different from the G. fruticoſa of Bergius, (cap. 302.) which is the Atractylis oppoſitifolia of Linn. Syſt.

8. Gorteria herbacea, or herbaceous gorteria: ſtem-leaves claſping, ciliate, root-leaves unarmed, villoſe underneath. Stem ſcarcely a foot high, herbaceous, ſmooth, very little branched. Flowers terminating, ſeſſile; calyx like that of an artichoke, but ſcarcely bigger than a plum, imbricate, ſmooth at the edge, thorny at the end, ſtraight.

9. Gorteria hiſpida, or hairy gorteria: leaves oblong, ciliate-ſpinous, upright, ſmooth, calyxes entire, ending in a thorn. 10. Gorteria ſpinoſa, or thorny gorteria: leaves oblong, ſeſſile, tooth-ſpinous, ſpreading, ſmooth, calyxes ciliate-ſpinous; flowers upright. Both thoſe were found at the Cape by Thunberg.

11. Gorteria cernua, or drooping gorteria: leaves oblong, clafping, tooth-fpinous, fpreading, fmooth; calyxes ciliate-ferrate; flowers drooping. The bafe of the calyx is fingular, with ripe feeds, and refembles the fruit of Medicago. It flowers in May.

12. Gorteria uniflora, or one-flowered gorteria: leaves lanceolate, undivided, tomentofe underneath; ftems one-flowered, depreffed. Stems a fpan high, fimple, herbaceous, leafy on all fides. Has the appearance of G. rigens, and may perhaps be a variety of it.

13. Gorteria barbata, or bearded gorteria: leaves elliptic-lanceolate, tooth-awned; calyxes peduncled, ciliate-fetaceous. Stems diffufed, fimple, white-tomentofe. Leaves oppofite or alternate, feffile, acute, fmooth, marked with lines, awned at the end on both fides with four or five lateral teeth, white-tomentofe underneath.

Propagation and Culture. Moft of thefe plants may be increafed by cuttings, planted in a fhady border, during any of the fummer months; afterwards they may be treated like other plants from the Cape. For this fee ARCTOTIS, vol. ii. p. 130. The two annual forts muft be propagated by feeds. The feventh fort is increafed by planting the fmall heads at the end of the branches, in June and July: thefe muft be clofely covered with either bell or hand glaffes, and carefully fcreened from the fun. When they are well rooted, they fhould be put each into a fmall pot, and in winter placed in an airy glafs cafe fecure from damp. This may ferve as a direction for any other forts, and indeed for moft fhrubby plants, that will not take from cuttings in the ordinary way. See ATRACTYLIS and ROHRIA.

GORTI'NA, the name of a place mentioned 1 Macc. xv. 25.

GORTIN'IANS, a fect in New England, not much differing from our quakers, fo called from Samuel Gorten, who was baniſhed thence about the year 1646.

GORT'SCHITZ, a river of Germany, which runs into the Gurk, three miles fouth of Ebernſtein, in the duchy of Carinthia.

GOR'TYN, or GOR'TYS, in ancient geography, an inland town of Crete. It was on the inhabitants of this place, that Hannibal, to fave his money, practifed an artifice recorded in Cornelius Nepos.

GORTYN'IA, in ancient geography, a town of Arcadia, in Peloponnefus.

GO'RY, *adj.* Covered with congealed blood:

When two boars with rankling malice met,
Their *gory* fides the freſh wounds fiercely fret. *Spenſer.*

Why do'ſt thou ſhake thy *gory* locks at me?
Thou can'ſt not ſay I did it. *Macbeth.*

Bloody; murtherous; fatal. *Not in uſe:*

The obligation of our blood forbids
A *gory* emulation 'twixt us twain. *Shakeſpeare.*

GORZ, *ſ.* in botany. See ULEX.

GORZE, a town of France, in the department of the Mozelle, and chief place of a canton, in the diſtrict of Metz: two leagues and a half ſouth-weſt of Metz, and three north-north-weſt of Pont a Mouſſon. Lat. 49.3.N. lon. 23. 39. E. Ferro.

GORZE'GNO, a town of Italy, and capital of a marquiſate, in the duchy of Montferrat, on the Bormida: fifteen miles eaſt of Bene, and thirteen ſouth-eaſt of Alba.

GORZ'KE, a town of Germany, in the circle of Lower Saxony, and principality of Magdeburg: thirty-four miles eaſt of Magdeburg.

GOS, a river of Germany, which runs into the Malentheim, three miles north-weſt of Gmund, in Carinthia.

GOSCHGOSCHU'ENCK, a town of the American States, in the Delawares, ſituated on the banks of the Ohio. Its name ſignifies *the habitation of owls*, from the great number of thoſe birds which reſort there.

GOSCHU'TZ, a town of Sileſia, in the principality of Oels: two miles north of Feſtenburg, and ſeven weſt of Mittelwalde.

GOSE, a river of Germany, in the circle of Upper Saxony, which runs into the Ocker, near Goſlar.

GO'SELBACH, a river of Germany, in the circle of Upper Saxony, which runs into the Saale, near Merſeburg, in Thuringia.

GO'SELBERG, a mountain of Germany, in the duchy of Stiria: ten miles weſt of Landſperg.

GOSELI'NI (Julian), an Italian writer, born at Rome in 1525, of a family of Nizza della Paglia. He received his early education at the latter place, and at the age of fourteen returned to Rome, where he continued his ſtudies in the houſe of the cardinal de Santa Fiora. When ſeventeen years old, he was taken into the ſervice of Ferdinand Gonzaga, viceroy of Sicily. He accompanied that nobleman to his government of Milan in 1546, and became his ſecretary; in which office he was continued under three ſucceeding governors, till his death, in 1587. He obtained great reputation by his writings, of which the principal are, 1. The Life of Ferdinand Gonzaga, 1579. 2. Three Conſpiracies, viz. of the Pazzi and Salviati againſt the Medici; of Giovan-Luigi de' Fieſchi againſt the Republic of Genoa; and of ſome Placentines againſt their Duke Pietro-Luigi Farneſe. 3. *Rime*; or, A Collection of Poems; ſeveral times reprinted. 4. Diſcourſes. 5. Letters, &c. alſo ſome Latin Poems and Letters.

GOS'HAWK, *ſ.* [ȝor, gooſe, and hapoc, Sax. a hawk.] A hawk of a large kind. See FALCO, vol. vii. p. 186, and the correſpondent engraving.

Such dread his awful viſage on them caſt;
So ſeem poor doves at *goſhawks* fight aghaſt. *Fairfax.*

GO'SHEN (Land of), a moſt fertile diſtrict of Egypt, ſituated, according to Jablouſki and Michaelis, between Arabia Petræa, and the eaſtern bank of the Nile. It is derived from the Hebrew word *Geſhem*, a great rain, or copious ſpring; and is remarkable in Scripture as being the place aſſigned to the houſe of Jacob, during the famine that prevailed in Egypt and the countries adjacent; the particular circumſtances that led to their ſettlement here are ſufficiently known not to need any repetition; ſuffice it to ſay, they had dwelt here for the ſpace of four hundred and thirty years when they were delivered under Moſes. *Gen.* xlv. 10. xlvii. 1–6, 27. *Exod.* xii. 40, 41.—Alſo, a part of Paleſtine ſo called, *Joſh.* x. 41. and xi. 16.—Alſo, the name of a city of Paleſtine, belonging to the tribe of Judah; ſituated in the mountains of that province. *Joſh.* xv. 51.

GO'SHEN, a townſhip of the American States, in Hampſhire county, Maſſachuſetts, between Cummington and Conway, fourteen miles north of Northampton, and 112 weſt-by-north of Boſton. It was incorporated in 1781, and contained 681 inhabitants.

GO'SHEN, a townſhip of the American States, in Addiſon county, Vermont, adjoining to Saliſbury on the weſt, and twenty-one miles north-eaſt-by-eaſt of Mount Independence.

GO'SHEN, a townſhip of the American States, in Cheſter county, Pennſylvania.

GO'SHEN, a town of the American States, in Litchfield county, Connecticut, famous for the production of excellent cheeſe. It is ſeven miles north-by-north-weſt of Litchfield, and fifty northward of Newhaven.

GO'SHEN, a conſiderable town of the American States, in Orange county, New-York, about fifty-eight miles north of New-York city, twenty weſt-by-ſouth of New Windſor, and thirty weſt-by-ſouth of Fiſh-Kill. This town is pleaſantly ſituated; has an academy, court-houſe, and gaol; and contains, by the cenſus, 2,448 inhabitants; of whom 316 are electors.

GO'SHEN, a townſhip of the American States, in the diſtrict of Maine, eight miles from Buckſtown, on Penobſcot river.

GOSH'GOSHINK,

GOSH'GOSHINK, a Moravian ſettlement in Pennſylvania, ſituated on Alleghany river, about fifteen miles above Venango, or Fort Franklin.

GOSIL'IA, a river of Boſnia, which unites with the river Boretza.

GOS'LING, a town of Germany, in the archduchy of Auſtria: twelve miles ſouth-eaſt of Bavarian Waidhoven.

GOS'LING, *ſ.* [from *gooſe*.] A young gooſe; a gooſe not full grown.—Nature hath inſtructed even a brood of *goſlings* to ſtick together, while the kite is hovering over their heads. *Swift.*

GOS'PEL, *ſ.* [from the Saxon Goð-ꝑpell, which Lye renders by "*Dei Sermo, Dei Verbum*"—The Word of God. A more cloſe interpretation of the Saxon original is "Good Meſſage." The learned Junius in his Etymolog. Anglican. obſerves on the word Gospel, "The Angles retained this word, when the uſe of it was quite loſt among the higher and lower inhabitants of Germany. For the term *Evangelium* ſeemed preferable to Eccleſiaſtics, in their deſire of being reputed wiſe above the vulgar, from having recourſe to Roman and Greek expreſſions leſs known and familiar, in their daily homilies addreſſed to the people, and on other occaſions of expounding Scripture. This however was not neceſſary for them to do; ſince the word Goðꝑpell is moſt emphatical, and in compoſition genuinely Teutonic, expreſſes admirably the force and propriety of the Greek word ευαγγελιον. For it is from Goð, "good," and ꝑpell, a "hiſtory, narration, meſſage."]

Gospel then in its higheſt ſenſe means, "A Declaration of that Merciful and Gracious Diſpenſation, by which God will reſtore Man to his favour, through Christ."

In a more limited acceptation, the term is uſed to ſignify "A Book, in which that Declaration is made, and the Nativity, Miniſtry, Paſſion, and Reſurrection of Christ are related."

Many ſuch Books were written. The primitive Chriſtians were ſcrupulous to a degree of uncommon anxiety, not to admit for genuine, any but moſt authentic Goſpels. And it is owing to their preciſion and exactneſs in examining, that only Four Goſpels are allowed to be Canonical; i. e. of ſuch authority as to be our Rules and Guides in matters of Chriſtian Information. The Four are, the Goſpels of St. Matthew, St. Mark, St. Luke, and St. John. It ſhould ſtrengthen our confidence in theſe Four Goſpels, that numberleſs others have been rejected. The very circumſtance of ſelection in preference to others, by examiners equally able and ſerious to decide according to Truth, at once ſtamps them with credit, and recommends them to our reception as documents of indiſputable veracity.

It will equally gratify curioſity and confirm our remark on the ſelection made by the primitive Chriſtians, if we name the Goſpels rejected as ſpurious. Such were,

The Goſpel of St. Andrew.
The Goſpel of Thaddæus.
The Goſpel of St. Thomas.
The Goſpel of St. Barnabas.
The Goſpel of the Infancy of our Saviour.
The Goſpel of Apelles.
The Goſpel according to the Twelve Apoſtles.
The Goſpel of St. Bartholomew.
The Goſpel of Baſilides.
The Goſpel of Cerinthus.
The Goſpel according to the Egyptians.
The Goſpel according to the Hebrews.
The Goſpel of Marcion.
The Goſpel of the Nazarenes.
The Goſpel of St. Peter.
The Goſpel of Truth.

Fragments of theſe Goſpels are remaining. If any one will compare them with the Four Canonical Goſpels, he will immediately diſcern the difference between falſehood and truth. The Goſpels ſpurious are embelliſhed with fanciful conceits and afcititious ornaments: the Goſpels genuine affect nothing, but to relate facts in a plain manner, correſponding with conviction of truth, which needs no tinſel decoration.

The word *goſpel* is ſometimes uſed for any general doctrine.—The propagators of this political *goſpel* are in hopes, their abſtract principle would be overlooked. *Burke.*

GOS'PELLER, *ſ.* A name of the followers of Wickliffe, who firſt attempted a reformation from popery, given them by the papiſts in reproach, from their profeſſing to follow and preach only the goſpel:

Theſe *goſpellers* have had their golden days,
Have trodden down our holy Roman faith. *Rowe.*

GOSPI'NI, a town of the iſland of Sardinia: twenty-four miles ſouth of Oriſtagni.

GOS'PORT, a town of England, in the county of Hants, ſituated on the weſt ſide of the entrance into Portſmouth harbour. The town is large, and a place of great trade, eſpecially in time of war. Several forts are erected, and a platform of twenty cannon, level with the water, to defend the channel. Here are ſeveral docks for repairing merchant ſhips, and a little to the ſouth of the town is an hoſpital, called *Haſlar Hoſpital*, for the reception of ſick and wounded ſeamen in the ſervice of the navy. In time of peace, packets ſail from Goſport every week to Havre de Grace and other ports of France: one mile from Portſmouth, ſixteen ſouth-eaſt from Southampton, and ſeventy-nine ſouth-weſt from London. Lat. 50. 44. N. lon. 1. 9. W. Greenwich.

GOS'PORT, formerly called Appledore, a town of the American States, on Star Iſland, one of the iſles of Shoals, belonging to Rockingham county, New Hampſhire: twelve miles eaſt-ſouth-eaſt of Piſcataqua harbour.

GOSS, *ſ.* The ſame as Gorse:

They my lowings follow'd through
Tooth'd briars, ſharp furzes, pricking *goſs*, and thorns.
Shakeſpeare.

GOS'SAMER, *ſ.* [*goſſipium*, low Lat.] The down of plants; the long white filaments which fly in the air in calm ſunny weather, eſpecially about the time of autumn. *Hanmer.*

A lover may beſtride the *goſſamour*,
And yet not fall, ſo light is vanity. *Shakeſpeare.*

The filmy *goſſamer* now flits no more,
Nor halcyons baſk on the ſhort ſunny ſhore. *Dryden.*

According to M. Bechſtein, in the *Magazin für das Neueſte aus des Phyſik*, vol. vi. part i. p. 53, the goſſamer ariſes from nothing elſe than a certain kind of field-ſpiders, which are, however, ſo ſmall and active, that they almoſt always eſcape notice, unleſs the obſerver is endowed with great acuteneſs of ſight.

The goſſamer ſpider (*aranea obtextrix*) is as large as the head of a ſmall pin. On the fore-part of its longiſh head it has eight grey eyes placed in a circular form; the extremity of the body is ſhaped like an egg; the body itſelf is of a ſhining dark-brown colour; the feet are of a moderate length, and yelloviſh, and the whole animal is covered with inſulated hairs. Theſe inſects firſt appear in the beginning of October, in woods, gardens, and meadows, where their eggs may be hatched unhurt and unmoleſted, and thence ſpread themſelves over whole diſtricts; ſo that, during all the month of October, and till the middle of November, they may be found on the dry fields throughout all Europe; and as they produce a numerous progeny, extenſive tracts may ſometimes be ſeen ſwarming with them. The young, which have not attained to their full growth, are not larger than the point of a pin; they are black, with grey feet, and almoſt imperceptible to the naked eye. In the beginning

of

of October, when very few of them have been hatched, one obſerves only in the ſunſhine a few ſingle threads of their webs, which they extend from twig to twig, or from ſtraw to ſtraw; but about the middle of the month their threads become more perceptible; and towards the end, if people ſtand or place themſelves in ſuch a poſition that they can ſee the ſun-beams playing on the tender threads, they perceive hedges, meadows, cornfields, ſtubble land, and even whole diſtricts, covered with a fine white thick ſort of gauze. This ſpider belongs to that kind which do not weave webs, but only extend ſingle threads from one place to another, and which Linnæus, on that account, includes in a particular diviſion. The threads, owing to the ſmallneſs of the animal, are ſo delicate that a ſingle one cannot be diſtinguiſhed by the naked eye unleſs when the ſun ſhines upon it. A thread, to be viſible at other times, muſt be compoſed of at leaſt ſix threads twiſted together; and ſuch a thread, as the ſingle ones are exceedingly brittle and do not readily unite, may be again eaſily divided into its component threads.

During the ſerene calm days of the above months theſe animals carry on their occupation with great diligence, eſpecially after the morning fogs have diſappeared. Between the hours of twelve and two, however, is the period when their great induſtry excites moſt admiration. If people are poſſeſſed of good eye-ſight, or are furniſhed with a magnifying glaſs, they may find among the barley ſtubble ſuch a multitude of theſe ſpiders employed in extending their threads, that the fields appear as if covered with ſwarms of gnats, and they perform their labour ſo ſpeedily that they ſeem to fly from one ſtubble to another. Theſe tender threads, which are extended over whole fields, particularly in the laſt half of October, become twiſted together with the gentleſt breath of wind, and form perceptible threads, that, being broken looſe by a ſtronger wind, are united into thick threads, and even balls, that float through the atmoſphere. They are known then in Germany by the name of the *flying ſummer*, becauſe the ſummer ſeems as it were to fly away at the ſame time. The ſpiders alſo are then conveyed along in them; and it is not uncommon to find theſe animals entwiſted in ſuch threads which have been caught. Theſe webs, which conſiſt of threads cloſely joined together, ſerve the inſects as nets, in which they catch very ſmall gnats and aphides, the juices of which they ſuck for their nouriſhment. The goſſamer, therefore, is often found filled with the dried huſks of ſuch inſects.

GOSSE'INS, a town of Aſia, in Thibet, near the eaſt coaſt of the Dewah river. Lat. 30. 30. N. lon. 81. 24. E. Ferro.

GOSSILIE'RES, a town of the Netherlands, in the county of Namur: five miles from Charleroy.

GOS'SIP, *ſ.* [from ȝoð and ꝛÿb, Sax. relation, affinity.] One who anſwers for the child in baptiſm.—At the chriſtening of George duke of Clarence, who was born in the caſtle of Dublin, he made both the earl of Kildare and the earl of Ormond his *goſſips*. *Davies on Ireland.*—A tippling companion:

And ſometimes lurk I in a *goſſip's* bowl,
In very likeneſs of a roaſted crab,
And when ſhe drinks againſt her lips I bob. *Shakeſpeare.*

One who runs about tattling. The term is commonly applied to the good women who attend parturition:

'Tis ſung in every ſtreet,
The common chat of *goſſips* when they meet. *Dryden.*

To GOS'SIP, *v. n.* To chat; to prate; to be merry.—He gives himſelf up to an idle *goſſiping* converſation. *Law.*

His mother was a votreſs of my order,
And, in the ſpiced Indian air by night,
Full often hath ſhe *goſſipt* by my ſide. *Shakeſpeare.*

To be a pot companion:

Nor met with fortune, other than at feaſt,
Full warm of blood, of mirth of *goſſiping*. *Shakeſpeare.*

GOS'SIPING, *ſ.* Chatting; holding a goſſip's tale. A merry meeting of goſſips; a lying-in.

GOS'SIPRED, *ſ.* [*goſſipry*, from *goſſip*.] *Goſſipred*, or compaternity, by the canon law, is a ſpiritual affinity; and the juror, that was goſſip to either of the parties, might, in former times, have been challenged as not indifferent. *Davies.*

GOS'SIPRY, *ſ.* A company of goſſips; a ſpiritual affinity. *Scott.*

GOSS'LAR, a town of Germany, in the circle of Lower Saxony, on the river Goſe, which, at a ſmall diſtance from the town, runs into the Ocker. It is a free and imperial town, ſurrounded on one ſide by the biſhopric of Hildeſheim, and on the other by the principality of Wolfenbuttel. The houſes are generally old, except in a part of the town which was burned down in 1728, where the houſes have been rebuilt in a more modern ſtyle. The principal commerce of the town ariſes from the mines of iron and lead found in the Rammel mountain, near which it is ſituated; alſo in beer and proviſions. The town was founded in 922, by Henry the Fowler, who reſided and held ſeveral diets here, as did ſome of his ſucceſſors. Here are four pariſh churches, two chapters, and two Lutheran convents. The two chapters depend immediately upon the empire, the one is called the chapel of the emperor, the other the chapel of the empreſs. Goſlar occupies the ſeventh place at the diet on the Rheniſh bench, and the ſecond at the aſſemblies of the circle: thirty miles ſouth of Brunſwick. Lat. 51. 50. N. lon. 28. 3. E. Ferro.

GOSS'NITZ, a town of Germany, in the circle of Upper Saxony, and principality of Altenburg: three miles eaſt of Schmolln.

GOSS'WEINSTEIN, or GOSS'MANSTEIN, a town of Germany, in the circle of Franconia, and biſhopric of Bamberg: twenty-three miles north-north-eaſt of Nuremberg, and twenty eaſt-ſouth-eaſt of Bamberg. Lat. 49. 45. N. lon. 29. 5. E. Ferro.

GOSSYP'IUM, *ſ.* [Voſſius is of opinion that this is an Egyptian word; it is called ξυλον in Greek. See Pliny, l. 19. c. 1.] COTTON. In botany, a genus of the claſs monadelphia, order polyandria, natural order of columniferæ, (malvaceæ, *Juſſ.*) The generic characters are—Calyx: perianthium double; outer one-leafed, trifid, flat, larger; inner one-leafed, bluntly emarginate in five rows, cup-form. Corolla: petals five, obcordate, flat, ſpreading, faſtened by their baſe to the tube of the ſtamens. Stamina: filaments numerous, uniting at the bottom into a tube, ſeparate at and below the tip, lax, inſerted into the corolla; antheræ kidney-form. Piſtillum: germ roundiſh; ſtyle columnar, the length of the ſtamens; ſtigmas three or four, thickiſh. Pericarpium: capſule roundiſh, acuminate, three or four-celled; partitions contrary. Seeds: very many, oval, involved in cotton.—*Eſſential Character.* Calyx double; outer trifid; capſule four celled; ſeeds wrapped in cotton.

Species. 1. Goſſypium herbaceum, or common cotton: leaves five-lobed without glands underneath; ſtem herbaceous. Root tapering, woody, with numerous fibres, annual. Seed-lobes two, kidney-form, terminating gradually in a long petiole with the figure of a halved funnel. Stem three feet high, upright, round, pubeſcent, as is the whole of the herb, at the bottom brown with ſlight chinks, at the top ſpotted with black; branches axillary, ſcarcely longer than the leaf at their origin. Leaves alternate, only half the length of the petiole, tomentoſe, odorous whilſt young. Germ ſuperior, ovate; capſule bluntly three-cornered, three-valved, three-celled; ſeeds ovate, about three in each cell, convex on one ſide, more flat on the other, immerſed in fine cotton. This is the common Levant cotton, which is cultivated alſo in ſeveral iſlands of the Archipelago;

and in Malta, Sicily, and the kingdom of Naples, as well as in moſt parts of Aſia. It is a native of the Eaſt Indies; and was cultivated here by Gerarde, as a garden plant, in 1594. "It groweth (ſays he) about Tripolis and Alepo in Syria, from whence the factor of a worſhipfull merchant in London, Maſter Nicholas Lete, did ſend unto his ſaid maſter divers pounds weight of the ſeed, whereof ſome were committed to the earth at the impreſſion hereof (1597): the ſucceſs we leave to the Lord. Notwithſtanding myſelf three years paſt did ſow of the ſeeds, which did grow very frankly, but periſhed before it came to perfection, by reaſon of the cold froſts that overtook it in the time of flowering." Few plants are more uſeful, ſince it furniſhes materials for clothing in the four quarters of the world, particularly to the Aſiatics. The ſeeds alſo are an article of food, and eſteemed wholeſome.

2. Goſſypium arboreum, or tree cotton: leaves palmate, with lanceolate lobes; ſtem ſhrubby. Stem eight feet high, the thickneſs of the human leg, with a rugged brown bark, and long, diffuſed, twiſted branches. Leaves three or five-lobed, without glands, ſmooth, ſcattered, petioled; the lobes ſhort. Flowers entirely yellow, terminating, ſolitary. Native of the Eaſt Indies, and the eaſtern coaſt of Africa.

3. Goſſypium hirſutum, or rough cotton: leaves five-lobed with one gland underneath, the twigs and petioles pubeſcent. This is planted, ſays Browne, in a few gardens in Jamaica, but is not much cultivated, for the cotton is not thought to be ſo good, and the ſeeds are ſo ſmall, that it is a difficult matter to ſeparate them from the cotton. It grows however more luxuriant than the common, and riſes generally from ſeven to nine feet in height, bearing a great number of ſeed-veſſels on all the branches.

Swartz mentions a variety, called *Cotonier de ſoie*, (Xylon Americanum præſtantiſſimum of Tournefort,) the cotton of which is better than any of the reſt.

4. Goſſypium religioſum, or ſpotted-bark cotton-tree: leaves three-lobed, acute, with one gland underneath; twigs ſpotted with black. This is a ſhrub, with the branches not hairy, but having ſmall black dots ſcattered over them, as the petioles alſo have. Leaves cordate, deeply three-lobed, in a very fertile ſoil five-lobed, as big as the palm of the hand, acuminate, with a ſingle gland under the midrib. The ſtamens are entirely monadelphous. According to Swartz, the ſtem is a fathom in height, biennial, roundiſh; branches ſpreading very much, angular, ſtriated. Upper leaves three-lobed, lower five-lobed; lobes ovate, entire, nerved, pubeſcent; with three glandular pores underneath on the midribs of the leaves. Petioles long, round, patulous, hirſute, with black atoms ſcattered over them. Flowers oppoſite to the petioles, large, fulvous, on dotted peduncles. Outer calyx ſubtriphyllous, pubeſcent, dotted; the ſegments large, deeply and unequally toothed; the inner is very ſhort, and five-lobed in waves. Capſule leathery, thickiſh, three-celled, three-valved; the partitions inſerted in the middle of the valves, which are wrinkled within, and the edges turn back after they open. There is no receptacle, but the ſeeds are fixed in a double row to the central angle of the cells. Seeds about ſix in each cell, ovate, tapering towards the umbilicus, convex on one ſide, angular on the other, and white. Merian deſcribes it thus: "This tree grows in a ſhort time at Surinam; inſomuch that in ſix months after ſown, it will become as large as an European quince. The Indians uſe the leaves for cooling and healing wounds; the tree bears rich ſulphur-coloured flowers, very large and beautiful. After the flowers drop, a head of ſeed follows, which, when it comes to maturity, burſts open, ſcatters the ſeeds, and diſcovers the white cotton; this cotton the Indians ſpin into thread, and make the hammocks in which they ſleep." Native of India, and the Society Iſles. Cultivated in Jamaica. Introduced here in 1777, by Daniel Charles Solander, L.L.D. It is alſo a native of China, where it conſtitutes the clothing of both ſexes throughout that vaſt empire and its neighbourhood. In China is chiefly cultivated that particular ſpecies or variety of the goſſypium that produces the cloth uſually called nankeens in Europe. The down enveloping the ſeed conſtitutes what, in the language of trade, is called cotton-wool, which is of a white colour in the common plant, but in that growing in the province of Kiung-nan, of which the city of Nankin is the capital, the down is of the yellow tinge which it preſerves when ſpun and woven into cloth. The colour, as well as the ſuperior quality of this ſubſtance, in Kiung-nan, was ſuppoſed to be owing to the particular nature of the ſoil; and it is aſſerted, that the ſeeds of the nankeen cotton degenerate in both particulars when tranſplanted to another province, however little different in its climate.

5. Goſſypium latifolium, or broad-leaved cotton: leaves acute, the loweſt undivided, the reſt three-lobed, with one gland underneath. Stem four or five feet high, perpendicular, round, ſtraighter at the baſe, the thickneſs of a ſwan's quill, above flexuoſe and thicker, ſomewhat angular, ſwelling at the origin of the branches, green, rugged, pubeſcent, branched. Leaves large, horizontal or oblique, cordate, broad, the lower undivided, the upper deeply three-lobed, with acuminate lobes, pubeſcent eſpecially on the veins.

6. Goſſypium Barbadenſe, or Barbadoes cotton-tree: leaves three lobed, quite entire, with three glands underneath. Stem from ſix to fifteen feet in height, ſuffruticoſe, biennial, ſmooth. This is the ſpecies which is ſo much cultivated in the Weſt Indies, and forms a conſiderable branch of their exports. An emulſion of the ſeeds is recommended in the bloody-flux; and an oil is obtained from them by expreſſion, which ſupplies the boiling-houſe lamps in ſome plantations. This and the third and fourth ſpecies are not eaſily diſtinguiſhed, for they vary in the ſize of the parts, the diviſion and pubeſcence of the leaves, the colour of the ſeeds and cotton, the adherence and tenacity of the latter, the number of glands at the back of the leaves, &c. ſo that it is difficult to ſay which are ſpecies, and which are varieties.

Propagation and Culture. All the ſpecies of goſſypium, or cotton, are very tender, and will not grow in the open air in England. The firſt and third will ripen their ſeeds here, if they be ſown early in the ſpring, upon a good hot-bed; and when the plants are come up, planted each into ſeparate pots, and plunged into the bark-bed to bring them forward: when they are too tall to remain under the frames, remove them into the tan-bed in the ſtove; and when the roots have filled the pots, remove them into larger. With this management the flowers will appear in July, and the ſeeds will be ripe towards the end of September.

Cotton is propagated in the Weſt Indies by the ſeed, which is ſet in rows, about five feet aſunder, at the end of September, or beginning of October, at firſt but ſlightly covered; but after it is grown up, the root is well moulded. The ſeed is ſubject to decay, when it is ſet too deep, eſpecially in wet weather. The ſoil ſhould not be ſtiff, nor ſhallow, as this plant has a tap-root. The ground is hoed frequently, and kept very clean about the young plants, until they riſe to a moderate height; otherwiſe they are apt to be deſtroyed by caterpillars. It grows from four to ſix feet high, and produces two crops annually; the firſt in eight months from the time of ſowing the ſeed; the ſecond, within four months after the firſt; and the produce of each plant is reckoned about one pound weight. The branches are pruned or trimmed after the firſt gathering; and if the growth is over-luxuriant, this ſhould be done ſooner. When great part of the pods are expanded, the

Gossypium religiosum; or Cotton Tree.

London. Published as the Act directs. June 20 1807. by J. Wilkes.

wool is picked, and afterwards cleared from the ſeeds by a machine called a gin, compoſed of two or three ſmooth wooden rollers of about one inch diameter, ranged horizontally, cloſe and parallel to each other, in a frame; at each extremity they are toothed or channelled longitudinally, correſponding one with the other; and the central roller, being moved with a treadel or foot-lath, reſembling that of a knife-grinder, makes the other two revolve in contrary directions. The cotton is laid, in ſmall quantities at a time, upon theſe rollers, whilſt they are in motion, and, readily paſſing between them, drops into a ſack, placed underneath to receive it, leaving the ſeeds, which are too large to paſs with it, behind. The cotton thus diſcharged from the ſeeds, is afterwards hand-picked, and cleanſed thoroughly from any little particles of the pods or other ſubſtances which may be adhering to it. It is then ſtowed in large bags, where it is well trod down, that it may lie cloſe and compact; and the better to anſwer this purpoſe, ſome water is every now and then ſprinkled upon the outſide of the bag; the marketable weight of which is uſually three hundred pounds. An acre may be expected to produce from two hundred and forty pounds to that quantity; or two hundred and ſeventy pounds on an average. See BOMBAX.

GOS'TADT, or JOTT'STADT, or JO'SEPHSTADT, a town of Germany, in the circle of Upper Saxony, and circle of Erzgeburg: eight miles ſouth of Wolkenſtein.

GOS'TENHOF, a town of Germany, in the circle of Franconia, and territory of Nuremberg, ſituated near Nuremberg.

GOS'STING, a town of Germany, in the archduchy of Auſtria: two miles eaſt-north-eaſt of Ziſterſdorff.

GOS'TITZ, a town of Sileſia, in the principality of Neiſſe: two miles ſouth of Patſchkau.

GOSTY'NEN, a town of Poland, in the palatinate of Rawa; this town is remarkable for having been the priſon of Demetrius Suſki, czar of Muſcovy, who was confined to the day of his death in the citadel: thirty-ſix miles north of Rawa.

GOS'ZITZ, a town of Germany, in the circle of Upper Saxony, and circle of Neuſtadt: three miles weſt of Ziegenbruck.

GOT, *pret.* [from the verb *get.*] They began to reaſon about the means how the ſea *got* thither. *Woodward.*

Theſe regions and this realm my wars have *got*:
This mournful empire is the loſer's lot. *Dryden.*

GOT, *part. paſſ.* of *get.*—If he behaves himſelf ſo when he depends on us for his daily bread, can any man ſay what he will do when he is *got* above the world? *Arbuthnot.*

Thou wert from Ætna's burning entrails torn,
Got by fierce whirlwinds, and in thunder born. *Pope.*

GO'TER, *ſ.* A large ſwelling in the neck. See GOITRE.—One of our countrymen in travelling over the Alps was detained by a fever in one of thoſe villages, where every grown perſon has that ſort of ſwellings in the neck, which they call *goters*. *Spence's Crito.*

GOTH (Stephen), archbiſhop of Upſal in Sweden, in the ſixteenth century. He concurred in the meaſures adopted by king John, inſenſibly to reſtore popery in that country. For this purpoſe he gave his ſanction to a new liturgy, which, under the pretence of bringing the Lutheran church more near to the ſimplicity of the earlier ages of the goſpel, artfully aſſimilated the doctrines and ceremonies of worſhip to thoſe of Rome, with the omiſſion of ſome particular forms and expreſſions which would have too plainly diſcloſed the object in view. This liturgy was ordered to be uſed in all the churches; but it threw the kingdom into confuſion, and had nearly produced a civil war; ſo that the king was obliged to relinquiſh his ſcheme, and the liturgy was ſuppreſſed. It has now become an object of curioſity among collectors, and is entitled, *Liturgia Succeanæ Eccleſiæ, &c. cum Præfatione & Notis Laurentii Upſalienſis Epiſcopi*; 1576, 4to.

GO'THA, or SAXE-GOTHA, a principality of Germany, in the circle of Upper Saxony, bounded on the north by the electorate of Saxony, on the eaſt by the duchy of Weimar, on the ſouth by the county of Henneberg, and on the weſt by the principality of Eiſenach. The country abounds in grain and fruit; the ſouthern diviſion contains a part of the foreſt of Thuringia, and ſome mine works. The whole duchy contains twelve towns, and more than two hundred churches. The ſtate conſiſts of three claſſes, that is, of the counts, the nobility, and ſome towns, which are convoked by the prince. The dukes are deſcended from the grandſon of John William Erneſt the Pious, whoſe ſons formed ſeven different branches, ſome of which are extinct. Gotha was the principal. The others which yet remain are Saxe-Meinungen, Saxe-Hilburghauſen, and Saxe-Saalfeld. The Roman month is forty-eight florins twenty kruitzers, and tax to the imperial chamber ſixty-two rix-dollars ſixty-four kruitzers. The duke maintains a guard of 160 men, two regiments, each compoſed of 800 men, and a corps of artillery. The principal rivers are the Leine and the Neiſſe.

GO'THA, a city of Germany, and capital of the principality of the ſame name, ſeated on a riſing ground, near the Leine, from which, in 1369, the landgrave, Balthaſar, drew one branch near the town; but duke Erneſt improved this work, and conveyed it through all the ſtreets, by means of ſtone canals. Gotha is one of the beſt and handſomeſt towns in Thuringia. In 1715, in the town, and without the gates, were 1030 houſes paying ſcot and lot, and within its walls are nine hundred and ſix, excluſive of a great many others which ſtand on the ramparts. In it is alſo an hoſpital for the ſoldiery, with two ſchools for children deſcended from them, and the barracks, in the largeſt of which the cadets are inſtructed in the ſeveral branches of the military art. Here is likewiſe a foundery for cannon and bells, &c. with two churches, a good academy, a houſe of correction, an hoſpital for widows, and another for orphans. The inhabitants derive not their ſubſiſtence from the reſidence of the court, but carry on a conſiderable trade in woollen manufactures, as alſo in wood and beer; and, excluſive of the profits ariſing to them from agriculture, receive farther advantages from its being the thoroughfare from Leipzig to Upper Germany. Gotha ſuffered greatly by fire in the years 1207, 1545, 1632, 1646, and 1665; but the houſes deſtroyed in the laſt of theſe years have been all rebuilt of ſtone, and of the ſame height. On a hill above the town ſtands the ducal reſidence, called Friedenſtein, which was begun in 1643, by duke Erneſt the Pious, on the ſite of the caſtle of Grimmenſtein, which, in 1567, was totally razed by Auguſtus I. elector of Saxony, who, in conſequence of the ban iſſued againſt duke John Frederic II. had made himſelf maſter both of this place and the town. Friedenſtein has been fortified by permiſſion of Ferdinand III. In it is a well provided armoury, with a valuable library, a fine muſeum of natural curioſities, and one of the moſt valuable cabinets of medals in Europe: thirteen miles ſouth-weſt of Erfurt. Lat. 50. 46. N. lon. 28. 17. E. Ferro.

GO'THA, a river of Sweden, which runs from the Wenner Lake into the ſea, near Gothenburg. The navigation of this river, which connects the ſpacious lake Wenner with the ſea, is interrupted at Trolhätta, about fifteen miles from Gothenburg, by a ſucceſſion of frightful cataracts and rapids. Nothing on this ſide of the Atlantic can exceed the wild ſublimity of the ſcenery. A vaſt body of water, almoſt of the whole of the Gotha, pent into a narrow channel, precipitates itſelf with awful

ful crash from a height of upwards of sixty feet into a fathomless abyss; and, while yet boiling and foaming, it again dashes repeatedly from other ledges, and then rushes along with fury over a rocky bottom for almost three miles, till it spends its force and loses itself into a wide basin. In front of the spectator, rises perpendicularly to an altitude of three or four hundred feet, a rampart of granitic rock, which, bristling with its dark-some pines, frowns majestically over the awful scene. The other side presents a pleasing contrast, several saw-mills being perched among the cliffs, and turned by small detached torrents.

Gustavus Vasa conceived the magnificent plan of not only overcoming this vast obstruction by a canal, but likewise joining the Baltic with the North Sea, by connecting a chain of lakes, the Mälar, the Hjelmar, and the Wenner, which are not far distant; and which, with the river Gotha, would form a communication extending all the way from Stockholm to Gothenburg. Were this scheme realized, besides the obvious commercial advantages which it offers, the Swedes might avoid paying the Sound dues to Denmark: but the construction of a canal at Trollhätta, which was part of the plan, appeared of more immediate and practical utility. It was begun by Charles XII. whose passionate love of glory, had it been rightly directed, would have proved highly beneficial to his kingdom; and the attempt was at different times resumed in the succeeding reigns, and large sums of money were foolishly squandered without making any solid advancement. At last the undertaking was transferred to a company of merchants, deeply interested in its success, and who subscribed liberally on the prospect of a toll granted to them. Under their active management, the canal was recently prosecuted, and completed in little more than six years. It is certainly the grandest work of the kind that has been yet executed, and reflects the highest credit on the spirit and ingenuity of the Swedish nation. To form a just idea of the difficulties surmounted, we must not consider the length of the canal so much as its great width, the frequency of the locks, and the refractory nature of the materials in which the excavation is made. It is cut through a hill or continued rock of the hardest granite, by the force of gun-powder and the usual operations of mining; and the canal has nine locks, with their intermediate basins; of which the depth is about sixteen, and the breadth twenty-two feet. It can therefore admit of ships of very large burthen.

GO'THAM, a small town of the American States, in Maryland, about five miles north of Baltimore city.

GO'THAM, a village in Nottinghamshire.

"As wise as a man of GOTHAM."

This proverb passes for the periphrasis of a fool, as a hundred absurdities are feigned and fathered on the inhabitants of Gotham in Nottinghamshire.

GO'THARD, one of the alpine mountains of Switzerland; and from the top, where there is an hospital for monks, is one of the finest prospects in the world. It is eight miles from Aldorf.—A very great natural curiosity, which seems not generally known, has been lately observed upon the summit of this mountain: it is a rock, of considerable magnitude, so perfectly even, smooth, and polished, on one side, as to reflect the objects placed opposite to it, as perfectly as a looking-glass; whence, among the mountaineers, it is called the *mirror-rock*. No enquiry seems yet to have been set on foot with a view to account for this extraordinary phenomenon.

GO'THEBURG, or GOTHENBURG, a town of Sweden in the province of West Gothland, situated near the sea, at the conflux of the Moldal and the Gotha, on the side of which the old town is built; the other part, called the new town, is situated in a valley intersected by canals; the whole about three miles in circumference, and regularly fortified. The harbour is between two chains of rocks, about two furlongs wide. It was first built by Charles IX. in the island of Hisingen, in 1607; but, this town a few years after being burned down by Christian IV. king of Denmark, the inhabitants were removed, in the reign of Gustavus Adolphus, to the present spot. Charles IX. when he founded the former town, drew thither a great number of foreigners, by allowing them a free exercise of religion, and an exemption from duties on exports and imports for twenty years. These privileges were confirmed to the new town. Gothenburg is well built, and partakes of the taste of its first founders the Dutch, in being every where intersected by canals. Excepting the new quarter, and some buildings on the quay, all the houses are of wood; and though we generally form very poor ideas of such dwellings, these are very commodious, and warmer in winter than those which are built with stone. Their construction is very simple, being formed with square fir-trees placed one on the other, pinned together, and the interstices filled with moss; the outside is covered with planks painted red or white, and the inside with plaster. The country people thatch the roof with the bark of the birch-tree, over which they lay turf; while persons of property employ tile or slate; and these modes are prevalent throughout all Sweden and Norway. Such houses appear to be more convenient for the common people than those of stone, brick, or earth; because they are more expeditiously built, are more easily kept in repair, and can be removed from place to place without much difficulty.

Gothenburg contains about fifteen thousand inhabitants, and is reckoned the second city of the kingdom. It enjoys a very large share of trade. Its situation is peculiarly romantic, on the side of the river, at some distance from its mouth, and encircled by an amphitheatre of towering and diversified rocks. The inhabitants vie with those of the capital in every species of luxury. They are hospitable and friendly to strangers, and the ladies are celebrated for their amiable manners and elegant accomplishments. A foundling-hospital has been erected at Gothenburg on a very liberal plan, and every care is taken to provide for the poor and the fatherless.

The commerce of Gothenburg is carried on by many respectable merchants from different countries. Many Scotch houses are established here, and are very flourishing. The manufactures of the country are few, but excellent of their kind: sugar, for instance, is better refined in Sweden than any where else, but it is dear. Near the coast is a glass-house, the manufacture of which is very beautiful:—but the merchants of Gothenburg, and throughout Sweden, are principally engaged in the exportation of metals, chiefly iron; which is a very productive commerce. Herrings visit the coast towards the month of November, in such shoals that boats pass through them with difficulty; and if an oar be put into the sea, it will stand as upright among them as if it were stuck in the sand. This trade is considered so important, that every precaution is taken to prevent the fish from being frightened from the coast; and as soon as they appear, it is expressly forbidden to fire any cannon, even for the usual salutes. In a good year, 600,000 barrels of salted herrings are sold, and 30,000 barrels of oil. Nearly all the articles of importation, which are considerable, come from England, and sell very well. Indeed, the communication between the two countries is such, that most people of condition in Gothenburg have even their shoes from London, or from some town of Great Britain. The stuffs and leather which are brought thence are not only of a superior quality, but cheaper than the manufactures of the country. These circumstances may in some manner account for the reluctance of Sweden to break the bonds of amity with Great Britain, even amid the worst threats of the slayer Napoleon, and they are flattering testimonies in favour of our British manufactures and commer-

cial exertions. Forty miles ſouth of Uddevalla. Lat. 57. 42. N. lon. 29. 19. E. Ferro.

GO'THIA, an iſland in the Baltic, ſo called from the ancient Goths.

GOTH'IC, *adj.* [from *Goth.*] Spoken by the Goths. —They are to be found with little variation in the other collateral languages deſcended from the *Gothic*. *Tyrwhitt*. Uncivilized.—Ah! ruſtic ruder than *Gothic*. *Congreve*.

GOTHIC ARCHITECTURE. That ſtyle of building which diſtinguiſhes our cathedrals, and many other ancient fabrics.—See ARCHITECTURE, vol. ii. p. 78–86.

GOTH'ICISM, *ſ.* [from *Gothic.*] Gothic architecture.—I am glad you enter into the ſpirit of Strawberry-caſtle, it has a purity and propriety of *Gothiciſm* in it. *Gray's Letters*.—The ſtate of barbarians.—Night, *Gothiciſm*, confuſion, and abſolute chaos, are come again. *Shenſtone*.

GOTH'LAND, a country of Sweden, bounded on the north by Sweden Proper, on the eaſt and ſouth by the Baltic, and on the weſt by the Sound, the German Ocean, and Norway. This country was inhabited by a nation which had its origin from the Getæ, or Tartars of the Crimea; and was united to Sweden by Suercher. It is a pleaſant and fertile country, conſiſting of good arable and paſture land; with lakes and rivers, which abound in fiſh; it has alſo foreſts and mines. It contains forty-eight towns, and is divided into Eaſt Gothland, Weſt Gothland, and South Gothland.

GOTH'LAND (Eaſt), is bounded on the north by the provinces of Nericia and Sudermanland, on the eaſt by the Baltic, on the ſouth by Smaland, and on the weſt by the Wetter Lake, which ſeparates it from Weſt Gothland, about eighty miles in length, and ſeventy in breadth. This country was formerly governed by its particular kings and laws. It produces wheat, rye, barley, oats, peaſe, &c. in ſuch plenty as to ſupply the neighbouring provinces with theſe ſorts of grain. It has alſo many fine orchards, rich meadows and paſtures, lakes, and rivers, abounding with a variety of fiſh, extenſive foreſts, ſome of which are of oak and birch; profitable iron-mines and founderies, quarries of ſtone and marble; ſlatting-mills, and other machines for the improvement of manufacture. The occupations of the inhabitants are agriculture, grazing, hunting, and fiſhing; and in ſome places they are employed in the mines. The principal towns are Nordkioping, Soderkioping, Linkioping, and Wadſtena.

GOTH'LAND (South), is divided into three provinces, Schonen, Haland, and Blekingen, which from time immemorial, have undergone many viciſſitudes and changes. Sometimes they were ſubject to the crown of Denmark, at other times they were recovered by the Swedes; but at length king Charles Guſtavus annexed them for ever to the Swediſh dominions, by the treaty of Roſchild, in 1658.

GOTH'LAND (Weſt), is bounded on the north by Warmeland, on the eaſt by Nericia, the Wetter Lake, and Smaland, on the ſouth by Smaland and Haland, and on the weſt by the Scaggerac; about 115 miles in length, and fifteen in breadth. It was formerly an independent kingdom, governed by its own laws. The ſoil produces corn, vegetables, and fruit, with excellent paſtures, ſo that the inhabitants ſend cheeſe and butter to other provinces. The rivers, lakes, and ſea-coaſt, abound with fiſh. Iron-works, alum-works, and paper-mills, are erected in ſeveral places. The principal occupations of the inhabitants are agriculture, grazing, and fiſhing. The principal towns are Gotheburg, Wenneſburg, Lidkoping, and Falkioping.

GOTH'LAND, or GOTT'LAND, an iſland of Sweden, in the Baltic ſea, about ſeventy miles in length, and twenty-five in its greateſt breadth, formerly an independent kingdom, but now ſubject to the ſupreme court of juſtice at Stockholm. From its convenient ſituation it has juſtly acquired the name of *the Eye of the Baltic*. The ſoil is fertile, and there are fine woods of oaks and pines, good paſtures, and profitable fiſheries round the iſland; large quarries of ſtone, particularly the famous Gottland ſtone, and a ſoft grey ſandy ſtone, which are exported to Stockholm and other places. Here are alſo found ſome curious ſpecies of ſtone coral, cornelians, agates, and beautiful petrifactions. In former times here were alſo fine marble quarries. Very good lime-ſtone, tar, deal-boards, beams, and an excellent breed of ſheep, are exported from this iſland. Gottland is not infeſted with bears or wolves, but is ſufficiently ſtocked with deer, foxes, and hares; the inhabitants ſubſiſt by agriculture, grazing, fiſhing, working in the quarries, burning lime, and by ſeveral ſorts of mechanic trades, and navigation. The Gottland peaſants ſell none of their commodities to the inhabitants of the towns; but when a peaſant comes to a market-town, the burgher to whom he applies finds him in all neceſſaries, and gives him money to enable him to pay his taxes. On the other hand, the peaſant delivers up to the burgher all the produce of his induſtry, without ſaying a word about the price; and thus both parties act according to the dictates of natural juſtice and equity. In 1361, Waldemar king of Denmark ravaged this iſland, and laid it waſte, but it ſtill remained ſubject to the crown of Sweden. Albert king of Sweden, after an expenſive war, was obliged to mortgage it to the knights of the croſs, in Pruſſia, who, in conſideration of a ſum of money, delivered it up, in 1403, to queen Margaret, though with ſome reluctance. King Erick, of Pomerania, after he was dethroned, withdrew to this iſland, where he remained for three years: and when Charles VIII. was preparing to drive him from Gottland, and make a conqueſt of it, in 1449, Erick made an offer of it to Chriſtian I. king of Denmark. It remained in the poſſeſſion of the Danes till the year 1645, when, by the treaty of Bromſebro, it was reſtored to Sweden. Wiſby is the capital. Lat. 56. 54. to 57. 56. N. lon. 18. 6. to 19. 6. E. Greenwich.

GOTHS, or GU'TÆ, one of the moſt celebrated northern nations of antiquity, called alſo by different writers *Gothones*, *Gutones*, *Gythones*, and *Guttones*. Their origin is deduced from the peninſula of Scandinavia or Sweden; and the peopling of the Cherſoneſus, of the iſlands of the Baltic ſea, and the adjacent places on the continent, is attributed by the northern writers to this famous race of warriors. Many veſtiges indeed ſtill atteſt the ancient reſidence of the Goths in the countries beyond the Baltic. From the time of the geographer Ptolemy, the ſouthern part of Sweden ſeems to have continued in the poſſeſſion of the leſs enterpriſing remnant of that nation, and a large territory, after their name, is even at preſent divided into Eaſt and Weſt Gothland. During the middle ages, whilſt Chriſtianity was advancing with a ſlow progreſs into the north, the Goths and the Swedes compoſed two diſtinct and ſometimes hoſtile members of the ſame community. The latter of theſe two names has however prevailed, without extinguiſhing the former. The Swedes alſo have in every age claimed the kindred glory of the Goths. In a moment of diſcontent againſt the court of Rome, Charles XII. inſinuated, according to Voltaire, that his victorious troops were not degenerated from their brave anceſtors, who had ſubdued the miſtreſs of the world; and when the Auſtrians deſired the aid of the court of Rome againſt Guſtavus Adolphus, they always repreſented that conqueror as the lineal ſucceſſor of Alaric.—See Harte's Hiſtory of Guſtavus, vol. ii. p. 123.

Till the end of the eleventh century, an ancient temple ſubſiſted at Upſal, the moſt conſiderable town of the Swedes and Goths. It was enriched with the gold which the Scandinavians had acquired in their piratical adventures, and ſanctified by repreſentations of their three principal deities, the god of war, the goddeſs of generation, and the god of thunder. In the general feſtival that was ſolemnized every ninth year, nine animals of every ſpecies, without excepting even the human,

were ſacrificed, and their bleeding bodies ſuſpended in the ſacred grove adjacent to the temple. The only traces that now ſubſiſt of this barbaric ſuperſtition are contained in the Edda, a ſyſtem of mythology compiled in Iceland about the thirteenth century, and ſtudied by the learned of Denmark and Sweden, as the moſt valuable remains of their ancient traditions.

Though ſo many ſucceſſive generations of Goths might be capable of preſerving a faint tradition of their Scandinavian origin, we are not to expect, from ſuch unlettered barbarians, any diſtinct account of the time and circumſtances of their emigration. To croſs the Baltic from their ancient ſeat, was an eaſy and natural attempt. The inhabitants of Sweden were maſters of a ſufficient number of large veſſels, with oars, and the diſtance is little more than one hundred miles from Carlſcroon to the neareſt ports of Pomerania and Pruſſia: and here we begin to trace ſomewhat of hiſtoric ground. At leaſt as early as the Chriſtian æra, and as late as the age of the Antonines, the Goths, according to Tacitus, were eſtabliſhed towards the mouth of the Viſtula, and in that fertile province where the commercial cities of Thorn, Elbing, Konigſberg, and Dantzic, were long afterwards founded. Weſtward of the Goths, the numerous tribes of the Vandals were ſpread along the banks of the Oder, and the ſea-coaſt of Pomerania and Mecklenburgh. A ſtriking reſemblance of manners, complexion, religion, and language, ſeemed to indicate that the Vandals and the Goths were originally one great people. The latter appear to have been ſubdivided into Oſtrogoths, Viſigoths, and Gepidæ. The Oſtro and Viſi, the eaſtern and weſtern Goths, (ſays Jornandes, c. 17,) obtained thoſe denominations from their original ſeats in Scandinavia. In all their future marches and ſettlements they preſerved, with their names, the ſame relative ſituation. When they firſt departed from Sweden, the infant colony was contained in three veſſels. The third being a heavy ſailor lagged behind, and the crew, which afterwards ſwelled into a nation, received from that circumſtance the appellation of *Gepidæ* or Loiterers. The diſtinction among the Vandals was more ſtrongly marked by the independent names of Heruli, Burgundians, Lombards, and a variety of other petty ſtates, many of which, in a future age, expanded themſelves into powerful monarchies.

In the age of the Antonines, the Goths were ſtill ſeated in Pruſſia. About the reign of Alexander Severus, the Roman province of Dacia had already experienced their proximity by deſtructive inroads. In this interval, therefore, of about ſeventy years, we muſt place the ſecond migration of the Goths from the Baltic to the Euxine; but the cauſe that produced it lies concealed among the various motives which actuate the conduct of unſettled barbarians. Either a peſtilence or a famine, a victory or a defeat, an oracle of the gods or the eloquence of a daring leader, were ſufficient to impel the Gothic arms on the milder climates of the ſouth. Beſides the influence of a martial religion, the numbers and ſpirit of the Goths were equal to the moſt dangerous enterpriſes. The uſe of round bucklers and ſhort ſwords rendered them formidable in a cloſe engagement; the manly obedience which they yielded to hereditary kings, gave union and ſtability to their councils; and the renowned Amala, the hero of that age, and the tenth anceſtor of Theodoric, king of Italy, enforced, by the aſcendant of perſonal merit, the prerogative of his birth, which he claimed to derive from the *Anſes*, or demigods of the Gothic nation.

The fame of a great enterpriſe excited the braveſt warriors from all the Vandalic ſtates of Germany, many of whom are ſeen a few years afterwards combating under the common ſtandard of the Goths. The firſt motions of the emigrants carried them to the banks of the Prypec, a river conceived by the ancients to be the ſouthern branch of the Boryſthenes. The windings of that great ſtream through the plains of Poland and Ruſſia, gave a direction to their line of march, and a conſtant ſupply of freſh water and paſturage to their numerous herds of cattle. They followed the unknown courſe of the river, confident in their valour, and careleſs of whatever power might oppoſe their progreſs. The Baſtarnæ and the Venedi were the firſt who preſented themſelves; and the flower of their youth, either from choice or compulſion, increaſed by their numbers the Gothic army. The Baſtarnæ dwelt on the northern ſide of the Carpathian mountains; the immenſe tract of land that ſeparated the Baſtarnæ from the ſavages of Finland, was poſſeſſed, or rather waſted, by the Venedi. There is ſome reaſon to believe that the firſt of theſe nations, which diſtinguiſhed itſelf in the Macedonian war, and was afterwards divided into the formidable tribes of the Peucini, the Borani, the Carpi, &c. derived its origin from the Germans. With better authority, a Sarmatian extraction may be aſſigned to the Venedi, who rendered themſelves ſo famous in the middle ages. Jornandes has ſhewn, that the Venedi, the Slavi, and the Antes, were the three great tribes of the ſame people. But the confuſion of blood and manners on that doubtful frontier, often perplexed the moſt accurate obſervers. As the Goths advanced near the Euxine ſea, they encountered a purer race of Sarmatians, the Jazyges, the Alani, and the Roxolani; and they were probably the firſt Germans who ſaw the mouths of the Boryſthenes, and of the Tanais. If we enquire into the characteriſtic marks of the people of Germany and of Sarmatia, we ſhall diſcover that thoſe two great portions of human kind were principally diſtinguiſhed by fixed huts or moveable tents, by a cloſe dreſs, or flowing garments, by the marriage of one or of ſeveral wives, by a military force, conſiſting, for the moſt part, either of infantry or cavalry; and above all by the uſe of the Teutonic, or of the Sclavonian, language; the laſt of which has been diffuſed by conqueſt, from the confines of Italy to the neighbourhood of Japan.

The Goths were now in poſſeſſion of the Ukraine, a country of conſiderable extent and uncommon fertility, interſected with navigable rivers, which from either ſide diſcharge themſelves into the Boryſthenes; and interſperſed with large and lofty foreſts of oak. The plenty of game and fiſh, the innumerable bee-hives depoſited in the hollows of old trees, and in the cavities of rocks, and forming, even in that rude age, a valuable branch of commerce, the ſize of the cattle, the temperature of the air, the aptneſs of the ſoil for every ſpecies of grain, and the luxuriancy of the vegetation, all diſplayed the liberality of nature, and tempted the induſtry of man. But the Goths withſtood all theſe temptations, and ſtill adhered to a life of idleneſs, of poverty, and of rapine.

The Scythian hords, which, towards the eaſt, bordered on the new ſettlements of the Goths, preſented no temptation to their arms, except the doubtful chance of an unprofitable victory. But the proſpect of the Roman territories was far more alluring; and the fields of Dacia were covered with rich harveſts, ſown by the hands of an induſtrious, and expoſed to be gathered by thoſe of a warlike, people. It is probable, that the conqueſts of Trajan, maintained by his ſucceſſors, leſs for any real advantage than for ideal dignity, had contributed to weaken the empire on that ſide. The new and unſettled province of Dacia was neither ſtrong enough to reſiſt, nor rich enough to ſatiate, the rapaciouſneſs of the barbarians. As long as the remote banks of the Nieſter were conſidered as the boundary of the Roman power, the fortifications of the Lower Danube were more careleſsly guarded, and the inhabitants of Mæſia lived in ſupine ſecurity, fondly conceiving themſelves at an inacceſſible diſtance from any barbarian invaders. The irruptions of the Goths, however, under the reign of Philip, convinced them of their miſ-

take. The king, or leader, of that fierce nation, traverſed with contempt the province of Dacia, and paſſed both the Nieſter and the Danube, without encountering any oppoſition capable of retarding his progreſs. The relaxed diſcipline of the Roman troops, betrayed the moſt important poſts, where they were ſtationed, and the fear of deſerved puniſhment induced great numbers of them to inliſt under the Gothic ſtandard. The various multitude of barbarians appeared, at length, under the walls of Marcianopolis, a city built by Trajan in honour of his ſiſter, and at that time the capital of the ſecond Mæſia. The inhabitants conſented to ranſom their lives and property, by the payment of a large ſum of money, and the invaders retreated back into their deſerts, animated, rather than ſatisfied, with the firſt ſucceſs of their arms againſt an opulent but feeble country. Intelligence was ſoon tranſmitted to the emperor Decius, that Cniva, king of the Goths, had paſſed the Danube a ſecond time, with more conſiderable forces; that his numerous detachments ſcattered devaſtation over the province of Mæſia, whilſt the main body of the army, conſiſting of ſeventy thouſand Germans and Sarmatians, a force equal to the moſt daring atchievements, required the preſence of the Roman monarch, and the exertion of all his military power.

The Goths were found by Decius, A. D. 250, engaged before Nicopolis, on the Jatrus, one of the many monuments of Trajan's victories. On his approach they raiſed the ſiege, but with a deſign only of marching away to a conqueſt of greater importance, the ſiege of Philippopolis, a city of Thrace, founded by Philip king of Macedon, near the foot of mount Hæmus. Decius followed them through a difficult country, and by forced marches; but when he imagined himſelf at a conſiderable diſtance from the rear of the Goths, Cniva turned ſhort with rapid fury on his purſuers. The camp of the Romans was ſurpriſed and pillaged, and, for the firſt time, their emperor fled in diſorder before a troop of half-armed barbarians. After a long reſiſtance, Philippopolis, deſtitute of ſuccours, was taken by ſtorm. A hundred thouſand perſons are reported to have been maſſacred in the ſack of that city. Many priſoners of conſequence became a valuable acceſſion to the ſpoil; and Priſcus, a brother of Philip, bluſhed not to aſſume the purple under the protection of the barbarians. The time, however, conſumed in that tedious ſiege, enabled Decius to revive the courage, reſtore the diſcipline, and recruit the numbers, of his troops. He intercepted ſeveral parties of Carpi, and other Germans, who were haſtening to ſhare the victory of their countrymen, intruſted the paſſes of the mountains to officers of approved valour and fidelity, repaired and ſtrengthened the fortifications of the Danube, and exerted his utmoſt vigilance to oppoſe either the progreſs or the retreat of the Goths. Encouraged by the return of fortune, he anxiouſly waited for an opportunity to retrieve, by a great and deciſive blow, his own glory, and that of the Roman arms.

The Goths were now, on every ſide, ſurrounded and purſued by the Roman arms. The flower of their troops had periſhed in the long ſiege of Philippopolis, and the exhauſted country could no longer afford ſubſiſtence for the remaining multitude of licentious barbarians. Reduced to this extremity, the Goths would gladly have purchaſed, by the ſurrender of all their booty and priſoners, the permiſſion of an undiſturbed retreat. But the emperor, confident of victory, and reſolving, by the chaſtiſement of theſe invaders, to ſtrike terror into the nations of the North, refuſed to liſten to any terms of accommodation. The high-ſpirited barbarians rather preferred death to ſlavery. An obſcure town of Mæſia, called Forum Terebronii, was the ſcene of the battle. The Gothic army was drawn up in three lines; and the front of the third line was covered by a deep moraſs. In the beginning of the action, the ſon of Decius, a youth of the faireſt hopes, was ſlain by an arrow in the ſight of his afflicted father; who, ſummoning all his fortitude, admoniſhed the diſmayed troops, that the loſs of a ſingle ſoldier was of little importance to the republic. The conflict was terrible; it was the combat of deſpair againſt grief and rage. The firſt line of the Goths at length gave way in diſorder; the ſecond, advancing to ſuſtain it, ſhared its fate; and the third only remained entire, prepared to diſpute the paſſage of the moraſs, which was imprudently attempted through the inconſiderateneſs of the enemy. Here the fortune of the day turned, and all things became adverſe to the Romans: the place deep with ooze, ſinking under thoſe who ſtood, ſlippery to ſuch as advanced; their armour heavy, the waters deep; nor could they wield, in that ſituation, their weighty javelins. The Goths, on the contrary, were enured to encounters in the bogs; their perſons tall, and their ſpears long, they could wound at a diſtance. In this moraſs the Roman army, after an ineffectual ſtruggle, was irrecoverably loſt; nor could the body of the unfortunate Decius ever be found.

The imperial dignity was conferred on Hoſtilianus, the only ſurviving ſon of Decius, and the ſame rank was granted to Gallus, whoſe ability ſeemed equal to the great truſt of guardian to the young prince and the diſtreſſed empire. The firſt care was now to deliver the Illyrian provinces from the ravages of the victorious Goths. He conſented, in the year 252, to leave in their hands the rich fruits of their invaſion, an immenſe booty, and, what was more diſgraceful, a great number of priſoners of the higheſt quality. He ſupplied their camp with every conveniency that could aſſuage their angry ſpirits, or facilitate their departure; and he even promiſed to pay them annually a large ſum of gold, on condition they ſhould never afterwards infeſt the Roman territories by their incurſions.

The great ſtream of Gothic hoſtilities was now, for a time, diverted into a different channel. The Goths, in their new ſettlement of the Ukraine, ſoon became maſters of the northern coaſt of the Euxine: to the ſouth of that inland ſea, were ſituated the ſoft and wealthy provinces of Aſia Minor, which poſſeſſed all that could attract, and nothing that could reſiſt, a barbarian conqueror. The banks of the Boryſthenes are only ſixty miles diſtant from the entrance of the peninſula of Crim Tartary, known to the ancients under the name of Cherſoneſus Taurica. This little kingdom of Boſphorus, whoſe capital was ſituated on the Straits through which the Mæotis communicates itſelf to the Euxine, was compoſed of degenerate Greeks. Domeſtic factions and fears, or the private intereſt of individuals, were ſoon the means of admitting the Goths into the heart of Boſphorus. With the acquiſition of a ſuperfluous waſte of fertile ſoil, the conquerors obtained the command of a naval force, ſufficient to tranſport their armies to the coaſt of Aſia. The ſhips uſed in the navigation of the Euxine were of a very ſingular conſtruction. They were ſlight flat-bottomed barks framed of timber only, without the leaſt mixture of iron, and occaſionally covered with a ſhelving roof, on the appearance of a tempeſt. In theſe floating houſes, the Goths careleſsly truſted themſelves to the mercy of an unknown ſea, under the conduct of ſailors preſſed into the ſervice, and whoſe ſkill and fidelity were equally ſuſpicious. But the hopes of plunder had baniſhed every idea of danger, and a natural fearleſſneſs of temper ſupplied in their minds the more rational confidence which is the juſt reſult of knowledge and experience. Warriors of ſuch a daring ſpirit muſt have often murmured againſt the cowardice of their guides, who required the ſtrongeſt aſſurances of a ſettled calm before they would venture to embark; and would ſcarcely ever be tempted to loſe ſight of the land. The fleet of the Goths, leaving the coaſt of Circaſſia on the left hand,

hand, firſt appeared before Pityus, the utmoſt limits of the Roman provinces; a city provided with a convenient port, and fortified with a ſtrong wall. Here they met with a reſiſtance more obſtinate than they had reaſon to expect. They were repulſed; and their diſappointment ſeemed to diminiſh the terror of the Gothic name. As long as Succeſſianus, an officer of ſuperior merit, defended that frontier, all their efforts were ineffectual; but as ſoon as he was removed, they reſumed the attack of Pityus; and, by the deſtruction of that city, obliterated the memory of their former diſgrace.

Circling round the eaſtern extremity of the Euxine ſea, the navigation from Pityus to Trebizond is about three hundred miles. The courſe of the Goths carried them in ſight of the country of Colchis, ſo famous by the expedition of the Argonauts; and they even attempted, though without ſucceſs, to pillage a rich temple at the mouth of the river Phaſis. Trebizond, celebrated in the retreat of Xenophon as an ancient colony of Greeks, derived its wealth from the munificence of the emperor Adrian, who had conſtructed an artificial port on a coaſt left deſtitute by nature of ſecure harbours. The city was large and populous; a double enclofure of walls ſeemed to defy the fury of the Goths, and the uſual garriſon had been ſtrengthened by a reinforcement of ten thouſand men. But there are not any advantages capable of ſupplying the abſence of diſcipline and vigilance. The numerous garriſon of Trebizond, diſſolved in riot and luxury, diſdained to guard their impregnable fortifications. The Goths ſoon diſcovered the ſupine negligence of the beſieged, erected a lofty pile of faſcines, aſcended the walls in the ſilence of the night, and entered the defenceleſs city ſword in hand. A general maſſacre of the people enſued, whilſt the affrighted ſoldiers eſcaped through the oppoſite gates of the town. The moſt holy temples, and the moſt ſplendid edifices, were involved in one common deſtruction. The booty that fell into the hands of the Goths was immenſe: the wealth of the adjacent countries had been depoſited in Trebizond, as in a ſecure place of refuge. The number of captives was incredible, as the victorious barbarians now ranged without oppoſition through the extenſive province of Pontus. The rich ſpoils of Trebizond filled a great fleet of ſhips that had been found in the port. The robuſt youth of the ſea-coaſt were chained to the oar; and the Goths, ſatisfied with the ſucceſs of their firſt naval expedition, returned in triumph to their new eſtabliſhments in the kingdom of Boſphorus.

The ſecond expedition of the Goths was undertaken with greater powers of men and ſhips; but they ſteered a different courſe, and, diſdaining the exhauſted provinces of Pontus, followed the weſtern coaſt of the Euxine, paſſed before the wide mouths of the Boryſthenes, the Nieſter, and the Danube, and increaſing their fleet by the capture of a great number of fiſhing barks, they approached the narrow ſtrait through which the Euxine ſea pours its waters into the Mediterranean, and divides the continents of Europe and Aſia. The garriſon of Chalcedon was encamped near the temple of Jupiter Urius, on a promontory that commanded the entrance of the ſtrait; and ſo inconſiderable were the dreaded invaſions of the barbarians, that this body of troops ſurpaſſed in number the Gothic army. But it was in numbers alone that they ſurpaſſed it. They deſerted with precipitation their advantageous poſt, and abandoned the town of Chalcedon, moſt plentifully ſtored with arms and money, to the diſcretion of the conquerors. Whilſt the Gothic chiefs heſitated whether they ſhould prefer the ſea or land, Europe or Aſia, for the ſcene of their hoſtilities, a perfidious fugitive pointed out Nicomedia, once the capital of the kings of Bithynia, as a rich and eaſy conqueſt. He guided the march, which was only ſixty miles from the camp of Chalcedon, directed the reſiſtleſs attack, and partook of the booty; for the Goths had learned ſufficient policy to reward the traitor whom they deteſted. Nice, Pruſa, Apæmæa, Cius, cities that had ſometimes rivalled the ſplendour of Nicomedia, were involved in the ſame calamity, which, in a few weeks, raged without controul through the whole province of Bithynia. Three hundred years of peace, enjoyed by the luxuriant inhabitants of Aſia, had aboliſhed the exerciſe of arms, and removed the apprehenſion of danger. The ancient walls were ſuffered to moulder away, and the revenue of the moſt opulent cities was reſerved for the conſtruction of baths, temples, and theatres.

From the ſack of Pruſa, the Goths advanced within eighteen miles of Cyzicus, which they had devoted to deſtruction; but the ruin of that city was delayed by a fortunate accident. The ſeaſon was rainy, and the lake Apolloniates, the reſervoir of all the ſprings of Mount Olympus, roſe to an unuſual height. The little river of Rhyndacus, which iſſues from the lake, ſwelled into a broad and rapid ſtream, and ſtopped the progreſs of the Goths. Their retreat to the maritime city of Heraclea, where the fleet had probably been ſtationed, was attended by a long train of waggons, laden with the ſpoils of Bithynia, and was marked by the flames of Nice and Nicomedia, which they wantonly burnt. Some obſcure hints are mentioned of a doubtful combat that ſecured their retreat. But even a complete victory would have been of little moment, as the approach of the autumnal equinox ſummoned them to haſten their return. To navigate the Euxine before the month of May, or after that of September, would have been eſteemed the higheſt inſtance of raſhneſs and folly.

When we are informed that the third fleet equipped by the Goths in the ports of Boſphorus, conſiſted of five hundred ſail of ſhips, our imagination naturally computes and multiplies the formidable armament; but, as we are aſſured by the judicious Strabo, that the piratical veſſels uſed by the barbarians of Pontus and the Leſſer Scythia were not capable of containing more than twenty-five or thirty men, we may ſafely affirm, that fifteen thouſand warriors, at the moſt, embarked in this great expedition. Impatient of the limits of the Euxine, they ſteered their courſe from the Cimmerian to the Thracian Boſphorus. When they had almoſt gained the middle of the Straits, they were ſuddenly driven back to the entrance of them; till a favourable wind ſpringing up the next day, carried them in a few hours into the lake of the Propontis. Their landing on the iſland of Cyzicus, was now attended with the ruin of that ancient and noble city. From thence iſſuing again through the narrow paſſage of the Helleſpont, they purſued their winding navigation amidſt the numerous iſlands ſcattered over the Archipelago, or the Ægean Sea. The aſſiſtance of captives and deſerters muſt have been very neceſſary to pilot their veſſels, and to direct their various incurſions, as well on the coaſt of Greece as on that of Aſia. At length the Gothic fleet anchored in the port of Piræus, five miles diſtant from Athens, which had attempted to make ſome preparations for a vigorous defence. Cleodamus, one of the engineers employed by the emperor's orders to fortify the maritime cities againſt the Goths, had already begun to repair the ancient walls, fallen to decay ſince the time of Sylla. The efforts of his ſkill were ineffectual, and the barbarians became maſters of this native ſeat of the muſes and the arts. But while the conquerors abandoned themſelves to the licence of plunder and intemperance, their fleet, that lay with a ſlender guard in the harbour of Piræus, was unexpectedly attacked by the brave Dexippus, who, flying with the engineer Cleodamus from the ſack of Athens, collected a haſty band of volunteers, peaſants as well as ſoldiers, and in ſome degree avenged the calamities of his country.

But this exploit, whatever luſtre it might ſhed on the declining age of Athens, ſerved rather to irritate than

to

to ſubdue the undaunted ſpirit of the Goths. A general conflagration blazed out at the ſame time in every diſtrict of Greece. Thebes and Argos, Corinth and Sparta, which had formerly waged ſuch memorable wars againſt each other, were now unable to bring an army into the field, or even to defend their ruined fortifications. The rage of war, both by land and by ſea, ſpread from the eaſtern point of Sunium to the weſtern coaſt of Epirus. The Goths had already advanced within ſight of Italy, when the approach of ſuch imminent danger awakened Gallienus from his unaccountable lethargy. The emperor appeared in arms; and his preſence ſeems to have checked the ardour, and to have divided the ſtrength, of the enemy. Great numbers of the Goths, diſguſted with the perils and hardſhips of a tedious voyage, broke into Mæſia, with a deſign of forcing their way over the Danube to their ſettlements in the Ukraine. The wild attempt would have proved inevitable deſtruction, if the diſcord of the Roman generals had not opened to the barbarians the means of an eſcape. The ſmall remainder of this deſtroying hoſt returned on-board their veſſels; and meaſuring back their way through the Helleſpont and the Boſphorus, ravaged in their paſſage even the ſhores of Troy. As ſoon as they found themſelves in ſafety within the baſon of the Euxine, they landed at Anchialus in Thrace, near the foot of Mount Hæmus: and, after all their toils, indulged themſelves in the uſe of thoſe ſalutary baths. What remained of the voyage was a ſhort and eaſy navigation. Such was the various fate of this third and and greateſt of their naval enterpriſes. It may ſeem difficult to conceive, how the original body of fifteen thouſand warriors could ſuſtain the loſſes and diviſions of ſo bold an adventure. But as their numbers were gradually waſted by the ſword, by ſhipwrecks, and by the influence of a warm climate, they were perpetually renewed by troops of banditti and deſerters, who flocked to the ſtandard of plunder, and by a crowd of fugitive ſlaves, often of German or Sarmatian extraction, who eagerly ſeized the opportunity of freedom and revenge. In theſe expeditions, the Gothic nation claimed a ſuperior ſhare of honour and danger; but the tribes that fought and the Gothic banners are ſometimes diſtinguiſhed and ſometimes confounded in the imperfect hiſtories of that age; and as the barbarian fleets ſeemed to iſſue from the mouth of the Tanais, the vague but familiar appellation of Scythians was frequently beſtowed on the mixed multitude.

We muſt not forget that the temple of Diana at Epheſus, that ſacred and exalted ſtructure, after having riſen with increaſing ſplendour from ſeven repeated misfortunes, was finally burnt by the Goths in their third naval invaſion. And we are told that in the ſack of Athens the Goths had collected all the libraries, and were on the point of ſetting fire to this funeral pile of Grecian learning, had not one of their chiefs, of more refined policy than his brethren, diſſuaded them from the deſign; by the grave obſervation, that as long as the Greeks were addicted to the ſtudy of books, they would never apply themſelves to the exerciſe of arms. This ſagacious counſellor reaſoned like an ignorant barbarian; for in the moſt polite and powerful nations, the age of knowledge and ſcience has generally been the age of military virtue and renown.

Perſiſting ſtill in their rooted animoſity with the Romans, the ferocious tribes of Germany and Sarmatia who fought under the Gothic ſtandard, collected an armament in 269, more formidable than any which had yet iſſued from the ſtrong holds of the Euxine, or the iſlands of the Baltic. On the banks of the Nieſter they conſtructed a fleet of two thouſand, or even of ſix thouſand, veſſels; numbers which, however incredible they may ſeem, would have been inſufficient to tranſport their army of three hundred and twenty thouſand men; which, however, the Auguſtan hiſtory, and Zonaras, have held in diſpute. But whatever might be the real ſtrength of the Goths, the vigour and ſucceſs of the expedition were not adequate to the greatneſs of the preparations. In their paſſage through the Boſphorus, the unſkilful pilots were overpowered by the violence of the current; and while the multitude of their ſhips were crowded in a narrow channel, many were daſhed againſt each other, or againſt the ſhore. The barbarians made ſeveral deſcents on the coaſts both of Europe and Aſia; but the open country had been already plundered, and they were repulſed with ſhame and loſs from the fortified cities which they aſſaulted. A ſpirit of diſcouragement and diviſion aroſe in the fleet, and ſome of their chiefs ſailed away towards the iſlands of Crete and Cyprus; but the main body purſuing a more ſteady courſe, anchored at length near the foot of mount Athos, and aſſaulted the city of Theſſalonica, the wealthy capital of the Macedonian provinces. Their attacks, in which they diſplayed a fierce but artleſs bravery, were ſoon repreſſed by the haſty approach of Claudius, who repaired to a ſcene of action that called for the preſence of a warlike prince, at the head of the legions of the Roman empire. Impatient for battle, the Goths immediately broke up their camp, relinquiſhed the ſiege of Theſſalonica, left their navy at the foot of mount Athos, traverſed the hills of Macedonia, and preſſed forwards to engage the army of Italy. Meanwhile Claudius, conſcious of his danger, but ſtill deriving a well-grounded hope from the reſources of his own mind, prepared to cut ſhort the progreſs of theſe undiſciplined barbarians.

The event ſurpaſſed his own expectations and thoſe of the world. By the moſt ſignal of victories he delivered the empire from this hoſt of invaders, and was on this account diſtinguiſhed by poſterity under the appellation of the Gothic Claudius. The deciſive battle was fought near Naiſſus, a city of Dardania. The Romans at firſt gave way, oppreſſed by numbers, and diſmayed by misfortunes. Their ruin was inevitable, had not the abilities of their emperor prepared a ſeaſonable relief. A large detachment riſing out of the ſecret and difficult paſſes of the mountains, which, by his order, they had occupied, ſuddenly aſſailed the rear of the Goths. The favourable inſtant was improved by the activity of Claudius. He revived the drooping courage of his troops, reſtored their ranks, and preſſed the barbarians on every ſide. Fifty thouſand men are reported to have been ſlain in the battle of Naiſſus. Several large bodies of the Goths, covering their retreat with a moveable fortification of waggons, retired, or rather eſcaped, from the field of ſlaughter. The war had been diffuſed over the provinces of Mæſia, Thrace, and Macedonia, and its operations drawn out into a variety of marches, ſurpriſes, and tumultuary engagements, as well by ſea as by land. The immenſe booty which had been collected by the Goths, conſiſted for the greater part of cattle and ſlaves. A ſelect body of the Gothic youth was on this occaſion incorporated among the imperial troops; the remainder was ſold into ſervitude; and ſo conſiderable was the number of female captives, that every ſoldier obtained to his ſhare two or three women. A circumſtance from which it has been concluded, that the invaders entertained ſome deſigns of a ſettlement as well as of plunder; ſince even in a naval expedition they were accompanied by their families. The loſs of their fleet, which had been either taken or ſunk, prevented the retreat of the Goths; and a vaſt circle of Roman poſts, diſtributed with ſkill, and gradually cloſing towards a common centre, forced the barbarians into the moſt inacceſſible parts of mount Hæmus, where they took refuge, but on a very ſcanty ſubſiſtence. During the courſe of a rigorous winter, in which they were beſieged by the emperor's troops, famine and peſtilence, deſertion and the ſword, continually diminiſhed the fugitive multitude. On the return of ſpring,

nothing appeared in arms except a deſperate band, the only remnant of that formidable hoſt which had embarked at the mouth of the Nieſter.

On the death of Claudius, in 270, and the recal of the Roman troops from mount Hæmus, and the banks of the Danube, theſe barbarians appear to have been excited to new enterpriſes. The Gothic and Vandalic tribes at once abandoned their ſettlements of the Ukraine, traverſed the rivers, and ſwelled with new multitudes the deſtroying hoſt of their countrymen. Their depredations were directed to the Roman frontier, which was laid waſte with terrible deſtruction. Their united numbers were at length encountered by Aurelian, and the bloody and doubtful conflict ended only with the approach of night. Exhauſted and depreſſed by the calamities they had reciprocally endured and inflicted during a twenty year's war, the Goths and the Romans now conſented to a laſting and beneficial treaty. It was ſolicited on the ſide of the barbarians, and cheerfully ratified by the Roman legions, to whoſe ſuffrage the prudence of Aurelian referred the deciſion of that important queſtion. The Gothic nation engaged in conſequence to ſupply the armies of Rome with a body of two thouſand auxiliaries, conſiſting entirely of cavalry; and Aurelian ſtipulated in return an undiſturbed retreat to the Goths, with a regular market as far as the Danube, provided by the emperor's care, but at their own expence. The treaty was obſerved with ſuch religious fidelity, that when a party of five hundred men ſtraggled from the Gothic camp in queſt of plunder, the general of the barbarians commanded that the guilty leader ſhould be apprehended and ſhot to death with darts, as a ſacrifice to the ſanctity of their engagements. It is, however, not unlikely that the precaution of Aurelian, who had exacted as hoſtages the ſons and daughters of the Gothic chiefs, contributed ſomething to this pacific temper. The youths he trained in the exerciſe of arms, and near his own perſon: to the ladies he gave a liberal Roman education, and by beſtowing them in marriage on ſome of his principal officers, gradually introduced between the two nations the bonds of amity and friendſhip. But the moſt important condition of the peace was, that Aurelian ſhould withdraw the Roman forces from Dacia, and relinquiſh that great province to the Goths and Vandals. His manly judgment convinced him of the ſolid advantages, and taught him to deſpiſe the ſeeming diſgrace, of thus contracting the frontiers of the empire. This colony, which had ſo long been a Roman province, readily acknowledged the authority of the Gothic tribe, and claimed the fancied honour of a Scandinavian origin. At the ſame time the accidental reſemblance of the name of Gæta, infuſed among the credulous Goths a belief that, in a remote age, their own anceſtors, ſeated in the Dacian provinces, had received the inſtructions of Zamolxis, and checked the arms of Seſoſtris and Darius.

From this period to the year 322, theſe northern hives, exhauſted for a time and weakened, appear to have ſheathed the ſword, and reſpected their treaty. But the ſtrength of that warlike nation was now reſtored by a peace of near fifty years; a new generation had ariſen, who no longer remembered the misfortunes of ancient days: the Sarmatians of the lake Mœotis followed the Gothic ſtandard either as ſubjects or as allies, and their united forces burſt forth like a torrent upon the devoted countries of Illyricum. Campona, Margus, and Bononia, appear to have been the ſcenes of ſeveral memorable ſieges and battles; and though Conſtantine encountered a very obſtinate reſiſtance, he prevailed at length in the conteſt, and the Goths were compelled to purchaſe an ignominious retreat, by reſtoring the booty and priſoners which they had taken. Nor was this advantage ſufficient to ſatisfy the indignation of the emperor. At the head of his legions he paſſed the Danube, penetrated into the ſtrongeſt receſſes of Dacia, and not till he had inflicted a ſevere revenge condeſcended to give peace to the ſuppliant Goths.

Among barbaric tribes, the ſharing of the ſpoil, and the recriminations after a defeat, equally ſtir up diſſenſions between them. Thus it happened with the Sarmatians and Goths: the latter, by wearing the longer ſword, were diſpoſed to carve largely for themſelves, without admitting a breath of reſtriction from their weaker allies. Hence the Vandal princes were ſtimulated by envy and revenge, when they beheld the Gothic kings aſpiring to extend their dominion from the Euxine to the frontiers of Germany; and the waters of the Maros, a river which falls into the Teyſs, were literally ſtained with the blood of the contending barbarians. After experiencing the ſuperior ſtrength and numbers of their adverſaries, the Sarmatians implored the protection of the Roman monarch, who beheld with pleaſure the diſcord of theſe rapacious nations, but who was juſtly alarmed by this new progreſs of the Gothic arms. As ſoon as Conſtantine had declared himſelf in favour of the weaker party, the haughty Araric king of the Goths, inſtead of waiting the attack of the Romans, boldly paſſed the Danube, and ſpread terror and devaſtation through the province of Mæſia. To oppoſe the inroad of this deſtroying hoſt, the aged emperor, A. D. 332, again took the field; but on this occaſion his fortune betrayed the glory which he had acquired in ſo many former actions. He had the mortification of ſeeing his troops fly before an inconſiderable detachment of the Goths, who purſued them to the edge of their fortified camp, and obliged him to conſult his ſafety by a precipitate and ignominious retreat. The event of a ſecond and more ſucceſsful action retrieved the honour of the Roman name; and the force of diſcipline prevailed, after an obſtinate conteſt, over the efforts of irregular valour. The broken army of the Goths abandoned the field of battle, fled from the waſted province, and, flying before the victors, quickly repaſſed the Danube.

The emperor improved this advantage by his negociations with the warlike people of Cherſoneſus. The Cherſonites were animated againſt the Goths, by the memory of the wars, which, in the preceding century, they had maintained with unequal forces againſt thoſe invaders of their country. Obedient to the requiſition of Conſtantine, they prepared a conſiderable army, of which the principal ſtrength conſiſted in croſs-bows and military chariots. The Goths, now vanquiſhed on every ſide, were driven into the mountains, where, in the courſe of a ſevere campaign, above an hundred thouſand were computed to have periſhed by cold and hunger. Peace was at length granted; the eldeſt ſon of Araric was accepted as an hoſtage; and Conſtantine once more endeavoured to convince theſe chiefs, by a liberal diſtribution of honours and rewards, how far the friendſhip of the Romans was preferable to their enmity.

The Goths now for a ſucceſſion of years cultivated a firm attachment to the imperial houſe of Conſtantine, of whoſe liberality they had received ſo many ſignal proofs. But, in the year 366, their contempt for two new and obſcure princes, who had been raiſed to the imperial throne by a popular election, opened to the aſpiring Goths a field of new enterpriſes; and, while they agitated the deſign of marching their confederate forces under the national ſtandard, they were reſolved to embrace the party of Procopius. The treaty might ſtipulate no more than ten thouſand auxiliaries; but the deſign was ſo zealouſly adopted by the chiefs of the Viſigoths, that the army which paſſed the Danube is ſaid to have amounted to thirty thouſand men. They marched with the confidence that their valour would decide the fate of the Roman empire; and the provinces of Thrace groaned under the weight of theſe barbarians,

barbarians, who displayed the insolence of masters, and the licentiousness of enemies. But the intemperance which gratified their appetites, retarded their progress; and before the Goths could receive any certain intelligence of the defeat and death of Procopius, they found, by the hostile state of the country, that the civil and military powers were resumed by his successful rival. A chain of posts and fortifications, skilfully disposed by the generals of Valens, resisted their march, prevented their retreat, and intercepted their subsistence. The fierceness of the Goths was tamed by hunger: they threw down their arms, and for the sake of food submitted to chains. The numerous captives were distributed in all the cities of the east; and the provincials, who became familiarized with their savage appearance, ventured, by degrees, to measure their own strength with these formidable adversaries, whose name had so long been the object of their terror. The king of Scythia was grieved and exasperated by this national calamity. His ambassadors loudly complained, at the court of Valens, of the infraction of the ancient and solemn alliance, which had so long subsisted between the Romans and the Goths. They alleged, that they had fulfilled the duty of allies, by assisting the kinsman and successor of the emperor Julian; they required the immediate restitution of the captives; and they urged a very singular claim, that the Gothic generals, marching in arms, were entitled to the sacred character and privileges of ambassadors. The peremptory refusal of these demands, was the immediate signal for a new war: the aged monarch of the Goths resigned to Athanaric the conduct of the war. A bridge of boats was established upon the Danube; and the presence of Valens animated the Roman troops. The operations of the campaign were in favour of the Romans; but they found it impossible to drive the Visigoths from their strong posts in the mountains: and the devastation of the plains obliged the victors to repass the Danube on the approach of winter. The incessant rains, which swelled the waters of the river, produced a suspension of arms, and confined the emperor Valens, during the whole course of the ensuing summer, to his camp of Marcianapolis. The third year of the war became still more favourable to the Romans, and more pernicious to the Goths; who, by the desolation of the country, were threatened with the horrors of famine. Athanaric was therefore compelled to risk a battle, which he lost; and the pursuit was rendered more bloody by the precaution of the Roman generals, who had promised a large reward for the head of every Goth that was brought into the imperial camp. This signal overthrow procured, as usual, a temporary peace. Valens returned in triumph to Constantinople; and the Goths remained in a state of tranquillity about six years; till they were violently impelled against the Roman empire, by a new horde of Scythians or Huns, who appeared to issue from the frozen regions of the north.

The great Hermanric, whose Gothic empire was extended from the Baltic to the Euxine, began to enjoy, in the full maturity of age and reputation, the fruit of his victories, when he was alarmed, in the year 375, by this formidable host of unknown enemies. The numbers, the strength, the rapid motions, and the implacable cruelty, of the Huns, were soon felt and dreaded by the astonished Goths; who beheld their fields and villages consumed with flames, and deluged with indiscriminate slaughter. Hermanric prepared to exert the united forces of the Gothic state against them; but he soon discovered that his vassal tribes, provoked by oppression, and instigated by the hope of plunder, were much more inclined to second, than to repel, the invasion of the Huns. One of the chiefs of the Roxolani had formerly deserted the standard of Hermanric, and the cruel Goth condemned the innocent wife of the traitor to be torn asunder by horses. The brothers of that unfortunate woman seized the present moment of revenge. The aged king of the Goths languished under the wound which he received from their daggers; and the conduct of the war was distracted by a spirit of jealousy and discord. His death, which has been imputed to his own despair, left the reins of government in the hands of Withimer, who, with the aid of some Scythian mercenaries, maintained the contest against the Huns, till he was defeated and slain in a decisive battle. The Ostrogoths submitted to their fate; and the royal race of the Amali are henceforward found among the subjects of Attila. But the person of Witheric, the infant king, was saved by the diligence of Alatheus and Saphrax; two generals of approved fidelity; who, by cautious marches, conducted the poor remains of the Ostrogoths towards the Niester. On the banks of that river the prudent Athanaric, more attentive to his own than to the general safety, had fixed the camp of the Visigoths, with a resolution of opposing the victorious barbarians by mere defensive operations. The speed of the Huns was checked by the weight of spoils, and the incumbrance of captives; but their military skill deceived, and almost destroyed, the army of Athanaric. While this distinguished judge of the Visigoths defended the banks of the Niester, he was encompassed and attacked by a numerous detachment of cavalry, who, by the light of the moon, had passed the river in a fordable place; and, it was not without the utmost efforts of courage and conduct, that he was able to effect his retreat towards the hilly country. The undaunted Athanaric had already formed a judicious plan of defensive war; and the strong lines which he was preparing to construct between the mountains, the Pruth, and the Danube, would have secured the extensive and fertile territory that now bears the name of Wallachia, from the destructive inroads of the Huns. But the hopes and measures of the judge of the Visigoths were soon disappointed, by the trembling impatience of his dismayed countrymen; who were persuaded by their fears, that the interposition of the Danube was the only barrier that could save them from the rapid pursuit of the barbarians of Scythia. Under the command of Fritigern and Alavivus, the body of the nation advanced to the banks of that river, and implored the protection of the Roman emperor of the east; while Athanaric retired, with a band of faithful followers, into the mountainous country of Caucaland, which appears to have been almost concealed by the impenetrable forests of Transylvania.

In 376, an embassy was dispatched to the emperor Valens, to inform him that the North was agitated by a furious tempest; that the irruption of the Huns, a monstrous race of savages, had subverted the power of the Goths; and that the suppliant multitudes of that warlike nation, whose pride was now humbled in the dust, covered a space of many miles along the banks of the Danube. With pathetic lamentations they deplored their past misfortunes, and their present danger; acknowledged, that their only hope of safety was in the clemency of the Roman government; and most solemnly protested, that if the gracious liberality of the emperor would permit them to cultivate the waste lands of Thrace, they should ever hold themselves bound by the strongest obligations to obey the laws, and to guard the limits, of the republic. The prayers of the Goths were granted, and their service was accepted by the imperial court: and orders were dispatched to the civil and military governors of the Thracian diocese, to make preparations for the passage and subsistence of this distressed people, till a sufficient territory could be allotted for their future residence. The liberality of the emperor was accompanied, however, with two rigorous conditions, which prudence, perhaps, might justify, but which distress alone could extort from the indignant Goths. Before they passed the Danube, they were required to deliver up their arms; and it was insisted that

their children ſhould be taken from them, and diſperſed through the provinces of Aſia, where they might be civilized by the arts of education, and ſerve as hoſtages to ſecure the fidelity of their parents.

A probable teſtimony has fixed the number of theſe diſcomfited Gothic warriors at two hundred thouſand men; and if we may venture to add the juſt proportion of women, of children, and of ſlaves, the whole maſs of people which compoſed this formidable emigration, muſt have amounted to near a million of perſons of both ſexes, and of all ages. The children of the Goths, thoſe at leaſt of a diſtinguiſhed rank, were ſeparated from the multitude. They were conducted, without delay, to the diſtant ſeats aſſigned for their reſidence and education; and as the numerous train of hoſtages or captives paſſed through the cities, their ſplendid apparel, and their robuſt and martial figure, excited the ſurpriſe and curioſity of the provincials. But the ſtipulation, the moſt offenſive to the Goths, and the moſt important to the Romans, was eluded. The barbarians, who conſidered their arms as the enſigns of honour, and the pledges of ſafety, were diſpoſed to offer a price, which the avarice of the imperial officers was eaſily tempted to accept. Thus the Goths, with arms in their hands, were permitted to enter the boats; and when their ſtrength was collected on the other ſide of the river, the immenſe camp which was ſpread over the plains and hills of the Lower Mæſia, aſſumed a threatening and even hoſtile aſpect. The leaders of the Oſtrogoths, Alatheus and Saphrax, the guardians of their infant king, appeared ſoon afterwards on the northern banks of the Danube; and immediately diſpatched their ambaſſadors to Valens, to ſolicit, with the ſame profeſſions of allegiance and gratitude, the ſame favour which had been granted to the ſuppliant Viſigoths. But the abſolute refuſal of Valens ſuſpended their progreſs, and diſcovered the ſuſpicions and the fears of the imperial council. At this important criſis, the military government of Thrace was exerciſed by Lupicinus and Maximus, in whoſe venal minds the ſlighteſt hope of private emolument outweighed every conſideration of public advantage; and whoſe guilt was only alleviated by their incapacity of diſcerning the pernicious effects of their criminal adminiſtration. Inſtead of obeying the orders of their ſovereign, and ſatisfying the natural wants of the Goths, they levied an oppreſſive tax upon them. The vileſt food was ſold at an extravagant price; and, in the room of wholeſome proviſions, the markets were filled with the fleſh of dogs, and of unclean animals, who had died of diſeaſe. To obtain the acquiſition of a pound of bread, the Goths reſigned the poſſeſſion of a ſerviceable ſlave; and a ſmall quantity of meat was greedily purchaſed with ten pounds of precious metal. A ſpirit of diſcontent inſenſibly aroſe in the camp of the barbarians, who pleaded the merit of their dutiful behaviour; and loudly complained of the inhoſpitable treatment which they received from their new allies. The clamours of the multitude announced the firſt ſymptoms of reſiſtance, and alarmed the guilty minds of Lupicinus and Maximus. Theſe crafty miniſters, who ſubſtituted the cunning of temporary expedients to the ſalutary counſels of general policy, attempted to remove the Goths from their dangerous ſtation on the frontiers of the empire; and to diſperſe them in ſeparate quarters of cantonment, through the interior provinces. As they were conſcious how ill they had deſerved the reſpect of the barbarians, they diligently collected a military force, while they imprudently diſarmed the ſhips and the fortifications which conſtituted the defence of the Danube. The fatal overſight was obſerved and improved by Alatheus and Saphrax, who anxiouſly watched the favourable moment of eſcaping from the purſuit of the Huns. By the help of ſuch rafts and veſſels as could be haſtily procured, the leaders of the Oſtrogoths tranſported, without oppoſition, their king and their army; and boldly fixed their hoſtile camp on the territories of the empire.

Under the name of judges, Alavivus and Fritigern were ſtill the leaders of the Viſigoths; and the authority which they derived from their birth, was ratified by the will of the nation. In a ſeaſon of tranquillity, their power might be equal, as well as their rank; but, as ſoon as their countrymen were exaſperated by hunger and oppreſſion, the ſuperior abilities of Fritigern aſſumed the military command, which he was well qualified to exerciſe for the public welfare. Senſible of the benefits which would reſult from an union of all the Gothic powers under the ſame ſtandard, he ſecretly cultivated the friendſhip of the Oſtrogoths; and while he profeſſed an implicit obedience to the orders of the Roman generals, he proceeded by ſlow marches towards Marcianopolis, the capital of the Lower Mæſia, about ſeventy miles from the banks of the Danube. On that fatal ſpot, the flames of diſcord ſuddenly burſt forth into a dreadful conflagration. Lupicinus had invited the Gothic chiefs to a ſplendid entertainment; and their martial train remained under arms at the entrance of the palace. But the gates of the city were ſtrictly guarded; and the barbarians were ſternly excluded from the uſe of a plentiful market, to which they aſſerted their equal claim, as ſubjects and allies. Their ſolicitations were rejected with deriſion; and as their patience became exhauſted, the townſmen, the ſoldiers, and the Goths, were ſoon involved in a conflict of paſſionate altercation and angry reproaches. A blow was involuntarily given; a ſword was haſtily drawn; and the firſt blood that was ſpilt in this accidental quarrel, became the ſignal of a long and deſtructive war. In the midſt of noiſe and intemperance, Lupicinus was informed that many of his ſoldiers were ſlain, and deſpoiled of their arms; and as he was highly inflamed by wine, he iſſued a raſh command, that their death ſhould be revenged by the maſſacre of the guards of Fritigern and Alavivus. The clamorous ſhouts and dying groans appriſed Fritigern of his extreme danger: and, as he poſſeſſed the calm and intrepid ſpirit of a hero, he ſaw that he was loſt if he allowed a moment of deliberation to the man who had ſo deeply injured him. "A trifling diſpute, (ſaid the Gothic leader, with a firm tone,) appears to have ariſen between the two nations; but it may be productive of the moſt dangerous conſequences, unleſs the tumult is immediately pacified by the aſſurance of our ſafety, and the authority of our preſence." At theſe words, Fritigern and his companions drew their ſwords, opened their paſſage through the crowd which filled the ſtreets of Marcianopolis, and, mounting their horſes, haſtily vaniſhed from the eyes of the aſtoniſhed Romans. The generals of the Goths were ſaluted by the joyful acclamations of their camp: war was inſtantly reſolved on, and the reſolution was executed without delay: the banners of the Gothic nation were diſplayed according to the cuſtom of their anceſtors; and the air reſounded with the harſh muſic of the barbarian trumpet. The weak and guilty Lupicinus, who ſtill deſpiſed theſe formidable people, marched againſt the Goths, at the head of ſuch a military force as could be collected on this ſudden emergency. The barbarians expected his approach about nine miles from Marcianopolis; and on this occaſion the valour of the Goths was ſo ably directed by the genius of Fritigern, that they broke, by a cloſe and vigorous attack, the ranks of the Roman legions. Lupicinus left his arms and ſtandards, his tribunes and his braveſt ſoldiers, on the field of battle; and ſaved himſelf by an ignominious flight. That memorable day put an end to the diſtreſs of the barbarians; from that day they renounced the precarious condition of ſtrangers and exiles, aſſumed the character of citizens and maſters, claimed an abſolute dominion over the poſſeſſors

of

of land, and held, as in their own right, thoſe provinces of the empire which are bounded by the Danube. See *Jornandes de Rebus Geticus*, c. 26. p. 648. edit. Grot.

The report of the Gothic victory was ſoon diffuſed over the adjacent country; and while it filled the minds of the Romans with aſtoniſhment, their own haſty imprudence contributed to increaſe the forces of Fritigern, and the calamities of the province. Some time before the great emigration, a numerous body of Goths, under the command of Suerid and Colias, had been received into the ſervice of the empire; and they were encamped under the walls of Adrianople: but the miniſters of Valens were anxious to remove them beyond the Helleſpont, that they might have no communication with their countrymen. The reſpectful ſubmiſſion with which they yielded to the order of their march, might be conſidered as a proof of their fidelity; but their moderate requeſt of a ſufficient allowance of proviſions, and of a delay of only two days to prepare for their march, incenſed the governor of Adrianople, who refuſed this indulgence; and arming againſt them the inhabitants of a populous city, he urged, with hoſtile threats, their inſtant departure. The barbarians ſtood ſilent and amazed, till they were exaſperated by the inſulting clamours and miſſile weapons of the populace: but when their patience was exhauſted, they cruſhed the undiſciplined multitude, and determined to unite themſelves with the nation of the Viſigoths. The troops of Colias and Suerid, therefore, immediately fought the army of Fritigern, ranged themſelves under his ſtandard, and ſignaliſed their ardour in the ſiege of Adrianople. But the reſiſtance of the garriſon informed the barbarians, that, in the attack of regular fortifications, the efforts of courage unaſſiſted by ſcience, are ſeldom effectual. Their general ſoon acknowledged his error, raiſed the ſiege, declared that "he was at peace with ſtone walls;" and revenged his diſappointment on the adjacent country. In the courſe of theſe depredations, a great number of the children of the Goths, who had been ſold into captivity, were reſtored to the embraces of their parents; but theſe tender interviews, which ſhould have cheriſhed in their minds ſome ſentiments of humanity, tended only to ſtimulate their native fierceneſs by the deſire of revenge. They liſtened with eager attention to the complaints of their captive children, who had ſuffered the moſt cruel indignities from the luſtful or angry paſſions of their maſters; and the ſame cruelties, the ſame indignities, were retaliated on the ſons and daughters of the Romans.

Under theſe afflicting circumſtances, A. D. 377, Valens declared his intention of marching from Conſtantinople, to cruſh this dangerous rebellion; and, as he was not ignorant of the difficulties of the enterpriſe, he ſolicited the aſſiſtance of his nephew, the emperor Gratian, who commanded the forces of the weſtern empire. The veteran legions were haſtily recalled from the defence of Armenia, and the conduct of the Gothic war, during the abſence of Valens, was entruſted to his generals Trajan and Profuturus, who indulged in a falſe opinion of their own abilities. On their arrival in Thrace, they were joined by Richomer and the auxiliaries of the Weſt. In a council of war, it was reſolved to ſeek and to encounter the barbarians, who lay encamped in the ſpacious plain of the Salices or willows, near the moſt ſouthern of the ſix mouths of the Danube. Their camp was ſurrounded by their uſual fortification of waggons; and the barbarians, ſecure within the circle of their incloſure, enjoyed the fruits of their rapacity, and the ſpoils of the province. In the midſt of riotous intemperance, however, the watchful Fritigern obſerved the motions, and penetrated the deſigns, of the Romans. He perceived that the numbers of the enemy were hourly increaſing; and, as he underſtood their intention of attacking his rear whenever the ſcarcity of forage ſhould oblige him to remove his camp, he recalled to their ſtandard his predatory detachments, which covered and pillaged the adjacent country. As ſoon as they deſcried the flaming beacons of alarm, they obeyed, with incredible ſpeed, the ſignal of their leader; the camp was filled with the martial crowd; their impatient clamours demanded the battle; and their tumultuous zeal was animated by the ſpirit of their chiefs. The evening was already far advanced; and the two armies prepared themſelves for the approaching combat, which was deferred only till the dawn of day. While the trumpets ſounded to arms, the undaunted courage of the Goths was ſtimulated by the mutual obligation of a ſolemn oath; and as they advanced to battle, the rude ſongs, which celebrated the glory of their forefathers, mingled with their fierce and diſſonant outcries, drowned in ſilence the Roman ſhout. Some attempt at military ſkill was diſplayed by Fritigern to gain the advantage of a commanding eminence; but the bloody conflict, which began and ended with the light, was maintained on every ſide by the perſonal and obſtinate efforts of ſtrength, valour, and agility. The brave legions of Armenia ſupported their fame in arms; but they were oppreſſed by the irreſiſtible weight of the hoſtile multitude: the left wing of the Romans was thrown into diſorder, and the field was ſtrewed with their mangled carcaſſes. This partial defeat was balanced, however, by partial ſucceſs; and when the two armies, at a late hour of the evening, retreated to their reſpective camps, neither of them could claim the honour of the victory. The real loſs was more ſeverely felt by the Romans, in proportion to the ſmallneſs of their numbers; but the Goths were ſo deeply confounded and diſmayed by this vigorous reſiſtance, that they remained ſeven days within the circle of their fortifications. Such funeral rites as the circumſtances of time and place would admit, were piouſly diſcharged to ſome officers of diſtinguiſhed rank; but the indiſcriminate vulgar were left unburied on the plain, their fleſh devoured by beaſts and birds of prey, and for ſeveral years afterwards the white and naked bones which covered the wide extent of the plain, preſented to the eye of travellers a dreadful monument of the battle of Salices.

The progreſs of the Goths was ſomewhat checked by the ſlaughter of that bloody day; and the imperial generals adopted a plan of deſtroying the barbarians by the wants and preſſure of their own multitudes. They prepared to confine the Viſigoths in the narrow tract of land lying between the Danube, the deſert of Scythia, and the mountains of Hæmus, till their ſtrength and ſpirit ſhould be inſenſibly waſted by the inevitable operation of famine. The deſign was proſecuted with ſome ſucceſs; but the alarming intelligence that new ſwarms of barbarians had paſſed the Danube, either to ſupport the cauſe, or to imitate the example, of Fritigern, obliged the Romans to relinquiſh the inveſtiture of the Gothic camp. The indignant Viſigoths, no longer awed by an enemy, ſatiated their hunger by the devaſtation of the whole country extending from the banks of the Danube to the ſtraits of the Helleſpont. The ſagacious Fritigern ſaw, and wiſely prepared for, the events that were to enſue from the return of the Romans with an increaſed force. He cemented a ſtrict alliance with the great body of his countrymen under Alatheus and Saphrax, who were the guardians of their infant king: the long animoſity of rival tribes was ſuſpended for the good of the common intereſt; the independent part of the nation was aſſociated under one ſtandard; and the chiefs of the Oſtrogoths yielded the chief command to the ſuperior genius of the general of the Viſigoths. But the moſt powerful auxiliaries of the Goths, upon this occaſion, were drawn from the camp of thoſe very enemies who had expelled them from their native country. The looſe ſubordination, and extenſive poſſeſſions, of the Huns and the Alani, delayed the con-

queſts, and diſtracted the councils, of that victorious people. Several of the hords were therefore allured by the liberal promiſes of Fritigern; and the rapid cavalry of Scythia added weight and energy to the ſteady and ſtrenuous efforts of the Gothic infantry.

On the 9th of Auguſt 378, a day moſt inauſpicious to the Romans, the emperor Valens, leaving under a ſtrong guard his baggage and military treaſure, marched from Adrianople to attack the Goths, who were encamped about twelve miles from that city. By ſome miſtake of the orders, or ignorance of the ground, the right column of cavalry arrived in ſight of the enemy, whilſt the left was ſtill at a conſiderable diſtance, and out of view: the infantry were compelled, in the ſultry heat of ſummer, to precipitate their pace; and the line of battle was formed with tedious confuſion, and irregular delay. The Gothic cavalry had been detached to forage in the adjacent country; and the crafty Fritigern played off the artifice of a ſuppliant for peace. He diſpatched meſſengers, made propoſals, offered hoſtages, and waſted the hours, till the Romans, expoſed without ſhelter to the burning rays of the ſun, were exhauſted by thirſt, hunger, and unuſual fatigue. The emperor was deluded to ſend an ambaſſador to the Gothic camp; and the zealous Richomer, who alone had courage to accept the dangerous commiſſion, was proceeding on his way, when he was ſuddenly recalled by the ſhouts of battle. The haſty attack was made by Bacurius the Iberian, who commanded a legion of archers; and as they advanced with raſhneſs, they retreated with ſudden diſgrace. In the ſame moment, the fleet ſquadrons of Alatheus and Saphrax, whoſe return had been anxiouſly expected by the general of the Goths, deſcended like a whirlwind from the hills, ſwept acroſs the plain, and added new terrors to the tumultuous but irreſiſtible charge of the barbarian hoſt. The event of the battle of Adrianople, ſo fatal to Valens and to the empire, may be deſcribed in a few words:—the Roman cavalry fled; the infantry was abandoned, ſurrounded, and cut in pieces. The moſt ſkilful evolutions, the firmeſt courage, are rarely able to extricate a body of foot, encompaſſed, on an open plain, by ſuperior numbers of horſe: but the troops of Valens, oppreſſed by the weight of the enemy and their own fears, were crowded into a narrow ſpace, where it was impoſſible for them to extend their ranks, or even to uſe, with effect, their ſwords and javelins. In the midſt of tumult, of ſlaughter, and diſmay, the emperor, deſerted by his guards, and wounded with an arrow, ſought protection among the Lancearii and the Mattiarii, who ſtill maintained their ground with ſome appearance of order and firmneſs. His faithful generals, Trajan and Victor, who perceived his danger, loudly exclaimed, that all was loſt, unleſs the perſon of the emperor could be ſaved. Some troops, animated by their exhortation, advanced to his relief: they found only a bloody ſpot, covered with broken arms and mangled bodies, without being able to diſcover their unfortunate prince, either among the living, or the dead. Their ſearch could not indeed be ſucceſsful; for by the care of ſome of his attendants, Valens was removed from the field of battle to a neighbouring cottage, where they attempted to dreſs his wound, and to provide for his ſafety. But this humble retreat was inſtantly ſurrounded by the enemy, who, receiving a diſcharge of arrows from the roof, in revenge ſet fire to a pile of faggots, and conſumed the cottage with the Roman emperor and his train. Valens periſhed in the flames; and a youth, who dropt from the window, alone eſcaped, to atteſt the melancholy tale, and to inform the Goths of the ineſtimable prize which they had loſt in the ranſom of the emperor, by their own inconſiderate raſhneſs. See Ammianus, xxxi. 12, 13.

The pride of the Goths was elated by this memorable victory, in which it is recorded that forty thouſand Romans fell: but their avarice was diſappointed by the mortifying diſcovery, that the imperial ſpoils had been ſecured within the walls of Adrianople. They haſtened to poſſeſs this claim of their valour; but they were encountered by the remains of the vanquiſhed army, with an intrepid reſolution, which was the effect of deſpair, and the only hope of their ſafety. The walls of the city, and the ramparts of the Roman camp, were lined with military engines, that threw ſtones of an enormous weight; and aſtoniſhed the ignorant barbarians by the noiſe and velocity, more than by the real effects, of the diſcharge. The ſoldiers, the citizens, the provincials, the domeſtics of the palace, were equally united in the danger, and in the defence: the furious aſſault of the Goths was repulſed; and they indignantly raiſed the ſiege of Adrianople, in purſuit of a grander enterpriſe. The tide of the Gothic inundation rolled inſtantly from the walls of Adrianople to the ſuburbs of Conſtantinople. The barbarians were ſurpriſed with the ſplendid appearance of the capital city of the Eaſt, the height and extent of the walls, the myriads of wealthy and affrighted citizens who crowded the ramparts, and the various proſpect of the ſea and land. While they gazed with hopeleſs deſire on the inacceſſible beauties of Conſtantinople, a ſally was made from one of the gates by a party of Saracens, who had been engaged in the ſervice of Valens. The cavalry of the Goths was forced to yield to the admirable ſwiftneſs and ſpirit of the Arabian horſes; their riders were ſkilled in the evolutions of irregular war; and the northern barbarians were aſtoniſhed and diſmayed by the ſuperior ferocity of the barbarians of the ſouth. A Gothic ſoldier was ſlain by the dagger of an Arab; and the hairy naked ſavage, applying his lips to the wound, expreſſed a horrid delight while he ſucked the blood of his vanquiſhed enemy. The army of the Goths, laden with the ſpoils of the wealthy ſuburbs, ſlowly moved from the Boſphorus to the mountains which form the weſtern boundary of Thrace. The important paſs of Succi was betrayed by the fear or miſconduct of Maurus; and the barbarians, who no longer had any reſiſtance to apprehend from the ſcattered and vanquiſhed troops of the eaſt, ſpread themſelves over the face of a fertile and beautiful country, as far as the confines of Italy and the Adriatic Sea. St. Jerome has deſcribed in mournful language the dreadful calamities inflicted by the Goths, the Huns, and Vandals, on his native country of Pannonia; and the wide extent of their ravages, from the walls of Conſtantinople to the foot of the Julian Alps; the rapes, the maſſacres, the conflagrations; and, above all, the profanation of the churches, that were turned into ſtables, and the contemptuous treatment of the relics of holy martyrs. He affirms, "that, in thoſe deſert countries, nothing was left except the ſky and the earth; that, after the deſtruction of the cities, and the extirpation of the human race, the land was overgrown with foreſts and inextricable brambles; and that the univerſal deſolation, announced by the prophet Zephaniah, was accompliſhed, in the ſcarcity of the beaſts, the birds, and even of the fiſh!"—Tom. vii. p. 250. ad 1 cap. Sophonias; and tom. i. p. 26.

Whatever might have been the true meaſure of the calamities of Europe, there was reaſon to fear that the ſame calamities would ſoon extend to the peaceful countries of Aſia. The ſons of the Goths had been diſtributed through the cities of the eaſt; and the arts of education were employed to poliſh and ſubdue the native fierceneſs of their temper. In the ſpace of about twelve years, their numbers had continually increaſed; and the children, who in the firſt emigration were ſent over the Helleſpont, had attained, with rapid growth, the ſtrength and ſpirit of perfect manhood. It was impoſſible to conceal from their knowledge the events of the Gothic war; and as thoſe daring youths had not

ſtudied

ſtudied the language of diſſimulation, they betrayed their wiſh, their deſire, perhaps their intention, to emulate the great example of their fathers. The danger of the times ſeemed to juſtify the jealous ſuſpicions of the provincials; and theſe ſuſpicions were admitted as unqueſtionable evidence, that the Goths of Aſia had formed a ſecret and dangerous conſpiracy againſt the public ſafety. The death of Valens had left the eaſt without a ſovereign; and Julius, who filled the important ſtation of maſter-general of the troops, with a high reputation of diligence and ability, thought it his duty to conſult the ſenate of Conſtantinople; which he conſidered, during the vacancy of the throne, as the repreſentative council of the nation. As ſoon as he had obtained the diſcretionary power of acting as he ſhould judge moſt expedient for the good of the republic, he aſſembled the principal officers; and privately concerted meaſures for the execution of his bloody deſign. An order was promulgated, that, on a ſtated day, the Gothic youth ſhould aſſemble in the capital cities of their reſpective provinces; and as a report was induſtriouſly circulated, that they were ſummoned to receive a liberal gift of lands and money, the pleaſing hope allayed the fury of their reſentment, and perhaps ſuſpended the motions of the conſpiracy. On the appointed day, the unarmed crowd of the Gothic youth was carefully collected in the ſquare, or forum: the ſtreets and avenues were occupied by the Roman troops; and the roofs of the houſes were covered with archers and ſlingers. At the ſame hour, in all the cities of the eaſt, the ſignal was given of indiſcriminate ſlaughter; and the provinces of Aſia were delivered, by the cruel prudence of Julius, from a domeſtic enemy, who, in a few months, might have carried fire and ſword from the Helleſpont to the Euphrates. The urgent conſideration of the public ſafety may undoubtedly authoriſe the violation of every poſitive law. How far that, or any other conſideration, may operate, to diſſolve the natural obligations of humanity and juſtice, is a doctrine of which every good man will deſire to remain ignorant.

The glory of delivering the Roman provinces from theſe deſperate marauders, was reſerved to dignify the military fame of Theodoſius. The prudence of that diſtinguiſhed emperor was ſeconded by fortune; and he never failed to ſeize, and to improve, every favourable circumſtance of advantage. As long as the ſuperior genius of Fritigern preſerved the union and directed the motions of the barbarians, their power was not to be eaſily broken or overcome. But the death of that hero, the predeceſſor of the renowned Alaric, relieved the unwieldy multitude from the yoke of diſcipline and prudence. The barbarians, who had been reſtrained by his authority, now abandoned themſelves to the utmoſt licentiouſneſs. Their miſchievous diſpoſition was ſhewn in the deſtruction of every object, which they wanted ſtrength to remove, or taſte to enjoy; and they often conſumed, with improvident rage, the harveſts, or the granaries, which ſoon afterwards became neceſſary for their own ſubſiſtence. A ſpirit of diſcord aroſe among the different tribes and nations, which had been united only by the bands of an accidental alliance. The troops of the Huns and the Alani would upbraid the unnatural flight of the Goths from their native country; who in their turn would not be diſpoſed to uſe with moderation the improvement of their fortune: the ancient jealouſy of the Oſtrogoths and the Viſigoths could not long be ſuſpended; and the haughty chiefs ſtill remembered the inſults and injuries, which they had reciprocally offered, or ſuſtained, while the nation was ſeated in the countries beyond the Danube. The progreſs of mutual recriminations ſoon abated their ardour for war, and ſowed among them the ſeeds of fatal diſſenſion. The officers of Theodoſius were inſtructed to purchaſe with gifts and promiſes, the retreat, or ſervice, of the diſaffected party. The acquiſition of Modar, a prince of the royal blood of the Amali, gave a bold and faithful champion to the cauſe of Rome. The illuſtrious deſerter ſoon obtained an important command; ſurpriſed an army of his countrymen, who were immerſed in wine and ſleep; and after a cruel ſlaughter of the aſtoniſhed Goths, returned with an immenſe ſpoil, and four thouſand waggons, to the imperial camp. In the hands of a ſkilful politician, the moſt different means may be ſucceſsfully applied to the ſame ends: and the peace of the empire, which had been forwarded by the diviſions, was now to be accompliſhed by the re-union, of the Gothic nation. Athanaric, who had been a patient ſpectator of theſe extraordinary events, was at length driven, by the chance of arms, from the dark receſſes of the woods of Caucaland. He no longer heſitated to paſs the Danube; and a very conſiderable part of the ſubjects of Fritigern, who already felt the inconveniencies of anarchy, were eaſily perſuaded to acknowledge for their king a Gothic judge, whoſe birth they reſpected, and whoſe abilities they had frequently experienced. But age had chilled the daring ſpirit of Athanaric; and, inſtead of leading his people to the field of battle and victory, he wiſely liſtened to the propoſals of an honourable and advantageous treaty. In January 381, Theodoſius, who was acquainted with the merit and power of his new ally, condeſcended to entertain him in the imperial city of Conſtantinople, with the confidence of a friend, and the magnificence of a monarch. The Gothic prince obſerved, with ſingular attention, the variety of objects which attracted his notice, and at laſt broke out into a ſincere and paſſionate exclamation of wonder: "I now behold, (ſaid he,) what I never could believe, the glories of this ſtupendous capital!" As he caſt his eyes around, he viewed, and admired, the commanding ſituation of the city, the ſtrength and beauty of the walls and public edifices, the capacious harbour crowded with innumerable veſſels, the perpetual concourſe of diſtant nations, and the arms and diſcipline of the troops. "Indeed, (continued Athanaric,) the emperor of the Romans is a god upon earth; and the preſumptuous man, who dares to lift his hand againſt him, is guilty of his own blood." The Gothic king did not long enjoy this ſplendid reception; and as temperance was not the virtue of his nation, it may juſtly be ſuſpected, that his mortal diſeaſe was contracted amidſt the pleaſures of the imperial banquets. But the policy of Theodoſius derived more benefit from the death, than he could have expected from the moſt faithful ſervices, of his ally. The funeral of Athanaric was performed with ſolemn rites in the capital of the eaſt; a ſtately monument was erected to his memory; and his whole army, won by the liberal courteſy of Theodoſius, enliſted under the ſtandard of the Roman empire. The ſubmiſſion of ſo great a body of the Viſigoths was productive of the moſt ſalutary conſequences; and the mixed influence of force, of reaſon, and of corruption, became every day more powerful, and more extenſive. Each independent chieftain haſtened to obtain a ſeparate treaty, from the apprehenſion that an obſtinate delay might expoſe *him*, alone and unprotected, to the revenge, or juſtice, of the conqueror. The general, or rather the final, capitulation of the Goths, may be dated four years, one month, and twenty-five days, after the defeat and death of the emperor Valens.

The provinces of the Danube had been already relieved from the oppreſſive weight of the Oſtrogoths, by the voluntary retreat of Alatheus and Saphrax; whoſe reſtleſs ſpirit had prompted them to ſeek new ſcenes of rapine and plunder in the weſt. The Oſtrogoths were joined by ſeveral of the German tribes, and overran the provinces of Gaul; they concluded, and ſoon violated, a treaty with the emperor Gratian; they advanced into the unknown countries of the north; and, after an interval of more than four years, returned, with

with an accumulated force, to the banks of the Lower Danube. The Roman general who commanded the military and naval powers of the Thracian frontier, ſoon perceived that his ſuperiority would be diſadvantageous to the public ſervice; and that the barbarians, awed by the preſence of his fleet and legions, would probably defer the paſſage of the river till the approaching winter. The dexterity of the ſpies, whom he ſent into the Gothic camp, allured the barbarians into a fatal ſnare. They were perſuaded, that, by a bold attempt, they might ſurpriſe, in the ſilence and darkneſs of the night, the ſleeping army of the Romans; and the whole multitude, according to Zoſimus, lib. iv. p. 253, was haſtily embarked in a fleet of three thouſand canoes. The braveſt of the Oſtrogoths led the van; the main body conſiſted of the remainder of their ſubjects and ſoldiers; and the women and children ſecurely followed in the rear. One of the nights without a moon had been ſelected for the execution of this deſign; and they had almoſt reached the ſouthern bank of the Danube, in the firm confidence that they ſhould find an eaſy landing, and an unguarded camp. But the progreſs of the barbarians was ſuddenly ſtopped by an unexpected obſtacle; a triple line of veſſels, ſtrongly connected with each other, and which formed an impenetrable chain of two miles and a half along the river. While they ſtruggled to force their way in the unequal conflict, their right flank was overwhelmed by the irreſiſtible attack of a fleet of gallies, which were urged down the ſtream by the united impulſe of oars and of the tide. The weight and velocity of thoſe ſhips of war broke and ſunk the feeble canoes of the barbarians: their valour was ineffectual; and Alatheus, the general of the Oſtrogoths, periſhed, with his braveſt troops, either by the ſword of the Romans, or in the waves of the Danube. The laſt diviſion of this unfortunate fleet might regain the oppoſite ſhore: but the diſtreſs and diſorder of the multitude rendered them alike incapable either of action or counſel; and they ſoon implored the clemency of the victorious enemy.

The original treaty which fixed the ſettlement of the Goths, was now, in 383, renewed by Theodoſius. A numerous colony of the Viſigoths was to be ſeated in Thrace; the remains of the Oſtrogoths were planted in Phrygia and Lydia; their immediate wants were ſupplied by a diſtribution of corn and cattle; and their future induſtry was encouraged by an exemption from tribute, during a certain term of years. The barbarians required, and obtained, the ſole poſſeſſion of the villages and diſtricts aſſigned for their reſidence; they cheriſhed and propagated their native manners and language; aſſerted the freedom of domeſtic government; and acknowledged the ſovereignty of the emperor, without ſubmitting to the inferior juriſdiction of the magiſtrates of Rome. The hereditary chiefs of the tribes and families were permitted to command their followers in peace and war; but the royal dignity was aboliſhed; and the generals of the Goths were appointed and removed at the pleaſure of the emperor. An army of forty thouſand Goths was maintained for the perpetual ſervice of the empire of the eaſt; and Theodoſius had the addreſs to perſuade his allies, that the conditions of peace which had been extorted from him by prudence and neceſſity, were the voluntary expreſſions of his ſincere friendſhip for the Gothic nation. The barbarians ſtill wore a ſavage and hoſtile aſpect; but the experience of paſt times might encourage the hope, that they would acquire the habits of induſtry and obedience; that their manners would be poliſhed by time, education, and the influence of Chriſtianity; and that their poſterity would inſenſibly blend with the great body of the Roman people.

Notwithſtanding theſe ſanguine hopes and expectations, it was apparent to every diſcerning eye, that the Goths would not long remain the friends and allies of the Roman empire. Theodoſius died in the month of January 395; and before the end of the winter of the ſame year, the Gothic nation was in arms. The barbarian auxiliaries erected their independent ſtandard; and boldly avowed the hoſtile deſigns which they had long cheriſhed in their ferocious minds. Their countrymen, who had been bound by the conditions of the laſt treaty to a life of tranquillity and labour, deſerted their farms at the firſt ſound of the trumpet; and eagerly reſumed the weapons which they had reluctantly laid aſide. The barriers of the Danube were thrown open; the ſavage warriors of Scythia iſſued from their foreſts; and the uncommon ſeverity of the winter allowed the poet to remark, "that they rolled their ponderous waggons over the broad and icy back of the indignant river." The unhappy natives of the provinces to the ſouth of the Danube, ſubmitted to the calamities, which, in the courſe of twenty years, were almoſt grown familiar to their imagination; and the various troops of barbarians, who gloried in the Gothic name, were irregularly ſpread from the woody ſhores of Dalmatia to the walls of Conſtantinople. The interruption, or at leaſt the diminution, of the ſubſidy, which the Goths had received from the liberality of Theodoſius, was made the ſpecious pretence of their revolt; the affront was embittered by their contempt for the unwarlike ſons of Theodoſius; and their reſentment was inflamed by the weakneſs, or treachery, of the miniſter of Arcadius. The Goths, inſtead of being impelled by the headſtrong paſſions of diſcordant chiefs, were now directed by the bold and artful genius of Alaric. That renowned leader was deſcended from the noble race of the Balti, which yielded only to the royal dignity of the Amali: he had vainly ſolicited the command of the Roman armies; and the imperial court provoked him to demonſtrate the folly of their refuſal, by the importance of their loſs. Whatever hopes might be entertained of the conqueſt of Conſtantinople, the judicious general ſoon abandoned ſuch an impracticable enterpriſe. In the midſt of a divided court, and a diſcontented people, the emperor Arcadius was terrified by the aſpect of the Gothic arms: but the want of wiſdom and valour was ſupplied by the ſtrength of the city; and the fortifications, both of the ſea and land, might ſecurely brave the impotent and random darts of the barbarians. Alaric diſdained to trample any longer on the proſtrate and ruined countries of Thrace and Dacia, and he reſolved to ſeek a plentiful harveſt of fame and riches in a province which had hitherto eſcaped the ravages of war. Alaric, in 396, traverſed, without reſiſtance, the plains of Macedonia and Theſſaly, as far as the foot of Mount Oeta, a ſteep and woody range of hills, almoſt impervious to his cavalry. They ſtretched from eaſt to weſt, to the edge of the ſea-ſhore; and left between the precipice and the Malian Gulf, an interval of three hundred feet, which, in ſome places, was contracted to a road capable of admitting only a ſingle carriage. In this narrow paſs of Thermopylæ, where Leonidas and the three hundred Spartans had glorioufly devoted their lives, the Goths might have been ſtopped, or deſtroyed, by a ſkilful general; and perhaps, the view of that ſacred ſpot might have kindled ſome ſparks of military ardour in the breaſts of the degenerate Greeks. The troops which had been poſted to defend the ſtraits of Thermopylæ, retired, as they were directed, without attempting to diſturb the ſecure and rapid paſſage of Alaric; and the fertile fields of Phocis, and Bœotia, were inſtantly covered by a deluge of barbarians; who maſſacred the males of an age to bear arms, and drove away the beautiful females as captives, with the ſpoil and cattle of the flaming villages. The travellers, who viſited Greece ſeveral years afterwards, could eaſily diſcover the deep and bloody traces of the march of the Goths; and Thebes was leſs indebted for her preſervation to the ſtrength of her ſeven gates, than to the

the eager haſte of Alaric, who advanced to occupy the city of Athens, and the important harbour of the Piræus. The ſame impatience urged him to prevent the delay and danger of a ſiege, by the offer of a capitulation; and as ſoon as the Athenians heard the voice of the Gothic herald, they were eaſily perſuaded to deliver the greateſt part of their wealth, as the ranſom of their city and its inhabitants. The treaty was ratified by ſolemn oaths, and obſerved with mutual fidelity. The Gothic prince, with a ſelect train, was admitted within the walls; he indulged himſelf in the refreſhment of the bath, accepted a ſplendid banquet which was provided by the magiſtrate, and affected to ſhew that he was not ignorant of the manners of civiliſed nations. But the whole territory of Attica, from the promontory of Sunium to the town of Megara, was blaſted by his baneful preſence; and, if we may uſe the compariſon of a contemporary philoſopher, Athens itſelf reſembled the bleeding and empty ſkin of a ſlaughtered victim. The diſtance between Megara and Corinth could not much exceed thirty miles; but ſuch was the deep and rugged nature of the roads, that it might eaſily have been made impaſſable for the march of an enemy. The thick and gloomy woods of mount Cithæron covered the inland country; the Scironian rocks approached the water's edge, and hung over the narrow and winding path, which was confined above ſix miles along the ſea-ſhore. The paſſage of thoſe rocks was terminated by the iſthmus of Corinth; and a ſmall body of firm and intrepid ſoldiers might have ſucceſsfully defended a temporary intrenchment of five or ſix miles from the Ionian to the Ægean ſea. The confidence of the cities of Peloponneſus in their natural rampart, had tempted them to neglect the care of their antique walls; and the avarice of the Roman governors had betrayed the unhappy province. Corinth, Argos, Sparta, yielded without reſiſtance to the arms of the Goths; and the moſt fortunate of the inhabitants were ſaved, by death, from beholding the ſlavery of their families and the conflagration of their cities. The vaſes and ſtatues were diſtributed among the barbarians, with more regard to the value of the material, than to the elegance of the workmanſhip; the female captives ſubmitted to the laws of war; the enjoyment of beauty was the reward of valour; and the Greeks could not reaſonably complain of an abuſe, which was juſtified by the example of the heroic times. The deſcendants of that extraordinary people, who had conſidered valour and diſcipline as the walls of Sparta, no longer remembered the generous reply of their anceſtors to an invader more formidable than Alaric. "If thou art a god, thou wilt not hurt thoſe who have never injured thee: if thou art a man, advance; and thou wilt find men equal to thyſelf."

From Thermopylæ to Sparta, the leader of the Goths purſued his victorious march without encountering any mortal antagoniſt; when he received information of the approach of the renowned Stilicho. A numerous fleet was equipped in the ports of Italy; and the troops, after a ſhort and proſperous navigation over the Ionian ſea, were ſafely diſembarked on the iſthmus of Corinth, A.D. 397. The woody and mountainous country of Arcadia, the fabulous reſidence of Pan and the Dryads, now became the ſcene of a long and doubtful conflict between two generals not unworthy of each other. The ſkill and perſeverance of the Romans at length prevailed; and the Goths, after ſuſtaining a conſiderable loſs from diſeaſe and deſertion, gradually retreated to the lofty mountain of Pholoe, near the ſources of the Peneus, and on the frontiers of Elis. The camp of the barbarians was immediately beſieged: the waters of the river were diverted into another channel; and while they laboured under the inſupportable preſſure of thirſt and hunger, a ſtrong line of circumvallation was formed to prevent their eſcape. After theſe precautions, Stilicho, too confident of victory, retired to enjoy his triumph in the theatrical games and laſcivious dances of the Greeks; his ſoldiers, deſerting their ſtandards, ſpread themſelves over the country of their allies, which they ſtripped of all that had been ſaved from the rapacious hands of the Goths. Alaric appears to have ſeized the favourable moment to execute one of thoſe hardy enterpriſes, in which the abilities of a general are diſplayed with more genuine luſtre, than in the precarious tumult of a day of battle. To extricate himſelf from the priſon of Peloponneſus, it was neceſſary that he ſhould pierce the intrenchments which ſurrounded his camp; that he ſhould perform a difficult and dangerous march of thirty miles, as far as the Gulf of Corinth; and that he ſhould tranſport his troops, his captives, and his ſpoil, over an arm of the ſea, which, in the narrow interval between Rhium and the oppoſite ſhore, is at leaſt half a mile in breadth. The operations of Alaric muſt have been ſecret, prudent, and rapid; for the Roman general was confounded and aſtoniſhed by the intelligence that the Goths, who had eluded his efforts, were in full poſſeſſion of the important province of Epirus. This unpardonable neglect of diſcipline, allowed Alaric ſufficient time to conclude the treaty, which he ſecretly negociated, with the miniſters of Conſtantinople; while the apprehenſion of a civil war compelled Stilicho to retire, at the haughty mandate of his rivals, from the dominions of Arcadius.

By the treaty which Alaric made with the emperor Arcadius, he was declared maſter-general of the Eaſtern Illyricum, A.D. 398. The Gothic conqueror was to be received as a lawful magiſtrate, in all the cities which he had ſo lately beſieged. The fathers whoſe ſons he had maſſacred, the huſbands whoſe wives he had violated, were to be ſubject to his authority: and the ſucceſs of his rebellion encouraged the ambition of every leader of the foreign mercenaries. The uſe to which Alaric applied his new command, diſtinguiſhes the firm and judicious character of his policy. He iſſued his orders to the four magazines and manufactures of offenſive and defenſive arms, Margus, Ratiaria, Naiſſus, and Theſſalonica, to provide his troops with an extraordinary ſupply of ſhields, helmets, ſwords, and ſpears; the devoted provincials were compelled to forge the inſtruments of their own deſtruction; and the barbarians removed the only defect which had ſometimes diſappointed the efforts of their courage. The high birth of Alaric, the glory of his paſt exploits, and the confidence in his future deſigns, inſenſibly united the whole body of the Gothic nation under his victorious ſtandard; and with the unanimous conſent of the barbarian chieftains, the maſter-general of Illyricum was elevated, according to ancient cuſtom, on a ſhield, and ſolemnly proclaimed king of the Viſigoths. Armed with this double power, ſeated on the verge of the two empires, he alternately ſold his deceitful promiſes to the courts of Arcadius and Honorius; till he declared and executed his reſolution of invading the dominions of the Weſt. The provinces of Europe which belonged to the Eaſtern emperor, were already exhauſted; thoſe of Aſia were inacceſſible; and the ſtrength of Conſtantinople had reſiſted his attack. But he was tempted by the fame, the beauty, the wealth, of Italy, which he had twice viſited; and he ſecretly aſpired to plant the Gothic ſtandard on the walls of Rome, and to enrich his army with the accumulated ſpoils of three hundred triumphs.

Early in the year 403, Alaric aſſembled his mighty hoſt; and the march of the barbarian army filled Italy with conſternation and diſmay. The emperor Honorius, educated in pride and luxury, did not ſuſpect that there exiſted on the earth any power preſumptuous enough to invade the repoſe of the ſucceſſor of Auguſtus. The arts of flattery concealed the impending danger, till Alaric approached the palace of Milan. And when the ſound of war had awakened the young emperor, inſtead of flying to arms, he eagerly liſtened to thoſe timid counſellors, who propoſed to convey his ſacred perſon

to ſome ſecure and diſtant ſtation in the provinces of Gaul. Stilicho alone had courage and authority to reſiſt this diſgraceful meaſure, which would have abandoned Rome and Italy to the barbarians; but as the troops of the palace had been detached to the Rhætian frontier, and as the ſource of new levies was ſlow and precarious, the general of the Weſt could only promiſe, that, if the court of Milan would maintain their ground during his abſence, he would ſoon return with an army equal to the encounter of the Gothic king. Without loſing a moment, Stilicho embarked on the Larian lake, aſcended the mountains of ice and ſnow amidſt the ſeverity of an alpine winter, and ſuddenly repreſſed, by his unexpected preſence, the enemy, who had diſturbed the tranquillity of Rhætia. The cohorts, who were delivered from the neighbouring foe, diligently repaired to the imperial ſtandard; and Stilicho iſſued his orders to the moſt remote troops of the Weſt, to advance, by rapid marches, to the defence of Honorius and of Italy. The bridge and paſſage of the Adda were now poſſeſſed by a ſtrong detachment of the Gothic army; and as Alaric approached the ſuburbs of Milan, he enjoyed the proud ſatisfaction of ſeeing the emperor of the Romans fly before him. Honorius, accompanied by his ſtateſmen and eunuchs, haſtily retreated towards the Alps, with a deſign of ſecuring his perſon in the city of Arles, which had often been the royal reſidence of his predeceſſors. But Honorius had ſcarcely paſſed the Po, before he was overtaken by the Gothic cavalry. The urgency of the danger compelled the emperor to ſeek a temporary ſhelter within the fortification of Aſta, a town of Liguria, ſituate on the banks of the Tanarus. The ſiege of an obſcure place, which contained ſo rich a prize, and ſeemed incapable of a long reſiſtance, was inſtantly formed, and indefatigably preſſed, by the king of the Goths; and juſt as the barbarians had propoſed the indignity of a capitulation, the imperial captive was relieved by the haſty approach of the hero whom he had ſo long expected. At the head of a choſen and intrepid band, Stilicho ſwam the ſtream of the Adda, to gain the time which he muſt have loſt in the attack of the bridge; the paſſage of the Po was an enterpriſe of much leſs hazard and difficulty; and the ſucceſsful action, in which he cut his way through the Gothic camp under the walls of Aſta, revived the hopes and vindicated the drooping honour of Rome. Inſtead of graſping the fruit of his victory, the barbarian was gradually inveſted, on every ſide, by the troops of the Weſt, who ſucceſſively iſſued through all the paſſes of the Alps; his quarters were ſtraitened; his convoys cut off; and the vigilance of the Romans prepared to form a chain of fortifications, and to beſiege the lines of the beſiegers. A military council was aſſembled of the chiefs of the Gothic nation, who recommended the prudent meaſure of a ſeaſonable retreat. In this debate Alaric diſplayed the true ſpirit of a warrior; after he had reminded his countrymen of their atchievements and of their deſigns, he concluded an animating ſpeech by the ſolemn and poſitive aſſurance, that he was reſolved to find in Italy either a kingdom or a grave.

The camp of the Goths, which Alaric had pitched in the neighbourhood of Pollentia, was thrown into confuſion by the ſudden and impetuous charge of the imperial cavalry; but, in a few moments, the undaunted genius of their leader gave them an order of battle; and as ſoon as they had recovered from their aſtoniſhment, they reſiſted the attack of the Romans, and the battle raged with tenfold fury. In the evening of the bloody day, the Goths retreated from the field of battle; the intrenchments of their camp were forced, and the ſcene of rapine and ſlaughter atoned in ſome meaſure for the calamities which they had inflicted on the ſubjects of the empire. The magnificent ſpoils of Corinth and Argos enriched the veterans of the Weſt; the captive wife of Alaric was reduced to implore the mercy of the conqueror; and many thouſand priſoners, releaſed from Gothic chains, diſperſed through the provinces of Italy the praiſes of their deliverer. The triumph of Stilicho was compared to that of Marius; who, in the ſame part of Italy, had encountered and diſcomfited another army of northern barbarians.

Alaric, in the midſt of this ſignal overthrow, poſſeſſed the invincible temper of mind which riſes ſuperior to misfortune, and derives new reſources from adverſity. After the total defeat of his infantry, he withdrew from the field of battle with the greateſt part of his cavalry entire and unbroken. Without waſting a moment to lament the irreparable loſs of ſo many brave companions, he left his victorious enemy in quiet poſſeſſion of their ſpoils, and boldly reſolved to break through the unguarded paſſes of the Apennines, to ſpread deſolation over the fruitful face of Tuſcany, and to conquer or die before the gates of Rome. The capital was ſaved by the active and inceſſant diligence of Stilicho: but he dreaded the ſavage deſpair of his enemy; and, inſtead of committing the fate of the republic to the chance of another battle, he propoſed to purchaſe the abſence of the barbarians. The ſpirit of Alaric would have rejected ſuch terms, the permiſſion of a retreat, and the offer of a penſion, with contempt and indignation; but he exerciſed a limited and precarious authority over the independent chieftains, who had only raiſed him for their own ſervice above the rank of his equals; they were ſtill leſs diſpoſed to follow an unſucceſsful general, and many of them were tempted to conſult their intereſt by a private negociation with the miniſter of Honorius. The king ſubmitted to the voice of his chiefs, ratified the treaty with the empire of the Weſt, and repaſſed the Po, with the remains of the unſubdued army which he had led into Italy. But the Roman forces, jealous of his deſigns, ſtill hung upon his rear; and Stilicho, who maintained a ſecret correſpondence with ſome of the barbarian chiefs, was punctually appriſed of the deſigns that were formed in the camp and council of Alaric. The king of the Goths, ambitious to ſignalize his retreat by ſome ſplendid atchievement, had reſolved to occupy the important city of Verona, which commands the principal paſſage of the Rhætian Alps; and, directing his march through the territories of thoſe German tribes whoſe alliance would reſtore his exhauſted ſtrength, he propoſed to invade, on the ſide of the Rhine, the wealthy and unſuſpecting provinces of Gaul. Ignorant of the treaſon which had betrayed this bold enterpriſe, he advanced towards the paſſes of the mountains, already poſſeſſed by the imperial troops; where he was expoſed, almoſt at the ſame inſtant, to a general attack in the front, on his flanks, and in the rear. In this bloody action, at a ſmall diſtance from the walls of Verona, the loſs of the Goths was not leſs heavy than that which they had ſuſtained in the defeat of Pollentia; yet the undaunted Alaric ſecured the remains of his army on the adjacent rocks; and prepared himſelf, with unſubdued reſolution, to maintain a ſiege againſt the ſuperior numbers of the enemy, who inveſted him on all ſides. But he could not oppoſe the inevitable progreſs of hunger and diſeaſe; nor was it poſſible for him to check the continual deſertion of his impatient and capricious barbarians. In this extremity he ſtill found reſources in his own ſubtilty, or in the moderation of his adverſary; and the retreat of the Gothic king was conſidered as the deliverance of Italy. Yet the people of Rome, incapable of forming any rational judgment of the buſineſs of peace and war, preſumed to arraign the policy of Stilicho, who ſo often vanquiſhed, ſo often ſurrounded, and ſo often diſmiſſed, this implacable enemy of the republic.

In the courſe of this unfortunate expedition, the king of the Goths muſt indeed have ſuſtained a conſiderable loſs; and his haraſſed forces required an interval of repoſe to recruit their numbers, and revive their confi-

dence.

dence. Adverſity had exerciſed, and diſplayed, the genius of Alaric; and the fame of his valour invited to the Gothic ſtandard the braveſt of the barbarian warriors; who, from the Euxine to the Rhine, were agitated by the deſire of rapine and conqueſt. He had acquired the admiration and friendſhip of Stilicho; and through his means concluded with Honorius, who now kept his court at Ravenna, a treaty of peace and alliance, by which he was declared maſter-general of the Roman armies throughout the præfecture of Illyricum: and a civil war being expected between the eaſtern and weſtern empires, Stilicho prepared to lead to the gates of Conſtantinople the united armies of the Romans and of the Goths. But this declaration was rather an object of policy; and his principal care was to employ the forces of Alaric at a diſtance from Italy. This deſign could not long eſcape the penetration of the Gothic king, who continued to hold a doubtful, and perhaps a treacherous, correſpondence with the rival courts. In the mean time envy and reproach followed rapidly the footſteps of the able and judicious Stilicho, who was baſely murdered through the corrupt policy and miſtaken zeal of his ungrateful countrymen.

From his camp, on the confines of Italy, Alaric attentively obſerved the revolutions of the imperial palace, and watched the progreſs of faction and diſcontent in the boſom of the Roman empire. In the midſt of its difficulties and contentions, the Gothic king demanded the payment of four thouſand pounds of gold, which had been formerly granted by the Roman ſenate, either to reward his ſervices, or to appeaſe his fury. His decent firmneſs was ſupported by an artful moderation, which contributed to the ſucceſs of his deſigns. He refuſed to truſt the faith of the Romans, unleſs Ætius and Jaſon, the ſons of two great officers of ſtate, were ſent as hoſtages to his camp: but he offered to deliver, in exchange, ſeveral of the nobleſt youths of the Gothic nation. The modeſty of Alaric was interpreted, by the miniſters of Ravenna, as a ſure token of his weakneſs and fear. They diſdained either to negociate a treaty, or to aſſemble an army; and with a raſh confidence, derived only from their ignorance of the extreme danger, irretrievably waſted the moments which ſhould have prepared them for war. Alaric, with bold and rapid marches, paſſed the Alps and the Po; haſtily pillaged the cities of Aquileia, Altinum, Concordia, and Cremona, which yielded to his arms; increaſed his forces by the acceſſion of thirty thouſand auxiliaries; and, without meeting a ſingle enemy in the field, advanced as far as the edge of the moraſs which protected the impregnable reſidence of the emperor of the weſt. Inſtead however of attempting the ſiege of Ravenna, the leader of the Goths proceeded to Rimini, ſtretched his ravages along the ſea-coaſts of the Adriatic, and meditated the conqueſt of the ancient miſtreſs of the world. His troops, animated by the hopes of ſpoil, followed the courſe of the Flaminian way, occupied the unguarded paſſes of the Apennines, deſcended into the rich plains of Umbria; and Alaric at length pitched his camp under the walls of Rome, A.D. 408.

By a ſkilful diſpoſition of his numerous forces, who impatiently watched the moment of an aſſault, Alaric encompaſſed the walls, commanded the twelve principal gates, intercepted all communication with the adjacent country, and vigilantly guarded the navigation of the Tyber, from which the Romans derived their ſupply of proviſions. The firſt emotions of the nobles, and of the people, were thoſe of ſurpriſe and indignation, that a vile barbarian ſhould dare to inſult the capital of the world: but their pride was ſoon humbled by misfortune; and their unmanly rage, inſtead of being directed againſt an enemy in arms, was meanly exerciſed on a defenceleſs and innocent victim. Within their walls was Serena, the widow of Stilicho; and they liſtened with credulous paſſion to a tale of calumny, which accuſed her of maintaining a ſecret and criminal correſpondence with the Gothic invader. Actuated by the ſame popular frenzy, the ſenate, without requiring any evidence of her guilt, pronounced the ſentence of her death. Serena was ignominiouſly ſtrangled; and the infatuated multitude were aſtoniſhed to find, that this cruel act of injuſtice did not immediately produce the retreat of the barbarians, and the deliverance of the city: inſtead of which they were deſervedly puniſhed with the diſtreſs of ſcarcity, and the calamities of famine. Many thouſands of the wretched inhabitants of Rome expired in their houſes, or in the ſtreets, for want of food; and as the public ſepulchres without the walls were in the power of the enemy, the ſtench, which aroſe from ſo many putrid and unburied carcaſes, infected the air; and the miſeries of famine were ſucceeded and aggravated by the contagion of a peſtilential diſeaſe.

The laſt reſource of the Romans was to be found in the clemency or moderation of the king of the Goths. The ſenate, who in this emergency aſſumed the powers of the government, appointed two ambaſſadors to negociate with the enemy. This truſt was delegated to Baſilius, a ſenator of Spaniſh extraction; and to John, the firſt tribune of the notaries, who was peculiarly qualified by his dexterity in buſineſs, as well as by his former intimacy with the Gothic prince. When they were introduced into his preſence, they declared that the Romans were reſolved to maintain their dignity, either in peace or war; and that, if Alaric refuſed them a fair and honourable capitulation, he might ſound his trumpets, and prepare to give battle to an innumerable people, exerciſed in arms, and animated by deſpair. "The thicker the hay, the eaſier it is mowed," was the conciſe reply of the barbarian. He then condeſcended to fix the ranſom, which he would accept as the price of his retreat from the walls of Rome: all the gold and ſilver in the city, whether it were the property of the ſtate, or of individuals; all the rich and precious moveables; and all the ſlaves who could prove their title to the name of *barbarians*. "If ſuch, O king, are your demands, (ſaid the aſtoniſhed negociators,) what do you intend to leave us?" "Your lives;" replied the haughty conqueror: they trembled, and retired. Yet before they retired, a ſhort ſuſpenſion of arms was granted, which allowed ſome time for a more temperate deciſion. The ſtern features of Alaric were inſenſibly relaxed; he abated much of the rigour of his terms; and at length conſented to raiſe the ſiege, on the immediate payment of five thouſand pounds of gold, of thirty thouſand pounds of ſilver, of four thouſand robes of ſilk, of three thouſand pieces of fine ſcarlet cloth, and of three thouſand pounds weight of pepper. As ſoon as the Romans had ſatisfied the rapacious demands of Alaric, A.D. 409, they were reſtored, in ſome meaſure, to the enjoyment of peace and ſuſtenance. A more regular diſcipline than could have been expected, was maintained in the camp of Alaric; and the wiſe barbarian juſtified his regard for the faith of treaties, by the ſeverity with which he chaſtiſed a party of licentious Goths, who had inſulted ſome Roman citizens on the road to Oſtia. His army, enriched by the contributions of the capital, ſlowly advanced into the fair and fruitful province of Tuſcany, where he propoſed to eſtabliſh his winter-quarters; and the Gothic ſtandard became the refuge of forty thouſand barbarian ſlaves, who had broke their chains, and aſpired, under the command of their deliverer, to revenge the injuries, and the diſgrace, of their former ſervitude. About the ſame time, he received a reinforcement of Goths and Huns, who had cut their way through ſuperior numbers of the imperial troops; and Alaric now found himſelf at the head of an hundred thouſand fighting men.

Alaric was conſcious, perhaps, of ſome ſecret weakneſs, ſome internal defect; or perhaps the moderation which he diſplayed, was intended only to deceive and

diſarm the credulity of the miniſters of Honorius. The king of the Goths repeatedly declared, that it was his deſire to be conſidered as the friend of peace, and of the Romans. Three ſenators, at his requeſt, were ſent ambaſſadors to the court of Ravenna, to ſolicit the exchange of hoſtages, and the concluſion of the treaty; and the propoſals, which he more clearly expreſſed during the courſe of the negociations, could only inſpire a doubt of his ſincerity, as they might ſeem inadequate to the ſtate of his fortune. The barbarian ſtill aſpired to the rank of maſter-general of the armies of the weſt; he ſtipulated an annual ſubſidy of corn and money; and he choſe the provinces of Dalmatia, Noricum, and Venetia, for the ſeat of his new kingdom, which would have commanded the important communication between Italy and the Danube. If theſe terms ſhould be rejected, Alaric ſhewed a diſpoſition to relinquiſh his pecuniary demands, and even to content himſelf with the poſſeſſion of Noricum; an exhauſted and impoveriſhed country, perpetually expoſed to the inroads of the barbarians of Germany. But the hopes of peace were diſappointed by the obſtinacy, or intereſted views, of the miniſter Olympius. Without liſtening to the ſalutary remonſtrances of the ſenate, he diſmiſſed their ambaſſadors under the conduct of a military eſcort, too numerous for a retinue of honour, and too feeble for an army of defence. Six thouſand Dalmatians, the flower of the imperial legions, were ordered to march from Ravenna to Rome, through an open country, which was occupied by the formidable myriads of the barbarians. Theſe brave legionaries, encompaſſed and betrayed, fell a ſacrifice to miniſterial folly; their general, Valens, with an hundred ſoldiers, eſcaped from the field of battle; and one of the ambaſſadors, who could no longer claim the protection of the law of nations, was obliged to purchaſe his freedom with a ranſom of thirty thouſand pieces of gold. Yet Alaric, inſtead of reſenting this act of hoſtility, in vain renewed his propoſals of peace.

While the emperor and his court enjoyed the ſecurity of the marſhes and fortifications of Ravenna, they ſtill abandoned Rome to the reſentment of Alaric. Yet ſuch was the moderation which he affected to preſerve, that, as he moved with his army along the Flaminian way, he ſucceſſively diſpatched the biſhops of the towns of Italy to reiterate his offers of peace, and to conjure the emperor, that he would ſave the city and its inhabitants from the hoſtile fire, and the ſword of the barbarians. Theſe impending calamities were however averted, not indeed by the wiſdom of Honorius, but by the prudence or humanity of the Gothic king; who employed a milder, though not leſs effectual, method of conqueſt. Inſtead of aſſaulting the capital, he directed his efforts againſt the commanding port of Oſtia, one of the moſt ſtupendous works of Roman magnificence. As ſoon as Alaric was in poſſeſſion of that important place, he ſummoned the city to ſurrender at diſcretion; and his demands were enforced by the poſitive declaration, that a refuſal, or even a delay, ſhould be inſtantly followed by the deſtruction of the magazines, on which the life of the Roman people depended. The terror of famine ſubdued the pride of the ſenate; they ſubmitted, and liſtened, without reluctance, to the propoſal of placing a new emperor on the throne of Honorius; and the ſuffrage of the Gothic conqueror beſtowed the purple on Attalus, præfect of the city. But the oſtentatious folly and caprice of this mock emperor, rendered his reign as ridiculous as it was fleeting and temporary. The reſentment of the Gothic king was exaſperated againſt him by his weakneſs and folly: and in a large plain near Rimini, in the preſence of an innumerable multitude of Romans and barbarians, the wretched Attalus was publicly deſpoiled of the diadem and purple; and thoſe enſigns of royalty were now ſent by Alaric, as the pledge of peace and friendſhip, to the ſon of Theodoſius, within the ſtrong hold of Ravenna. The officers who returned to their duty, were reinſtated in their former employments, and Alaric advanced within three miles of Ravenna, to preſs the treaty for peace. But his indignation was kindled by the report, that a rival chieftain, Sarus, the hereditary foe of the houſe of Balti, had been received into the palace; and at the head of three hundred followers, that fearleſs barbarian ſallied from the gates of Ravenna, ſurpriſed and cut in pieces a conſiderable body of Goths, re-entered the city in triumph; and then inſulted his adverſary by the voice of a herald, who publicly declared that the guilt of Alaric had for ever excluded him from the friendſhip and alliance of Honorius. The folly of the court of Ravenna was expiated, a third time, by the fall of Rome. The angry king of the Goths, who no longer diſſembled his appetite for plunder, now meditated a deſperate revenge. He appeared in arms under the walls of Rome; and the trembling ſenate, without any hopes of relief, prepared, by a deſperate reſiſtance, to delay the ruin of their country. But they were unable to guard againſt the ſecret conſpiracy of their ſlaves and domeſtics; who, either from birth or intereſt, were attached to the cauſe of the enemy. At the hour of midnight, the Salarian gate was ſilently opened, and the inhabitants were awakened by the tremendous ſound of the Gothic trumpets. Eleven hundred and ſixty-three years after the foundation of Rome, the imperial city, which had ſubdued and civiliſed ſo conſiderable a part of mankind, was delivered to the licentious fury of the Goths, on the 24th of Auguſt 410.

The proclamation of Alaric, when he forced his entrance into the vanquiſhed city, diſcovered ſome regard for the laws of humanity and religion, which, however, were not ſo pioufly imitated by Genſeric at the head of his Vandals, when, in 455, he became, in the hands of Providence, a ſimilar ſcourge to this proud capital of the weſtern world. Alaric encouraged his troops boldly to ſeize the rewards of valour, and to enrich themſelves with the ſpoils of a wealthy and effeminate people: but he exhorted them to ſpare the lives of the unreſiſting citizens, and to reſpect the churches of the apoſtles St. Peter and St. Paul, as holy and inviolable ſanctuaries. The Goths had received, under the indefatigable zeal of their biſhop Ulphilas, the light and truth of the Goſpel, in the year 360, which evidently influenced their conduct on this memorable occaſion. Amidſt the horrors of a nocturnal tumult, ſeveral of the Chriſtian Goths diſplayed the fervour of their recent converſion; and ſome inſtances of their uncommon piety and moderation are related with zeal by the eccleſiaſtical writers. While the barbarians roamed through the city in queſt of prey, the humble dwelling of an aged virgin, who had devoted her life to the ſervice of the altar, was forced open by one of the powerful Goths. He immediately demanded, though in civil language, all the gold and ſilver in her poſſeſſion; and was aſtoniſhed at the readineſs with which ſhe conducted him to a ſplendid hoard of maſſy plate, of the richeſt materials, and the moſt curious workmanſhip. The barbarian viewed with wonder and delight this valuable acquiſition, till he was interrupted by a ſerious admonition, addreſſed to him in the following words: "Theſe," ſaid ſhe, "are the conſecrated veſſels belonging to St. Peter; if you preſume to touch them, the ſacrilegious deed will remain on your conſcience. For my part, I dare not keep what I am unable to defend." The Gothic captain, ſtruck with reverential awe, diſpatched a meſſenger to inform the king of the treaſure which he had diſcovered; and received a peremptory order from Alaric, that all the conſecrated plate and ornaments ſhould be tranſported, without damage or delay, to the church of the apoſtle. From the extremity of the Quirinal hill to the diſtant quarter of the Vatican, a numerous detachment of Goths, marching in order of battle through the principal ſtreets, protected, with glittering arms, the long train of their devout companions, who bore aloft, on their heads, the ſacred veſſels

of gold and ſilver; and the martial ſhouts of the barbarians were mingled with the ſound of religious pſalmody. From all the adjacent houſes, a crowd of Chriſtians haſtened to join this edifying proceſſion; and a multitude of fugitives, without diſtinction of age, or rank, or even of ſect, had the good fortune to eſcape to the ſecure ſanctuary of the Vatican. The learned work, concerning the City of God, was profeſſedly compoſed by St. Auguſtin, to juſtify the ways of Providence in the deſtruction of the Roman greatneſs. He celebrates, with peculiar ſatisfaction, this memorable triumph of Chriſt; and inſults his adverſaries, by challenging them to produce ſome ſimilar example, of a town taken by ſtorm, in which the fabulous gods of antiquity had been able to protect either themſelves or their votaries. *Auguſtin, de Civitat. Dei, l.* 1. *c.* 1–6.

After the ſack of Rome, on the ſixth day, the victorious Goths prepared to complete the blow they had thus partially given. At the head of an army, encumbered with weighty ſpoils, their intrepid leader advanced along the Appian way into the ſouthern provinces of Italy, deſtroying whatever dared to oppoſe his paſſage, and enriching himſelf with the plunder of the unreſiſting country, which now became ſubject to the Goths.

Whether fame, or conqueſt, or riches, were the object of Alaric, he purſued that object with an indefatigable ardour, which could neither be quelled by adverſity, nor ſatiated by ſucceſs. No ſooner had he gained the extremeſt land of Italy, than he was attracted by the neighbouring proſpect of a fertile and peaceful iſland. Yet even the poſſeſſion of Sicily he conſidered only as an intermediate ſtep to the important expedition, which he already meditated againſt the continent of Africa. The ſtreights of Rhegium and Meſſina are twelve miles in length, and, in the narroweſt paſſage, about one mile and a half broad; and the fabulous monſters of the deep, the rocks of Scylla, and the whirlpool of Charybdis, could terrify none but timid and unſkilful mariners. Yet as ſoon as the firſt diviſion of the Goths had embarked, a ſudden tempeſt aroſe, which ſunk, or ſcattered, many of the tranſports; their courage was blunted by the terrors of a new element; and their further deſign was defeated by the ſudden death of Alaric, A.D. 410, and which, after a ſhort illneſs, here terminated the career of his conqueſts and glory. The ferocious character of the barbarians was ſingularly diſplayed in the funeral of a hero, whoſe valour and fortune they celebrated with mournful applauſe. By the labour of a captive multitude they forcibly diverted the courſe of the Buſentinus, a ſmall river that waſhes the Conſentia. The royal ſepulchre, adorned with the ſpoils and trophies of Rome, was conſtructed in the centre of the vacant bed; the waters were then reſtored to their natural channel; and the ſpot where the remains of Alaric had been depoſited, was for ever concealed by the inhuman maſſacre of the priſoners who had been employed to execute the work. *Jornandes, de Reb. Get. c.* 30, *p.* 654.

All perſonal animoſities among the barbarians were ſuſpended by the ſtrong neceſſity of their affairs; and Adolphus, the brother-in-law of the deceaſed monarch, was unanimouſly elected to the throne. With pacific views, the ſucceſſor of Alaric ſuſpended the operations of war; and ſeriouſly negociated with the imperial court a treaty of friendſhip and alliance. It was the intereſt of the miniſters of Honorius, who were now releaſed from the dread of Alaric himſelf, to embrace the preſent propoſals for delivering Italy from the intolerable weight of the Gothic war; and Honorius now readily accepted their ſervices againſt the tyrants and barbarians who were infeſting the provinces beyond the Alps. Adolphus, aſſuming the character of a Roman general, directed his march from the extremity of Campania to the ſouthern provinces of Gaul. His troops, either by force or agreement, immediately occupied the cities of Narbonne, Thouloufe, and Bourdeaux; and though they were repulſed by count Boniface from the walls of Marſeilles, they ſoon extended their quarters from the Mediterranean to the Ocean. The oppreſſed provincials exclaimed, that they were cruelly raviſhed by their pretended allies; yet ſome ſpecious colours were not wanting to palliate, or juſtify, the violence of the Goths. The cities of Gaul, which they attacked, might perhaps be conſidered as in a ſtate of rebellion againſt the government of Honorius: the articles of the treaty, or the ſecret inſtructions of the court, might ſometimes be alleged in favour of the ſeeming uſurpations of Adolphus; and the guilt of any irregular act of hoſtility, might be imputed, with an appearance of truth, to the ungovernable ſpirit of a barbarian hoſt, impatient of peace or diſcipline.

The profeſſions of Adolphus were probably ſincere, and his attachment to the cauſe of the republic was ſecured by the aſcendant which a Roman princeſs had acquired over the heart and underſtanding of the barbarian king. Placidia, the daughter of the great Theodoſius, and of Galla, his ſecond wife, was about twenty years of age when Rome was firſt inveſted by the arms of Alaric. The victorious barbarians detained her, either as a hoſtage or a captive; and while ſhe was expoſed to the diſgrace of following round Italy the motions of a Gothic camp, ſhe made a deep impreſſion on the mind of Adolphus; and the Gothic king aſpired to call himſelf the brother of the emperor. The miniſters of Honorius rejected with diſdain the propoſal of an alliance, ſo injurious to every ſentiment of Roman pride; and repeatedly urged the reſtitution of Placidia, as an indiſpenſable condition of the treaty of peace. But the daughter of Theodoſius ſubmitted, without reluctance, to the deſires of the conqueror, a young and valiant prince, who yielded to Alaric in ſoftneſs of ſtature, but who excelled in the more attractive qualities of grace and beauty. The marriage of Adolphus and Placidia was conſummated before the Goths retired from Italy; and the day of their nuptials was celebrated in the Gothic camp with a magnificent diſplay of feſtivity. The nuptial gift, which, according to the cuſtom of his nation, was offered to Placidia, conſiſted of the rare and magnificent ſpoils of her own country.

This important event inſenſibly paved the way to a better underſtanding between Adolphus and Honorius; and the king of the Goths, in the year 414, readily accepted the propoſal of turning his victorious arms againſt the barbarians of Spain. With rapid movements he preſſed his march towards the Pyrenees; paſſed the mountains, and ſurpriſed, in the name of the emperor, the city of Barcelona. The fondneſs of Adolphus for his Roman bride was not abated by time or poſſeſſion; and the birth of a ſon, ſurnamed, from his illuſtrious grandſire, *Theodoſius*, appeared to fix him for ever in the intereſt of the republic. The loſs of that infant, whoſe remains were depoſited in a ſilver coffin in one of the churches near Barcelona, afflicted his parents; but the grief of the Gothic king was ſuſpended by the labours of the field; and the courſe of his victories was ſoon interrupted by domeſtic treaſon. He had imprudently received into his ſervice one of the followers of Sarus, a barbarian of a daring ſpirit, whoſe ſecret deſire of revenging the death of his patron inſtigated his ſavage hand to aſſaſſinate Adolphus in the palace of Barcelona, in the month of Auguſt 415. The laws of the ſucceſſion were inſtantly violated by a tumultuous faction; and a ſtranger to the royal race, Singeric, the brother of Sarus himſelf, was ſeated on the Gothic throne. The firſt act of his reign was the inhuman murder of the ſix children of Adolphus, the iſſue of a former marriage, whom he tore, without pity, from the feeble arms of a venerable biſhop. The unfortunate Placidia, inſtead of the reſpectful compaſſion which ſhe might have excited in

the moſt ſavage breaſts, was treated with cruel and wanton inſult. The daughter of the emperor Theodoſius, confounded among a crowd of vulgar captives, was compelled to march on foot above twelve miles, before the horſe of a barbarian, the aſſaſſin of her huſband, whom Placidia moſt tenderly loved, and whoſe fate, with her own, ſhe had now moſt bitterly to deplore.

But Placidia contrived the means of a deſperate retaliation on the head of the guilty tyrant: he was aſſaſſinated on the ſeventh day of his uſurpation; and the choice of the nation beſtowed the Gothic ſceptre on Wallia, whoſe warlike and ambitious temper appeared beſt ſuited to the martial diſpoſition of the barbarians. He marched in arms from Barcelona to the ſhores of the Atlantic, which the ancients revered as the boundary of the world. But when he reached the ſouthern promontory of Spain, and, from the rock now covered by the fortreſs of Gibraltar, contemplated the neighbouring and fertile coaſt of Africa, Wallia reſumed the deſigns of conqueſt, which had been broken by the death of Alaric: but the winds and waves again diſappointed the enterpriſe of the Goths; and the minds of a ſuperſtitious people were deeply affected by the repeated diſaſters of ſtorms and ſhipwrecks. In this diſpoſition, the ſucceſſor of Adolphus no longer refuſed to liſten to a Roman ambaſſador, whoſe propoſals were enforced by the dreaded approach of a numerous army under the conduct of Conſtantius. In 418, a ſolemn treaty was ſtipulated, and Placidia was honourably reſtored to her brother; ſix hundred thouſand meaſures of wheat were delivered to the hungry Goths; and Wallia engaged to draw his ſword in the ſervice of the empire. A bloody war was inſtantly excited among the barbarians of Spain; and the contending princes are ſaid to have addreſſed their letters, their ambaſſadors, and their hoſtages, to the throne of the weſtern emperor, exhorting him to remain a tranquil ſpectator of their conteſt; the events of which muſt be favourable to the Romans, by the mutual ſlaughter of their common enemies. The Spaniſh war was obſtinately ſupported during three campaigns with deſperate valour, and the martial atchievements of Wallia diffuſed through the empire the ſuperior renown of the Gothic hero. He exterminated the Silingi, who had deſolated the province of Bœtica. He ſlew, in battle, the king of the Alani; and the remains of thoſe Scythian wanderers, who eſcaped from the field, inſtead of chooſing a new leader, ſought a refuge under the ſtandard of the Vandals, with whom they were ever afterwards confounded. The Vandals themſelves, and the Suevi, yielded to the ſuperiority of the invincible Goths.

The triumph and victories of Wallia were now to be rewarded by a rich and fertile eſtabliſhment. His victorious Goths, forty-three years after they had paſſed the Danube, were fixed, according to the faith of treaties, in the poſſeſſion of the ſecond Aquitain, a maritime province between the Garonne and the Loire, under the civil and eccleſiaſtical juriſdiction of Bourdeaux. That metropolis, advantageouſly ſituated for the trade of the ocean, was built in a regular and elegant form; and its numerous inhabitants were diſtinguiſhed among the Gauls by their wealth, their learning, and the politeneſs of their manners. The adjacent province, which has been compared to the garden of Eden, is bleſſed with a fruitful ſoil, and a temperate climate: the face of the country diſplayed the arts and the rewards of induſtry; and the Goths, after their martial toils, were deſtined luxurioufly to exhauſt the rich vineyards of Aquitain. The Gothic limits were enlarged by the additional gift of ſome neighbouring dioceſes; and the ſucceſſors of Alaric fixed their royal reſidence at Thouloufe, which included five populous quarters within the ſpacious circuit of its walls. About the ſame time, and in the laſt years of the reign of Honorius, the Goths, the Burgundians, and the Franks, obtained unitedly a permanent ſeat and dominion in the provinces of Gaul.

The kingdom thus eſtabliſhed by the Viſigoths in the ſouthern provinces of Gaul, gradually acquired ſtrength and maturity. After the death of Wallia, the Gothic ſceptre devolved to Theodoric, the ſon of the great Alaric; and his proſperous reign of more than thirty years over a turbulent people, may be allowed to prove, that his prudence was ſupported by uncommon vigour both of mind and body. Impatient of his narrow limits, Theodoric aſpired to the poſſeſſion of Arles, the wealthy ſeat of government and commerce; but the city was ſaved by the timely approach of the conſul or patrician Ætius; and the Gothic king, who had raiſed the ſiege with ſome loſs and diſgrace, was perſuaded, for an adequate ſubſidy, to divert the martial valour of his ſubjects in a Spaniſh war. Yet Theodoric watched, and eagerly ſeized, the favourable moment of renewing his hoſtile attempts. The Goths, in 435, beſieged Narbonne; while the Belgic provinces were invaded by the Burgundians; and the public ſafety was threatened on every ſide by the apparent union of the enemies of Rome. On every ſide the activity of Ætius oppoſed a firm and ſucceſsful reſiſtance. Twenty thouſand Burgundians were ſlain in battle; and the remains of the nation humbly accepted a dependent ſeat in the mountains of Savoy. The walls of Narbonne had been ſhaken by the battering engines, and the inhabitants had endured the laſt extremities of famine, when count Litorius, approaching in ſilence, and directing each horſeman to carry behind him two ſacks of flour, cut his way through the intrenchments of the beſiegers. The ſiege was immediately raiſed; and the more deciſive victory, which is aſcribed to the perſonal conduct of Ætius, was marked with the blood of eight thouſand Goths. But in the abſence of the patrician, who was haſtily ſummoned to Italy, count Litorius ſucceeded to the command; and his preſumption ſoon diſcovered, that far different talents were wanting to direct the operations of an important war. At the head of an army of Huns, he raſhly advanced to the gates of Thouloufe, full of contempt for an enemy whom he had juſter reaſon to fear. The predictions of the augurs had inſpired Litorius with the confidence, that he ſhould enter the Gothic capital in triumph; and the truſt which he repoſed in his pagan allies, encouraged him to reject the conditions of peace which were propoſed by the biſhops in the name of Theodoric. The king of the Goths exhibited in his diſtreſs the edifying contraſt of Chriſtian piety and moderation; nor did he lay aſide his ſackcloth and aſhes till he was prepared to arm for the combat. His ſoldiers, animated with martial and religious enthuſiaſm, aſſaulted the camp of Litorius. The conflict was obſtinate; the ſlaughter was mutual. The Roman general, after a total defeat, which could be imputed only to his unſkilful raſhneſs, was actually led through the ſtreets of Thouloufe in hoſtile triumph; and the miſery which he experienced, in a long and ignominious captivity, excited at length the compaſſion of the barbarians themſelves. Such a loſs, in a country whoſe ſpirit and finances were long ſince exhauſted, could not eaſily be repaired; and the Goths, aſſuming, in their turn, the ſentiments of ambition and revenge, would have planted their victorious ſtandards on the banks of the Rhone, if the preſence of Ætius had not reſtored new ſtrength and diſcipline to the Romans. The two armies expected the ſignal of a deciſive action; but the generals, who were conſcious of each other's force, and doubtful of their own ſuperiority, prudently ſheathed their ſwords in the field of battle; and their reconciliation became permanent and ſincere. Theodoric appears to have deſerved the regard of his ſubjects, the confidence of his allies, and the eſteem of mankind. His throne was ſurrounded by ſix valiant ſons, who were educated in the exerciſes

exercises of the barbarian camp, and in those of the Gallic schools: from the study of the Roman jurisprudence, they acquired the theory of law and of justice; and the refined and exalted sentiments of Virgil contributed to soften the asperity of their native manners. The two daughters of the Gothic king were given in marriage to the eldest sons of the kings of the Suevi and of the Vandals, who reigned in Spain and Africa; but these illustrious alliances were pregnant with mischief and discord. The queen of the Suevi bewailed the death of an husband, inhumanly massacred by her own brother. The queen of the Vandals was the victim of a jealous tyrant, whom she was taught to call her father. The cruel Genseric suspected, that his son's wife had conspired to poison him; the supposed crime was punished by the amputation of her nose and ears; and the unhappy daughter of Theodoric was ignominiously returned to the court of Thoulouse in that deformed and mutilated condition. This horrid act, which would seem incredible to a civilized age, drew tears from every spectator; but Theodoric was urged, by the feelings of a parent and a king, to revenge such irreparable injuries. The imperial ministers, who always cherished the discord of the barbarians, would have supplied the Goths with arms, and ships, and treasures, for the African war; and the cruelty of Genseric might have been fatal to himself, if the artful Vandal had not armed in his cause the formidable power of the Huns. His rich gifts and pressing solicitations inflamed the ambition of Attila; and the intended co-operation of Ætius and Theodoric was prevented by the unexpected invasion of Gaul.

Attila, at the head of a numerous body of the Huns, had penetrated into the heart of Gaul, and spread the horrors of desolation wherever he came. Ætius was the sole guardian of the public safety; and he represented to Theodoric, that an ambitious conqueror, who aspired to the dominion of the earth, could be resisted only by the firm and unanimous alliance of the powers whom he laboured to oppress. The lively eloquence of the senator Avitus, also inflamed the Gothic warriors, by the description of the injuries which their ancestors had suffered from the rapacity of the Huns; and whose implacable fury still pursued them from the Danube to the foot of the Pyrenees. He strenuously urged, that it was the duty of every Christian to save, from sacrilegious violation, the churches of God, and the relics of the saints: that it was the interest of every barbarian, who had acquired a settlement in Gaul, to defend the fields and vineyards, which were cultivated for his use, against the desolation of the Scythian shepherds. Theodoric yielded to the evidence of truth; adopted the measure at once the most prudent and the most honourable; and declared, that as the faithful ally of Ætius and the Romans, he was ready to expose his life and kingdom for the common safety of Gaul. The Visigoths, who, at that time, were in the mature vigour of their fame and power, obeyed with alacrity the signal of war; prepared their arms and horses, and assembled under the standard of their aged king, who was resolved, with his two eldest sons, Torismond and Theodoric, to command in person his numerous and valiant people. The example of the Goths determined several tribes that seemed to fluctuate between the Huns and the Romans. The indefatigable diligence of Ætius gradually collected the troops of Gaul and Germany, who had formerly acknowledged themselves the subjects, or soldiers, of the republic, but who now claimed the rewards of voluntary service, and the rank of independent allies; the Læti, the Armoricans, the Breones, the Saxons, the Burgundians, the Sarmatians, or Alani, the Ripuarians, and the Franks who followed Merovæus as their lawful prince. Such was the various army, which, under the conduct of Ætius and Theodoric, advanced, by rapid marches, to relieve Orleans, and to give battle to the innumerable host of Attila.

On their approach, the king of the Huns immediately raised the siege, and sounded a retreat. The valour of Attila was always guided by his prudence; and as he foresaw the fatal consequences of a defeat in the heart of Gaul, he repassed the Seine, and expected the enemy in the plains of Châlons, whose smooth and level surface was adapted to the operations of his Scythian cavalry. This spacious plain was distinguished by some inequalities of ground; and the importance of an height, which commanded the camp of Attila, was understood, and disputed by the two generals. The young and valiant Torismond first occupied the summit; the Goths rushed with irresistible weight on the Huns, who laboured to ascend from the opposite side; and the possession of this advantageous post inspired both the troops and their leaders with a fair assurance of victory. The unusual despondency which now seemed to prevail among the Huns, engaged Attila to use every expedient to animate their courage. "I myself," said the king of the Huns, "will throw the first javelin, and the wretch who refuses to imitate the example of his sovereign, is devoted to inevitable death." The spirit of the troops was rekindled by the voice and example of their intrepid leader; and Attila, yielding to their impatience, immediately formed his order of battle. At the head of his faithful Huns, he occupied, in person, the centre of the line. The nations subject to his controul, the Rugians, the Heruli, the Thuringians, the Franks, the Burgundians, were extended, on either hand, over the ample space of the Catalaunian fields; the right wing was commanded by Ardaric, king of the Gepidæ; and the three valiant brothers, who reigned over the Ostrogoths, were posted on the left to oppose the kindred tribes of the Visigoths. The disposition of the allies was regulated by a different principle. Sangiban, the faithless king of the Alani, was placed in the centre; where his motions might be strictly watched, and his treachery might be instantly punished. Ætius assumed the command of the left, and Theodoric of the right, wing; while Torismond still continued to occupy the heights which stretched on the flank. The nations from the Volga to the Atlantic were assembled on the plains of Châlons; but many of these nations had been divided by faction, or conquest, or emigration; and the appearance of similar arms and ensigns, which threatened each other, presented the image of a civil war.

The discipline and tactics of the Greeks and Romans, formed an interesting part of their national manners; but the battle of Châlons can only excite our curiosity by the magnitude of the object. Cassiodorius, who had conversed with many Gothic warriors who served in that memorable engagement, describes it to be "a conflict fierce, various, obstinate, and bloody; such as could not be paralleled either in the present or in past ages." The number of the slain amounted to one hundred and sixty-two thousand, or, according to another account, three hundred thousand persons. After the mutual and repeated discharge of missile weapons, in which the archers of Scythia might signalize their superior dexterity, the cavalry and infantry of the two armies were furiously mingled in closer combat. The Huns, who fought under the eyes of their king, pierced through the centre of the allies, separated their wings from each other, and, wheeling with a rapid effort to the left, directed their whole force against the Visigoths. As Theodoric rode along the ranks to animate his troops, he received a mortal stroke from the javelin of Andages, a noble Ostrogoth, and immediately fell from his horse. The wounded king was oppressed in the general disorder, and trampled under the feet of his own cavalry. Attila already exulted in the confidence of victory, when the valiant Torismond descended from the hills, and turned the fate of the day. The Visigoths, who had been thrown into confusion by the flight, or defection, of the Alani, gradually restored their order of battle;

when the Huns were vanquiſhed, and Attila was compelled to retreat. He had expoſed his perſon with the raſhneſs of a private ſoldier; but his intrepid troops of the centre had puſhed forwards beyond the reſt of the line; their attack was but faintly ſupported; their flanks were unguarded; and the troops of Attila were ſaved by the approach of the night from a total defeat. They retired within the circle of waggons that fortified their camp; and the diſmounted ſquadrons prepared themſelves for a defence, to which neither their arms nor their temper were adapted. The event was doubtful: but the king of the Huns had ſecured a dreadful reſource. The ſaddles and rich furniture of the cavalry were collected by his order into a funeral pile; and the magnanimous barbarian had reſolved, if his intrenchments ſhould be forced, to ruſh headlong into the flames, to deprive his enemies of the glory which they might have acquired by the death or captivity of Attila.

But his enemies had paſſed the night in equal anxiety and perturbation. The inconſiderate courage of Toriſmond was tempted to urge the purſuit till he unexpectedly found himſelf, with a few followers, in the midſt of the Scythian waggons. In the confuſion of a nocturnal combat, he was thrown from his horſe; and the Gothic prince muſt have periſhed like his father, if his youthful ſtrength, and the intrepid zeal of his companions, had not reſcued him from this dangerous ſituation. In the ſame manner, but on the left of the line, Ætius was ſeparated from his allies, ignorant of their victory, and anxious for their fate; and it was his fortune to encounter and eſcape the hoſtile troops that were ſcattered over the plains of Châlons: and he at length reached the camp of the Goths, which he could only fortify with a ſlight rampart of ſhields, till the dawn of day. The imperial general was then ſatisfied of the defeat of Attila, who ſtill remained inactive within his intrenchments; and when he contemplated the bloody ſcene, he obſerved, with ſecret ſatisfaction, that the loſs had principally fallen on the barbarians. The body of Theodoric, pierced with wounds, was diſcovered under a heap of the ſlain: his ſubjects bewailed the death of their king and father; and his funeral rites were performed in the face of a vanquiſhed enemy. The Goths, claſhing their arms, elevated on a buckler his eldeſt ſon Toriſmond, to whom they juſtly aſcribed the glory of their ſucceſs; and the new king accepted the obligation of revenge, as a ſacred portion of his paternal inheritance. Yet the Goths themſelves were aſtoniſhed by the fierce and undaunted aſpect of their formidable antagoniſt; and their hiſtorian has compared Attila to a lion encompaſſed in his den, and threatening his hunters with redoubled fury. All his inſtruments of martial muſic inceſſantly ſounded a loud and animating ſtrain of defiance; and the foremoſt troops who advanced to the aſſault, were checked, or deſtroyed, by ſhowers of arrows from every ſide of the intrenchments. It was determined in a general council of war, to beſiege the king of the Huns in his camp, to intercept his proviſions, and to reduce him to the alternative of a diſgraceful treaty, or an unequal combat. But the impatience of the barbarians ſoon diſdained theſe cautious and dilatory meaſures: and the mature policy of Ætius was apprehenſive, that, after the extirpation of the Huns, the republic would be oppreſſed by the pride and power of the Gothic nation. The patrician exerted the ſuperior aſcendant of authority and reaſon, to calm the paſſions, which the ſon of Theodoric conſidered as a duty; repreſented, with ſeeming affection, and real truth, the dangers of abſence and delay; and perſuaded Toriſmond to diſappoint, by his ſpeedy return, the ambitious deſigns of his brothers, who might occupy the throne and treaſures of Thouloufe. After the departure of the Goths, and the ſeparation of the allied army, Attila was ſurpriſed at the vaſt ſilence that reigned over the plains of Châlons; and the ſuſpicion of ſome hoſtile ſtratagem detained him ſeveral days within the circle of his waggons, before he ventured upon his retreat beyond the Rhine. Toriſmond, with more active vigilance, haſtened to aſſemble his court at Thouloufe, where he fell a victim to the ambitious meaſures he was preparing to put in force.

Theodoric II. is ſaid to have acquired the Gothic ſceptre in the year 453, by the murder of his brother Toriſmond; and he juſtified this atrocious deed by the deſign which his predeceſſor had formed of violating his alliance with the empire. Theodoric, after this foul deed, formed a cloſe alliance with the emperor Avitus; and offered his perſon and his forces, as a faithful ſoldier of the republic. The exploits of Theodoric II. ſoon convinced the world, that he had not degenerated from the warlike virtues of his anceſtors. After the eſtabliſhment of the Goths in Aquitain, and the paſſage of the Vandals into Africa, the Suevi, who had fixed their kingdom in Gallicia, aſpired to the conqueſt of Spain, and threatened to extinguiſh the feeble remains of the Roman dominion. The provincials of Carthagena and Tarragona, afflicted by an hoſtile invaſion, repreſented their injuries and their apprehenſions. Count Fronto was diſpatched, in the name of the emperor Avitus, with advantageous offers of peace and alliance; and Theodoric interpoſed his mediation, to declare, that, unleſs his brother-in-law, the king of the Suevi, immediately retired, he ſhould be obliged to arm in the cauſe of juſtice and of Rome. "Tell him," replied the haughty Rechiarius, "that I deſpiſe his friendſhip and his arms; but that I ſhall ſoon try whether he will dare to expect my arrival under the walls of Thouloufe." Such a challenge urged Theodoric to prevent the bold deſigns of his enemy: he paſſed the Pyrenees at the head of the Viſigoths: the Franks and Burgundians ſerved under his ſtandard; and though he profeſſed himſelf to be the general of Avitus, he privately ſtipulated for himſelf and his ſucceſſors, the abſolute poſſeſſion of his Spaniſh conqueſts. The two armies encountered each other on the banks of the river Urbicus, about twelve miles from Aſtorga; and the deciſive victory of the Goths appeared for a while to have extirpated the name and kingdom of the Suevi. From the field of battle Theodoric advanced to Braga, their metropolis, which ſtill retained the veſtiges of its ancient commerce and dignity. His entrance was not polluted with blood, and the Goths reſpected the chaſtity of their female captives, more eſpecially of the conſecrated virgins. The unfortunate king of the Suevi had eſcaped to one of the ports of the ocean; but the obſtinacy of the winds oppoſed his flight; he was delivered to his implacable rival; and Rechiarius, who neither deſired nor expected mercy, received, with manly conſtancy, the death which he would probably have inflicted. After this bloody ſacrifice to policy or reſentment, Theodoric carried his victorious arms as far as Merida, the principal town of Luſitania, without meeting any reſiſtance; but he was ſtopped in the full career of ſucceſs, and recalled from Spain, before he could provide for the ſecurity of his conqueſts. In his retreat towards the Pyrenees, he revenged his diſappointment on the country through which he paſſed, and in the ſack of Pollentia and Aſtorga, he ſhewed himſelf a faithleſs ally, as well as a cruel enemy. Whilſt the king of the Viſigoths fought and vanquiſhed in the name of Avitus, the reign of Avitus had expired. He was depoſed on the 16th of October 456.

After the depoſition and death of Avitus, the deſign of extinguiſhing the Roman empire in Spain and Gaul, was conceived, and almoſt completed, by Euric, who, in turn, aſſaſſinated his brother Theodoric II. and diſplayed, with a more ſavage temper, ſuperior abilities, both in peace and war. He paſſed the Pyrenees at the head of a numerous army, ſubdued the cities of Saragoſſa and Pampeluna, vanquiſhed in battle the martial nobles of the Tarragoneſe province, carried his victo-

rious

EURIC, KING OF THE VISIGOTHS.

London Published as the Act directs Oct.24th 1807 by J.Wilkes.

rious arms into the heart of Luſitania, and permitted the Suevi to hold the kingdom of Gallicia under the Gothic monarchy of Spain. The efforts of Euric were not leſs vigorous or leſs ſucceſsful in Gaul; and throughout the country that extends from the Pyrenees to the Rhône and the Loire, Berry and Auvergne were the only cities which refuſed to acknowledge him as their maſter. In the defence of Clermont, the inhabitants of Auvergne ſuſtained, with inflexible reſolution, the miſeries of war, peſtilence, and famine; and the Viſigoths, relinquiſhing the fruitleſs ſiege, ſuſpended the hopes of that important conqueſt. The youth of the province were animated by the heroic valour of Ecdicius, the ſon of the emperor Avitus, who made a deſperate ſally with only eighteen horſemen, boldly attacked the Gothic army, and, after maintaining a flying ſkirmiſh, retired ſafe and victorious within the walls of Clermont.

The fortune and proweſs of Odoacer, who, from an humble adventurer among the Huns, had riſen to the ſupreme power of extinguiſhing the Roman empire in the weſt, now induced him to ſolicit the friendſhip of the moſt powerful barbarians. He had no ſooner aſſumed the novel title of *king* of Italy, A.D. 476, than he offered to Euric, king of the Viſigoths, all the Roman conqueſts beyond the Alps, as far as the Rhine and the Ocean: and the ſenate confirmed this liberal gift with ſome oſtentation to a prince, who had been the firſt of his nation that was capable of framing a municipal code, or of reducing to writing the imperfect annals of his country. The lawful pretenſions of Euric were perhaps juſtified by ambition and ſucceſs; and the Gothic nation might aſpire, under his command, to the monarchy of Spain and Gaul. Arles and Marſeilles ſurrendered to his arms: he oppreſſed the freedom of Auvergne; Sidonius waited before the gates of the palace among a crowd of ambaſſadors and ſuppliants; and their various buſineſs at the court of Bordeaux atteſted the power, and the renown, of the king of the Viſigoths. The Heruli of the diſtant ocean implored his protection; and the Saxons reſpected the maritime provinces of a prince, who was deſtitute of any naval force. The tall Burgundians ſubmitted to his authority; nor did he reſtore the captive Franks, till he had impoſed on that fierce nation the terms of an unequal peace. The Vandals of Africa cultivated his friendſhip; and the Oſtrogoths of Pannonia were ſupported by his powerful aid againſt the oppreſſion of the neighbouring Huns. The North was agitated, or appeaſed, by the nod of Euric; and the new king of Italy was not ſecure without an alliance with the ſovereign of the Goths. Thus we ſee the fortune of nations often depends on accident; and France may aſcribe her greatneſs to the premature death of Euric, in 485, at a time when his ſon Alaric was an helpleſs infant, and his adverſary Clovis an ambitious and valiant youth.

While Childeric, the father of Clovis, lived an exile in Germany, he was hoſpitably entertained by the queen, as well as by the king of the Thuringians. After his reſtoration, Baſina eſcaped from her huſband's bed to the arms of her lover; openly declaring, that if ſhe had known a man wiſer, ſtronger, or more beautiful, than Childeric, that man ſhould have been the object of her preference. Clovis was the offspring of this ſingular union; and, when he was no more than fifteen years of age, he ſucceeded, by his father's death, to the command of the Salian tribe. The narrow limits of his kingdom were confined to the iſland of the Batavians, with the ancient dioceſes of Tournay and Arras; and at the baptiſm of Clovis, the number of his warriors could not exceed five thouſand. The kindred tribes of the Franks, who had ſeated themſelves along the Belgic rivers, the Scheld, the Meuſe, the Moſelle, and the Rhine, were governed by their independent kings, of the Merovingian race; the equals, the allies, and ſometimes the enemies, of the Salic prince. But the Germans, who in peace obeyed the hereditary juriſdiction of their chiefs, were always free to follow the ſtandard of a popular and victorious general; and the ſuperior merit of Clovis attracted the reſpect of the national confederacy. When he firſt took the field, he had neither gold and ſilver in his coffers, nor wine and corn in his magazines: but he imitated the example of Cæſar, who, in the ſame country, had acquired wealth by the ſword, and purchaſed ſoldiers with the fruits of conqueſt. After each ſucceſsful battle or expedition, the ſpoils were accumulated in one common maſs; every warrior received his proportionable ſhare, and the royal prerogative ſubmitted to the equal regulations of military law. The untamed ſpirit of the barbarians was taught to acknowledge the advantages of regular diſcipline. At the annual review of the month of March, their arms were diligently inſpected; and when they traverſed a peaceful territory, they were prohibited from touching a blade of graſs. The juſtice of Clovis was inexorable; and his careleſs or diſobedient ſoldiers were puniſhed with inſtant death. It would be ſuperfluous to praiſe the valour of a Frank: but the valour of Clovis was directed by cool and conſummate prudence. In all his tranſactions with mankind, he calculated the weight of intereſt, of paſſion, and of opinion; and his meaſures were ſometimes adapted to the ſanguinary manners of the Germans, and ſometimes moderated by the milder genius of Rome, and Chriſtianity. He was ſometimes intercepted in the career of victory; but he accompliſhed, in a reign of thirty years, the eſtabliſhment of the French monarchy in Gaul.—See the article FRANCE, vol. vii. p. 650.

The firſt exploit of Clovis was the defeat of Syagrius, the ſon of Ægidius; and the public quarrel might, on this occaſion, be inflamed by private reſentment. The glory of the father ſtill inſulted the Merovingian race; the power of the ſon might excite the jealous ambition of the king of the Franks. Syagrius inherited, as a patrimonial eſtate, the city and dioceſe of Soiſſons: and after the diſſolution of the weſtern empire, he might reign with the title of king of the Romans. In this ſituation Syagrius received, and boldly accepted, the hoſtile defiance of Clovis; who challenged his rival, in the true ſpirit of chivalry, to appoint the day, and the field, of battle. In the time of Cæſar, Soiſſons would have poured forth a body of fifty thouſand horſe; but the courage and numbers of the Gallic youth were long before exhauſted; and the looſe bands of volunteers who marched under the ſtandard of Syagrius, were incapable of contending with the national valour of the Franks. It would be ungenerous, without ſome more accurate knowledge of his ſtrength and reſources, to condemn the rapid flight of Syagrius, who eſcaped, after the loſs of a battle, to the diſtant court of Thouloufe. The feeble minority of Alaric could not aſſiſt, or protect, an unfortunate fugitive; the Goths were intimidated by the menaces of Clovis; and the Roman king, after a ſhort confinement, was delivered into the hands of the executioner. The Belgic cities ſurrendered to the king of the Franks; and his dominions were enlarged towards the eaſt by the dioceſe of Tongres, which Clovis ſubdued in the tenth year of his reign, A.D. 496.

The riſing fortune of Clovis, and his conduct towards the unfortunate Syagrius, inſulted the fading honour of the Goths. They viewed his rapid progreſs with jealouſy and terror; and the youthful fame of Alaric was oppreſſed by the more potent genius of his rival. Some diſputes aroſe on the edge of their contiguous dominions; and after the delays of fruitleſs negociation, a perſonal interview of the two kings was propoſed and accepted. This conference of Clovis and Alaric was held in a ſmall iſland of the Loire, near Amboiſe. They embraced, familiarly converſed, and feaſted together; and ſeparated with the warmeſt profeſſions of peace, and brotherly love. But their apparent confidence con-

cealed a dark ſuſpicion of hoſtile and treacherous deſigns; and their mutual complaints ſolicited, eluded, and diſclaimed, a final arbitration. Clovis declared the neceſſity of a Gothic war; and Alaric called inſtantly for the ſuccour of his ſubjects and allies. The people of Aquitain and Burgundy received the firſt reproaches of the Gothic king, who juſtly accuſed them of preferring the dominion of the Franks. To reſiſt theſe foreign and domeſtic enemies, Alaric collected his troops, far more numerous than the military powers of Clovis. The Viſigoths reſumed the exerciſe of arms, which they had neglected in a long and luxurious peace: a ſelect band of valiant and robuſt ſlaves attended their maſters to the field; and the cities of Gaul were compelled to furniſh their reluctant aid. Theodoric, king of the Oſtrogoths, who had overturned the empire of Odoacer, and now reigned in Italy, laboured to maintain the tranquillity of Gaul; and he aſſumed, or affected for that purpoſe, the impartial character of a mediator. But the ſagacious monarch dreaded the riſing empire of Clovis, and he was firmly engaged to ſupport the national and religious cauſe of the Goths.

Clovis, with a conſiderable army, was on his march from Paris, when, at the diſtance of forty miles from Poitiers, their progreſs was intercepted by an extraordinary ſwell of the river Vienne; and the oppoſite banks were covered by the encampment of the Viſigoths. Delay muſt be always dangerous to barbarians, who conſume the country through which they march; and had Clovis poſſeſſed leiſure and materials, it might have been impracticable to conſtruct a bridge, or to force a paſſage, in the face of a ſuperior enemy. But by the information of ſome peaſants a ford was diſcovered. The counſels of the Viſigoths were irreſolute and diſtracted. A crowd of impatient warriors, preſumptuous in their ſtrength, and diſdaining to fly before the Franks, excited Alaric to aſſert in arms the name and blood of the conqueror of Rome. The advice of the graver chieftains preſſed him to elude the firſt ardour of the enemy; and to expect, in the ſouthern provinces of Gaul, the veteran and victorious Oſtrogoths, whom the king of Italy had already ſent to his aſſiſtance. The deciſive moments were waſted in idle deliberation; the Goths too haſtily abandoned an advantageous poſt; and the opportunity of a ſecure retreat was loſt by their ſlow and diſorderly motions. After Clovis had paſſed the ford, he advanced with bold and haſty ſteps to prevent the eſcape of the enemy. At the third hour of the day, about ten miles beyond Poitiers, Clovis overtook, and inſtantly attacked, the Gothic army; whoſe defeat was already prepared by terror and confuſion. Yet they rallied in their extreme diſtreſs, and the martial youths, who had clamorouſly demanded the battle, refuſed to ſurvive the ignominy of flight. The two kings encountered each other in ſingle combat. Alaric fell by the hand of his rival, A.D. 507; and the victorious Frank was ſaved by the goodneſs of his cuiraſs, and the vigour of his horſe, from the ſpears of two deſperate Goths, who furiouſly rode againſt him to revenge the death of their ſovereign.

Such is the empire of Fortune, if we may diſguiſe our ignorance under that appellation. A bloody and complete victory has ſometimes yielded no more than the poſſeſſion of the field; and the loſs of ten thouſand men has ſometimes been ſufficient to deſtroy, in a ſingle day, the work of ages. The battle of Poitiers was followed by the conqueſt of the whole Gothic empire in Gaul. Alaric had left behind him an infant ſon, a baſtard competitor, factious nobles, and a diſloyal people; and the remaining forces of the Goths were oppreſſed by the general conſternation, or oppoſed to each other in civil diſcord. The victorious king of the Franks proceeded without delay to Angoulême, which became an eaſy conqueſt. At Bordeaux, which ſubmitted without reſiſtance, Clovis eſtabliſhed his winter-quarters; and his prudent economy tranſported from Thouloufe the royal treaſures, which were depoſited in the capital of the monarchy. The conqueror penetrated as far as the confines of Spain; fixed in Aquitain a colony of Franks; and delegated to his lieutenants the taſk of extirpating the nation of the Viſigoths. But the Viſigoths were ſtill defended by the powerful monarch of Italy. While the balance was equal, Theodoric delayed the march of the Oſtrogoths; but their ſtrenuous efforts reſiſted for a time the ambition of Clovis; and the army of the Franks, and their Burgundian allies, was compelled to raiſe the ſiege of Arles, with the loſs, as it is ſaid, of thirty thouſand men. Theſe viciſſitudes inclined the fierce ſpirit of Clovis to acquieſce in an advantageous treaty of peace. The Viſigoths were now ſuffered to retain the poſſeſſion of Septimania, a narrow tract of ſea-coaſt from the Rhone to the Pyrenees; but the noble province of Aquitain, from thoſe mountains to the Loire, was indiſſolubly united to the kingdom of France.

After the ſucceſs of the Gothic war, Clovis accepted the honours of the Roman conſulſhip, A.D. 510. The emperor Anaſtaſius beſtowed on that powerful rival of Theodoric, the title and enſigns of this ancient dignity; yet, from ſome unknown cauſe, the name of Clovis has never been inſcribed in the Faſti either of the eaſt or weſt. On the ſolemn day, the monarch of Gaul, placing a diadem on his head, was inveſted in the church of St. Martin with a purple tunic and mantle. From thence he proceeded on horſeback to the cathedral of Tours; and, as he paſſed through the ſtreets, profuſely ſcattered a donative of gold and ſilver to the joyful multitude, who inceſſantly repeated their acclamations of Conſul and Auguſtus. The actual, or legal, authority of Clovis, could not receive any new acceſſions from the conſular dignity. It was merely a name, a ſhadow, an empty pageant; and if the conqueror had been inſtructed to claim the ancient prerogatives of that high office, they muſt have expired with the period of its annual duration: yet has this title, in modern times, been reſumed in France, as a mock-emblem of this ancient pageantry of their firſt Chriſtian king.

The Oſtrogoths of Italy, unable to defend their diſtant acquiſitions, reſigned to the Franks the cities of Arles and Marſeilles. This tranſaction was confirmed by the imperial authority; and Juſtinian, yielding to the Franks the ſovereignty of the countries beyond the Alps, abſolved the provincials from their allegiance, and eſtabliſhed the infant throne of the Merovingians. From that era, they enjoyed the right of celebrating at Arles, the games of the Circus; and by a ſingular privilege, which was denied even to the Perſian monarch, the gold coin, impreſſed with their name and image, obtained a legal currency in the empire. See *le Blanc Traite Hiſtorique des Monnoyes de France*, p. 37–43.

The Viſigoths, deprived by Clovis of their Gallic poſſeſſions, found an aſylum in the yet-ſecure provinces of Spain. From the monarchy of the Goths, which ſoon involved the Suevic kingdom of Galicia, the modern Spaniards derive ſome of their national character. The Goths of Spain were long ſeparated from the reſt of mankind, by the lofty ridge of the Pyrenæan mountains: their manners and inſtitutions, as far as they relate to the rude manners of the bulk of their nation, have been already explained. After their converſion from idolatry or hereſy, the Viſigoths were diſpoſed to ſubmit to the laws of a more civiliſed policy. On their aſſembling in Spain, ſixteen national councils were ſucceſſively eſtabliſhed and convened. The ſix metropolitans, Toledo, Seville, Merida, Braga, Tarragona, and Narbonne, preſided according to their reſpective ſeniority; the aſſembly was compoſed of their ſuffragan biſhops, who appeared in perſon, or by their proxies; and a place was aſſigned to the moſt holy or opulent of the Spaniſh abbots. During the firſt three days of the convocation, as long as they agitated the eccleſiaſtical queſtions

queſtions of doctrine and diſcipline, the laity was excluded from their debates; which were conducted, however, with decent ſolemnity. But, on the morning of the fourth day, the doors were thrown open for the entrance of the great officers of the palace, the dukes and counts of the provinces, the judges of the cities, and the Gothic nobles: and their decrees were ratified by the conſent of the people. The ſame rules were obſerved in the provincial aſſemblies, the annual ſynods which were empowered to hear complaints, and to redreſs grievances; and a legal government was ſupported by the prevailing influence of the Spaniſh clergy. The biſhops, for a time, laboured to exalt the mitre above the crown. Yet the national councils of Toledo, in which the free ſpirit of the barbarians was tempered and guided by epiſcopal policy, have eſtabliſhed ſome prudent laws for the common benefit of the king and people. The vacancy of the throne was uſually ſupplied by the choice of the biſhops and palatines; and, after the failure of the line of Alaric, the regal dignity was ſtill limited to the pure and noble blood of the Goths. The clergy, who anointed their lawful prince, always recommended the duty of allegiance: and the ſpiritual cenſures were denounced againſt every ſubject who ſhould reſiſt his authority, conſpire againſt his life, or violate, by an indecent union, the chaſtity even of his widow. But the monarch himſelf, when he aſcended the throne, was bound by a reciprocal oath to God and his people, that he would faithfully execute his important truſt. The faults of his adminiſtration were ſubject to the controul of a powerful ariſtocracy; and the biſhops and palatines were guarded by a fundamental privilege, that they ſhould not be degraded, impriſoned, tortured, nor puniſhed with death, exile, or confiſcation, unleſs by the free and public judgment of their peers.

One of theſe legiſlative councils of Toledo, examined and ratified the code of laws which had been framed by the riſing genius of Euric. As long as the Goths were ſatisfied with the rude cuſtoms of their anceſtors, they indulged their ſubjects in the enjoyment of the Roman law. Their gradual improvement in arts, in policy, and at length in religion, encouraged them to imitate, and to ſuperſede, theſe foreign inſtitutions; and to compoſe a code of civil and criminal juriſprudence, for the uſe of a great and united people. The ſame obligations, and the ſame privileges, were communicated to the nations of the Spaniſh monarchy: the conquerors, inſenſibly renouncing the Teutonic idiom, ſubmitted to the reſtraints of equity, and exalted their people to the participation of freedom; and the merit of this impartial policy was enhanced by the ſituation of Spain under the reign of the Viſigoths. Thus this diviſion of the Gothic nation, ſtill maintaining its juriſdiction over Septimania on the other ſide of the Pyrenees, finally fixed its empire in Spain, over which the Goths continued the ſupreme rulers until that country was conquered by the Saracens or Arabs in the year 713; for particulars of which ſee the article SPAIN.

The other grand diviſion of the Gothic nation, denominated Oſtrogoths, had, as noticed above, eſtabliſhed themſelves in Italy, under the ſovereignty of Theodoric, the fourteenth in lineal deſcent of the royal line of the *Amali*, or demi-gods, who lived about the time of Domitian. He was born in the neighbourhood of Vienna in 455, two years after the death of Attila. A ſignal victory had reſtored the independence of the Oſtrogoths; and the three brothers, Walamir, Theodemir, and Widimir, who ruled that warlike nation with united counſels, had ſeparately pitched their habitations in the fertile though deſolated province of Pannonia. The Huns ſtill threatened them with deſtruction; but their haſty attack was repelled by the ſingle forces of Walamir, and the news of his victory reached the diſtant camp of his brother, in the ſame auſpicious moment that the favourite concubine of Theodemir was delivered of Theodoric. In the eighth year of his age, Theodoric was reluctantly yielded by his father to the public intereſt, as the pledge of an alliance which Leo, emperor of the Eaſt, had conſented to purchaſe by an annual ſubſidy of three hundred pounds of gold. The royal hoſtage was educated at Conſtantinople with care and tenderneſs. His body was formed to all the exerciſes of war; his mind to the habits of liberal converſation; he frequented the ſchools of the moſt ſkilful maſters; but he diſdained or neglected the arts of Greece; and ſo ignorant did he always remain of the firſt elements of ſcience, that a rude mark was contrived to repreſent the ſignature of the king of Italy. As ſoon as he had attained the age of eighteen, he was reſtored to the boſom of the Oſtrogoths, whom the emperor aſpired to gain by liberality and confidence. Walamir had fallen in battle; the youngeſt of the brothers, Widimir, had led away into Italy and Gaul a colony of barbarians; and the whole nation acknowledged for their king Theodemir, the father of Theodoric. His warlike ſubjects admired the ſtrength and ſtature of their young prince; and he ſoon convinced them that he had not degenerated from the valour of his anceſtors. At the head of ſix thouſand volunteers he ſecretly left the camp in queſt of adventures, deſcended the Danube as far as Singidunum or Belgrade, and ſoon returned to his father with the ſpoils of a Sarmatian king whom he had vanquiſhed and ſlain. Such triumphs, however, were productive only of fame; and the invincible Oſtrogoths were reduced to extreme diſtreſs by the want of clothing and food. They unanimouſly reſolved to deſert their Pannonian encampments, and boldly to advance into the warm and wealthy neighbourhood of the Byzantine court, which already maintained in pride and luxury ſo many bands of confederate Goths. After proving by ſome acts of hoſtility that they could be dangerous, or at leaſt troubleſome enemies, the Oſtrogoths ſold at a high price their reconciliation and fidelity, accepted a donative of lands and money, and were entruſted with the defence of the lower Danube, under the command of Theodoric, who ſucceeded after his father's death to the hereditary throne of the Amali.

While Zeno reigned as emperor of the Eaſt, he beſtowed on the king of the Oſtrogoths the rank of patrician and conſul, and gave him the command of the Palatine troops. As long as Theodoric condeſcended to ſerve, he ſupported with courage and fidelity the cauſe of his benefactor: but on the firſt ſhyneſs or jealouſy of the emperor, he became a deadly foe, who ſpread the flames of war from the gates of Conſtantinople to the ſhores of the Adriatic Sea; many flouriſhing cities were reduced to aſhes, and the agriculture of Thrace was almoſt extirpated by the wanton cruelty of the Goths, who deprived their captive peaſants of the right hand that guided the plough. See Malchus Excerpt. Leg. p. 95. On ſuch occaſions, Theodoric ſuſtained the loud reproach of diſloyalty, of ingratitude, and of inſatiate avarice; which could only be defended by the hard neceſſity of his ſituation. He reigned, not as the monarch, but as the miniſter, of a ferocious people, whoſe ſpirit was unbroken by ſlavery, and impatient of real or imaginary inſult. Their poverty was incurable: ſince the moſt liberal donatives were ſoon diſſipated in waſteful luxury, and the moſt fertile eſtates became barren in their hands; they deſpiſed, though they envied, the laborious provincials; and when their ſubſiſtence had failed, the Oſtrogoths embraced the familiar reſources of war and rapine. It had been the wiſh of Theodoric, (ſuch at leaſt was his declaration,) to lead a peaceable and obedient life on the confines of Scythia, till the Byzantine court, by ſplendid and fallacious promiſes, ſeduced him to attack a confederate tribe of Goths, who had been engaged in the party of Baſiliſcus. See the article ROME. He marched from his ſtation in Mæſia, on the ſolemn aſſurance that before he reached Adrianople, he

he ſhould meet a plentiful convoy of proviſions, and a reinforcement of eight thouſand horſe and thirty thouſand foot, while the legions of Aſia were encamped at Heraclea to ſecond his operations. Theſe meaſures were diſappointed by mutual jealouſy. As he advanced into Thrace, the ſon of Theodemir found an inhoſpitable ſolitude, and his Gothic followers, with a heavy train of horſes, of mules, and of waggons, were betrayed by their guides among the rocks and precipices of Mount Sondis, where he was aſſaulted by the arms and invectives of the ſon of Triarius. From a neighbouring height, his artful rival harangued the camp of the Walamirs, and branded their leader with the opprobrious names of child, of madman, of perjured traitor, the enemy of his nation. "Are you ignorant," exclaimed the ſon of Triarius, "that it is the conſtant policy of the Romans to deſtroy the Goths by each other's ſwords? Are you inſenſible that the victor in this unnatural conteſt will be expoſed, and juſtly expoſed, to their implacable revenge? Where are thoſe warriors, my kinſmen and thy own, whoſe widows now lament that their lives were ſacrificed to thy raſh ambition? Where is the wealth which thy ſoldiers poſſeſſed when they were firſt allured from their native homes to inliſt under thy ſtandard? Each of them was then maſter of three or four horſes; they now follow thee on foot like ſlaves, through the deſerts of Thrace; thoſe men who were tempted by the hope of meaſuring gold with a buſhel, thoſe brave men who are as free and as noble as thyſelf." A language ſo well ſuited to the temper of the Goths, excited clamour and diſcontent; and the ſon of Theodemir, apprehenſive of being left alone, was compelled to embrace his brethren, and to imitate the example of Roman perfidy.

In every ſtate of his fortune, the prudence and firmneſs of Theodoric were equally conſpicuous; whether he threatened Conſtantinople at the head of the confederate Goths, or retreated with a faithful band to the mountains and ſea-coaſt of Epirus. At length the accidental death of the ſon of Triarius deſtroyed the balance which the Romans had been ſo anxious to preſerve, the whole nation acknowledged the ſupremacy of the Amali, and the Byzantine court ſubſcribed an ignominious and oppreſſive treaty. The ſenate had already declared, that it was neceſſary to chuſe a party among the Goths, ſince the public was unequal to the ſupport of their united forces; a ſubſidy of two thouſand pounds of gold, with the ample pay of thirteen thouſand men, were required for the leaſt conſiderable of their armies; and the Iſaurians, who guarded not the empire but the emperor, enjoyed, beſides the privilege of rapine, an annual penſion of five thouſand pounds. The ſagacious mind of Theodoric ſoon perceived that he was odious to the Romans, and ſuſpected by the barbarians; he underſtood the popular murmur, that his ſubjects were expoſed in their frozen huts to intolerable hardſhips, while their king was diſſolved in the luxury of Greece, and he prevented the painful alternative of encountering the Goths, as the champion, or of leading them to the field as the enemy, of Zeno. Embracing an enterpriſe worthy of his courage and ambition, Theodoric addreſſed the emperor in the following words: "Although your ſervant is maintained in affluence by your liberality, graciouſly liſten to the wiſhes of my heart! Italy, the inheritance of your predeceſſors, and Rome itſelf, the head and miſtreſs of the world, now fluctuate under the violence and oppreſſion of Odoacer the mercenary. Direct me, with my national troops, to march againſt the tyrant. If I fall, you will be relieved from an expenſive and troubleſome friend: if, with the divine permiſſion, I ſucceed, I ſhall govern in your name, and to your glory, the Roman ſenate, and the part of the republic delivered from ſlavery by my victorious arms." The propoſal of Theodoric was accepted; but the forms of the commiſſion appear to have been expreſſed with a prudent ambiguity; and it was left doubtful, whether the conqueror of Italy ſhould reign as the lieutenant, the vaſſal, or the ally, of the emperor of the Eaſt.

The reputation both of the leader and of the war diffuſed an univerſal ardour; the Walamirs were multiplied by the Gothic ſwarms already engaged in the ſervice, or ſeated in the provinces, of the empire; and each bold barbarian, who had heard of the wealth and beauty of Italy, was impatient to ſeek through the moſt perilous adventures, the poſſeſſion of ſuch enchanting objects. The march of Theodoric muſt be conſidered as the emigration of an entire people; the wives and children of the Goths, their aged parents, and moſt valuable effects, were carefully tranſported; and ſome idea may be formed of the heavy baggage that now followed the camp, by the loſs of two thouſand waggons, which had been ſuſtained in a ſingle action in the war of Epirus. For their ſubſiſtence, the Goths depended on the magazines of corn which was ground in portable mills by the hands of their women; on the milk and fleſh of their flocks and herds; on the caſual produce of the chaſe, and upon the contributions which they might impoſe on all who ſhould preſume to diſpute the paſſage, or to refuſe their friendly intercourſe. Notwithſtanding theſe precautions, they were expoſed to the danger, and almoſt to the diſtreſs, of famine, in a march of ſeven hundred miles, which had been undertaken in the depth of a rigorous winter. Since the fall of the Roman power, Dacia and Pannonia no longer exhibited the rich proſpect of populous cities, well-cultivated fields, and convenient highways: the reign of barbariſm and deſolation was reſtored, and the tribes of Bulgarians, Gepidæ, and Sarmatians, who had occupied the vacant province, were prompted by their native fierceneſs, or the ſolicitations of Odoacer, to reſiſt the progreſs of his formidable enemy. In many obſcure though bloody battles, Theodoric fought and vanquiſhed; till at length, ſurmounting every obſtacle by ſkilful conduct and perſevering courage, he deſcended from the Julian Alps, and diſplayed his invincible banners on the confines of Italy.

Odoacer, a rival not unworthy of his arms, had already occupied the advantageous and well-known poſt of the river Sontius, near the ruins of Aquileia, at the head of a powerful hoſt, whoſe independent chiefs diſdained the duties of ſubordination and the prudence of delays. No ſooner had Theodoric granted a ſhort repoſe and refreſhment to his wearied cavalry, than he boldly attacked the fortifications of the enemy; the Oſtrogoths ſhewed more ardour to acquire, than the mercenaries to defend, the lands of Italy; and the reward of the firſt victory was the poſſeſſion of the Venetian province as far as the walls of Verona. In the neighbourhood of that city, on the ſteep banks of the Adige, he was oppoſed by a new army, reinforced in its numbers, and not impaired in its courage: the conteſt was more obſtinate, but the event was more deciſive; Odoacer fled to Ravenna, Theodoric advanced to Milan, and the vanquiſhed troops ſaluted their conqueror with loud acclamations of reſpect and fidelity. But their want either of conſtancy or of faith, ſoon expoſed the victor to the moſt imminent danger; his vanguard, with ſeveral Gothic counts, which had been imprudently entruſted to a deſerter, was betrayed and deſtroyed near Faenza, by his double treachery. Odoacer again appeared maſter of the field; and the invader, ſtrongly entrenched in his camp of Pavia, was reduced to ſolicit the aid of the Viſigoths of Gaul. This diviſion of the Goths had been tampered with by the ſagacious Odoacer, probably without ſucceſs: but the dark and imperfect materials do not afford us a more ample narrative of the conſequent diſtreſs of Italy, nor of the fierce conflict, which was finally decided by the abilities, experience, and valour, of Theodoric. Immediately before the battle of Verona, he viſited the tent of his mother and ſiſter,

ter, and requeſted, that on a day, the moſt illuſtrious of his life, they would adorn him with the rich garments which they had worked with their own hands. "Our glory," ſaid he, "is mutual and inſeparable. You are known to the world as the mother of Theodoric; and it becomes me to prove, that I am the genuine offspring of thoſe heroes from whom I claim my deſcent." The wife or concubine of Theodemir was inſpired with the ſpirit of the German matrons, who eſteemed their ſons' honour far above their ſafety: and it is aſſerted by Segonius, tom. i. p. 580, that in a deſperate action, when Theodoric himſelf was hurried along by the torrent of a flying crowd, ſhe boldly met them at the entrance of the camp, and, by her ſtern reproaches, drove them back on the ſwords of the enemy.

From the Alps to the extremity of Calabria, Theodoric reigned by the right of conqueſt: the Vandal ambaſſadors ſurrendered the iſland of Sicily as a lawful appendage of his kingdom; and he was accepted as the deliverer of Rome by the ſenate and people, who had ſhut their gates againſt the flying uſurper. Ravenna alone, ſecure in her fortifications, ſuſtained a ſiege of almoſt three years; and the daring ſallies of Odoacer frequently carried ſlaughter and diſmay into the Gothic camp. At length, deſtitute of proviſions and hopeleſs of relief, that unfortunate monarch yielded to the groans of his ſubjects and the clamours of his ſoldiers. A treaty of peace was negotiated by the biſhop of Ravenna; the Oſtrogoths were admitted into the city, and the hoſtile kings conſented, under the ſanction of an oath, to rule with equal and undivided authority the provinces of Italy. The event of ſuch an agreement may be eaſily foreſeen. After ſome days had been devoted to the ſemblance of joy and friendſhip, Odoacer, in the midſt of a ſolemn banquet, was ſtabbed by the command of his rival, on the 3d of March 493. Secret and effectual orders had been previouſly diſpatched; the faithleſs and rapacious mercenaries, at the ſame moment, and without reſiſtance, were univerſally maſſacred; and the royalty of Theodoric was proclaimed by the Goths, with the reluctant and ambiguous conſent of the emperor of the Eaſt.

The firſt act of the reign of Theodoric, was the partition of the lands of Italy, of which he aſſigned the third part to his ſoldiers; a grant which has been arraigned as the ſole injuſtice of his life. Yet even this act has been juſtified by the example of Odoacer, the rights of conqueſt, the true intereſt of the Italians, and the ſacred duty of ſubſiſting a whole people, who, on the faith of his promiſes, had tranſported themſelves into a diſtant land. Under the reign of Theodoric, and in the prolific climate of Italy, the Goths ſoon multiplied to a formidable hoſt of two hundred thouſand men, and the whole amount of their families may be computed by the ordinary addition of women and children. Their invaſion of property was diſguiſed by the name of *hoſpitality*; theſe unwelcome gueſts were irregularly diſperſed over the face of Italy, and the lot of each barbarian was adequate to his birth and office, the number of his followers, and the ruſtic wealth which he poſſeſſed in ſlaves and cattle. The diſtinctions of noble and plebeian were acknowledged; but the lands of every freeman were exempt from taxes, and he enjoyed the ineſtimable privilege of being ſubject only to the laws of his country. Faſhion, and even convenience, ſoon perſuaded the conquerors to aſſume the more elegant dreſs of the natives, but they ſtill perſiſted in the uſe of their mother-tongue; and their contempt for the Latin ſchools was applauded by Theodoric himſelf, who gratified their prejudices by declaring, that the child who had trembled at a rod would never dare to look upon a ſword. Diſtreſs might ſometimes provoke the indigent Roman to aſſume the ferocious manners which were inſenſibly relinquiſhed by the victorious barbarian: but theſe mutual converſions were not encouraged by the policy of a monarch who ſtudied the ſeparation of the Italians and Goths; reſerving the former for the arts of peace, and the latter for the ſervice of war. To accompliſh this deſign, he was anxious to protect his induſtrious ſubjects, as well as to moderate the violence without enervating the valour of his ſoldiers, who were maintained for the public defence. They held their lands and benefices as a military ſtipend: at the ſound of the trumpet, they were prepared to march under the conduct of their provincial officers; and the whole extent of Italy was diſtributed into the ſeveral quarters of a well-regulated camp. The ſervice of the palace and of the frontiers was performed by choice or by rotation; and each extraordinary fatigue was recompenſed by an increaſe of pay and occaſional donatives. Theodoric had convinced his brave companions, that empire muſt be acquired and defended by the ſame arts. After his example, they ſtrove to excel in the uſe, not only of the lance and ſword, the inſtruments of their victories, but of the miſſile weapons, which they were too much inclined to neglect; and the lively image of war was diſplayed in the daily exerciſe and annual reviews of the Gothic cavalry. A firm though gentle diſcipline impoſed the habits of modeſty, obedience, and temperance; and the Goths were at length inſtructed to ſpare the people, to reverence the laws, to underſtand the duties of civil ſociety, and to diſclaim the barbarous licenſe of judicial combat and private revenge.

Among the barbarians of the Weſt, the victory of Theodoric had ſpread a general alarm. But as ſoon as it appeared that he was ſatisfied with conqueſt and deſirous of peace, terror was changed into reſpect, and they ſubmitted to a powerful mediation, which was uniformly employed for the beſt purpoſes of reconciling their quarrels and civilizing their manners. The ambaſſadors who reſorted to Ravenna from the moſt diſtant countries of Europe, admired his wiſdom, magnificence, and courteſy. His domeſtic alliances, a wife, two daughters, a ſiſter, and a niece, united the family of Theodoric with the kings of the Franks, the Burgundians, the Viſigoths, the Vandals, and the Thuringians; and contributed to maintain the harmony, or at leaſt the balance, of the great republic of the Weſt.

It is difficult in the dark foreſts of Germany and Poland to purſue the emigrations of the Heruli, a fierce people who diſdained the uſe of armour, and who condemned their widows and aged parents not to ſurvive the loſs of their huſbands, or the decay of their ſtrength. The king of theſe ſavage warriors ſolicited the friendſhip of Theodoric, and was elevated to the rank of his ſon, according to the barbaric rites of a military adoption. From the ſhores of the Baltic, the Æſtians or Livonians laid their offerings of native amber at the feet of a prince, whoſe fame had excited them to undertake an unknown and dangerous journey of fifteen hundred miles. With the country from whence the Gothic nation derived their origin, he maintained a frequent and friendly correſpondence; the Italians were clothed in the rich ſables of Sweden; and one of its ſovereigns, after a voluntary abdication, found an hoſpitable retreat in the palace of Ravenna.

The life of Theodoric repreſents the rare and meritorious example of a barbarian, who ſheathed his ſword in the pride of victory and the vigour of his age. A reign of thirty-three years was conſecrated to the duties of civil government; and the hoſtilities in which he was ſometimes involved, were ſpeedily terminated by the conduct of his lieutenants, the diſcipline of his troops, the arms of his allies, and even by the terror of his name. He reduced, under a ſtrong and regular government, the countries of Rhætia, Noricum, Dalmatia, and Pannonia, from the ſource of the Danube and the territory of the Bavarians, to the petty kingdom erected by the Gepidæ on the ruins of Sirmium. His prudence could not ſafely entruſt the bulwark of Italy to ſuch turbu-

lent neighbours; and his juſtice might claim the lands which they oppreſſed, either as a part of his kingdom, or as the inheritance of his father. The greatneſs of a ſervant, who was called perfidious becauſe he was ſucceſsful, awakened the jealouſy of the emperor Anaſtaſius; and a war was kindled on the Dacian frontier, by the protection which the Gothic king, in the viciſſitude of human affairs, had granted to one of the deſcendants of Attila. Sabinian, an illuſtrious general, advanced at the head of ten thouſand Romans; and the proviſions and arms, which filled a long train of waggons, were diſtributed to the fierceſt of the Bulgarian tribes. But, in the fields of Margus, the eaſtern powers were defeated by the inferior forces of the Goths and Huns; the flower and even the hope of the Roman armies was irretrievably deſtroyed; and ſuch was the temperance with which Theodoric had inſpired his victorious troops, that as their leader had not given the ſignal of pillage, the rich ſpoils of the enemy lay untouched at their feet. Exaſperated by this diſgrace, the Byzantine court diſpatched two hundred ſhips and eight thouſand men to plunder the ſea-coaſt of Calabria and Apulia; they aſſaulted the ancient city of Tarentum, interrupted the trade and agriculture of the country, and ſailed back to the Helleſpont, proud of their victory over a people whom they ſtill preſumed to conſider as their *Roman* brethren. Their retreat was haſtened by the prudent activity of Theodoric; Italy was covered by a fleet of a thouſand veſſels, which he conſtructed with incredible diſpatch; and his firm moderation was ſoon rewarded by a ſolid and honourable peace. He maintained with a powerful hand the balance of the Weſt, till it was at length overthrown by the genius of Clovis; and although unable to give effectual aſſiſtance to his kinſman the king of the Viſigoths, he ſaved the remains of his family and people, and checked the Franks in the midſt of their inſidious career. Under this reſpectable character, the king of Italy reſtored the prætorian præfecture of the Gauls, reformed ſome abuſes in the civil government of Spain, and accepted the annual tribute and apparent ſubmiſſion of its military governor, who wiſely refuſed to truſt his perſon in the palace of Ravenna. The Gothic ſovereignty of Italy was eſtabliſhed from Sicily to the Danube, from Sirmium or Belgrade to the Atlantic Ocean; and the Greeks themſelves have acknowledged that Theodoric reigned over the faireſt portion of the weſtern empire.

In the ſeventh year of his reign, Theodoric viſited the ancient capital of the weſtern world; the ſenate and people advanced in ſolemn proceſſion to ſalute a ſecond Trajan, a new Valentinian; and he nobly ſupported that character by the aſſurance of a juſt and legal government, in a diſcourſe which he was not afraid to pronounce in public, and to inſcribe on a tablet of braſs. During a reſidence of ſix months in Rome, the fame, the perſon, and the courteous demeanour, of the Gothic king, excited the admiration of the people; and he contemplated, with equal curioſity and ſurpriſe, the monuments that remained of their ancient greatneſs. He imprinted the footſteps of a conqueror on the Capitoline hill, and frankly confeſſed that each day he viewed with freſh wonder the forum of Trajan and his lofty column. The theatre of Pompey appeared, even in its decay, as a huge mountain artificially hollowed and poliſhed, and adorned by human induſtry; and he vaguely computed, that a river of gold muſt have been drained to erect the coloſſal amphitheatre of Titus. The Gothic kings, injuriouſly accuſed of the ruin of antiquity, were anxious to preſerve the monuments of the nation whom they had ſubdued. The royal edicts were framed to prevent the abuſes, the neglect, or the depredations, of the citizens themſelves; and to a profeſſed architect, the annual ſum of two hundred pounds of gold, twenty-five thouſand tiles, and the receipt of cuſtoms from the Lucrine port, were aſſigned for the ordinary repairs of the walls and public edifices. A ſimilar care was extended to the ſtatues of metal or marble of men or animals. The ſpirit of the horſes, which have given a modern name to the Quirinal, was applauded by the barbarians; the brazen elephants of the *Via ſacra* were diligently reſtored; the famous heifer of Myron deceived the cattle, as they were driven through the forum of peace; and an officer was created to protect thoſe works of art, which Theodoric conſidered as the nobleſt ornament of his kingdom.

After the example of the laſt emperors, Theodoric preferred the reſidence of Ravenna, where he cultivated an orchard with his own hands. As often as the peace of his kingdom was threatened by the barbarians, he removed his court to Verona on the northern frontier; and the image of his palace, ſtill extant on a coin, repreſents the oldeſt and moſt authentic model of Gothic architecture. Theſe two capitals, as well as Pavia, Spoleto, Naples, and the reſt of the Italian cities, acquired under his reign the uſeful or ſplendid decorations of churches, aqueducts, baths, porticoes, and palaces. But the happineſs of the ſubject was more truly conſpicuous in the buſy ſcene of labour and luxury, in the rapid increaſe and enjoyment of national wealth. Agriculture revived under the bleſſings of peace, and the number of huſbandmen was multiplied by the redemption of captives. Whenever the ſeaſons were leſs propitious, the precautions of forming magazines of corn, of fixing the price, and prohibiting the exportation, atteſted at leaſt the benevolence of the ſtate; but ſuch was the extraordinary plenty which an induſtrious people produced from a grateful ſoil, that a gallon of wine was then ſold in Italy for leſs than three farthings, and a quarter of wheat at about five ſhillings and ſixpence. A country poſſeſſed of ſo many objects of commerce, ſoon attracted the merchants of the world, whoſe beneficial traffic was encouraged and protected by the liberal ſpirit of Theodoric. The free intercourſe of the provinces by land and water was reſtored and extended; the city gates were never ſhut either by day or by night; and the common ſaying, that a purſe of gold might be ſafely left in the fields, was expreſſive of the conſcious ſecurity of the inhabitants of Italy.

It muſt be with a mingled ſhare of ſurpriſe and pleaſure, that the reader will contemplate the many private virtues and public acts of impartial juſtice, manifeſted to the admiring world during ſo long a reign of a Gothic barbarian. Yet the fair proſpect was overcaſt with the blackeſt clouds; and the declining age of Theodoric was ſtained with the guilt of ſacrificing innocent blood. In the exultations of victory, he had been tempted to deprive the whole party of Odoacer of the civil and even the natural rights of ſociety; a tax unſeaſonably impoſed after the calamities of war, would have cruſhed the riſing agriculture of Liguria; a rigid pre-emption of corn, which was intended for the public relief, muſt have aggravated the diſtreſs of Campania. Theſe dangerous projects were defeated by the virtue and eloquence of Boethius, who, in the preſence of Theodoric, ſucceſsfully pleaded the cauſe of the people. But towards the cloſe of the reign of Theodoric, a diſaffection to his perſon and government was intended or ſuſpected. The ſenator Albinus was accuſed, and convicted of *hoping*, as it was ſaid, the liberty of Rome. "If Albinus be criminal," exclaimed the orator, "the ſenate, and myſelf are all guilty of the ſame crime. If we are innocent, Albinus is equally entitled to the protection of the laws." The advocate of Albinus was at once involved in the danger of his client; their ſignature, which they denied as a forgery, was affixed to the original addreſs, inviting the emperor Juſtin to deliver Italy from the Goths; and three witneſſes, perhaps of infamous reputation, atteſted the treaſonable deſigns of the Roman patrician. Yet his innocence muſt be preſumed, ſince he was deprived by Theodoric of the means of juſtification, and rigorouſly exiled and confined in the tower of Pavia, while

THEODORIC, KING OF THE OSTROGOTHS.

London. Published as the Act directs Nov.r 8.th 1807, by J. Wilkes.

while the ſenate, at the diſtance of five hundred miles, pronounced a ſentence of confiſcation and death againſt this moſt illuſtrious of its members. The unhappy ſufferer alleviated the horrors of impriſonment by compoſing his admired work on the "Conſolations of Philoſophy;" a celeſtial guide, which poured into his wounds her celeſtial balm; till ſuſpenſe, the worſt of evils, was at length determined by the miniſters of death, who executed, and perhaps exceeded, the inhuman mandate of Theodoric. A cord was faſtened round the head of Boethius, and forcibly tightened, till his eyes almoſt ſtarted fromtheir ſockets; while his executioners refined upon the torture by beating him with clubs till he expired, A. D. 525. In the laſt hours of Boethius, he derived ſome comfort from the ſafety of his two ſons, of his wife, and of his father-in-law, the venerable Symmachus. But the grief of Symmachus was indiſcreet; it almoſt implied that he might dare to revenge the death of an injured friend. He was dragged in chains from Rome to the palace of Ravenna; and the ſuſpicions of Theodoric could only be appeaſed by the blood of this innocent and aged ſenator.

After a life of philanthropy and glory, Theodoric was to deſcend with ſhame and infamy into the grave: his mind was humbled by the contraſt of the paſt, and juſtly alarmed by the terrors of futurity. Anguiſh and remorſe will find their way into the moſt obdurate heart, and ſting the moſt depraved conſcience. The images of theſe innocent ſufferers ſtood conſtantly before the eyes of Theodoric, till unable any longer to ſuſtain the weight of his own guilt, he retired to his chamber, and, as he lay trembling with cold, under a weight of bed-clothes, he expreſſed in broken murmurs to his phyſician Elpidius, his deep repentance for the murders of Boethius and Symmachus. His malady increaſed, and after three days he expired in the palace of Ravenna, A. D. 526, in the thirty-third year of his reign, and the thirty-ſeventh from his firſt invaſion of Italy. Conſcious of his approaching end, he divided his treaſures and provinces between his two grandſons, and fixed the Rhone as their common boundary. Amalaric was reſtored to the throne of Spain; while Italy, with all the conqueſts of the Oſtrogoths, was bequeathed to Athalaric, whoſe age did not exceed ten years, but who was cheriſhed as the laſt male offspring of the line of Amali, by the marriage of his mother Amalaſontha with a royal prince of the ſame blood. In the preſence of the dying monarch, the Gothic chiefs and Italian magiſtrates mutually engaged their faith and loyalty to the young prince, and to his guardian mother; and they received in the ſame awful moment, his laſt ſalutary advice to maintain the laws, to love the ſenate and people of Rome, and to cultivate with decent reverence the friendſhip of the emperor. The monument of Theodoric was erected by his daughter Amalaſontha, in a conſpicuous ſituation, which commanded the city of Ravenna, the harbour, and the adjacent coaſt. A chapel of a circular form, thirty feet in diameter, is crowned by a dome of one entire piece of granite: from the centre of the dome, four columns aroſe, which ſupported, in a vaſe of porphyry, the remains of the Gothic king, ſurrounded by the brazen ſtatues of the twelve apoſtles.

Amalaſontha, the regent and queen of Italy, united in her perſon the two moſt illuſtrious families of the barbarians. Her mother, the ſiſter of Clovis, was deſcended from the long-haired kings of the Merovingian race; and the regal ſucceſſion of the Amali was illuſtrated in the eleventh generation by her father Theodoric. The ſex of his daughter excluded her from the Gothic throne; but his vigilant tenderneſs for his family and his people diſcovered the laſt heir of the royal line, whoſe anceſtors had taken refuge in Spain; and the fortunate Eutharic was ſuddenly exalted to the rank of a conſul and a prince. He enjoyed only a ſhort time the charms of Amalaſontha, and the hopes of the ſucceſſion; and his widow, after the death of her huſband and father, became the only guardian of her ſon Athalaric, and the kingdom of Italy. At the age of about twenty-eight years, the endowments of her mind and perſon had attained their perfect maturity. Her beauty was animated by manly ſenſe, activity, and reſolution. Education and experience had cultivated her talents; her philoſophic ſtudies were exempt from vanity; and, though ſhe expreſſed herſelf with equal elegance in the Greek, the Latin, and the Gothic, tongue, the daughter of Theodoric maintained in her counſels a diſcreet and impenetrable ſilence. By a faithful imitation of the virtues, ſhe revived the proſperity, of his reign: while ſhe ſtrove, with pious care, to expiate the faults, and to obliterate the darker memory, of his declining age. The children of Boethius and Symmachus were reſtored to their paternal inheritance: her extreme lenity never conſented to inflict any corporal or pecuniary penalties on her Roman ſubjects; and ſhe generouſly deſpiſed the clamours of the Goths, who, at the end of forty years, ſtill conſidered the people of Italy as their ſlaves or their enemies. Her ſalutary meaſures were directed by the wiſdom, and celebrated by the eloquence, of Caſſiodorius; ſhe ſolicited and deſerved the friendſhip of the emperor; and the kingdoms of Europe reſpected, both in peace and war, the majeſty of the Gothic throne. But the future happineſs of the queen and of Italy depended on the education of her ſon; who was deſtined, by his birth, to ſupport the different and almoſt incompatible characters of the chief of a barbarian camp, and the firſt magiſtrate of a civilized nation. From the age of ten years, Athalaric was educated with the utmoſt care and diligence; and three venerable Goths were choſen to inſtil the principles of honour and virtue into the mind of their young king. But the untractable youth betrayed the moſt ſullen and vicious diſpoſition; and as he advanced towards manhood, he became abandoned to wine, to women, and to the miſchievous deſigns of his favourites. Thus the king of Italy, at the age of ſixteen, was conſumed by premature intemperance, and left the throne deſtitute of legal authority. Inſtead of ſubmitting to the laws of her country, the daughter of Theodoric conceived the impracticable deſign of ſharing, with one of her couſins, the regal title, and of reſerving in her own hands the ſupreme power. He received the propoſal with reſpect and gratitude; and the eloquent Caſſiodorius announced to the ſenate and the emperor, that Amalaſontha and Theodatus had aſcended the throne of Italy. His birth, (for his mother was the ſiſter of Theodoric,) might be conſidered as an imperfect title; and the choice of Amalaſontha was more ſtrongly directed by her contempt of his avarice and puſillanimity, which had deprived him of the eſteem of the barbarians. But Theodatus was exaſperated by the contempt which he experienced: diabolical revenge lurked in his boſom: and he cauſed the queen of Italy to be impriſoned in a ſmall iſland of the lake of Bolſena, where, after ſhort confinement, ſhe was ſtrangled in the bath by his order, A. D. 535.

Although Theodatus deſcended from a race of heroes, he was ignorant of the art, and averſe to the dangers, of war. The feeble monarch reſigned to Juſtinian the poſſeſſion of Sicily; and was actually treating with that emperor to reſign to him, for a penſion, the whole of his dominions; when, in the interval, two Roman generals, who had entered the province of Dalmatia, were defeated and ſlain by the Gothic troops. The march of Beliſarius was inſtantly directed to the reduction of Italy, and here commenced, A. D. 537, the ſecond Italian Gothic War.

Beliſarius, after he had ſecured Sicily, advanced with his fleet and army to the city of Naples, which he ſtormed and took, while Theodatus ſecured his perſon within the walls of Rome. His cavalry, indeed, advanced forty miles on the Appian way, and encamped in the Pomptine marſhes; but the principal forces of the Goths were

diſperſed in Dalmatia, Venetia, and Gaul. In this inactive ſtate they were ſuffered to remain, until the puſillanimous character of Theodatus emboldened his army to declare him unworthy of his race, his nation, and his throne; and their general Vitiges, whoſe valour had been ſignalized in the Illyrian war, was raiſed with unanimous applauſe on the bucklers of his companions. On the firſt rumour, the abdicated monarch fled from his country; but he was purſued by a Goth whom he had injured, who overtook Theodatus on the Flaminian way, and, regardleſs of his bitter cries and entreaties for his life, ſlaughtered him as he lay proſtrate on the ground, A. D. 536. Though the choice of the Goths had made Vitiges their king, yet he was impatient to return to Ravenna, where he might ſeize the reluctant hand of the daughter of Amalaſontha, in order to found ſome claim of hereditary right. A national council was immediately held, and the new monarch reconciled the impatient ſpirit of the barbarians to a meaſure of diſgrace, which the miſconduct of his predeceſſor had rendered indiſpenſable. The Goths conſented to retreat from the preſence of a victorious enemy; to delay till the next ſpring the operations of offenſive war; to ſummon their ſcattered forces; to relinquiſh their diſtant poſſeſſions, and to truſt even Rome itſelf to the faith of its inhabitants. Leuderis, an aged Gothic warrior, was left in the capital with four thouſand ſoldiers; but who betrayed his truſt to the Romans. Beliſarius, after completing his conqueſt of Naples and Cumæ, advanced haſtily to Rome; and the city, after ſixty years ſervitude, was delivered from the yoke of the barbarians, A. D. 536.

The deſigns of Vitiges were in the mean time executed with diligence and effect. From their ruſtic habitations, from their diſtant garriſons, the Goths aſſembled at Ravenna for the defence of their country; and ſuch were their numbers, that after an army had been detached for the relief of Dalmatia, one hundred and fifty thouſand fighting men marched under the royal ſtandard. According to the degrees of rank or merit, the Gothic king diſtributed arms and horſes, rich gifts, and liberal promiſes. He raiſed the ſieges of Peruſia and Spoleto, and arrived within two miles of Rome, at the foot of the Milvian bridge, in the month of March, 537. At the head of one thouſand horſe, Beliſarius ſallied from the Flaminian gate to mark the ground of an advantageous poſition, and to ſurvey the camp of the barbarians; but while he believed them on the other ſide of the Tyber, he was ſuddenly encompaſſed and aſſaulted by their innumerable ſquadrons. The fate of Italy depended on his life; and the deſerters pointed to the conſpicuous bay horſe which he rode on that memorable day. "Aim at the bay horſe," was the univerſal cry. Every bow was bent, and every javelin directed, againſt that devoted object, and the command was obeyed by thouſands who were ignorant of its real motive. The bolder barbarians advanced to the cloſer combat of ſwords and ſpears; and the praiſe of hiſtory has graced the fall of Viſandus, the Gothic ſtandard-bearer, who maintained his foremoſt ſtation till he was pierced with thirteen wounds, perhaps by the hand of Beliſarius himſelf. The Roman general, ſtrong, active, and invincible, on every ſide diſcharged his mortal ſtrokes: his faithful guards imitated his valour, and defended his perſon; and the Goths, after the loſs of a thouſand men, fled before the arms of the hero. They were raſhly purſued to their camp; and the Romans, oppreſſed by multitudes, in their turn made a precipitate retreat to the gates of the city: the gates were ſhut againſt their own troops; and the public terror was increaſed by the report that Beliſarius was ſlain. The Flaminian gate was at length thrown open; but not till Beliſarius had performed prodigies of valour, and defended himſelf from a hoſt of enemies.

The whole army of the Goths now paſſed the Tyber, and formed the regular ſiege of the city, which continued above a year. The prudence of Beliſarius made every male inhabitant a ſoldier. His troops were relieved by the zeal and diligence of the people, who watched while they ſlept, and laboured while they repoſed. With a veteran band of only five thouſand men, he undertook to defend a circle of twelve miles, againſt an army of one hundred and fifty thouſand barbarians. Yet this formidable hoſt of the Goths was inſufficient to embrace the circumference of the city: of the fourteen gates, ſeven only were inveſted; and Vitiges divided his troops into ſix camps, each of which was fortified with a ditch and rampart. On the Tuſcan ſide of the river, a ſeventh encampment was formed in the field or circus of the Vatican, for the purpoſe of commanding the Milvian bridge and the courſe of the Tyber; but they approached with devout circumſpection the contiguous church of St. Peter; which it was their anxious care to preſerve from ſacrilegious inſult.

From the moment that Beliſarius had determined to ſuſtain a ſiege, his firſt care was to provide againſt the danger of famine. An extraordinary ſupply of corn was imported from Sicily: the harveſts of Campania and Tuſcany were forcibly ſwept for the uſe of the city: and the rights of private property were infringed by the ſtrong plea of the public ſafety. It might eaſily be foreſeen that the enemy would intercept the aqueducts; and the ceſſation of the water-mills was the firſt inconvenience, which was ſpeedily removed by mooring large veſſels, and fixing mill-ſtones in the current of the river. The ſtream was ſoon embarraſſed by the trunks of trees, and polluted with dead carcaſes; yet ſo effectual were the precautions of the Roman general, that the waters of the Tyber ſtill continued to give motion to the mills, and drink to the inhabitants. Anxious to relieve himſelf from an uſeleſs and devouring multitude, Beliſarius iſſued peremptory orders for the inſtant departure of the women, the children, and ſlaves; required his ſoldiers to diſmiſs their male and female attendants, and regulated their allowance, that one moiety ſhould be given in proviſions, and the other in money. Yet in the latter months of the ſiege, the people was expoſed to the miſeries of ſcarcity, unwholeſome food, and contagious diſorders. Beliſarius ſaw with poignant grief their ſufferings; but he rejected with diſdain the idea of flight or capitulation; repreſſed their clamorous impatience for battle; amuſed them with the proſpect of ſpeedy relief; and ſecured himſelf and the city from the effects of deſpair and treachery. Succours for the deliverance of the city at this doubtful criſis fortunately arrived. A fleet of three thouſand Iſaurians caſt anchor in the bay of Naples, and afterwards at Oſtia. Above two thouſand horſe landed at Tarentum; and, after the junction of five hundred ſoldiers of Campania, and a train of waggons laden with wine and flour, they directed their march from Capua to the neighbourhood of Rome. The forces that arrived by land and ſea, were united at the mouth of the Tyber. The Goths, alarmed with doubts and fears, ſet on foot a negotiation with Beliſarius, and the ambaſſadors of Vitiges declared that, for the ſake of peace, they were diſpoſed to renounce for ever the poſſeſſion of Sicily. "The emperor is not leſs generous," replied his lieutenant, with a contemptuous ſmile; "in return for a gift which you no longer poſſeſs, he preſents you with an ancient province of his empire; he reſigns to the Goths the ſovereignty of the Britiſh iſland." Beliſarius rejected with equal firmneſs the offer of a tribute; but he allowed the Gothic ambaſſadors to appeal to Juſtinian himſelf; and conſented to a truce of three months, for the purpoſe of obtaining a peace; but, as was ſuſpected, the negotiation proved abortive.

The whole nation of the Oſtrogoths had been aſſembled for the attack, and was almoſt entirely conſumed in the ſiege, of Rome. If any credit be due to the hiſtorians

hiſtorian of the time, one-third at leaſt of their enormous hoſt was deſtroyed, in frequent and bloody combats under the walls of the city; and the evils of famine and peſtilence were aggravated by their own licentiouſneſs, and the unfriendly diſpoſition of the country. While Vitiges ſtruggled with his fortune; while he heſitated between ſhame and ruin; his retreat was haſtened by domeſtic alarms. The king of the Goths was informed by trembling meſſengers, that the devaſtations of war were ſpread from the Apennine to the Adriatic; that the rich ſpoils and captives of Picenum were ſeized by the Roman general John, ſurnamed the Sanguinary, who had inſulted his capital, and ſeduced the fidelity of his wife, the daughter of Amalaſontha. Yet, before he retired, Vitiges made a laſt effort, either to ſtorm or to ſurpriſe the city. A ſecret paſſage was diſcovered in one of the aqueducts; two citizens of the Vatican were tempted by bribes to intoxicate the guards of the Aurelian gate; an attack was meditated on the walls beyond the Tyber; and the barbarians advanced, with torches and ſcaling-ladders, to the aſſault of the Pincian gate. But every attempt was defeated by the intrepid vigilance of Beliſarius; and the Goths, alike deſtitute of hope and ſubſiſtence, clamorouſly urged their departure. One year and nine days after the commencement of the ſiege, an army, ſo lately ſtrong and triumphant, burnt their tents, and tumultuouſly repaſſed the Milvian bridge, A. D. 538.

The retreating army of Vitiges was nevertheleſs ſo numerous, that he deſtined ten thouſand men for the defence of the cities which he was moſt ſolicitous to preſerve, and detached his nephew Uraias, with an adequate force, to ſecure Milan. At the head of his principal army, he beſieged Rimini, only thirty-three miles diſtant from the Gothic capital. A feeble rampart, and a ſhallow ditch, were maintained by the ſkill and valour of John the Sanguinary, who ſhared the danger and fatigue of the meaneſt ſoldier, and emulated the military ſkill even of Beliſarius. The battering engines of the barbarians were rendered uſeleſs; their attacks were repulſed; and the tedious blockade, which reduced the garriſon to the laſt extremity of hunger, afforded time for the march of the Roman forces. A fleet which had ſurpriſed Ancona, ſailed along the coaſt of the Adriatic to the relief of the beſieged city. The eunuch Narſes landed in Picenum with two thouſand Heruli and five thouſand of the braveſt troops of the empire; while ten thouſand veterans, under the command of Beliſarius himſelf, marched from Rome to their ſupport. Overwhelmed with deſpair, the Goths abandoned the ſiege of Rimini, their tents, their ſtandards, and their leaders; and Vitiges never halted till he found ſhelter within the walls of Ravenna.

To theſe walls, and to ſome fortreſſes deſtitute of any mutual ſupport, the Gothic monarchy was now reduced; and the laſt effort of Beliſarius was to cruſh this monarchy, by marching to beſiege the place. The multitudes which yet adhered to the ſtandard of Vitiges, far ſurpaſſed the number of the Roman troops; but neither prayers, nor defiance, nor the extreme danger of his moſt faithful ſubjects, could tempt the Gothic king to march out in defence of the fortifications of Ravenna. Theſe fortifications were, indeed, impregnable to the aſſaults of art or violence; and when Beliſarius inveſted the capital, he was ſoon convinced that famine only could tame the ſtubborn ſpirit of Vitiges, who had contrived to ſet on foot a ſecret treaty with Juſtinian. The ſea, the land, and the channels of the Po, were guarded by the vigilance of the Roman general; and he even deſcended to the practice of poiſoning the waters, and ſecretly firing the granaries of the beſieged city. While he preſſed the blockade, he was ſurpriſed by the arrival of two ambaſſadors from Conſtantinople, with a treaty of peace, which Juſtinian had ſigned, without deigning to conſult the author of his victories. By this precarious agreement, Italy and the Gothic treaſure were divided, and the provinces beyond the Po were left with the regal title to the ſucceſſors of Theodoric. The ambaſſadors were eager to accompliſh their commiſſion; the captive Vitiges accepted with tranſport the unexpected offer of a crown; honour was leſs prevalent among the Goths, than the want and appetite of food; and the Roman chiefs, who murmured at the continuance of the war, profeſſed a joyful ſubmiſſion to the commands of the emperor. But Beliſarius himſelf rejected the treaty of partition, and declared his reſolution of leading Vitiges in chains to the feet of Juſtinian. The Goths, aſtoniſhed and diſmayed, now offered to ſurrender the city, their riches, and all their ſpoils to Beliſarius, and elect him their king, provided they might retain their liberty as his ſubjects and vaſſals. The policy of Beliſarius perſuaded them that he was diſpoſed to comply with their wiſhes, without engaging an oath or a promiſe for the performance of a treaty which he ſecretly abhorred. The day of the ſurrender was ſtipulated; a fleet, laden with proviſions, ſailed as a welcome gueſt into the harbour; the gates were opened to the fancied king of Italy; and Beliſarius triumphantly marched through the ſtreets of the impregnable Ravenna, A. D. 539. The Romans were aſtoniſhed by their ſucceſs; the multitude of tall and robuſt barbarians were confounded by their own cowardice and puſillanimity; and the maſculine females, ſpitting in the faces of their ſons and huſbands, bitterly reproached them for betraying their dominion and freedom to theſe pygmies of the ſouth, contemptible in their numbers, diminutive in their ſtature. Before the Goths could recover from the firſt ſurpriſe, and claim the accompliſhment of their hopes, the victor eſtabliſhed his power in Ravenna, beyond the danger of repentance and revolt. Vitiges was placed under a guard in his palace; the flower of the Gothic youth was ſelected for the army of the emperor; the remainder of the people was diſmiſſed to their habitations in the ſouthern provinces; and a colony of Italians was ordered to repleniſh the depopulated city. But the reward of Beliſarius was ſuch as too often falls to the lot of the virtuous and the brave: he was received at Conſtantinople with cold ingratitude; the deleterious fang of envy had poiſoned the mind of Juſtinian; and he was diſgraced, diſhonoured, and ſuperſeded in his command.

The degradation and recal of Beliſarius revived the fainting courage of the Goths, who reſpected his genius, and admired his virtue. They had loſt their king, their capital, their treaſures, the provinces from Sicily to the Alps, and the military force of two hundred thouſand barbarians, magnificently equipped with horſes and arms. Yet all was not loſt, as long as Pavia was defended by one thouſand Goths, inſpired by the love of freedom, and the memory of their paſt greatneſs. The ſupreme command was unanimouſly offered to the brave Uraias; and it was in his eyes alone that the diſgrace of his uncle Vitiges could appear as a reaſon of excluſion. His voice turned the election in favour of Hildibald, whoſe perſonal merit was recommended by the hope that his kinſman, the king of the Viſigoths in Spain, would ſupport the common intereſt of the Gothic nation. The ſucceſs of his arms in Liguria and Venetia ſeemed to juſtify their choice; but he ſoon declared to the world, that he was incapable of forgiving or commanding his benefactor. The conſort of Hildibald was deeply mortified by the beauty of the wife of Uraias; and the death of that virtuous patriot excited the indignation of the people. A bold aſſaſſin executed their ſentence, by ſtriking off the head of Hildibald in the midſt of a banquet. The Rugians, a foreign tribe, aſſumed the privilege of election; and Totila, the nephew of the late king, was tempted, by revenge, to deliver himſelf and the garriſon of Trevigo into the hands of the Romans. But the gallant and accompliſhed

youth was eaſily perſuaded to prefer the Gothic throne before the ſervice of Juſtinian; and as ſoon as the palace of Pavia had been purified from the Rugian uſurper, he reviewed the national force of five thouſand ſoldiers, and boldly undertook the reſtoration of the kingdom of Italy.

The ſucceſſors of Beliſarius, eleven generals of equal rank, had neglected to cruſh the feeble remains of the diſunited Goths, till they were rouſed to action by the progreſs of Totila, and the reproaches of Juſtinian. The gates of Verona were ſecretly opened to Artabazus, at the head of one hundred Perſians in the ſervice of the emperor. The Goths fled from the city. At the diſtance of ſixty furlongs the Roman generals halted to ſhare the ſpoil. While they diſputed, the enemy diſcovered the real number of the victors: the Perſians were inſtantly overpowered, and it was by leaping from the wall that Artabazus preſerved a life which he loſt in a few days by the lance of a barbarian, who had defied him to ſingle combat. Twenty thouſand Romans encountered the forces of Totila, near Faenza, and on the hills of Mugello, in the Florentine territory. The ardour of the Romans was ſoon diſſipated. On the firſt attack they abandoned their enſigns, threw down their arms, and diſperſed on all ſides. The new king of the Goths purſued with rapid ſteps the advantages of his victory. He paſſed the Po, traverſed the Apennines, ſuſpended the important conqueſt of Ravenna, Florence, and Rome, and marched through the heart of Italy, to form the blockade of Naples. The Roman chiefs, immured in their fortified cities, and accuſing each other of the common diſgrace, did not preſume to diſturb his enterpriſe. After the reduction of Naples and Cumæ, the provinces of Lucania, Apulia, and Calabria, ſubmitted to the king of the Goths. Totila led his army to the gates of Rome, pitched his camp at Tivoli, within twenty miles of the capital, and exhorted the ſenate and people to conſider and compare the tyranny of the Greeks with the generous freedom of the Gothic reign. To the huſbandmen of Italy the Gothic king iſſued a welcome proclamation, enjoining them to purſue their induſtrious labours, and to reſt aſſured, that, on the payment of the ordinary taxes, they ſhould be defended by his valour and diſcipline from the injuries of war. The ſtrong towns he ſucceſſively attacked; and as ſoon as they had yielded to his arms, he demoliſhed the fortifications; to ſave the people from the calamities of a future ſiege, to deprive the Romans of defence, and to decide the tedious quarrel of the two nations, by an equal conflict in the field of battle. The Roman captives and deſerters were tempted to enliſt in the ſervice of the courteous adverſary; the ſlaves were attracted by the faithful promiſe, that they ſhould never be delivered to their maſters; and from the thouſand warriors of Pavia, a new people, under the ſame appellation of Goths, was inſenſibly formed in the camp of Totila. The wives of the ſenators, who had been taken in war, were reſtored, without a ranſom, to their huſbands; and the violation of female chaſtity was inexorably chaſtiſed with death. The virtues of Totila, whether they proceeded from policy, religious principle, or the inſtinct of humanity, were extremely advantageous to his cauſe: he often harangued his troops; and it was his conſtant theme, that national vice and ruin are inſeparably connected; that victory is the fruit of moral as well as military virtue; and that the prince, and even the people, are reſponſible for the crimes which they neglect to puniſh.

The return of Beliſarius, to ſave the country which he had ſubdued, was preſſed with equal vehemence by his friends, and his ungrateful enemies; and the Gothic war was again impoſed on the injured hero. He accepted the command; and his firſt public oration was addreſſed to the Goths and Romans, in the name of the emperor, "who had ſuſpended for a while the conqueſt of Perſia, and liſtened to the prayers of his Italian ſubjects." But not a man was tempted to deſert the ſtandard of the Gothic king. After reducing the towns of inferior note in the midland provinces of Italy, Totila proceeded, not to aſſault, but to encompaſs and ſtarve, the ancient capital. Rome was guarded by the valour, and afflicted by the avarice, of Beſſas, a veteran chief of Gothic extraction, who filled, with a garriſon of three thouſand ſoldiers, the ſpacious circle of her venerable walls. From the diſtreſs of the people he extracted a profitable trade, and ſecretly rejoiced in the continuance of the ſiege, until the whole garriſon were reduced to feed on dead horſes, dogs, cats, and mice, and eagerly to ſnatch the graſs and nettles which grew among the ruins of the city. A crowd of ſpectres, pale and emaciated, ſurrounded the palace of the governor, urging for ſubſiſtence, or an order for their immediate execution. Beſſas artfully ſoothed the diſcontent, and revived the hopes, of the deſponding Romans, by the vague reports of the fleets and armies which were haſtening to their relief from the extremities of the Eaſt. They derived more rational comfort, however, from the aſſurance that Beliſarius had landed at the port; and, without numbering his forces, they firmly relied on the humanity, the courage, and the ſkill, of their great deliverer.

The foreſight of Totila had raiſed obſtacles worthy of ſuch an antagoniſt. Ninety furlongs below the city, in the narroweſt part of the river, he joined the two banks by ſtrong and ſolid timbers in the form of a bridge; on which he erected two lofty towers, manned by the braveſt of his Goths, and ſtored with miſſile weapons and engines of offence. The approach of the bridge and towers was covered by a ſtrong and maſſy chain of iron; and the chain, at either end, on the oppoſite ſides of the Tyber, was defended by a numerous detachment of archers. But the enterpriſe of forcing theſe barriers, and relieving the capital, diſplays a ſhining example of the boldneſs and conduct of Beliſarius. His cavalry advanced from the port along the public road, to awe the motions, and diſtract the attention, of the enemy. His infantry and proviſions were diſtributed in two hundred large boats; and each boat was ſhielded by a high rampart of thick planks, pierced with many ſmall holes for the diſcharge of miſſile weapons. In the front, two large veſſels were linked together to ſuſtain a floating caſtle, which commanded the towers of the bridge, and contained a magazine of fire, ſulphur, and bitumen. The whole fleet, which the general led in perſon, was moſt laboriouſly moved againſt the current of the river. The chain yielded to the weight, and the enemies who guarded the banks were either ſlain or ſcattered. As ſoon as they touched the principal barrier, the fire-ſhip was inſtantly grappled to the bridge; one of the towers with two hundred Goths, was conſumed by the flames; the aſſailants ſhouted victory; and Rome had been ſaved, if the wiſdom of Beliſarius had not been defeated by the miſconduct of his officers. He had previouſly ſent orders to Beſſas to ſecond his operations by a ſally from the town; and he had directed his lieutenant, by a peremptory command, not to quit the ſtation of the port. But avarice rendered Beſſas immoveable; while the youthful ardour of the lieutenant delivered him into the hands of a ſuperior enemy. The fatal rumour of his defeat was haſtily carried to Beliſarius: he pauſed, and reluctantly ſounded a retreat, to ſave his wife, his treaſures, and the only harbour which he poſſeſſed on the Tuſcan coaſt. The vexation of his mind produced an ardent and almoſt mortal fever; and Rome was left without protection to the indignation of Totila.

Famine had relaxed the ſtrength and diſcipline of the garriſon of Rome. They could derive no effectual ſervice from a dying people; and the inhuman avarice of the merchant at length abſorbed the vigilance of the governor. Four Iſaurian centinels, while their compa-

nions

nions ſlept, and their officers were abſent, deſcended by a rope from the wall, and ſecretly propoſed to the Gothic king to introduce his troops into the city. The offer was entertained with coldneſs and ſuſpicion; they returned in ſafety; they twice repeated their viſit; the place was twice examined; the conſpiracy was known and diſregarded; and no ſooner had Totila conſented to the attempt, than they unbarred the Aſinarian gate, and gave admittance to the Goths, on the 17th of December 546. Till the dawn of day they halted in order of battle, apprehenſive of treachery or ambuſh; but the troops of Beſſas, with their leader, had already eſcaped; and when the king was preſſed to diſturb their retreat, he prudently replied, that "no fight could be more grateful than that of a flying enemy." The patricians, who were poſſeſſed of horſes, accompanied the governor; their brethren, among whom were Olybrius, Oreſtes, and Maximus, took refuge in the church of St. Peter: but the aſſertion, that only five hundred perſons remained in the capital, inſpires ſome doubt of the fidelity of the hiſtorian. As ſoon as day-light had manifeſted the entire victory of the Goths, their monarch iſſued orders to ſpare the lives of the Romans; and the chaſtity of the maids and matrons was preſerved inviolate from the paſſions of the hungry ſoldiers. But they were rewarded by the freedom of pillage, after the moſt precious ſpoils had been reſerved for the royal treaſury. The next day Totila pronounced two orations, to congratulate and admoniſh his victorious Goths, and to reproach the ſenate, as the vileſt of ſlaves, with their perjury, folly, and ingratitude; ſternly declaring, that their eſtates and honours were juſtly forfeited to the companions of his arms. Againſt the city which had ſo long delayed the courſe of his victories, he appeared inexorable: one-third of the walls, in different parts, were demoliſhed by his command; fire and engines were prepared to conſume or ſubvert the moſt ſtately works of antiquity: and the world was aſtoniſhed by the fatal decree, that Rome ſhould be changed into a paſture for cattle. The firm and temperate remonſtrance of Beliſarius ſuſpended the execution; he warned the barbarian not to ſully his fame by the deſtruction of thoſe monuments which were the glory of the dead, and the delight of the living; and Totila was perſuaded by the advice of an enemy, to preſerve Rome as the ornament of his kingdom, or the faireſt pledge of peace and reconciliation. When he had ſignified to the ambaſſadors of Beliſarius his intention of ſparing the city, he ſtationed an army at the diſtance of one hundred and twenty furlongs, to obſerve the motions of the Roman general. With the remainder of his forces, he marched into Lucania and Apulia, and occupied, on the ſummit of mount Garganus, one of the camps of Hannibal. The ſenators were dragged in his train, and afterwards confined in the fortreſſes of Campania: the citizens, with their wives and children, were diſperſed in exile; and during forty days Rome was abandoned to deſolation and ſolitude.

The loſs of Rome was retrieved by an action, to which many would apply the name of raſhneſs. After the departure of Totila, the Roman general ſallied from the port at the head of a thouſand horſe, cut in pieces the enemy who oppoſed his progreſs, and entered Rome in February 547, at the head of his invincible troops. Reſolved to maintain a ſtation ſo conſpicuous in the eyes of mankind, he ſummoned his army to the ſtandard which he erected on the capitol: the old inhabitants were recalled by the love of their country; and the keys of Rome were ſent a ſecond time to the emperor Juſtinian. The walls, as far as they had been demoliſhed by the Goths, were haſtily repaired with diſſimilar materials; the ditch was reſtored; and iron ſpikes were driven into the highways, to annoy the feet of the horſes. At the expiration of twenty-five days, Totila returned by haſty marches from Apulia, to avenge the injury and diſgrace. Beliſarius expected his approach. The Goths were thrice repulſed in three general aſſaults; they loſt the flower of their troops; the royal ſtandard had nearly fallen into the hands of the enemy, and the fame of Totila began to ſink, as it had riſen, with the fortune of his arms. Whatever ſkill and courage could atchieve, had been performed by the Roman general; who was now ordered to purſue the enemy into the province of Lucania. In this warfare, the hero, invincible againſt the power of the barbarians, was vanquiſhed by the delay, the diſobedience, and the cowardice, of his own officers. He repoſed in his winter-quarters of Crotona, in the full aſſurance that the two paſſes of the Lucanian hills were guarded by his cavalry. They were betrayed by treachery or weakneſs; and the rapid march of the Goths ſcarcely allowed time for the eſcape of Beliſarius to the coaſt of Sicily. At length a fleet and army were aſſembled for the recovery of Roſſano, where the nobles of Lucania had taken refuge. In the firſt attempt, the Roman forces were diſſipated by a ſtorm. In the ſecond they approached the ſhore; but they ſaw the hills covered with archers, the landing-place defended by invulnerable lines of ſpears, and the king of the Goths impatient for battle. Beliſarius retired with a ſigh, and continued to languiſh till he obtained permiſſion for his return.

On the departure of Beliſarius, Peruſia was beſieged; and few cities were impregnable to the Gothic arms. Ravenna, Ancona, and Crotona, ſtill reſiſted the barbarians; and when Totila aſked in marriage one of the daughters of the king of France, he was ſtung by the reproach that the king of Italy was unworthy of his title till it was acknowledged by the Roman people. Three thouſand of his braveſt ſoldiers had been left to defend the capital. On the ſuſpicion of a monopoly, they maſſacred the governor, and announced to Juſtinian, by a deputation of the clergy, that unleſs their offence was pardoned, and their arrears were ſatisfied, they would inſtantly accept the offers of Totila. But the officer who ſucceeded to the command deſerved their eſteem and confidence; and the Goths, inſtead of finding an eaſy conqueſt, had to encounter a vigorous reſiſtance from the ſoldiers and people, who patiently endured the loſs of the port, and of all maritime ſupplies. The ſiege of Rome would perhaps have been raiſed, if the liberality of Totila to the Iſaurians had not encouraged ſome of their venal countrymen to copy the example of treaſon. In a dark night, while the Gothic trumpets ſounded on another ſide, they ſilently opened the gate of St. Paul: the barbarians retook the city, A. D. 549; and the flying garriſon was intercepted before they could reach the harbour of Centumcellæ. A ſoldier trained in the ſchool of Beliſarius, Paul of Cilicia, retired with four hundred men to the mole of Adrian. They repelled the Goths; but they felt the approach of famine; and their averſion to the taſte of horſe-fleſh confirmed their reſolution to riſk the event of a deſperate ſally. But their ſpirit inſenſibly ſtooped to the offers of capitulation: they retrieved their arrears of pay, and preſerved their arms and horſes, by enliſting in the ſervice of Totila; their chiefs, who pleaded an attachment to their wives and children in the Eaſt, were diſmiſſed with honour; and above four hundred enemies, who had taken refuge in the ſanctuaries, were ſaved by the clemency of the victor. He no longer entertained a wiſh of deſtroying the edifices of Rome, which he now reſpected as the ſeat of the Gothic kingdom: the ſenate and people were reſtored to their country; the means of ſubſiſtence were liberally provided; and Totila, in the robe of peace, exhibited the equeſtrian games of the circus. Whilſt he amuſed the eyes of the multitude, four hundred veſſels were prepared for the embarkation of his troops. The cities of Rhegium and Tarentum were reduced: he paſſed into Sicily, the object of his implacable reſentment; and the

iſland

iſland was ſtripped of its gold and ſilver, of the fruits of the earth, and of an infinite number of horſes, ſheep, and oxen. Sardinia and Corſica obeyed the fortune of Italy; and the ſea-coaſt of Greece was viſited by a fleet of three hundred gallies. The Goths were landed in Corcyra and the ancient continent of Epirus; they advanced as far as Nicopolis, the trophy of Auguſtus, and Dodona. But in every ſtep of his victories, the wiſe barbarian repeated to Juſtinian his deſire of peace, and offered to employ the Gothic arms in the ſervice of the empire.

Juſtinian was deaf to peace, and firmly bent on the deliverance of Italy. Beliſarius now repoſed in the ſhade of his laurels; but the command of the principal army was reſerved for Germanus, the emperor's nephew, whoſe rank and merit had been long depreſſed by the jealouſy of the court. His valour had formerly triumphed over the Sclavonians of the Danube, and the rebels of Africa: the firſt report of his promotion revived the hopes of the Italians; and he was privately aſſured, that a crowd of Roman deſerters would abandon, on his approach, the ſtandard of Totila. His ſecond marriage with Malaſontha, the grand-daughter of the great Theodoric, endeared Germanus to the Goths themſelves; and they marched with reluctance againſt the father of a royal infant, the laſt offſpring of the line of Amali. A ſplendid allowance was aſſigned by the emperor; and he ſurpaſſed, in the promptitude and ſucceſs of his levies, the expectation of mankind. He was permitted to ſelect ſome ſquadrons of Thracian cavalry: the veterans, as well as the youth, of Conſtantinople and Europe, engaged their voluntary ſervice; and as far as the heart of Germany, his fame and liberality attracted the aid of the barbarians. The Romans advanced to Sardica; an army of Sclavonians fled before their march; but within two days of their final departure, the deſigns of Germanus were terminated by his ſudden death, A. D. 551. Yet the impulſe which he had given to the war, ſtill continued to act with energy and effect. The maritime towns, Ancona, Crotona, Centumcellæ, reſiſted the aſſaults of Totila. Sicily was reduced by the zeal of Artaban, and the Gothic navy was defeated near the coaſt of the Adriatic. The two fleets were almoſt equal, forty-ſeven to fifty gallies: the victory was decided by the knowledge and dexterity of the Greeks; but the ſhips were ſo cloſely grappled, that only twelve of the Goths eſcaped from this unfortunate conflict. They affected to depreciate an element in which they were unſkilled; but their own experience confirmed the truth of a maxim, "THAT THE MASTER OF THE SEA WILL ALWAYS ACQUIRE THE DOMINION OF THE LAND."

After the loſs of Germanus, the nations were made to ſmile by the ſtrange intelligence, that the command of the Roman armies was given to an eunuch. But the eunuch Narſes is ranked among the few who have reſcued that unhappy name from the contempt of mankind. A mean diminutive body in this caſe concealed the ſoul of a ſtateſman and a warrior. His youth had been employed in the management of the houſehold, and the ſervice of female luxury; but while his hands were buſy, he ſecretly exerciſed the faculties of a vigorous and diſcerning mind. A ſtranger to the ſchools and the camp, he ſtudied in the palace to diſſemble, to flatter, and to perſuade; and as ſoon he approached the perſon of the emperor, Juſtinian liſtened with ſurpriſe and pleaſure to the manly counſels of his chamberlain and private treaſurer. The talents of Narſes were tried and improved in frequent embaſſies; he led an army into Italy, acquired a practical knowledge of the war and the country, and preſumed to ſtrive with the genius of Beliſarius. Twelve years after his return, the eunuch was choſen to atchieve the conqueſt which had been left imperfect by all the Roman generals. Inſtead of being dazzled by vanity or emulation, he ſeriouſly declared, that unleſs he were armed with an adequate force, he would never conſent to riſk his own glory, and that of his ſovereign. Juſtinian granted to the favourite, what he might have denied to the hero: the Gothic war was rekindled from its aſhes, and the preparations were not unworthy of the Roman empire. The key of the public treaſure was put into his hand, to collect magazines, to levy ſoldiers, to purchaſe arms and horſes, to diſcharge the arrears of pay, and to tempt the fidelity, of the fugitives and deſerters. The troops of Germanus were ſtill in arms; they halted at Salona in the expectation of a new leader; and legions of ſubjects and allies were created by the well-known liberality of the eunuch Narſes. The king of the Lombards ſatisfied the obligations of a treaty, by landing two thouſand two hundred of his braveſt warriors, who were followed by three thouſand of their martial attendants. Three thouſand Heruli fought on horſeback under Philemuth, their native chief; and the noble Aratus, who adopted the manners and diſcipline of Rome, conducted a band of veterans of the ſame nation. Dagiſtheus was releaſed from priſon to command the Huns; and Kobad, the grandſon and nephew of the great king, was conſpicuous by the regal tiara at the head of the Perſians, who had devoted themſelves to the fortunes of their prince. Abſolute in the exerciſe of his authority, Narſes led this numerous army from Philippopolis to Salona, from whence he coaſted the eaſtern ſide of the Adriatic as far as the confines of Italy. But his progreſs was checked. The Eaſt could not ſupply veſſels capable of tranſporting ſuch multitudes of men and horſes. The Franks, who, in the general confuſion, had uſurped the greater part of the Venetian provinces, refuſed a paſſage to the friends of the Lombards. The ſtation of Verona was occupied by Teias, with the flower of the Gothic forces; and that ſkilful commander had overſpread the adjacent country with the fall of woods, and the inundation of waters. In this perplexity, an officer of experience propoſed a meaſure, that the Roman army ſhould cautiouſly advance along the ſea-ſhore, while the fleet preceded their march, and ſucceſſively caſt a bridge of boats over the mouths of the Timavus, the Brenta, the Adige, and the Po, which fall into the Adriatic to the north of Ravenna. Nine days he repoſed in the city, collected the fragments of the Italian army, and marched towards Rimini, to meet the defiance of the Goths.

The prudence of Narſes impelled him to ſpeedy and deciſive action. His powers were the laſt effort of the ſtate: the coſt of each day accumulated the enormous account; and the nations, untrained to diſcipline or fatigue, might be raſhly provoked to turn their arms againſt each other, or againſt their benefactor. The ſame conſiderations might have tempered the ardour of Totila. But he ſuſpected the rapid progreſs of treaſon, and reſolved to riſk the Gothic kingdom on the chance of a day, in which the valiant would be animated by inſtant danger, and the diſaffected might be awed by mutual ignorance. In his march from Ravenna, the Roman general chaſtiſed the garriſon of Rimini, traverſed in a direct line the hills of Urbino, and re-entered the Flaminian way nine miles beyond the perforated rock. The Goths were aſſembled in the neighbourhood of Rome, they advanced without delay to ſeek a ſuperior enemy, and the two armies approached each other at the diſtance of one hundred furlongs, between Tagina and the ſepulchres of the Gauls. The haughty meſſage of Narſes was an offer, not of peace, but of pardon. The anſwer of the Gothic king declared his reſolution, to die or conquer. "What day," ſaid the meſſenger, "will you fix for the combat?" "The eighth day," replied Totila: but early the next morning he attempted to ſurpriſe a foe, ſuſpicious of deceit, and prepared for battle. Ten thouſand Heruli and Lombards, of approved valour, were placed in the centre. Each of the

wings was compoſed of eight thouſand Romans; the right was guarded by the cavalry of the Huns, the leftwas covered by fifteen hundred choſen horſe, deſtined, according to the emergencies of action, to ſuſtain the retreat of their friends, or to encompaſs the flank of the enemy. From his ſtation at the head of the right wing, the eunuch rode along the line, expreſſing by his voice and countenance the aſſurance of victory; exciting the ſoldiers of the emperor to puniſh the guilt and madneſs of a band of robbers; and expoſing to their view, gold chains, collars, and bracelets, the rewards of military virtue. From the event of a ſingle combat, they drew an omen of ſucceſs; and they beheld with pleaſure the courage of fifty archers, who maintained a ſmall eminence againſt three ſucceſſive attacks of the Gothic cavalry. At the diſtance only of two bow-ſhots, the armies ſpent the morning in awful ſuſpence. Narſes awaited the charge; and it was delayed by Totila till he had received his laſt ſuccours of two thouſand Goths. While he conſumed the hours in fruitleſs treaty, the king exhibited in a narrow ſpace the ſtrength and agility of a warrior. His armour was enchaſed with gold; his purple banner floated with the wind: he caſt his lance into the air; caught it with the right hand; ſhifted it to the left; threw himſelf backwards; recovered his ſeat; and managed a fiery ſteed in all the paces and evolutions of the equeſtrian ſchool. As ſoon as the ſuccours had arrived, he retired to his tent, aſſumed the dreſs and arms of a private ſoldier, and gave the ſignal of battle. The firſt line of cavalry advanced with more courage than diſcretion, and left behind them the infantry of the ſecond line. They were ſoon engaged between the horns of a creſcent, into which the adverſe wings had been inſenſibly curved, and were ſaluted from either ſide by the vollies of four thouſand archers. Their ardour, and even their diſtreſs, drove them forwards to a cloſe and unequal conflict, in which they could only uſe their lances againſt an enemy equally ſkilled in all the inſtruments of war. A generous emulation inſpired the Romans and their barbarian allies; and Narſes, who calmly viewed and directed their efforts, doubted to whom he ſhould adjudge the prize of ſuperior bravery. The Gothic cavalry was aſtoniſhed and diſordered, preſſed and broken; and the line of infantry, inſtead of preſenting their ſpears, or opening their intervals, were trampled under the feet of the flying horſe. Six thouſand of the Goths were ſlaughtered, without mercy, in the field of Tagina. Their prince, with five attendants, was overtaken by Aſbad, of the race of the Gepidæ; "Spare the king of Italy," cried a diſtant loyal voice; but Aſbad ſtruck his lance through the body of Totila. The blow was inſtantly revenged by his faithful Goths; they tranſported their dying monarch ſeven miles beyond the ſcene of his diſgrace; and his laſt moments were not embittered by the preſence of an enemy. Compaſſion afforded him the ſhelter of an obſcure tomb; but the Romans would not be ſatisfied of their victory, till they beheld the corpſe of the Gothic king. His hat, enriched with gems, and his bloody robe, were preſented to Juſtinian by the meſſengers of triumph.

The victorious eunuch purſued his march through Tuſcany, accepted the ſubmiſſion of the Goths, and encompaſſed the walls of Rome with the remainder of his formidable hoſt. Round the wide circumference, Narſes aſſigned to himſelf, and to each of his lieutenants, a real or a feigned attack, while he ſilently marked the place of the moſt unguarded entrance. Neither the fortifications of Adrian's mole, nor of the port, could long delay the progreſs of the conqueror; and Juſtinian once more received the keys of Rome, which, under his reign, had been five times taken and recovered. But the deliverance of Rome was the laſt calamity of the Roman people. The barbarian allies of Narſes too frequently confounded the privileges of peace and war: they ſpared none, neither regarded the chaſtity of matrons or virgins. The deſpair of the flying Goths had recourſe to ſanguinary revenge: and three hundred youths of the nobleſt families, who had been ſent as hoſtages beyond the Po, were inhumanly ſlain by the ſucceſſor of Totila.

The Gothic war was yet alive. The braveſt of the nation retired beyond the Po; and Teias was unanimouſly choſen to ſucceed and revenge their departed hero. The new king ſent ambaſſadors to implore, or rather to purchaſe, the aid of the Franks, and nobly laviſhed for the public ſafety, the riches which had been depoſited in the coffers of Pavia. The reſidue of the royal treaſure was guarded by his brother Aligern at Cumæ; but the ſtrong caſtle which Totila had fortified, was cloſely beſieged by the arms of Narſes. From the Alps to the foot of mount Veſuvius, the Gothic king, by rapid and ſecret marches, advanced to the relief of his brother, eluded the vigilance of the Roman chiefs, and pitched his camp on the banks of the Sarnus, which flows from Nuceria into the bay of Naples. The river ſeparated the two armies; ſixty days were conſumed in diſtant and fruitleſs combat; and Teias maintained this important poſt, till he was deſerted by his fleet, and the hope of ſubſiſtence. The Goths now embraced a generous reſolution; to diſmiſs their horſes, and die in arms, in the poſſeſſion of their freedom. The king marched at their head, bearing in his right hand, a lance, and a buckler in his left: with the one he ſtruck dead the foremoſt of the aſſailants; with the other he received the weapons which every hand was ambitious to aim againſt his life. After a combat of many hours, his left arm was fatigued by the weight of twelve javelins which hung from his ſhield. Without moving from his ground, or ſuſpending his blows, the hero called aloud on his attendants for a freſh buckler, but in the moment, while his ſide was uncovered, it was pierced by a mortal dart. He fell: and his head, exalted on a ſpear, proclaimed to the nations, that the Gothic kingdom was no more. But the example of his death ſerved only to animate the companions who had ſworn to periſh with their leader. They fought till darkneſs deſcended on the earth. They repoſed on their arms. The combat was renewed with the return of day-light, and maintained with unabated vigour till the evening of the ſecond day. The repoſe of a ſecond night, the want of water, and the loſs of their braveſt champions, determined the ſurviving Goths to accept the capitulation which the prudence of Narſes was inclined to propoſe. They embraced the alternative of reſiding in Italy as the ſubjects and ſoldiers of Juſtinian, or departing with a portion of their private wealth, in ſearch of ſome independent country. Yet the oath of fidelity or exile was ſpurned by one thouſand Goths, who broke away before the treaty was ſigned, and boldly effected their retreat to the walls of Pavia. The ſpirit of Aligern prompted him to imitate, rather than to bewail, his brother: a ſtrong and dexterous archer, he tranſpierced with a ſingle arrow the armour and breaſt of his antagoniſt; and his military conduct defended Cumæ above a year againſt the forces of the Romans. Their induſtry had ſcooped the Sibyll's cave into a prodigious mine; combuſtible materials were introduced to conſume the temporary props: the wall and the gate of Cumæ ſunk into the cavern, but the ruins formed a deep and inacceſſible precipice. On the fragment of a rock, Aligern the Goth ſtood alone and unſhaken, till he calmly ſurveyed the hopeleſs condition of his country, and judged it more honourable to be the friend of Narſes, than the ſlave of the Franks. After the death of Teias, the Roman general ſeparated his troops to reduce the cities of Italy; Lucca ſuſtained a long and vigorous ſiege; and ſuch was the humanity or the prudence of Narſes, that the repeated perfidy of the inhabitants could not provoke him to exact the forfeit lives of their hoſtages. Theſe hoſ-

tages were dismissed in safety; and their grateful zeal at length subdued the obduracy of their countrymen.

After a reign of sixty years, the throne of the western Gothic kings was filled by the exarchs of Ravenna, the representatives of the emperor of the Romans. Their jurisdiction was soon reduced to the limits of a narrow province: but Narses himself, the first and most powerful of the exarchs, administered above fifteen years the jurisprudence of the kingdom of Italy. The Gothic empire being thus extinguished in Italy, A. D. 554, the remnant of the Goths evacuated the country, or mingled with the people. Those who renounced the slavery of the Romans, retired either to Gothland or Bavaria; incorporated themselves among their kindred Goths in Spain; or, uniting in colonies, formed predatory settlements in different countries of Europe.—See the article ROME.

Although this race of northern adventurers has been stigmatized with every epithet that can possibly degrade the exalted character of man; yet in their warfare they have frequently evinced greater humanity and virtue, more elevated sentiments of morality and justice, and a higher regard for the discipline and preservation of the Christian church, than almost any of those more civilized nations with whom they have contended. But a most extraordinary and indisputable proof of their zeal for the propagation of the gospel, as well as of their taste for the extension of the arts on a grand scale, is the remains of their architecture; which, even at the commencement of the nineteenth century, in a survey of our cathedrals and ancient castles, fail not to inspire the mind of the beholder with reverential and religious awe; and with a high sense of the resources of that people, who possessed the information and the means by which such venerable and majestic fabrics were called into existence. See the article GOTHIC ARCHITECTURE, vol. ii. p. 78–93.

GOTHS, *s. pl.* Any nation deficient in general knowledge.—What do you think of the late extraordinary event in Spain? Could you have ever imagined, that those ignorant *Goths* would have dared to banish the Jesuits? *Chesterfield.*

GO-TOU', a town of China, in the province of Setchuen: forty-eight miles north-west of Oumong.

GOT'ZEL, a town of Germany, in the circle of Lower Bavaria: thirty-six miles east of Ratisbon, and twelve north of Deckendorf.

GOT'TELSBRUNN, a town of Germany, in the archduchy of Austria: three miles north of Brugg.

GOT'TEN, *part. pass.* of *get.*—Wisdom cannot be *gotten* for gold. *Job*, xxviii. 15.—Few of them, when they are *gotten* into an office, apply their thoughts to the execution of it. *Temple.*

GOT'TERN, a town of Germany, in the circle of Upper Saxony, and country of Thuringia: four miles north-west of Langen Salza.

GOT'TESBERG, a town of Silesia, in the principality of Schweidnitz. Near it is a mine of gold, and another of coals; the former is not worked. Great quantities of worsted stockings are knit in this town, which contains two churches: nine miles south-south-west of Freyburg, and twelve south-west of Schweidnitz.

GOT'TI (Vincent Louis), a learned Italian cardinal, born at Bologna in 1664. At sixteen years of age he embraced the ecclesiastical life, among the monks of the dominican order; and when he had completed his philosophical course at Bologna, he was sent to study theology at Salamanca in Spain. Upon his return to Italy in 1688, he was appointed professor of philosophy in the university of Bologna; and recommended himself by his talents and virtues to the posts of prior and provincial of his order. In 1728 pope Benedict XIII. raised him to the dignity of the purple; and three years afterwards appointed him member of the congregation for examining bishops. He died at Rome in 1742, in the seventy-ninth year of his age. He displayed considerable erudition and abilities in different theological and controversial works, which are much valued by the Catholics, particularly in Italy. The principal of them are, 1. *De Vera Christi Ecclesia*, 1719, in 3 vols. intended to refute the writings of James Piceninus, a Swiss calvinist minister, in defence of the reformed churches. 2. *Theologia Scholastico-dogmatica, juxta Mentem divi Thomæ Aquinatis, &c.* in 6 vols. 4to. 3. *Colloquia Theologico-polemica, in tres Classes distributa, &c.* 1727, 4to. 4. *De Eligenda inter Dissidentes Christianos Sententia*, 1734, written in answer to a piece with the same title by the famous John le Clerc; and a very diffuse work in defence of the truth of the Christian religion against atheists, idolaters, Mahometans, Jews, &c. published at Rome between the years 1735 and 1740, in twelve volumes.

GOTTIG'NIES (Giles-Francis), a Flemish Jesuit, and able mathematician, born at Brussels in 1630. He entered into the order in 1653, at Mechlin, whence he was sent to pursue his theological studies at Rome, where he spent the residue of his life, employed in teaching the mathematics, and writing different works in that science. He died in 1689, when about fifty-nine years of age. His works are, 1. *Astronomicæ Epistolæ duæ; altera &c. ad excel. Joan. Dominic. Cassinum, Bonon. Archigym. Astron. altera excel. Cassini responsiva, circa Eclipses in Jove, a Mediceis Planetis effectæ*, 1665. 2. *Lettera di Eustachio Divini, con altra Lettera del P. Egid. Francisco de Gottignies, interno alle machie nuovamente Scoperte nel Pianeta di Giove*, 1666, 8vo. 3. *Elementa Geometriæ planæ*, 1669, 12mo. 4. *Figuræ Cometarum qui apparuerunt Annis* 1664, 1665, 1668, *Tabulis Æri incisis expressæ, cum brevissimis Annotationibus.* 5. *Logistica, sive Scientia circa quamlibet Quantitatem demonstrative discurrendi, cui Mathematicum nullum Problema insolubile, nullum Theorema indemonstrabile*, 1674, 4to. 6. *Arithmetica Introductio ad Logisticam universæ Mathesi servientem*, 1676, 4to. 7. *Idea Logistæ speculativè & practicè declarata*, 1677, 4to. 8. *Epistolæ Mathematicæ*, 1678, 4to. 9. *Clavis Logisticæ*, 1679, 4to. 10. *Logistica Universalis, sive Mathesis Gottigniana*, 1687, folio.

GOT'TINGEN, or GOETTINGEN, a city of Germany, in the circle of Lower Saxony, and principality of Calenberg, and principal town of a quarter, or district, to which it gives name, situated in an agreeable, spacious, and fertile, valley, on a canal or branch of the river Leine, which passes through, and divides it into the New Town and Marsch. It contains about one thousand houses and eight thousand souls; the streets are large and convenient, and paved on each side. Here are five parish churches, and one for Calvinists. The Roman Catholics celebrate their service in a private manner. The principal ornament and advantage of Gottingen is its university, founded in 1734, by George II. king of England, and consecrated on the 17th of September 1737, which university, by the inexpressible attention and care of its first curator, baron Munchausen, has acquired a very distinguished reputation. Belonging to it is a large splendid church, with a peculiar pastor, and to it likewise belong a new and stately structure of stone, the ground-floor of which serves as a hall for public lectures, and that above is the library, with a council chamber, and other apartments. This library, to which considerable additions are annually made, if considered with regard to the number, goodness, and value, of its books, is one of the most capital libraries in Europe. It is called the *Bulowcan*, having received its origin from a collection of about ten thousand volumes, bequeathed by the baron Bulow for the public use, and by his heirs given to the university. A royal society for the encouragement of sciences and literature, founded in 1751, and a royal German society, also form part of the university. It has likewise a fine observatory, erected on a tower on the rampart, with a physic garden, and near it a handsome anatomical theatre of ingenious construction, a school for teaching parturition,

turition, &c. The territory belonging to the town is very conſiderable: twenty-two miles north-eaſt of Caſſel, and fifty-one eaſt-ſouth-eaſt of Paderborn. Lat. 51. 24. N. lon. 27. 19. E. Ferro.

GOTT'LEUVE, a town of Germany, in the circle of Upper Saxony, and marggraviate of Meiſſen: ſix miles ſouth-weſt of Konigſtein, and eight ſouth of Pirnau.

GOTTLIE'BEN, a town of Swiſſerland, near the lake of Conſtance, where John Huſs was confined, by order of the council, in the year 1415: one league from Conſtance.

GOTT'LSTORF, a town of Germany, in the archduchy of Auſtria: five miles ſouth-eaſt of Altenmarkt.

GOT'TO, a negro kingdom, ſituated in the interior of Africa, on the banks of the Niger, ſaid to be of great extent. It was formerly divided into a number of petty ſtates, which were governed by their own chiefs; but their private quarrels invited invaſion from the neighbouring kingdoms, ſo that many of the inhabitants of Gotto had been plundered, and ſome driven away as ſlaves. At length a politic chief, of the name of Mooſſee, had addreſs enough to make them unite in hoſtilities againſt the adjoining kingdom of Bamburra; and on this occaſion he was unanimouſly choſen general; the different chiefs conſenting for a time to act under his command. Mooſſee immediately diſpatched a fleet of canoes, loaded with proviſions, from the banks of the lake Dibbie up the Niger towards Jenné, and with the whole of his army puſhed forwards into Bamburra. He arrived on the bank of the Niger oppoſite to Jenné, before the town's-people had the ſmalleſt intimation of his approach; his fleet of canoes joined him the ſame day, and having landed the proviſions, he embarked part of his army, and in the night took Jenné by ſtorm. This event ſo terrified the king of Bamburra, that he ſent meſſengers to ſue for peace, and in order to obtain it, conſented to deliver to Mooſſee a certain number of ſlaves every year; and return every thing that had been taken from the inhabitants of Gotto. Mooſſee, thus triumphant, returned to Gotto, where he was declared king, and the capital of the country is called by his name. *Park.*

GOT'TORP, a caſtle or palace of Denmark, belonging to the prince of Heſſe-Caſſel, adjoining to SLESWICK, which ſee.

GOTT'SCHED (John Chriſtopher), profeſſor of logic, metaphyſics, and poetry, at Leipſic, born in 1700, at Koningſberg in Pruſſia, where his father was a clergyman. He ſtudied in that city, devoted himſelf to theology and poetry, and in 1723 took the degree of maſter of arts, after which he proceeded to Leipſic, and obtained great applauſe by his lectures on the belles-lettres. He was elected, in 1726, ſenior of the poetical ſociety, which was ſoon after transformed into that called the German Society. In 1730 he was appointed extraordinary profeſſor of philoſophy; in 1734 profeſſor of logic and metaphyſics, and at length decemvir of the academy and member of various learned bodies. Good taſte, about this period, began to be revived alſo in Swiſſerland under Bodmer and Breitinger; but as theſe writers purſued a different path, Gottſched was ſoon involved with the latter in ſome literary diſputes, which were carried on, for many years, with great aſperity on both ſides. He died on the 12th of December 1766. His dramatic productions, though not maſter-pieces, laid the firſt grounds for the formation of the German theatre. His principal works are, 1. Eſſay towards a Critical Hiſtory of Poetry for the Germans, Leipſic, 1730, 8vo. 2. The Death of Cato, a tragedy, *ibid.* 1732, 8vo. 3. Collections towards a Critical Hiſtory of the German Language, Poetry, and Eloquence, *ibid.* 1732–44, 8 vols. 8vo. 4. The Firſt Principles of General Philoſophy, *ibid.* 1733, 1735, 1739, 2 parts, 8vo. 5. The German Theatre, *ibid.* 1746–50, 6 parts, 8vo. 6. New Library of the Belles-Lettres and Fine Arts, *ibid.* 1745–50, 10 vols. 8vo. without the author's name. And in conjunction with others, 7. The Principles of the German Language, *ibid.* 1748, large octavo; of this work various improved editions have ſince been publiſhed. 8. Neweſt Poems, Ratiſbon, 1749, 4to. 9. Exerciſes in Elocution, Leipſic, 1755, 8vo. 10. Exerciſes in Latin and German Poetry, for the Uſe of Schools, *ibid.* 1757, 8vo. 11. Materials towards a Hiſtory of the German Dramatic Poetry; or, A Catalogue of all the Tragedies, Comedies, and Operas, which appeared between the Years 1450 and 1760, Leipſic, 1757–65, 2 parts, 8vo. 12. A Manual or Dictionary of the Belles-Lettres and Fine Arts, *ibid.* 1760.

GOTT'SCHEE, a town of Germany, in Middle Carniola: twenty-three miles ſouth-ſouth-eaſt of Laybach, and one hundred and ſixty ſouth-ſouth-weſt of Vienna. Lat. 45. 53. N. lon. 32. 19. E. Ferro.

GOTT'ZENDORF, a town of Germany, in the archduchy of Auſtria: five miles ſouth of Aigen.

GOUACE', a town of France, in the department of the North Coaſt: one league and three-quarters eaſt of Roſtrenen, and four and a half weſt of Uzel.

GOUA'NIA, *ſ.* [ſo named by Jacquin, in honour of *Antoine Gouan*, M. D. author of *Flora Monſpeliaca*, *Hortus Monſpelienſis*, and other celebrated works.] In botany, a genus of the claſs polygamia, order monoecia, natural order rhamni, *Juſſ.* The generic characters are—I. Hermaphrodites. Calyx: perianthium one-leafed, ſuperior, funnel-form, five-cleft; tube permanent; ſegments ovate, acute, ſpreading, deciduous. Corolla: none. Stamina: filaments five, ſubulate, length of the calyx, and alternate with the ſegments; antheræ roundiſh, incumbent, veiled; veil like a cowl, elaſtic. Piſtillum: germ inferior; ſtyle ſubulate, half three-cleft; ſtigmas obtuſe. Pericarpium: fruit dry, three-ſided, diviſible into three ſeeds. Seeds: three parts of the fruit, roundiſh inclined to three-ſided, two-winged. II. Males, on the ſame plant. Calyx, Corolla, and Stamina: as in the hermaphrodites. Piſtillum: germ none; ſtyle as in the hermaphrodites; ſtigmas obſcure or none.—*Eſſential Character.* Hermaphrodite: calyx, five-cleft; corolla, none; antheræ, five, under a veil; ſtyle, three-cleft; fruit, inferior, tripartile. Male: ſimilar, but without germ and ſtigma.

1. Gouania Domingenſis, or chaw-ſtick; a ſingle ſpecies. Stem ſhrubby, and climbing like hops by axillary tendrils; leaves ovate or ovate or oblong-ovate, acuminate, or blunt with a point, unequally ferrate-toothed, or ſlightly crenate only, ſmooth, deep green, alternate, petioled, two inches long; racemes furniſhed with one or two leaflets; the male flowers have no piſtil whatſoever; but there are three or four flowers in a hundred that have a ſtyle without any germ. Native of St. Domingo, in woods. Cultivated by Mr. Miller in 1739.

Propagation and Culture. Sow the ſeeds on a hot-bed early in the ſpring, and when the plants are ſtrong enough, tranſplant each into a ſmall pot filled with light rich earth, and plunge the pots into a moderate hot-bed of tanner's-bark, watering and ſhading the plants until they have taken new root. In winter plunge them into the bark-bed in the ſtove, and water them frequently. The ſtems muſt be ſupported, and they ſeldom produce flowers before the third ſummer.

GOVAR'DO, a diſtrict in the province of Benaco in Italy, containing ten pariſhes, and eight thouſand ſouls. The ſmall town of the ſame name, containing two thouſand inhabitants, is ſituated on the river Chieſe.

GOU'DA, or TERGOUW, a city of Holland, ſituated on a branch of the Rhine called *Iſſel*, where it receives the river Gouw, which gives it its name. It was built in the year 1272, by Florent V. comte of Holland, who granted it great privileges; the foundations had been laid long before. In 1330, it belonged to the houſe of Blois, who built a caſtle; but, in 1398, it was reſtored

to the comte of Holland, together with the lordſhip of Schoonoven; this caſtle was entirely demoliſhed by the citizens, in 1581. In 1438, it was entirely deſtroyed by fire, but afterwards rebuilt in a better manner; the grand market is in a triangular form, with a handſome town-houſe, built in 1449, ſtanding in the centre. The great church is one of the handſomeſt and largeſt in the country, and is particularly celebrated for its painted glaſs windows, ſuppoſed to be the fineſt of the kind in Europe, and preſerved with great care: the principal painters were Theodore and Walter Crabeth, both of this town. Before the Napoleon revolution, the magiſtrates were, a grand bailey, who repreſented the authority of the ancient comtes of Holland, four burgomaſters, and ſeven echevins, choſen by the common council, which conſiſted of forty citizens. The ſituation of the place is very advantageous, on account of the ſluices and the canals, which are running ſtreams; it has alſo a convenient port on the Iſſel, and five gates. It cannot eaſily be beſieged, as they could open the ſluices and lay the country round under water: beſides the great breadth and depth of the ditches; ſo that the only approach is by the banks of the Iſſel, which are ſtrongly fortified. Its principal trade conſiſts in cordage, cheeſe, and tobacco-pipes: there are boats which paſs regularly to Amſterdam, the Hague, Rotterdam, Utrecht, &c. Jaqueline, comteſſe of Holland, in the war with the duke of Burgundy, made this the chief place of her reſidence: nine miles north-eaſt of Rotterdam, and twenty-two ſouth of Amſterdam. Lat. 52. 1. N. lon. 22. 7. E. Ferro.

GOU'DELIN, or GOUDOU'LI (Peter), the moſt celebrated of the poets in the Gaſcon dialect, born in 1579, at Toulouſe. He was brought up to the bar, but devoted himſelf to the compoſition of verſes in his native tongue. By his poetical talent, and the pleaſantry of his converſation, he acquired the favour of the duke de Montmorenci, and other perſons of rank, and might have enriched himſelf, had he not been negligent of his fortune. In his declining years he was only preſerved from indigence by a penſion granted him by his fellow-citizens. He died at Toulouſe in 1649. His memory was honoured by a buſt in the hotel de ville, among the illuſtrious Touloufans. He wrote upon a great variety of ſubjects; and his poem on the death of Henry IV. has been tranſlated into Latin by father Vaniere, and is among the moſt elevated of his compoſitions. His works have been ſeveral times printed at Toulouſe, and they form a part of the Gaſcon poets, printed at Amſterdam, in 2 vols. 12mo. 1700.

GOUD'HURST, an ancient and pleaſant town, near Cranbrook, in Kent, diſtant forty-three miles from London, on the Tunbridge road. It has a market on Wedneſdays for corn and butcher's meat; and two fairs annually, on Auguſt 26 and November 5, to which conſiderable quantities of Welch and Scotch cattle are generally brought. Here are three free-ſchools, one of which is a grammar-ſchool, founded by John Horſenonden, eſq. about the year 1724. Here was formerly a very conſiderable manufactory of woollen cloths; but of late years it has declined. The church was ſo impaired by a ſtorm of thunder and lightning on Auguſt 23, 1637, that its tall ſteeple was obliged to be pulled down.

GOU'DOZ, a town of Aſiatic Turkey, in the province of Natolia: ſeventy-two miles eaſt-north-eaſt of Kiutaja.

GOUDT (Henry), an eminent engraver and painter, born of a noble family at Utrecht in 1570, and was a knight of the palatinate. Being paſſionately fond of painting and engraving, and deſirous of engaging in them, he applied himſelf diligently to drawing, and made a great proficiency therein. He went to Rome, to examine the works of the great maſters in that city. Here he contracted an intimacy with that excellent artiſt Adam Elſheimer; ſtudied his manner of penciling, deſigning, and colouring; and made the works of that painter models for his own imitation. Thoſe pictures which Goudt himſelf painted were neatly and delicately touched, in colour and pencil reſembling Elſheimer. The ſeven prints engraved by him, from Elſheimer, and which continue to be ſo highly prized, are, 1. Ceres drinking from a pitcher; diſtinguiſhed by the name of the *ſorcery*. 2. The flight into Egypt: a night-ſcene, in which the moon and ſtars are introduced with great ſucceſs. 3. The angel with Tobit, who is drawing a fiſh by his ſide. 4. The angel with Tobit, croſſing a ſtream of water. 5. Baucis and Philemon entertaining Jupiter and Mercury. 6. A landſcape, called the *Aurora*, repreſenting the dawn of day: the effect very beautiful. 7. The beheading of St. John in priſon, a ſmall upright oval print, and by far the ſcarceſt. He died in 1639.

GOVE, *ſ.* A mow. *Tuſſer.*

To GOVE, *v. n.* To mow; to put in a gove, goff, or mow. *An old word:*

Load ſafe, carry home, follow time being fair,
Gove juſt in the barn, it is out of deſpair. *Tuſſer.*

GOVE'A (Antony), an eminent juriſt and philologer, born about 1505, at Beja, in Portugal. He was educated at Paris, with two other brothers, under their uncle, who was principal of the college of St. Barbe. After teaching the claſſics for ſome time, he went in 1537 to ſtudy the law at Toulouſe, which he alſo purſued at Avignon and Lyons. At the latter city, he acquired much reputation by defending the philoſophy of Ariſtotle againſt Ramus. In 1548 he obtained a profeſſorſhip of law at Toulouſe, which he quitted the next year, and ſucceſſively occupied chairs at Cahors, Valence, Grenoble, and Turin, where he died in 1565, being then a privy counſellor of Philibert duke of Savoy. He was a man of great erudition, and has been eſteemed ſuperior to Cujas in ability, though inferior in induſtry. He publiſhed ſeveral works on the law, which he collected into one volume, folio, printed at Lyons, in 1562, under the title of *Antonii Goveani Juriſconſulti Opera Juriſcivilis*. He alſo publiſhed an eſteemed commentary on the *Topica* of Cicero, and an edition of Terence.

ANDREW, the younger brother of Antony, was recalled by the king of Portugal, for the purpoſe of eſtabliſhing a college at Coimbra, and took with him ſeveral learned men; but Portugal was no propitious ſeat for the muſes. Govea was principal of the college, and died in 1548.

To GO'VERN, *v. a.* [*gouverner*, Fr. *guberno*, Lat.] To rule as a chief magiſtrate.—This inconvenience is more hard to be redreſſed in the governor than the *governed*; as a malady in a vital part is more incurable than in an external. *Spenſer.*

Slaves to our paſſions we become, and then
It grows impoſſible to *govern* men. *Waller.*

To regulate; to influence; to direct.—The chief point, which he is to carry always in his eye, and by which he is to *govern* all his counſels, deſigns, and actions. *Atterbury.*—To manage; to reſtrain.—Go after her, ſhe's deſperate; *govern* her. *Shakeſpeare.*—To pilot; to regulate the motions of a ſhip.

[In grammar.] To have force with regard to ſyntax: as, *amo governs* the accuſative caſe.

To GO'VERN, *v. n.* To keep ſuperiority; to behave with auſterity:

Your wicked atoms may be working now
To give bad counſel, that you ſtill may *govern*. *Dryden.*

GOV'ERNABLE, *adj.* Submiſſive to authority; ſubject to rule; obedient; manageable.—The flexibleneſs of the former part of a man's age, not yet grown up to be headſtrong, makes it more *governable*. *Locke.*

GOV'ERNABLENESS, *f.* The ſtate of being governable.

GOV'ERNALL, *f.* [from *govern.*] Governance.—He of this gardin had the *governall. Spenſer.*—The old word is *governaill,* but altered by Spenſer to make it rhyme.

GOV'ERNANCE, *f.* Government; rule; management.—Jonathan took the *governance* upon him at that time, and roſe up inſtead of his brother Judas. 1 *Mac.* ix. 31.—Controul, as that of a guardian:

What! ſhall king Henry be a pupil ſtill,
Under the ſurly Glo'ſter's *governance?* *Shakeſpeare.*

Behaviour; manners. *Obſolete:*

He likeſt is to fall into miſchance
That is regardleſs of his *governance.* *Spenſer.*

GOV'ERNANT, *f.* [*gouvernante,* Fr.] A lady who has the care of young girls of quality. The more uſual and proper word is *governeſs.*

GOV'ERNESS, *f.* [*gouvernereſſe,* old French, from *gove.*] A female inveſted with authority:

The moon, the *governeſs* of floods,
Pale in her anger, waſhes all the air,
That rheumatic diſeaſes do abound. *Shakeſpeare.*

A tutoreſs; a woman that has the care of young ladies.—His three younger children were taken from the *governeſs* in whoſe hands he put them. *Clarendon.*—A tutoreſs; an inſtructreſs; a directreſs.—Great affliction that ſevere *governeſs* of the life of man brings upon thoſe ſouls ſhe ſeizes on. *More.*

GOV'ERNMENT, *f.* [*gouvernement,* Fr.] Form of a community with reſpect to the diſpoſition of the ſupreme authority.—An eſtabliſhed ſtate of legal authority:

There they ſhall found
Their *government,* and their great ſenate chuſe
Through the twelve tribes, to rule by laws ordain'd.
Milton.

Adminiſtration of public affairs:

Safety and equal *government* are things
Which ſubjects make as happy as their kings. *Waller.*

Thoſe *governments* which curb not evils, cauſe;
And a rich knave's a libel on our laws. *Young.*

Regularity of behaviour. *Not in uſe:*

You needs muſt learn, lord, to amend this fault;
Though ſometimes it ſhews greatneſs, courage, blood,
Yet oftentimes it doth preſent harſh rage,
Defect of manners, want of *government,*
Pride, haughtineſs, opinion, and diſdain. *Shakeſpeare.*

Manageableneſs; compliance; obſequiouſneſs:

Thy eyes windows fall,
Like death, when he ſhuts up the day of life;
Each part depriv'd of ſupple *government,*
Shall ſtiff and ſtark and cold appear, like death. *Shakeſp.*

Management of the limbs or body. *Obſolete:*

Many a dart they ſhot with fierce intent;
But I them warded all with wary *government.* *Spenſer.*

[In grammar.] Influence with regard to conſtruction.

The origin of civil government muſt have been nearly coeval with mankind; and was, at firſt, either patriarchal or military; as *that* of a parent over his family, or of a commander over his fellow warriors. Paternal authority, and the order of domeſtic life, ſupplied the foundation of *civil government.* Did mankind ſpring out of the earth mature and independent, it would be found perhaps impoſſible to introduce ſubjection and ſubordination among them; but the condition of human infancy prepares men for ſociety, by combining individuals into ſmall communities, and by placing them from the very beginning under direction and controul. A family contains the rudiments of an empire. The authority of one over many, and the diſpoſition to govern and to be governed, are in this way incidental to the very nature, and coeval with the exiſtence, of the human ſpecies. Moreover, the conſtitution of families not only aſſiſts the formation of civil government, by the diſpoſitions which it generates, but alſo furniſhes the firſt ſteps of the proceſs by which empires have been actually reared. A parent would retain a conſiderable part of his authority after his children were grown up, and had formed families of their own. The obedience of which they remembered not the beginning, would be conſidered as natural; and would ſcarcely, during the parent's life, be entirely withdrawn. Here then we ſee the ſecond ſtage in the progreſs of dominion. The firſt was, that of a parent over his young children: this, that of an anceſtor preſiding over his adult deſcendants.

Although the original progenitor was the centre of union to his poſterity, yet it is not probable that the aſſociation would be immediately diſſolved by his death. Connected by habits of intercourſe and affection, and by ſome common rights, neceſſities, and intereſts, they would conſider themſelves as allied to each other in a nearer degree than to the reſt of the ſpecies. Almoſt all would be ſenſible of an inclination to continue in the ſociety in which they had been brought up; and experiencing, as they ſoon would do, many inconveniencies from the abſence of that authority which their common anceſtor exerciſed, eſpecially in deciding their diſputes, and directing their operations in matters in which it was neceſſary to act in conjunction, they might be induced to ſupply his place by a formal choice of a ſucceſſor; or rather might willingly, and almoſt imperceptibly, transfer their obedience to ſome one of the family, who by his age or ſervices, or by the part he poſſeſſed in the direction of their affairs during the lifetime of the parent, had already taught them to reſpect his advice or to attend to his commands; or laſtly, the proſpect of theſe inconveniencies might prompt the firſt anceſtor to appoint a ſucceſſor; and his poſterity, from the ſame motive, united with an habitual deference to the anceſtor's authority, might receive the appointment with ſubmiſſion. Here then we have a tribe incorporated under one chief. Such communities might be increaſed by the acceſſion of numbers, and fulfil the purpoſes of civil union without any other or more regular convention, conſtitution, or form of government, than what we have deſcribed. Every branch that was ſlipped off from the primitive ſtock, and removed to a diſtance from it, would in like manner take root, and grow into a ſeparate tribe. Two or three of theſe tribes might frequently be united into one. Marriage, conqueſt, mutual defence, common diſtreſs, or other accidental coalitions, might produce this effect.

A ſecond ſource of perſonal authority, which would eaſily extend, and often ſuperſede, the patriarchal, is that which reſults from military arrangement. In wars either of aggreſſion or defence, manifeſt neceſſity would prompt thoſe who fought on the ſame ſide to array themſelves under one leader. And although their *leader* was advanced to this eminence for the purpoſe only, and during the operations of a ſingle expedition, yet his authority would not always terminate with the reaſons for which it was conferred. A warrior who had led forth his tribe againſt their enemies with repeated ſucceſs, would procure to himſelf, even in the deliberations of peace, a powerful and permanent influence. If this advantage were added to the authority of the patriarchal chief, or favoured by any previous diſtinction of anceſtry, it would be no difficult undertaking for the perſon who poſſeſſed it to obtain the almoſt abſolute direction of the affairs of the community; eſpecially if he was careful to aſſociate to himſelf proper auxiliaries, and content to practiſe the art of gratifying or removing thoſe who oppoſed his pretenſions.

But although we may be able to comprehend how by his perſonal abilities or fortune one man may obtain the rule over many, yet it ſeems more difficult to explain how empire firſt became *hereditary*, or in what manner ſovereign power, which is never acquired without great merit or management, learns to deſcend in a ſucceſſion, which has no dependence upon any qualities, either of underſtanding or activity. The cauſes which have introduced hereditary dominion into ſo general a reception in the world, are principally the following:—The influence of aſſociation, which communicates to the ſon a portion of the ſame reſpect which was wont to be paid to the virtues, or ſtation, of the father—the mutual jealouſy of other competitors—the greater envy, with which all behold the exaltation of an equal, than the continuance of an acknowledged ſuperiority—a reigning prince leaving behind him many adherents, who can preſerve their own importance only by ſupporting the ſucceſſion of his children.—Add to theſe reaſons, that elections to the ſupreme power having upon trial produced deſtructive contentions, many ſtates would take refuge from a return of the ſame calamities, in a rule of ſucceſſion; and no rule preſents itſelf ſo obvious, certain, and intelligible, as conſanguinity of birth.

The early ſtate of ſociety in moſt countries, and the modern condition of many uncivilized parts of the world, exhibit that appearance, which this account of the origin of civil government would lead us to expect. The earlieſt hiſtories of Paleſtine, Greece, Italy, Gaul, and Britain, inform us, that theſe countries were occupied by many ſmall independent nations, not much perhaps unlike thoſe which are found at preſent amongſt the ſavage inhabitants of North America, and upon the coaſt of Africa. Theſe nations may be conſidered as the amplifications of ſo many ſingle families; or as derived from the junction of two or three families, whom ſociety in war, or the approach of ſome common danger, had united. Suppoſe a country to have been firſt peopled by ſhipwreck on its coaſts, or by emigrants or exiles from a neighbouring country; the new ſettlers having no enemy to provide againſt, and occupied with the care of their perſonal ſubſiſtence, would think little of digeſting a ſyſtem of laws, of contriving a form of government, or indeed of any political union whatever; but each ſettler would remain at the head of his own family, and each family would include all of every age and generation who were deſcended from him. So many of theſe families as were holden together after the death of the original anceſtor, by the reaſons and in the method above recited, would ripen, as the individuals were multiplied, into tribes, clans, hordes, or nations, ſimilar to thoſe into which the ancient inhabitants of many countries are known to have been divided, and which are ſtill found, wherever the ſtate of ſociety and manners is immature and uncultivated.

Nor need we be ſurpriſed at the early exiſtence in the world of ſome vaſt empires, or at the rapidity with which they advanced to their greatneſs, from comparatively ſmall and obſcure originals. Whilſt the inhabitants of ſo many countries were broken into numerous communities, unconnected, and oftentimes contending, with each other; before experience had taught theſe little ſtates to ſee their own danger in their neighbour's ruin; or had inſtructed them in the neceſſity of reſiſting the aggrandizement of an aſpiring power, by alliances and timely preparations; in this condition of civil policy, a particular tribe which by any means had got the ſtart of the reſt in ſtrength, or diſcipline, and happened to fall under the conduct of an ambitious chief, by directing their firſt attempts to the part where ſucceſs was moſt ſecure, and by aſſuming, as they went along, thoſe whom they conquered into a ſhare of their future enterprizes, might ſoon gather a force, which would infallibly overbear any oppoſition that the ſcattered power and unprovided ſtate of ſuch enemies could make to the progreſs of their victories. This theory affords a preſumption, that the earlieſt governments were monarchies, becauſe the government of families, and of armies, from which civil government probably derived its inſtitution, is univerſally monarchical. And this theory incontrovertibly proves, that the notion of ABSOLUTE EQUALITY among men, is founded in error and abſurdity. See the article EQUALITY, vol. vi. p. 874–8.

In order to prove that civil obedience to a government, after it has been formed, is a moral duty, and an obligation upon the conſcience, it hath been uſual with many political writers to ſtate a *compact* between the citizen and the ſtate, as the ground and cauſe of the relation between them; which compact, binding the parties for the ſame general reaſon that private contracts do, reſolves the duty of ſubmiſſion to civil government into the univerſal obligation of fidelity in the performance of promiſes. This compact is twofold: Firſt, an *expreſs* compact by the primitive founders of the ſtate, who are ſuppoſed to have convened for the declared purpoſe of ſettling the terms of their political union, and a future conſtitution of government. The whole body is ſuppoſed, in the firſt place, to have unanimouſly conſented to be bound by the reſolutions of the majority; that majority, in the next place, to have fixed certain fundamental regulations; and then to have conſtituted, either in one perſon, or in an aſſembly (the rule of ſucceſſion or appointment being at the ſame time determined,) a *ſtanding legiſlature*, to whom, under theſe pre-eſtabliſhed reſtrictions, the government of the ſtate was thenceforward committed, and whoſe laws the ſeveral members of the convention were, by their firſt undertaking, thus perſonally engaged to obey. This tranſaction is ſometimes called the *ſocial compact*, and theſe ſuppoſed original regulations compoſe what are meant by the *conſtitution*, the *fundamental laws of the conſtitution*; and form, on one ſide, the *inherent indefeaſible prerogative of the crown*; and, on the other, the unalienable *birthright* of the ſubject.

Secondly, a *tacit* or *implied* compact, by all ſucceeding members of the ſtate, who, by accepting its protection, conſent to be bound by its laws; in like manner as whoever *voluntarily enters* into a private ſociety, is underſtood, without any other or more explicit ſtipulation, to promiſe a conformity with the rules, and obedience to the government, of that ſociety, as the known conditions upon which he is admitted to a participation of its privileges. This account of the ſubject, although ſpecious, and patronized by names the moſt reſpectable, appears to labour under the following objections: that it is founded upon a ſuppoſition falſe in fact, and leading to dangerous concluſions.

No ſocial compact, ſimilar to what is here deſcribed, was ever made or entered into in reality; no ſuch original convention of the people was ever actually held, or in any country could be held, antecedent to the exiſtence of civil government in that country. It is to ſuppoſe it poſſible to call ſavages out of caves and deſerts, to deliberate and vote upon topics, which the experience, and ſtudies, and refinements, of civil life alone ſuggeſt. Therefore no government in the univerſe *began* from this original. Some imitation of a *ſocial* compact may have taken place at a *revolution*. The preſent age has been witneſs to tranſactions, which bear the neareſt reſemblance to this political idea, of any of which hiſtory has preſerved the account or memory: the eſtabliſhment of the United States of North America; and the unprecedented revolution in France.

As the firſt members of the ſtate were bound by expreſs ſtipulation to obey the government which they had erected, ſo the ſucceeding inhabitants of the ſame country are underſtood to promiſe allegiance to the conſtitution and government they find eſtabliſhed, by accepting its protection, claiming its privileges, and acquieſcing in its laws; more eſpecially, by the purchaſe

or

or inheritance of lands, to the poſſeſſion of which, allegiance to the ſtate is annexed, as the very ſervice and condition of the tenure.—Smoothly as this train of argument proceeds, little of it will endure examination. The native ſubjects of modern ſtates are not conſcious of any ſtipulation with their ſovereigns, of ever exerciſing an election whether they will be bound or not by the acts of the legiſlature, of any alternative being propoſed to their choice, of a promiſe either required or given; nor do they apprehend that the validity or authority of the laws depends at all upon *their* recognition or conſent. In all ſtipulations, whether they be expreſſed or implied, private or public, formal or conſtructive, the parties ſtipulating muſt both poſſeſs the liberty of aſſent and refuſal, and alſo be conſcious of this liberty; which cannot with truth be affirmed of the ſubjects of civil government, as government is now, or ever was, actually adminiſtered. This is a defect, which no arguments can excuſe or ſupply: all preſumptions of conſent, without this conſciouſneſs, or in oppoſition to it, are vain and erroneous. Still leſs is it poſſible to reconcile, with any idea of ſtipulation, the practice in which all European nations agree, of founding allegiance upon the circumſtance of nativity, that is, of claiming and treating as ſubjects all thoſe who are born within the confines of their dominions, although removed to another country in their youth or infancy. In this inſtance certainly the ſtate does not preſume a *compact*.

Again, when it is contended that the taking and holding poſſeſſion of land amounts to an acknowledgment of the ſovereign, and a virtual promiſe of allegiance to his laws, it is neceſſary to the validity of the argument to prove, that the inhabitants, who firſt compoſed and conſtituted the ſtate, collectively poſſeſſed a right to the ſoil of the country—a right to parcel it out to whom they pleaſed, and to annex to the donation what conditions they thought fit. How came they by this right? An agreement amongſt themſelves would not confer it: that could only adjuſt what already belonged to them. A ſociety of men vote themſelves to be the owners of a region of the world;—does that vote, unaccompanied eſpecially with any culture, incloſure, or proper act of occupation, make it theirs? does it entitle them to exclude others from it, or to dictate the conditions upon which it ſhall be enjoyed? Yet this original collective right and ownerſhip, is the foundation of all the reaſoning, by which the duty of allegiance is inferred from the poſſeſſion of land.

The theory of government which affirms the exiſtence and the obligation of a ſocial compact, would, after all, merit little diſcuſſion, and, however groundleſs and unneceſſary, ſhould receive no oppoſition from us, did it not appear to lead to concluſions unfavourable to the improvement, and to the peace, of human ſociety: 1ſt. Upon the ſuppoſition that government was firſt erected by, and that it derives all its juſt authority from, reſolutions entered into by a convention of the people, it is capable of being preſumed, that many points were ſettled by that convention, anterior to the eſtabliſhment of the ſubſiſting legiſlature, and which the legiſlature, conſequently, has no right to alter, or interfere with. Theſe points are called the *fundamentals* of the conſtitution; and as it is impoſſible to determine how many, or what, they are, the ſuggeſting of any ſuch ſerves extremely to embarraſs the deliberations of the legiſlature, and affords a dangerous pretence for diſputing the authority of the laws. It was this ſort of reaſoning that produced in this nation the doubt, which ſo much agitated the minds of men in the reign of the ſecond Charles, whether an act of parliament could of right alter or limit the ſucceſſion of the crown.

2dly. If it be by virtue of a compact, that the ſubject owes obedience to civil government, it will follow, that he ought to abide by the form of government which he finds eſtabliſhed, be it ever ſo abſurd, or inconvenient. He is bound by his bargain. It is not permitted to any man to retreat from his engagement, merely becauſe he finds the performance diſadvantageous, or becauſe he has an opportunity of entering into a better. This law of contracts is univerſal: and to call the relation between the ſovereign and the ſubjects a contract, yet not to apply it to the rules, or allow of the effects, of a contract, is an arbitrary uſe of names, and an unſteadineſs in reaſoning, which can teach nothing. Reſiſtance to the *encroachments* of the ſupreme magiſtrate may be juſtified upon this principle; recourſe to arms, for the purpoſe of bringing about an amendment of the conſtitution, *never can*. No form of government contains a proviſion for its own diſſolution; and few governors will conſent to the extinction, or even to any abridgement, of their own power. It does not therefore appear, how deſpotic governments can ever, in conſiſtency with the obligation of the ſubject, be changed or mitigated. Deſpotiſm is the conſtitution of many ſtates; and whilſt a deſpotic prince exacts from his ſubjects the moſt rigorous ſervitude, according to this account, he is only holding them to their agreement. A people may vindicate, by force, the rights which the conſtitution has left them; but every attempt to narrow the prerogative of the crown, by *new* limitations, and in oppoſition to the will of the reigning prince, whatever opportunities may invite, or ſucceſs follow it, muſt be condemned as an infraction of the compact between the ſovereign and the ſubject.

3dly. Every violation of the compact on the part of the governor releaſes the ſubject from his allegiance, and diſſolves the government. It is impoſſible to avoid this conſequence, if we found the duty of allegiance upon compact, and admit any analogy between the ſocial compact and other contracts. In private contracts, the violation and non-performance of the conditions, by one of the parties, vacates the obligation of the other. Now the terms and articles of the ſocial compact being no where extant or expreſſed; the rights and offices of the adminiſtrator of an empire being ſo many and various; the imaginary and controverted line of his prerogative being ſo liable to be over-ſtepped in one part or other of it: the poſition, that every ſuch tranſgreſſion amounts to a forfeiture of the government, and conſequently authorizes the people to withdraw their obedience and provide for themſelves by a new ſettlement, would endanger the ſtability of every political fabric in the world, and has in fact always ſupplied the diſaffected with a topic of ſeditious declamation. If occaſions have ariſen, in which this plea has been reſorted to with juſtice and ſucceſs, they have been occaſions in which a revolution was defenſible upon other and plainer principles. The plea itſelf is at all times dangerous, and ought to be regarded with the eye of watchfulneſs and caution. Wherefore, rejecting the intervention of a compact, as unfounded in its principle, and dangerous in the application, we aſſign for the only ground of the ſubject's obligation, THE WILL OF GOD, AS COLLECTED FROM EXPEDIENCY.

The ſteps by which the argument proceeds are few and direct. "It is the will of God that the happineſs of human life be promoted:"—this is the firſt ſtep, and the foundation not only of this, but of every moral concluſion. "Civil ſociety conduces to that end:"—this is the ſecond propoſition. "Civil ſocieties cannot be upheld, unleſs, in each, the intereſt of the whole ſociety be binding upon every part and member of it:"—this is the third ſtep, and conducts us to the concluſion, namely, "That ſo long as the intereſt of the whole ſociety requires it, that is, ſo long as the eſtabliſhed government cannot be reſiſted or changed without public inconveniency, it is the will of God (which *will* univerſally determines our duty) that the eſtabliſhed government be obeyed,"—and no longer.

To

To theſe obſervations of archdeacon Paley, we might add the remarks of Dr. Shipley, biſhop of St. Aſaph: "Thoſe who think government inſtituted for the ſole uſe and emolument of the perſons who govern, muſt neceſſarily think their powers unlimited. For, on this ſuppoſition, their intereſts alone are to be regarded, of which they are the only judges; and who will ſet bounds to their own pretenſions? But they who believe government to be inſtituted purely for the good of the governed, will naturally ſuppoſe that the powers of their rulers are, in all caſes, to be limited by the end for which thoſe rulers were appointed. And, as they muſt have obſerved that the other opinion has, in all countries, very numerous and very formidable ſupporters; and in practice, at leaſt, has prevailed almoſt univerſally; they muſt regard it as a chief point of civil wiſdom to truſt no more power to rulers than is ſtrictly neceſſary to procure the good of ſociety. Nor ſhould this be conſidered as a diſadvantage even by a prince; for the happieſt ſtate that man can be placed in, is, to be endowed with great powers of doing good, and, at the ſame time, to be preſerved from the temptation to do evil; from the dangers of an unbounded truſt, and from the pride and intoxication of arbitrary power. Righteouſneſs and mercy, or, in the modern uſe of language, juſtice and benevolence, are ſo far from being fit to be excluded from the cabinets of princes, that good government is nothing elſe but the full exerciſe and diſplay of thoſe ſovereign virtues. They contain in themſelves the very art and myſtery of true policy. They are not beneath the attention of the greateſt monarchs; ſince God himſelf does not diſdain to uſe them in the government of the world. And all the miniſterial arts and refinements which lead through the crooked paths of policy, falſely ſo called, are a ſort of unwiſe cunning, that leads only to guilt and diſgrace; and to cheat and betray the people it was their duty to protect. Let it be allowed me to mention one inſtance of this falſe policy with a becoming dread and abhorrence; the art of government by a corrupt influence and bribery. Perhaps human nature does not afford a ſtronger inſtance of the power of habit to make men do wrong. It is unneceſſary and improper for me to ſay, how long this practice has prevailed. There is a decency attending our profeſſion that juſtly reſtrains us from provoking paſſions and enmities by perſonal cenſures; but there is alſo a dignity in truth, which ought to embolden us to inform the greateſt of their duty. It is the fault of the people in all countries to be credulous and ignorant, and to place a too unſuſpecting confidence in their rulers; from whence it has happened, that in moſt nations, except our own, the appearance, or name, of freedom, is hardly to be met with. But if any thing upon earth is ſacred, it is the rights which a people have expreſsly reſerved to themſelves; after truſting every thing elſe to the diſcretion of their rulers. Such, with us, is the ſecurity of our perſons; a trial by known laws and unprejudiced judges; and, above all, the independency of parliament, eſpecially of our own repreſentatives. To undermine theſe rights, and to corrupt theſe repreſentatives, would be to deprive us of all that is valuable in our free government; and to ruin the very eſſence of our conſtitution. Under the appearance and the expenſive forms of limited monarchy, it ſubjects us, in effect, to arbitrary will. It mocks men with the image of liberty, while it ſlips on their fetters, and rivets them faſt."

It were almoſt needleſs to obſerve, that the obligation of obedience to civil government, is limited to actions in themſelves not criminal. Virtue has claims, which are prior and ſuperior to thoſe of political reſtraint. When William Tell was ordered to ſhoot with an arrow at an apple placed on the head of his ſon, if he had been uncertain of his aim, and had, in conſequence, refuſed to comply with the inhuman mandate, who could have preſumed to call his conduct *criminal* on the ſcore of diſobedience? His obligation to abſtain from acting as an inſtrument, in taking away the life of his ſon, was ſuperior to that which bound his obedience to the commands of the duke of Auſtria, however juſt may be ſuppoſed to have been the foundation of the authority which the latter exerciſed over the inhabitants of Uri, either as a political chief, or as a military commander. This, however, is widely different from leaving a man's general obligation of obedience to the civil government of his country, to depend on his private opinion of its right; or his obſervance of the laws, to depend on *his* opinion of their general expediency. It is evidently incumbent on civil government, in its ordinances or adminiſtration, to reſpect the conſciences of men: duty and right in this, as in all other caſes, are reciprocal. On the other hand, it is the duty of every man to endeavour that his conſcience may be rightly informed. But with an exception of criminal actions, and in due ſubordination to the rights of conſcience, obedience and loyalty to civil government are duties of ſacred and indiſpenſable obligation.

All mankind will agree, that government ſhould be repoſed in ſuch perſons in whom thoſe qualities are moſt likely to be found, the perfection of which is among the attributes of him who is emphatically ſtiled *The Supreme Being*; the three grand requiſites of WISDOM, of GOODNESS, and of POWER: wiſdom to diſcern the real intereſt of the community; goodneſs to endeavour always to purſue that real intereſt; and ſtrength or power to carry this knowledge and intention into action. Theſe are the natural foundations of ſovereignty, and theſe are the requiſites that ought to be found in every well-conſtituted frame of government.

Political writers have in general reſtrained the powers of legiſlation to no more than three regular forms of government. The firſt, when the ſovereign power is veſted in an aggregate aſſembly conſiſting of all the free members of a community, which is called a *democracy*; the ſecond when it is lodged in a council, compoſed of ſelect members, and then it is ſtiled an *ariſtocracy*; the laſt when it is entruſted in the hands of a ſingle perſon, and then it aſſumes the name of a *monarchy*. All other ſpecies of government, they contend, are either corruptions of, or reducible to, theſe three. By the ſovereign power, is meant the power of making laws; for wherever that power reſides, all others muſt conform to, and be directed by it, whatever appearance the outward form and adminiſtration of the government may put on. For it is at any time at the option of the legiſlature to alter that form and adminiſtration by a new edict or rule, and to put the execution of the laws into whatever hands it pleaſes, by conſtituting one, or a few, or many, executive magiſtrates; and all the other powers of the ſtate muſt obey the legiſlative power in the diſcharge of their ſeveral functions, or elſe the conſtitution or form of government is at an end.

In a democracy, where the right of making laws reſides in the people at large, public virtue, or goodneſs of intention, is more likely to be found, than either of the other qualities of government. Popular aſſemblies are frequently injudicious in their contrivance, and irreſolute in their execution; but generally intend to do the thing that is moſt proper; and always manifeſt a degree of patriotiſm or public ſpirit. In ariſtocracies there is more wiſdom to be found, than in the other frames of government; being compoſed, or intended to be compoſed, of the moſt experienced citizens. But there is leſs integrity than in a republic, and leſs ſtrength than in a monarchy. A monarchy is indeed the moſt powerful of any; for by the entire conjunction of the legiſlative and executive powers, all the ſinews of government are knit together, and united in the hand of the prince;

but

but then, in abſolute monarchies, there is imminent danger of his employing that ſtrength to oppreſſive purpoſes.

Thus theſe three forms of government have, all of them, their ſeveral perfections and imperfections. Democracies are uſually the beſt calculated to direct the end of a law, ariſtocracies to invent the means by which that end ſhall be obtained, and monarchies to carry thoſe means into execution. The ancients had no idea of any other permanent form of government but theſe three: for though Cicero declares himſelf of opinion, "*eſſe optimè conſtitutam rempublicam, quæ ex tribus generibus illis, regali, optimo, et populari, ſit modicè confuſa,*" yet Tacitus treats this notion of a mixed government, formed out of them all, and partaking of the advantages of each, as a viſionary fabric, which could never be laſting or ſecure.

But, happily for Engliſhmen, The Britiſh Conſtitution has long remained, and it is to be hoped will long continue, a ſtanding exception to the truth of this obſervation. For as, with us, the executive power of the laws is lodged in a ſingle perſon, they have all the advantages of ſtrength and diſpatch, that are to be found in the moſt abſolute monarchy: and as the legiſlature of this kingdom is intruſted to three diſtinct powers, entirely independent of each other; firſt the King; ſecondly the Lords ſpiritual and temporal, which is an ariſtocratical aſſembly of perſons ſelected for their piety, their birth, their wiſdom, their valour, or their property; and thirdly the Houſe of Commons, freely choſen by the people from among themſelves, which makes it a kind of democracy; as this aggregate body, actuated by different ſprings, and attentive to different intereſts, compoſes the Britiſh parliament, and has the ſupreme diſpoſal of every thing; there can be no inconvenience attempted by either of the three branches, but which will be withſtood by one of the other two; each branch being armed with a negative power, ſufficient to repel any innovation which it ſhall think inexpedient or dangerous.

Here then is lodged the Sovereignty of the Britiſh Conſtitution; and lodged as beneficially as is poſſible for ſociety. For in no other ſhape could we be ſo certain of finding the three great qualities of government ſo well and ſo happily united. If the ſupreme power were lodged in any of the three branches ſeparately, we muſt be expoſed to the inconveniences, of either abſolute monarchy, ariſtocracy, or democracy, and ſo want two of the three principal ingredients of good policy, either virtue, wiſdom, or power. If it were lodged in any two of the branches; for inſtance in the king and houſe of lords, our laws might be providentially made, and well executed, but they might not have always the good of the people in view: if lodged in the king and commons, we ſhould want that circumſpection and mediatory caution which the wiſdom of the peers is to afford: if the ſupreme rights of legiſlature were lodged in the two houſes only, and the king had no negative upon their proceeding, they might be tempted to incroach upon the royal prerogative, or perhaps to aboliſh the kingly office, and thereby weaken (if not totally deſtroy) the ſtrength of the executive power. But the conſtitutional government of this iſland is ſo admirably tempered and compounded, that nothing can endanger or hurt it, but deſtroying the equilibrium of power between one branch of the legiſlature and the reſt. For if ever it ſhould happen that the independence of any one of the three ſhould be loſt, or that it ſhould become ſubſervient to the views of either of the other two, there would ſoon be an end of our conſtitution. 1 *Blackſtone's Comm.* 48–52. *Introd.*

Of the Britiſh Conſtitution, archdeacon Paley has given the following analyſis:—By the conſtitution of a country is meant ſo much of its law, as relates to the deſignation and form of the legiſlature; the rights and functions of the ſeveral parts of the legiſlative body; the conſtruction, office, and juriſdiction, of courts of juſtice. The conſtitution is one principal diviſion, ſection, or title, of the code of public laws; diſtinguiſhed from the reſt only by the ſuperior importance of the ſubject of which it treats. Therefore the terms *conſtitutional* and *unconſtitutional*, mean legal and illegal. The diſtinction and the ideas, which theſe terms denote, are founded in the ſame authority with the law of the land upon any other ſubject; and to be aſcertained by the ſame inquiries. In England, the ſyſtem of public juriſprudence is made up of acts of parliament, of deciſions of courts of law, and of immemorial uſages: conſequently, theſe are the principles of which the Engliſh conſtitution itſelf conſiſts; the ſources from which all our knowledge of its nature and limitations is to be deduced, and the authorities to which all appeal ought to be made, and by which every conſtitutional doubt and queſtion can alone be decided. This plain and intelligible definition is the more neceſſary to be preſerved in our thoughts, as ſome writers upon the ſubject abſurdly confound what is conſtitutional, with what is expedient; pronouncing forthwith a meaſure to be unconſtitutional, which they adjudge in any reſpect to be detrimental or dangerous: whilſt others again aſcribe a kind of tranſcendant authority, or myſterious ſanctity, to the conſtitution, as if it were founded in ſome higher original than that which gives force and obligation to the ordinary laws and ſtatutes of the realm, or were inviolable on any other account than its intrinſic utility. An act of parliament in England can never be unconſtitutional, in the ſtrict and proper acceptation of the term; in a lower ſenſe it may, viz. when it militates againſt the ſpirit, contradicts the analogy, or defeats the proviſion, of other laws, made to regulate the form of government. Even that flagitious abuſe of their truſt, by which a parliament of Henry the Eighth conferred upon the king's proclamation the authority of law, was unconſtitutional only in this latter ſenſe.

Moſt of thoſe who treat of the Britiſh conſtitution, conſider it as a ſcheme of government formerly planned and contrived by our anceſtors, in ſome certain era of our national hiſtory, and as ſet up in purſuance of ſuch regular plan and deſign. Something of this ſort is ſecretly ſuppoſed, or referred to, in the expreſſions of thoſe who ſpeak of the "principle of the conſtitution," of bringing back the conſtitution to its "firſt principles," of reſtoring it to its "original purity," or "primitive model." Now this appears to be an erroneous conception of the ſubject. No ſuch plan was ever formed, conſequently no ſuch firſt principles, original model, or ſtandard, exiſt. That is, there never was a date or point of time in our hiſtory, when the government of England was to be ſet up *anew*, and when it was referred to any ſingle perſon, or aſſembly, or committee, to frame a charter for the future government of the country; or when a conſtitution, ſo prepared and digeſted, was by common conſent received and eſtabliſhed. In the time of the civil wars, or rather between the death of Charles the Firſt and the reſtoration of his ſon, many ſuch projects were publiſhed, but none were carried into execution. The magna charta, and the bill of rights, were wiſe and ſtrenuous efforts to obtain ſecurity againſt certain abuſes of regal power, by which the ſubject had been formerly aggrieved; but theſe were, either of them, much too partial modifications of the conſtitution to give it a new original. The conſtitution of England, like that of moſt countries in Europe, hath grown out of occaſion and emergency; from the fluctuating policy of different ages; from the contentions, ſucceſſes, intereſts, and opportunities, of different orders and parties of men in the community. It reſembles one of thoſe old manſions, which inſtead of being built all at once, after a regular plan, and according to the rules of architecture at preſent eſtabliſhed, has been reared in

different ages of the art, has been altered from time to time, and has been continually receiving additions and repairs ſuited to the taſte, fortune, or conveniency, of its ſucceſſive proprietors. In ſuch a building we look in vain for the elegance and proportion, for the juſt order and correſpondence of parts, which we expect in a modern edifice; and which external ſymmetry, after all, contributes much more perhaps to the amuſement of the beholder, than the accommodation of the inhabitant.

In the Britiſh, and poſſibly in all other conſtitutions, there exiſts a wide difference between the actual ſtate of the government, and the theory. The one reſults from the other; but ſtill they are different. When we contemplate the *theory* of the Britiſh government, we ſee the king inveſted with the moſt abſolute perſonal impunity; with a power of rejecting laws, which have been reſolved upon by both houſes of parliament; of conferring by his charter, upon any ſet or ſucceſſion of men he pleaſes, the privilege of ſending repreſentatives into one houſe of parliament, as by his immediate appointment he can place whom he will in the other. What is this, a foreigner might aſk, but a more circuitous deſpotiſm? Yet, when we turn our attention from the legal extent to the actual exerciſe of royal authority in England, we ſee theſe formidable prerogatives dwindled into mere ceremonies; and, in their ſtead, a ſure and commanding influence, of which the conſtitution, it ſeems, is totally ignorant, growing out of that enormous patronage, which the increaſed territory and opulence of the empire have placed in the diſpoſal of the executive magiſtrate.

Upon queſtions of reform, the habit of reflection to be encouraged, is a ſober compariſon of the conſtitution under which we live, not with models of ſpeculative perfection, but with the actual chance of obtaining a better. This turn of thought will generate a political diſpoſition, equally removed from that puerile admiration of preſent eſtabliſhments which ſees no fault, and can endure no change, and that diſtempered ſenſibility, which is alive only to perceptions of inconveniency, and is too impatient to be delivered from the uneaſineſs which it feels, to compute either the peril, or expence, of the remedy. Political innovations commonly produce many effects beſide thoſe that are intended. The direct conſequence is often the leaſt important. Incidental, remote, and unthought-of, evils or advantages, frequently exceed the good that is deſigned, or the miſchief that is foreſeen. It is from the ſilent and unobſerved operation, from the obſcure progreſs, of cauſes ſet at work for different purpoſes, that the greateſt revolutions take their riſe. When Elizabeth, and her immediate ſucceſſor, applied themſelves to the encouragement and regulation of trade by many wiſe laws, they knew not, that, together with wealth and induſtry, they were diffuſing a conſciouſneſs of ſtrength and independency, which would not long endure, under the forms of a mixed government, the dominion of arbitrary princes. When it was debated whether the mutiny act, the law by which the army is governed and maintained, ſhould be temporary or perpetual, little elſe, probably, occurred to the advocates of an annual bill, than the expediency of retaining a controul over the moſt dangerous prerogative of the crown—the direction and command of a ſtanding army: whereas, in its effect, this ſingle reſervation has altered the whole frame and quality of the Britiſh conſtitution. For ſince, in conſequence of the military ſyſtem which prevails in neighbouring and rival nations, as well as on account of the internal exigencies of government, a ſtanding army has become eſſential to the ſafety and adminiſtration of the empire, it enables parliament, by diſcontinuing this neceſſary proviſion, ſo to enforce its reſolutions upon any other ſubject, as to render the king's diſſent to a law, which has received the approbation of both houſes, too dangerous an experiment to be in many caſes adviſed. A conteſt between the king and parliament, cannot now be perſevered in, without a diſſolution of the government. Laſtly, when the conſtitution conferred upon the crown the nomination to all employments in the public ſervice, the authors of this arrangement were led to it, by the obvious propriety of leaving to a maſter the choice of his ſervants; and by the manifeſt inconveniency of engaging the national council, upon every vacancy, in thoſe perſonal conteſts which attend elections to places of honour and emolument. Our anceſtors did not obſerve that this diſpoſition added an influence to the regal office, which, as the number and value of public employments increaſed, would ſuperſede in a great meaſure the forms, and change the character, of the ancient conſtitution. They knew not, what the experience and reflection of modern ages has diſcovered, that patronage univerſally is power; that he who poſſeſſes in a ſufficient degree the means of gratifying the deſires of mankind after wealth and diſtinction, by whatever checks and forms his authority may be limited or diſguiſed, will direct the management of public affairs. Whatever be the mechaniſm of the political engine, he will guide the motion. Theſe inſtances are adduced to illuſtrate the propoſition, that, in politics, the moſt important and permanent effects have, for the moſt part, been incidental, and unforeſeen: and this propoſition we inculcate, for the ſake of the caution which it teaches, that changes ought not to be adventured upon without a *comprehenſive* diſcernment of the conſequences—without a knowledge, as well of the remote tendency, as of the immediate deſign. The courage of a ſtateſman ſhould reſemble that of a commander, who, however regardleſs of perſonal danger, never forgets, that with his own he commits the lives and fortunes of a multitude; and who does not conſider it as any proof of zeal or valour, to ſtake the ſafety of *other* men upon the ſucceſs of a perilous or deſperate enterpriſe.

There is one end of civil government peculiar to a good conſtitution, namely, *the happineſs of its ſubjects*; there is another end eſſential to a good government, but common to it with many bad ones—*its own preſervation*. Obſerving that the beſt form of government would be defective, which did not provide for its own permanency, in our political reaſonings we conſider all ſuch proviſions as expedient; and are content to accept as a ſufficient ground for a meaſure, or law, that it is neceſſary or conducive to the preſervation of the conſtitution. Yet, in truth, ſuch proviſions are abſolutely expedient, and ſuch an excuſe final, only whilſt the conſtitution is worth preſerving; that is, until it can be exchanged for a better. We premiſe this diſtinction, becauſe many things in the Engliſh, as in every conſtitution, are to be vindicated and accounted for, ſolely from their tendency to maintain the government in its preſent ſtate, and the ſeveral parts of it in poſſeſſion of the powers which the conſtitution has aſſigned to them; and becauſe we would wiſh it to be remarked that ſuch a conſideration is always ſubordinate to another—the value and uſefulneſs of the conſtitution itſelf.

The GOVERNMENT OF ENGLAND, ſometimes called a mixed government, ſometimes a limited monarchy, is formed, as above obſerved, by a combination of the three regular ſpecies of government. The perfection intended by ſuch a ſcheme is, to unite the advantages of the ſeveral ſimple forms, and to exclude the inconveniencies. To what degree this purpoſe is attained or attainable in the Britiſh conſtitution; wherein it is loſt ſight of or neglected; and by what means it may in any part be promoted with better ſucceſs, the reader will be enabled to judge, by a ſeparate recollection of theſe advantages and inconveniences, and a diſtinct application of each to the political condition of this country. We will preſent our remarks upon the ſubject in a brief account of the expedients by which the Britiſh conſtitution

tion provides, 1ſt, For the intereſt of its ſubjects. 2dly, For its own preſervation.

The contrivances for the firſt of theſe purpoſes are the following: In order to promote the eſtabliſhment of ſalutary public laws, every citizen of the ſtate is capable of becoming a member of the ſenate; and every ſenator poſſeſſes the right of propounding to the deliberation of the legiſlature whatever law he pleaſes. Every diſtrict of the empire enjoys the privilege of chooſing repreſentatives, informed of the intereſts and circumſtances and deſires of their conſtituents, and entitled by their ſituation to communicate that information to the national council. The meaneſt ſubject has ſome one whom he can call upon to bring forward his complaints and requeſts to public attention.

By annexing the right of voting for members of the houſe of commons to different qualifications in different places, each order and profeſſion of men in the community become virtually repreſented; that is, men of all orders and profeſſions, ſtateſmen, courtiers, country gentlemen, lawyers, merchants, manufacturers, ſoldiers, ſailors, intereſted in the proſperity, and experienced in the occupation, of their reſpective profeſſions, obtain ſeats in parliament. The elections, at the ſame time, are ſo connected with the influence of landed property as to afford a certainty that a conſiderable number of men of great eſtates will be returned to parliament; and are alſo ſo modified, that men the moſt eminent and ſucceſsful in their reſpective profeſſions, are the moſt likely, by their riches or the weight of their ſtations, to prevail in theſe competitions. The number, fortune, and quality, of the members; the variety of intereſts and characters amongſt them; above all, the temporary duration of their power, and the change of men which every new election produces, are ſo many ſecurities to the public, as well againſt the ſubjection of their judgments to any external dictation, as againſt the formation of a junto in their own body, ſufficiently powerful to govern their deciſions.

The repreſentatives are ſo intermixed with the conſtituents, and the conſtituents with the reſt of the people, that they cannot, without a partiality too flagrant to be endured, impoſe any burthen upon the ſubject, in which they do not ſhare themſelves; nor ſcarcely can they adopt an advantageous regulation, in which their own intereſts will not participate of the advantage. The proceedings and debates of parliament, and the parliamentary conduct of each repreſentative, are alſo known by the people at large. The repreſentative is ſo far dependent upon the conſtituent, and political importance upon public favour, that a member of parliament cannot more effectually recommend himſelf to eminence and advancement in the ſtate, than by contriving and patronizing laws of public utility.

When intelligence of the condition, wants, and occaſions, of the people, is thus collected from every quarter, when ſuch a variety of invention, and ſo many underſtandings, are ſet at work upon the ſubject, it may be preſumed, that the moſt eligible expedient, remedy, or improvement, will occur to ſome one or other: and when a wiſe counſel, or beneficial regulation, is once ſuggeſted, it may be expected, from the diſpoſition of an aſſembly ſo conſtituted as the Britiſh houſe of commons is, that it cannot fail of receiving the approbation of a majority. To prevent thoſe deſtructive contentions for the ſupreme power, which are ſure to take place where the members of the ſtate do not live under an acknowledged head, and a known rule of ſucceſſion; to preſerve the people in tranquillity at home, by a ſpeedy and vigorous execution of the laws; to protect their intereſt abroad, by ſtrength and energy in military operations, by thoſe advantages of deciſion, ſecrecy, and diſpatch, which belong to the reſolutions of monarchical councils; for theſe purpoſes, the conſtitution has committed the executive government to the adminiſtration and limited authority of an hereditary king.

In the defence of the empire; in the maintenance of its power, dignity, and privileges, with foreign nations; in the advancement of its trade by treaties and conventions; and in the providing for the general adminiſtration of municipal juſtice, by a proper choice and appointment of magiſtrates; the inclination of the king and of the people uſually coincides: in this part, therefore, of the regal office, the conſtitution entruſts the prerogative with ample powers. The dangers principally to be apprehended from regal government, relate to the two articles, *taxation* and *puniſhment*. In every form of government, from which the people are excluded, it is the intereſt of the governors to get as much, and of the governed to give as little, as they can: the power alſo of puniſhment, in the hands of an arbitrary prince, oftentimes becomes an engine of extortion, jealouſy, and revenge. Wiſely, therefore, hath the Britiſh conſtitution guarded the ſafety of the people, in theſe two points, by the moſt ſtudious precautions.

Upon that of *taxation*, every law which, by the remoteſt conſtruction, may be deemed to levy money upon the property of the ſubject, muſt originate, that is, muſt firſt be propoſed and aſſented to, in the houſe of commons: by which regulation, accompanying the weight which that aſſembly poſſeſſes in all its functions, the levying of taxes is almoſt excluſively reſerved to the popular part of the conſtitution, who, it is preſumed, will not tax themſelves, nor their fellow-ſubjects, without being firſt convinced of the neceſſity of the aids which they grant. The application alſo of the public ſupplies, is watched with the ſame circumſpection, as the aſſeſſment. Many taxes are annual; the produce of others is mortgaged, or appropriated to ſpecific ſervices; the expenditure of all of them is accounted for in the houſe of commons; as computations of the charge of the purpoſe, for which they are wanted, are previouſly ſubmitted to the ſame tribunal.

In the infliction of *puniſhment*, the power of the crown, and of the magiſtrate appointed by the crown, is confined by the moſt preciſe limitations: the guilt of the offender muſt be pronounced by twelve men of his own order, indifferently choſen out of the county where the offence was committed: the puniſhment, or the limits to which the puniſhment may be extended, are aſcertained and affixed to the crime, by laws which knew not the perſon of the criminal. And whereas arbitrary or clandeſtine confinement is the injury moſt to be dreaded from the ſtrong hand of the executive government, becauſe it deprives the priſoner at once of protection and defence, and delivers him into the power, and to the malicious or intereſted deſigns, of his enemies; the conſtitution has provided againſt this danger with extreme ſolicitude. The ancient writ of habeas corpus, the habeas corpus act of Charles the Second, and the practice and determinations of our ſovereign courts of juſtice founded upon theſe laws, afford a complete remedy for every conceivable caſe of illegal impriſonment.

Treaſon being that charge, under colour of which the deſtruction of an obnoxious individual is often ſought; and government being at all times more immediately a party in the proſecution; the law, beſide the general care with which it watches over the ſafety of the accuſed, in this caſe, ſenſible of the unequal conteſt in which the ſubject is engaged, has aſſiſted his defence with extraordinary indulgencies. By two ſtatutes, enacted ſince the revolution, every perſon indicted for high treaſon ſhall have a copy of his indictment, a liſt of the witneſſes to be produced, and of the jury impanelled, delivered to him ten days before the trial; he is alſo permitted to make his defence by counſel—privileges which are not allowed to the priſoner, in a

trial for any other crime: and what is of more importance to the party than all the reſt, the teſtimony of two witneſſes, *at the leaſt*, is required to convict a perſon of treaſon; whereas, one poſitive witneſs is ſufficient in almoſt every other ſpecies of accuſation.

We proceed, in the ſecond place, to enquire in what manner the conſtitution has provided for its own preſervation; that is, in what manner each part of the legiſlature is ſecured in the exerciſe of the powers aſſigned to it, from the encroachment of the other parts. The ſecurity is ſometimes called the *balance of the conſtitution*; and the political equilibrium, which this phraſe denotes, conſiſts in two contrivances—a balance of power, and a balance of intereſt. By a balance of power is meant, that there is no power poſſeſſed by one part of the legiſlature, the abuſe or exceſs of which is not checked by ſome antagoniſt power reſiding in another part. Thus the power of the two houſes of parliament to frame laws is checked by the king's negative; that, if laws ſubverſive of regal government ſhould obtain the conſent of parliament, the reigning prince, by interpoſing his prerogative, may ſave the neceſſary rights and authority of his ſtation. On the other hand, the arbitrary application of this negative is checked by the privilege which parliament poſſeſſes, of refuſing ſupplies of money to the exigencies of the king's adminiſtration. The conſtitutional maxim, "that the king can do no wrong," is balanced by another maxim, not leſs conſtitutional, "that the illegal commands of the king do not juſtify thoſe who aſſiſt, or concur, in carrying them into execution;" and by a ſecond rule, ſubſidiary to this, "that the acts of the crown acquire not a legal force, until authenticated by the ſubſcription of ſome of its great officers." The wiſdom of this contrivance is worthy of obſervation. As the king could not be puniſhed, without a civil war, the conſtitution exempts his perſon from trial or account; but, leſt this impunity ſhould encourage a licentious exerciſe of dominion, various obſtacles are oppoſed to the private will of the ſovereign, when directed to illegal objects. The pleaſure of the crown muſt be announced with certain ſolemnities, and atteſted by certain officers of ſtate. In ſome caſes, the royal order muſt be ſignified by a ſecretary of ſtate; in others, it muſt paſs under the privy ſeal; and, in many, under the great ſeal. And when the king's command is regularly publiſhed, no miſchief can be achieved by it, without the miniſtry and compliance of thoſe to whom it is directed. Now all who either concur in an illegal order, by authenticating its publication with their ſeal or ſubſcription, or who in any manner aſſiſt in carrying it into execution, ſubject themſelves to proſecution and puniſhment, for the part they have taken; and are not permitted to plead or produce the command of the king, in juſtification of their obedience. But farther; the power of the crown to direct the military force of the kingdom, is balanced by the annual neceſſity of reſorting to parliament for the maintenance and government of that force. The power of the king to declare war, is checked by the privilege of the houſe of commons, to grant or withhold the ſupplies by which the war muſt be carried on. The king's choice of his miniſters is controlled by the obligation he is under of appointing thoſe men to offices in the ſtate, who are found capable of managing the affairs of his government, with the two houſes of parliament. Which conſideration impoſes ſuch a neceſſity upon the crown, as hath in a great meaſure ſubdued the influence of favouritiſm; inſomuch, that it is become no uncommon ſpectacle in this country, to ſee men promoted by the king to the higheſt offices and richeſt preferments which he has in his power to beſtow, who have been diſtinguiſhed by their oppoſition to his perſonal inclinations.

By the *balance of intereſt*, which accompanies and gives efficacy to the *balance of power*, is meant this—that the reſpective intereſts of the three eſtates of the empire are ſo diſpoſed and adjuſted, that whichever of the three ſhall attempt any encroachment, the other two will unite in reſiſting it. If the king ſhould endeavour to extend his authority, by contracting the power and privileges of the commons, the houſe of lords would ſee their own dignity endangered by every advance which the crown made to independency upon the reſolutions of parliament. The admiſſion of arbitrary power is no leſs formidable to the grandeur of the ariſtocracy, than it is fatal to the liberty of the republic; that is, it would reduce the nobility from the hereditary ſhare they poſſeſs in the national councils, in which their real greatneſs conſiſts, to the being made a part of the empty pageantry of a deſpotic court. On the other hand, if the houſe of commons ſhould intrench upon the diſtinct province, or uſurp the eſtabliſhed prerogative, of the crown, the houſe of lords would receive an inſtant alarm from every new ſtretch of popular power. In every conteſt in which the king may be engaged with the repreſentative body, in defence of his eſtabliſhed ſhare of authority, he will find a ſure ally in the collective power of the nobility. An attachment to the monarchy, from which they derive their own diſtinction; the allurements of a court, in the habits and with the ſentiments of which they have been brought up; their hatred of all levelling pretenſions, which may ultimately affect the privileges, or even the exiſtence, of their order; in ſhort, every principle and every prejudice which are wont to actuate human conduct, will determine their choice to the ſide and ſupport of the crown. Laſtly, if the nobles themſelves ſhould attempt to revive the ſuperiorities which their anceſtors exerciſed under the feudal conſtitution, the king and the people would alike remember, how the one had been inſulted, and the other enſlaved, by that barbarous tyranny. They would forget the natural oppoſition of their views and inclinations, when they ſaw themſelves threatened with the return of a domination, which was odious and intolerable to both.

The proper uſe and deſign of the lords ſpiritual and temporal, as an indiſpenſible part of the Britiſh conſtitution, are therefore the following: Firſt, to enable the king, by his right of beſtowing the peerage, to reward the ſervants of the public, in a manner moſt grateful to them, and at a ſmall expence to the nation; ſecondly, to fortify the power and to ſecure the ſtability of regal government, by an order of men naturally allied to its intereſts; and, thirdly, to anſwer a purpoſe, which, though of ſuperior importance to the other two, does not occur ſo readily to our obſervation; namely, to ſtem the progreſs of popular enthuſiaſm. Large bodies of men are ſubject to ſudden phrenzies. Opinions are ſometimes circulated amongſt a multitude without proof or examination, acquiring confidence and reputation merely by being repeated from one to another; and paſſions founded upon theſe opinions, diffuſing themſelves with a rapidity which can neither be accounted for nor reſiſted, may agitate a country with the moſt violent commotions. Now the only way to ſtop the fermentation, is to divide the maſs; that is, to erect different orders in the community, with ſeparate prejudices and intereſts. And this would moſt naturally ariſe out of an hereditary nobility, inveſted with a ſhare of legiſlation. Averſe to thoſe prejudices which actuate the minds of the vulgar; accuſtomed to condemn the clamour of the populace; diſdaining to receive laws and opinions from their inferiors in rank, they will oppoſe reſolutions which are founded in the folly and violence of the lower part of the community.

The admiſſion of a ſmall number of eccleſiaſtics into the houſe of lords, is but an equitable compenſation to the clergy for the excluſion of their order from the houſe of commons. They are a ſet of men conſiderable by

by their number and property, as well as by their influence, and the duties of their ſtation; yet, whilſt every other profeſſion has thoſe amongſt the national repreſentatives, who, being converſant in the ſame occupation, are able to ſtate, and naturally diſpoſed to ſupport, the rights and intereſts of the claſs and calling to which they belong, the clergy alone are deprived of this advantage: which hardſhip is made up to them by introducing the prelacy into parliament; and if biſhops, from gratitude or expectation, be more obſequious to the will of the crown than thoſe who poſſeſs great temporal inheritances, they are properly inſerted into that part of the conſtitution, from which much or frequent reſiſtance to the meaſures of government is not expected.

But, among political writers on the Britiſh conſtitution the grand ſubject of contention has been,—the increaſing INFLUENCE of the crown. Yet it remains a conſideration of the higheſt magnitude—whether the influence ſo loudly complained of can be deſtroyed, or even much diminiſhed, without danger to the ſtate. Whilſt the zeal of ſome men beholds this influence with a jealouſy, which nothing but its entire abolition can appeaſe, many wiſe and virtuous politicians deem a conſiderable portion of it to be as neceſſary a part of the Britiſh conſtitution, as any other ingredient in the compoſition—to be that, indeed, which gives coheſion and ſolidity to the whole. Were the meaſures of government, ſay they, oppoſed from nothing but principle, government ought to have nothing but the rectitude of its meaſures to ſupport them; but ſince oppoſition often ſprings from other motives, government muſt poſſeſs an influence to counteract theſe motives; to produce, not a bias of the paſſions, but a neutrality: it muſt have ſome weight to caſt into the ſcale, to ſet the balance even. It is the nature of power always to preſs upon the boundaries which confine it. Licentiouſneſs, faction, envy, impatience of controul, or inferiority; the ſecret pleaſure of mortifying the great, or the hope of diſpoſſeſſing them; a conſtant willingneſs to queſtion and thwart whatever is dictated or even propoſed by another; a diſpoſition common to all bodies of men to extend the claims and authority of their orders; above all, that love of power, and of ſhewing it, which reſides more or leſs in every human breaſt, and which, in popular aſſemblies, is inflamed, like every other paſſion, by communication and encouragement: theſe motives, added to private deſigns and reſentments, cheriſhed alſo by popular acclamation, and operating upon the great ſhare of power already poſſeſſed by the houſe of commons, might induce a majority, or at leaſt a large party of men in that aſſembly, to unite in endeavouring to draw to themſelves the whole government of the ſtate; or at leaſt ſo to obſtruct the conduct of public affairs, by a perverſe oppoſition, merely for oppoſition ſake, as to render it impoſſible for the wiſeſt ſtateſman to carry forwards the buſineſs of the nation with ſucceſs or ſatisfaction.

Some paſſages of our national hiſtory will ſufficiently elucidate this remark. Before the acceſſion of James I. or, at leaſt, during the reigns of his three immediate predeceſſors, the government of England was a government by force; that is, the king carried his meaſures in parliament by *intimidation*. A ſenſe of perſonal danger kept the members of the houſe of commons in ſubjection. A conjunction of fortunate cauſes delivered at laſt the parliament and nation from ſlavery. That overbearing ſyſtem, which had declined in the hands of James, expired early in the reign of his ſon. After the reſtoration there ſucceeded in its place, and ſince the revolution has been methodically purſued, the more ſucceſsful expedient of *influence*. Now we remember what paſſed between the fits of terror, and the eſtabliſhment of influence. The tranſactions of that interval, whatever we may think of their occaſion or effect, no friend of regal government would wiſh to ſee revived. But the affairs of this kingdom afford a more recent atteſtation to the ſame doctrine. In the Britiſh colonies of North America, the late aſſemblies poſſeſſed much of the power and conſtitution of our houſe of commons. The king and government of Great Britain held no patronage in the country, which could create attachment and influence ſufficient to counteract that reſtleſs arrogating ſpirit, which in popular aſſemblies, when left to itſelf, will never brook an authority, that checks and interferes with its own. To this cauſe, excited perhaps by ſome unſeaſonable provocations, we may attribute, as to their true and proper original, the changes that have taken place in the Britiſh empire. The admonition, which ſuch examples ſuggeſt, will have its weight with thoſe, who are content with the general frame of the Engliſh conſtitution; and who conſider ſtability amongſt the firſt perfections of any government.

We proteſt however againſt any conſtruction, by which what is here ſaid ſhall be attempted to be applied to the juſtification of bribery, or of any *clandeſtine* reward or ſolicitation whatever. The very ſecrecy of ſuch negociations confeſſes or begets a conſciouſneſs of guilt; which when the mind is once taught to endure without uneaſineſs, the character is prepared for every compliance: and there is the greater danger in theſe corrupt practices, as the extent of their operation is unlimited and unknown. Our apology relates ſolely to that influence, which reſults from the acceptance or expectation of public preferments. Nor does the influence, which we defend, require any ſacrifice of perſonal probity. In political, above all other ſubjects, the arguments, or rather the conjectures, on each ſide of the queſtion, are often ſo unequally poiſed, that the wiſeſt judgments may be held in ſuſpenſe. As the balance muſt preponderate, the ſerious queſtion is, what influence ſhall be admitted. If you remove the influence of the crown, it is only to make way for influence from a different quarter. If motives of expectation and gratitude be withdrawn, other motives will ſucceed in their place, acting probably in an oppoſite direction, but equally irrelative and external to the proper merits of the queſtion. There exiſt, as we have ſeen, paſſions in the human heart, which will always make a ſtrong party againſt the executive power of a mixed government. According as the diſpoſition of parliament is friendly or adverſe to the recommendation of the crown in matters which are really or apparently indifferent, the buſineſs of empire will be tranſacted with eaſe and convenience, or embarraſſed with endleſs contention and difficulty. Nor is it a concluſion founded in juſtice, or warranted by experience, that, becauſe men are induced by views of intereſt to yield their conſent to meaſures, concerning which their judgment decides nothing, they may be brought by the ſame influence to act in deliberate oppoſition to knowledge and duty. Whoever reviews the operations of government in this country ſince the revolution, will find few even of the moſt queſtionable meaſures of adminiſtration, about which the beſt inſtructed judgment might not have doubted at the time; but of which he may affirm with certainty, that they were *indifferent* to the greateſt part of thoſe who concurred in them. From the ſucceſs, or the facility, with which they who dealt out the patronage of the crown carried meaſures like theſe, ought we to conclude, that a ſimilar application of honours and emoluments would procure the conſent of parliament to counſels evidently detrimental to the common welfare? Is there not, on the contrary, more reaſon to fear, that the prerogative, if deprived of influence, would not be long able to ſupport itſelf? For when we reflect upon the power of the houſe of commons to extort a compliance with its reſolutions from the other parts of the legiſlature; or to put to death the conſtitution by a refuſal of the annual grants of money to the ſupport of the neceſſary functions of government—when we reflect alſo what motives there are,

are which, in the viciſſitudes of political intereſts and paſſions, may arm and point this power againſt the executive magiſtrate—when we attend to theſe conſiderations, we ſhall be led perhaps to acknowledge, that there is not more of paradox than of truth in that important but much-decried apophthegm, "that a totally independent parliament is incompatible with the exiſtence of the executive government;"—and hence every miniſter, ſince the days of ſir Robert Walpole, has uniformly aimed at acquiring and maintaining an *influence* in the houſe of commons, as the only certain means by which he can retain his ſituation, or conduct the affairs of the ſtate: and in many caſes where this influence is found to be on the decline, or the balance of the votes in the houſe of commons ſo nearly equal as to render the operations of the exiſting government precarious; then, as the dernier reſort, the king exerts his prerogative of diſſolving his parliament, and thus conſigns to the judgment of his people which party, or political ſyſtem, it is moſt wiſe and prudent for him to adopt, by leaving to their own choice the meaſures in the election of men, whom they ſhall deem it expedient to return to a new parliament. A ſtriking inſtance of this fact was manifeſted by the event which followed the memorable agitation of the Roman catholic bill in 1807.

GOUERNO'LO, a town of Italy, in the duchy of Mantua, at the junction of the Mincio and the Po: twelve miles ſouth-eaſt of Mantua. In 1796, a ſevere battle was fought near this town, between the French republicans and the Auſtrians, in which the latter were defeated, with the loſs of ten thouſand priſoners.

GOV'ERNOR, *ſ.* [*gouverneur*, Fr.] One who has the ſupreme direction.—They beget in us a great idea and veneration of the mighty author and *governor* of ſuch ſtupendous bodies, and excite and elevate our minds to his adoration and praiſe. *Bentley.*—One who is inveſted with ſupreme authority in a ſtate.—For the kingdom is the Lord's, and he is the *governor* among the nations. *Pſ.* xxii. 28.—One who rules any place with delegated and temporary authority:

To you, lord *governor*,
Remains the cenſure of this helliſh villain. *Shakeſpeare.*

A tutor; one who has the care of a young man.—The great work of a *governor* is to faſhion the carriage, and form the mind; to ſettle in his pupil good habits, and the principles of virtue and wiſdom. *Locke.*—Pilot; regulator; manager.—Behold all the ſhips, which though they be ſo great, and are driven of fierce winds, yet they are turned about with a very ſmall helm, whitherſoever the *governor* liſteth. *Ja.* iii. 4.

GOUEZEC', a town of France, in the department of the Finiſterre, and chief place of a canton, in the diſtrict of Châteaulin: one league and a half ſouth-eaſt of Châteaulin, and three and a half north-eaſt of Quimper.

GOUGA'NE BA'RO, a lake of Ireland, in the county of Cork: ten miles north of Bantry.

GOUGE, *ſ.* [French.] A chiſſel having a round edge, for the cutting of ſuch wood as is to be rounded or hollowed. *Moxon.*

To GOUGE, *v. a.* To ſcoop out, as with a chiſſel.

GOUGE (William), an eminent Engliſh divine, born at Bow, in the county of Middleſex, in 1575. He received his claſſical education partly at St. Paul's ſchool, in London, and partly at Eton, whence he was elected to King's-college, Cambridge, in 1595. His academic ſtudies he performed with uncommon diligence, and proportionate ſucceſs. He took his degrees in arts at the regular periods, when he performed the exerciſes in the public ſchools, required by the ſtatutes of the univerſity, with very great applauſe. He was choſen a lecturer in logic and philoſophy in his college, and acquired much credit by the able manner in which he diſcharged the duties of that appointment. In 1607 he was admitted into orders; and in the following year obtained the rectory of Blackfriars, in the city of London. In this ſituation he continued during the remainder of his life, diſcharging the paſtoral functions with exemplary diligence and fidelity, and ſetting before his pariſhioners a commendable example of the moral and religious duties which he enforced in his ſermons. In 1611 he was admitted to the degree of bachelor of divinity, and in 1628 to that of doctor in the ſame faculty. He was modeſt, humble, affable, and charitable, of ſtrict and exemplary piety, and continued to preach as long as he was able to get up into the pulpit; and for many years he was eſteemed the father of the London miniſters. He died in 1653, ſoon after he had completed his ſeventy-eighth year. The principal of his works were, 1. A Commentary on the Epiſtle to the Hebrews. 2. An Expoſition of the Lord's Prayer. 3. The whole Armour of God. 4. A treatiſe of Domeſtical Duties. 5. Of the Sin againſt the Holy Ghoſt. 6. The Sabbath's Sanctification. 7. A treatiſe of Apoſtacy. 8. The Saint's Sacrifice; or, a Comment on Pſalm 116. 9. Two Catechiſms.

GOUGE (Thomas), a very exemplary Engliſh divine, ſon of the preceding, born at Bow in 1605. He was ſent early to Eton ſchool, whence he was elected to King's-college, Cambridge, in 1626. In that univerſity he purſued his ſtudies with becoming diligence, and took his degrees in arts at the ſtatutable periods; during which time he was choſen a fellow of his college. Having afterwards taken orders, he left the univerſity and his fellowſhip, and was preſented to the living of Colſden, in Surrey, where he continued about three years. In 1638 he became incumbent of St. Sepulchre, in London, where, for about twenty-four years, he diſcharged the paſtoral duties with exemplary vigilance and fidelity. When the act of uniformity took place, as he could not conſcientiouſly ſubſcribe to its proviſions, he was ejected from his living; on which occaſion he declined preaching in the metropolis, modeſtly obſerving, "that there was no need of his labours in London, where there were ſo many godly, able, and painful, miniſters to carry on the work." His time now was zealouſly devoted to acts of beneficence and charity. He was himſelf poſſeſſed of a good eſtate, the greater part of which he employed in relieving the wants of his poorer brethren. About the year 1671, the accounts which he received of the deplorable ignorance in which the poor were involved in Wales, inſpired him with the generous and noble deſign of introducing knowledge and religion into that neglected country. For this purpoſe he viſited the principality, and commenced his undertaking by eſtabliſhing ſchools in different towns, and undertook to pay the inſtructors. By degrees theſe ſchools amounted to between three and four hundred in number, and were annually viſited by Mr. Gouge; when he carefully enquired into the improvement of his young beneficiaries, and preached occaſionally. He, likewiſe, with the aſſiſtance which he received from his friends, printed eight thouſand copies of the Bible in the Welſh language; a thouſand of which were freely given to the poor, and the reſt ſent to the principal cities and towns in Wales, to be ſold at low prices. To ſhew that he was no bigot, he alſo procured the Church Catechiſm, with a practical expoſition of it, and the Common Prayer, to be printed in Welſh, and diſtributed them to the poor, with the Welſh Bible, the Whole Duty of Man, the Practice of Piety, and many other pious and uſeful treatiſes. He died in 1681, in the ſeventy-ſeventh year of his age. He had committed but a few of his own productions to the preſs, and theſe were of the practical kind; ſuch as, 1. The Principles of Religion explained, in Queſtion and Anſwer. 2. A Word to Sinners. 3. Chriſtian Directions to walk with God. 4. The ſureſt and ſafeſt Way of Thriving, viz. by Charity to the Poor. 5. The Young Man's Guide through the Wilderneſs of this World. 6. The Chriſtian Houſeholder, &c.

GOU'GEON,

GOU'GEON, or Gou'jon (John), a French ſculptor and architect, in the reign of Francis I. accounted the firſt who introduced a true taſte for ſculpture in France, and freed it from the barbariſm of former times. The moſt conſiderable of his works is the Fountain of the Nymphs, called the Innocents, finiſhed in 1550. Among other remains of his workmanſhip, is a tribune in the hall des Cent-Suiſſes at the Louvre, enriched with ſculptures, and ſupported by four gigantic Caryatides. He was alſo an able medalliſt, and ſtruck ſeveral pieces for Catharine de Medicis, which are ſought by the curious. His reliefs are executed with great taſte, his drapery is light and elegant, his figures graceful and flexible, but their attitudes are ſometimes forced. He was a Huguenot, and met with the melancholy fate of his party on the infamous St. Bartholomew, 1572, being ſhot as he ſtood working upon a ſcaffold.

GOU'JET (Claude-Peter), a moſt fertile writer, born at Paris in 1697. He received the greateſt part of his education in the Jeſuits' college, and was ſome time in the congregation of the Oratory. Having taken orders, he became a canon of the church of St. Jacques de l'Hôpital in Paris. He was an aſſociate of ſeveral academies in France, and was generally eſteemed, not only for his learning, but for the mildneſs of his diſpoſition, and the purity of his morals. He died in 1767. He had collected a library of ten thouſand well-choſen volumes, which was the baſis of his numerous works. Of theſe, the following are the principal: 1. *Vies des Saints*, 2 vols. 4to. 2. Supplement to Moreri's Dictionary, 2 vols. folio, 1735, and 2 vols. folio, 1749. 3. *Bibliotheque des Ecrivains Eccleſiaſtiques*, 3 vols. 8vo. 4. *Diſcours ſur le Renouvellement des Etudes depuis le XIV. Siècle.* 5. *De l'Etat des Sciences en France depuis la Mort de Charlemagne juſqu'à celle du Roi Robert*, 12mo. for this curious diſſertation the author obtained the prize of the academy of belles-lettres. 6. *Bibliotheque Françoiſe, ou Hiſtoire de la Littérature Françoiſe*, 18 vols. 12mo. this is the moſt celebrated of his works, but is compoſed with more induſtry than taſte or judgment. 7. A new edition of Richelet's French Dictionary, 3 vols. folio, with numerous additions and corrections: of this he publiſhed at the ſame time an Abridgment, which has ſince been printed in an improved form by Wailly, in 2 vols. 8vo. 8. *L'Hiſtoire du College Royal de France*, 1 vol. 4to. and 3 vols. 12mo. 9. *Hiſtoire du Pontificat de Paul IV.* 2 vols. 12mo. in this piece the author is by no means friendly to the Jeſuits, though educated among them. He likewiſe furniſhed a great variety of articles for the continuation of the *Mémoires de Littérature*, by Deſmolets, and for the *Mém. des Hommes illuſtres*, of Niceron.

GOU'JIM, a town of Portugal, in the province of Beira: four leagues ſouth-weſt of St. Joao de Peſqueira.

GOU'LAND, *ſ.* A flower.—Pinks, *goulands*, king-cups, and ſweet ſops-in-wine. *B. Jonſon's Maſques.*

GOU'LART (Simon), a French proteſtant divine, born at Senlis in 1543. Having ſtudied divinity at Geneva, he was admitted into the office of the miniſtry, and was choſen paſtor of the church of which Calvin had been miniſter. He diſcharged the duties of his paſtoral office with great diligence and acceptability, and continued the exerciſe of them till within ſeven days of his death, which took place in 1628, when eighty-five years of age. He edited a number of works, with notes, comments, or additions; and, among others, The Works of Plutarch, tranſlated by Amyot; St. Cyprian's Works; Du Bartas's Weeks; Illyricus's Witneſſes to Truth, &c. He tranſlated into French All the Works of Seneca, publiſhed at Paris in 1590, in 2 vols. 4to. The Hiſtorical Meditations of Camerarius, to which he made conſiderable additions; Oſorius's Hiſtory of Portugal, 1587, in 5 vols. 8vo. The Chronicle of Carion; different treatiſes of Theodoret; John Wierus's Book concerning diabolical Impoſtures, &c. He made a collection of Remarkable Hiſtories, 1620, in 2 vols. 8vo. and alſo wrote ſeveral moral and devotional tracts, and pieces relating to the hiſtory of his own time. The moſt intereſting and curious of the latter deſcription is his Collection of the moſt memorable Events which occurred during the League, &c. 1590, in 6 vols. 8vo. afterwards reprinted at Paris in 1758, in 6 vols. 4to. with notes and original documents.

Goulart had a ſon, of the ſame name, who on that account has by ſome writers been confounded with his father. He was born at Senlis, in 1576, and died at Frederickſtadt, in Holſtein, in 1628. He was educated to the miniſtry, and was ſettled as paſtor with the Walloon church at Amſterdam, where he embraced the party of the Remonſtrants. In 1615 he was ſuſpended from his functions, for preaching againſt the horrible doctrine, connected with the notion of reprobation, that ſome children who die at the breaſt, or in their mother's womb, are eternally damned. He was afterwards baniſhed the country, together with the other miniſters of the Arminian party, in conſequence of the decrees of the ſynod of Dort; when he ſought an aſylum at firſt in Flanders, afterwards in France, and finally in Holſtein. He wrote ſome letters to the Remonſtrants at Amſterdam, conſoling them under their perſecutions, and exhorting them to conſtancy and perſeverance; which are inſerted in a collection of ſuch pieces in folio, under the title of *Epiſtolæ Eccleſiaſticæ & Theologicæ.*

GOULDS'BOROUGH HAR'BOUR, a harbour of North America, in the diſtrict of Main. Lat. 44. 25. N. lon. 67. 53. W. Greenwich.

GOULOU' (John), a French monk, born at Paris in 1576. He was educated to the profeſſion of an advocate; but having had the misfortune, the firſt time that he pleaded a cauſe, to fall into a confuſion from which he could not recover himſelf, the ſuppoſed diſgrace ſo much affected his mind, that he determined on exchanging the bar for the cloiſter. Accordingly, he entered into the order of Feuillants, in 1604, and by his talents recommended himſelf ſucceſſively to different confidential employments, and at laſt was raiſed to the poſt of general of his order. As he underſtood the Greek language, he applied himſelf to the tranſlation into French of the pretended Works of Dionyſius the Areopagite, which were printed in 1608, accompanied with an attempted defence of their genuineneſs; Epictetus's Enchiridion, printed in 1609; St. Baſil's Homilies upon the Hexameron, printed in 1616; and Arrian's Diſſertations. He alſo reviſed and publiſhed a Latin verſion of the Treatiſes of St. Gregory Nyſſen againſt Eunomius. In 1627, father Goulou made himſelf much talked of by a violent attack upon the works of M. Balzac. This naturally occaſioned M. Balzac to defend himſelf by a ſpirited apology, in which the monk was treated with no little ſeverity. A copy of this apology was ſent to father Goulou, who conſidered it in the light of a challenge, and ſoon produced two volumes of Letters from Phyllarchus to Ariſto, in which he not only attempted to diſcredit M. Balzac's merits as a writer, but attacked the morality of his work, in language unpardonably abuſive. Notwithſtanding the intemperance which diſgraced theſe letters, ſtill they had many encomiaſts, particularly among the monks. Father Goulou, however, did not long enjoy the praiſes which his partiſans beſtowed upon him, as he died in 1629, in the fifty-third year of his age.

GOUL'VIN, a town of France, in the department of Finiſterre, and chief place of a canton, in the diſtrict of Leſneven: one league and a quarter north of Leſneven, and four weſt of St. Pol-de-Leon.

GOU'NONG A'PI. See Gonapi.

GO'VON, a town of Italy, in the principality of Piedmont: ſix miles north of Alba.

GOU'PIA, *ſ.* in botany. See Glossopetalum.

GOUPIL' (James), a learned phyſician of the ſixteenth century, born of a good family at Luçon. He ſtudied

ſtudied at Poitiers, and then undertook the education of ſome young men of quality at Saintonge. Coming afterwards to Paris, he ſtudied Greek at the royal college. He was made a licentiate of the faculty in 1548, and ſoon after took his degree of doctor. In 1555, he was appointed royal profeſſor of phyſic on the death of James Sylvius. He particularly diſtinguiſhed himſelf by his editions of Alexander of Tralles, Dioſcorides, Actuarius, Paul Ægineta, Rufus, and Aretæus. He alſo tranſlated from the Italian the work of Alex. Piccolomini, On the Sphere of the World. In 1564, during the violence of the civil wars, his library was plundered by the populace, which misfortune ſo much affected him that he died ſoon after. He was then engaged on on a Commentary upon all the works of Hippocrates.

GOUR, or GOU'RA, an ancient city of Hindooſtan, the *Gangia Regia* of Ptolemy, and *Lucknouti* of other writers. It ſtill retains in the maps the name of *Gour*. It was taken in 1009, by Mahmood I. and its king made priſoner. Like Hannibal, he kept poiſon concealed in his ring, which he took, and put an end to his life. Goura was deſtroyed after Tamerlane's invaſion, but reſtored and ornamented by Akbar, in 1573, who called it *Jennutabad*; originally it was waſhed by the Ganges, but that mutable ſtream at preſent does not come within four miles of the neareſt part. The extent of the ruins are not leſs than fifteen miles, ſtretching along the old banks of the Ganges; the breadth between two and three miles. Over the ſite are ſcattered ſeveral villages, and thick woods, now the haunts of tigers and other beaſts of prey. The chief remains are a moſque, lined with black marble, elaborately carved, and two gates of the citadel, moſt ſtrikingly magnificent. The bricks of which the buildings were compoſed, have ſtood the trial of many ages; their excellency makes them greatly ſought after, and they are ſent as articles of commerce to Moorſhedabad, and ſeveral other places. In its proſperity it was the capital of Bahar and Bengal, for which it was by its ſituation particularly well adapted.

GOU'RA, or GURA, a town of Poland, in the palatinate of Maſovia, on the Viſtula: twelve miles from Warſaw.

GOV'RA, a town of Perſia, in the province of Irak: thirty-five miles eaſt of Iſpahan.

GOU'RAINCOURT, a town of France, in the department of the Meuſe, and chief place of a canton, in the diſtrict of Eſtain: five leagues north-eaſt of Verdun, and two and three quarters north of Eſtain.

GOVRAY', a cape on the eaſt coaſt of the iſland of Jerſey, four miles eaſt from St. Helier.

GOURAY' (Le), a town of France, in the department of the North Coaſt, and chief place of a canton, in the diſtrict of Broons: three leagues weſt of Broons, and two and three quarters ſouth of Lamballe.

GOURD, *ſ.* in botany. See CUCURBITA.—The word in the fourth chapter of Jonah, which the LXX. and our verſion tranſlate a *gourd*, is in Hebrew *kikajon*. Jerome and Aquila uſe the word *hedera*, ivy. Jerome in different parts of his writings, gives two (bad) reaſons for this: in one place he ſays, that he followed ancient interpreters, which is not abſolutely true, for Juſtin Martyr employs the word *gourd*. In another place, Jerome confeſſes, that the word *ivy* does not anſwer the ſignification of the Hebrew קיקיון; but, as he could not find any Latin word proper to expreſs it, he choſe rather to uſe *hedera* than to leave it *kikajon*, which might be taken for a monſtrous animal in the Indies, or mountains of Bœotia. His deſcription of it is as follows: "It is a ſhrub which grows in the ſandy places of Paleſtine, and increaſes ſo ſuddenly, that in a few days it comes to a conſiderable height; the leaves are large, almoſt like thoſe of the vine; it is ſupported by its trunk, without being upheld by any thing elſe, and furniſhes a very agreeable ſhade." From this, it is plain enough, that it can neither be ivy, nor the gourd; and accordingly it is now generally agreed to be the *Ricinus major*, a kind of Palma Chriſti, in Egyptian called *kiki*, in Greek *ſelicyprion*, in the Syriac and Carthaginian language *elkeroa*. See Saurin's Diſſ. continued by Roques, tom. viii. p. 81, 8vo. edit. and Calmet's Dict. by Taylor, article *Kikajon*.

Bitter GOURD, ſee CUCUMIS. *Sour* GOURD, ſee ADANSONIA.

GOUR'DAN (Simon), a French writer, born at Paris in 1646. When he was about fifteen years of age, he entered among the canons regular of St. Victor, at Paris, where he practiſed auſterities and mortifications of the moſt rigorous kind. He led a ſolitary aſcetic life, almoſt entirely devoted to writing and ſtudy. He was the author of numerous Hymns, printed in the different offices of the Gallican church. Towards the cloſe of his life, he engaged in the theological conteſts of the times, and publiſhed a volume of Letters on the Subject of the Conſtitution *Unigenitus*. He died in 1729, at eighty-three years of age, leaving behind him in manuſcript, A Hiſtory of thoſe Members of the Order of St. Victor who were eminent for their Piety, Science, or Dignities, in folio.

GOURD'INESS, *ſ.* in farriery, the ſwelling of a horſe's legs after a journey.

GOUR'DON, a town of France, and principal place of a diſtrict, in the department of the Lot: five leagues and a half north of Cahors, and nine and a quarter weſt-north-weſt of Figeac. Lat. 44. 44. N. lon. 19. 3. E. Ferro.

GOURD'Y, *adj.* Swelled in the legs; ſwelled with hard uſage; greaſy.

GOU'RIN, a town of France, in the department of the Morbihan, and chief place of a canton, in the diſtrict of Le Faouet: two leagues and a half north-north-weſt of Le Faouet, and nine weſt of Pontivy.

GOUR'MANDIZE, *ſ.* Voraciouſneſs:

A tigre forth out of the wood did riſe,
That with fell claws, full of fierce *gourmandize*,
And greedy mouth wide gaping like hell gate,
Did run at Paſtorell, her to ſurprize. *Spenſer.*

GOUR'NAI (Le Jars de, Mary), a lady celebrated for learning, born at Paris in 1566. She loſt her father early, and acquired an adoptive one in the famous Michael de Montaigne, who was the object of her enthuſiaſtic admiration. He was accuſtomed to call her his *daughter of alliance*, and he made her heireſs of his writings. After his death ſhe publiſhed an edition of his Eſſays, dedicated to cardinal Richelieu. She was well acquainted with the learned languages, and maintained a correſpondence with many of the moſt eminent literary characters of her time. She died at Paris in 1645, in her ſeventy-ninth year, and was honoured with many epitaphs from men of letters. Her works were collected in a quarto volume, under the title of *Les Avis ou les Préſens de la Demoiſelle de Gournai*.

GOUR'NAY, a town of France, and principal place of a diſtrict, in the department of the Lower Seine: eight leagues eaſt of Rouen. Lat. 49. 29. N. lon. 19. 18. E. Ferro.

GOU'ROCK, a town of Scotland, in the county of Renfrew, on a creek of the river Clyde, near which is a copper mine: two miles weſt of Greenock.

GOUR'VILLE (John Herauld de), born at Rochefoucauld in 1625, and taken by the famous duke of that title into his ſervice, and made his friend and confidant. He was alſo much eſteemed by the great Condé, and by the ſuperintendant Fouquet. Being employed by the latter, he was involved in his diſgrace, and obliged to take refuge in foreign countries. What Voltaire aſſerts is not exactly true, "that he was at the ſame time hanged in effigy at Paris, and the king's envoy in Germany," ſince he had not the latter employment till ſome interval had elapſed from his flight. So well did he approve his political talents, that he was propoſed

to the king as ſucceſſor to Colbert in the miniſtry. He died in 1705. Gourville left Memoirs of his Life from 1642 to 1698, 2 vols. 12mo. which are written with frankneſs and ſimplicity. They contain many curious and authentic anecdotes of the principal perſons of his time, of which Voltaire is ſaid to have made conſiderable uſe.

GOUSSAINCOU'RT, a town of France, in the department of the Meuſe, and chief place of a canton, in the diſtrict of Vaucouleurs: two leagues and a quarter eaſt of Gondrecourt, and two and a quarter ſouth of Vaucouleurs.

GOUS'SET (James), a learned French proteſtant divine, born at Blois in 1635. He was educated to the miniſtry, and became paſtor of the proteſtant church at Poitiers in 1662. So high was his reputation for abilities and erudition, that he was three times invited to fill the chair of profeſſor of divinity at Saumur; but he would not quit his flock till compelled to become a fugitive from the kingdom, in conſequence of the revocation of the edict of Nantz. On this occaſion he took refuge in Holland, and afterwards was ſettled as French miniſter at Groningen, where he obtained the poſts of profeſſor of divinity and of the Hebrew language in the univerſity of that city. He died there in 1704, when ſixty-nine years of age. He was the author of, 1. Theological and Critical Strictures on the Propoſals for a new Verſion of the Scriptures, 1698, 12mo. 2. Diſſertations in Controverſy with the Jews, 1699. 3. Theological Lectures explanatory of the Apoſtle James's Doctrine concerning a Living Faith and a Dead Faith. 4. *Commentarii Linguæ Hebraicæ*, 1702, folio, forming a valuable Hebrew dictionary, of which the beſt edition was publiſhed at Leipſic in 1743, 4to. 5. *Jeſu Chriſti, Evangeliique Veritas demonſtrata, in Confutatione Libri Chizzouk Emounac*, or The Buckler of the Faith, by Rabbi Iſaac, 1712, folio. 6. *Diſſertatione in Epiſtolam Pauli ad Hebræos, &c.* 1712. He left behind him numerous manuſcripts, among which are Commentaries upon the whole of the ſacred Scriptures.

GOUT, *ſ.* [*goutte*, Fr.] The arthritis; a periodical diſeaſe attended with great pain. See MEDICINE.

GOUT, *ſ.* [French.] A taſte. *An affected word.*—Catalogues ſerve for a direction to any one that has a *gout* for the like ſtudies. *Woodward.*

GOUTHIE'RES (James), a learned civilian of the ſeventeenth century, born at Chaumont in Baſſigni, and became an advocate in the parliament of Paris. After paſſing forty years at the bar, he retired to the country, and died in 1638. He wrote in 1612 a work *De veteri Jure Pontificio Urbis Romæ*, 4to. which was ſo well received at Rome, that the ſenate conferred upon him and his poſterity the quality of a Roman citizen. He alſo publiſhed *De Officiis Domus Auguſtæ, publicæ & privatæ*, 4to. 1628. *De Jure Manium, ſeu de Ritu, More, & Legibus, priſci Funeris*, 4to. 1615; and two moral diſcourſes, viz. *Tireſias, ſeu de Cæcitatis & Sapientiæ Cognatione*, and *Choartius Major, ſeu de Orbitate toleranda.* He compoſed Latin verſes with ſucceſs; his *Rupella Capta*, addreſſed to cardinal Richelieu, 1628, 4to. is written with ſpirit and vigour.

GOUT'INESS, *ſ.* The ſtate or condition of being gouty. *Scott.*

GOUT'WEED, *ſ.* in botany. See ÆGOPODIUM.

GOUT'Y, *adj.* Afflicted or diſeaſed with the gout.—There dies not above one of a thouſand of the gout, although I believe that more die *gouty*. *Graunt.*—Relating to the gout.—There are likewiſe other cauſes of blood ſpitting; one is the ſettlement of a *gouty* matter in the ſubſtance of the lungs. *Blackmore.*

GOUVE'A, a town of Portugal, in the province of Beira: ſeven leagues ſouth-eaſt of Viſeo.

GOUX, a town of France, in the department of the Doubs, and chief place of a canton, in the diſtrict of Pontarlier: one league and three quarters north-weſt of Pontarlier, and three ſouth-eaſt of Ornans.

GOUX DE LA BOULAY'E (Francis le), a celebrated traveller, born about 1610, at Beaugé in Anjou. His inclination led him at an early age to travel, and he employed ten years ſucceſſively in rambling through various parts of the globe. In Aſia and Africa he paſſed as a Mahometan, in Europe as a Catholic. Upon his return, he publiſhed an account of his travels, under the title of *Les Voyages & Obſervations de François de la Boulaye le Goux, en divers Pays d'Europe, d'Aſie, & d'Afrique, juſqu'à l'Année* 1650, with figures, 4to. 1653. He was ſo much altered by his travels, that, on viſiting his native place, even his mother could not recognize him, and he was obliged to inſtitute a law-ſuit to eſtabliſh his right of primogeniture. Having ſucceeded in this point, he married and ſettled. In 1668, Louis XIV. being deſirous of renewing his commerce with the Porte and the Great Mogul, choſe La Boulaye for his ambaſſador. During this miſſion he died of a fever in Perſia in 1669.

GOU'YE (Thomas), a French Jeſuit and mathematician, born at Dieppe in 1650. He entered into the order in the year 1667, and principally diſtinguiſhed himſelf by the taſte which he diſcovered for ſcientific purſuits. In 1699 he was admitted an honorary member of the Royal Academy of Sciences at Paris, and proved an aſſiduous attendant at the meetings of that illuſtrious body, to whoſe Memoirs he was an enlightened contributor. He died at Paris in 1725, when ſeventy-five years of age. He publiſhed Phyſical and Mathematical Obſervations, tending to the Improvement of Aſtronomy and of Geography, ſent from Siam to the Academy of Sciences at Paris, by the Jeſuit Miſſionaries, &c. with Reflections and Notes, in two volumes. The firſt, which is in octavo, was publiſhed in 1688, and the ſecond, in quarto, in 1692.

This author is not to be confounded with his countryman GOUYE of Longuemare, who died in 1763, and was regiſtrar of the bailiwic of Verſailles. The latter publiſhed ſeveral intereſting Memoirs and Diſſertations relative to the hiſtory of France.

GOU'ZON, a town of France, in the department of the Creuſe, and chief place of a canton, in the diſtrict of Bouſſac: five leagues eaſt of Gueret.

GO'WER, the peninſulated extremity of Glamorganſhire, to the weſt of the bay of Swanſea. It has very lofty lime-ſtone cliffs next the ſea, whence large quantities of lime are exported to the Engliſh counties acroſs the Briſtol channel. The coaſt abounds with oyſters. The land is a fertile tract of arable and paſture.

GOW'ER (John), an Engliſh poet of the fourteenth century, deſcended from a family at Stitenham in Yorkſhire. He received a liberal education, and was a member of the ſociety of the Inner Temple, where Chaucer, on coming to the metropolis, found him much reſpected in the profeſſion of the law. Some have aſſerted that he became chief juſtice of the common pleas, but others ſuppoſe him in this point to have been miſtaken for another perſon of the ſame name. He particularly attached himſelf to Thomas duke of Glouceſter, uncle to Richard II. and was noticed by that monarch, at whoſe deſire he wrote his principal work. Yet on the acceſſion of Henry IV. he employed his pen in adulation of the new king, not without ſome ſevere reflections on the miſgovernment of the depoſed one. He appears to have been in affluent circumſtances; for he contributed largely to the rebuilding of the conventual church at St. Mary Overee, in Southwark. He died at a great age, in 1401. His tomb is ſtill to be ſeen in the church to which he was ſo munificent a benefactor. He was the author of three volumes entitled *Speculum Meditantis*; *Vox Clamantis*; *Confeſſio Amantis.* Of theſe, the firſt, or the Mirror of Meditation, is a moral tract in ten books, relative to the conjugal duties, written in French rhymes. The ſecond, or Voice of one crying in the Wilderneſs, is chiefly a metrical chronicle of the inſurrection of the commons under Richard II. in Latin elegiac verſe. The

third, or Lover's Confeſſion, is an Engliſh poem in eight books, relative to the morals and metaphyſics of love. This alone has been printed; and ſuch was its reputation, that it was one of the earlieſt products of the Engliſh preſs, being ſet forth by Caxton in 1483. The language of this piece is reckoned tolerably perſpicuous, and the verſification often harmonious. With reſpect to his Latin ſtyle, Mr. Warton gives him the credit of copying Ovid's Elegiacs with ſome degree of purity. He had not, however, got over the barbariſm of monkiſh rhymes, then ſo much the vogue.

GOWER's ISLAND, a ſmall iſland in the Southern Pacific Ocean, which has no anchorage near it. Lat. 7. 55. S. lon. 158. 56. E. Greenwich.

GOW'LANS (Locker). See TROLLIUS.

GOWN, *ſ.* [*gonna*, Ital. *gwn*, Welſh and Erſe.] A long upper garment:

In length of train deſcends her ſweeping *gown*,
And by her graceful walk the queen of love is known.
Dryden.

The long habit of a man dedicated to acts of peace, as divinity, medicine, law, &c.—The benefices are often ſo mean in Iriſh counties, that they will not yield any competent maintenance for an honeſt miniſter, ſcarcely to buy him a *gown*. *Spenſer.*—The dreſs of peace:

He Mars depos'd, and arms to *gowns* made yield;
Succeſsful councils did him ſoon approve
As fit for cloſe intrigues as open field. *Dryden.*

GOWN'ED, *adj.* Dreſſed in a gown:

In velvet white as ſnow the troop was *gown'd*,
The ſeams with ſparkling emeralds ſet around. *Dryden.*

GOWN'MAN, *ſ.* A man devoted to the arts of peace; one whoſe proper habit is a gown:

Let him with pedants
Pore out his life amongſt the lazy *gownmen*. *Rowe.*

GOW'RAN, a town of Ireland, in the county of Kilkenny: ſix miles eaſt of Kilkenny.

GOY'AS, a government of South America, in Brazil, which extends from 24. to 36. degrees of lon. weſt Ferro, and from 6. 30. to 19. ſouth lat. The number inhabitants of this vaſt extent of country is eſtimated at 8930 whites, 29,630 Indians, and 34,100 negroes. The chief buſineſs is ſearching for gold in the mines, which were firſt diſcovered in the year 1726.

GOYA'VA, a town of Africa, on the Grain Coaſt.

GOY'AVE, a town on the weſt coaſt of the iſland of Grenada, in the Weſt Indies. Lat. 12. 13. N. lon. 61. 31. W. of Greenwich.

GOYA'VES, a town of the iſland of Guadaloupe, ſituated in a bay to which it gives name.

GO'YEN (John Van), a painter of landſcapes, cattle, and ſea-pieces, born at Leyden in 1596; the diſciple of Vandervelde, the moſt celebrated landſcape-painter of his time. Van Goyen very ſoon roſe into general eſteem; and his works are univerſally ſpread through Europe. He died in 1656, aged 60. His beſt works are valued ſo highly in the Low Countries, that they deſervedly afford large prices, being ranked in Holland with the pictures of Teniers.

GOZ, or GO'ZEN, a ſeaport town of Africa, in the empire of Morocco, on the coaſt of the Atlantic, not far from Mogador.

GO'ZA, or GO'ZO, a ſmall iſland in the Mediterranean, belonging to the knights of Malta, ſituated a little to the north-weſt of Malta. The inhabitants of Gozo are ſaid to be more induſtrious than thoſe of Malta, as they are more ſecluded from the world and have fewer inducements to idleneſs. Their coverlits and blankets are much eſteemed, and their ſilk ſtockings remarkably fine; ſome, they pretend, have been ſold for ten ſequins a pair. The red kind of oranges are produced from the common orange bud, engrafted on the pomegranate ſtock. The ſugar cane is cultivated with ſucceſs in Gozo, though not in any conſiderable quantity.

GO'ZAN, a river of Aſſyria, mentioned, 2 *Kings* xvii. 6. xviii. 11. xix. 12. 1 *Chron.* v. 26. *Iſaiah* xxxvii. 12.

GOZ'ZO DI CAN'DIA, a ſmall iſland, near the iſland of Candia, in the Mediterranean. Lat. 34. 58. N. lon. 41. 31. E. Ferro.

GRAAF, or GRAEF (Regner de), a phyſician and anatomiſt, born at Schoonhoven in Holland, in 1641. His father, Cornelius, an architect, diſtinguiſhed himſelf by the invention of ſeveral hydraulic machines. Regner was brought up to phyſic, and ſtudied firſt at Leyden, under James Sylvius, and then in France, where he graduated at Angers in 1665. He ſettled at Delft, and became eminent in practice; but was cut off at the early age of thirty-two, in 1673. His death was imputed to vexation, from the controverſies in which he was engaged with Swammerdam. De Graaf's firſt publication was, *De Succi Pancreatici Natura & Uſu*, Leyden, 1664, 12mo. He next publiſhed, *De Virorum Organis Generationi inſervientibus*, 1668, 8vo. a work which gained him great anatomical reputation. In this work he was the firſt who gave repreſentations of the tubes for anatomical injection; an art in which he was very expert, and which he greatly improved. In 1672 he publiſhed, *De Mulierum Organis Generationi inſervientibus*, 8vo. a work containing much that is intereſting and valuable. He maintained in it the ovarian ſyſtem of generation, and gave figures of the corpora lutea, and the fœtus in different ſtates of progreſs. A ſhort time before his death, in 1673, he publiſhed *Partium Genitalium Defenſio*, in which he aſſerts his own claims to diſcovery, in oppoſition to thoſe of Swammerdam, and adds ſome new anatomical obſervations. All the works of De Graaf have been printed together in 8vo. Leyd. 1677; Lond. 1678; Amſt. 1705.

GRAB', a town of Bohemia, in the circle of Leitmeritz: ſeventeen miles weſt-north-weſt of Leitmeritz.

GRA'BAT, *ſ.* [French; from the Greek γραβατος, a bed.] A little bed with curtains. *Phillips.*

GRABATA'RII, *ſ.* [from *grabat.*] In church hiſtory, thoſe perſons who were baptiſed on their death-beds.

GRABAU', a town of Poland, in the palatinate of Kaliſh: twenty miles ſouth of Kaliſh.

GRABAW', a town of Poland, in the palatinate of Belcz: twenty-eight miles north-north-weſt of Belcz.

To GRAB'BLE, *v. n.* [probably corrupted from *grapple.*] To grope; to feel eagerly with the hands.—My blood chills about my heart at the thought of theſe rogues, with their bloody hands *grabbling* and pulling out my very entrails. *Arbuthnot.*

To GRAB'BLE, *v. a.* To lie proſtrate on the ground. *Ainſworth.*

GRABE (John-Erneſt), a learned divine, and editor of the Alexandrian MS. in the royal library at London, born at Koningſberg, in Pruſſia, in 1666. He received his education at the univerſity in his native town, and when he had taken his degree of M. A. ſedulouſly applied himſelf to the ſtudy of divinity, and to the peruſal of the writings of the fathers. From the latter he imbibed the opinion that the outward and uninterrupted ſucceſſion of biſhops is eſſential to the being of a true church; which, as it is contrary to the tenets of Lutheraniſm, occaſioned his being ſummoned before his ſuperiors, and confined for ſeveral months. Upon his releaſe, becoming ſtill more firmly attached to that doctrine, he determined to quit the communion in which he had been educated, and came to England, where he was ſo ſtrongly recommended to king William, that his majeſty granted him a penſion of 100l. a-year, to enable him to purſue his ſtudies. From this time he adopted England for his country; and he ſhewed that he was not unworthy of the patronage which he received, by the attention and induſtry which he beſtowed on the publication of ſeveral learned works. In 1698, he publiſhed,

liſhed, 1. *Spicilegium S.S. Patrum, &c.* vol. i. 8vo. containing fragments from the writings of the catholic fathers and hereties of the firſt century, with diſſertations and remarks; and in the following year came out the ſecond volume of the ſame work. In the year 1706 Mr. Grabe was ordained a deacon of the church of England, and was preſented to a chaplaincy of Chriſtchurch, Oxford. In the ſame year he publiſhed *S. Juſtini Philoſophi & Martyris Apologia Prima pro Chriſtianis, &c.* 8vo. illuſtrated with the notes of ſeveral learned men, and additional remarks of his own; and in 1702 he publiſhed *S. Irenæi Epiſcopi Lugdunenſis contra omnes Hæreſes, Libri quinque, &c.* folio, with prolegomena, notes, &c.

Upon the acceſſion of queen Anne to the throne, Mr. Grabe's penſion was continued, and her majeſty was adviſed to employ him on an undertaking which reflected great honour on himſelf, and on the patronage by which he was enabled to complete it: that was to print from the Alexandrian manuſcript in the royal library, the Septuagint tranſlation of the Old Teſtament. When the queen informed him that he was ſelected to perform this taſk, ſhe preſented him with a purſe, as a preliminary encouragement to his exertions. In 1705, Mr. Grabe publiſhed his propoſals for printing that work by ſubſcription, annexed to an account which he had drawn up of the ſuperior value of this copy to the Vatican manuſcript. In the following year, the univerſity of Oxford, as a teſtimony of their approbation of his deſign, honoured him with the degree of doctor of divinity; and in addition to the queen's bounty, he received a preſent from his own ſovereign, the king of Pruſſia, together with ſubſcriptions from the principal nobility, clergy, and gentry, from all parts. Animated by theſe encouragements, he proceeded with diligence and ſpirit in his undertaking, and in 1707 produced the firſt volume of his work, under the title of *Vetus Teſtamentum juxta Septuaginta Interpretes; Tomus I. continens Octateuchum, &c.* in folio and 8vo. This volume contains the Pentateuch and the three following books. According to the order which the author had adopted, the ſecond volume was to contain all the hiſtorical books of the Old Teſtament, whether canonical or apocryphal; the third, all the prophetical books; and the fourth, the Pſalms, the three books of Solomon, &c. But after he had begun to print the ſecond volume, he was induced to poſtpone the appearance of that, and alſo of the third volume, by the expectation of being furniſhed with important manuſcripts and other materials, which would enable him to render them more complete. That no time might be loſt, however, in expediting the whole work, he publiſhed in 1709 the fourth volume, *continens Pſalmorum, Jobi, ac tres Salamonis Libros, cum Apocrypha Ejuſdem, necnon Siracidæ Sapientia*, in folio and 8vo. In the following year he publiſhed a Latin diſſertation, giving a particular account of the reaſons why he had departed from his original order of publication, and of the helps which he expected to receive in order to perfect his plan. Theſe were, a Syriac manuſcript of the hiſtorical books of the Old Teſtament, with Origen's remarks upon them; and two manuſcripts, one belonging to cardinal Chigi, and the other to the college of Louis XIV. Afterwards he received theſe manuſcripts, and made collations from them; while in the mean time he had prepared a volume of annotations upon the whole work, and alſo collected the materials for the Prolegomena. It required, however, ſo much time to digeſt the whole into proper method, that the ſecond and third volumes were not publiſhed till after the author's death, which happened in 1712, in only the forty-fifth year of his age. Beſides this great and laborious work, Dr. Grabe publiſhed in 1705, an elegant edition of biſhop Bull's Latin works, in folio, with his own notes, which procured him the thanks of that prelate; aſſiſted in preparing for the preſs archdeacon Gregory's edition of the New Teſtament in Greek, which was printed in the ſame year; and in 1706 he publiſhed a preface to Daubuz's *Pro Teſtimonio Flavii Joſephi de Jeſu Chriſto, Libri duo.* He alſo left behind him a number of manuſcripts, of which the following were afterwards given to the world: *Liturgia Græca Johannis Erneſti Grabe*, ſubjoined to Chriſtopher Matthew Pfaff's edition of *Irenæi Fragmenta Anecdota*, printed at the Hague, in 1715, 8vo. and *De Forma Conſecrationis Euchariſticæ, hoc eſt, Defenſio Eccleſiæ Græcæ, &c.* publiſhed with an Engliſh verſion, and notes, &c. at London, 1721, 8vo.

GRA'BEN, a town of Croatia: twelve miles ſouth of Varaſdin.

GRA'BIN, a town of Sileſia, in the principality of Oels: two miles ſouth-weſt of Feſtenburg.

GRA'BERN, a town of Bohemia, in the circle of Leitmeritz: ſix miles weſt-ſouth-weſt of Leypa.

GRA'BERN, a town of Germany, in the archduchy of Auſtria: three miles north of Sonneberg.

GRA'BINETZ, a town of Imperial Iſtria: fourteen miles north eaſt of Pedena.

GRA'BO, a town of Sweden, in the province of Eaſt Gothland: eleven miles ſouth-eaſt of Linkioping.

GRABOVENIT'ZA (Upper), a lake of Sileſia, in the principality of Oels: five miles eaſt of Militſch.

GRABOVENIT'ZA (Unter), a lake of Sileſia, in the principality of Oels: three miles and a half eaſt of Militſch.

GRA'BOW, a town of Germany, in the circle of Lower Saxony, and duchy of Mecklenburgh: twenty-two miles ſouth of Schwerin.

GRAÇAY', a town of France, in the department of the Cher, and chief place of a canton, in the diſtrict of Vierzon: four leagues north-north-weſt of Iſſoudun, and three and a quarter ſouth-weſt of Vierzon.

GRAC'CHUS (T. Sempronius), father of Tiberius and Caius Gracchus, twice conſul, and once cenſor, was diſtinguiſhed by his integrity as well as his prudence and ſuperior ability either in the ſenate or at the head of the armies. He made war in Gaul, and met with much ſucceſs in Spain. He married Sempronia, of the family of the Scipio's, a woman of great virtue, piety, and learning.——Their children, Tiberius and Caius, who had been educated under the watchful eye of their mother, rendered themſelves famous for their eloquence, ſeditions, and an obſtinate attachment to the intereſts of the populace, which at laſt proved fatal to them. With a winning eloquence, affected moderation, and uncommon popularity, Tiberius began to renew the Agrarian law, which had already cauſed ſuch diſſenſions at Rome. See AGRARIAN LAWS, vol. i. p. 204. By the means of violence, his propoſition paſſed into a law, and he was appointed commiſſioner, with his father-in-law Appius Claudius, and his brother Caius, to make an equal diviſion of the lands among the people. The riches of Attalus, which were left to the Roman people by will, were diſtributed without oppoſition; and Tiberius enjoyed the triumph of his ſucceſsful enterprize, when he was aſſaſſinated in the midſt of his adherents by P. Naſica, while the populace were all unanimous to reelect him to ſerve the office of tribune the following year. The death of Tiberius checked, for a while, the friends of the people; but Caius, ſpurred by ambition and furious zeal, attempted to remove every obſtacle which ſtood in his way by force and violence. He ſupported the cauſe of the people with more vehemence, but leſs moderation, than Tiberius; and his ſucceſs ſerved only to awaken his ambition, and animate his reſentment againſt the nobles. With the privileges of a tribune, he ſoon became the arbiter of the republic, and treated the patricians with contempt. This behaviour haſtened the ruin of Caius, and in the tumult he fled to the temple of Diana, where his friends prevented him from committing ſuicide. This increaſed the ſedition, and he was murdered by order of the conſul Opimius, B.C. 121, about thirteen years after the unfortunate end

end of Tiberius. His body was thrown into the Tiber, and his wife was forbidden to put on mourning for his death. Caius has been accuſed of having ſtained his hands in the blood of Scipio Africanus the younger, who was found murdered in his bed. *Plut. in vitâ.—Cic. in Cat.* 1.—*Lucan.* 6. v. 796.

GRACE, *ſ.* [*grace*, Fr. *gratia*, Lat. *graace*, Erſe.] Favour; kindneſs.—Is this the reward and thanks I am to have for thoſe many acts of *grace* I have lately paſſed? *King Charles.*

O momentary *grace* of mortal men,
Which we more hunt for than the *grace* of God! *Shakeſp.*

Favourable influence of God on the human mind.—The *grace* of God, that paſſeth underſtanding, keep your hearts and minds. *Common Prayer.*—Virtue; effect of God's influence.—Within the church are contained perſons truly good and ſanctified; and together with them other perſons void of all ſaving *grace*. *Pearſon.*—Pardon; mercy:

Noble pity held
His hand a while, and to their choice gave ſpace.
Which they would prove, his valour or his *grace*. *Waller.*

Favour conferred:

I ſhould therefore eſteem it great favour and *grace*,
Would you be ſo kind as to go in my place. *Prior.*

Privilege:

But to return and view the cheerful ſkies,
To few great Jupiter imparts this *grace*. *Dryden.*

Behaviour, conſidered as decent or unbecoming.—Have I reaſon or good *grace* in what I do? *Temple.*—Adventitious or artificial beauty; pleaſing appearance.—To write and ſpeak correctly gives a *grace* and gains a favourable attention to what one has to ſay. *Locke.*

One lilac only, with a ſtatelier *grace*,
Preſum'd to claim the oak's and cedar's place. *Harte.*

Natural excellence:

The charming Lauſus, full of youthful fire,
To Turnus only ſecond in the *grace*
Of manly mien, and features of the face. *Dryden.*

Embelliſhment; recommendation; beauty.—Where juſtice grows, there grows the greater *grace*. *Spenſer.*

Set all things in their own peculiar place,
And know that order is the greateſt *grace*. *Dryden.*

Single beauty.—I paſs their form and every charming *grace*. *Dryden.*—Ornament; flower; higheſt perfection:

By their hands this *grace* of kings muſt die,
If hell and treaſon hold their promiſes. *Shakeſpeare.*

Single or particular virtue.—The *graces* of religion prepare him for the moſt uſeful diſcharge of every relation of life. *Rogers.*—Virtue phyſical:

O, mickle is the pow'rful *grace* that lies
In plants, herbs, ſtones, and their true qualities. *Shakeſp.*

The title of a duke or archbiſhop; formerly of the king, meaning the ſame as *your goodneſs*, or *your clemency*:

Here come I from our princely general,
To know your grief; to tell you from his *grace*,
That he will give you audience. *Shakeſpeare.*

A ſhort prayer ſaid before and after meat:

Then cheerful healths, your miſtreſs ſhall have place:
And what's more rare, a poet ſhall ſay *grace*. *Pope.*

To GRACE, *v. a.* To adorn; to dignify; to embelliſh; to recommend; to decorate:

Though triumphs were to generals only due,
Crowns were reſerv'd to *grace* the ſoldiers too. *Pope.*

To dignify or raiſe by an act of favour:

Diſpoſe all honours of the ſword and gun,
Grace with a nod, and ruin with a frown. *Dryden.*

To favour:

When the gueſts withdrew,
Their courteous hoſt, ſaluting all the crew,
Regardleſs paſs'd her o'er, nor *grac'd* with kind adieu.
Dryden.

ACT OF GRACE, an appellation firſt given to the act of parliament of 1696, c. 32. which allows priſoners for civil debts to be ſet at liberty, upon making oath that they have not wherewithal to ſupport themſelves in priſon, unleſs they are alimented by the creditors on whoſe diligences they were impriſoned, within ten days after intimation made for that purpoſe.

DAYS OF GRACE, three days immediately following the term of payment of a bill of exchange, in the laſt of which the creditor muſt proteſt it, if payment be not obtained, in order to intitle him to recourſe againſt the drawer. See the article BILL OF EXCHANGE, vol. iii. P. 34.

GRACE-CUP, *ſ.* The cup or health drank after grace:

The *grace-cup* ſerv'd, the cloth away,
Jove thought it time to ſhew his play. *Prior.*

GRA'CED, *adj.* Beautiful; graceful; virtuous; regular; chaſte. *Not in uſe:*

Epicuriſm and luſt
Make it more like a tavern or a brothel,
Than a *grac'd* palace. *Shakeſpeare.*

GRA'CEFUL, *adj.* Beautiful with dignity:

Matchleſs his pen, victorious was his lance;
Bold in the liſts, and *graceful* in the dance. *Pope.*

Graceful to fight, and elegant to thought,
The great are vanquiſh'd, and the wiſe are taught. *Young.*

GRA'CEFULLY, *adv.* Elegantly; with pleaſing dignity.—Walking is the mode or manner of man, or of a beaſt; but walking *gracefully* implies a manner or mode ſuperadded to that action. *Watts.*

Through nature and through art ſhe rang'd,
And *gracefully* her ſubject chang'd. *Swift.*

GRA'CEFULNESS, *ſ.* Elegance of manner; dignity with beauty.—He executed with ſo much *gracefulneſs* and beauty, that he alone got money and reputation. *Dryden.*—There is a ſecret *gracefulneſs* of youth which accompanies his writings, though the ſtaidneſs and ſobriety of age be wanting. *Dryden's Ovid, Preface.*

Her hearers are amaz'd from whence
Proceeds that fund of wit and ſenſe;
While *gracefulneſs* its art conceals,
And yet through every motion ſteals. *Swift.*

GRA'CELESS, *adj.* Void of grace; wicked; hopeleſsly corrupt; abandoned.—In all manner of *graceleſs* and hopeleſs characters, ſome are loſt for want of advice, and others for want of heed. *L'Eſtrange.*

Furniſh'd for offence, he croſs'd the way,
Betwixt the *graceleſs* villain and his prey. *Dryden.*

GRA'CELESSLY, *adv.* In a graceleſs manner. *Scott.*

GRA'CELESSNESS, *ſ.* The ſtate of quality of being graceleſs. *Scott.*

GRA'CES, *ſ.* *Good graces*, for favour, is ſeldom uſed in the ſingular:

Demand deliv'ry of her heart,
Her goods and chattles, and good *graces*,
And perſon up to his embraces. *Hudibras.*

GRA'CES, or CHARITES, in mythology, were three beautiful deities who attended on Venus. Their names, *Aglia*, *Thalia*, and *Euphroſyne*, are ſaid literally to ſignify *ſhining*, *flouriſhing*, and *gay*. They are painted naked, to ſhow that the Graces borrow nothing from art, and that they have no other beauties than what are natural. Yet in the firſt ages they were not repreſented naked, as appears from Pauſanias, lib. vi. and lib. ix. who deſcribes their

their temple and ſtatues. Their robe was gilt; one of them held in her hand a roſe, another a dye, and the third a ſprig of myrtle.—See the article CHARITES, vol. iv. p. 113.

GRA'CIAN (Balthaſar), an eminent Spaniſh writer, born in 1603 at Calataiud. He entered among the Jeſuits at the age of ſixteen, and became a teacher in the ſociety ſucceſſively of belles-lettres, of philoſophy, and theology. He was likewiſe for ſome years a preacher; and finally was rector of the Jeſuits' college of Tarragona. He died in that college in 1658. His principal works are: 1. *El Heroe* (The Hero), 1637, under the name of Lorenzo Gracian, which he alſo took on other occaſions. 2. *El Politico D. Ferdinando el Catholico*, 1641; or, Reflections on the political Conduct of Ferdinand the Catholic. 3. *Agudezza y arte de Ingenio*, 1642; a treatiſe on the different kinds of witty conceptions. 4. *El Diſcreto*, 1646. 5. *El Criticon*, a work treating on the errors to which man is liable. 6. *Oraculo Manual, y Arte de Prudencia*, 1647; a manual for prudent conduct. 7. *El Comulgador*, 1655; a collection of meditations on taking the holy communion. Moſt of theſe works have been tranſlated into French, and other foreign languages.

GRA'CIAS A DI'OS, a town of North America, in the country of Mexico, and province of Honduras, ſituated at the mouth of a river, which communicates with the Bay of Honduras: 140 miles eaſt of Guatimala. Lat. 14. 30. N. lon. 72. 15. W. Greenwich.

GRA'CILE, *adj.* [*gracilis*, Lat.] Slender, ſmall.

GRA'CILENT, *adj.* [*gracilentus*, Lat.] Lean.

GRACI'LITY, *ſ.* [*gracilitas*, Lat.] Slenderneſs; ſmallneſs.

GRA'CIOUS, *adj.* [*gracieux*, Fr.] Merciful; benevolent.—To be good and *gracious*, and a lover of knowledge, are two of the moſt amiable things. *Burnet.*—Favourable; kind.—And the Lord was *gracious* unto them, and had compaſſion on them. 2 *Kings*, xiii. 23.

From now reveal
A *gracious* beam of light; from now inſpire
My tongue to ſing, my hand to touch the lyre. *Prior.*

Acceptable; favoured.—Doctrine is much more profitable and *gracious* by example than by rule. *Spenſer.*—He made us *gracious* before the kings of Perſia, ſo that they gave us food. 1 *Eſdr.* viii. 80.—Virtuous; good.—Kings are no leſs unhappy, their iſſue not being *gracious*, than they are in loſing them when they have approved their virtues. *Shakeſpeare.*—Excellent. *Now obſolete.*—The grievous abuſe which hath been of councils, ſhould rather cauſe men to ſtudy how ſo *gracious* a thing may again be reduced to that firſt perfection. *Hooker.*—Graceful; becoming. *Obſolete.*—Our women's names are more *gracious* than their Rutilia, that is red-head. *Camden.*—This ſenſe was extended to perſons.—There was not ſuch a *gracious* creature born. *Shakeſpeare.*

GRA'CIOUSLY, *adv.* Kindly; with kind condeſcenſion.—If her majeſty would but *graciouſly* be pleaſed to think a hardſhip of this nature worthy her royal conſideration. *Swift.*—In a pleaſing manner.

GRA'CIOUSNESS, *ſ.* Kind condeſcenſion.—The *graciouſneſs* and temper of this anſwer made no impreſſion on them. *Clarendon.*—Pleaſing manner.

GRAC'ULA, [Lat. ſo named from its cry.] In ornithology, the grakle; a genus of birds belonging to the order of picæ; the characters of which are: bill convex, knife-ſhaped, naked at the baſe: tongue entire, enlarged and fleſhy; feet ambulatory. None of theſe birds have been found to inhabit Europe. They are remarkable for their thick bill, compreſſed at the ſides; their minute noſtrils placed at its baſe; their hooked ſharp nails; and the middle toe of their fore feet connected at the baſe with the exterior one. There are thirteen ſpecies now aſcertained, beſides varieties.

1. Gracula religioſa, the minor grakle; plumage violet, black, with a fine gloſs on the upper-part of the body; the throat, wings, and tail, enriched with green and violet reflections; and it has a white ſpot on the wings. What is moſt remarkable, is a double yellow comb, irregularly jagged, which riſes on each ſide of the head, behind the eye; the two parts recline and approach each other, and on the back of the head they are parted only by a bar of long narrow feathers, which begins at the baſe of the bill; the other feathers on the crown of the head form a ſort of black velvet; the legs are of a tawny yellow. It feeds on fruit, and is eight inches long. This ſpecies abounds in Aſia, and is found in almoſt every iſle beyond the Ganges. It is a very tame and familiar bird; and, like the parrot, will ſoon learn to talk. There is a larger variety, which differs only in ſize, and in ſlight variations of colour.

2. Gracula calva, the bald grakle: upper part of the body light ſilver-grey, tail and wings darker, each eye encircled by a cere entirely bare, and forming an irregular ellipſe; the under part of the body is brown, varied with white ſpots; the naked ſkin which ſurrounds the eyes is fleſh-coloured; the bill, legs, and nails, black. It has the name of *goulin* in the Philippine iſlands, where it very much abounds.

3. Gracula criſtatella, the creſted grakle: this is larger than the preceding; almoſt all its plumage is black, with a dull bluiſh tint; a white ſpot appears in the middle of the wings, and a little white on the tips of the lateral quills of the tail; the bill and legs are yellow, and the iris of a fine orange. It has a ſmall tuft of feathers on the forehead, forming a creſt, which it can erect at pleaſure. Theſe birds are natives of China, where they are much eſteemed, and the figures of them are frequently ſeen in Chineſe paintings and paper-hangings.

4. Gracula barita, the boat-tailed grakle: about the ſize of a cuckow: bill ſharp, black, and an inch and a half in length; the general colour of the plumage is black, with a gloſs of purple; legs and claws black, the latter hooked. It has a great ſingularity in the folding up of the tail-feathers, which, inſtead of forming a plain ſurface at top, ſink into a hollow like a deep gutter. It always carries its tail expanded when on the ground, and folds it up in the above manner only when perched, or flying. It inhabits Jamaica; and feeds on maize, and other inſects, as well as on the fruit of the banana. It is likewiſe common in North America, where it breeds in the ſwamps, and migrates in September, after which none are ſeen.

5. Gracula quiſcala, the purple grakle; plumage black, but moſt beautifully and richly gloſſed with purple, eſpecially on the head and neck. The female is wholly of a brown colour, deepeſt on the wings and tail. This ſpecies inhabits Carolina, Mexico, and other parts of North America; alſo Jamaica; and the Weſt-India iſlands. Theſe birds are very deſtructive to the fields of maize. They build in trees; and are ſaid to paſs the winter in ſwamps which are quite overgrown with wood, from thence only appearing in mild weather; and, after the maize is got in, are content to feed on aquatic tare-graſs, buck-wheat, and oats; yet they are ſaid alſo to deſtroy that pernicious inſect the bruchus piſi. There is a pied variety of this ſpecies, with the head and breaſt white; quill-feathers and tail black; found in Mexico.

6. Gracula fœtida, the fetid grakle: plumage black; quill-feathers bluiſh; band round the neck naked; head with erect ſhort ſilky feathers; bill like that of the cuckow; noſtrils oval, naked; tongue ſharp; tail even. Inhabits America: ſize of a magpie.

7. Gracula ſaularis, the dial grakle: upper parts bluiſh-black; belly, ſpot on the wings, and lateral tail-feathers, white. Inhabits Bengal: ſize of a thruſh.

8. Gracula Atthis, the Egyptian grakle: ſuperior part of the body greeniſh-blue; belly, ferruginous; legs, blood-red. Neck with a longitudinal ruſty line at the ſides. Inhabits Egypt; four inches long; feeds on inſects.

9. Gracula longiroſtra, the long-billed grakle: body brown;

brown; beneath ochre-yellow; head, and neck, black; band round the neck naked, wrinkled; area of the wings white; tail wedge-ſhaped; black, white at the tip. Bill black, long; noſtrils placed in the middle; tongue deeply cleft, the edges jagged; irids duſky; firſt quill-feathers obliquely white at the baſe; legs long, ſtout, black; body, ſlender. Inhabits South America; about eight inches long. There is a variety of this ſpecies of a ſhining-black; ſome of the feathers of the ſhoulders and tail yellow; found in the Sandwich iſlands.

10. Gracula ſturnina, the Dauurian grakle; plumage hoary; ſpot on the crown and back between the wings violet black; tail and wings with a ſhade of green, the latter with a double white ſtripe. Inhabits the ozier banks of Dauuria; in its neſt and eggs reſembles the thruſh.

11. Gracula icterops, the yellow-faced grakle; body black; band on the wings and body beneath white; region of the eyes naked, wrinkled; bill compreſſed; noſtrils oval; legs yellow. Inhabits New Holland.

12. Gracula Cayanenſis, the climbing grakle; plumage ſtriate; above tawny, beneath yellowiſh; head, and chin, varied with tawny and white; tail wedge-ſhaped, ſharp, and with the wings tawny. Bill black, near two inches long, a little curved; legs black. Inhabits the interior parts of Guiana; climbs trees like the woodpecker.

13. Gracula carunculata, the cockſcomb grakle; upper parts of the body cinereous; tail and quill-feathers black; crown and chin with warty excreſcences. Inhabits the Cape of Good Hope? ſix inches long.

GRA'DATED, *adj.* [from the Lat. *gradus*, a ſtep.] Graduated, divided into parts or degrees. *Scott.*

GRADA'TIO, *ſ.* in rhetoric, a figure the ſame that in Greek is called climax.

GRADA'TION, *ſ.* [*gradation*, Fr. *gradus*, Lat.] Regular progreſs from one degree to another.—The deſire of more and more riſes by a natural *gradation* to moſt, and after that to all. *L'Eſtrange.*—Regular advance ſtep by ſtep.—The pſalmiſt very elegantly expreſſeth to us the ſeveral *gradations* by which men at laſt come to this horrid degree of impiety. *Tillotſon.*—Order; ſequence; ſeries:

'Tis the curſe of ſervice;
Preferment goes by letter and affection,
Not, as of old, *gradation*, where each ſecond
Stood heir to th' firſt. *Shakeſpeare.*

Regular proceſs of argument.—Certain it is, by a direct *gradation* of conſequences from this principle of merit, that the obligation to gratitude flows from, and is enjoined by, the firſt dictates of nature. *South.*

GRA'DATORY, *ſ.* [*gradus*, Lat.] Steps from the cloiſters into the church. *Ainſworth.*

GRA'DECK, a town of Lithuania, in the palatinate of Troki: twenty miles ſouth-ſouth-weſt of Grodno.

GRA'DES, or GRADUS, a town of Germany, in the duchy of Carinthia: five miles north of Gurck, and five weſt of Freiſach.

GRA'DETZ, a town of Swiſſerland, in the Valais: ſix miles eaſt of Sion.

GRA'DIENT, *adj.* [*gradiens*, Lat.] Walking; moving by ſteps.

GRADIG'NA, a town of Venetian Iſtria: ſeven miles ſouth-ſouth-eaſt of Capo d'Iſtria.

GRADIS'CA, or GRAD'ISG, a town of Sclavonia, ſituated on the river Save, near the borders of Croatia, well peopled, and ſurrounded with fortifications; a regiment of infantry takes its name, and is appointed to defend the frontiers; 132 miles weſt of Belgrade, and 170 ſouth of Vienna. Lat. 45. 28. N. lon. 34. 31. E. Ferro.

GRADIS'CA, a town of Germany, in the circle of Auſtria, and county of Friuli, on the Liſonzo; built in 1473, to ſtop the inroads of the Turks. In 1764, the fortifications were repaired and enlarged, and in 1784 it was erected into a biſhopric. It was taken by the French republicans in 1797, and its garriſon, conſiſting of three thouſand men, were made priſoners; the Auſtrian army, commanded by the arch-duke Charles, having juſt before been defeated at no great diſtance from the town. The territory of Gradiſca, which was formerly a county of itſelf, is united to Goritz: five miles ſouth of Goritz, and one hundred and eighty-two ſouth-ſouth-weſt of Vienna. Lat. 46. 6. N. lon. 31. 18. E. Ferro.

GRA'DISCHK, a town of Stiria: one mile from Windiſch Gratz.

GRADIS'TA, a town of European Turkey, in Bulgaria, on the borders of Servia: forty miles ſouth of Viddin.

GRADI'VUS, a ſurname of Mars among the Romans, perhaps from *χραδαινειν*, brandiſhing a ſpear. His reſidence was ſuppoſed to be among the fierce and ſavage Thracians and Getæ, over whom he particularly preſided. *Virgil.*

GRAD'LIZ, a town of Bohemia, in the circle of Konigingratz: twelve miles north of Konigingratz.

GRA'DO, a town of Spain, in the province of Aſturia: ten miles north-weſt of Oviedo.

GRA'DO, a ſmall iſland in the Gulf of Venice, near the coaſt of Friuli. Lat. 45. 44. N. lon. 31. 8. E. Ferro.

GRA'DUAL, *adj.* [*graduel*, Fr.] Proceeding by degrees; advancing ſtep by ſtep; from one ſtage to another:

Nobler birth
Of creatures animate with *gradual* life,
Of growth, ſenſe, reaſon, all ſumm'd up in man. *Milton.*

GRA'DUAL, *ſ.* [*gradus*, Lat.] An order of ſteps:

Before the *gradual* proſtrate they ador'd,
The pavement kiſs'd, and thus the ſaint implor'd. *Dryd.*

A prayer; a form of prayer to be ſung in the Roman church after the epiſtles.

GRADUAL PSALMS, fifteen pſalms, from the 119th to the 134th, which were wont to be ſung by the Levites, as they went up the fifteen ſteps of Solomon's temple, a pſalm on each ſtep.

GRADUAL'ITY, *ſ.* Regular progreſſion.—This ſome aſcribe unto the mixture of the elements, others to the *graduality* of opacity and light. *Brown.*

GRAD'UALLY, *adv.* By degrees; in regular progreſſion.—The Author of our being weans us *gradually* from our fondneſs of life the nearer we approach towards the end of it. *Swift.*—In degree.—Human reaſon doth not only *gradually*, but ſpecifically, differ from the fantaſtic reaſon of brutes. *Grew.*

To GRA'DUATE, *v. a.* [*graduer*, Fr. *gradus*, Lat.] To dignify with a degree in the univerſity.—John Tregonwel, *graduated* a doctor and dubbed a knight. *Carew.*—To mark with degrees.—The places were marked where the ſpirits ſtood at the ſevereſt cold and greateſt heat, and according to theſe obſervations he *graduates* his thermometers. *Derham.*—To raiſe to a higher place in the ſcale of metals: a chemical term.—The tincture was capable to tranſmute or *graduate* as much ſilver as equalled in weight that gold. *Boyle.*—To heighten; to improve.—Not only vitriol is a cauſe of blackneſs, but the ſalts of natural bodies: and dyers advance and *graduate* their colours with ſalts. *Brown.*

GRA'DUATE, *ſ.* [*gradué*, Fr. from *gradus*, Lat.] A man dignified with an academical degree:

Of *graduates* I diſlike the learned rout,
And chuſe a female doctor for the gout. *Bramſton.*

GRADUA'TION, *ſ.* [French; from *graduate*.] Regular progreſſion by ſucceſſion of degrees.—The *graduation* of the parts of the univerſe is likewiſe neceſſary to the perfection of the whole. *Grew.*—Improvement; exaltation of qualities.—The act of conferring academical degrees.—The art of dividing mathematical and aſtronomical

GRACULA.

J. Pass sc.

1. Minor Grakle. 2. Crested Grakle.

London. Published as the Act directs, March 7th 1807, by J. Wilkes.

aſtronomical inſtruments into parts or degrees; for the method of which, ſee the article SCALE. See alſo GEOMETRY of the COMPASS, in this volume.

GRA'DUS, *ſ.* [Latin, a ſtep.] A Roman meaſure, in length two feet, two inches, and ten decimal parts.

GRAD'WEIN, a town of Germany, in the duchy of Stiria: ſix miles north-north-weſt of Graz.

GRÆCI'NUS (Julius), a Roman ſenator in the reign of Caligula. He was diſtinguiſhed for eloquence and for the ſtudy of philoſophy, and he carried into practice the moral leſſons he had learned: for he refuſed to obey the command of Caligula to appear as the accuſer of Marcus Silanus, and ſuffered death in conſequence. Seneca ſays of him, "that he was put to death for the ſole reaſon, that he was too good a man to be permitted to live under a tyrant." Columella mentions him as having written a treatiſe concerning agriculture and the management of vines. He was the father of the illuſtrious Cn. Julius Agricola.

GRÆ'DER FIO'RD, a bay of Weſt Greenland. Lat. 63. 50. N. lon. 49. 30. W. Greenwich.

GRÆME (James), an admired poetical writer, born in 1749, at a village near Lanerk in Scotland, and died when only twenty-two years of age. His ſhort life, paſſed in obſcurity, and in the ſilent acquiſition of knowledge, has ſcarcely any objects for deſcription, or events to which narrative can give importance. In 1763, when Græme was fourteen years old, he was ſent to the grammar-ſchool of the neighbouring town of Lanerk, where, under Mr. Robert Thomſon, brother-in-law to the "poet of the Seaſons," he laid the foundations of claſſical knowledge and refined taſte. Like other votaries of the muſes, he was paſſionately fond of rural ſcenery, and delighted in walking alone among the beautiful caſcades and groves which the banks of the Clyde preſent in this part of Lanerkſhire. The lowlineſs of his lot conſpired with the ſimplicity of his heart, to poſſeſs him with an early veneration for the virtues and the writings of the primitive ages; and the nature of his ſtudies afforded him the beſt opportunities to heighten and confirm that veneration, by enabling him to converſe familiarly with the moſt celebrated writers of Greece and Rome. He read their remains with ardour, and imbibed their ſentiments with enthuſiaſm; on them he formed his judgment, and improved his heart. Time was not allowed him for going deep into French, Italian, and German, literature; but he had read the beſt authors in theſe languages, in Engliſh verſions. From the gentleneſs of his diſpoſition, the elegance of his fancy, and the claſſical ſimplicity of his taſte, the ſtyle of his poetry took its character, which has more tenderneſs than ſublimity, more elegance than dignity, more eaſe than force. Prompted generally by incident, and impatient of deſign, he wrote with more happineſs than care; but all his compoſitions are diſtinguiſhed by marks of genius and poetical feeling, with numbers animated and varied according to the ſubject. His thoughts are often ſtriking, and always juſt. His verſification, though not exquiſitely poliſhed, is commonly flowing and harmonious. His language is, in general, chaſte, correct, and well adapted. All his pieces were written with ſurpriſing facility; moſt of them, as occaſion ſuggeſted; and, as his cuſtom was, they were committed to any ſcrap of paper, or blank leaf of a book that came in his way. Of the incredible number of pieces he compoſed, the printed collection contains only thirty-eight elegies, and ſomewhat more than half that number of miſcellaneous poems and tranſlations; being all he deſigned for publication, or of which any complete copies have been preſerved.

His Love Elegies, the moſt finiſhed and the moſt pleaſing of his performances, are moſtly written in alternate rhyme, in the ſtyle of Hammond, whoſe ſimplicity and tenderneſs he has judiciouſly imitated, without adopting his Roman imagery derived from Tibullus, whom for the moſt part he tranſlates. Of his Elegies, moral and deſcriptive, the ſentiments, in general, are pleaſing and pathetic, and the imagery pictureſque and beautiful. The Elegy on the Loſs of the Aurora; the Elegy written at Cuthally Caſtle; October, an Elegy; and the Elegy on Mr. Fiſher, deſerve particular commendation. They unite poetical beauty with that plaintive tenderneſs which is the characteriſtic of elegy. The amiable humanity, and tender ſimplicity, which diſtinguiſh The Linnet, an Elegy, are attractive and affecting in the higheſt degree. Of his miſcellaneous poems, the Night Piece, Hymn to the Eternal Mind, Fit of the Spleen, Abra, the Student, Alexis, &c. are chiefly diſtinguiſhed for felicity of invention, ſerioufneſs of ſubject, and ſtrength and elegance of compoſition. His Epiſtles, Songs, Anacreontics, &c. diſplay invention, and no ſmall portion of that eaſe, vivacity, and delicacy, eſſential to ſucceſs in the lighter and leſs elevated productions of fancy. His Hero and Leander is for the moſt part a tranſlation from the Greek poem of Muſæus. Several paſſages in the original are omitted; others paraphraſed, and ſome entire ſpeeches and new circumſtances introduced. Upon the whole, the general poetical merit of his compoſitions muſt be allowed to be conſiderably above mediocrity. That he had great force of genius, and genuine poetical feeling, cannot be denied; and there are ſcarcely any of his performances that do not diſplay a tenderneſs of ſentiment, an energy of expreſſion, a vivacity of deſcription, and an appoſite variety of numbers, which evince the vigour of his imagination, and the accuracy of his taſte, and reflect much honour both on his heart and his underſtanding.

GRÆNTZ'GRABEN, a river of Sileſia, which runs into the river Schwartze: one mile north-weſt of Cranſt.

GRÆ'SATZ, a town of Croatia: thirty miles ſouth of Bihacs.

GRÆ'VIUS (John-George), a very eminent critic, born in 1632 at Naumburg in Saxony. After acquiring the learned languages at a college in Germany, he ſtudied at Leipſic under Rivinus and Strauchius. He then paſſed two years at Deventer in an intimate connection with the celebrated John-Frederic Gronovius, to whom he acknowledged himſelf indebted for a great part of his acquiſitions. He ſpent ſome time at Amſterdam; and at the age of twenty-four was invited by the elector of Brandenburg to occupy a profeſſorſhip at Duiſburg. Two years afterwards he ſucceeded Gronovius at Deventer. His reputation induced the ſtates of Utrecht to attract him to their univerſity; and during forty-one years he filled the chairs of politics, hiſtory, and eloquence, in Utrecht, refuſing various invitations to other ſeminaries. He drew a great concourſe of ſtudents from all parts, ſome of them of high rank; and the curators of the univerſity, conſcious of the treaſure they poſſeſſed, loaded him with favours. He died in 1703, aged ſeventy-one. The works of Grævius are well known. They conſiſt of editions of ſeveral claſſic authors, as Heſiod, the greater part of Cicero, Florus, Cæſar, Suetonius, &c. and of two great compilations. Theſe are, *Thſaurus Antiquitatum Romanorum*, 12 vols. folio, 1694 *et ſeq.* a vaſt collection of authors who have treated on this ſubject; and *Theſaurus Antiquitatum Italicorum*, 6 vols. folio, continued by Burman to the forty-fifth volume. Grævius as a critic was modeſt, and free from the pride and pedantry which too often accompany this arduous character.

GRA'FABERG, a town of Germany, in the archduchy of Auſtria: five miles ſouth-weſt of Schrattentaal.

GRA'FENDORF, a town of Germany, in the archduchy of Auſtria, ſituated on the Bielach: four miles ſouth of St. Polten.

GRA'FENHAYNCHEN, a town of Germany, in the circle of Upper Saxony, and electorate of Saxony: eleven miles ſouth-eaſt of Deſſau, and eleven ſouth-ſouth-weſt of Wittenberg.

GRA'FENSCHLAG,

GRA'FENSCHLAG, a town of Germany, in the archduchy of Auſtria: four miles ſouth of Zwetl.

GRA'FENWORTH, a town of Germany, in the archduchy of Auſtria: eleven miles ſouth-weſt of Sonneberg.

GRAFF, *ſ.* A ditch; a moat.—Though the fortifications were not regular, yet the walls were good, and the *graff* broad and deep. *Clarendon.*

GRAFF, or GRAFT, *ſ.* [*greffe*, Fr.] A ſmall branch inſerted into the ſtock of another tree, and nouriſhed by its ſap, but bearing its own fruit; a young cyon. See HORTICULTURE.—God gave unto man all kinds of ſeeds and *graffs* of life; as the vegetative life of plants, the ſenſual of beaſts, the rational of man, and the intellectual of angels. *Raleigh.*

Now the cleft rind inſerted *graffs* receives,
And yields an offſpring more than nature gives. *Pope.*

To GRAFF, or GRAFT, *v. a.* To inſert a cyon or branch of one tree into the ſtock of another:

With his pruning hook disjoin'd
Unbearing branches from their head,
And *graft* more happy in their ſtead. *Dryden.*

To propagate by inſertion or inoculation.—Now let me *graff* my pears and prune the vine. *Dryden.*—To inſert into a place or body to which it did not originally belong.—And they alſo, if they bide not ſtill in unbelief, ſhall be *grafted* in; for God is able to *graff* them in again. *Romans.*

Theſe are th' Italian names which fates will join
With ours, and *graff* upon the Trojan line. *Dryden.*

To impregnate with an adſcititious branch:

The noble iſle doth want her proper limbs;
Her royal ſtock *graft* with ignoble plants. *Shakeſpeare.*

To join one thing ſo as to receive ſupport from another:

May one kind grave unite each hapleſs name,
And *graft* my love immortal on thy fame. *Pope.*

To GRAFF, *v. n.* To practiſe inſition:

In March is good *graffing* the ſkilful do know,
So long as the wind in the eaſt do not blow:
From moon being changed, 'till paſt be the prime,
For *graffing* and cropping is very good time. *Tuſſer.*

GRAF'FENBERG, a town of Germany, in Upper Carniola: nineteen miles ſouth-eaſt of Laybach.

GRAF'FENDORFF, a town of Germany, in the duchy of Stiria: four miles north of Hardeberg.

GRAF'FENECK, a town of Germany, in the archduchy of Auſtria: ten miles ſouth-weſt of Sonneberg.

GRAF'FEN TON'NA, a town of Germany, in the circle of Upper Saxony, and principality of Gotha: eight miles north of Gotha.

GRAF'FENTHAL, a town of Germany, in the circle of Upper Saxony, and principality of Altenburg: ſeven miles ſouth of Saalfeld, and fifty-two ſouth-weſt of Altenburg.

GRAFFENWARK'MARCK, a town of Germany, in Middle Carniola: four miles ſouth of Gottſchee.

GRAFF'ER, *ſ.* [from *greffier*, Fr.] In old ſtatutes, a ſcrivener, a notary.

GRAF'FIGNY (Frances d'Iſſembourg d'Happoncourt de), a literary lady, born at Nanci about 1694. Her huſband, De Graffigny, chamberlain to the duke of Lorrain, was a man of ſuch a brutal diſpoſition, that after living many years with him, ſhe obtained a legal ſeparation. She then went to Paris with mademoiſelle de Guiſe, who was eſpouſed to marſhal Richelieu, and ſoon made her merit known to the literati of that capital. She firſt appeared as an author in a Spaniſh novel in 1745. This was followed by the *Lettres d'une Peruvienne*, 2 vols. 12mo. which were much read and admired, notwithſtanding ſome affectation in the ſtyle. A dramatic piece by madame de Graffigny, in five acts in proſe, entitled *Cenie*, was regarded as one of the beſt ſpecimens of ſentimental or pathetic comedy. Another of a ſimilar kind, named *La Fille d'Ariſtide*, obtained leſs applauſe. This authoreſs was of a very eſtimable character in private life, and had many reſpectable friends. The emperor and empreſs honoured her with their friendſhip, and made her frequent preſents. She was an aſſociate of the academy of Florence; and died at Paris in 1758, at the age of ſixty-four.

GRAF'FIUM, *ſ.* [from *graffer.*] A writing-book; a regiſter of deeds or evidences.

GRAF'TER, *ſ.* One who propagates fruit by grafting.—I am informed, by the trials of the moſt ſkilful *grafters*, that a man ſhall ſeldom fail of having cherries borne by his graft the ſame year in which the inſition is made. *Evelyn.*

GRAFT'ING, *ſ.* The art of inſerting the branch of one tree into the ſtock of another. For the proceſs, advantages, &c. ſee the article HORTICULTURE.

GRAF'TON, a county of the American States, in New Hampſhire, is bounded north by Canada, ſouth by the counties of Strafford, Hillſborough, and Cheſhire, weſt by the ſtate of Vermont, and eaſt by the diſtrict of Maine. It comprehends nearly as much territory as all the other four counties, but it is by no means ſo thickly inhabited. It is divided into fifty townſhips, and ſeventeen locations, and contains by the cenſus 13,472 inhabitants; but the increaſe of population ſince the enumeration of 1790 has been very great.

GRAF'TON, a townſhip of the American States, in the county of its own name in New Hampſhire, thirteen miles ſouth-eaſt of Dartmouth college, and nineteen ſouth-weſt of Plymouth. It was incorporated in 1778. *Lapis ſpecularis*, commonly called iſinglaſs, of the beſt quality, is found in this townſhip, in a mountain about twenty miles eaſtward of Dartmouth college. It is found adhering to white or yellow quartz, and lying in laminæ, like ſheets of paper.

GRAFTON, or the *Haſſanamiſco* of the Indians, a townſhip of the American States, in Worceſter county, Maſſachuſetts, containing nine hundred inhabitants; forty miles ſouth-weſt of Boſton, eight eaſterly of Worceſter, and thirty-four north-weſt of Providence.

GRAF'TON I'SLAND, the moſt northerly of the Baſhee iſlands, in the Eaſtern Indian Sea. Lat. 21. 4. N. lon. 239. W. Greenwich.

GRAF'VESKOI, a fortreſs of Ruſſia, in the government of Kolivan, on the Irtiſch: two hundred and forty miles ſouth-ſouth-weſt of Kolivan. Lat. 50. 15. N. lon. 97. E. Ferro.

GRAGNA'NO, a town of Italy, in the ſtate of Lucca: four miles north-eaſt of Lucca.

GRA'HAM (ſir Richard), lord viſcount Preſton, eldeſt ſon of ſir George Graham, of Netherby in Cumberland, bart. born in 1648. He was ſent ambaſſador by Charles II. to Louis XIV. and was maſter of the wardrobe and ſecretary of ſtate under James II. But when the revolution took place, he was tried and condemned, on an accuſation of attempting the reſtoration of that prince; though he obtained a pardon by the queen's interceſſion. He ſpent the remainder of his days in retirement, and publiſhed an elegant tranſlation of Boethius on the Conſolations of Philoſophy. He died in 1695.

GRA'HAM (George), an eminent mathematician and watch-maker, born at Gratwick in Cumberland, in 1675; and in 1678 he came up to London, and was received into the family of the celebrated Mr. Tompion, who treated him with a kind of parental affection as long as he lived. That Mr. Graham was, without competition, the moſt eminent of his profeſſion, is but a ſmall part of his character: he was the beſt general mechanic of his time, and had a complete knowledge of practical aſtronomy; ſo that he not only gave to various movements for meaſuring time a degree of perfection which

had never before been attained, but invented ſeveral aſtronomical inſtruments, by which conſiderable advances have been made in that ſcience. The great mural arch in the obſervatory at Greenwich was made for Dr. Halley under Mr. Graham's immediate inſpection, and divided by his own hand: and from this incomparable original, the beſt foreign inſtruments of the kind are copies made by Engliſh artiſts. The ſector by which Dr. Bradley firſt diſcovered two new motions in the fixed ſtars, was of his invention and fabric. He compriſed the whole planetary ſyſtem within the compaſs of a ſmall cabinet; from which, as a model, all the modern orreries have been conſtructed. And when the French academicians were ſent to the north to make obſervations for aſcertaining the figure of the earth, Mr. Graham was thought the fitteſt perſon in Europe to ſupply them with inſtruments; by which means they finiſhed their operations in one year; while thoſe who went to the ſouth, not being ſo well furniſhed, were very much embarraſſed and retarded in their operations. Mr. Graham was many years a member of the royal ſociety, to which he communicated ſeveral ingenious and important diſcoveries, viz. from the 31ſt to the 42d volume of the Philoſ. Tranſactions, chiefly on aſtronomical and philoſophical ſubjects; particularly a kind of horary alteration of the magnetic needle, a quickſilver pendulum, and many curious particulars relating to the true length of the ſimple pendulum, upon which he continued to make experiments till almoſt the year of his death, which happened in 1751, at ſeventy-ſix years of age. His diſpoſition was not leſs communicative than his genius was penetrating; and his principal view was the advancement of ſcience, and the benefit of mankind.

GRA'HAM's DYKE. See ANTONINUS's WALL, vol. i. p. 781.

GRA'HAM's MOOR, a place of Scotland, in the county of Stirling, where the brave ſir William Wallace fought his way through the Engliſh army, in the year 1298: three miles ſouth-eaſt of Falkirk.

GRAIL, *ſ.* [*grele*, Fr. hail.] Small particles of any kind:

Hereof this gentle knight unweeting was,
And lying down upon the ſandy *grails*,
Drank of the ſtream as clear as cryſtal glaſs. *Spenſer.*

GRAIN, *ſ.* [*graine*, Fr. *granum*, Lat. *grano*, Ital.] A ſingle ſeed of corn:

Look into the ſeeds of time,
And ſay which *grain* will grow, and which will not.
Shakeſpeare.

Corn.—'Tis a rich ſoil, I grant you; but oftener covered with weeds than *grain*. *Collier.*—The ſeed of any fruit. Any minute particle; any ſingle body:

Thou exiſt'ſt on many thouſand *grains*
That iſſue out of duſt. *Shakeſpeare.*

The ſmalleſt weight, of which in phyſic twenty make a ſcruple, and in Troy weight twenty-four make a penny-weight; ſo named becauſe it is ſuppoſed of equal weight with a grain of corn.—Unity is a precious diamond, whoſe *grains*, as they double, twice double in their value. *Holyday.*

His brain
Outweigh'd his rage but half a *grain*. *Hudibras.*

Any thing proverbially ſmall.—For the whole world before thee is as a little *grain* of the balance. *Wiſd.* xi. 22.—The ungrateful perſon lives to himſelf, and ſubſiſts by the goodnature of others, of which he himſelf has not the leaſt *grain*. *South.*—The direction of the fibres of wood, or other fibrous matter:

Knots, by the conflux of meeting ſap,
Infect the ſound pine, and divert his *grain*
Tortive and errant from his courſe of growth. *Shakeſp.*

The body of the wood as modified by the fibres:

The beech, the ſwimming alder, and the plane,
Hard box, and linden of a ſofter *grain*. *Dryden.*

The body conſidered with reſpect to the form or direction of the conſtituent particles.—The tooth of a ſea-horſe, in the midſt of the ſolider parts, contains a curdled *grain* not to be found in ivory. *Brown.*—Died or ſtained ſubſtance:

How the red roſes fluſh up in her cheeks,
And the pure ſnow with goodly vermil ſtain,
Like crimſon dy'd in *grain*. *Spenſer.*

The name of *grain colour* was given to ſcarlets, crimſons, and purples, from the kermes berries, which were uſed for theſe purpoſes before cochineal was known. *Bailey.*—Temper; diſpoſition; inclination; humour, from the direction of fibres:

Your minds, pre-occupied with what
You rather muſt do than with what you ſhould do,
Made you againſt the *grain* to voice him conſul. *Shakeſp.*

The heart; the bottom.—The one being tractable and mild, the other ſtiff and impatient of a ſuperior, they lived but in cunning concord, as brothers glued together, but not united in *grain*. *Hayward.*—The form of the ſurface with regard to roughneſs and ſmoothneſs.—Poliſh is no otherwiſe than by breaking the roughneſs to a very fine *grain*, ſo that the ſcratches and frettings of the ſurface become too ſmall to be viſible. *Newton.*

GRAIN *of Allowance*. Something indulged or remitted; ſomething above or under the exact weight.—He, whoſe very beſt actions muſt be ſeen with *grains of allowance*, cannot be too mild, moderate, and forgiving. *Addiſon.*

GRAIN, or GRIN (John-Baptiſte), a French hiſtorian, born at Paris in 1565. He was educated with care, and in his youth attended on the court, where he attached himſelf to the ſervice of Henry IV. That prince, on the eſtabliſhment of the houſhold of Mary de Medicis, appointed Le Grain to the office of her counſellor and maſter of requeſts in ordinary. His principal employment, however, was in writing, and in attending to the education of his children. It was on their account that he drew up memoirs relative to the hiſtory of France, which remained in manuſcript till his relation, the chancellor De Sillery, perſuaded him to publiſh a part of them. His firſt publication, which he printed in his own houſe, was entitled, *Decade contenant l'Hiſtoire de Henri le Grand Roi de France & Navarre, IV. du Nom*, folio, 1614, in ten books: it compriſes the period from the peace of Cambray in 1559, to the king's death in 1610. This was written with a freedom which pleaſed the young king Louis XIII. to whom it was preſented; and by his order he publiſhed a ſecond decade in 1618, giving the hiſtory of that king's reign from 1610 to 1617. The honeſty of his narration and candour of his ſentiments, raiſed a ſtorm againſt his work, and ſeveral attempts were made to procure a cenſure upon it from the Sorbonne, but without ſucceſs; that body declaring that they found nothing in it deſerving of cenſure. The treatment he met with diſguſted him with the court, and he ſpent his latter years in retirement on his eſtate of Montgeron, where he died in 1642. In his will he enjoined his deſcendants never to entruſt the education of their children to the Jeſuits.

GRAIN COAST, or MALAGUETTA, or PEPPER COAST, a country of Guinea, bounded by the Sierra Leona country, which lies to the weſt, and the Ivory Coaſt on the ſouth-eaſt, extending along the Atlantic Ocean about one hundred leagues. The climate is ſaid to be unwholeſome, eſpecially to Europeans. The productions are peaſe, beans, gourds, lemons, oranges, and a kind of nut, with an exceedingly thick ſhell, a moſt delicious fruit, for which neither Europeans nor natives

appear yet to have a name. The palm-wine and dates of this country are in the greateſt eſteem. Cows, hogs, ſheep, and goats, are in great plenty; but what conſtitutes the chief wealth of the Grain Coaſt, is the abundance of Guinea pepper, or grains of paradiſe, which it produces, called *malaguetta* by the Portugueſe, which draws a great trade, not only with all the neighbouring interior nations, but with the Europeans alſo. The natives of this diviſion are guilty of no exceſſes in eating or drinking, or indeed of intemperance in any kind of luxury. They admit the Europeans into all familiarities with their women; and even invite them to love-banquets with their own wives and daughters. One quality they have in common with all other negroes, which is, a propenſity to ſteal whatever they come near, eſpecially from ſtrangers and foreigners; and they never omit the opportunity. Their *taba, taba ſeyle*, or, as others call him, *tabo ſeil*, or king, exerts an arbitrary power and deſpotic authority over his ſubjects, and never appears abroad but with the utmoſt pomp and magnificence. His people raiſe his power by certain implicit ſentiments of a natural ſubmiſſion, and that awe with which they would regard a ſuperior being. Their ignorance attaches them to paganiſm; but natural reaſon dictates a future ſtate. They welcome the new moon with ſongs, dancing, and diverſions of every kind; and their ſuperſtitious regard for ſorcerers is extreme. The ſole employment of many of the negroes of this country is fiſhing; and every morning preſents large fleets of canoes, ranged along the ſhore, upon this employment. Their common method of fiſhing is by a hand-line and a hook, which they ſeldom draw empty out of the water. The Portugueſe had formerly the whole of the commerce of this coaſt, but the great advantages having excited the emulation of the Engliſh and Dutch, in 1664, their power began to give way to the more warlike and commercial ſpirit of theſe rivals. They loſt gradually all their ſettlements, and being forced to retire into the interior countries, reſolved, as the laſt effort, to unite themſelves with the natives by marriage; whence ſprung that mixed progeny of mulattoes, more numerous here than in any part of Guinea. From policy, and, perhaps, from natural affection, the Portugueſe entruſted them with the care of the ſmall remnant of trade they now have, gave them the appellation of *hidalgoes* or gentlemen, reconciled them to the church of Chriſt, nay even admitted them into holy orders, and rendered them uſeful in propagating Chriſtianity and the goſpel.

GRAIN'ED, *adj.* Rough; made leſs ſmooth:

Though now this *grained* face of mine be hid
In ſap-conſuming Winter's drizzled ſnow,
Yet hath my night of life ſome memory. *Shakeſpeare.*

GRAIN'GER (James, M. D.), a poetical and medical writer, born in 1724, at Dunſe in Berwickſhire, whither his father had removed, as an exciſe officer, after ſelling his eſtate of Houghton-hall, in Cumberland. James received a claſſical education at North Berwick, and was then put apprentice to a ſurgeon in Edinburgh. He attended the medical lectures in the univerſity, and entered the army as a regimental ſurgeon, in which capacity he ſerved both at home and abroad. On the peace of 1748 he took the degree of doctor of phyſic, and ſettled in the practice of his profeſſion at London. His taſte for elegant literature made him known to ſeveral of the wits and poets of the time, and the publication of his Ode on Solitude in Dodſley's collection, gave him a reſpectable rank among them; but his profeſſional encouragement was inconſiderable, ſince we find him engaged as tutor to a young man of fortune at a ſalary of two hundred pounds per annum. In 1759 he publiſhed his tranſlation of Tibullus, which he had completed many years before. It was dedicated to his pupil, whom, in the following year, he accompanied to the Weſt Indies. He ſettled at Baſſeterre, in the iſland of St. Chriſtopher, married the daughter of the governor, and purſued the practice of phyſic with great ſucceſs. At the ſame time he did not deſert the amuſement of poetry, but compoſed his didactic poem on the culture of the ſugar-cane. This he publiſhed in 1764, after reviſiting England, and ſubmitting the manuſcript to the criticiſm of his friends. He then returned to Baſſeterre, where he died in December 1767, much eſteemed and regretted. Dr. Grainger, in his poetical capacity, ſtands higheſt as the writer of the Ode on Solitude; the fine exordium of which Mr. Boſwell tells us that Dr. Johnſon repeated with great energy, adding liberal praiſe to the whole. Another ſhort piece, entitled, Bryan and Pereene, printed in Percy's Reliques, is a beautifully pathetic and deſcriptive ballad. His Sugar-Cane will be admired only by thoſe who can bear proſaic matter raiſed upon the ſtilts of blank-verſe. His tranſlation of the elegies of Tibullus is reſpectable, but not eminently happy. The doctor's medical writings were, *Hiſtoria Febris Anomalæ Batavæ, Ann.* 1746–7–8, 8vo. and a Treatiſe on the more common Weſt-India Diſeaſes, 8vo. 1764.

GRAIN'GER, a county of the American States, in the diſtrict of Hamilton, ſtate of Tenneſſee, formed of parts of the counties of Knox, Jefferſon, and Hawkins, and thus called after the maiden name of the lady of governor William Blount.

GRAIN'ING, *ſ.* [from *grain.*] Indentation.—It is called by ſome the unmilled guinea, as having no *graining* upon the rim. *Leake.*

GRAINS, *ſ.* [without a ſingular.] The huſks of malt exhauſted in brewing.

GRAIN'VILLE, a town of France, in the department of the Lower Seine: one league ſouth of Cany, and four and a half north of Caudebec.

GRAIN'Y, *adj.* Full of corn. Full of grains or kernels.

GRAI'SO (l'Ance la), a ſettlement of the American States, in Louiſiana.

GRAJUE'LA, a town of Spain, in the province of Murcia: ſeventeen miles north-north-weſt of Chinchilla.

GRAL'LÆ, *ſ.* in ornithology, an order of birds in the Linnæan ſyſtem; for particulars of which ſee the article ORNITHOLOGY.

GRAM, a river of Denmark, which runs into the North Sea: two miles weſt of Ripen.

GRAMAFFET'TEN, a town of Germany, in the archduchy of Auſtria: twelve miles ſouth-weſt of Freuſtadt.

GRA'MAT, a town of France, in the department of the Lot, and chief place of a canton, in the diſtrict of St. Ceré: ſeven leagues and a half north-north-eaſt of Cahors, and two and three quarters ſouth-weſt of St. Ceré. Lat. 44. 47. N. lon. 19. 23. E. Ferro.

GRA'MATA, a town of European Turkey, in the province of Epire: twenty-four miles ſouth of Valona.

GRAMA'YE (John-Baptiſt), a writer of hiſtory, and a native of Antwerp. He ſtudied at Louvain, and taught rhetoric in that univerſity. He was afterwards made hiſtoriographer to the Low-countries, provoſt of Arnheim, and apoſtolical prothonotary. He travelled through Germany and Italy; and proceeding from the latter country to Spain, he was taken by an Algerine corſair, and carried into Africa. This opportunity of ſeeing another part of the world was not unpleaſant to him. After returning to his native country, he travelled into Moravia and Sileſia, and in the latter province was placed by cardinal Dietrichſtein at the head of a college. He died upon a journey at Lubeck, in 1635. He was a man of learning, and compoſed Latin works both in proſe and verſe. Of the former are, 1. *Africæ illuſtratæ, Lib. X.* 4to. 1622; containing a hiſtory of Africa from the remoteſt periods to his own times, with ſome geographical details. 2. *Diarium Algerienſe*; the reſult of local

local obſervations during his captivity. 3. *Peregrinatio Belgica*, 8vo. 4. *Antiquitates Flandriæ*, 1608, folio. 5. *Hiſtoria Namurcenſis*.

GRA'MEN, *ſ.* in botany. See GRASS.

GRA'MERCY, *interj.* [contracted from *grant me mercy*.] An obſolete expreſſion of ſurpriſe.—*Gramercy*, lovely Lucius, what's the news? *Shakeſpeare.*

Gramercy, ſir, ſaid he; but mote I weet
What ſtrange adventure do ye now purſue? *Spenſer.*

GRA'MERCY, and GRA'MERCIES, *interj.* [from *grande merci*, Fr. great thanks, or great mercy.] Great thanks to you:

Gramercy, Mammon, ſaid the gentle knight,
For ſo great grace and offer'd high eſtate. *Spenſer.*

Gramercies, Tranio, well doſt thou adviſe. *Shakeſpeare.* —*Gramercies*, my deare Devill: weele put it ſeriouſly in practice, yfaith. *B. Jonſon.*

GRA'MINA, *ſ.* in botany, GRASSES. This forms the fifth family, and the ſecond nation, tribe, or caſt, in Linnæus's General Diviſion of the Vegetable Kingdom: the fourteenth order in the Fragments of a Natural Method in Philoſophia Botanicæ; and the fourth of the Natural Orders at the end of Genera Plantarum. See GRASS.

GRAMIN'EAL, *adj.* [from *gramen*, Lat. graſs.] Full of graſs.

GRAMIN'EOUS, *adj.* Graſſy.

GRAMINIFO'LIA, *ſ.* in botany. See PILULARIA, SUBULARIA, and ZANNICHELLIA.

GRAMINIFO'LIOUS, *adj.* [from *gramen*, Lat. graſs, and *folium*, a leaf.] Having leaves like graſs. *Scott.*

GRAMINIV'OROUS, *adj.* [*gramen* and *voro*, Lat.] Graſs-eating; living upon graſs.—The ancients were verſed chiefly in the diſſection of brutes, among which the *graminivorous* kind have a party-coloured choroides. *Sharp.*

GRAMINO'SE, *adj.* Full of graſs; graſſy; having leaves without footſtalks.

GRAM'INOUS, *adj.* Graſſy; full of graſs; having leaves like graſs. *Cole.*

GRAM'MA, *ſ.* [Greek.] A letter; any ſingle letter of the alphabet. Hence comes *grammar*, becauſe it ſhews how to form articulate ſounds, which are repreſented by letters.

GRAM'MAR, *ſ.* [*grammaire*, Fr. *grammatica*, Lat. γραμματική, Gr.] The ſcience of ſpeaking correctly; the art which teaches the relations of words to each other. —To be accurate in the *grammar* and idioms of the tongues, and then as a rhetorician to make all their graces ſerve his eloquence. *Fell.*—Propriety or juſtneſs of ſpeech; ſpeech according to grammar.—*Varium & mutabile ſemper fæmina*, is the ſharpeſt ſatire that ever was made on woman; for the adjectives are neuter, and *animal* muſt be underſtood to make them *grammar*. *Dryden.*—The book that treats of the various relations of words to one another.

Few authors have written with philoſophical accuracy on the principles of General Grammar; and, what is more to be regretted, fewer ſtill have thought of applying thoſe principles to the Engliſh language. While the French tongue has long been an object of attention to many able and ingenious writers of that nation, who have conſidered its conſtruction, and determined its propriety with great accuracy; the genius and grammar of the Engliſh, to the reproach of the country, have not been ſtudied with equal care, or aſcertained with the ſame preciſion. Some faint attempts have indeed been made towards ſupplying this defect; and ſome able writers have entered on the ſubject; but much remains to be done. It is not within the plan of our work to give an extended ſyſtem either of Grammar in general, or of Engliſh Grammar in particular; but we ſhall nevertheleſs take a general view of the chief principles relating to this ſubject, with ſome particular remarks on the peculiarities of our own tongue.

The firſt thing to be conſidered, is, the diviſion of the ſeveral parts of ſpeech. The eſſential parts of ſpeech are the ſame in all languages. There muſt always be ſome words which denote the names of objects, or mark the ſubject of diſcourſe; other words, which denote the qualities of thoſe objects, and expreſs what we affirm concerning them; and other words, which point out their connections and relations. Hence, ſubſtantives, pronouns, adjectives, verbs, prepoſitions, and conjunctions, muſt neceſſarily be found in all languages. The moſt ſimple and alſo the moſt ancient diviſion of the parts of ſpeech is, into *ſubſtantives*, *attributives*, and *connectives*. *Subſtantives*, are all the words which expreſs the names of objects, or the ſubjects of diſcourſe; *attributives*, are all the words which expreſs any attribute, property, or action, of the former; *connectives*, are what expreſs the connections, relations, and dependencies, which take place among them.

The following definition of Grammar and its parts, is from Siret's *Elémens de la Langue Angloiſe*. "Grammar is the art of reducing to rule the principles common to all languages. Languages are compoſed of *ſentences*, ſentences of *words*, words of *ſyllables*, and ſyllables of *letters*. Letters therefore (or ſounds, which muſt be taken to mean the ſame thing) are the firſt and principal materials of which language is compoſed.

Noun ſubſtantives. When men had diſcovered theſe ſounds or letters, they next applied themſelves to invent words to expreſs the different objects which preſented themſelves to the ſenſes. As each of theſe objects muſt be a ſubſtance either animate or inanimate, the firſt words which were formed were called *ſubſtantives*, that is, the names of ſubſtances.

Pronouns. Next, to avoid repeating the ſame words when the ſame objects were often preſented in a diſcourſe, it was found neceſſary to form words which might expreſs the ſubſtances without repeating them. Hence the origin of *pronouns*; i. e. the repreſentatives of nouns.

Adjectives and Verbs. But, in ſpeaking of things, it is neceſſary to explain what they are, how they act, &c. It was therefore neceſſary to have other words, as well to expreſs the attributes and qualities of ſubſtances, as to explain their influence and various operations. Hence came *adjectives* and *verbs*. *Adjectives* are thus called becauſe they are added to nouns, and ſhew their attributes and qualities; the *verb* (*verbum*, or the word, by way of eminence) is thus named becauſe it expreſſes the exiſtence, action, condition, and paſſion, of beings.

Adverbs. Going on to conſider the diverſity of qualities and of actions, it was ſoon diſcovered that theſe were ſuſceptible of innumerable modifications; it thence became neceſſary to invent words to expreſs theſe modifications. They called theſe words *adverbs*, becauſe they were added to verbs, to give more or leſs extent to their ſignification.

Nouns of Number. The multiplicity of individuals in each ſpecies, the frequency of actions of the ſame nature; cauſed men to ſeek in proceſs of time for a new ſpecies of words to ſpecify at once any quantity of objects, of cauſes, or of effects. This produced *nouns of number*.

Prepoſitions. To theſe ſucceeded new expreſſions to denote the reference which things have to each other, and to fix the idea of one by that of another. Theſe were called *prepoſitions*, becauſe they are placed before nouns and verbs.

Conjunctions. But as things have often diſtant relations which cannot be collected in one ſentence, it was neceſſary to form particles whereby they might be joined; and which from their uſe were therefore called *conjunctions*.

Interjections. Laſtly, having provided the means of expreſſing the nature, the ſpecies, the attributes, the influence, the exiſtence, the references, and the different modifications, of things, expreſſions were invented to paint

paint the ſudden emotions of the ſoul. Theſe are called *interjections*, and are more or leſs numerous according to the nature of the language itſelf.

Thus, it is eaſy to perceive, that grammar is built upon nine kinds of words, of which the origin is from nature itſelf. They are called the *parts of ſpeech*, becauſe there can be no word uttered but muſt belong to one or other of the ſpecies or kinds we have explained above."

Our readers will readily perceive the imperfections of the above ſyſtem; namely, the making nouns of number a ſeparate part of ſpeech, and omitting to notice the *article*. And this leads us to remark, that Mr. Horne Tooke admits of only three parts of ſpeech, of which the firſt is the *article*, the other two are the *noun* and the *verb*; he conſiders all other words as corruptions or abbreviations of the two laſt.

Our common diviſion of ſpeech into eight parts; nouns, pronouns, verbs, participles, abverbs, prepoſitions, conjunctions, and interjections, is not very logical, as it comprehends, under the general term of nouns, both ſubſtantives and adjectives, which are parts of ſpeech generically and eſſentially diſtinct; while it makes a ſeparate part of ſpeech of participles, which are no other than verbal adjectives. The *article*, alſo, is an eſſential part of ſpeech, at leaſt in the modern languages. However, as theſe are the terms to which our ears have been moſt familiariſed, and, as an exact logical diviſion is of no great conſequence to our preſent purpoſe, it will be better to make uſe of theſe known terms than of any other.

Of the PARTS of SPEECH.

We are naturally led to begin with the conſideration of SUBSTANTIVE NOUNS, which are the foundation of all grammar, and may be conſidered as the moſt ancient part of ſpeech. The more common opinion, however, is in favour of verbs; but aſſuredly, as ſoon as men had got beyond ſimple interjections, or exclamations of paſſion, and began to communicate themſelves by diſcourſe, they would be under a neceſſity of aſſigning names to the objects they ſaw around them. Nouns then are all thoſe words by which objects or ſubſtances are denominated, and which diſtinguiſh them from one another, without marking either quantity, quality, action, or relation. The ſubſtantive or noun is the *name* of the thing ſpoken of, and in Greek and Latin is called *name*; for it is ονομα in the one, and *nomen* in the other; and if in Engliſh we had called it the *name* rather than the *noun*, the appellation would have been more proper. Men could not ſpeak of themſelves or of any thing elſe, without having names for themſelves and the various objects with which they are ſurrounded. But the diverſity of objects is ſo great, that had each individual a diſtinct and proper name, it would be impoſſible for the moſt tenacious memory, during the courſe of the longeſt life, to retain even the nouns of the narroweſt language. It has therefore been found expedient, when a number of things reſemble each other in ſome important particulars, to arrange them all under one ſpecies; to which is given a name that belongs equally to the whole ſpecies, and to each individual comprehended under it. Thus the word *man* denotes a ſpecies of animals, and is equally applicable to every human being: the word *horſe* denotes another ſpecies of animals, and is equally applicable to every individual of that ſpecies of quadrupeds. We find, however, that there are ſome qualities in which ſeveral ſpecies reſemble each other; and therefore we refer them to a higher order called a *genus*, to which we give a name that is equally applicable to every ſpecies and every individual comprehended under it. Thus, men and horſes, and all living things on earth, reſemble each other in this reſpect, that they have *life*. We refer them therefore to the genus called *animal*; and this word belongs to every ſpecies of animals, and to each individual animal. It is almoſt needleſs to obſerve, that the words *genus* and *ſpecies* are here taken in the logical ſenſe, and not as we employ them when treating upon the diviſions of natural hiſtory.

When language had proceeded thus far, the notification which it made of objects was ſtill very imperfect; for, when one mentioned to another, in diſcourſe, any ſubſtantive noun; ſuch as, man, lion, or tree, how was it to be known which man, which lion, or which tree, he meant, among the many comprehended under one name? Here occurs a very curious and a very uſeful contrivance for ſpecifying the individual object intended, by means of that part of ſpeech called the *article*.

The force of the *article* conſiſts in pointing or ſingling out from the common maſs the individual of which we mean to ſpeak. In Engliſh we have two articles, *a* and *the*: *a* is more general and unlimited; *the* more definite and ſpecial. *A* is much the ſame with *one*, and marks only any one individual of a ſpecies; that individual being either unknown, or left undetermined; as, a lion, a king. *The*, which poſſeſſes more properly the force of the article, aſcertains ſome known or determined individual of the ſpecies; as, the lion, the king.

Articles are words of great uſe in ſpeech. In ſome languages, however, they are not found. The Greeks have but one article, ο η το, which anſwers to our definite or proper article, *the*. They have no word which anſwers to our article *a*; but they ſupply its place by the preſence of their article: thus, βασιλευς ſignifies, *a* king; ο βασιλευς, *the* king. The Latins have no article. In the room of it, they employ pronouns, as, *hic*, *ille*, *iſte*, for pointing out the objects which they want to diſtinguiſh. This, however, appears to be a defect in the Latin tongue; as articles contribute much to the clearneſs and preciſion of language.

In order to illuſtrate this, remark what difference there is in the meaning of the following expreſſions in Engliſh, depending wholly on the different employment of the articles: "The ſon of a king—The ſon of the king—A ſon of the king's." Each of theſe three phraſes has an entirely different meaning, which we need not explain, becauſe any one who underſtands the language conceives it clearly at firſt hearing, through the different application of the articles *a* and *the*. Whereas, in Latin, *filius regis* is wholly undetermined; and to explain in which of theſe three ſenſes it is to be underſtood, (for it may bear any of them,) a circumlocution of ſeveral words muſt be uſed. In the ſame manner, "Are you *a* king?—Are you *the* king?" are queſtions of quite ſeparate import; which, however, are confounded together in the Latin phraſe, *Eſne tu rex?* "Thou art *a* man," is a very general and harmleſs poſition; but, "Thou art *the* man," is an aſſertion, capable, we know, of ſtriking terror and remorſe into the heart. Theſe obſervations illuſtrate the force and importance of articles.

Beſides this quality of being particulariſed by the article, three affections belong to ſubſtantive nouns, number, gender, and caſe, which require our conſideration.

Number diſtinguiſhes them as one, or many, of the ſame kind, called the *ſingular* and *plural*; a diſtinction found in all languages, and which muſt, indeed, have been coeval with the very infancy of language; as there were few things which men had more frequent occaſion to expreſs, than the difference between *one* and *many*. For the greater facility of expreſſing it, it has, in all languages, been marked by ſome variation made upon the ſubſtantive noun; as we ſee, in Engliſh, our plural is commonly formed by the addition of the letter *s*. In the Hebrew, Greek, and ſome other ancient languages, we find, not only a plural, but a *dual*, number; the riſe of which may very naturally be accounted for, from ſeparate terms of numbering not being yet invented, and one, two, and many, being all, or at leaſt

the chief, numeral diſtinctions which men, at firſt, had any occaſion to take notice of.

Gender is an affection of ſubſtantive nouns, which will lead us into more diſcuſſion than number. Gender, being founded on the diſtinction of the two ſexes, it is plain, that in a proper ſenſe, it can only find place in the names of living creatures, which admit the diſtinction of male and female, and therefore can be ranged under the maſculine or feminine genders. All other ſubſtantive nouns ought to belong to what grammarians call the *neuter* gender, which is meant to imply the negation of either ſex. But, with reſpect to this diſtribution, ſomewhat ſingular hath obtained in the ſtructure of language. For, in correſpondence to that diſtinction of male and female ſex, which runs through all the claſſes of animals, men have, in moſt languages, ranked a great number of inanimate objects alſo, under the like diſtinctions of maſculine and feminine. Thus we find it, both in the Greek and Latin tongues. *Gladius*, a ſword, for inſtance, is maſculine; *ſagitta*, an arrow, is feminine; and this aſſignation of ſex to inanimate objects, this diſtinction of them into maſculine and feminine, appears often to be entirely capricious; derived from no other principle than the caſual ſtructure of the language, which refers to a certain gender, words of a certain termination. In the Greek and Latin, however, all inanimate objects are not diſtributed into maſculine and feminine; but many of them are alſo claſſed, where all of them ought to have been, under the neuter gender; as, *templum*, a church; *ſedile*, a ſeat. But the genius of the French and Italian tongues differs, in this reſpect, from the Greek and Latin. In the French and Italian, from whatever cauſe it has happened, ſo it is, that the neuter gender is wholly unknown, and that all their names of inanimate objects are put upon the ſame footing with living creatures; and diſtributed, without exception, into maſculine and feminine. The French have two articles, the maſculine *le*, and the feminine *la*; and one or other of theſe is prefixed to all ſubſtantive nouns in the language, to denote their gender. The Italians make the ſame univerſal uſe of their articles *il* and *lo*, for the maſculine; and *la* for the feminine.

In the Engliſh language, it is remarkable that there obtains a peculiarity quite oppoſite. In the French and Italian, there is no neuter gender. In the Engliſh, when we uſe common diſcourſe, all ſubſtantive nouns, that are not names of living creatures, are neuter, without exception. *He*, *ſhe*, and *it*, are the marks of the three genders; and we always uſe *it*, in ſpeaking of any object where there is no ſex, or where the ſex is not known. The Engliſh is, perhaps, the only language in the known world (except the Chineſe, which is ſaid to agree with it in this particular) where the diſtinction of gender is properly and philoſophically applied in the uſe of words, and confined, as it ought to be, to mark the real diſtinctions of male and female. Hence ariſes a very great and ſignal advantage of the Engliſh tongue, which it is of conſequence to remark. Though in common diſcourſe, as already obſerved, we employ only the proper and literal diſtinction of ſexes; yet the genius of the language permits us, whenever it will add beauty to our diſcourſe, to make the names of inanimate objects maſculine or feminine in a metaphorical ſenſe; and when we do ſo, we are underſtood to quit the literal ſtyle, and to uſe one of the figures of diſcourſe. For inſtance; if I am ſpeaking of virtue, in the courſe of ordinary converſation, or of ſtrict reaſoning, I refer the word to no ſex or gender; I ſay, "Virtue is its own reward;" or, "it is the law of our nature." But if I chuſe to riſe into a higher tone; if I ſeek to embelliſh and animate my diſcourſe, I give a ſex to virtue; I ſay, "She deſcends from heaven;—ſhe alone confers true honour upon man; her gifts are the only durable rewards." By this means, we have it in our power to vary our ſtyle at pleaſure. By making a very ſlight alteration, we can perſonify any object that we chuſe to introduce with dignity; and by this change of manner, we give warning, that we are paſſing from the ſtrict and logical to the ornamented and rhetorical ſtyle. This is an advantage which not only every poet, but every good writer and ſpeaker in proſe, is, on many occaſions, glad to lay hold of, and improve: and it is an advantage peculiar to our tongue; no other language poſſeſſes it. For, in other languages, every word has one fixed gender, maſculine, feminine, or neuter, which can upon no occaſion be changed; ἀρετη, for inſtance, in Greek; *virtus*, in Latin; and *la vertu*, in French; are uniformly feminine. *She* muſt always be the pronoun anſwering to the word, whether you be writing in poetry or proſe, whether you be uſing the ſtyle of reaſoning or that of declamation: whereas, in Engliſh, we can either expreſs ourſelves with the philoſophical accuracy of giving no gender to things inanimate; or by giving them gender, and transforming them into perſons, we adapt them to the ſtyle of poetry, and, when it is proper, we enliven proſe.

It deſerves to be further remarked on this ſubject, that, when we employ that liberty which our language allows, of aſcribing ſex to any inanimate object, we have not, however, the liberty of making it of what gender we pleaſe, maſculine or feminine; but are, in general, ſubjected to ſome rule of gender which the currency of language has fixed to that ſubject. The foundation of that rule is imagined, by Mr. Harris, in his Philoſophical Enquiry into the Principles of Grammar, to be laid in a certain diſtant reſemblance, or analogy, to the natural diſtinction of the two ſexes. Thus, according to him, we commonly give the maſculine gender to thoſe ſubſtantive nouns uſed figuratively, which are conſpicuous for the attributes of imparting, or communicating; which are by nature ſtrong and efficacious, either to good or evil; or which have a claim to ſome eminence, whether laudable or not. Thoſe again, he imagines to be generally made feminine, which are conſpicuous for the attributes of containing, and of bringing forth; which have more of the paſſive in their nature, than the active; which are peculiarly beautiful or amiable; or which have reſpect to ſuch exceſſes as are rather feminine than maſculine. Upon theſe principles he takes notice, that the ſun is always put in the maſculine gender with us; the moon in the feminine, as being the receptacle of the ſun's light. The earth is, univerſally, feminine. A ſhip, a country, a city, are likewiſe made feminine, as receivers, or containers. God, in all languages, is maſculine. Time, we make maſculine, on account of its mighty efficacy; virtue, feminine, from its beauty, and its being the object of love. Fortune is always feminine. Mr. Harris imagines, that the reaſons which determine the gender of ſuch words as theſe, hold in moſt other languages, as well as the Engliſh. This, however, appears doubtful. A variety of circumſtances, which ſeem caſual to us, becauſe we cannot reduce them to principles, muſt, unqueſtionably, have influenced the original formation of languages; and in no article whatever does language appear to have been more capricious, and to have proceeded leſs according to fixed rule, than in the impoſition of gender upon things inanimate; eſpecially among ſuch nations as have applied the diſtinction of maſculine and feminine to all ſubſtantive nouns. Thus in the French and German languages we have ſtrange inſtances of caprice, if not of abſurdity, in this part of grammar. The words patrole and ſentinel are in French of the feminine gender, *la patrouille*, *la ſentinelle*; and the king is always ſpoken of in the feminine, *ſa majeſté*. In German, many of the words relating to the female ſex are of the *neuter* gender; as, *frauen-volk*, *weiber-volk*, *frauen-zimmer*, women in general; *fraulein*, a young woman; *weib*, a woman or wife; *weibchen*, *weiblein*, a little woman or wife, the female of animals in general, &c.

We next proceed to that peculiarity of ſubſtantive nouns, which, in the ſtyle of grammar, is called their

declenſion by *caſes*. Let us, firſt, conſider what caſes ſignify. In order to underſtand this, it is neceſſary to obſerve, that, after men had given names to external objects, had particularized them by means of the article, and diſtinguiſhed them by number and gender, ſtill their language remained extremely imperfect, till they had deviſed ſome method of expreſſing the relations which thoſe objects bore one towards another. They would find it of little uſe to have a name for man, lion, tree, river, without being able, at the ſame time, to ſignify how theſe ſtood with reſpect to each other; whether as approaching to, receding from, joined with, and the like. Indeed, the relations which objects bear to one another are immenſely numerous; and therefore, to deviſe names for them all muſt have been among the laſt and moſt difficult refinements of language. But, in its moſt early periods, it was abſolutely neceſſary to expreſs, in ſome way or other, ſuch relations as were moſt important, and as occurred moſt frequently in common ſpeech. Hence the genitive, dative, and ablative, caſes of nouns, which expreſs the noun itſelf, together with thoſe relations, *of*, *to*, *with*, *from*, and *by*; the relations which we have the moſt frequent occaſion to mention. The proper idea then of caſes in declenſion, is no other than an expreſſion of the ſtate, or relation, which one object bears to another, denoted by ſome variation made upon the name of that object; moſt commonly in the final letters, and by ſome languages in the initial. All languages, however, do not agree in this mode of expreſſion. The Greek, Latin, and ſeveral other languages, uſe declenſion. The Engliſh, French, and Italian, do not; or, at moſt, uſe it very imperfectly. In place of the variations of caſes, the modern tongues expreſs the relations of objects, by means of the words called prepoſitions, which denote thoſe relations, prefixed to the name of the object. Engliſh nouns have no caſe whatever, except a ſort of genitive, commonly formed by the addition of the letter *s* to the noun; as when we ſay "Dryden's poems," meaning the poems of Dryden. Our perſonal pronouns have alſo a caſe, which anſwers to the accuſative of the Latin: *I, me,—he, him,—who, whom*. There is nothing, then, or at leaſt very little, in the grammar of our language, which correſponds to declenſion in the ancient languages.

Two queſtions, reſpecting this ſubject, may be put. Firſt, Which of theſe methods of expreſſing relations, whether that by declenſion, or that by prepoſitions, was the moſt ancient uſage in language? And next, Which of them has the beſt effect? Both methods, it is plain, are the ſame as to the ſenſe, and differ only in form. For the ſignificancy of the Roman language would not have been altered, though the nouns, like ours, had been without caſes, provided they had employed prepoſitions; and though, to expreſs a diſciple of Plato, they had ſaid, *Diſcipulus de Plato*, like the modern Italians, in place of *Diſcipulus Platonis*. Now, with reſpect to the antiquity of caſes, although they may, on firſt view, ſeem to conſtitute a more artificial method than the other, of denoting relations, yet there are ſtrong reaſons for thinking that this was the earlieſt method practiſed by men. We find, in fact, that declenſions and caſes are uſed in moſt of what are called the *mother tongues*, or original languages, as well as in the Greek and Latin. And a very natural and ſatisfying account can be given why this uſage ſhould have early obtained. Relations are the moſt abſtract and metaphyſical ideas of any which men have occaſion to form, when they are conſidered by themſelves, and ſeparated from the related object. It would puzzle any man, as has been well obſerved by an author on this ſubject, to give a diſtinct account of what is meant by ſuch a word as *of*, or *from*, when it ſtands by itſelf, and to explain all that may be included under it. The firſt rude inventors of language, therefore, would not, for a long while, arrive at ſuch general terms. In place of conſidering any relation in the abſtract, and deviſing a name for it, they would much more eaſily conceive it in conjunction with a particular object; and they would expreſs their conceptions of it, by varying the name of that object through all the different caſes; *hominis*, of a man; *homini*, to a man; *homine*, with a man, &c.

But, though this method of declenſion was, probably, the only method which men employed at firſt, for denoting relations, yet, in progreſs of time, many other relations being obſerved, beſides thoſe which are ſignified by the caſes of nouns, and men alſo becoming more capable of general and metaphyſical ideas, ſeparate names were gradually invented for all the relations which occurred, forming that part of ſpeech which we now call *prepoſitions*. Prepoſitions being once introduced, they were found to be capable of ſupplying the place of caſes, by being prefixed to the nominative of the noun. Hence, it came to paſs that, as nations were intermixed by migrations and conqueſts, and were obliged to learn and adopt the languages of one another, prepoſitions ſupplanted the uſe of caſes and declenſions. When the Italian tongue, for inſtance, ſprung out of the Roman, it was found more eaſy and ſimple, by the Gothic nations, to accommodate a few prepoſitions to the nominative of every noun, and to ſay, *di Roma*, *al Roma*, *di Carthago*, *al Carthago*, than to remember all the variety of terminations, *Romæ*, *Romam*, *Carthaginis*, *Carthaginem*, which the uſe of declenſions required in the ancient nouns. By this progreſs we can give a natural account how nouns, in our modern tongues, come to be ſo void of declenſion: a progreſs which is fully illuſtrated in Dr. Adam Smith's ingenious Diſſertation on the Formation of Languages.

With regard to the other queſtion on this ſubject, Which of theſe two methods is of the greateſt utility and beauty? we ſhall find advantages and diſadvantages to be balanced on both ſides. There is no doubt that, by aboliſhing caſes, we have rendered the ſtructure of modern languages more ſimple. We have diſembarraſſed it of all the intricacy which aroſe from the different forms of declenſion, of which the Romans had no fewer than five; and from all the irregularities in theſe ſeveral declenſions. We have thereby rendered our languages more eaſy to be acquired, and leſs ſubject to the perplexity of rules. But, though the ſimplicity and eaſe of language be great and eſtimable advantages, yet there are alſo ſuch diſadvantages attending the modern method, as leave the balance, on the whole, doubtful, or rather incline it to the ſide of antiquity. For, in the firſt place, by our conſtant uſe of prepoſitions for expreſſing the relations of things, we have filled language with a multitude of thoſe little words, which are eternally occurring in every ſentence, and may be thought thereby to have encumbered ſpeech, by an addition of terms; and by rendering it more prolix, to have enervated its force. In the ſecond place, we have certainly rendered the ſound of language leſs agreeable to the ear, by depriving it of that variety and ſweetneſs, which aroſe from the length of words, and the change of terminations, occaſioned by the caſes in the Greek and Latin. But, in the third place, the moſt material diſadvantage is, that, by this abolition of caſes, and by a ſimilar alteration in the conjugation of verbs, we have deprived ourſelves of that liberty of tranſpoſition in the arrangement of words, which the ancient languages enjoyed.

PRONOUNS are the claſs of words moſt nearly related to ſubſtantive nouns; being, as the name imports, repreſentatives, or ſubſtitutes, of nouns. *I, thou, he, ſhe*, and *it*, are no other than an abridged way of naming the perſons, or objects, with which we have immediate intercourſe, or to which we are obliged frequently to refer in diſcourſe. In communicating thoughts, a perſon muſt either ſpeak of himſelf, of the perſon to whom he is ſpeaking, or of ſome other perſons or things. The word

word referring to the ſpeaker is called the pronoun of the firſt perſon; the word referring to the perſon ſpoken to is the pronoun of the ſecond perſon; the word referring to other perſons is the pronoun of the third perſon. Pronouns are ſubject to the ſame modifications as nouns, viz. number, gender, and caſe. But in moſt languages the firſt and ſecond perſons of pronouns are without gender: in Hebrew, however, the ſecond is modified to ſignify the male or female. This diſtinction has been conſidered as ſuperfluous, ſince the ſexes of the two perſons in converſation are known by their appearance. But ſometimes it may be elegant. Thus, if we were to ſay to a woman, Wouldeſt *thou* do ſuch a thing? then, meaning to imply that the action was derogatory to the female character, we cannot do it by the pronoun alone. The change of *at* for *attah* in Hebrew, may convey this reproof very pointedly in one word.

The pronoun of the third perſon denoting neither the *ſpeaker* nor the *hearer*, but the *ſubject* of the diſcourſe, and being merely the ſubſtitute of a *noun* which may be either *maſculine*, *feminine*, or *neuter*, muſt of neceſſity agree with the noun which it repreſents, and admit of a triple diſtinction ſignificant of gender. In Engliſh, which allows its adjectives no genders, this pronoun is *he* in the maſculine, *ſhe* in the feminine, and *it* in the neuter; the utility of which diſtinction may be better found in ſuppoſing it away. Suppoſe, for example, that we ſhould in hiſtory read theſe words: *He cauſed him to deſtroy him*—and were informed that the pronoun, which is here thrice repeated, ſtood each time for ſomething different; that is to ſay, for a man, for a woman, and for a city, whoſe names were *Alexander*, *Thais*, and *Perſepolis*. Taking the pronoun in this manner—diveſted of its gender—how would it appear which was deſtroyed, which the deſtroyer, and which the cauſe that moved to the deſtruction? But there is no ambiguity when we hear the genders diſtinguiſhed: when we are told, with the proper diſtinctions, that SHE *cauſed* HIM *to deſtroy* IT, we know with certainty that the *promoter* was the *woman*; that her *inſtrument* was the *hero*; and that the *ſubject* of their cruelty was the *unfortunate city*. From this example we ſhould be ſurpriſed how the Italians, French, and Spaniards, could expreſs themſelves with preciſion or elegance with no more than two variations of this pronoun.

Although, in every language with which we are now acquainted, there is but one pronoun for each of the firſt and ſecond perſons; and although it is obvious from the nature and import of thoſe words, that no more can be neceſſary; yet the mere Engliſh reader may perhaps be puzzled with finding three diſtinct words applied to each; *I*, *mine*, and *me*, for the firſt perſon; *thou*, *thine*, and *thee*, for the ſecond. The learned reader will ſee at once that the words *mine* and *me*, *thine* and *thee*, are equivalent to the genitive and accuſative caſes of the Latin pronouns of the firſt and ſecond perſons. That *mine* is a pronoun in the poſſeſſive caſe is obvious; for if I were aſked, "Whoſe book is that before me?" I ſhould reply—"It is *mine*;" meaning that it belongs to *me*. That the word *me* is the ſame pronoun in the caſe which the Latin grammarians call the *accuſative*, is evident from the import of that word in the ſentence, *he admires me*, where the admiration is ſuppoſed to proceed from the perſon ſpoken of to the perſon who ſpeaks. It appears therefore, that though Engliſh nouns have only two caſes, the nominative and poſſeſſive, the pronouns of that language have three, as, *I*, *mine*, *me*; *thou*, *thine*, *thee*; *he*, *his*, *him*, &c. Both pronouns, the Latin and the Engliſh, are irregularly inflected; and thoſe words which are called the oblique caſes of each were originally derived from nominatives different from *ego* and *I*; but theſe nominatives are now loſt, and *mei* and *mine* have, beyond all diſpute, the effect of the genitives of the Latin and Engliſh pronouns of the firſt perſon. If we miſtake not, Dr. Johnſon has ſomewhere affected to ridicule biſhop Lowth for conſidering the word *mine* as the poſſeſſive caſe of the pronoun of the firſt perſon. According to the doctor, *mine* is the ſame word with the pronominal adjective *my*, and was anciently uſed before a vowel, as *my* was before a conſonant. This is not ſaid with the great lexicographer's uſual preciſion. That *mine* was anciently uſed before a vowel is certain; but it does not therefore follow, that it is the ſame word with *my*. If it were, we might on every occaſion ſubſtitute either of theſe for the other, without offending againſt grammar, however we might injure the ſound; but we apprehend that this is not the caſe. "That book is *mine*," is good Engliſh; but "That book is *my*," would be a groſs ſoleciſm: the reaſon is, that *mine* is a *genuine pronoun*, and ſtands by itſelf with the power of a noun; but *my*, being an *adjective*, cannot ſtand by itſelf.

Upon the *perſonal pronouns* it may alſo be proper to obſerve, that the ancient mode in England, as well as among the Greeks and Romans, was to uſe the ſecond perſon ſingular in addreſſing people of whatever rank. This is the ſtyle of Scripture; and thus Diogenes ſpeaking to Alexander the Great, Cicero to Cæſar, and Pliny to Trajan, always uſed *tu*, thou. The ſame mode is preſerved in tranſlating the claſſics. It has now, however, been long a cuſtom throughout all Europe to uſe the ſecond perſon plural inſtead of the ſingular: it was firſt introduced for the purpoſe of ſhewing a reſpect for diſtinguiſhed perſons, but as long ago as the time of Charles V. it had become a common mark of civility among ordinary perſons. But in the ſeventeenth century, a higher degree of politeneſs and reſpect was invented in Germany and Italy, but which has not been received into the Engliſh language; that of ſpeaking in the third perſon ſingular; and, inſtead of ſaying, *Du haſt mir es geſagt*, "Thou haſt told me ſo," it was counted reſpectful to ſay, *Er hat mir es geſagt*, "He has ſaid ſo;" and the ſame in Italian. But at the beginning of the laſt century, it was carried ſtill farther; and they began to employ the third perſon plural inſtead of the ſecond perſon ſingular, ſo that now they are accuſtomed in Germany to ſay, *Sie haben mir es geſagt*, "They have ſaid it," though ſpeaking to one perſon. In the mean time, the higheſt mark of reſpect of all is ſtill the original form; for we uniformly addreſs the Deity in the ſecond perſon ſingular.

In the firſt ſtage of ſpeech, it is probable that the places of pronouns were ſupplied by pointing to the object when preſent, and naming it when abſent. For one can hardly think that pronouns were of early invention; as they are words of ſuch a particular and artificial nature. *I*, *thou*, *he*, *it*, it is to be obſerved, are not names peculiar to any ſingle object, but ſo very general, that they may be applied to all perſons, or objects, whatever, in certain circumſtances. *It*, is the moſt general term that can poſſibly be conceived, as it may ſtand for any one thing in the univerſe of which we ſpeak. At the ſame time, theſe pronouns have this quality, that, in the circumſtances in which they are applied, they never denote more than one preciſe individual; which they aſcertain, and ſpecify, much in the ſame manner as is done by the article. So that pronouns are, at once, the moſt general and the moſt particular words in language. They are commonly the moſt irregular and troubleſome words to the learner, in the grammar of all tongues; as being the words moſt in common uſe, and ſubjected thereby to the greateſt varieties.

Of ADJECTIVES.—Nouns, we have ſaid, are words by which objects are denominated, and which diſtinguiſh them from one another without marking their quality; and hence, as theſe objects have a vaſt variety of qualities by which they may be compared together, there muſt be words to expreſs theſe qualities only, and theſe words are called *adjectives*. Thus of apples we

may

may ſay, "This is a ſweet apple, that a ſour apple." The words *ſweet* and *ſour* are adjectives. Since the adjective is the word expreſſing the quality of ſome object, it can have no meaning by itſelf, and requires the preſence, or the implied preſence, of the ſubſtantive; and hence that ſingularity which attends them in the Greek and Latin, of having the ſame form given them with ſubſtantive nouns; being declined, like them, by caſes, and ſubjected to the like diſtinctions of number and gender. And hence it has happened, that grammarians have made them to belong to the ſame part of ſpeech, and divided the noun into ſubſtantive and adjective; an arrangement founded more on attention to the external form of words than to their nature and force. For adjectives, or terms of quality, have not, by their nature, the leaſt reſemblance to ſubſtantive nouns, as they never expreſs any thing which can poſſibly ſubſiſt by itſelf; which is the very eſſence of the ſubſtantive noun. They are, indeed, more a-kin to verbs, which, like them, expreſs the attribute of ſome ſubſtance.
